Deeply affected by the anticommunist crusade of Senator Joseph R. McCarthy and other hard-line conservatives, Welch developed a conspiratorial interpretation of U.S. politics and recent historical events. In December 1958, he and eleven other right-wing ideologues founded the John Birch Society, named after a U.S. intelligence operative executed by the Chinese communists in 1945. The society espoused the bizarre belief that the entire U.S. federal government, including President Dwight D. Eisenhower and numerous high officials such as Central Intelligence Agency (CIA) Director Allen W. Dulles and Supreme Court Chief Justice Earl Warren, were part of a vast communist conspiracy to subvert American ideals and surrender the nation to communism. Welch and his compatriots wielded considerable

**Welch, Robert Henry
Winborne, Jr.**
(1899–1985)

influence within conservative circles of the Republican Party, especially among the supporters of Arizona Senator Barry Goldwater, a fierce anti-communist and the party's 1964 presidential nominee.

Welch's John Birch Society reached its peak of influence in the early 1960s, when fears over *Sputnik 1*, the illusory missile gap, and the Cuban Missile Crisis held the nation in thrall. Welch's organization claimed between 60,000 and 100,000 members with \$5 million in annual contributions during this period. The society closely guarded the anonymity of its members, behaving as secretively as the supposed conspirators it condemned. The 1960 publication of Welch's defamatory Eisenhower exposé, *The Politician*, which named the president as "a willing agent of the Soviet Union," forced a break between Birchites and most mainstream conservatives.

Welch's ideology proved a product of deeply held Cold War fears and McCarthy-era hysteria that resonated well beyond the 1950s. Welch died on 6 January 1985 in Winchester, Massachusetts. His organization survived him, focusing on the threat of "one world government," the growth of federal "socialist" powers, and alleged plans of the United Nations (UN) to take over U.S. society through the "treason" of establishment politicians.

West Germany

See Germany, Federal Republic of

Western European Union

(23 October 1954)

A defensive alliance formed by West European states in 1954 to establish a framework to make the controversial rearming of Germany more palatable. On 17 March 1948, the United Kingdom, France, and the Benelux countries (Belgium, the Netherlands, and Luxembourg) signed the Brussels Treaty (Treaty on Economic, Social and Cultural Collaboration and Collective Self-Defense), which created the European Union (EU). The formation of this alliance was a response to the extension of Soviet power in Central and East-

ern Europe. In addition to pledging mutual support in response to an attack on any member and agreeing to integrate their air defenses and command structure, the signatories agreed to work toward European integration. The EU was superseded by the broader military alliance, the North Atlantic Treaty Organization (NATO), established in 1949.

When General Dwight D. Eisenhower was appointed NATO's first Supreme Allied Commander Europe (SACEUR) in late 1950, the members of EU merged their military organization into NATO. However, the EU continued to exist. When the Korean War broke out in June 1950, there was deep concern about the ability of the United States to fight a major war in Asia while simultaneously bearing the brunt of European defense. Thus, the rearmament of the Federal Republic of Germany (FRG, West Germany) was perceived as critical, but there were misgivings, especially in France. The French were naturally wary of a rearmed Germany on its eastern border, having been invaded from the east three times since 1870. When a proposal to integrate the West German forces into a European Defense Community was rejected by the French parliament in August 1954, British Foreign Minister Anthony Eden proposed including West Germany and Italy in the EU and changing its name to the Western European Union (WEU).

At a special conference in London in September 1954, the signatories to the Brussels Treaty and the United States and Canada agreed to invite West Germany and Italy to accede to the treaty. They did so on 23 October 1954, creating the WEU. West Germany thereby agreed to allow the WEU to exercise control over the size of its military. This concession on the part of the Germans and Britain's commitment to keep its forces in West Germany assuaged the French, who agreed to permit the entry of West Germany into NATO.

The eclipse of the WEU continued. NATO assumed its military role, the Organization for European Economic Cooperation (OEEC) replaced the EU's economic functions, and its social and cultural roles passed to the Council of Europe, which was initiated on 5 May 1949. Nevertheless, the WEU still existed and in fact played a role in the 1956 Saar settlement and continued to serve as a link between the European Economic Community (EEC) and the United Kingdom before Britain joined the European Community in 1973.

The moribund WEU was resurrected in 1984 in Rome to serve as a European counterpoint to NATO. It was viewed as a body in which European countries could consult and coordinate their responses to security issues. WEU members agreed that the foreign and defense ministers of the member states would meet twice annually to discuss the implications of ongoing crises. At a conference in The Hague in 1987, it was agreed that security issues were inseparable from the process of European integration. In effect, the WEU became the security component of the European Union (EU), which had developed from the European Community following the 1991 Treaty of Maastricht.

The WEU was expanded to include Portugal and Spain in 1990 and Greece in 1992. In 1992 Iceland, Norway, and Turkey became associate members of the WEU, and Denmark and Ireland became observers. In 1995

Austria, Finland, and Sweden became observers. In 1994 the category of associate partner was created for countries of Central and Eastern Europe that had signed the Europe Agreement with the EU. Bulgaria, the Czech Republic, Estonia, Hungary, Latvia, Lithuania, Poland, Romania, and Slovakia became associate partners in 1994, and Slovenia became an associate partner in 1996. In 1999 the Czech Republic, Hungary, and Poland became associate members.

Western Sahara

Northwest African region. Western Sahara covers 102,700 square miles and is bordered by Morocco to the north, Algeria to the northeast, Mauritania to the east and south, and the Atlantic Ocean to the west. Western Sahara's territory is contested, and its sovereignty remains in legal limbo. In 1945, it had an estimated population of 160,000 people. Mostly desert and sparsely populated but rich in phosphate resources, this part of Africa became a part of the Spanish Empire in 1884 and was known as the Spanish Sahara.

In the nineteenth-century European scramble for control of Africa, Spain took over the Western Sahara in 1884, primarily because of the proximity of the region to the Spanish Canary Islands and to match French claims of suzerainty in neighboring Morocco and Algeria. The Spanish and French agreed on the border between Morocco and the Spanish Sahara in negotiations conducted in 1900 and 1912. Spanish control was actually limited to coastal areas, as tribes in the interior continued to operate with considerable independence. After World War II, European empires collapsed, and decolonization swept much of the African continent. Northwest Africa was no exception, and Morocco became independent in 1956. There were also independence movements in adjacent areas, such as the bitter conflict for independence in French Algeria. The native Sahrawi of the Western Sahara began a struggle for independence before World War II that intensified in 1956.

The Spanish proved reluctant to commit the resources necessary to maintain control of the Spanish Sahara, and the United States did not view this area as key to the larger Cold War conflict. Independent Morocco remained firmly in the Western camp, and American support for Spanish claims in the region was primarily verbal. Agitation for independence increased after the creation of the Polisario (Front for the Liberation of Saguía el Hamra and Río de Oro) in 1973. Although this was a movement rooted in communist ideology, that fact did not deter the United States from pressuring Spain to accept the recommendations by the United Nations (UN) in 1966 for a referendum to determine the future of the Spanish Sahara. Spain finally withdrew its forces in 1975 after agreements for a partition of the Spanish Sahara between Morocco and Mauritania.

Almost immediately thereafter, both Morocco and Mauritania sent troops to enforce control over their parts of the Western Sahara. The focus of Polisario then turned toward creation of a Western Sahara, independent of both Morocco and Mauritania. Both Morocco and Mauritania wanted access to the abundant phosphate deposits in the area, which were discovered in geological explorations beginning in 1949 and are among the world's largest.

In the 1970s, the issue of Western Sahara's sovereignty was relegated to the back burner of international relations, where it remains. Polisario continues to fight for independence. Mauritania has for the time being withdrawn from the conflict, but Morocco continues to press forward, as it has done since settling 350,000 Moroccans, backed by military force, in the area in 1976. The result of Moroccan policy has been the expulsion of as many as 165,000 Sahrawi natives, many of whom settled in Algeria. The UN has made repeated attempts to resolve the issue, as has the United States, but to no avail.

U.S. Army general, commander of U.S. forces in Vietnam (1964–1968), and U.S. Army chief of staff (1968–1972). Born in Spartanburg County, South Carolina, on 26 March 1914, William Westmoreland graduated from the U.S. Military Academy, West Point, in 1936. Commissioned a lieutenant of field artillery, he served with distinction in World War II and the Korean War and was promoted to brigadier general in November 1952.

**Westmoreland,
William Childs**
(1914–2005)

General William Westmoreland, who commanded U.S. forces in the Republic of Vietnam (ROV, South Vietnam) during 1964–1968. (U.S. Department of Defense)

Westmoreland embarked on an effort to seek out and engage communist forces, defeating them in a war of attrition.

Promoted to major general in December 1956, Westmoreland commanded the 101st Airborne Division (1958–1960) at Fort Campbell, Kentucky. During 1960–1963, he was superintendent of the U.S. Military Academy, West Point. Promoted to lieutenant general, he returned to Fort Campbell to command the XVIII Airborne Corps in 1963. In June 1964 he was named commander of the U.S. Military Assistance Command, Vietnam (MACV), as a full general.

Westmoreland subsequently presided over the steep escalation of the Vietnam War and eventually commanded more than half a million American troops there. He embarked on an effort to seek out and engage communist forces, defeating them in a war of attrition. He had little interest in pacification programs. Westmoreland and planners in Washington never did understand the extent to which Democratic Republic of Vietnam (DRV, North Vietnam) leaders were prepared to sacrifice manpower to inflict American casualties and influence opinion in the United States. Casualty rates heavily unfavorable to the communists, taken as proof by Westmoreland that the war was being won, were nonetheless acceptable to Hanoi.

Westmoreland's overly optimistic predictions regarding the war in late 1967 helped feed public disillusionment in the United States following the heavy casualties of the January 1968 communist Tet Offensive, nonetheless lost by the communist side. Westmoreland interpreted the situation after the offensive as an opportunity and proposed the dispatch of additional troops to Vietnam. President Lyndon B. Johnson, although he sent some emergency reinforcements, denied Westmoreland's request.

In June 1968, Johnson recalled Westmoreland to Washington as chief of staff of the army. Westmoreland held that post until his retirement in July 1972, with much of his energies devoted to planning the transition to an all-volunteer force. Following retirement, he continued to speak out on the Vietnam War, published his memoirs, and ran unsuccessfully for governor of South Carolina. He remained a major and controversial figure in the postwar debate over U.S. involvement in Vietnam. Westmoreland died in Charleston, South Carolina, on 18 July 2005.

U.S. Army general, chief of staff of the army during 1962–1964, and chairman of the Joint Chiefs of Staff (JCS) during 1964–1970. Born in Washington, D.C., on 13 January 1908, Earle Wheeler joined the National Guard at age sixteen and graduated from the U.S. Military Academy, West Point, in 1932. Commissioned in the infantry, during 1937–1938 he served in Tianjin, China. After training troops in World War II, from late 1944 he saw combat service in Europe as chief of staff of the 63rd Infantry Division.

From 1946 to 1949 Wheeler held various staff positions in France and Germany, and in November 1951, now a full colonel, he commanded the 351st Infantry in Trieste, Italy. From then until 1962, he alternated European and U.S. commands with Pentagon staff positions, being promoted to brigadier general in November 1952, major general in December 1955, lieutenant general in April 1960, and full general in March 1962.

In October 1962, President John F. Kennedy appointed Wheeler U.S. Army chief of staff. Almost immediately, his deft handling of racial confrontations at the University of Mississippi in Oxford impressed administration officials. In July 1964, President Lyndon B. Johnson appointed Wheeler chairman of the JCS. He held this position for six years, a record that no subsequent incumbent has yet surpassed. Although he sought to enhance the bargaining power of the JCS by persuading all service heads to maintain a unanimous united front on military issues, in practice decision making often rested with Robert S. McNamara, the dominating secretary of defense.

The most controversial issue facing Wheeler was the Vietnam War, on which he consistently took a strongly hawkish line. He disliked the Johnson administration's gradual escalation of the war, an ad hoc strategy that Wheeler thought likely to prove ineffective, and unavailing pressed political leaders to call up reserve forces to supply the manpower needed to meet American commitments in Vietnam and elsewhere. The JCS never, however, came out forthrightly to their civilian superiors to condemn the graduated response strategy and demand the application of overwhelming force against the enemy, an omission that subsequent historians have fiercely criticized. Nor did the JCS, including Wheeler, express their reservations over the Johnson administration's limited rather than full-scale air bombing campaigns.

Wheeler consistently endorsed commanding General William C. Westmoreland's requests for additional manpower. After the 1968 Tet Offensive, Wheeler urged Westmoreland to demand an additional 206,000 troops, a requirement that he apparently hoped would trigger the call-up of reserves but instead helped to precipitate the Johnson administration's March 1968 decision to open negotiations with a view to withdrawing American forces.

**Wheeler, Earle
Gilmore**
(1908–1975)

General Earle G. Wheeler, chairman of the U.S. Joint Chiefs of Staff, 1964–1970. (U.S. Department of Defense)

Wheeler also supported President Richard M. Nixon's controversial 1969 decision to begin secret air strikes on communist sanctuaries in Cambodia.

After suffering several heart attacks, at least partly due to stress and frustration over Vietnam, Wheeler retired in July 1970. He died in Frederick, Maryland, on 18 December 1975. One significant legacy of his tenure as chairman of the JCS was that subsequent American military leaders came to believe that the United States should not intervene in military situations unless civilian officials were prepared to endorse the employment of forces sufficient to guarantee swift and overwhelming victory.

Whisky on the Rocks Crisis

(27 October 1981)

Grounding of a Soviet submarine on the Swedish coast that caused an international incident in October 1981. Throughout the 1980s, neutral Sweden was plagued by a series of Soviet submarine intrusions into its territorial waters. The most significant and public of these events was the grounding of a Soviet Whisky-class diesel-powered attack submarine inside a restricted zone located near the Swedish naval base at Karlskrona. The sub ran aground on the night of 27 October 1981 and was discovered by a Swedish fisherman as its crew was attempting unsuccessfully to extricate themselves.

When queried by astonished Swedish Navy officials, the Soviet captain declared that a “navigation error” brought the submarine to its resting place. Swedish signals intelligence, however, intercepted orders from a Soviet Kashin-class destroyer instructing the captain to concoct a cover story. Sweden formally complained to Soviet officials and asked them to apologize, pay

for salvage costs, permit a Swedish salvage crew to do the job, and allow the submarine's captain to be interrogated. The Swedish ambassador to the Soviet Union was then confronted by a Soviet deputy foreign minister—and ten silent Soviet admirals behind him—who agreed to the first three demands but refused to allow the submarine captain to be questioned.

Meanwhile, a formidable Soviet naval task force assembled off the Swedish coast in international waters to intimidate the Swedish government. Six days passed. Then, a Swedish radiological survey team discovered that radiation was leaking from the Soviet sub's torpedo tube area. At that point, the Swedes concluded that the Whisky-class boat contained nuclear weapons. Sweden eventually permitted the submarine to depart after having taken full advantage of the crisis for propaganda purposes. It was later determined that the Whisky-class boat had been covertly observing classified Swedish torpedo trials off Karlskrona.

In 1982, unidentified submarine intrusions into Swedish territorial waters increased dramatically. It was assumed that they were of Soviet origin. Small submersibles, some using a tracked propulsion system, infiltrated Swedish minefields, and divers tampered with the mine suspension chains. On a number of occasions, Swedish antisubmarine forces dropped depth charges on suspected submarine contacts. The number of intrusions increased to sixty in 1983, finally tapering off to fifteen in 1986. The reasons behind this Soviet submarine activity are uncertain, although it is assumed that this was prompted by a combination of reconnaissance, intimidation, and training exercises.

U.S. Air Force general and chief of staff (1957–1961). Born in Walker, Minnesota, on 6 August 1902, Thomas White graduated from the United States Military Academy, West Point, in 1920. Before World War II, he served in the U.S. Army's infantry and aviation branches and in a series of attaché positions, among them duty posts in China (1927–1931), the Soviet Union (1934), Italy (1934–1937), and Brazil (1940–1942), where he was stationed when the United States entered World War II. During the war, White served in a series of senior staff positions and rose to become deputy commander of

**White, Thomas
Dresser**
(1902–1965)

the Thirteenth Air Force and commander of the Seventh Air Force in the Pacific theater.

After the war, White first commanded the Fifth Air Force in Japan and then returned to the United States to work in several staff positions on the air force staff. In June 1953 he was named vice chief of staff and promoted to full general. In July 1957 he was elevated to chief of staff of the air force.

During his tenure at the top of the air force, White was a strong advocate of the primacy of strategic nuclear airpower and the development of modern weapons-delivery technologies. He was especially aggressive in pursuing intercontinental ballistic missile (ICBM) capabilities and military operations in space. He was responsible for inserting the term “aerospace” into air force doctrine and using the concept to claim a lead role for the air force in the military use of space. White retired in June 1961 and died in Washington, D.C., on 22 December 1965.

Whitlam, Edward Gough (1916–)

Australian Labour Party politician and prime minister (1972–1975). Born on 11 July 1916 at Kew, Victoria, Gough Whitlam was educated in the Canberra public schools. He graduated with a degree in arts and law from the University of Sydney in 1938 and served in the Royal Australian Air Force during 1941–1945, leaving the service as a flight lieutenant.

After the war, Whitlam returned to the University of Sydney to study law and was admitted to the bar in 1947. He joined the Labour Party in 1945 and entered politics in 1950 when he attempted but failed to win election to the New South Wales state parliament. In 1952 he won election to the national Parliament as a member from Werriwa, a seat he held for more than twenty years. In 1967 he became the head of the Labour Party.

Whitlam led his party to a resounding victory in 1972 and began a reform program based on his campaign platform. His ambitious program included abolishing conscription, withdrawing Australian troops from the Vietnam War, banning South African sports teams from participating in events in Australia, establishing diplomatic relations with the People's Republic of China (PRC), reforming state- and church-run schools, and negotiating aboriginal

land rights. However, his reform agenda was crippled by rocketing oil prices and a stagnant economy.

Against a backdrop of rising unemployment and inflation, members of his party tried to secure \$2 billion in overseas loans and then provided incomplete answers when this activity was discovered. The party was also handicapped by a sex scandal involving a senior Labour Party official. These events and the Australian Senate's blocking of the budget led to a showdown on 11 February 1975, when Whitlam refused to call a general election. Governor-General Sir John Kerr then dismissed the Whitlam government, and the ensuing election brought a new coalition government to power.

Following a second electoral defeat in 1977, Whitlam resigned as head of the Labour Party in 1978. During 1982–1986 he served as ambassador to the United Nations Educational, Scientific and Cultural Organization (UNESCO).

Prime minister of Australia Edward Gough Whitlam, 1973. (Bettmann/Corbis)

U.S. secretary of defense (1953–1957) and president of General Motors (1941–1953). Born on 18 July 1890 in Minerva, Ohio, Charles Wilson earned an electrical engineering degree in 1909 from the Carnegie Institute of Technology. He began his business career at Westinghouse Electric Corporation, where he was involved in the engineering of military radio equipment during World War I. He joined General Motors in 1919 and eventually became its president in 1941. During World War II, he oversaw the company's massive production of military equipment.

President Dwight D. Eisenhower selected Wilson as secretary of defense in January 1953. Wilson's experience running a large corporation with significant dealings with the Department of Defense was viewed as an asset. During his nomination hearing, however, his business background led to controversy, including his initial refusal to sell his General Motors stock and

Wilson, Charles Erwin
(1890–1961)

a statement he made that was famously simplified to “What is good for General Motors is good for the country.”

Wilson shared Eisenhower’s goals of maintaining a strong defense while also reducing the defense budget and reorganizing the armed forces. This was reflected most clearly in the New Look military policy, which relied upon nuclear deterrent forces and strategic airpower in place of mass conventional forces. To implement this, Wilson gradually reduced the defense budget and shifted the defense emphasis to the U.S. Air Force, leading to tensions with the U.S. Army and the U.S. Navy. This policy transformation was most clearly seen in his 1956 decision to give the air force control over intermediate-range ballistic missiles (IRBMs) and intercontinental ballistic missiles (ICBMs) while sharply limiting the army’s role in strategic missile forces.

Wilson resigned his post in October 1957 and returned to the private sector. He died in Norwood, Louisiana, on 26 September 1961.

Wolf, Markus (1923–2006)

Head of German Democratic Republic (GDR, East Germany) intelligence. Born in Hechingen, Germany, on 19 January 1923, the son of communist writer and doctor Friedrich Wolf, Markus Wolf fled with his family to Moscow when Adolf Hitler came to power in 1933. Wolf eventually joined the Communist International (Comintern) and was trained as an operative. He became a member of Walter Ulbricht’s group while in exile and was sent back to Berlin in 1945. Throughout the Cold War, Wolf was known as “the man without a face” because no reliable pictures of him existed.

Wolf initially worked as a journalist, but in 1953 he became one of the founding members of the new foreign intelligence service within the East German Ministry of State Security (Stasi) headed by Erich Mielke. Among Wolf’s tasks was organizing teams of so-called Romeo spies (also referred to as “swallows”) who seduced their targets to obtain information. His agents successfully penetrated the office of Federal Republic of Germany (FRG, West Germany) Chancellor Willy Brandt in the early 1970s, causing an international scandal, and Wolf gained an international reputation as a spymaster. He retired in 1986 and gained a different sort of notoriety as a prominent

supporter of Soviet leader Mikhail Gorbachev's policies of glasnost and perestroika.

When the East German state collapsed in 1989, Wolf was one of the first targets of scrutiny. Although he claims that the U.S. Central Intelligence Agency (CIA) offered him sanctuary, he remained in Berlin. He was subsequently arrested on charges of treason after the reunification of Germany and was tried and sentenced to six years in prison. That conviction was overturned, but he was later tried and convicted on charges of kidnapping East German citizens during the Cold War and received a two-year suspended sentence. He testified in several court cases about his activities and written several books, but he remains unapologetic. Wolf died in Berlin on 9 November 2006.

Outdoor music festival held near Woodstock, New York, on 14–16 August 1969. Billed in advance as the greatest rock concert ever, the event was perhaps the high point of the countercultural movement of the 1960s.

Neither the concert organizers nor the government officials of this small upstate New York community were prepared for the number of people who gathered for the three-day concert. Called together for a musical celebration of peace and love, the watchwords of the counterculture, individuals and groups of all descriptions poured into Woodstock from all over the United States. As the song later written by Joni Mitchell to commemorate the event suggested, most of the participants thought of themselves as coming together with other young people who were “stardust” and “golden.” Observers from outside the counterculture, however, formed an entirely different impression.

The 500,000 people who showed up for the concert quickly overwhelmed the supply of food, the provisions for sanitation, and various other health services. There was no apparent shortage of drugs or alcohol, however. Planned as a camping event, a torrential rainstorm turned the occupied 600-

Woodstock
(14–16 August 1969)

John Sebastian, formerly of The Lovin' Spoonful, performs at the free Woodstock Music and Art Fair in August 1969. Perhaps 450,000 people attended the three-day affair, which is remembered as an important symbol of the liberal spirit of the 1960s. (Henry Diltz/Corbis)

acre area into a huge sea of mud. In spite of these and other inconveniences, including a 20-mile-long traffic jam, the gathering ended without violence and was a huge success in the minds of most participants.

Press coverage focusing on the nudity, drug consumption, and casual sex enjoyed by many participants who often overlooked the real reason for the gathering: the music. There were well over thirty bands at Woodstock that managed to play in spite of enormous technical difficulties. The concert brought together folk, rock and roll, blues, and uncategorized musicians from the western, eastern, and southern United States as well as many groups from England. Several performers were well known when they arrived, while for others, Woodstock launched their careers. Musicians delighted their followers and made many new fans. Among the well-known musicians were Joan Baez; Sly and the Family Stone; Jefferson Airplane; the Who; the Grateful Dead; Blood, Sweat and Tears; Crosby, Stills, Nash, and Young; Santana; Jimi Hendrix; Janis Joplin; Country Joe and the Fish; and the Paul Butterfield Blues Band.

With such a diversity of artists present, the musicians coalesced into something much closer to a movement than had been the case among disorganized countercultural elements before Woodstock. A similar phenomenon occurred with most of the crowd as well. Yet in many ways, Woodstock was the last innocent celebration of the counterculture. Not long after the event, the ravages of the drug culture became more obvious with the deaths of Hendrix and Joplin (among others), who had turned in two of Woodstock's most memorable performances. At the same time,

Woodstock's very success alerted recording companies and other business ventures to the massive market potential of the counterculture, whose messages of peace and love were gradually diluted by commercialization.

An organization of the United Nations (UN), the aim of which is to spur economic growth and curb poverty in the developing world by providing loans, policy advice, and technical assistance. The International Bank for Reconstruction and Development (IBRD), or World Bank as it is more commonly known, came into existence in 1945. Its charter was drafted at the 1944 Bretton Woods Conference. As of 2007, 185 countries were World Bank members. Membership in the World Bank requires prior membership in the International Monetary Fund (IMF).

In July 1944, the UN convened a conference in Bretton Woods, New Hampshire, to discuss economic cooperation after the war. Concerns over monetary stability were most pressing, and thus the IMF was established at the conference. Postwar reconstruction and economic development issues were also addressed, which gave birth to the World Bank. In December 1945, the first members signed its charter, and in 1946 the organization began its lending operations with a loan of \$250 million for French postwar reconstruction. After the initial postwar reconstruction period in Europe, the second task of the World Bank, economic development, became most prominent. The World Bank used its status as a first-class debtor to pass on low-interest loan rates on funds raised on international capital markets to project countries. Among these nations were newly independent states in Africa and Asia.

Among the first World Bank signatories were Poland and Czechoslovakia. In 1950, however, the Soviets forced them to withdraw, as they considered the World Bank an instrument of U.S. economic imperialism. Since then, World Bank members have consisted largely of nations with market-oriented economies. Japan and the Federal Republic of Germany (FRG, West Germany) became members in 1952 and later were among the biggest donors of soft loans. The World Bank Charter specifically prohibits the body from interfering in the political affairs of states receiving World Bank aid and holds that only economic considerations will be used to determine need. Nevertheless, because the seat of Bretton Woods institutions (the World Bank and the IMF) was in Washington, D.C., and the World Bank maintained close relations with American-based banking institutions, politics did come into play over the years. The United States has remained the most influential World Bank member, and the president of the World Bank has always been an American.

Because the establishment of credibility in capital markets was based on World Bank recipient nations' ability to repay loans, in the first fifteen years of its existence the body focused on lending not to the poorest countries, which posed too high a risk of default, but rather to middle- or upper-middle-income countries, such as those in Latin America. This policy, however, did little to alleviate poverty. It also became problematic in terms of Cold War geopolitics. Poverty presented itself as a powerful precondition for successful communist or nationalist movements throughout the developing world.

Delegates from forty-four nations gather for a group photograph outside the Mount Washington Hotel at Bretton Woods, where a conference occurred in July 1944 to discuss programs of economic cooperation and progress after World War II. (Bettmann/Corbis)

In recognition of this, in 1960 the International Development Association (IDA) was created as part of the World Bank. The aim of the IDA was to make concessional loans to the world's poorest nations, funded by contributions of member states. The two largest contributors were the United States and Japan.

During 1962–1968, under the leadership of President George Woods, the World Bank broadened its conception of economic development, which had been formerly restricted to large high-tech projects such as highways or power plants. Because earnings from these initial projects allowed increased funding, the World Bank's new lending policy included longer repayment periods, involved technical and direct assistance, and provided loans for agricultural purposes, which became a major focus of World Bank priorities.

During 1968–1981, Robert McNamara, a former Ford Motor Company chief executive officer (CEO) and secretary of defense under Presidents John F. Kennedy and Lyndon B. Johnson, served as the World Bank's pres-

ident and profoundly changed the institution. During McNamara's tenure, the World Bank became involved foremost in poverty mitigation programs and increased its lending operations from \$1 billion in 1968 to more than \$12 billion in 1981. He also had to cope with the 1971 breakdown of the international monetary system designed at Bretton Woods, the oil price shocks of 1973–1974 and 1979–1980, and the developing world debt crisis. The first oil price shock led to the emergence of the so-called petrodollar market of Organization of Petroleum Exporting Companies (OPEC) countries. Some of these funds were borrowed by the World Bank to finance development projects, especially rural development projects in Africa. Unfortunately, the expansion of lending did not always contribute to the reduction of poverty but, on the contrary, locked many states into a vicious cycle of higher and higher debt with no ability to pay the debt or accruing interest.

Because the World Bank raises its funds from international capital markets, it is largely independent of interventions by member governments. During the 1960s and early 1970s particularly, the World Bank witnessed active intervention by the United States to prevent lending to the Democratic Republic of Vietnam (DRV, North Vietnam) and other U.S. adversaries. This obviously politicized the World Bank. Due to successful World Bank-sponsored development projects in East Asia and Latin America, the 1980s witnessed the emergence of a consensus view of economic development based on free markets. World perception of the East Asian miracle in nations such as the Republic of Korea (ROK, South Korea), Taiwan, and Singapore was largely based on a seminal book published by the World Bank in 1993. The end of the Cold War brought a host of nations clamoring to join the World Bank, many of them in former communist bloc areas. Today, the World Bank focuses on creating sustainable economic growth by combating corruption in recipient nations and by ameliorating the situation of the poorest, most heavily indebted countries with poor growth records.

World Council of Churches

Ecumenical, religious organization dedicated to world peace and the preservation of human rights. As early as 1937, religious leaders had agreed to establish a World Council of Churches (WCC), but World War II delayed the founding of the organization until August 1948, when representatives of 147 churches assembled in Amsterdam to create the WCC. Today, the WCC consists of 342 member churches in 120 countries. The WCC is the institutional expression of the modern ecumenical movement, the goal of which is to achieve Christian unity. WCC-affiliated churches are mainly Protestant (Lutheran, Reformed, Methodist, Baptist), Anglican, and Orthodox churches. The Roman Catholic Church is the only major Christian church that does not belong to the WCC.

The Cold War decided the political framework of the WCC from its start in 1948, when U.S. Secretary of State John Foster Dulles and Czechoslovak theologian Josef Hromádka argued about whether the churches should combat communism or champion such socialist ideals as class justice and equality. The WCC's first secretary-general, Willem Visser 't Hooft, partly settled the issue by advocating that the churches promote reconciliation rather than competition between East and West.

This stance changed, however, after the Third Assembly in New Delhi in 1961, when churches from former colonies in Africa and Asia and Orthodox churches from the Soviet Union and Eastern Europe entered the WCC. These overwhelmed the older member churches and influenced WCC policy in a more anti-West direction. Philip Potter from Dominica, as secretary-general after 1964, was a voice of the former colonies. Western churches now saw themselves confronted with the indignation of developing-world and Eastern churches. Consequently, the WCC adopted the Program to Combat Racism, which proved a valuable contribution to the struggle against South Africa's apartheid government. The WCC also came to the defense of human rights in Latin America during the 1960s–1980s.

In 1975 the WCC Assembly faced a short period of Western criticism over human rights violations in Eastern Europe. However, Orthodox church officials—some of them Komitet Gosudarstvennoi Bezopasnosti (KGB) or Stasi informers—progressive Western officials, and church deputies from Africa and Asia soon stanching this criticism and concentrated on anticolonialist, antiracist, and peace programs. In Boston in 1979 the WCC announced a program to combat militarism that inspired many peace organizations throughout the world, such as Aktion Sühnezeichen in Germany and Pax Christi International.

In 1983 in Vancouver, the WCC sought to combine peace, social justice, and environmentalism into one large conciliar process. This policy bore fruit, particularly in North America, the Netherlands, and the two Germanies. In the West, it tied many loose church groups together. In East Germany it went further, stimulating protest against the regime from within the churches. The conclusion of the conciliar process took place in Seoul in 1990.

By that time, the world had changed significantly. The Cold War had all but ended, and politically driven WCC discussions had receded in importance. The WCC then had to cope with the accusations of East European dissidents and oppressed churches who believed that the WCC had not adequately defended them. Council officials were also confronted with revelations about their spying activities on behalf of communist regimes. Because of these scandals and the WCC's alleged pro-Soviet inclination, the organization lost a great deal of credibility. At the same time, Orthodox churches criticized the WCC because of its progressive positions concerning the ordination of women or the acceptance of homosexuality.

Organization formally established in 1949 ostensibly to promote world peace but actually a front organization of the Soviet Union's Information Bureau of the Communist and Workers' Parties (known in the West as the Cominform). The origins of the World Peace Council (WPC), sometimes known as the World Council of Peace, are rather murky, befitting a communist front organization. Some sources trace its beginning to Poland in 1948, but 1949 is the year in which the WPC began its activities on a significant level. For the entire Cold War, the WPC was strategically located in Helsinki. Publicly, the WPC had a beneficent and worthy goal of promoting peaceful coexistence and nuclear disarmament.

Almost immediately, however, Western nations, particularly the United States, accused the WPC of having ulterior motives—that is, the advancement of Soviet foreign policy goals, disinformation, and propaganda and the infiltration of various Western peace movements. In 1950, Washington openly accused the WPC of being a front organization of the Communist Party of the Soviet Union (CPSU). The U.S. Central Intelligence Agency (CIA) allegedly had evidence that the WPC was being funded by communist bloc nations. This was proven true in 1989 when the WPC admitted to having received 90 percent of its funding from the Soviet Union. At its height in the early 1960s, the WPC may have received more than \$50 million a year from

World Peace Council

Moscow. In an attempt to hide Soviet involvement, money earmarked for the WPC was heavily laundered to make it difficult to trace the source of the funding.

In 1951, the WPC was expelled from France for its fifth-column activities. Some evidence exists that the WPC helped circulate stories in 1952 about the American use of biological weapons in the Korean War, a completely bogus accusation. The WPC worked independently but also played a role in other presumably legitimate peace organizations, mainly through infiltration and co-option. One of its tenets was aggressive insistence on nuclear disarmament, and unilateral Western nuclear disarmament became one of its favorite causes. Tellingly, British philosopher and peace activist Bertrand Russell, who had spurred on the Campaign for Nuclear Disarmament (CND), denounced the WPC in 1958 (the year the CND was born) for having failed to condemn the 1956 Soviet intervention in the Hungarian Revolution.

In spite of its dubious parentage and financing, the WPC attracted many adherents. Quick to condemn U.S. foreign and military policy, the WPC organized anti-Vietnam War protests in several West European nations. The WPC was especially active in Australia, where it orchestrated massive anti-war rallies in the 1960s. At the same time, the WPC remained silent during the 1968 Soviet invasion of Czechoslovakia. The WPC lost some of its luster in the late 1960s, therefore, as the New Left came to distrust Soviet communism. Another blow to the organization came in 1966 when the People's Republic of China (PRC) withdrew from the WPC, citing the growing Sino-Soviet split.

Despite the doubts of many, the WPC continued its work and was no doubt active in the nuclear disarmament movement of the 1980s. The WPC is still in existence today, but it has been badly discredited. The end of the Cold War took away much of its mission.

World War II, Allied Conferences

During World War I (1914–1918), the Entente powers were notably unsuccessful in coordinating their strategic goals and war aims. It was not until Italy's catastrophic failure at Caporetto in November 1917 that a Supreme

British Prime Minister Winston Churchill (*left*), U.S. President Franklin D. Roosevelt (*center*), and Soviet leader Josef Stalin (*right*) at the Yalta Conference. The “Big Three” met in Yalta, Crimea (in what is now the Ukraine), on 4–11 February 1945 to discuss military and political strategies for ending World War II. (Library of Congress)

War Council was established, and it was a similar near-disaster on the Western Front in April 1918 that finally persuaded the British, French, and Americans to name a single Allied commander in chief. This disunity persisted into the postwar period, hindering the Versailles Treaty negotiations in 1919 and helping to prevent the establishment of a lasting peace structure.

Given such abysmal precedents, it is not surprising that British Prime Minister Winston Churchill and U.S. President Franklin D. Roosevelt placed great emphasis on maintaining a smooth working relationship among the Allied powers during World War II. This complex relationship was hammered out in a series of conferences held throughout the war, several involving direct dialogues among the various heads of government. For Churchill and Roosevelt, who prided themselves on their ability to finesse negotiations through charisma, such meetings provided a perfect medium for deal making.

The conference system produced a remarkable degree of harmony between the British and Americans. While relations with Soviet leader Josef

Allied Conferences during World War II

<i>Name</i>	<i>Date</i>	<i>Location</i>	<i>Nations Involved</i>	<i>Function and Outcome</i>
Arcadia Conference	December 1941–January 1942	Washington, D.C., United States	United States, Britain	discuss strategy and cooperative agreements
Casablanca Conference	January 1943	Casablanca, Morocco	United States, Britain	discuss strategy, demand for “unconditional surrender”
Quebec Conference	August 1943	Quebec, Canada	United States, Britain, Canada, China	discuss strategic bombing, Operation OVERLORD, Pacific Theater
Moscow Conference	October 1943	Moscow, Soviet Union	United States, Britain, Soviet Union	creation of Four Power Declaration, establishment of commissions of postsurrender issues
Cairo Conference	November–December 1943	Cairo, Egypt	United States, Britain, Nationalist China	discuss military strategy and postwar territorial changes
Tehran Conference	November–December 1943	Tehran, Iran	United States, Britain, Soviet Union	discuss invasion of France, postwar division of Germany and Poland, and Soviet involvement in war with Japan
Dumbarton Oaks Conference	August–October 1944	Washington, D.C., United States	thirty-nine nations	discuss nature and structure of the United Nations
Yalta Conference	February 1945	Yalta, Ukraine	United States, Britain, Soviet Union	discuss postwar divisions, Soviet resolution to enter war with Japan, Declaration on Liberated Europe
Potsdam Conference	July–August 1945	Potsdam, Germany	United States, Britain, Soviet Union	discuss future of Germany and Eastern Europe, reparations, and Soviet involvement in war with Japan

Stalin, the third principal in the Allied triumvirate, were never so straightforward, it was at least possible to keep the Soviet Union committed to the fight against the Axis powers. The conferences also established workable, if far from ideal, settlements of postwar issues.

When Churchill and Roosevelt first met at Placentia Bay, Newfoundland, in August 1941, there were technically no Allied powers because there was no alliance of which to speak. The United States was still (nominally) neutral, and while the Soviet Union was engaged in a bitter fight with German forces, it was doing so neither with support from nor in coordination with the West. The Newfoundland conference was therefore more symbolic than substantive, although it did produce a powerful statement of democratic principles in the form of the Atlantic Charter. Perhaps more significantly, it led the way for the so-called Three-Power Conference in Moscow (29 September–1 October 1941), at which Churchill and Roosevelt’s representatives, Lord Beaverbrook and W. Averell Harriman, agreed to extend American Lend-Lease support to the Soviets.

After the United States entered the war in December 1941, these tentative contacts were supplanted by full-fledged diplomatic commitments. Churchill traveled to Washington in the immediate wake of the Pearl Harbor attack, and at the resulting Anglo-American conference (code name ARCADIA) during 22 December 1941–14 January 1942, the two nations negotiated the mechanisms through which they would fight the remainder of World War II

together, including the Combined Chiefs of Staff Committee and joint boards to coordinate shipping, raw material usage, and industrial production. In May 1942 the two Western powers drew the Soviets closer to the new alliance system—known since January as the United Nations (UN)—via an Anglo-Soviet Treaty (26 May 1942) and a meeting between Roosevelt and Soviet Foreign Minister Vyacheslav Molotov on 29 May 1942. These somewhat tentative steps helped reduce mutual suspicions between the liberal-capitalist and communist powers.

It should be noted, however, that the American-British relationship was not without tension. At the Second Washington Conference in June 1942, it became clear that American and British leaders had very different ideas about the conduct of the war. Although the Germany First strategy went largely unquestioned, the Americans' eagerness to launch a full-scale invasion of the European mainland as soon as possible clashed with the more cautious British proposal to restrict activities to the periphery until the Axis had been sufficiently worn down. At this stage in the war, the British view tended to predominate, as much for practical reasons as for the cogency of its appeal: the two allies simply lacked the means to launch anything more than secondary operations. It remained vital to keep the Soviets in the fight, however, hence Churchill's August 1943 visit to Moscow, an uncomfortable meeting in which the British leader had to inform Stalin that a second European front remained, for the time being, an impossibility.

The successful Allied invasion of French North Africa in November 1942 was followed by the Casablanca Conference (14–24 January 1943) at which a more confident Roosevelt declared for the first time the Allied policy of unconditional surrender. He and Churchill also approved the round-the-clock strategic bombing campaign against Germany. At a follow-up conference four months later in Washington, D.C. (11–25 May 1943), the Americans agreed to delay a cross-channel attack for another year, but they extracted from the still-skeptical British a deadline for such action of 1 May 1944. The details of this future offensive were elaborated at the first conference between the Western Allies in Quebec in August 1943, at which the top secret plans for the Manhattan Project—the atomic bomb program—were also thrashed out. By mid-1943, with the German assault on the Eastern Front finally blunted at Kursk and with Italy on the verge of collapse after the invasion of Sicily, the main issue for the alliance was not so much the defeat of the Axis but rather how and when that defeat would come.

There remained, nonetheless, great concern about the West's relationship with the Soviet Union. Might Stalin negotiate a separate peace with Germany? And what of the future map of Europe after an Allied victory? Such concerns were central to the four-power Moscow Conference (19 October–1 November 1943), at which representatives of the Big Three powers and Nationalist-controlled China ratified the unconditional surrender doctrine and agreed to the establishment of a postwar organization for global security. To solidify the still-shaky Allied relationship, Churchill and Roosevelt also suggested a personal meeting with Stalin. At the preparatory Anglo-American talks in Cairo in November 1943, Churchill believed that he had persuaded

his American colleague to take a less emphatic line on the timing of the Normandy landings. To his considerable dismay, however, Roosevelt ignored his concession in face-to-face discussions with Stalin at the Tehran Conference (28 November–1 December 1943), where he enthusiastically embraced the cross-channel invasion, Operation OVERLORD. Tehran marked the fulcrum point at which American diplomatic efforts shifted decisively toward a bilateral relationship with the Soviet Union, thereby marginalizing its weaker British ally.

By 1944, conference proceedings were dominated by the shaping of the postwar world. At Bretton Woods (1 July–15 July 1944) and Dumbarton Oaks (21–29 August 1944), the Allies drafted constitutions for the International Monetary Fund (IMF) and the UN, centerpieces of the new postwar financial and political order. Such bold declarations of idealistic principle contrasted with the rather murkier realpolitik conducted at the same time behind closed doors. At the Second Quebec Conference in September 1944, Churchill attempted, without much success, to shift the focus of the Pacific war toward the reconstitution of the British Empire in Southeast Asia. While in Moscow the following month, he made the notorious percentages agreement with Stalin that divided Eastern Europe and the Balkans into western and eastern spheres of influence. This spirit of cynicism or, from another point of view, sober realism pervaded the last meeting among Roosevelt, Stalin, and Churchill at Yalta (4 February–11 February 1945), at which the de facto division of Europe was confirmed and a number of Russo-American agreements on the future shape of East Asia were drawn up without regard for the British or Chinese.

The Allied conference era was rapidly concluding. The war against Germany was in its closing days when the delegates of the new UN met in San Francisco in April 1945 for their inaugural session. A month later President Harry S. Truman traveled to the ruins of Hitler's defeated Reich to meet Churchill, his soon-to-be replacement Clement Attlee, and Stalin at Potsdam from 17 July–2 August 1945. At Potsdam, the three partners delivered to Japan a final ultimatum for surrender and attempted to settle the disputed future of Poland, but despite the glow of certain victory, it was evident that an alliance born of expedience could not survive in the postwar environment. Potsdam marked the effective end of wartime comradeship between East and West and the beginning of forty years of Cold War.

By virtually any measurement, World War II was the most devastating conflict in human history. All the world was touched by it to some degree. The war's economic and financial cost alone has been calculated at perhaps five times that of World War I. In human terms, World War II claimed half again as many military lives: 15 million versus 10 million for World War I. Total deaths from World War II, including civilians, came to 41–49 million people, a figure that would have been much higher without new sulfa and penicillin drugs and blood plasma transfusions.

When the war finally ended, vast stretches of Europe and parts of Asia lay in ruins. Whole populations were utterly exhausted, and many people were starving and living in makeshift shelters. Millions more had been uprooted from their homes and displaced. Many of them had been transported to Nazi Germany to work as slave laborers in German industry and agriculture. Transportation—especially in parts of Western and Central Europe and in Japan—was at a standstill. Bridges were blown, rail lines destroyed, and highways cratered and blocked. Ports, especially in Northwestern Europe and Japan, were especially hard-hit, and many would have to be rebuilt. Most of the large cities of Germany and Japan were piles of rubble and their buildings mere shells.

Some countries had fared reasonably well, however. Damage in Britain was not too extensive, and civilian deaths were relatively slight. Denmark and Norway escaped with little destruction. The rapid Allied advance had largely spared Belgium, although the port of Antwerp had been badly damaged. The Netherlands, however, sustained considerable destruction, and portions of the population were starving. The situation in Greece was also dire, and Poland suffered horribly from the brutal German and Soviet occupation policies and from armies sweeping back and forth across its territory.

Among major powers, the Soviet Union was the hardest hit. Its 27 million dead in the war dramatically affect national demographics to the present day. In 1959, Moscow announced that the ratio of males to females in the Soviet Union was 45 to 55. Aside from the catastrophic human costs, the Germans had occupied its most productive regions, and the scorched-earth policy practiced by both the Soviets and the Germans resulted in the total or partial destruction of 1,700 towns, 70,000 villages, and 6 million buildings, including 84,000 schools. The Soviet Union also lost 71 million farm animals, including 7 million horses. There was widespread destruction in such great

World War II, Legacy of

Among major powers, the Soviet Union was the hardest hit. Its 27 million dead in the war dramatically affect national demographics to the present day.

cities as Kiev, Odessa, and Leningrad. Perhaps a quarter of the property value of the Soviet Union was lost in the war, and tens of millions of Soviet citizens were homeless. Simply feeding the Soviet population became a staggering task. All of this goes far to explain subsequent Russian policies, both internal and external.

Recovery efforts in Europe as well as in Asia centered for several years on the pressing problems of food, housing, and employment. As it turned out, much of the damage was not as extensive as initially thought, and many machines were still operational once the rubble was removed. In a perverse sense, Germany and Japan benefited from the bombing in that they rebuilt with the most modern infrastructure and factories.

With the end of the war, the liberated nations carried out purges of fascists and collaborators. Many were slain without benefit of trial. In France, 8,000–9,000 people were so executed, while afterward 1,500 were sentenced to death and executed following regular court procedures. The victorious Allies were determined to bring to justice the leaders of Germany and Japan, whom they held responsible for the war. Two great trials were held in Nuremberg and Tokyo. Afterward, interest in bringing the guilty to justice waned, even in the cases of those responsible for wartime atrocities. Punishment varied greatly according to nation and circumstance, and working out acceptable formulas that might punish the guilty when so many people had to some degree collaborated with the occupiers proved virtually impossible.

At the end of the war it appeared as if the idealistic, Left-leaning Resistance movements might realize their goals of new political, economic, and social institutions to implement meaningful change. Most people thought that a return to prewar democratic structures was impossible, but the bright hopes were soon dashed. Resistance leaders fell to quarreling among themselves. The fracturing of the Left, as in France and Italy, made room for the return of the old but still powerful conservative elites. The political structures that ultimately emerged from the war, at least in Western Europe, were little changed from those that had preceded it. Even so, extensive social welfare reforms were implemented throughout Western Europe, in part to compensate ordinary people in those nations for their wartime privations. In the United States, wartime rhetoric of democracy and equality encouraged African Americans, many of whom saw military service, to demand an end to segregation and second-class status, which gave new impetus to the civil rights movement. In much of Central and Eastern Europe, where the Soviet Union now held sway, there was significant change including land reform, although this was seldom to the real benefit of the populations involved. Soviet rule also brought widespread financial exactions in the form of war reparations to the Soviet Union and the stifling of democracy.

The war did serve to intensify the movement for European unity. Many European statesmen believed that some means had to be found to contain nationalism, especially German nationalism, and that the best vehicle for that would be the economic integration of their nations, with political unification to follow in what some called a “United States of Europe.” They believed

that a Germany integrated into the European economy would not be able to act unilaterally. Although steps in that direction were slow, such thinking led, a decade after the end of the war, to the European Common Market.

Asia was also greatly affected by the war. In China, the bitter prewar contest between the Chinese Guomindang (GMD, Nationalist) party and the Chinese Communist Party (CCP) resumed in a protracted civil war when Nationalist leader Jiang Jieshi sent troops into Manchuria in an effort to reestablish Nationalist control of that important region. The conflict ended in 1949 with a communist victory. To the west, British imperial India dissolved into an independent India and Pakistan in 1947.

The United States granted the Philippines delayed independence, but in other areas, such as French Indochina and the Dutch East Indies, the colonizers endeavored to continue their control. Where the European powers sought to hold on to their empires after August 1945, there would be further bloodshed. The French government, determined to maintain France as a great power, insisted on retaining its empire, which led to the protracted Indochina War and a bitter insurgency in Algeria. Fighting also erupted in many other places around the world, including Malaya and the Dutch East Indies. Even where the European powers chose to withdraw voluntarily, as in the case of Britain in Palestine and on the Indian subcontinent, there was often heavy fighting as competing nationalities sought to fill the vacuum. Nonetheless, independence movements in Africa and Asia, stimulated by the long absence of European control during the war, gathered momentum, and over the next two decades, much of Africa and Asia became independent.

One of the supreme ironies of World War II is that Adolf Hitler had waged the conflict with the stated goal of destroying communism. In the end, he had gravely weakened Europe. Rather than eradicating his ideological adversary, he had strengthened it. In 1945, the Soviet Union was one of the two leading world powers, and its international prestige was at an all-time high. In France and Italy, powerful communist parties were seemingly poised to take power. The Soviet Union also established governments friendly to it in Central and Eastern Europe. Under the pressure of confrontation with the West, these states became openly communist in the years after World War II. In 1948, the communists made their last acquisition in Central Europe in a coup d'état in Czechoslovakia. Communists also nearly came to power in Greece.

Indeed, far from destroying the Soviet Union and containing the United States, Germany and Japan had enhanced the international position of both. Western and Soviet differences meant that while treaties were negotiated with some of the smaller Axis powers, there were no big-power agreements concerning the future of Germany and Japan. Germany, initially divided into four occupation zones, in 1949 became two states: the Western-style Federal Republic of Germany (FRG, West Germany) and the communist German Democratic Republic (GDR, East Germany). Korea also had been temporarily divided at the 38th Parallel for the purposes of a Japanese surrender. Unlike Germany, which was reunited in 1990, in 2007 Korea still remained divided, another legacy of World War II.

South Korean soldiers patrol their side of the demilitarized zone (DMZ) along the 38th Parallel in Korea in 1990. The DMZ dividing Korea remains one of the world's flash points. (Michel Serboun/Corbis)

Despite the continued importance of secondary powers such as Britain and France, the year 1945 witnessed the emergence of a bipolar world in which there were two superpowers: the United States and the Soviet Union. Added to the confrontational mix was the threat of nuclear war as both governments embarked on a new struggle, known as the Cold War.

Chinese diplomat and vice foreign minister of the People's Republic of China (PRC). Born in Wuhan, Hubei Province, on 6 March 1908, Wu Xiuquan joined the Chinese Communist Party (CCP) as a youth and served in the Red Army—later renamed the People's Liberation Army (PLA)—as a political instructor, translator, and deputy chief of staff. In 1936 he began his diplomatic career as director of the Foreign Affairs Department.

During the Sino-Japanese War and the Chinese Civil War, Wu served on several military commissions in Northwest and Northeast China, where he was responsible for liaison and military coordination programs. After the PRC was established in 1949, he became director of the USSR and Eastern Europe Department of the Ministry of Foreign Affairs, in which capacity he accompanied Foreign Minister Zhou Enlai to Moscow in February 1950 to negotiate the Sino-Soviet Treaty. In November 1950 Wu, as the PRC's special envoy, attended a United Nations (UN) Security Council meeting in which he condemned U.S. Korean War measures in the Taiwan Strait, calling them an invasion of Chinese territory. In 1955 he became the vice foreign minister, a position he held until March 1955, when he was appointed Chinese ambassador to Yugoslavia. He returned home in late 1956 and became a member of the CCP Central Committee and in March 1959 became director of the party's International Liaison Department. He held both posts until the mid-1960s, during which time he led a number of delegations abroad, primarily to communist bloc countries.

In 1966 during the Cultural Revolution, Wu was purged from the government and imprisoned. In 1975 he returned to the public scene, first as deputy chief of the PLA General Staff. In 1980 he was named director of the Beijing Institute for International Strategic Studies and was also named vice foreign minister, in which capacities he played an active role in enhancing the PRC's international status. Wu died on 9 November 1997 in Beijing.

Wu Xiuquan
(1908–1997)

Wu Xueqian

(1921–)

Vice premier and foreign minister of the People's Republic of China (PRC). Born on 19 December 1921 in Shanghai, Jiangsu Province, Wu Xueqian enrolled at the Jinan University in 1939, where he joined the Chinese Communist Party (CCP). Throughout the Sino-Japanese War and the Chinese Civil War, he lived in Shanghai, where he engaged in student underground work. He went on to serve the new PRC as deputy director of the International Liaison Department of the New Democratic Youth League of the CCP's Central Committee until 1953. Shortly thereafter, he became director of the International Liaison Department and simultaneously retained membership in both the New Democratic Youth League and the National Committee of the Federation of Democratic Youth. He held these posts until the mid-1960s, during which time he led a number of youth delegations abroad to foster closer ties among the PRC and other socialist nations as well Asian and African nations.

In 1967, as a result of the Cultural Revolution, Wu was relieved of all of his posts and was forced into private life. In early 1978 he reemerged publicly and resumed his former position in the International Liaison Department. From May 1982 to April 1988 he served as the PRC's foreign minister, during which time he accompanied PRC leaders on visits abroad, notably to Western Europe and North America. He also reinforced the Sino-American rapprochement begun by his predecessor. In April 1988 he became vice premier and continued his efforts to boost China's international standing. He relinquished the vice premiership in March 1993, although he retained his membership in the CCP Central Committee and Politburo, where he continues to serve.

Wyszyński, Stefan, Cardinal

(1901–1981)

Roman Catholic prelate and prominent Polish dissident. Born on 3 August 1901 in Zuzela, Poland (then a part of the Russian Empire), Stephan Wyszyński studied at the Włocławek seminary and was ordained a priest in August 1924. He continued his studies at the Catholic University in Lublin and earned a PhD in sociology and ecclesiastical law in 1929. He then returned to Poland, where he taught at the Włocławek seminary and edited a theological review.

Cardinal Stefan Wyszyński at the Vatican, October 1958. (Bettmann/Corbis)

During World War II, he served as a chaplain in the Polish underground army.

In 1946, Wyszyński was named bishop of Lublin. Two years later he became archbishop of Gniezno and Warsaw, making him primate of the Polish Roman Catholic Church. In 1953 he was named a cardinal. He was a fierce opponent of the postwar Polish government, which used Stalinist methods to seize and retain power. Nevertheless, in 1950 Wyszyński signed an agreement with the government that ostensibly allowed considerable freedom to the Roman Catholic Church in return for its tacit support of the Polish government. But Polish authorities refused to respect the agreement. Communist

officials in fact severely repressed organized religion. In 1953, Wyszyński issued a public repudiation of the government and declared an end to the Church's accommodative policies. He was subsequently arrested and imprisoned during 1953–1956.

In 1956, Wyszyński resumed his duties under the new anti-Stalinist government of Władysław Gomułka. The years after 1956 were less repressive than the early postwar years, but Wyszyński still faced constant challenges from the communist government. The cardinal maintained cordial and close relations with Rome and participated in Vatican Council II.

In 1978, when Pope John Paul II became the Roman Catholic Church's first Polish pope, the new pontiff praised Wyszyński for his steadfast commitment to human rights and thanked him for his sacrifices. In 1979, John Paul II made a triumphant pilgrimage to his native Poland, a true high point in the cardinal's life. Wyszyński was disappointed, however, when the pope's visit did not bring about any immediate change in the Polish government's policy toward the Church. Wyszyński died in Warsaw on 28 May 1981.

Indian and Pakistani military leader and president of Pakistan (1969–1971). Born on 4 February 1917 in Peshawar, India (now Pakistan), Agha Mohammad Yahya Khan graduated from Punjab University and the Indian Military Academy at Dehra Dun. Commissioned in the Indian Army in 1938, during World War II he served with the British Army in North Africa, Iraq, and Italy.

Upon the creation of Pakistan in 1947, Yahya Khan cofounded the Pakistan Staff College at Quetta. He also helped to bring Muhammad Ayub Khan to power. During the Second Pakistan-India War in 1965, Yahya Khan commanded an infantry division. The following year he was appointed commander in chief of the Pakistani Army.

On 25 March 1969, civil unrest prompted Muhammad Ayub Khan, the president of Pakistan, to declare martial law. He promptly resigned after naming Yahya Khan chief martial law administrator and president. Yahya Khan moved swiftly to abolish the 1962 constitution and dissolve the National Assembly. He served as president for the next two years.

On 29 March 1970 Yahya Khan promulgated the Legal Framework Order of 1970, which functioned as an interim constitution and under which an election could be held. Then in December 1970 Yahya Khan oversaw the first free elections in Pakistani history. The Awami League led by Sheikh Mujib-ur-Rahman captured 160 out of 165 seats in East Pakistan but no seats in West Pakistan. Instead of brokering a compromise between Rahman and Zulfikar Ali Bhutto, majority leader of the West Pakistani Assembly, Yahya Khan used military force to repress the opposition in East Pakistan, and a civil war ensued. The Third Pakistan-India War (3–17 December 1971) began when India interceded. West Pakistan was defeated, and East Pakistan seceded to become Bangladesh in 1971.

Yahya Khan resigned the presidency on 20 December 1971 and was replaced by the Pakistani foreign minister Zulfikar Ali Bhutto. In 1972 Bhutto placed Yahya Khan under house arrest. Yahya Khan died on 10 August 1980 in Rawalpindi, Pakistan, after suffering a stroke.

Yang Shangkun
(1907–1998)

Politician, diplomat, and president of the People's Republic of China (PRC). Born in 1907 in Shuangjiang, Sichuan Province, Yang Shangkun enrolled at the Shanghai University in 1925 and joined the Chinese Communist Party (CCP) in 1926. In 1927 he continued his studies at the Sun Yixian University, graduating in 1930. Returning to China in 1931, he served in the Red Army as director of the Political Department. During the Sino-Japanese War and the Chinese Civil War, he served in North China, engaging in the CCP's organizational, propaganda, and liaison efforts.

Upon the establishment of the PRC in 1949, Yang became director of the General Office of the CCP Central Committee and handled the party's daily administrative affairs, a post that familiarized him with all aspects of party operations. In 1966 he was purged during the Cultural Revolution and imprisoned. In 1979 he returned to power, first as secretary and then as vice governor of Guangdong Province. In 1981 he transferred to Beijing as a Politburo member and permanent vice chairman of the Central Military Commission, in which capacities he became active in foreign affairs, leading a number of delegations abroad to promote the PRC's international standing. In 1988 he was elected the PRC's president and concurrently appointed the first vice chairman of the Central Military Commission, thus becoming the second most powerful figure in Chinese politics after Deng Xiaoping. On 4 June 1989, Yang ordered the People's Liberation Army (PLA) to crack down on the prodemocracy student demonstrators in Tiananmen Square. In 1993 he retreated from his duties. Yang died on 14 September 1998 in Beijing.

Chinese writer and Communist Party official in the People's Republic of China (PRC), best known as a member of the Gang of Four. Born in Zhuji, Zhejiang Province, in 1931, Yao Wenyuan was the son of a well-known leftist writer. Yao too became a writer and a literary critic in Shanghai. As a member of the Shanghai group known as the Proletarian Writers for Purity, he became a champion of the orthodox Chinese Communist Party (CCP) literary line against liberalism. He opposed the Hundred Flowers movement and became known as "the Cudgel" for his hard-line approach (later he was dubbed "the Killer by Pen").

In November 1961 Yao published an article, "Notes on the New Historical Drama 'Hai Rui Dismissed from Office,'" first in *Wenhui bao* and then, after considerable opposition, in the *People's Daily*. The article was a critique of a play written by former vice mayor of Beijing Wu Han that was an allegory in support of former Defense Minister Peng Dehuai, who had been dismissed in 1959 by communist leader Mao Zedong for his criticism of the Great Leap Forward. In short, the play was sharply critical of Mao, and Yao's article was a defense of Mao. Believed to have been ordered by Mao, Yao's article in effect launched the Cultural Revolution in China.

Closely identified both with Mao and his wife Jiang Qing, a former Shanghai actress, in October 1966 Yao joined the Cultural Revolution Group headed by Jiang and Chen Boda that directed some of the more violent aspects of the Cultural Revolution. Together with Jiang, Wang Hongwen, and Zhang Chunqiao, Yao formed what became known as the Gang of Four. In April 1969 he became a member of both the Politburo and the Central Committee of the CCP, where he directed the regime's propaganda efforts.

Expelled from the CCP and arrested in October 1976, Yao was brought to trial with the other members of the Gang of Four and charged with responsibility for the worst excesses of the Cultural Revolution. According to the Chinese government, he also admitted forging documents that led to the purge of Deng Xiaoping, later China's leader. In October 1981 Yao received twenty years in prison, the lightest sentence of the four defendants. He was released in October 1996. He spent the remainder of his life working on a history of China. Following the death of Zhang Chunqiao in April 2005, Yao became the last surviving member of the Gang of Four. Yao died in Shanghai of diabetes on 23 December 2005.

Yeltsin, Boris (1931–2007)

Soviet reform politician during the last years of the Soviet Union and first elected president of Russia (1991–1999). Born on 1 February 1931 in Butka in the Sverdlovsk Oblast in the Ural Mountains, Boris Nikolayevich Yeltsin graduated from the Urals Polytechnical Institute in 1955 as a construction engineer. He joined the Communist Party of the Soviet Union (CPSU) in 1961 and worked on various construction projects in the Sverdlovsk area until 1968.

Yeltsin rose through the party ranks in the Sverdlovsk Oblast Party Committee. He was elected the region's industry secretary in 1975 and first sec-

Boris Yeltsin, shown here campaigning for the presidency of the Russian Federation on 1 June 1991. (Reuters/Corbis)

retary in 1976. During 1976–1985, he moved through the national ranks of the CPSU. He served as a deputy in the Council of the Union (1978–1989), a member of the Supreme Soviet Commission on Transport and Communication (1979–1984), a member of the Presidium of the Supreme Soviet (1984–1985), and chief of the Central Committee Department of Construction in 1985. The new CPSU general secretary, Mikhail Gorbachev, summoned Yeltsin to Moscow in April 1985 as part of a team of reform-minded party members.

Gorbachev asked Yeltsin to reform the Moscow City Committee. Yeltsin began to clear the city's Party Committee of corrupt officials, which endeared him to Muscovites. Eventually, he became dissatisfied with the slow pace of the perestroika reforms and openly criticized the CPSU officials. This was directed at the power base of Yegor Ligachev, who endorsed a moderate party-led reform. In 1987, Yeltsin resigned to force Gorbachev to take sides. Gorbachev needed Yeltsin to counterbalance Ligachev's growing skepticism and rejected his resignation, asking him to curb his critiques. Yeltsin ignored Gorbachev's plea. Thus, Gorbachev allowed Ligachev to continue the campaign against Yeltsin, which finally led to Yeltsin's dismissal as first secretary of the Moscow Party Committee. In 1988 Yeltsin was also expelled from the Politburo, but he remained in Moscow as the first deputy chair of the State Committee for Construction.

Yeltsin went on to win a landslide victory in the newly established Congress of People's Deputies of the Russian Soviet Federated Socialistic Republic (RSFSR) in March 1989. In May 1990 he became chairman of the RSFSR. By 12 June 1990 the RSFSR, along with the other fourteen Soviet republics, had declared its independence. Yeltsin was directly elected to the newly created office of president of the now-independent RSFSR on 12 June 1991. He then demanded Gorbachev's resignation. Gorbachev refused to step down, but he did agree to sign a new union treaty in late August 1991.

Hard-line conservative forces within the CPSU tried to prevent the signing of the treaty, which would lead to the dissolution of the Soviet Union. On 19 August 1991, the conservatives dispatched troops to key positions around Moscow and held Gorbachev under house arrest. Yeltsin climbed atop one of the tanks surrounding the parliament building, denounced the CPSU coup as illegal, and called for a general strike. He and his supporters remained in the parliament building as they rallied international support. For three days, thousands of people demonstrated in front of parliament, holding off an expected attack on the building.

The failed putsch and massive street demonstrations quickly destroyed the credibility of Gorbachev's perestroika and glasnost reforms. On 24 December 1991 the RSFSR and then later Russia took the Soviet Union's seat in the United Nation (UN) Security Council. The next day Gorbachev resigned, an act that officially dissolved the Soviet Union. Yeltsin, as president of Russia, immediately abolished the CPSU. In the meantime, he had negotiated with the leaders of Ukraine and Belarus to form the Commonwealth of Independent States as a federation of most of the former Soviet republics.

Yeltsin climbed atop
of one of the tanks
surrounding the
parliament building,
denounced the
CPSU coup as
illegal, and called
for a general strike.

With a stagnating economy, a hostile legislature, and an attempted coup, Yeltsin was not expected to win reelection in 1996. However, he staged an amazing comeback. Despite becoming increasingly unpopular and suffering from ill health, he continued as president of Russia until 31 December 1999, when he surprisingly named Vladimir Putin acting president. Yeltsin died in Moscow on 23 April 2007.

Yemen

Middle Eastern nation located in the southern part of the Arabian Peninsula. The Republic of Yemen borders Saudi Arabia to the north, Oman to the east, the Arabian Sea and the Gulf of Aden to the south, and the Red Sea to the west. Not far off the western and southern coasts of the country are the East African nations of Eritrea, Djibouti, and Somalia. Yemen's total area encompasses 203,846 square miles and is slightly larger than twice the size of the U.S. state of Wyoming. It had an estimated 1945 population of 4.77 million people.

Since 1918, Yemen had been divided into North Yemen (Mutawakkilite Kingdom of Yemen during 1918–1962 and the Yemen Arab Republic during 1962–1990) and South Yemen (People's Republic of Yemen during 1967–1990). In 1970, when South Yemen formally declared itself a Marxist state, many hundreds of thousands of Yemenis fled north. This precipitated a virtual civil war between North and South Yemen that would endure for twenty years. Not until 1990 did the two states reconcile, forming a single state known as the Republic of Yemen. Since then, there have been several unsuccessful attempts by groups in southern Yemen to secede from the republic. The most serious secessionist move came in 1994.

As with most areas in this part of the world, Yemen's climate is characterized by torridly hot weather especially in the eastern desert regions, where rainfall is scant. The western coast has a hot and somewhat humid climate, while the mountainous regions in western Yemen are more temperate and have more rainfall. Much of the country can be characterized as a desert. Topographically, Yemen features a narrow strip of coastal plains and immediately behind them low hills that give way to high mountains. High-desert plains farther east descend to hot desert in the interior. The nation's chief

resources include oil, marble, fish, minor coal deposits, gold, lead, nickel, and copper. The bulk of Yemen's arable land is located in the western part of the country and comprises less than 3 percent of the entire landmass.

Yemen's population is overwhelmingly Muslim and of Arabic descent. Arabic is the official language. Of the nation's Muslims, about 52 percent are Sunni Muslims and 48 percent are Shia Muslims. The Sunnis live principally in the southern and southeastern parts of the country. Yemen has one of the world's highest birth rates, and as a result its population as a whole is quite young. Indeed, some 46 percent of the population is age fourteen and under, while less than 3 percent is over age sixty-five. The median age is sixteen years.

Yemen is a representative republic that has a popularly elected president and a prime minister appointed by the president. The executive branch shares power with the bicameral legislature. The legal system in Yemen is a mix of Islamic law, Turkish law (a vestige of the Ottoman Empire), English common law, and local tribal dictates. Nevertheless, Islamic laws almost always take precedence in accordance with the Koran. Ali Abdullah Saleh has served as president of the Republic of Yemen since the 1990 unification. Before that, he had served as the president of North Yemen since 1978.

Recorded human habitation in the region of Yemen can be traced as far back as the ninth century BC. Yemen's strategic location on the Red Sea and the Gulf of Aden has made it an important crossroad for East-West trade as well as for trade from Asia to Africa. Around the seventh century AD, Muslim caliphs began to exert their influence over the region and gradually ceded authority to dynastic imams, who retained the caliph's theocratic government until the modern era. Over the centuries, Egyptian caliphs also held sway in Yemen. The Ottoman Empire controlled some or most of Yemen sporadically between the 1500s and 1918, when the empire crumbled as a result of World War I. Ottoman influence was most keen in northern Yemen. In southern Yemen, imams tended to control the local scene, although they were usually overseen to some extent by the central authorities in Constantinople (Istanbul).

In 1918 North Yemen won its independence from the Ottoman Empire and finally became a republic in 1962, which precipitated an eight-year-long civil war. The conflict pitted royalists in the Mutawakkilite Kingdom of Yemen against republicans. In southern Yemen until 1967, the British dominated, having established a protectorate in Aden in 1839. Soon, the British created a formal colony that incorporated Aden and southern Yemen. As such, the British had great command of the strategic waterways of the region. After World War II, however, Yemenis in the southern part of the country came to resent the British presence, and before long they had organized an anti-British insurgency with aid from the Egyptians.

Several attacks against British interests sponsored by Egypt's government under Gamal Abdel Nasser as well as by insurgents from North Yemen essentially forced the British out in 1967. The former British colony now became South Yemen. In 1970, the South Yemen government declared a Marxist state and aligned itself squarely with the Soviet Union. As a result,

several hundred thousand South Yemenis fled to North Yemen, overwhelming that nation's resources. The South Yemen government did nothing to stop the mass exodus.

Before 1962, the ruling imams in North Yemen pursued an isolationist foreign policy. That country did have commercial and cultural ties with Saudi Arabia, however. In the late 1950s, the Chinese and Soviets attempted to lure North Yemen into their orbit with technological missions. By the early 1960s, North Yemen had become dependent upon Egypt for financial and technical support. Later still, the Saudis supplanted the Egyptians as the main conduit of support. During the civil war, the Saudis backed the royalists while Egypt and the Soviet Union aided the republicans. In the 1970s and 1980s, many North Yemenis found jobs in neighboring Saudi Arabia, boosting North Yemen's flagging economy.

After 1967, when South Yemen declared itself a Marxist state, it maintained tense—and sometimes hostile—relations with its conservative Arab neighbors. In addition to the ongoing conflict with North Yemen, South Yemeni insurgents engaged the Saudis in military actions first in 1969 and again in 1973. They also openly aided the Dhofar rebellion in Oman.

After the 1990 unification, the Republic of Yemen has generally pursued a pragmatic foreign policy. It is a member of the Non-Aligned Movement, is a signatory to the Nuclear Non-Proliferation Treaty, and attempted to stay impartial during the 1991 Persian Gulf War and subsequent wars in the Middle East. Its noncommittal stance in these areas, however, has not endeared it to the Gulf States or Western nations.

Yemen is among the poorest nations in the Arab world. The long civil war of 1962–1970 wrought great havoc on an already struggling economy, and the agricultural sector has been hit by periodic droughts. Coffee production, once a mainstay of northern Yemeni crops, has fallen off dramatically. The Port of Aden in southern Yemen suffered dramatic curtailments in its cargo handling after the 1967 Six-Day War and the British exit that same year. Since 1990, the return of hundreds of thousands of Yemenis from the Gulf States because of Yemen's nonalignment in the Persian Gulf War brought with it staggering unemployment. Reduced aid from other nations at this time and a brief secessionist movement in 1994 conspired to keep Yemen's economy depressed. Yemen does have significant oil deposits, but they are not of the same quality as Persian Gulf oil and thus have not brought in a windfall profit. Yemen does have major natural gas reserves, but that industry remains underdeveloped. As of 2006, the Yemeni government continues to struggle with high inflation, excessive spending, and widespread corruption.

Civil conflict in North Yemen (Yemen Arab Republic) lasting from 1962 until 1970 that pitted royalist forces of the Mutawakkilite Kingdom of Yemen against those seeking to establish a republic. In addition to the ongoing civil divisions in North Yemen (southern Yemen was controlled by Great Britain until 1967), the immediate catalyst of the civil war was the death of Ahmad bin Yahya in September 1962. Ahmad was the ruling imam in the region and represented the hereditary monarchy, which had controlled northern Yemen for many years. His repressive reign, which had begun in 1948, had gained few new adherents during its twenty-four-year history. Ahmad harbored visions of uniting all of Yemen but was unable to garner sufficient support to end British rule in the southern part of the country. In 1955, he had to fend off a serious coup effort instigated by two of his brothers and disgruntled army officers.

To bolster his position, Ahmad entered into a formal military pact with Egypt in 1956 that placed Yemeni military forces under a unified command structure. That same year, he also named his son Muhammad al-Badr crown prince and heir apparent and established formal ties with the Soviet Union. In 1960, Ahmad left North Yemen to seek medical treatment. In his absence, Crown Prince al-Badr began to implement several reform measures that his father had promised to implement but as yet had gone unfulfilled. Outraged that his son made such moves without his knowledge or assent, Ahmad promptly reversed the measures when he returned home. This did not, of course, endear him to his subjects, and several weeks of civil unrest ensued, which the government quashed with a heavy hand. The 1955 coup attempt and growing resentment toward Ahmad rendered the last years of his rule both paranoid and reactionary.

Ahmad died at age sixty-seven on 18 September 1962, and al-Badr then became imam. One of his first official acts was to grant a blanket amnesty to all political prisoners who had been imprisoned during his father's reign. He did so in hopes of maintaining power and keeping the kingdom's detractors at bay. But al-Badr's tactics did not stave off discord for long. On 26 September 1962 Abdullah as-Sallal, commander of the royal guard and recently appointed to that post by al-Badr, launched a coup and declared himself president of the Arab Republic of Yemen.

Al-Badr, meanwhile, managed to escape an assassination attempt and went to the northern reaches of the kingdom, where he was able to stir up support among the royalist tribes there. Within days, clashes began between royalist fighters and the republicans that soon grew into a full-scale civil war. Soliciting support from another hereditary kingdom, al-Badr gained the

Yemen Civil War (1962–1972)

support of Saudi Arabia, the proximity of which to northern Yemen made it a natural ally. As-Sallal, meanwhile, rallied republican forces and had soon gained the support of Egypt. Both the Saudis and Egyptians dispatched military troops to Yemen, adding to the destructiveness of the civil conflict.

By the mid-1960s, the royalists had also enlisted the help of Iran and Jordan, while the Soviets and several other communist nations backed the republicans. From a larger perspective, the Yemen Civil War saw the more conservative Middle East regimes (e.g., Saudi Arabia, Iran, and Jordan) pitted against the more radical and Pan-Arab forces in the region, as represented by Egypt's Gamal Abdel Nasser and the Soviet Union. The conflict also became politicized along Cold War lines, as the United States, Great Britain, and other Western powers tended to side with the royalists.

On several occasions, the United Nations (UN) attempted to mediate an end to the bloodshed, but the regional and international dynamics of the struggle made this task nearly impossible. At the height of its involvement in the Yemen Civil War, Egypt, which had sent the most forces into Yemen, was fielding some 75,000 troops there. This was not only acting as a huge drain on the Egyptian treasury and military but was also stoking inter-Arab enmity. Saudi-Egyptian relations were particularly tense. It was in fact the 1967 Six-Day War and Egypt's ignominious defeat in that conflict that began to turn the tide in the civil war. After June 1967, a weakened and chastened Nasser was compelled to begin withdrawing his troops from Yemen. That same year saw the British withdrawal from southern Yemen. This presented a diplomatic opening that would ultimately lead to an end to the fighting in 1970.

By 1969, both sides in the struggle agreed that the first step to ending the war would be the withdrawal of all foreign troops from Yemeni territory. Both Egypt and Saudi Arabia agreed. The removal of foreign forces ultimately led to the 1970 compromise that allowed for the continuation of the republican government in which several key positions would be occupied by royalists. There was, however, no role for Imam al-Badr, and part of the compromise stipulated that he and his family leave the country. Al-Badr sought exile in Britain, where he lived until his death in 1996. Sadly, the Yemen Civil War left deep scars on that country's society and politics that have not yet healed. Worse yet, it is estimated that between 100,000 and 150,000 Yemenis lost their lives in the eight years of fighting.

Japanese diplomat and prime minister (1946–1947, 1948–1954). Born in Yokosuka, Kanagawa Prefecture, Japan, on 22 September 1878, Yoshida Shigeru graduated from Tokyo Imperial University in 1906. He entered the Ministry of Foreign Affairs and served as deputy foreign minister in 1928 and then ambassador to Italy and Great Britain during 1936–1938. During World War II, he tried to bring the war to an end with an early Japanese surrender but was arrested by the military police.

During the U.S. occupation after the war, Yoshida headed the Japan Liberal Party and served as prime minister during May 1946–May 1947 and again during October 1948–December 1954. While he was in office, the Cold War heated up, altering U.S. policy toward Japan. President Harry S. Truman's administration recognized Japan's geopolitical importance in East Asia and changed its policies to revitalize Japan's economy, retain the use of Japanese military bases, and rearm Japan. Demand for Japanese rearmament became far stronger after the outbreak of the Korean War in June 1950.

In January 1951, Yoshida held a series of talks with U.S. diplomat John Foster Dulles, assigned to negotiate a peace treaty with Japan. Dulles wanted Japan to conclude a peace treaty as a U.S. ally and to maintain adequate armed forces. Yoshida agreed to an alliance with the United States but resisted Dulles's request for rearmament. Yoshida ultimately compromised with Dulles and secretly promised to create Japanese security forces. On 8 September 1951, Yoshida signed the San Francisco Peace Treaty. That same day, he also signed the United States–Japan Security Treaty.

In October 1952, Yoshida created the National Security Forces, which succeeded the National Police Reserve established in 1950. With continuous pressure from Washington to strengthen defense forces, he transformed the National Security Forces into the Self-Defense Forces in June 1954. A few months before this, the U.S.-Japan Mutual Defense Assistance Agreement was signed, strengthening military and economic ties between the two nations. By that time the Japanese economy was flourishing, as the Korean War had pumped billions of dollars into Japanese factories.

Yoshida's diplomacy put top priority on Japanese economic development, followed by retaining defense forces at the minimum level possible. Yoshida remained a strong supporter of the Guomindang (GMD, Nationalist) government on Taiwan. In domestic matters, he increased centralization of government.

The year 1954 saw the biggest challenge to his diplomacy. The *Lucky Dragon* incident in March caused massive protests against U.S. testing of nuclear weapons. The *Lucky*

Yoshida Shigeru (1878–1967)

Yoshida Shigeru served as prime minister of Japan from 1946–1947 and 1948–1954. Because he was uninvolved in Japan's wartime government, he was able to emerge as the leader and rebuilder of the nation after the conflict. (Library of Congress)

Dragon was a Japanese fishing vessel that had become caught in radioactive fallout after an American nuclear test in the Pacific Ocean.

Yoshida's political power and popularity decreased during this tumultuous year, and his premiership came to end in December 1954. He died on 20 October 1967 in Oiso, Kanagawa Prefecture, Japan.

Yugoslavia

Former Southeast European nation. Yugoslavia, with a 1945 population of some 15 million people, covered roughly 98,000 square miles, about the size of the U.S. state of Wyoming. It was bordered by Italy, Austria, and Hungary to the north; Romania and Bulgaria to the east; Greece and Albania to the south; and the Adriatic Sea to the east.

During the twentieth century, two states bearing the name “Yugoslavia” exemplified the international standard for ethnic strife and political fragmentation. Over the course of its seventy-year history, Yugoslavia staggered from crisis to crisis, swapping one volatile form of political union for another. The Kingdom of Serbs, Croats, and Slovenes, renamed in 1929 the Kingdom of Yugoslavia (the land of the South Slavs), was created in the aftermath of World War I and disintegrated under German invasion in 1941. The Federal People's Republic of Yugoslavia, renamed in 1963 the Socialist Federal Republic of Yugoslavia, dissolved on its own in 1991 into a brutal civil war that for the first time since World War II unleashed in Europe the horrors of genocide and concentration camps.

The survival of both states depended on the political, social, and cultural harmony of the multinational, multiethnic, and multireligious population of the federation who during the Cold War lived an ostensibly peaceful life in six republics (Bosnia and Herzegovina, Croatia, Macedonia, Montenegro,

Serbia, and Slovenia) and two autonomous regions (Vojvodina and Kosovo). The breakdown of relations between Orthodox Serbs and Roman Catholic Croats badly weakened the interwar Yugoslavia, making it easy prey for the Axis powers in 1941. After World War II, Josip Broz Tito and the communists subdued the interwar nationalistic tensions and put Yugoslavia on the world map as a socialist, nonaligned, self-managed alternative to Western capitalism and Soviet-style communism. In the wake of Tito's thirty-five-year benevolent dictatorship, the apparent lack of common values accentuated historical differences that were exploited by power-hungry politicians, who hastened the bloody collapse of the country in the early 1990s.

Eleven percent of Yugoslavia's 1940 population had been killed in World War II, and that conflict and subsequent resettlements completely disrupted the region's agriculture, industry, communications, and infrastructure, bringing about widespread suffering and starvation. The communist-led Partisans under Tito emerged from the war as sole rulers of Yugoslavia without significant Soviet assistance. During 1945–1948, Tito's government adopted a Soviet-style constitution that provided for a federation united under a strong central government. Meanwhile, the Yugoslav Communist Party (KPJ) adopted a Stalinist model for rapid industrial development. Through forced collectivization, nationalization, and the establishment of a strict central planning system, the government took control of virtually all of the country's wealth.

The communist regime further consolidated its grip on power by punishing wartime collaborators and eliminating political and religious opposition. The show trial and execution of Chetnik leader General Draža Mihajlović in Belgrade and the Zagreb trial and imprisonment of Archbishop Aloysius Stepinac sent strong signals to all opponents of the new regime, strengthening a siege mentality that remained a major hallmark of postwar Yugoslavia. Tito and his communist comrades recognized clearly the dangers inherent in national and religious chauvinism. To generate social tolerance, the communists introduced the brotherhood and unity concept under the national ideology of Yugoslavism as a substitute for individual ethnic nationalisms, but their efforts ultimately foundered.

Although Yugoslavia's communists began as devoted Stalinists, the image of Yugoslavia as the Soviets' staunchest ally changed dramatically in reaction to the Soviet attempt to dominate all domestic and foreign aspects of Yugoslavian affairs. In the wake of the Yugoslav-Soviet split, by 1948 Tito was seen as a hero in the West. Yugoslavia's ensuing expulsion from the Cominform (Communist Information Bureau) and Comecon (Council for Mutual Economic Assistance) led to a crisis that convinced Yugoslav leaders that a Soviet-led invasion was imminent. American and British assistance kept Tito afloat, saved the country from starvation in 1950, and contained much of Yugoslavia's trade deficit over the next decade. Yet neither Western economic aid nor U.S. military assistance resulted in Yugoslavia moving closer to the Western bloc. American officials wondered if the split with the Soviets was permanent, while Tito distrusted the United States and fretted over the Soviet reaction to American aid.

The renaming of the KPJ as the League of Communists of Yugoslavia in 1952 as well as the introduction of a new economic mechanism, workers' self-management, and market socialism of the 1960s confirmed that Yugoslavia was pursuing a unique, un-Soviet version of socialism. Yugoslavia's market socialism was based on worker-managed enterprises that used domestic and foreign forces as a management guide. Tito undoubtedly proved to be the most skillful politician in Yugoslavia's history because of his role in founding the Non-Aligned Movement, which became the keystone of the country's foreign policy during the Cold War. Yugoslavia's role in the movement stoked the competition between the Western powers and the Soviet bloc, and Tito encouraged the competition for his political gain while extracting valuable economic concessions from both sides. Despite the Yugoslav-Soviet rapprochement after Josef Stalin's death in 1953, Tito transformed one of the most isolated countries in the world into one that enjoyed reasonable diplomatic relations with more countries than any other communist regime.

During the 1960s and 1970s it appeared as if Yugoslavia's reforms were on the way to solving the most important domestic problems. Yet decentralization in 1960 in the wake of the fall of Aleksandar Ranković, the chief of the secret police who resisted reforms, did not introduce liberalization. Instead, it created deep institutional fractures, such as the introduction of a confederated system of republics with greater autonomy than before. This would ultimately result in the bloody break-up of Yugoslavia. The rise of nationalism in Croatia and elsewhere further obstructed reforms and the liberalization movement. The 1974 constitution, one of the world's longest, aimed to provide political stability by using ethnic quotas, rotation of cadres, and the republics' right to veto federal legislation but proved to be counter-productive. Steep increases in oil prices during the mid-1970s worsened the economic situation, which had been deteriorating for decades. Economic hardships were also partially attributable to the regime's inability to successfully tackle mounting foreign debts, budget deficits, and galloping inflation.

During his last years, Tito ignored worsening economic conditions. His death in 1980 deprived the country of strong leadership capable of unifying the nation and solving its mounting problems. Anti-Serbian rioting in Kosovo only contributed to the sense of crisis. The communist system of collective rotating leadership that replaced Tito's rule was unable to cope with the mounting crises. Serbian President Slobodan Milošević exploited the situation and greatly contributed to the breakdown of the sense of community by stockpiling weaponry, abolishing the autonomous provinces, and encouraging Serbian nationalism not in an attempt to preserve Yugoslavia but rather to create a greater Serbia.

Following a decade of political inertia and deepening economic crisis, the armed conflict in Slovenia in June 1991 between the forces of the Yugoslav People's Army and the Slovenian territorial defense forces marked the beginning of the collapse of Yugoslavia. The relatively minor dispute over Slovenia's independence carried over to Croatia, which had a substantial Serbian minority who demanded Serbian annexation and feared the new nationalist Croatian government led by Franjo Tuđman. After pulling out of

Slovenia, the army, strengthened by local Serbian forces, outmatched the Croats and occupied one-third of Croatian territory by December 1991. The occupied territories received the status of United Nations Protected Areas (UNPAs), and the United Nations Protection Force (UNPROFOR) replaced the Yugoslav People's Army.

This situation and sporadic fighting endured until May 1995, when the U.S.-trained Croatian Army overran the UNPA in western Slovenia. In August 1995 the Croats, in a lightning offensive, overran Serb-occupied Krajina. Both military actions received tacit approval from the West, but there was an exodus of Croatian Serb refugees who fled for fear of retaliation. The last UNPA in eastern Slovenia was peacefully reintegrated into Croatia in 1998 under the terms of the Dayton Peace Accords.

By the time the Bosnian state led by Alija Izetbegović received international recognition on 6 April 1992, Bosnian Serbs and Bosnian Croats had already formed satellite states as a part of a covert agreement between Milošević and Tuđman. Republika Srpska led by Radovan Karadžić was backed by Serbia and the Yugoslav People's Army, while Croatia supported Bosnia and Herzegovina. A three-sided ethnic war soon erupted. By the end of 1992, the Serbs controlled about 70 percent of Bosnia and laid siege to Sarajevo for three years, carrying out ethnic cleansing and torturing and murdering thousands of people in concentration camps. Croatian forces launched a war against the Muslims in May 1993 and then laid siege to the city of Mostar. The Muslims were initially poorly armed but by fighting a largely defensive war managed to hold off their opponents using equally atrocious tactics.

Peace in Bosnia was secured by the American team of negotiators led by Richard Holbrooke, who invited Tuđman, Izetbegović, and Milošević to Dayton, Ohio, to negotiate peace terms. After three weeks of intense negotiations, on 21 November 1995 the Muslim-Croat federation received control of 51 percent of the territory, while the Serbs received 49 percent. All three parties agreed to create a union in which each side would have control over its own defense, security, and taxes. The peace was enforced by 60,000 United Nations (UN) troops, reduced to a 24,000-strong international Stabilization Force (SFOR) in 1997.

The campaign of North Atlantic Treaty Organization (NATO) air strikes, led by the United States, against Serbia's atrocious Kosovo policy lasted from late March until June 1999. These strikes were precipitated by Milošević's rejection of the 1991 Rambouillet peace agreement, which stipulated that NATO forces would have unobstructed access to all of the Federal Republic of Yugoslavia to maintain peace in Kosovo. The steady suppression of the Albanian majority (90 percent of the population according to the 1991 census) erupted into an outright war with the paramilitary forces of the Kosovo Liberation Army (KLA). During 1998 and early 1999, the conflict drove from their homes more than 200,000 people, while thousands were killed. The air strikes destroyed military targets as well as factories and infrastructure throughout Serbia, including Belgrade. Milošević agreed to a peace plan on 3 June 1999 that created another international protectorate in the Balkans. A peacekeeping force, the Kosovo Force (KFOR) of 50,000 troops, was sent to

By the end of 1992, the Serbs controlled about 70 percent of Bosnia and laid siege to Sarajevo for three years.

ensure the safe return of refugees and maintain peace in Kosovo, which remains a part of Serbia.

The name “Yugoslavia” was officially erased from the map on 14 March 2002, when the two remaining republics that comprised the Federal Republic of Yugoslavia voted to rename the country Serbia and Montenegro.

Yugoslavia, Armed Forces

The large, expensive, and apparently effective armed forces of the Socialist Federal Republic of Yugoslavia were formed in 1945 from the 400,000-strong victorious, multiethnic Partisan National Liberation Army and gradually reduced to 180,000 soldiers, containing more than 100,000 conscripts, by 1990. All male citizens were subject to conscription after their seventeenth birthday, while women served as volunteers.

The Yugoslav People's Army was of colossal importance to the sovereignty of the Yugoslav state because during most of the Cold War, communist nonaligned Yugoslavia was a member of neither the Soviet bloc nor the Western bloc. Fear of a Soviet invasion was the primary factor in defense planning. President Josip Broz Tito and the Yugoslav Communist Party relied on the doctrine of total military defense, stressing brotherhood and unity ideology as well as coordination between the army and the Territorial Defense Force to safeguard and secure the regime's legitimacy.

The Yugoslav People's Army consisted of the army, air force, and navy organized into four military regions and further divided into districts that

controlled draft registration, mobilization, and military facilities. The army generally controlled the large Territorial Defense Forces (more than a million strong), exercised autonomy in military matters, and exerted substantial influence within the League of Communists of Yugoslavia. In 1990 more than 100,000 army personnel belonged to the league. As with the country at large, the armed forces were beset by ethnic tensions that intensified after Tito's death in 1980.

The army contained more than half of Yugoslavia's active-duty soldiers (including conscripts) and could rapidly mobilize close to half a million trained reservists. It was comprised of infantry, armor, artillery, air defense, signal, engineering, and chemical defense corps and was organized into three military regions (Slovenia and northern Croatia; eastern Croatia, Vojvodina, and Serbia; and Kosovo and Macedonia) and ten army headquarters. The brigade was the largest operational unit.

The army operated Soviet T-34, T-54, and T-55 tanks and Yugoslav M-84 tanks, among others. It also maintained some American M-4 and M-47 tanks. Although artillery and antitank regiments were well equipped with Soviet, American, and domestic tactical systems, mechanized infantry brigades lacked sufficient armored combat vehicles and personnel carriers.

The air force operated more than 400 combat aircraft (including Orao-2, Super Galeb, Jastreb, and P-2 Kraguj, some armed with American AGM-65 Maverick or Soviet AS-7 and AS-9 missiles) and 200 armed helicopters (among others, Mi-8 helicopter gunships and domestic Partisan helicopters) with the support of approximately 30,000 personnel and only a few thousand conscripts. There were also nine squadrons of 130 MiG-21 fighters armed with Soviet AA-2, AA-8, SA-2, or SA-3 missiles, some of which were obsolete by the time Yugoslavia disintegrated in 1991.

The navy provided an adequate coastal defense force of more than 10,000 sailors and marines charged with protecting the country's 1,000-mile shoreline, the coastal islands, and the strategic Strait of Otranto. It had its headquarters at Split and was organized into missile, torpedo, and patrol boat brigades; a submarine division; minesweeper flotillas; and an antisubmarine warfare helicopter squadron.

Most males and females between the ages of fifteen and sixty-five participated in national defense as part of the Territorial Defense Forces. Although the Territorial Defense Forces was originally independent, the nearest army command usually exerted authority over it and its lightly armored infantry units, battalions, and regiments that were trained exclusively for defensive actions on familiar local terrain.

No form of alternative service was available for conscientious objectors, and the penalty for refusing to serve ranged from five years in prison to execution. It is indeed ironic that the same armed forces that were considered the biggest school of brotherhood and unity and one of the strongest unifying institutions guaranteeing Yugoslav statehood metamorphosed into the main instrument against it during the bloody breakup of Yugoslavia in the 1990s.

Zaire

Czech communist politician, prime minister (1948–1953), and president of Czechoslovakia (1953). Born on 19 December 1884 in Zákolany, Bohemia, to a politically active working-class family, Antonín Zápotocký trained as a mason and joined the workers' movement and the Social Democratic Party in Kladno. He became known for his union-organizing abilities and was elected to the Kladno town council in 1911. Arrested several times for his political activities, he was drafted into the Austro-Hungarian Army, serving on various fronts during World War I.

After the war, Zápotocký returned to Kladno, resumed his activity with the Social Democrats, and wrote poetry and several novels about his involvement with the workers' movement. He received a two-year prison sentence for leading the 1920 general strike of Kladno ironworkers and miners. Released early, he became a founding member of the Communist Party of Czechoslovakia (CPCz) in 1921. He also assisted in the formation of its press and trade union movement.

In 1925 Zápotocký was elected as a deputy to the National Assembly, later serving as a senator. In 1929 he became head of the communist trade union in Czechoslovakia. After the Germans occupied Czechoslovakia in March 1939, he was arrested and interned at Sachsenhausen concentration camp until the end of World War II.

In 1945, Zápotocký joined the CPCz Politburo and became head of the Revolutionary Trade Union Organization (RTUO), the blanket union organization in Czechoslovakia. He was again elected to the National Assembly in 1946. He was instrumental in the CPCz's February 1948 coup by rallying his workers in the People's Militia to support the communist takeover.

Zápotocký, Antonín
(1884–1957)

Consequently, he became a deputy prime minister and, after CPCz leader and Premier Klement Gottwald became president in June 1948, succeeded him as premier.

Under Zápotocký's leadership, Czechoslovakia became a hard-line Stalinist state that attacked organized religion, private enterprise, and civil rights while unconditionally supporting Soviet policies at home and abroad. He also played an important role in events leading up to the 1950s purges and show trials in Czechoslovakia.

In 1950 Zápotocký helped reorganize the CPCz and resigned from the RTUO after being elected to the CPCz secretariat and presidium. Upon Gottwald's death in March 1953, Zápotocký became president, holding the position until his death in Prague on 13 November 1953.

Zhang Hanfu

(1905–1972)

Vice foreign minister of the People's Republic of China (PRC). Born in Wujin, Jiangsu Province, on 7 November 1905, Zhang Hanfu studied at China's Qinghua University and also took up studies in the United States and the Soviet Union during the 1920s. Returning to China in 1929, he found work as a journalist in Shanghai. In 1938 he joined the Chinese Communist Party (CCP) and served throughout the Sino-Japanese War as editor of the CCP's wartime publications. In 1945 he accompanied Zhou Enlai, the PRC's future foreign minister, to the San Francisco conference that drafted the United Nations (UN) Charter.

During the Chinese Civil War, Zhang served in Hong Kong, where he continued his editing career. He returned to China in late 1948 and became director of the Alien Affairs Office of the Municipal People's Government in Jiangsu. Upon the establishment of the PRC in 1949, he was appointed vice foreign minister, working directly under Zhou. In December 1949, Zhang also became director of the Foreign Ministry's Committee on Foreign Treaties, where he was responsible for developing China's diplomatic relationships with Western Asian and African nations. In April 1955 he accompanied Zhou to the Bandung Conference, at which Zhou's "Five Principles for Peaceful Coexistence" were first enunciated in public.

Zhang went on to serve under Liu Shaoqi and Chen Yi, traveling with them on a number of Asian and African tours to promote the Bandung Spirit. Zhang died in Beijing on 1 January 1972.

Chinese diplomat and vice foreign minister of the People's Republic of China (PRC) during 1955–1959. Born in Nanhui, Jiangsu Province, on 30 August 1900, Zhang Wentian joined the Chinese Communist Party (CCP) in 1925 and then enrolled at Moscow's Sun Yixian University. Upon his return to China in 1931, he became minister of publicity for the CCP, responsible for editing the party's journals.

During the Sino-Japanese War (1937–1945), Zhang served in Yan'an, Shaanxi, as editor of party publications and president of the Institute of Marxism and Leninism. After the war, he was sent to Northeast China, where he stayed throughout the final stages of the Chinese Civil War (1947–1949), working on organizational and economic matters.

In January 1950, Zhang was transferred to Beijing to lead a delegation to the United Nations (UN) and was concurrently appointed as the PRC representative to the UN Security Council. Realizing that the PRC could not be seated in the UN, Beijing named Zhang ambassador to the Soviet Union in 1951. In April 1954 he was appointed vice foreign minister and attended the Geneva Conference held that the same month. Returning to China in early 1955, he formally assumed his ministerial duties. During his tenure, which lasted until 1959, he was responsible for the PRC's relationship with the Soviet communist bloc. In September 1959, he was relieved of his post on charges that he had developed close ties with antiparty elements. He was forced to retreat from the diplomatic front line, taking up a research fellowship in the Economic Institute, a job he held until 1965.

With the ultraleftist Cultural Revolution, Zhang was first purged and then internally exiled. He died in Wuxi, Jiangsu Province, on 1 July 1976.

Zhao Ziyang

(1919–2005)

Chinese Premier Zhao Ziyang, shown here during a meeting with U.S. President Ronald Reagan during talks at the Great Hall of the People in Beijing, 27 April 1984. (Bettmann/Corbis)

Chinese communist politician and premier of the People's Republic of China (PRC) during 1980–1987. Born in Huaxian, Henan Province, on 17 October 1919, Zhao Ziyang completed his secondary education in 1937 at Wuhan, the capital of his native province. The next year, he joined the Chinese Communist Party (CCP), becoming secretary of the Third Special District in the Hebei-Shandong Border Region, where he also fought in the Sino-Japanese War (1937–1945).

Following World War II, Zhao was responsible for rural reform work in the Hebei-Shandong-Henan Border Region. During the Chinese Civil War (1946–1949), he served in his native province as the CCP's secretary of the Luoyang District. During October 1949–1965, he was assigned to Guangdong Province, holding a secretariat in the South China subbureau of the Central–South China Bureau. In mid-1965, he was promoted to the bureau level as the first secretary of Guangdong.

In October 1967, as a result of the ultraleftist Cultural Revolution, Zhao was denounced as a counterrevolutionary, a member of the landowning class, and an agent of PRC Chairman Liu Shaoqi, a rival of Mao Zedong. Thereafter, Zhao was exiled from public life, spending four years at forced labor in a factory until May 1971, when he was assigned to the Inner Mongolia Autonomous Region as the party's secretary. In April 1972 he returned to Guangdong, resuming his former posts. In 1976 he went to Sichuan, where he assumed similar positions. His successful economic modernization of Sichuan soon captured Beijing's attention.

In 1980, Zhao became premier, a post he held until 1987, during which he frequently traveled abroad to promote the PRC's international image. In 1987 he became the general-secretary and the first vice chairman of the CCP

Central Committee's Military Commission. On 19 May 1989, he visited with the student prodemocracy demonstrators in Tiananmen Square in Beijing. He begged them to depart, apologized for having arrived "too late," and warned the students that the state authorities were planning to take action against them. In June 1989, shortly after the Tiananmen Square Massacre, he was stripped of all his posts because of his support of the student demonstrators.

Zhao was then detained under house arrest in Beijing not far from the government offices where he once led China. During his long confinement, he became a powerful symbol for those who believed that the Chinese government should reassess its policies in the 3–4 June 1989 Tiananmen Square crackdown. Zhao died in Beijing on 17 January 2005, and nervous Chinese government officials strongly discouraged any public demonstrations or mourning to mark the occasion.

Soviet political leader and his country's chief communist ideologue in the early Cold War. Born in Mariupol, Ukraine, on 14 February 1896, Andrei Zhdanov joined the Bolshevik Party in 1915. Following the Bolshevik seizure of power in November 1917, he served as a party official in several regions of the country. A close associate of Josef Stalin, Zhdanov enjoyed rapid advancement in the party hierarchy. He took the lead in developing Soviet cultural policy, helping to establish both the Union of Soviet Writers and the doctrine of socialist realism, whereby literature and art should be realistic and instructive in order to advance the communist ideal.

Following the assassination of Sergei Kirov in 1934, Stalin appointed Zhdanov to the powerful post of party boss in Leningrad. Zhdanov played a leading part in the Great Purges of the late 1930s, sending tens of thousands of suspect communists and their families to Siberia. During World War II, he

took a key role in the defense of Leningrad during the long German siege of that city. Following the capitulation of Finland, which had reentered the war against the Soviet Union, he supervised reparations from that country to the Soviet Union.

Immediately after the war, Zhdanov was instrumental in the establishment of the Cominform (Communist Information Bureau) and in ensuring Soviet control over Eastern Europe. In line with this, he developed an anti-Western ideology that played on the intense patriotism roused by Soviet military accomplishments and suffering in the war to enforce discipline and stifle dissent.

In the summer of 1946, with the full support of Stalin, Zhdanov mounted an intense ideological crusade against Western influence, or bourgeois cosmopolitanism, and culture. Known as the Zhdanovshchina, it had three key elements: the glorification of Stalin, to whom all accomplishments were attributed; the achievements of the Soviet people, above all the Great Russians, in the war and in science and the arts (firsts were claimed for a variety of scientific advances); and communism. Numerous writers, artists, and scientists were sent to labor camps for failing to toe the party line.

Zhdanov, regarded by many as Stalin's heir apparent, was a heavy drinker and also suffered from heart disease. He battled a prolonged and unspecified illness for some time before his death at Valdai Heights near Moscow on 31 August 1948. Zhdanov's death precipitated a power struggle and triggered the Leningrad Affair, a sudden purge of thousands of government and party officials in and around Leningrad.

Zhivkov, Todor (1911–1998)

Bulgarian Communist Party (BCP) leader and head of state during 1971–1989. Born on 17 September 1911 in Pravets, Bulgaria, Todor Zhivkov received only a modest primary education before becoming a typographer. He became politically engaged at age nineteen when he joined the clandestine Communist Youth organization. He joined the BCP in 1932. During World War II, he joined the antimonarchist partisans and fought against the Bulgarian Royal

Army, which was allied with Nazi Germany. At war's end, he became a member of the BCP's Central Committee and went on to serve as secretary of the Municipal Committee of Sophia, the equivalent of the city's mayor.

By the late 1940s, Zhivkov had become the protégé of Valko Tchervenkov, who at the time was the strongman of the BCP. In 1951 Zhivkov joined the BCP Politburo as his meteoric political ascendancy continued. He soon became secretary of the Politburo's Central Committee, which gave him control over much of that body as a whole. In 1954 Tchervenkov tapped Zhivkov to be first secretary of the BCP. A cunning politician, Zhivkov soon pushed his mentor aside, with Moscow's implicit blessing. From 1962 until 1971, Zhivkov functioned as the leader of the BCP and as Bulgaria's premier, which afforded him vast powers over Bulgarian affairs. He was a hard-liner with dictatorial tendencies. Even while the Soviet Union implemented de-Stalinization policies in the mid-1950s, he refused to release Bulgaria's political prisoners. Indeed, the Bulgarian gulag would not be abandoned until 1962.

In 1971 Zhivkov proclaimed himself head of state as chair of the Council of State, essentially rubber-stamping his own authority as Bulgaria's leader. He continued to rule with an iron fist, choosing to surround himself mainly with family members acting as advisors and administrators. By the mid-1980s, with significant political changes afoot in Russia, he decided to crack down on his nation's Turkish minority of some 800,000 people. His repression of the Turks led to their mass exodus, with many crossing the border into Turkey. This debacle destabilized Bulgaria's already weak economy and strained relations with Turkey and the West.

Simultaneously, Zhivkov attempted to give the impression that he, like Russia's President Mikhail Gorbachev, supported perestroika. In reality, Zhivkov implemented few meaningful reforms. By late 1989, Bulgaria was on the brink of economic collapse. On 10 November 1989, as the Berlin Wall was crumbling, he was driven from office. His rule had been brutal and his policies disastrous. In February 1991, he was put on trial for his abuses of power, convicted, and sentenced to seven years in prison. For health reasons, he was confined under house arrest. Zhivkov wrote his memoirs during imprisonment and died on 5 August 1998 in Sofia.

Zhou Enlai

(1898–1976)

Premier and foreign minister of the People's Republic of China (PRC). Born in Shaoxing, Zhejiang Province, on 5 March 1898, Zhou Enlai traveled to France in 1920 on a work-study basis and joined the Chinese Communist Party (CCP) the following year. He returned to China in 1924 and joined the Guomindang (GMD, Nationalists) upon instructions from the Comintern as a part of an alliance called the First United Front that aimed at Chinese national unification.

The United Front broke down in mid-1927 when the GMD purged the communists from its ranks, precipitating the CCP-GMD power struggle that lasted for two decades. Zhou then joined Mao Zedong, the future chairman of both the CCP and the PRC, in the two CCP power bases at Juijin, Jiangxi Province, from 1927 to 1934 and Yan'an, Shaanxi Province, from 1935 to 1945. After the PRC's birth in 1949, Zhou became the first PRC premier and concurrently the first PRC foreign minister. Within the CCP, he took on the vice chairmanship of both the Central Committee and Central Military Committee, making him second only to Mao in rank.

Zhou's responsibilities were wide-ranging, including the restructuring of the political system, the drafting of the constitution, the implementation of mass socialization, and the launching of economic reforms such as the five-year plans and collectivization. Despite occasional differences with Mao on such matters as intervention in the Korean War and the radical Great Leap

Forward economic program, Zhou always fully supported Mao. This loyalty, together with Zhou's own popularity, enabled him to remain in office and survive the Cultural Revolution, during which many senior party and government officials were purged or imprisoned.

Zhou's most notable achievements were in the diplomatic realm. Although his foreign minister post was technically transferred to Chen Yi in April 1958, Zhou remained the chief architect of the PRC's foreign policy. In his capacity as premier, he spent much of his time abroad, boosting the PRC's international standing. His diplomatic approach was flexible and pragmatic, and his liaison service can be divided into three areas: the Soviet bloc, the developing world, and the Western bloc. In pursuing Mao's lean-to-one-side policy, Zhou's first task was to build a diplomatic partnership with the Soviet Union, the first nation to accord official recognition to the PRC. To reinforce Sino-Soviet ties, in January 1950 he visited Moscow and the next month secured the Sino-Soviet Treaty, which not only acknowledged Sino-Soviet solidarity but also promised Soviet aid to modernize the PRC's economy. Despite reservations as to the PRC's military readiness, he eventually supported Mao's decision to enter the Korean War in October 1950 so as to prove the PRC's faithfulness to the socialist bloc.

Premier of the People's Republic of China (PRC) Zhou Enlai. (Bettmann/Corbis)

Zhou's interest in the developing world became readily apparent in 1953. He perceived alignment with Asian and African nations as another path to elevating the PRC's image abroad. His approach to the developing world, termed the "Five Principles of Peaceful Coexistence," was first publicized at the Bandung Conference in April 1955. He called for the mutual respect of national sovereignty and territorial integrity, mutual nonaggression, nonintervention in internal affairs, equal mutual benefits, and peaceful coexistence. These became part of the so-called Bandung Spirit, which the conference participants pledged to uphold and promote.

Zhou's policy toward the developing world soon paid off, as the new Soviet leader, Nikita Khrushchev, advocated peaceful coexistence with the West, but Sino-Soviet relations began to deteriorate. Meanwhile, Mao vituperatively attacked Khrushchev's revisionism, and by 1963 Sino-Soviet solidarity had all but disappeared. To redress the loss of the PRC's erstwhile ally, Zhou looked to the developing world, although the onset of the Cultural Revolution prevented him from forging closer ties with the Asian-African bloc.

The PRC's early alliance with the Soviet Union inevitably meant an anti-U.S. stance. Zhou's problems with the United States centered on two main issues. The first was PRC representation in the United Nations (UN). Following the PRC's birth, Zhou had demanded that Jiang Jieshi's Guomindang (GMD, Nationalist) representative to the UN be unseated and replaced with a PRC representative. America, however, blocked such an attempt. The second issue was the island of Taiwan, which Jiang's GMD still retained and to which the United States was still attached. During his tenure, Zhou frequently reiterated the PRC's sovereignty over Taiwan and harshly criticized U.S. policies toward Taiwan.

Zhou never excluded the possibility of maintaining unofficial communications with the United States. His position bore fruit after the mid-1950s, when the PRC found itself increasingly isolated diplomatically. At the Bandung Conference, Zhou initiated what later became the Sino-American Ambassadorial Talks, first held in August 1958, that provided the first direct channel for U.S.-PRC communications. Although these talks were often suspended due to the deadlock over Taiwan, Zhou did not abandon the hope of reaching an understanding with the United States with a view toward breaking his nation's diplomatic isolation resulting from the Sino-Soviet split and the Cultural Revolution. In late 1969, he proposed to Mao a normalization of Sino-American relations. Once the proposal was approved, Zhou was wholly responsible for the rapprochement that ultimately led to U.S. President Richard M. Nixon's historic trip to China in February 1972. This top-level summit laid the foundation for the formal establishment of a Sino-American diplomatic relationship, which was completed in 1979. Zhou died in Beijing on 8 January 1976. His death triggered mourning demonstrations that contributed to the overthrow of the radical Gang of Four, who succeeded Mao following his death later that year, and their replacement by the more pragmatic Deng Xiaoping, who emphasized economic development rather than communist ideology.

Zhu De (1886–1976)

Chinese military leader, politician, and vice chairman of the People's Republic of China (PRC) during 1954–1959. Born in Yilong, Sichuan Province, on 18 December 1886, Zhu De went to Germany in 1922, studying in Berlin and Göttingen, and joined the Chinese Communist Party (CCP) the same year. He returned to China in 1926 and engaged in covert military activities. His two most innovative contributions were the development of the CCP's Red Army in 1927, which later became the People's Liberation Army (PLA), and the conceptualization of modern guerrilla warfare with its emphasis on control of the countryside. His military leadership and talents ensured the CCP's victories in both the Sino-Japanese War (1937–1945) and the Chinese Civil War (1946–1949). In both struggles, he commanded the CCP's armed forces.

After the birth of the PRC in October 1949, Zhu held a number of top positions, including commander in chief of the PLA, one of the vice chairmen of both the Central People's Government Council and the People's Revolutionary Council, and a member of the Standing Committee of the party's Central Committee. In September 1954 he gave up these posts and became the PRC's sole vice chairman and the first-ranking vice chairman of the National Defense Council, in political importance ranking second only to Chairman Mao Zedong. In 1955, Zhu was named one of the ten marshals of the PLA. Given his advanced age, he became less active in military affairs, participating only in important military conferences.

In foreign relations, however, Zhu became more active. During his tenure, he frequently traveled abroad on inspection tours to Moscow, Eastern Europe, and the Democratic People's Republic of Korea (DPRK, North Korea). In April 1959 he relinquished his two vice chairmanships and served as chairman of the Standing Committee of the National People's Congress, a

nominal legislative body. Thereafter he seldom made public appearances until the mid-1960s, when he was persecuted during the ultraleftist Cultural Revolution (1966–1976) simply because of his military background and was perceived as a threat to Mao's leadership. Zhu died in Beijing on 6 July 1976.

Marshal of the Soviet Union and minister of defense (1955–1957). Born in a peasant family in Strelkovka, Kaluga Province, Russia, on 1 December 1896, Georgi Zhukov was conscripted into the Russian Army in 1915 and served in the cavalry during World War I. He received a severe wound in late 1916 and did not participate in the fighting in 1917. He joined the Red Army in 1918, received a commission, and rose to squadron commander during the Russian Civil War.

In 1923 Zhukov took command of a cavalry regiment and in 1930 of a brigade. He attended several service schools, including the Frunze during 1929–1930, rising steadily in rank and responsibilities. In 1933 he had charge of a cavalry division and in 1937 of a corps. He was one of the few senior officers to survive Josef Stalin's purge of the military leadership in the late 1930s. In 1938 Zhukov was appointed deputy commander of the Bialystok Military District, and in June 1939 he received command of Soviet forces battling the Japanese in Mongolia. By the end of August, he had defeated the Japanese in the Battle of Khalkin Gol.

Promoted to full general, in June 1940 Zhukov took command of the Kiev Military District. In January 1941 he became chief of the General Staff, in effect Soviet dictator Stalin's chief military advisor. Following the June 1941 German invasion of the Soviet Union, Zhukov took part in almost every major battle on the Eastern Front, earning the nickname "Stalin's Fireman." He participated in the unsuccessful defense of Smolensk in August and successfully organized the defense of Leningrad in October and of Moscow, launching the counteroffensive against the Germans there in December 1941. In the fall of 1942, Zhukov helped plan the counteroffensive that trapped the German Sixth Army at Stalingrad. Promoted to marshal of the Soviet Union and appointed deputy supreme commander of the Red Army, he helped raise the siege of Leningrad in 1943, and that July he assisted in the defense of the Kursk salient.

**Zhukov, Georgi
Konstantinovich**
(1917–1974)

Georgi Zhukov was a prominent Soviet general during World War II. Known as “Stalin’s Fireman,” Zhukov fought in almost all major Soviet battles against Germany in the war and was undoubtedly the best known of Soviet generals in the West. (Library of Congress)

In the summer and autumn of 1944, Zhukov directed the great Belorussian Campaign that destroyed the German Army Group Center, and in April 1945 he personally commanded the final Soviet assault on Berlin. He was the Soviet representative at the formal German surrender of 8 May 1945, and he remained in Germany to command Soviet occupation forces there and serve as the Soviet representative on the Allied Control Commission for Germany.

In March 1946, Zhukov was recalled to the Soviet Union as commander in chief of Soviet Land Forces and deputy defense minister, but he lasted only three months in this post. In July, Stalin—no doubt jealous of Zhukov’s popularity and viewing him as a potential threat—relegated Zhukov to a series of minor commands, first the Odessa Military District and in February 1948 the Ural Military District.

Following Stalin’s death in March 1953, Nikita Khrushchev brought Zhukov back to the senior leadership, apparently anxious to use Zhukov’s status to ensure support from the armed forces. He became first deputy minister of defense in 1953 and defense minister in February 1955. During this period, he pushed modernization of the force structure, including the integration of missiles and nuclear weapons and improving the mobility of the armed forces. He also spearheaded major revisions in doctrine and strategy to exploit advances in technology and pursued a parallel effort to professionalize the officer corps.

Zhukov organized the Soviet invasion of Hungary in 1956. In June 1957, he supported Khrushchev during an effort to oust the Soviet leader and was rewarded by appointment to the Politburo, the first professional military man to reach this top-level leadership body. Khrushchev strongly opposed Zhukov’s proposed military reorganization that would reduce political influence in the armed forces and on 26 October 1957 dismissed Zhukov from his posts. He was rehabilitated after Khrushchev’s fall from power in October 1964 but never again played a major role in policy making. Zhukov died in Moscow on 18 June 1974.

Pakistani Army general, later dictator of Pakistan (1978–1988). Muhammad Zia ul Haq was born in Jullundur, Punjab (present-day India), on 12 August 1924 to a lower-middle-class family with strong Muslim beliefs. His father was an army clerical officer. Zia attended Delhi's prestigious St. Stephen's College, graduating in 1944. He then joined the British Indian Army, serving in World War II throughout Southeast Asia.

Upon British withdrawal from the subcontinent in 1947, Zia's birthplace was located in the newly independent (and predominantly Hindu) India. As with millions of other Muslims, he and his family migrated to Pakistan, settling in Peshawar, and he joined the officer corps of the Pakistani Army. After Zia received further training in the United States and steady promotions, Pakistani President Zulfikar Ali Bhutto appointed him chief of the army staff in 1976.

The following year Zia led a coup by fellow army officers, removing Bhutto from power. Over the next several years, Zia was the head of the military junta, amassing increasing power. He ruled Pakistan as its self-appointed president by disbanding parliament, increasing the power of the presidency, and imposing martial law. His assault on political opponents included the execution of Bhutto on 4 April 1979 for allegedly participating in a murder plot against his own rivals while in office.

Although a ruthless dictator, Zia was nevertheless popular among the lower classes in Pakistan. This was largely because of his reputation as a pious Muslim and his efforts at increasing the role of Islam in government, including the creation of Islamic courts. Zia was killed under mysterious circumstances in a plane crash on 17 August 1988 in Bahawalpur, Pakistan.

Zimbabwe

Landlocked nation in South-Central Africa. Zimbabwe covers 150,803 square miles, about the size of the U.S. state of Montana, and is bordered by Botswana to the west, Mozambique to the east, Zambia to the north, and South Africa to the south. In 1945 the population was about 2.5 million people, with a ratio of Africans to whites of about 16 to 1. The whites of what was then known as Southern Rhodesia, a self-governing British colony since 1923, found themselves in the 1950s incorporated by Britain into a Central African Federation with the two neighboring territories of Northern Rhodesia and Nyasaland.

Following the break-up of the federation in the early 1960s, Southern Rhodesia's whites voted in the right-wing Rhodesian Front headed by Ian Smith. It was Smith who in November 1965 unilaterally declared independence from Britain and launched the country as Rhodesia. The British government had ruled out the use of force against the settlers, who therefore got away with the illegal act. By then, a white population of some 200,000 ruled more than 4 million Africans. For a time it seemed that the settlers would be able to retain power indefinitely. As their position was increasingly challenged, Cold War involvement grew in the struggle to turn Rhodesia into an independent Zimbabwe.

In the early 1960s two major nationalist parties emerged, first the Zimbabwe African People's Union (ZAPU) under Joshua Nkomo, which developed ties with the Soviet Union, and then a rival Zimbabwe African National Union (ZANU), which was courted by the People's Republic of China (PRC). These links to communist countries were in both cases forged mainly for practical reasons and because of what the African nationalists believed to be Western support for the settler regime rather than from ideological commitment to communism.

In response to the unilateral declaration of independence, the United Nations (UN) imposed sanctions against Rhodesia, but these were flouted by South Africa, which crucially continued to supply oil by Portugal and, for a time, by the United States. In 1971, Senator Harry F. Byrd of Virginia piloted through Congress an amendment to sanction legislation that permitted the United States to import chrome ore, used for steelmaking, from Rhodesia. It was argued that because the only other source of chrome was the Soviet Union, the United States must put Cold War concerns above any antipathy to white supremacist regimes in southern Africa. In 1969 the National Security Council (NSC), under Henry Kissinger, had recommended that U.S. policy should be based on the assumption that the white settler

By 1965 a white population of some 200,000 ruled more than 4 million Africans.

A white Rhodesian soldier is on watch as black voters line up at a polling station at Lundi to vote in the Rhodesian election, 19 April 1979. The vote resulted in the country's first black-dominated parliament. (Bettmann/Corbis)

regimes in southern Africa would remain in power for the foreseeable future. Dubbed the Tar Baby Option by its critics, this meant that the United States would give tacit support to the settler regimes.

ZAPU and ZANU had launched an armed struggle against the settler regime in the mid-1960s, and during 1967–1968 ZAPU had forged an alliance with the African National Congress (ANC) of South Africa and had sent guerrillas into Rhodesia. But until 1972 the Rhodesian regime, with South African police support, was able to contain the insurgency with relative ease. Internal feuds divided ZAPU and helped render it ineffective, but the Zimbabwe African National Liberation Army (ZANLA), ZANU's military wing, began to operate from Mozambique in the early 1970s and was there given active support by the Mozambican Liberation Front (Frelimo), which came to power at independence from Portugal in 1975.

From 1972 the liberation war began to intensify, and by the time Cuban military forces intervened in Angola in late 1975, the military wings of ZAPU and ZANU were making inroads into Rhodesia from neighboring territories. Although the Rhodesian Air Force began in the mid-1970s to bomb their camps in both Mozambique and Zambia, causing large-scale loss of life, the guerrillas increasingly operated openly in parts of rural Rhodesia, having won the support of the local people. The war dragged on and became more brutal,

with both sides using terror tactics. By the time the war came to an end in 1979, more than 30,000 lives, most of them black, had been lost. There was considerable white emigration during the war, and the ratio of Africans to whites rose by the end of the decade to about 25 to 1.

By early 1976 Kissinger, now U.S. secretary of state, was concerned that unless he could bring about a negotiated settlement in Rhodesia, the war would escalate and the Cubans might become involved there as well. With Marxist regimes having come to power in Angola and Mozambique, he feared the creation of more radical pro-Soviet regimes in Africa, and he was worried that Rhodesia might be the next domino to fall. He thus traveled to Africa in April 1976 and in Zambia's capital, Lusaka, announced that the United States favored majority rule in Rhodesia. He then put pressure on Ian Smith via South African Prime Minister John Vorster, who was himself under domestic pressure, to accept the principle of majority rule, which Smith reluctantly did in October 1976 after the South Africans threatened to withdraw support from his regime. Attempts by President Jimmy Carter's administration and the British government to mediate in the conflict to produce a moderate black successor regime initially bore little fruit.

Soon after he became president, Carter pushed Congress to repeal the Byrd Amendment, which it did in March 1977, ending American violation of UN sanctions against Rhodesia. As Smith moved toward implementing a new constitution in which black Africans would take nominal power, there were many in the United States who argued that the time had come to lift sanctions. At the invitation of U.S. Senator Jesse Helms and others, Smith visited the United States in October 1978 to court support for the lifting of sanctions. Carter, however, stood firm against this and supported the British position that a settlement must include ZAPU and ZANU, which had now come together under pressure from the neighboring states in an uneasy Patriotic Front (PF).

The internal election that Smith organized and that the nationalists boycotted ushered in the majority-rule government of Abel Muzorewa. Margaret Thatcher, who became British prime minister following the Conservative Party's victory in Britain's April 1979 general election, was tempted to recognize the Muzorewa government. Instead, she invited all parties, including Smith, Muzorewa, Nkomo, and Robert Mugabe, to attend a conference at Lancaster House in London in order to reach an internationally recognized settlement. Mugabe reluctantly agreed to attend, only because Samora Machel of Mozambique threatened that if he did not, ZANU would lose its bases in his country.

British Foreign and Commonwealth Secretary Lord Carrington followed a brilliant negotiating strategy. He insisted, for example, that negotiations take place one step at a time. Thus, in the last months of 1979, the constitution for an independent Zimbabwe was agreed to, and then a process was approved for a transition to independence via a direct British presence. Mugabe in particular disliked the terms of the settlement, but Machel again put pressure on him. A British governor, Christopher Soames, was sent out to

Rhodesia to oversee the holding of elections. Plots by white supremacists to assassinate Mugabe and stage a coup were foiled.

Thanks to U.S. and British diplomacy and to the cost of the war, the bitterest liberation war fought in southern Africa came to an end, and an internationally recognized, independent Zimbabwe was born. To the dismay of the British and U.S. governments, however, it was not the moderates who triumphed in the election held in early 1980 but rather Mugabe of ZANU-PF, the austere revolutionary who had served eleven years in Smith's detention centers.

Coming into office, Mugabe initially preached reconciliation, but he had never absorbed democratic norms and was prepared to act with force to suppress any opposition to his rule. Nevertheless, when Zimbabwe became independent in April 1980, the United States provided an aid package of \$225 million to the new government, hoping that Mugabe's radicalism might be tempered, that Zimbabwe would remain stable and prosperous, and that it might serve as a role model for white South Africans. Whatever doubts they had about Mugabe, the Western powers had successfully prevented any significant involvement by communist countries in Rhodesia beyond the training of guerrillas and the supply of military matériel to ZAPU and ZANU.

For its first two decades after independence, Zimbabwe remained relatively stable and prosperous, although Mugabe used brutal measures in 1982, sending a brigade trained by the Democratic People's Republic of Korea (DPRK, North Korea) to stamp out opposition in southwestern Zimbabwe. More than 10,000 people are thought to have been killed in an episode that largely escaped the world's attention. Although Mugabe did not allow the ANC's armed wing to operate from Zimbabwe, his country was nevertheless the victim of a number of acts of South African aggression during the 1980s. Even as Zimbabwe moved toward becoming a de facto one-party state, the Lancaster House agreement prevented expropriation of land for ten years, and no moves were made to take land from whites by force until well after the end of the Cold War. In the early 1990s, Zimbabwe remained a viable state, but the rise of an effective opposition brought out Mugabe's dictatorial tendencies. By the end of the century, the country was plunging into economic ruination, with massive confiscations of white-owned farms, declining agricultural production, an AIDS epidemic, and political violence leading to rigged elections.

Zorin, Valerian Aleksandrovich (1902–1986)

Soviet Deputy Foreign Minister Valerian A. Zorin at a United Nations Security Council meeting during the Cuban Missile Crisis, 23 October 1962. (Library of Congress)

Soviet diplomat. Born in Novocherkassk in the Rostov Oblast on 14 January 1902, Valerian Zorin joined the Communist Party of the Soviet Union (CPSU) in 1922. Following a decade in various party posts, he attended the Higher Communist Institute of Education, graduating in 1935. He taught and served as a party official in several posts until joining the People's Commissariat of Foreign Affairs in 1941. He served as assistant secretary-general during 1941–1942, deputy commissar during 1942–1943, and head of the Fourth (Central European) Department during 1943–1945.

In March 1945, Zorin was appointed Soviet ambassador to Czechoslovakia, where he served until the spring of 1947. He then served as Soviet representative to the United Nations (UN) Economic Commission for Europe and later served on the Soviet delegation to the UN before returning to Moscow in November 1947 as deputy foreign minister, a post he held until 1955. He was dispatched to Prague to help oversee the February 1948 coup that installed a communist government.

From October 1952 to April 1953, Zorin was Soviet ambassador to the UN while retaining his foreign ministry post. In 1955 he was named Soviet ambassador to the Federal Republic of Germany (FRG, West Germany) before returning as deputy foreign minister the following year. Remaining in this post until 1965, he also served once again as Soviet ambassador to the UN from 1960 to 1963. During this appointment, he was involved in a now-famous exchange with U.S. ambassador to the UN Adlai Stevenson at the time of the Cuban Missile Crisis in October 1962. In 1965, Zorin was named Soviet ambassador to France, where he served until his retirement in 1971. In retirement, he served occasionally as an ambassador-at-large with responsibility for human rights issues. Elected a candidate mem-

ber of the CPSU Central Committee in 1956, he became a full member in 1965. He died in Moscow on 14 January 1986.

1. Henry R. Luce: “The American Century,” February 1941

Introduction

Born in 1898 in China to American missionary parents, Henry R. Luce became one of the most influential journalists and publishers in U.S. media history. In 1923 he founded *Time*, the first weekly news magazine in the United States, and subsequently established several other publications, most notably the business magazine *Fortune* in 1930, *Life* magazine in 1936, and *Sports Illustrated* in 1954. By the late 1930s, Luce’s publications dominated the market for popular middle-brow news in the United States, and he had become immensely wealthy. His missionary background, from which he took a near messianic sense of his own destiny and that of his country, probably contributed to his broader political ambitions. In February 1941 *Life* published Luce’s essay “The American Century.” In this piece, whose title would be used as a cliché to describe the twentieth-century international role of the United States, Luce argued that his country was already effectively in the current war and that it should in the future play a far greater part in world affairs than before. Luce made Herculean efforts to publicize his views beyond *Life*’s 12 million readers. He reprinted the piece in full-page advertisements in newspapers throughout the country and sent copies of a reprint pamphlet edition, bolstered by generally favorable commentary by several well-known journalists and commentators, to hundreds of influential friends and associates. “The American Century” used high-flown language to urge that Americans should address themselves to “the authentic creation of the 20th Century—our Century.” Luce argued that the United States had a choice as to whether to enter the war and that if it did so, the country must therefore decide what it was fighting for and what it hoped to get out of the war, in terms of “a workable Peace.” In his view, the United States, although it had already become “the most powerful and the most vital nation in the world,” did not know how to deploy its strength, and to date Americans had “failed to play their part as a world power—a failure which has had disastrous consequences for themselves and for all mankind.” The remedy he prescribed was that the country should “accept wholeheartedly our duty and our opportunity as the most powerful and vital nation in the world, and in consequence exert upon the world the full impact of our influence, for such purposes as we see fit and by such means as we see fit.” The United States should “shar[e] with all peoples . . . our Bill of Rights, our Declaration of Independence, our Constitution, our magnificent industrial products, our technical skills.” Luce’s article sounded many of the themes that would characterize post-war American internationalism. Implicit in it was the message that if Americans did not rise to this challenge and become actively involved in the outside world, they would themselves suffer materially and psychologically. Rather than simply pursuing its own interests, the United States was also to propagate American political, economic, and cultural values, serving as a model to other countries. Luce envisaged his country disseminating the American way of life around the world, pointing to the extent to which “American jazz, Hollywood movies, American slang, American machines and patented products” had already spread internationally so that, in his view, “America is already the intellectual, scientific and artistic capital of the world.” He urged Americans to consciously provide scientific, technological, educational, and cultural leadership. He suggested that a free American economy depended on the acceptance of “free economic system[s]” elsewhere in the world and that the United States should therefore ensure freedom of the seas and the air and become the top international trading nation. Luce also believed that Americans must provide humanitarian aid to a world facing famine and destitution. Lastly, he called upon the United States to propagate and spread abroad both specifically American ideals and those more broadly associated with Western civilization generally. He clearly hoped that this would be only the beginning of American

world dominance, finishing his article by stating that Americans should work together “to create the first great American Century.” As he intended, Luce’s article provoked wide-ranging discussion throughout the United States and beyond. Then and afterward, many on the Left condemned him for envisaging a new international order run in the interests of American capitalism and business, a world system in which U.S. imperialism and militarism would replace those of the European colonial powers. In its confident messianic sense of American international destiny, the article drew not only on Luce’s personal missionary heritage but also on the long-standing broader sense of the United States as an exceptional chosen nation whose Manifest Destiny gave it a special mission to the world, an outlook epitomized earlier in the twentieth century in the rhetoric of President Woodrow Wilson during World War I. Somewhat optimistically, but very much in the Wilsonian tradition, Luce affirmed that whereas other great powers were distrusted, “throughout the world [there] is faith in the good intentions . . . of the whole American people.” The absence of any real humility in Luce’s writing, his blunt insistence that his country was already the world’s greatest power, was undoubtedly less than tactful and an example of the kind of triumphalist rhetoric that has so often repelled even nations friendly to the United States. Scores of future books—and many, no doubt, still to come—would bear the title or discuss the concept of “The American Century.” If he had intended to set the terms of popular debate, Luce undoubtedly succeeded. In retrospect, “The American Century” would seem both prophetic and symptomatic, a seminal essay that both accurately predicted the nature of the future American international role during the Cold War and beyond and in itself embodied the hubris and exaggerated sense of omnipotence that would on occasion be highly detrimental to the effective exercise of U.S. power.

Primary Source

There is one fundamental issue which faces America as it faces no other nation. It is an issue peculiar to America and peculiar to America in the 20th Century—now. It is deeper even than the immediate issue of War. If America meets it correctly, then despite hosts of dangers and difficulties, we can look forward and move forward to a future worthy of men, with peace in our hearts.

If we dodge the issue, we shall flounder for ten or 20 or 30 bitter years in a chartless and meaningless series of disasters. . . .

Where are we? We are in the war. All this talk about whether this or that might not get us into the war is wasted effort. We are, for a fact, in the war. . . .

Now that we are in this war, how did we get in? We got in on the basis of defense. Even that very word, defense, has been full of deceit and self-deceit.

To the average American the plain meaning of the word defense is defense of the American territory. Is our national policy today limited to the defense of the American homeland by whatever means may seem wise? It is not. We are now in a war to promote, encourage and incite so-called democratic principles throughout the world. The average American begins to realize

now that’s the kind of war he’s in. And he’s halfway for it. But he wonders how he ever got there, since a year ago he had not the slightest intention of getting into any such thing. Well, he can see now how he got there. He got there via “defense.”

Behind the doubts in the American mind there were and are two different picture-patterns. One of them stressing the appalling consequences of the fall of England leads us to a war of intervention. As a plain matter of defense of American territory is that picture necessarily true? It is not necessarily true. For the other picture is roughly this: while it would be much better for us if Hitler were severely checked, nevertheless regardless of what happens in Europe it would be entirely possible for us to organize a defense of the northern part of the Western Hemisphere so that this country could not be successfully attacked. . . . No man can say that that picture of America as an impregnable armed camp is false. No man can honestly say that as a pure matter of defense—defense of our homeland—it is necessary to get into or be in this war.

The question before us then is not primarily one of necessity and survival. It is a question of choice and calculation. The true questions are: Do we want to be in this war? Do we prefer to be in it? And, if so, for what? . . .

This questioning reflects our truest instincts as Americans. But more than that. Our urgent desire to give this war its proper name has a desperate practical importance. If we know what we are fighting for, then we can drive confidently toward a victorious conclusion and, what's more, have at least an even chance of establishing a workable Peace.

Furthermore—and this is an extraordinary and profoundly historical fact which deserves to be examined in detail—America and only America can effectively state the war aims of this war. . . .

The big, important point to be made here is simply that the complete opportunity of leadership is ours. . . . [I]f our trouble is that we don't know what we are fighting for, then it's up to us to figure it out. Don't expect some other country to tell us. Stop this Nazi propaganda about fighting somebody else's war. We fight no wars except our wars. "Arsenal of Democracy?" We may prove to be that. But today we must be the arsenal of America and of the friends and allies of America. . . .

In the field of national policy, the fundamental trouble with America has been, and is, that whereas their nation became in the 20th Century the most powerful and the most vital nation in the world, nevertheless Americans were unable to accommodate themselves spiritually and practically to their fate. Hence they have failed to play their part as a world power—a failure which has had disastrous consequences for themselves and for all mankind. And the cure is this: to accept wholeheartedly our duty and our opportunity as the most powerful and vital nation in the world, and in consequence exert upon the world the full impact of our influence, for such purposes as we see fit and by such means as we see fit. . . .

Consider the 20th Century. It is ours not only in the sense that we happen to live in it but ours also because it is America's first century as a dominant power in the world. So far, this century of ours has been a profound and tragic disappointment. No other century has been so big with promise for human progress and happiness. And in no one century have so many men and women and children suffered such pain and anguish and bitter death. . . .

What can we say about an American Century? It is meaningless merely to say that we reject isolationism and accept the logic of internationalism. What internationalism? Rome had a great internationalism. So had the Vatican and Genghis Khan and the Ottoman Turks and the Chinese Emperors and 19th Century England. After the first World War, Lenin had one in mind. Today Hitler seems to have one in mind—one which appeals strongly to some American isolationists whose opinion of Europe is so low that they would gladly hand it over to anyone who would guarantee to destroy it for ever. But what internationalism have we Americans to offer?

Ours cannot come out of the vision of any one man. It must be the product of the imaginations of many men. It must be a sharing with all peoples of our Bill of Rights, our Declaration of Independence, our Constitution, our magnificent industrial products, our technical skills. It must be an internationalism of the people, by the people and for the people. . . .

Once we cease to distract ourselves with lifeless arguments about isolationism, we shall discover that there is already an immense American internationalism. American jazz, Hollywood movies, American slang, American machines and patented products, are in fact the only things that every community in the world, from Zanzibar to Hamburg, recognizes in common. Blindly, unintentionally, accidentally and really in spite of ourselves, we are already a world power in all the trivial ways—in very human ways. But there is a great deal more than that. America is already the intellectual, scientific and artistic capital of the world. Americans—Midwestern Americans—are today the least provincial people in the world. They have traveled the most and they know more about the world than the people of any other country. America's worldwide experience in commerce is also far greater than most of us realize.

Most important of all, we have that indefinable, unmistakable sign of leadership: prestige. And unlike the prestige of Rome or Genghis Khan or 19th Century England, American prestige throughout the world is faith in the good intentions as well as in the ultimate intelligence and ultimate strength of the whole American

people. We have lost some of that prestige in the last few years. But most of it is still there. . . .

No narrow definition can be given to the American internationalism of the 20th Century. It will take shape, as all civilizations take shape, by the living of it, by work and effort, by trial and error, by enterprise and adventure and experience.

And by imagination!

As America enters dynamically upon the world scene, we need most of all to seek and to bring forth a vision of America as a world power which is authentically American and which can inspire us to live and work and fight with vigor and enthusiasm. And as we come now to the great test, it may yet turn out that in all of our trials and tribulations of spirit during the first part of this century we as a people have been painfully apprehending the meaning of our time and now in this moment of testing there may come clear at last the vision which will guide us to the authentic creation of the 20th Century—our Century. . . .

Consider four areas of life and thought in which we may seek to realize such a vision:

First, the economic. It is for America and for America alone to determine whether a system of free economic enterprise—an economic order compatible with freedom and progress—shall or shall not prevail in this century. We know perfectly well that there is not the slightest chance of anything faintly resembling a free economic system prevailing in this country if it prevails nowhere else. What then does America have to decide? Some few decisions are quite simple. For example: we have to decide whether or not we shall have for ourselves and our friends freedom of the seas—the right to go with our ships and our ocean-going airplanes where we wish, when we wish and as we wish. The vision of Americas [*sic*] as the principal guarantor of the freedom of the seas, the vision of America as the dynamic leader of world trade, has within it the possibilities of such enormous human progress as to stagger the imagination. Let us not be staggered by it. Let us rise to its tremendous possibilities. Our thinking of world trade today is on ridiculously small terms. For

example, we think of Asia as being worth only a few hundred million a year to us. Actually, in the decades to come Asia will be worth to us exactly zero—or else it will be worth to us four, five, ten billions of dollars a year. And the latter are the terms we must think in, or else confess a pitiful impotence.

Closely akin to the purely economic area and yet quite different from it, there is the picture of an America which will send out through the world its technical and artistic skills. Engineers, scientists, doctors, movie men, makers of entertainment, developers of airlines, builders of roads, teachers, educators. Throughout the world, these skills, this training, this leadership is needed and will be eagerly welcomed, if only we have the imagination to see it and the sincerity and good will to create the world of the 20th Century.

But now there is a third thing which our vision must immediately be concerned with. We must undertake now to be the Good Samaritan of the entire world. It is the manifest duty of this country to undertake to feed all the people of the world who as a result of this worldwide collapse of civilization are hungry and destitute—all of them, that is, whom we can from time to time reach consistently with a very tough attitude toward all hostile governments. For every dollar we spend on armaments, we should spend at least a dime in a gigantic effort to feed the world—and all the world should know that we have dedicated ourselves to this task. Every farmer in America should be encouraged to produce all the crops he can, and all that we cannot eat—and perhaps some of us could eat less—should forthwith be dispatched to the four quarters of the globe as a free gift, administered by a humanitarian army of Americans, to every man, woman and child on this earth, who is really hungry.

But all this is not enough. All this will fail and none of it will happen unless our vision of America as a world power includes a passionate devotion to great American ideals. We have some things in this country which are infinitely precious and especially American—a love of freedom, a feeling for the equality of opportunity, a tradition of self-reliance and independence and also of co-operation. In addition to ideals and notions which are especially American, we are the inheritors of

all the great principles of Western civilization—above all Justice, the love of Truth, the ideal of Charity. The other day Herbert Hoover said that America was fast becoming the sanctuary of the ideals of civilization. For the moment it may be enough to be the sanctuary of these ideals. But not for long. It now becomes our time to be the powerhouse from which the ideals spread throughout the world and do their mysterious work of lifting the life of mankind from the level of the beasts to what the Psalmist called a little lower than the angels.

America as the dynamic center of ever-widening spheres of enterprise, America as the training center of the skillful servants of mankind, America as the Good

Samaritan, really believing again that it is more blessed to give than to receive, and America as the powerhouse of the ideals of Freedom and Justice—out of these elements surely can be fashioned a vision of the 20th Century to which we can and will devote ourselves in joy and gladness and vigor and enthusiasm. . . .

It is in this spirit that all of us are called, each to his own measure of capacity, and each in the widest horizon of his vision, to create the first great American Century.

2. The Atlantic Charter, 14 August 1941

Introduction

Drafted and signed while President Franklin D. Roosevelt and British Prime Minister Winston Churchill met secretly at sea in Argentia Harbor, off Placentia Bay on the Newfoundland coast, during 8–12 August 1941, the Atlantic Charter was issued publicly by Britain and the United States on 14 August 1941. This was the first time these two men, who had already encountered each other briefly in 1918 when both held less-eminent government positions in their own countries, met as president and prime minister. In August 1941, Britain had been at war with Germany for two years and with Italy since June 1940, but strictly speaking the United States was still neutral in the war. In reality, Roosevelt had so directed his country’s policies that he was serving as an undeclared ally of Britain. By this time it seemed quite likely that Roosevelt, who had already launched a massive defense buildup at home, would make some minor military or naval clash between U.S. and German forces into the pretext for declaring outright war against Germany. Roosevelt sought an idealistic program of liberal war aims around which he could rally American and international public opinion, thereby legitimizing and justifying his steady incremental moves toward war as part of a broader quest toward a fairer and better liberal world order that could be achieved in no other way. The Atlantic Charter represented the first formal statement of the principles and objectives for which both original signatory powers were fighting. British officials were nonetheless concerned that the principles enunciated therein might compromise their special economic relations with the rest of the British empire and later added a rider specifically exempting all such arrangements from the provisions of the Atlantic Charter. The Soviet Union had not been consulted at all and before adhering to the charter also later made significant reservations regarding its own rights in other territories. All such caveats notwithstanding, the Atlantic Charter nonetheless encapsulated the objectives for which the victorious World War II powers claimed to have waged that conflict and thereby effectively served to de-legitimize subsequent efforts by those states either to maintain control of their colonial possessions or to dominate smaller nations by force.

Primary Source

The President of the United States of America and the Prime Minister, Mr. Churchill, representing His Majesty’s Government in the United Kingdom, being met together, deem it right to make known certain common principles in the national policies of their

respective countries on which they base their hopes for a better future for the world.

First, their countries seek no aggrandizement, territorial or other;

Second, they desire to see no territorial changes that do not accord with the freely expressed wishes of the peoples concerned;

Third, they respect the right of all peoples to choose the form of government under which they will live; and they wish to see sovereign rights and self-government restored to those who have been forcibly deprived of them;

Fourth, they will endeavor, with due respect for their existing obligations, to further the enjoyment by all States, great or small, victor or vanquished, of access, on equal terms, to the trade and to the raw materials of the world which are needed for their economic prosperity;

Fifth, they desire to bring about the fullest collaboration between all nations in the economic field with the object of securing, for all, improved labor standards, economic advancement and social security;

Sixth, after the final destruction of the Nazi tyranny, they hope to see established a peace which will afford

to all nations the means of dwelling in safety within their own boundaries, and which will afford assurance that all the men in all the lands may live out their lives in freedom from fear and want;

Seventh, such a peace should enable all men to traverse the high seas and oceans without hindrance;

Eighth, they believe that all of the nations of the world, for realistic as well as spiritual reasons must come to the abandonment of the use of force. Since no future peace can be maintained if land, sea or air armaments continue to be employed by nations which threaten, or may threaten, aggression outside of their frontiers, they believe, pending the establishment of a wider and permanent system of general security, that the disarmament of such nations is essential. They will likewise aid and encourage all other practicable measures which will lighten for peace-loving peoples the crushing burden of armaments.

3. Winston Churchill: Percentages Agreement, 9 October 1944

Introduction

By fall 1944 it was clear that the decision by British and American officials to defer a second front in Europe until June 1944 meant that when the war ended, Soviet forces would effectively control most if not all of Eastern Europe. Despite the various Allied declarations endorsing the postwar self-determination of all nations, both British Prime Minister Winston Churchill and U.S. President Franklin D. Roosevelt recognized that, in practice, there was little they could do that would substantively affect Soviet policies in those areas. Soviet leader Josef Stalin had already stated fairly unequivocally that he regarded the maintenance of friendly governments in the region separating the Soviet Union from Germany as essential to his own country's security, and this was something on which he would not compromise. Seeking to protect and preserve British interests in the Balkans and Central Europe as Soviet forces advanced relentlessly across the continent, in October 1944 Churchill flew to Moscow to meet with Stalin. The two men reached an informal agreement as to the delineation and weighting of their countries' respective spheres of influence in those areas, one that reflected old-fashioned balance of power politics rather than the liberal principles enshrined in the Atlantic Charter and other wartime Allied declarations. Britain would have a virtually free hand in Greece, while Romania and Bulgaria were largely resigned to Soviet rule, and Britain and the Soviet Union agreed to share influence equally in Yugoslavia and Hungary. Certain portions of Eastern Europe fell outside the scope of the agreement, since Poland, the largest East European state, was considered too significant to include, and Czechoslovakia, well over to the west, was ignored. Roosevelt, although informed by Churchill of the "percentages agreement," never formally endorsed it but raised no objections to it. The episode was a revelation of the extent to which postwar Europe was likely to be shaped by the disposition on the ground of the various Allies' military forces.

Primary Source

We [the British party] alighted at Moscow on the afternoon of October 9, and were received very heartily and with full ceremonial by [Russian Foreign Minister V. I.] Molotov and many high Russian personages. This time we were lodged in Moscow itself, with every care and comfort. I had one small, perfectly appointed house, and Anthony [Eden, the British Foreign Secretary] another near by. We were glad to dine together and rest. At ten o'clock that night we held our first important meeting in the Kremlin. There were only Stalin, Molotov, Eden, and I, with Major Birse and Pavlov as interpreters. . . .

The moment was apt for business, so I said, "Let us settle about our affairs in the Balkans. Your armies are in Rumania and Bulgaria. We have interests, missions, and agents there. Don't let us get at cross-purposes in small ways. So far as Britain and Russia are concerned, how would it do for you to have ninety per cent predominance in Rumania, for us to have ninety per cent of the say in Greece, and go fifty-fifty about Yugoslavia?" While this was being translated I wrote out on a half-sheet of paper:

Rumania	
Russia	90%
The others	10%
Greece	
Great Britain	90%
(in accord with U.S.A.)	
Russia	10%
Yugoslavia	50-50%
Hungary	50-50%
Bulgaria	
Russia	75%
The others	25%

I pushed this across to Stalin, who had by then heard the translation. There was a slight pause. Then he took his blue pencil and made a large tick upon it, and passed it back to us. It was all settled in no more time than it takes to set down.

Of course we had long and anxiously considered our point, and were only dealing with immediate war-time arrangements. All larger questions were reserved on

both sides for what we then hoped would be a peace table when the war was won.

After this there was a long silence. The pencilled paper lay in the centre of the table. At length I said, "Might it not be thought rather cynical if it seemed we had disposed of these issues, so fateful to millions of people, in such an offhand manner? Let us burn the paper." "No, you keep it," said Stalin.

[. . .]

After our first meeting I reflected on our relations with Russia throughout Eastern Europe, and in order to clarify my ideas drafted a letter to Stalin on the subject, enclosing a memorandum stating our interpretation of the percentages which we had accepted across the table. In the end I did not send this letter, deeming it wiser to let well alone. I print it only as an authentic account of my thought.

Moscow
October 11, 1944

I deem it profoundly important that Britain and Russia should have a common policy in the Balkans which is also acceptable to the United States. The fact that Britain and Russia have a twenty-year alliance makes it especially important for us to be in broad accord and to work together easily and trustfully and for a long time. I realise that nothing we can do here can be more than preliminary to the final decisions we shall have to take when all three of us are gathered together at the table of victory. Nevertheless I hope that we may reach understandings, and in some cases agreements, which will help us through immediate emergencies, and will afford a solid foundation for long-enduring world peace.

These percentages which I have put down are no more than a method by which in our thoughts we can see how near we are together, and then decide upon the necessary steps to bring us into full agreement. As I said, they would be considered crude, and even callous, if they were exposed to the scrutiny of the Foreign Offices and diplomats all over the world. Therefore they could not be the basis of any public document, certainly not at the present time. They might however

be a good guide for the conduct of our affairs. If we manage these affairs well we shall perhaps prevent several civil wars and much bloodshed and strife in the small countries concerned. Our broad principle should be to let every country have the form of government which its people desire. We certainly do not wish to force on any Balkan State monarchic or republican institutions. We have however established certain relations of faithfulness with the Kings of Greece and Yugoslavia. They have sought our shelter from the Nazi foe, and we think that when normal tranquillity is re-established and the enemy has been driven out the peoples of these countries should have a free and fair chance of choosing. It might even be that Commissioners of the three Great Powers should be stationed there at the time of the elections so as to see that the people have a genuine free choice. There are good precedents for this.

However, besides the institutional question there exists in all these countries the ideological issue between totalitarian forms of government and those we call free enterprise controlled by universal suffrage. We are very glad that you have declared yourselves against trying to change by force or by Communist propaganda the established systems in the various Balkan countries. Let them work out their own fortunes during the years that lie ahead. One thing however we cannot allow—Fascism or Nazism in any of their forms, which give to the toiling masses neither the securities offered by your system nor those offered by ours, but, on the contrary, lead to the build-up of tyrannies at home and aggression abroad. In principle I feel that Great Britain and Russia should feel easy about the internal government of these countries, and not worry about them or interfere with them once conditions of tranquillity have been restored after this terrible blood-bath which they, and indeed we, have all been through.

It is from this point of view that I have sought to adumbrate the degrees of interest which each of us takes in these countries with the full assent of the other, and subject to the approval of the United States, which may go far away for a long time and then come back again unexpectedly with gigantic strength.

In writing to you, with your experience and wisdom, I do not need to go through a lot of arguments. Hitler has tried to exploit the fear of an aggressive, proselytising Communism which exists throughout Western Europe, and he is being decisively beaten to the ground. But, as you know well, this fear exists in every country, because, whatever the merits of our different systems, no country wishes to go through the bloody revolution which will certainly be necessary in nearly every case before so drastic a change could be made in the life, habits, and outlook of their society. We feel we were right in interpreting your dissolution of the Comintern as a decision by the Soviet Government not to interfere in the internal political affairs of other countries. The more this can be established in people's minds the smoother everything will go. We, on the other hand, and I am sure the United States as well, have Governments which stand on very broad bases, where privilege and class are under continual scrutiny and correction. We have the feeling that, viewed from afar and on a grand scale, the differences between our systems will tend to get smaller, and the great common ground which we share of making life richer and happier for the mass of the people is growing every year. Probably if there were peace for fifty years the differences which now might cause such grave troubles to the world would become matters for academic discussion.

At this point, Mr. Stalin, I want to impress upon you the great desire there is in the heart of Britain for a long, stable friendship and cooperation between our two countries, and that with the United States we shall be able to keep the world engine on the rails.

To my colleagues at home I sent the following:

12 Oct 44

The system of percentage is not intended to prescribe the numbers sitting on commissions for the different Balkan countries, but rather to express the interest and sentiment with which the British and Soviet Governments approach the problems of these countries, and so that they might reveal their minds to each other in some way that could be comprehended. It is not intended to be more than a guide, and of course in no

way commits the United States, nor does it attempt to set up a rigid system of spheres of interest. It may however help the United States to see how their two principal Allies feel about these regions when the picture is presented as a whole.

2. Thus it is seen that quite naturally Soviet Russia has vital interests in the countries bordering on the Black Sea, by one of whom, Rumania, she has been most wantonly attacked with twenty-six divisions, and with the other of whom, Bulgaria, she has ancient ties. Great Britain feels it right to show particular respect to Russian views about these two countries, and to the Soviet desire to take the lead in a practical way in guiding them in the name of the common cause.

3. Similarly, Great Britain has a long tradition of friendship with Greece, and a direct interest as a Mediterranean Power in her future. In this war Great Britain lost 30,000 men in trying to resist the German-Italian invasion of Greece, and wishes to play a leading part in guiding Greece out of her present troubles, maintaining that close agreement with the United States which has hitherto characterised Anglo-American policy in this quarter. Here it is understood that Great Britain will take the lead in a military sense and try to help the existing Royal Greek Government to establish itself in Athens upon as broad and united a basis as possible. Soviet Russia would be ready to concede this position and function to Great Britain in the same sort of way as Britain would recognise the intimate relationship between Russia and Rumania. This would prevent in Greece the growth of hostile factions waging civil war upon each other and involving the British and Russian Governments in vexatious arguments and conflict of policy.

4. Coming to the case of Yugoslavia, the numerical symbol 50-50 is intended to be the foundation of joint action and an agreed policy between the two Powers now closely involved, so as to favour the creation of a united Yugoslavia after all elements there have been joined together to the utmost in driving out the Nazi invaders. It is intended to prevent, for instance, armed strife between the Croats and Slovenes on the one side and powerful and numerous elements in Serbia on the other, and also to produce a joint and friendly policy towards Marshal Tito, while ensuring that weapons furnished to him are used against the common Nazi foe rather than for internal purposes. Such a policy, pursued in common by Britain and Soviet Russia, without any thought of special advantages to themselves, would be of real benefit.

5. As it is the Soviet armies which are obtaining control of Hungary, it would be natural that a major share of influence should rest with them, subject of course to agreement with Great Britain and probably the United States, who, though not actually operating in Hungary, must view it as a Central European and not a Balkan State.

6. It must be emphasised that this broad disclosure of Soviet and British feelings in the countries mentioned above is only an interim guide for the immediate wartime future, and will be surveyed by the Great Powers when they meet at the armistice or peace table to make a general settlement of Europe.

4. Declaration on Liberated Europe: The Yalta Conference, February 1945

Introduction

The most controversial of the wartime summit meetings of the Big Three Allied leaders—Josef Stalin of the Soviet Union, British Prime Minister Winston Churchill, and U.S. President Franklin D. Roosevelt—was that held at Yalta in the Crimea in February 1945. With victory in both Europe and Asia looming ever closer on the horizon, the

three men discussed numerous questions relating to the future government of many enemy or “liberated” states in both Europe and Asia. High on the agenda was the question of exactly who would control the new governments established in such countries. The Allied powers’ wartime declarations had formally endorsed the principles of national self-determination, but in practice authority would ultimately rest with the state or states whose armed forces controlled a particular country. Apparently seeking to soothe the fears of his Western Allies that Soviet forces would exercise uncurbed and arbitrary power in those countries under their control, Stalin agreed to sign a declaration that promised all “liberated” European countries “democratic” governments chosen through “free elections” as soon as possible, in accordance with the principles stated earlier in the Atlantic Charter and the Declaration of the United Nations. In practice, this statement failed to define precisely what constituted “democratic” or “free” governments, a deliberate resort to vagueness that effectively permitted the occupying powers to make their own determination on the subject. Before long, East Europeans and U.S. Republican Party politicians alike would attack the Yalta agreements on the grounds that they effectively acquiesced in Soviet domination of Eastern Europe. Given Soviet military dominance of the area, however, no matter how harshly Russian rule might be implemented and exercised, Roosevelt and Churchill had few real alternatives to accepting Stalin’s control there.

PROTOCOL OF PROCEEDINGS OF CRIMEA CONFERENCE

The Crimea Conference of the heads of the Governments of the United States of America, the United Kingdom, and the Union of Soviet Socialist Republics, which took place from Feb. 4 to 11, came to the following conclusions:

[. . .]

II. DECLARATION OF LIBERATED EUROPE

The following declaration has been approved:

The Premier of the Union of Soviet Socialist Republics, the Prime Minister of the United Kingdom and the President of the United States of America have consulted with each other in the common interests of the people of their countries and those of liberated Europe. They jointly declare their mutual agreement to concert during the temporary period of instability in liberated Europe the policies of their three Governments in assisting the peoples liberated from the domination of Nazi Germany and the peoples of the former Axis satellite states of Europe to solve by democratic means their pressing political and economic problems.

The establishment of order in Europe and the rebuilding of national economic life must be achieved by processes which will enable the liberated peoples to destroy the last vestiges of nazism and fascism and to create

democratic institutions of their own choice. This is a principle of the Atlantic Charter—the right of all people to choose the form of government under which they will live—the restoration of sovereign rights and self-government to those peoples who have been forcibly deprived to them by the aggressor nations.

To foster the conditions in which the liberated people may exercise these rights, the three governments will jointly assist the people in any European liberated state or former Axis state in Europe where, in their judgment conditions require,

- (a) to establish conditions of internal peace;
- (b) to carry out emergency relief measures for the relief of distressed peoples;
- (c) to form interim governmental authorities broadly representative of all democratic elements in the population and pledged to the earliest possible establishment through free elections of Governments responsive to the will of the people; and
- (d) to facilitate where necessary the holding of such elections.

The three Governments will consult the other United Nations and provisional authorities or other Governments in Europe when matters of direct interest to them are under consideration.

When, in the opinion of the three Governments, conditions in any European liberated state or former Axis

satellite in Europe make such action necessary, they will immediately consult together on the measure necessary to discharge the joint responsibilities set forth in this declaration.

By this declaration we reaffirm our faith in the principles of the Atlantic Charter, our pledge in the Declaration by the United Nations and our determination to build in cooperation with other peace-loving nations world order, under law, dedicated to peace, security, freedom and general well-being of all mankind.

In issuing this declaration, the three powers express the hope that the Provisional Government of the French Republic may be associated with them in the procedure suggested.

5. Mao Zedong and Jiang Jieshi: Statements on the Situation in China, 1945

Introduction

In China in 1945, the prospect of victory in the relatively near future did little to bring peace. Since the late 1930s the Guomindang (Nationalist) government headed by Jiang Jieshi (Chiang Kai-shek) and the revolutionary Chinese Communist Party led by Mao Zedong had observed an uneasy and fragile truce, as both collaborated in fighting the Japanese. Even so, clashes between the two groupings frequently occurred, since neither trusted the other and each had sought to eliminate its rival in the first half of the 1930s. The impending end of the war with Japan was merely a signal for renewed hostilities between the two Chinese political groupings. As victory over Japan seemed increasingly likely, in March 1945 Jiang announced his intention of summoning a national assembly to reestablish constitutional government in China. He also took the opportunity to assert the Guomindang party's status as the sole legitimate government of China, appeal for national unity, and demand that Chinese communist forces lay down their arms as a precondition for their inclusion in the forthcoming assembly. The Chinese communists, who already controlled substantial areas of the country, were highly unlikely to do so, as they feared—with some justification—that any such move would put them at the mercy of the Guomindang's own forces. Each party sought to place on the other the blame for the civil war that was brewing. In August 1945 the communists' leader, Mao, condemned Jiang's order that only Guomindang representatives could accept the surrender of Japanese forces in China. Mao feared that if communist cadres accepted this ruling, Guomindang officials would augment their existing weaponry with surrendered Japanese arms, putting the Chinese communists in a disadvantageous position if actual fighting did break out between them and the Guomindang. Within a few months, civil war had indeed begun between the two opponents, a conflict that, with intervals for mediation in 1946, lasted until October 1949, when Jiang's forces fled to the island of Taiwan and the victorious communists established the People's Republic of China (PRC).

Speech by President Chiang Kai-shek before the Preparatory Commission for Constitutional Government in Chungking
1 March 1945
Chinese News Service

You will recall that in 1936 the Government decided to summon a National Assembly on November 12, 1937 for the inauguration of constitutional government and

the termination of the period of political tutelage under the Kuomintang. On July 7, 1937 Japan suddenly made war on us, and the plan had to be shelved. However, the determination of the Kuomintang to realize constitutional government remained as strong as ever. Had it not been for the recommendation of further postponement by the People's Political Council, the National Assembly would have been convened during 1940 in accordance with another Government decision.

This year, on the first of January, on behalf of the Government, I announced that the National Assembly will be summoned before the close of the year, unless untoward and unexpected military developments should in the meanwhile intervene.

The Kuomintang is the historical party of national revolution; it overthrew the Manchu dynasty; it destroyed Yuan Shih-kai who would be emperor; it utterly defeated the militarists that succeeded Yuan Shih-kai; it brought about national unification; it achieved the removal of the unequal treaties; and it led the country into the eight-year-old struggle against Japan. It is we who are the party of liberation and progress. In summoning the National Assembly and returning the rule to the people in conformity with the sacred will of Dr. Sun Yat-sen, the Kuomintang is performing its historical role.

We must emerge from this war a united nation. Only a united nation can effectively perform the tasks of political and economic reconstruction to raise the lot of our toiling masses and handle the problems of external relations in a new, uncharted world. Before the Japanese invasion, we were a united nation. Today, but for the Communists and their armed forces, we are a united nation. There are no independent warlords or local governments challenging the central authority.

I have long held the conviction that the solution of the Communist question must be through political means. The Government has labored to make the settlement a political one. As the public is not well informed on our recent efforts to reach a settlement with the Communists, time has come for me to clarify the atmosphere.

As you know, negotiations with the Communists have been a perennial problem for many years. It has been our unvarying experience that no sooner is a demand met than fresh ones are raised. The latest demand of the Communists is that the Government should forthwith liquidate the Kuomintang rule, and surrender all power to a coalition of various parties. The position of the Government is that it is ready to admit other parties, including the Communist as well as non-partisan leaders, to participate in the Government without, however, relinquishment by the Kuomintang of its power

of ultimate decision and final responsibility until the convocation of the National Assembly. We have even offered to include the Communists and other parties in an organ to be established along the line of what is known abroad as a "war cabinet." To go beyond this and to yield to the Communist demand would not only place the Government in open contravention of the political program of Dr. Yat-sen, but also create insurmountable practical difficulties for the country.

During the past eight years, the country has withstood all the vicissitudes of military reverses and of unbelievable privation and has ridden through the storm for the simple reason that it has been led by a stable and strong Government. The war remains to be won, the future is still fraught with peril. If the Government shirks its responsibility and surrenders its power of ultimate decision to a combination of political parties, the result would be unending friction and fears, leading to a collapse of the central authorities. Bear in mind that in such a contingency, unlike in other countries, there exists in our country at present no responsible body representing the people for government to appeal to.

I repeat, whether by accident or design, the Kuomintang has had the responsibility of leading the country during the turbulent last decade and more. It will return the supreme power to the people through the instrumentality of the National Assembly, and in the meanwhile, it will be ready to admit other parties to a share in the government, but it definitely cannot abdicate to a loose combination of parties. Such a surrender would not mean returning power to the people.

We must emerge from the war with a united army. The Communists should not keep a separate army. Here allow me to digress a little. The Chinese Communist propaganda abroad has tried to justify this private army on the ground that if it becomes incorporated in the National Army, it will be in danger of being destroyed or discriminated against. Their propaganda also magnify, out of all proportion, the actual military strength of the Communists. To you, I need hardly say that Government forces have always without exception borne the brunt of Japanese attack and will continue to do so. Today, with the wholehearted co-operation of our Allies, powerful armies are being equipped and conditioned

to assume the offensive. We are synchronizing our efforts with those of our Allies in expelling Japan from the Asiatic mainland.

[. . .]

No one mindful of the future of our 450,000,000 people and conscious of standing at the bar of history, would wish to plunge the country into a civil war. The Government has shown its readiness and is always ready to confer with the Communists to bring about a real and lasting settlement with them.

I have explained the Government's position on the Communist problem at length, because today that is the main problem to unity and constitutional government.

I now turn to the concrete measures which the Government proposes to take to realize constitutional government, which I wish to announce briefly:

(1) The National Assembly to inaugurate constitutional government will be convened on November 12, this year the eightieth birthday anniversary of Dr. Sun Yat-sen, subject to the approval by the Kuomintang Congress which is due to meet in May.

(2) Upon the inauguration of constitutional government, all political parties will have legal status and enjoy equality. The Government has offered to give legal recognition to the Communist party as soon as the latter agrees to incorporate their army and local administration in the National Army and Government. The offer still stands.

(3) The next session of the People's Political Council with a larger membership as well as more extensive powers will soon be sitting. The Government will consider with the Council the measures in regard to the convening of the National Assembly and all related matters.

I am optimistic of national unification and the future of democratic government in our country. The torrent of public opinion demanding national unity and reconstruction is mounting ever stronger and will soon become an irresistible force. No individual or political

party can afford to disregard this force any longer. Let all of us, regardless of party affiliations, work together for the twin objectives of our people-national unity and reconstruction.

Chiang Kai-shek Is Provoking Civil War

Mao Zedong

13 August 1945

A spokesman for the Propaganda Department of the Kuomintang Central Executive Committee has made a statement describing as "a presumptuous and illegal act" the order setting a time-limit for the surrender of the enemy and the puppets, which was issued by Chu Teh, Commander-in-Chief of the Eighteenth Group Army, on August 10 from the General Headquarters in Yen-an. This comment is absolutely preposterous. Its logical implication is that it was wrong of Commander-in-Chief Chu Teh to act in accordance with the Potsdam Declaration and with the enemy's declared intention of surrendering and to order his troops to effect the surrender of the enemy and the puppets, and that on the contrary it would have been right and legitimate to advise the enemy and puppets to refuse to surrender. No wonder that even before the enemy's actual surrender, Chiang Kai-shek, China's fascist ring-leader, autocrat and traitor to the people, had the audacity to "order" the anti-Japanese armed forces in the Liberated Areas to "stay where they are, pending further orders", that is, to tie their own hands and let the enemy attack them. No wonder this selfsame fascist ringleader dared to "order" the so-called underground forces (who are, in fact, puppet troops "saving the nation by a devious path" and Tai Li's secret police collaborating with the Japanese and puppets) as well as other puppet troops to "be responsible for maintaining local order", while forbidding the anti-Japanese armed forces in the Liberated Areas to "take presumptuous action on their own" against enemy and puppet forces. This transposition of the enemy and the Chinese is in truth a confession by Chiang Kai-shek; it gives a vivid picture of his whole psychology, which is one of consistent collusion with the enemy and puppets and of liquidation of all those not of his ilk. However, the people's anti-Japanese armed forces in China's Liberated Areas will never be taken in by this venomous scheme. They know that Commander-in-Chief Chu Teh's order is precisely the resolute fulfilment of

the provision in paragraph 2 of the Potsdam Declaration, “prosecute the war against Japan until she ceases to resist”. On the other hand, Chiang Kai-shek’s so-called “orders” are precisely violations of the Potsdam Declaration which he himself signed. One has only to make the comparison to see at once who is not “adhering faithfully to the provisions of the common agreements of the Allies”.

Both the comment by the spokesman for the Propaganda Department of the Kuomintang Central Executive Committee and Chiang Kai-shek’s “orders” are from beginning to end provocations to civil war; at this moment, when attention at home and abroad is focussed on Japan’s unconditional surrender, their aim is to find a pretext for switching to civil war as soon as the War of Resistance ends. . . . So now they are saying that the Eighth Route Army and the New Fourth Army should not demand that the enemy and puppet troops surrender their guns. In the eight years of the War of Resistance, the Eighth Route Army and the New Fourth Army have suffered enough from the attacks and encirclements of both Chiang Kai-shek and the Japanese. And now, with the War of Resistance coming to an end, Chiang Kai-shek is hinting to the Japanese (and to his beloved puppet troops) that they should not surrender their guns to the Eighth Route Army and the New Fourth Army but “only to me, Chiang Kai-shek”. One thing, however, Chiang Kai-shek has left unsaid, “. . . so that I can use these guns to kill the Communists and wreck the peace of China and the world.” Isn’t this the truth? What will be the result of telling the Japanese to hand over their guns to Chiang Kai-shek and telling the puppet troops to “be responsible for maintaining local order”? The result can only be that a merger of the Nanking and Chungking regimes and co-operation between Chiang Kai-shek and the puppets will take the place of “Sino-Japanese collaboration” and of co-operation between the Japanese and the puppets, and that Chiang Kai-shek’s “anti-communism and national reconstruction” will take the place of the “anti-communism and national reconstruction” of the Japanese and Wang Ching-wei. Isn’t this a violation of the Potsdam Declaration? Can there be any doubt that the grave danger of civil war will confront the people of the whole country the

moment the War of Resistance is over? We now appeal to all our fellow-countrymen and to the Allied countries to take action, together with the people of the Liberated Areas, resolutely to prevent a civil war in China, which would endanger world peace.

After all, who has the right to accept the surrender of the Japanese and puppets? Relying solely on their own efforts and the support of the people, the anti-Japanese armed forces in China’s Liberated Areas, to whom the Kuomintang government refused all supplies and recognition, have succeeded by themselves in liberating vast territories and more than 100 million people and have resisted and pinned down 56 per cent of the invading enemy troops in China and 95 per cent of the puppet troops. If not for these armed forces, the situation in China would never have been what it is today! To speak plainly, in China only the anti-Japanese armed forces of the Liberated Areas have the right to accept the surrender of the enemy and puppet troops. As for Chiang Kai-shek, his policy has been to look on with folded arms and sit around and wait for victory; indeed he has no right at all to accept the surrender of the enemy and the puppets.

We declare to all our fellow-countrymen and to the people of the whole world: The Supreme Command in Chungking cannot represent the Chinese people and those Chinese armed forces which have really fought Japan; the Chinese people demand the right of the anti-Japanese armed forces of China’s Liberated Areas under Commander-in-Chief Chu Teh to send their representatives directly in order to participate in the acceptance of Japan’s surrender and in the military control over Japan by the four Allied Powers and also to participate in the future peace conference. If this is not done, the Chinese people will deem it most improper.

6. United Nations Charter, 1945

Introduction

The United Nations (UN) Charter was written at the organization's first meeting, from 25 April to 26 June 1945. Fifty delegates from around the world met in San Francisco to create the new international peacekeeping organization. The UN was formed to encourage the peaceful resolution of conflicts and to maintain world order, goals established in the initial charter and evidenced in the UN's prominent role in world events in subsequent years. Its charter, which revealed the influence of the prewar League of Nations, represented a compromise between the idea that all nations should be equal, with all entitled to vote in the General Assembly, and President Franklin D. Roosevelt's four policemen vision of a concert of the great powers who would run the world between them. Five member states—Great Britain, the United States, the Soviet Union, China, and France, the coalition that had won the war—each had a permanent seat and veto power on the UN Security Council, which had to approve all executive action taken by the UN. In conjunction with the new UN, the Allies also created an international court of justice. A lineal descendant of the prewar international court of justice, its function was to rule on and settle disputes between states. Although originally intended as a peacekeeping body, almost inevitably the UN was affected by Cold War antagonisms, as the various permanent Security Council members used their veto power to block initiatives that they considered disadvantageous to their own Cold War positions. For more than twenty years, member states were divided, generally on ideological lines, on the issue of whether the noncommunist Republic of China (ROC) on Taiwan or the communist People's Republic of China (PRC) on the mainland should fill China's UN seat, an objective that the PRC attained in 1971. The UN General Assembly was the arena for some of the most significant pronouncements and dramatic confrontations of the Cold War. In 1953 President Dwight D. Eisenhower delivered his "Atoms for Peace" address before the General Assembly, calling for international cooperation to develop peaceful uses for nuclear energy. More tense occasions included those when the flamboyant Soviet president, Nikita Khrushchev, openly defied the Western powers, and U.S. representative Adlai Stevenson challenged his Soviet counterpart in October 1962 to confirm the presence of Soviet missiles in Cuba. During the Cuban Missile Crisis, UN Secretary-General U Thant offered to try to mediate a settlement, an offer that President John F. Kennedy might have accepted had his own efforts proved unavailing. More embarrassingly for his country, during the U.S.-backed Bay of Pigs invasion attempt against Cuba in March 1961, Stevenson initially denied that his country was involved, a statement he was later forced to retract. The UN generally encouraged all international efforts toward arms control and provided the arena for the negotiation of the 1968 Treaty on the Non-Proliferation of Nuclear Weapons, the 1972 Biological and Toxin Weapons Convention, and the 1992 Convention on the Prohibition of the Development, Production, Stockpiling, and Use of Chemical Weapons. Although less controversial and publicized than its efforts to maintain peace and resolve international conflicts, at all times many of the UN's energies were devoted to economic, social, cultural, and humanitarian efforts, including the eradication and prevention of disease, environmental and climatic issues, human rights, women's and children's rights, immigration, education, the care of refugees, and measures to combat such transnational problems as international dealings in human beings and the narcotics trade. The UN was perhaps most successful in promoting joint international action on humanitarian, economic, social, and environmental issues that transcended national boundaries and demanded concerted international action, such as food and hunger, health, trade policies, social justice, women's rights, pollution, and other ecological concerns. The ending of the Cold War facilitated UN endeavors to promote such objectives by removing some of the East-West barriers to their successful implementation. Although sometimes derided as ineffective and handicapped in international crises by its reliance upon military forces contributed by member states, the UN often provided a valuable forum for the quiet exchange of views and the promotion of humanitarian and social goals. On occasion, it also conveniently furnished a useful alternative channel of communications among powers whose diplomatic relations were otherwise limited or even nonexistent. While never as effective in terms

of resolving international conflicts as its founders envisaged, the UN proved considerably more successful than its predecessor, the League of Nations, in attracting and retaining as members most of the world's major as well as minor states, whose continuing membership implicitly bestowed authority and legitimacy upon the organization's statements and actions. Although often hampered by Cold War antagonisms, during the forty-five years from 1945 to 1990 the UN played a significant role in moderating Cold War tensions and defusing at least some international crises, providing an arena where disputes could be quietly resolved.

[. . .]

CHAPTER I. PURPOSES AND PRINCIPLES

ARTICLE 1

The Purposes of the United Nations are:

1. To maintain international peace and security, and to that end: to take effective collective measures for the prevention and removal of threats to the peace, and for the suppression of acts of aggression or other breaches of the peace, and to bring about by peaceful means, and in conformity with the principles of justice and international law, adjustment or settlement of international disputes or situations which might lead to a breach of the peace;
2. To develop friendly relations among nations based on respect for the principle of equal rights and self-determination of peoples, and to take other appropriate measures to strengthen universal peace;
3. To achieve international cooperation in solving international problems of an economic, social, cultural, or humanitarian character, and in promoting and encouraging respect for human rights and for fundamental freedoms for all without distinction as to race, sex, language, or religion; and
4. To be a center for harmonizing the actions of nations in the attainment of these common ends.

ARTICLE 2

The Organization and its Members, in pursuit of the Purposes stated in Article 1, shall act in accordance with the following Principles.

1. The Organization is based on the principle of the sovereign equality of all its Members.

2. All Members, in order to ensure to all of them the rights and benefits resulting from membership, shall fulfill in good faith the obligations assumed by them in accordance with the present Charter.
3. All Members shall settle their international disputes by peaceful means in such a manner that international peace and security, and justice, are not endangered.
4. All Members shall refrain in their international relations from the threat or use of force against the territorial integrity or political independence of any state, or in any other manner inconsistent with the Purposes of the United Nations.
5. All Members shall give the United Nations every assistance in any action it takes in accordance with the present Charter, and shall refrain from giving assistance to any state against which the United Nations is taking preventive or enforcement action.
6. The Organization shall ensure that states which are not Members of the United Nations act in accordance with these Principles so far as may be necessary for the maintenance of international peace and security.
7. Nothing contained in the present Charter shall authorize the United Nations to intervene in matters which are essentially within the domestic jurisdiction of any state or shall require the Members to submit such matters to settlement under the present Charter; but this principle shall not prejudice the application of enforcement measures under Chapter VII.

CHAPTER II. MEMBERSHIP

ARTICLE 3

The original Members of the United Nations shall be the states which, having participated in the United Nations Conference on International Organization at San Francisco, or having previously signed the Decla-

ration by United Nations of January 1, 1942, sign the present Charter and ratify it in accordance with Article 110.

ARTICLE 4

1. Membership in the United Nations is open to all other peace-loving states which accept the obligations contained in the present Charter and, in the judgment of the Organization, are able and willing to carry out these obligations.
2. The admission of any such state to membership in the United Nations will be effected by a decision of the General Assembly upon the recommendation of the Security Council.

ARTICLE 5

A member of the United Nations against which preventive or enforcement action has been taken by the Security Council may be suspended from the exercise of the rights and privileges of membership by the General Assembly upon the recommendation of the Security Council. The exercise of these rights and privileges may be restored by the Security Council.

ARTICLE 6

A Member of the United Nations which has persistently violated the Principles contained in the present Charter may be expelled from the Organization by the General Assembly upon the recommendation of the Security Council.

CHAPTER III. ORGANS

ARTICLE 7

1. There are established as the principal organs of the United Nations: a General Assembly, a Security Council, an Economic and Social Council, a Trusteeship Council, an International Court of Justice, and a Secretariat.
2. Such subsidiary organs as may be found necessary may be established in accordance with the present Charter.

ARTICLE 8

The United Nations shall place no restrictions on the eligibility of men and women to participate in any capacity and under conditions of equality in its principal and subsidiary organs.

CHAPTER IV. THE GENERAL ASSEMBLY COMPOSITION

ARTICLE 9

1. The General Assembly shall consist of all the Members of the United Nations.
2. Each member shall have not more than five representatives in the General Assembly.

FUNCTIONS AND POWERS

ARTICLE 10

The General Assembly may discuss any questions or any matters within the scope of the present Charter or relating to the powers and functions of any organs provided for in the present Charter, and, except as provided in Article 12, may make recommendations to the Members of the United Nations or to the Security Council or to both on any such questions or matters.

ARTICLE 11

1. The General Assembly may consider the general principles of cooperation in the maintenance of international peace and security, including the principles governing disarmament and the regulation of armaments, and may make recommendations with regard to such principles to the Members or to the Security Council or to both.
2. The General Assembly may discuss any questions relating to the maintenance of international peace and security brought before it by any Member of the United Nations, or by the Security Council, or by a state which is not a Member of the United Nations in accordance with Article 35, paragraph 2, and, except as provided in Article 12, may make recommendations with regard to any such questions to the state or states concerned or to the Security Council or to both. Any such question on which action is necessary shall be referred to the Security Council by the General Assembly either before or after discussion.
3. The General Assembly may call the attention of the Security Council to situations which are likely to endanger international peace and security.
4. The powers of the General Assembly set forth in this Article shall not limit the general scope of Article 10.

ARTICLE 12

1. While the Security Council is exercising in respect of any dispute or situation the functions assigned to it in the present Charter, the General Assembly shall not make any recommendation with regard to that dispute or situation unless the Security Council so requests.
2. The Secretary-General, with the consent of the Security Council, shall notify the General Assembly at each session of any matters relative to the maintenance of international peace and security which are being dealt with by the Security Council and shall similarly notify the General Assembly, or the Members of the United Nations if the General Assembly is not in session, immediately the Security Council ceases to deal with such matters.

ARTICLE 13

1. The General Assembly shall initiate studies and make recommendations for the purpose of:
 - a. promoting international cooperation in the political field and encouraging the progressive development of international law and its codification;
 - b. promoting international cooperation in the economic, social, cultural, educational, and health fields, and assisting in the realization of human rights and fundamental freedoms for all without distinction as to race, sex, language, or religion.
2. The further responsibilities, functions and powers of the General Assembly with respect to matters mentioned in paragraph 1(b) above are set forth in Chapters IX and X.

ARTICLE 14

Subject to the provisions of Article 12, the General Assembly may recommend measures for the peaceful adjustment of any situation, regardless of origin, which it deems likely to impair the general welfare or friendly relations among nations, including situations resulting from a violation of the provisions of the present Charter setting forth the Purposes and Principles of the United Nations.

ARTICLE 15

1. The General Assembly shall receive and consider annual and special reports from the Security Council; these reports shall include an account of the measures that the Security Council has decided upon or taken to maintain international peace and security.
2. The General Assembly shall receive and consider reports from the other organs of the United Nations.

ARTICLE 16

The General Assembly shall perform such functions with respect to the international trusteeship system as are assigned to it under Chapters XII and XIII, including the approval of the trusteeship agreements for areas not designated as strategic.

ARTICLE 17

1. The General Assembly shall consider and approve the budget of the Organization.
2. The expenses of the Organization shall be borne by the Members as apportioned by the General Assembly.
3. The General Assembly shall consider and approve any financial and budgetary arrangements with specialized agencies referred to in Article 57 and shall examine the administrative budgets of such specialized agencies with a view to making recommendations to the agencies concerned.

VOTING

ARTICLE 18

1. Each member of the General Assembly shall have one vote.
2. Decisions of the General Assembly on important questions shall be made by a two-thirds majority of the members present and voting. These questions shall include: recommendations with respect to the maintenance of international peace and security, the election of the non-permanent members of the Security Council, the election of the members of the Economic and Social Council, the election of members of the Trusteeship Council in accordance with paragraph 1(c) of Article 86,

the admission of new Members to the United Nations, the suspension of the rights and privileges of membership, the expulsion of Members, questions relating to the operation of the trusteeship system, and budgetary questions.

3. Decisions on other questions, Composition including the determination of additional categories of questions to be decided by a two-thirds majority, shall be made by a majority of the members present and voting.

[. . .]

CHAPTER V. THE SECURITY COUNCIL

ARTICLE 23

1. The Security Council shall consist of fifteen Members of the United Nations. The Republic of China, France, the Union of Soviet Socialist Republics, the United Kingdom of Great Britain and Northern Ireland, and the United States of America shall be permanent members of the Security Council. The General Assembly shall elect ten other Members of the United Nations to be non-permanent members of the Security Council, due regard being specially paid, in the first instance to the contribution of Members of the United Nations to the maintenance of international peace and security and to the other purposes of the Organization, and also to equitable geographical distribution.
2. The non-permanent members of the Security Council shall be elected for a term of two years. In the first election of the non-permanent members after the increase of the membership of the Security Council from eleven to fifteen, two of the four additional members shall be chosen for a term of one year. A retiring member shall not be eligible for immediate re-election.
3. Each member of the Security Council shall have one representative.

FUNCTIONS AND POWERS

ARTICLE 24

1. In order to ensure prompt and effective action by the United Nations, its Members confer on the

Security Council primary responsibility for the maintenance of international peace and security, and agree that in carrying out its duties under this responsibility the Security Council acts on their behalf.

2. In discharging these duties the Security Council shall act in accordance with the Purposes and Principles of the United Nations. The specific powers granted to the Security Council for the discharge of these duties are laid down in Chapters VI, VII, VIII, and XII.
3. The Security Council shall submit annual and, when necessary, special reports to the General Assembly for its consideration.

ARTICLE 25

The Members of the United Nations agree to accept and carry out the decisions of the Security Council in accordance with the present Charter.

ARTICLE 26

In order to promote the establishment and maintenance of international peace and security with the least diversion for armaments of the world's human and economic resources, the Security Council shall be responsible for formulating, with the assistance of the Military Staff Committee referred to in Article 47, plans to be submitted to the Members of the United Nations for the establishment of a system for the regulation of armaments.

VOTING

ARTICLE 27

1. Each member of the Security Council shall have one vote.
2. Decisions of the Security Council on procedural matters shall be made by an affirmative vote of nine members.
3. Decisions of the Security Council on all other matters shall be made by an affirmative vote of nine members including the concurring votes of the permanent members; provided that, in decisions under Chapter VI, and under paragraph 3 of Article 52, a party to a dispute shall abstain from voting.

PROCEDURE

ARTICLE 28

1. The Security Council shall be so organized as to be able to function continuously. Each member of the Security Council shall for this purpose be represented at all times at the seat of the Organization.
2. The Security Council shall hold periodic meetings at which each of its members may, if it so desires, be represented by a member of the government or by some other specially designated representative.
3. The Security Council may hold meetings at such places other than the seat of the Organization as in its judgment will best facilitate its work.

ARTICLE 29

The Security Council may establish such subsidiary organs as it deems necessary for the performance of its functions.

ARTICLE 30

The Security Council shall adopt its own rules of procedure, including the method of selecting its President.

ARTICLE 31

Any Member of the United Nations which is not a member of the Security Council may participate, without vote, in the discussion of any question brought before the Security Council whenever the latter considers that the interests of that Member are specially affected.

ARTICLE 32

Any Member of the United Nations which is not a member of the Security Council or any state which is not a Member of the United Nations, if it is a party to a dispute under consideration by the Security Council, shall be invited to participate, without vote, in the discussion relating to the dispute. The Security Council shall lay down such conditions as it deems just for the participation of a state which is not a Member of the United Nations.

[. . .]

CHAPTER VII. ACTION WITH RESPECT TO THREATS TO THE PEACE, BREACHES OF THE PEACE, AND ACTS OF AGGRESSION

ARTICLE 39

The Security Council shall determine the existence of any threat to the peace, breach of the peace, or act of aggression and shall make recommendations, or decide what measures shall be taken in accordance with Articles 41 and 42, to maintain or restore international peace and security.

ARTICLE 40

In order to prevent an aggravation of the situation, the Security Council may, before making the recommendations or deciding upon the measures provided for in Article 39, call upon the parties concerned to comply with such provisional measures as it deems necessary or desirable. Such provisional measures shall be without prejudice to the rights, claims, or position of the parties concerned. The Security Council shall duly take account of failure to comply with such provisional measures.

ARTICLE 41

The Security Council may decide what measures not involving the use of armed force are to be employed to give effect to its decisions, and it may call upon the Members of the United Nations to apply such measures. These may include complete or partial interruption of economic relations and of rail, sea, air, postal, telegraphic, radio, and other means of communication, and the severance of diplomatic relations.

ARTICLE 42

Should the Security Council consider that measures provided for in Article 41 would be inadequate or have proved to be inadequate, it may take such action by air, sea, or land forces as may be necessary to maintain or restore international peace and security. Such action may include demonstrations, blockade, and other operations by air, sea, or land forces of Members of the United Nations.

ARTICLE 43

1. All Members of the United Nations, in order to contribute to the maintenance of international

peace and security, undertake to make available to the Security Council, on its call and in accordance with a special agreement or agreements, armed forces, assistance, and facilities, including rights of passage, necessary for the purpose of maintaining international peace and security.

2. Such agreement or agreements shall govern the numbers and types of forces, their degree of readiness and general location, and the nature of the facilities and assistance to be provided.
3. The agreement or agreements shall be negotiated as soon as possible on the initiative of the Security Council. They shall be concluded between the Security Council and Members or between the Security Council and groups of Members and shall be subject to ratification by the signatory states in accordance with their respective constitutional processes.

ARTICLE 44

When the Security Council has decided to use force it shall, before calling upon a Member not represented on it to provide armed forces in fulfillment of the obligations assumed under Article 43, invite that Member, if the Member so desires, to participate in the decisions of the Security Council concerning the employment of contingents of that Member's armed forces.

ARTICLE 45

In order to enable the United Nations to take urgent military measures Members shall hold immediately available national air-force contingents for combined international enforcement action. The strength and degree of readiness of these contingents and plans for their combined action shall be determined, within the limits laid down in the special agreement or agreements referred to in Article 43, by the Security Council with the assistance of the Military Staff Committee.

ARTICLE 46

Plans for the application of armed force shall be made by the Security Council with the assistance of the Military Staff Committee.

ARTICLE 47

1. There shall be established a Military Staff Committee to advise and assist the Security Council

on all questions relating to the Security Council's military requirements for the maintenance of international peace and security, the employment and command of forces placed at its disposal, the regulation of armaments, and possible disarmament.

2. The Military Staff Committee shall consist of the Chiefs of Staff of the permanent members of the Security Council or their representatives. Any Member of the United Nations not permanently represented on the Committee shall be invited by the Committee to be associated with it when the efficient discharge of the Committee's responsibilities requires the participation of that Member in its work.
3. The Military Staff Committee shall be responsible under the Security Council for the strategic direction of any armed forces placed at the disposal of the Security Council. Questions relating to the command of such forces shall be worked out subsequently.
4. The Military Staff Committee, with the authorization of the Security Council and after consultation with appropriate regional agencies, may establish regional subcommittees.

ARTICLE 48

1. The action required to carry out the decisions of the Security Council for the maintenance of international peace and security shall be taken by all the Members of the United Nations or by some of them, as the Security Council may determine.
2. Such decisions shall be carried out by the Members of the United Nations directly and through their action in the appropriate international agencies of which they are members.

ARTICLE 49

The Members of the United Nations shall join in affording mutual assistance in carrying out the measures decided upon by the Security Council.

ARTICLE 50

If preventive or enforcement measures against any state are taken by the Security Council, any other state, whether a Member of the United Nations or not,

which finds itself confronted with special economic problems arising from the carrying out of those measures shall have the right to consult the Security Council with regard to a solution of those problems.

ARTICLE 51

Nothing in the present Charter shall impair the inherent right of individual or collective self-defense if an armed attack occurs against a Member of the United Nations, until the Security Council has taken measures necessary to maintain international peace and security. Measures taken by Members in the exercise of this right of self-defense shall be immediately reported to the Security Council and shall not in any way affect the authority and responsibility of the Security Council under the present Charter to take at any time such action as it deems necessary in order to maintain or restore international peace and security.

[. . .]

CHAPTER IX. INTERNATIONAL ECONOMIC AND SOCIAL CO-OPERATION

ARTICLE 55

With a view to the creation of conditions of stability and well-being which are necessary for peaceful and friendly relations among nations based on respect for the principle of equal rights and self-determination of peoples, the United Nations shall promote:

- a. higher standards of living, full employment, and conditions of economic and social progress and development;
- b. solutions of international economic, social, health, and related problems; and international cultural and educational co-operation; and
- c. universal respect for, and observance of, human rights and fundamental freedoms for all without distinction as to race, sex, language, or religion.

[. . .]

CHAPTER XIV. THE INTERNATIONAL COURT OF JUSTICE

ARTICLE 92

The International Court of Justice shall be the principal judicial organ of the United Nations. It shall function in accordance with the annexed Statute which is based upon the Statute of the Permanent Court of International Justice and forms an integral part of the present Charter.

ARTICLE 93

1. All Members of the United Nations are ipso facto parties to the Statute of the International Court of Justice.
2. A state which is not a Member of the United Nations may become a party to the Statute of the International Court of Justice on conditions to be determined in each case by the General Assembly upon the recommendation of the Security Council.

ARTICLE 94

1. Each Member of the United Nations undertakes to comply with the decision of the International Court of Justice in any case to which it is a party.
2. If any party to a case fails to perform the obligations incumbent upon it under a judgment rendered by the Court, the other party may have recourse to the Security Council, which may, if it deems necessary, make recommendations or decide upon measures to be taken to give effect to the judgment.

7. Harry S. Truman: Diary Entries on Joint Meetings, July 1945

Introduction

The last of the wartime summit meetings among the Allied leaders took place at Potsdam, near the German capital of Berlin, in July 1945. This was the first occasion on which new U.S. President Harry S. Truman, who succeeded

Franklin D. Roosevelt following the latter's death in April 1945, met Soviet leader Josef Stalin. Berlin had been devastated by Allied bombing in the final years of the war and was under joint occupation by the four Allied powers: Britain, France, the United States, and the Soviet Union. Berlin also lay deep within the Soviet occupation sector. Truman was shocked by the dismal state of Berlin's German population, especially in the Soviet zone, yet recognized that German forces had treated Russians equally badly. Germany was already defeated, but the Pacific war against Japan was continuing, and Stalin promised that the Soviet Union would end its existing state of neutrality in that conflict and declare war on Japan in the near future. His allies hoped, however, that this might be unnecessary. During the Potsdam Conference, Truman and British Prime Minister Winston Churchill learned that their joint Manhattan Project to develop an atomic bomb had successfully detonated an immensely powerful weapon, which they resolved to use against Japan as soon as possible. Truman stated in his diary that he hoped that such devices would only be employed against a military target, but in practice many civilians died when U.S. bombers dropped two atomic weapons on the cities of Hiroshima and Nagasaki early in August. At Potsdam, Truman and Churchill also agreed to inform Stalin that they had successfully developed a nuclear bomb, something of which he was in fact already aware through Soviet intelligence agents within the Manhattan Project. The fact that until then the British and Americans had kept the Soviets in formal ignorance of this initiative was, however, striking evidence that they did not fully trust their wartime communist ally, a bias that was also clearly apparent in Truman's diary entries. The Potsdam Conference also raised issues as to the final disposition of German and Polish territory, as the Soviets—who were occupying both countries—unilaterally decided to annex a substantial portion of East Poland and compensate Poland with sections of East Germany. While Truman refused to recognize this arrangement, in practice there was little the Americans or British could do to change it. The leaders at Potsdam also discussed the question of reparations from Germany but again reached no real agreement on that subject and, more broadly, also failed to devise any scheme for the future treatment of Germany that would be acceptable to all the occupying powers. As the Cold War intensified in the latter 1940s, the issues left open at Potsdam would prove highly contentious.

Potsdam, July 16, 1945

[. . .]

To get down to today. Mr. Churchill called by phone last night and said he'd like to call—for me to set the hour. I did—for 11 A.M. this morning. He was on time to the dot. His daughter told Gen. Vaughan he hadn't been up so early in ten years! I'd been up for four and one half hours.

We had a most pleasant conversation. He is a most charming and a very clever person—meaning clever in the English not the Kentucky sense. He gave me a lot of hooey about how great my country is and how he loved Roosevelt and how he intended to love me etc. etc. Well. I gave him as cordial a reception as I could—being naturally (I hope) a polite and agreeable person.

I am sure we can get along if he doesn't try to give me too much soft soap. You know soft soap is made of ash hopper lye and it burns to beat hell when it gets into the eyes. It's fine for chigger bites but not so good for rose complexions. But I haven't a rose complexion.

We struck a "blow for liberty" when he left in Scotch—not the right brand for the purpose as the old V.P. Jack Garner can testify.

The photo men had a field day when he left.

[. . .]

Then we went on to Berlin and saw absolute ruin. Hitler's folly. He overreached himself by trying to take in too much territory. He had no morals and his people backed him up. Never did I see a more sorrowful sight, nor witness retribution to the nth degree.

The most sorrowful part of the situation is the deluded Hitlerian populace. Of course the Russians have kidnaped the able bodied and I suppose have made involuntary workmen of them. They have also looted every house left standing and have sent the loot to Russia. But Hitler did the same thing to them.

It is the Golden Rule in reverse—and it is not an uplifting sight. What a pity that the human animal is not able to put his moral thinking into practice!

We saw old men, old women, young women, children from tots to teens carrying packs, pushing carts, pulling carts, evidently ejected by the conquerors and carrying what they could of their belongings to nowhere in particular.

I thought of Carthage, Baalbek, Jerusalem, Rome, Atlantis, Peking, Babylon, Nineveh; Scipio, Rameses II, Titus, Herman, Sherman, Jenghis Khan, Alexander, Darius the Great—but Hitler only destroyed Stalingrad—and Berlin. I hope for some sort of peace—but I fear that machines are ahead of morals by some centuries and when morals catch up perhaps there'll be no reason for any of it.

I hope not. But we are only termites on a planet and maybe when we bore too deeply into the planet there'll [be] a reckoning—who knows.

Potsdam, July 17, 1945

Just spent a couple of hours with Stalin. Joe Davies called on Maisky and made the date last night for noon today. Promptly a few minutes before twelve I looked up from the desk and there stood Stalin in the doorway. I got to my feet and advanced to meet him. He put out his hand and smiled. I did the same, we shook, I greeted Molotov and the interpreter, and we sat down. After the usual polite remarks we got down to business. I told Stalin that I am no diplomat but usually said yes & no to questions after hearing all the argument. It pleased him. I asked him if he had the agenda for the meeting. He said he had and that he had some more questions to present. I told him to fire away. He did and it is dynamite—but I have some dynamite too which I'm not exploding now. He wants to fire Franco, to which I wouldn't object, and divide up the Italian colonies and other mandates, some no doubt that the British have. Then he got on the Chinese situation, told us what agreements had been reached and what was in abeyance. Most of the big points are settled. He'll be in the Jap War on August 15th. Fini Japs when that comes about. We had lunch, talked socially, put on a real show drinking toasts to everyone, then had pictures made in the back yard. I can deal with Stalin. He is honest—but smart as hell.

Potsdam, July 18, 1945

... Went to lunch with P.M. at 1:30. Walked around to British Hqtrs. Met at the gate by Mr. Churchill.

Guard of honor drawn up. Fine body of men, Scottish Guards. Band played Star Spangled Banner. Inspected Guard and went in for lunch. P.M. & I ate alone. Discussed Manhattan (it is a success). Decided to tell Stalin about it. Stalin had told P.M. of telegram from Jap Emperor asking for peace. Stalin also read his answer to me. It was satisfactory. Believe Japs will fold up before Russia comes in.

I am sure they will when Manhattan appears over their homeland. I shall inform Stalin about it at an opportune time. Stalin's luncheon was a most satisfactory meeting. I invited him to come to the U.S. Told him I'd send the Battleship Missouri for him if he'd come. He said he wanted to cooperate with U.S. in peace as we had cooperated in War but it would be harder. Said he was grossly misunderstood in U.S. and I was misunderstood in Russia. I told him that we each could help to remedy that situation in our home countries and that I intended to try with all I had to do my part at home. He gave me a most cordial smile and said he would do as much in Russia.

We then went to the conference and it was my job to present the Ministers' proposed agenda. There were three proposals and I banged them through in short order, much to the surprise of Mr. Churchill. Stalin was very much pleased. Churchill was too after he had recovered. I'm not going to stay around this terrible place all summer just to listen to speeches. I'll go home to the Senate for that.

[. . .]

Potsdam, July 25, 1945

We met at 11 A.M. today. That is Stalin, Churchill and the U.S. President. But I had a most important session with Lord Mountbatten & General Marshall before that. We have discovered the most terrible bomb in the history of the world. It may be the fire destruction prophesied in the Euphrates Valley Era, after Noah and his fabulous Ark.

Anyway we "think" we have found the way to cause a disintegration of the atom. An experiment in the New Mexican desert was startling—to put it mildly. Thirteen pounds of the explosive caused the complete disintegration of a steel tower 60 feet high, created a crater 6 feet deep and 1,200 feet in diameter, knocked over a steel tower ½ mile away and knocked

men down 10,000 yards away. The explosion was visible for more than 200 miles and audible for 40 miles and more.

This weapon is to be used against Japan between now and August 10th. I have told the Sec. of War, Mr. Stimson, to use it so that military objectives and soldiers and sailors are the target and not women and children. Even if the Japs are savages, ruthless, merciless and fanatic, we as the leader of the world for the common welfare cannot drop this terrible bomb on the old Capital or the new.

He & I are in accord. The target will be a purely military one and we will issue a warning statement asking the Japs to surrender and save lives. I'm sure they will not do that, but we will have given them the chance. It is certainly a good thing for the world that Hitler's crowd or Stalin's did not discover this atomic bomb. It seems to be the most terrible thing ever discovered, but it can be made the most useful.

At 10:15 I had Gen. Marshall come in and discuss with me the tactical and political situation. He is a level headed man—so is Mountbatten.

At the Conference Poland and the Bolsheviki land grab came up. Russia helped herself to a slice of Poland and gave Poland a nice slice of Germany, taking also a good slice of East Prussia for herself. Poland has moved in up to the Oder and the west Neisse, taking Stettin and Silesia as a fact accomplished. My position is that, according to commitments made at Yalta by my predecessor, Germany was to be divided into four occupation zones, one each for Britain, Russia and France and the U.S. If Russia chooses to allow Poland to occupy a part of her zone I am agreeable but title to territory cannot and will not be settled here. For the fourth time I restated my position and explained that territorial sessions had to be made by treaty and ratified by the Senate.

We discussed reparations and movement of populations from East Germany, Czechoslovakia, Austria, Italy and elsewhere. Churchill said Maisky had so defined war booty as to include the German fleet and Merchant Marine. It was a bombshell and sort of paralyzed the Russkies, but it has a lot of merit.

Potsdam, July 26, 1945

Last night talked to Gen. Somervell on time for universal military training. Regular Army wants a straight

year. I am very sure it cannot be put into effect. Talked to Mr. Caffery about France. He is scared stiff of Communism, the Russian variety which isn't communism at all but just police government pure and simple. A few top hands just take clubs, pistols and concentration camps and rule the people on the lower levels.

The Communist Party in Moscow is no different in its methods and actions toward the common man than were the Czar and the Russian Noblemen (so-called: they were anything but noble). Nazis and Fascists were worse. It seems that Sweden, Norway, Denmark and perhaps Switzerland have the only real people's governments on the Continent of Europe. But the rest are a bad lot, from the standpoint of the people who do not believe in tyranny.

Potsdam, July 30, 1945

[. . .] Conference is delayed. Stalin and Molotov were to call on me yesterday to discuss Polish question and Reparations. Molotov came but no Stalin. Said he is sick. No Big Three meeting yesterday and none today as a result of Stalin's indisposition. Sent him a note expressing regret at his illness. . . .

If Stalin should suddenly cash in it would end the original Big Three. First Roosevelt by death, then Churchill by political failure and then Stalin. I am wondering what would happen to Russia and Central Europe if Joe suddenly passed out. If some demagogue on horseback gained control of the efficient Russian military machine he could play havoc with European peace for a while. I also wonder if there is a man with the necessary strength and following to step into Stalin's place and maintain peace and solidarity at home. It isn't customary for dictators to train leaders to follow them in power. I've seen no one at this Conference in the Russian line-up who can do the job. Molotov is not able to do it. He lacks sincerity. Vishinsky same thing and Maisky is short on honesty. Well, we shall see what we shall see. Uncle Joe's pretty tough mentally and physically but there is an end to every man and we can't help but speculate.

We are at an impasse on Poland and its western boundary and on Reparations. Russia and Poland have agreed on the Oder and West Neisse to the Czechoslovakian border. Just a unilateral arrangement without so much as a by your leave. I don't like it. Roosevelt let Maisky mention twenty billions as reparations—half

for Russia and half for everybody else. Experts say no such figure is available.

I've made it plain that the United States of America does not intend to pay reparations this time. I want the German war industry machine completely dismantled and [as] far as U.S. is concerned the other allies can divide it up on any basis they choose. Food and other necessities we send into the restored countries and Germany must be first lien on exports before reparations. If Russians strip country and carry off population of course there'll be no reparations.

I have offered a waterway program and a suggestion for free intercourse between Central European nations which will help keep future peace. Our only hope for good from the European War is restored prosperity to Europe and future trade with them. It is a sick situation at best.

8. Harry S. Truman: Telegram to Jiang Jieshi, 1945

Introduction

During World War II, President Franklin D. Roosevelt had revealed himself as unsympathetic to French colonial rule in Indochina. Roosevelt particularly resented the fact that the Vichy authorities in the area (present-day Vietnam, Laos, and Cambodia) cooperated with the Japanese until 1944, when the latter took over Indochina entirely. By June 1945, Roosevelt was dead. The U.S. position on Indochina was now more nuanced. An internal U.S. State Department memorandum of 22 June titled "Postwar Policy toward Asia and the Pacific" declared that "the United States recognizes French sovereignty over Indochina." It went on, however, to state that it was "the general policy of the United States to favor a policy which would allow colonial peoples an opportunity to prepare themselves for increased participation in their own government with eventual self-government as their goal." As victory in the Pacific approached, the Allies had to decide precisely which among their various forces would take over responsibility for particular areas of Asia. During the Potsdam Conference of top Allied leaders, which ended on 2 August 1945, Truman and British Prime Minister Winston Churchill reached agreement on Indochina. The northern portion, above the 16th Parallel of latitude, would come within the China Theater, under the control of Chinese Guomindang (Nationalist) President Jiang Jieshi (Chiang Kai-shek), who resented Western colonialism but was also a staunch anticommunist. Below the 16th parallel, Indochina fell within the Southeast Asian Command, headed by the British commander Admiral Lord Louis Mountbatten. Since indigenous nationalist forces in French Indochina were headed by the veteran Vietnamese communist Ho Chi Minh, neither the Chinese nor the British authorities was likely to be particularly sympathetic to Ho's demands for the immediate independence of Indochina from the French. In practice, in September 1945 the British helped the French to regain control of the southern portion, while in February 1946 Jiang agreed to withdraw his forces from the northern portion and allow the French to return, in exchange for concessions from them on Shanghai and other Chinese treaty ports. The Americans, for whom the restoration of France as a great power and potential ally against communism was now a higher priority than the independence of Indochina, quietly acquiesced in these arrangements.

Primary Source

Top secret from the President to Ambassador Hurley.

Please deliver the following message from me to Generalissimo Chiang Kai-shek.

"1. At the Potsdam Conference the Prime Minister of Great Britain and I, in consultation with the Combined

Chiefs of Staff, have had under consideration future military operations in Southeast Asia.

2. On the advice of the Combined Chiefs of Staff we have reached the conclusion that for operational purposes it is desirable to include that portion of French Indo-China lying south of 16° north latitude in the Southeast Asia Command. This arrangement would

leave in the China Theater that part of Indo-China which covers the flank of projected Chinese operations in China and would at the same time enable Admiral Mountbatten to develop operations in the southern half of Indo-China.

3. I greatly hope that the above conclusions will recommend themselves to Your Excellency and that, for the purpose of facilitating operations against the common enemy, Your Excellency will feel able to concur in the proposed arrangements.

4. I understand that the Prime Minister of Great Britain is addressing a communication to Your Excellency in a similar sense.

Signed Harry S. Truman.”

9. William J. Donovan's Letter to Harold D. Smith, Director, Bureau of the Budget, 25 August 1945

Introduction

At the end of World War II, many U.S. officials who had been part of the wartime national security and defense apparatus were convinced that in order to remain an international great power, their country should retain much of the associated bureaucracy that had developed during the conflict. One of the more effective advocates was General William J. Donovan, director of the Office of Strategic Services (OSS). The OSS had functioned as a wartime foreign intelligence agency, collecting information and mounting covert operations. In August 1945, President Harry S. Truman formally disbanded the OSS, stating that now the war was over, the United States no longer required an intelligence agency functioning outside American borders. As he gradually liquidated his existing operations, Donovan also mounted a coordinated lobbying campaign designed to convince influential bureaucrats, politicians, and media representatives of the need to reestablish the OSS on a more permanent basis as an integral part of the U.S. national security apparatus. Increasing Cold War tensions soon helped to convince officials in Washington that the United States did indeed require a formal overseas intelligence and espionage capability, leading within two years to the creation of the Central Intelligence Agency (CIA). Although Donovan himself did not join the new organization, in its early years it was largely staffed by former OSS operatives.

Primary Source

It is our estimate . . . the effectiveness of OSS as a War Agency will end as of January 1, or at latest February 1946, at which time liquidation should be completed. At that point I wish to return to private life. Therefore, in considering the disposition to be made of the assets created by OSS, I speak as a private citizen concerned with the future of his country.

In our government today there is no permanent agency to take over the functions which OSS will have then ceased to perform. These functions while carried on as incident to the war are in reality essential in the effective discharge by this nation of its responsibilities in the organization and maintenance of the peace.

Since last November I have pointed out the immediate necessity of setting up such an agency to take over valuable assets created by OSS. Among these assets was establishment for the first time in our nation's history of a foreign secret intelligence service which reported information as seen through American eyes. As an integral and inseparable part of this service there is a group of specialists to analyze and evaluate the material for presentation to those who determine national policy.

It is not easy to set up a modern intelligence system. It is more difficult to do so in time of peace than in time of war.

It is important therefore that it be done before the War Agency has disappeared so that profit may be made of

its experience and “know how” in deciding how the new agency may best be conducted.

I have already submitted a plan for the establishment of centralized system. However, the discussion of that proposal indicated the need of an agreement upon certain fundamental principles before a detailed plan is formulated. If those concerned could agree upon the principles with which such a system should be established, acceptance of a common plan would be more easily achieved.

Accordingly, I attach a statement of principles, the soundness of which I believe has been established by study and by practical experience.

PRINCIPLES—THE SOUNDNESS OF WHICH IT IS BELIEVED HAS BEEN ESTABLISHED BY OUR OWN EXPERIENCE AND FIRST-HAND STUDY OF THE SYSTEMS OF OTHER NATIONS—WHICH SHOULD GOVERN THE ESTABLISHMENT OF A CENTRALIZED UNITED STATES FOREIGN INTELLIGENCE SYSTEM. The formulation of a national policy both in its political and military aspects is influenced and determined by knowledge (or ignorance) of the aims, capabilities, intentions, and policies of other nations.

All major powers except the United States have had for a long time past permanent world-wide intelligence services, reporting directly to the highest echelons of their governments. Prior to the present war, the United States had no foreign secret intelligence service. It never has had and does not now have a coordinated intelligence system.

The defects and dangers of this situation have been generally recognized. Adherence to the following would remedy this defect in peace as well as war so that American policy could be based upon information obtained through its own sources on foreign intentions, capabilities, and developments as seen and interpreted by Americans.

1. That each department of Government should have its own intelligence bureau for the collection and pro-

cessing of such informational material as it finds necessary in the actual performance of its functions and duties. Such a bureau should be under the sole control of the department head and should not be encroached upon or impaired by the functions granted any other governmental intelligence agency.

Because secret intelligence covers all fields and because of possible embarrassment, no executive department should be permitted to engage in secret intelligence but in a proper case call upon the central agency for service.

2. That in addition to the intelligence unit for each department there should be established a national centralized foreign intelligence agency which should have the authority:

A. To serve all departments of the Government.

B. To procure and obtain political, economic, psychological, sociological, military and other information which may bear upon the national interest and which has been collected by the different Governmental departments or agencies.

C. To collect when necessary supplemental information either at its own instance or at the request of any Governmental departments or agencies.

D. To integrate, analyze, process, and disseminate, to authorized Governmental agencies and officials, intelligence in the form of strategic interpretive studies.

3. That such an agency should be prohibited from carrying on clandestine activities within the United States and should be forbidden the exercise of any police functions at home or abroad.

4. That since the nature of its work requires it to have status, it should be independent of any department of the government (since it is obliged to serve all and must be free of the natural bias of an operating department). It should be under a director, appointed by the President, and be administered under Presidential direction, or in the event of a General Manager being

appointed, should be established in the Executive Office of the President, under his direction.

5. That subject to the approval of the President or the General Manager the policy of such a service should be determined by the Director with the advice and assistance of a Board on which the Secretaries of State, War, Navy, and Treasury should be represented.

6. That this agency, as the sole agency for secret intelligence, should be authorized, in the foreign field only, to carry on services such as espionage, counterespionage, and those special operations (including morale and psychological) designed to anticipate and counter any attempted penetration and subversion of our national security by enemy action.

7. That such a service have an independent budget granted directly by the Congress.

8. That such a service should have its own system of codes and should be furnished facilities by departments of Government proper and necessary for the performance of its duties.

9. That such a service should include in its staff specialties (within Governmental departments, civil and military, and in private life) professionally trained in analysis of information and possessing a high degree of linguistic, regional, or functional competence, to analyze, coordinate and evaluate incoming information, to make special intelligence reports, and to provide guidance for the collecting branches of the agency.

10. That in time of war or unlimited national emergency, all programs of such agency in areas of actual and projected military operations shall be coordinated with military plans, and shall be subject to the approval of the Joint Chiefs of Staff, or if there be consolidation of the armed services, under the supreme commander. Parts of such programs which are to be executed in the theater of military operations shall be subject to control of the military commander.

Source: William J. Donovan, "Gen. Donovan's Letter to the Director of the Bureau of Budget, Harold D. Smith," Counterintelligence in World War II, National Counterintelligence Center, http://www.fas.org/irp/ops/ci/docs/ci2/2ch3_c.htm.

10. George C. Marshall: "For the Common Defense," 1 September 1945

Introduction

As World War II ended, leading U.S. military officials clearly envisaged a greatly expanded international role for their country, one that would mandate a much-enhanced American military. In his final report as army chief of staff, George C. Marshall put forward proposals for a peacetime security policy for the United States. He envisaged a relatively small permanent standing army of military professionals buttressed by a citizen soldiery who could be called to arms in case of need. The latter he hoped to create through a program of universal military training, required of all young American men. Marshall expected the regular army to be "a strategic force, heavy in air power, partially deployed in the Pacific and the Caribbean ready to protect the Nation against a sudden hostile thrust and immediately available for emergency action wherever required." In addition, he called for the creation of substantial national stockpiles of arms, ammunition, and other military equipment and a heavy emphasis on the promotion of scientific research and development in the defense field. Marshall was heavily influenced by his experience of the rapid rundown of U.S. military forces in the aftermath of World War I, a policy he blamed for the inability of the United States to respond quickly to the onset of World War II when his country had to launch massive crash programs of rebuilding its vestigial forces for a two-front war against Germany and Japan. Largely due to popular opposition, the United States did not introduce universal military training, but most of Marshall's other recommendations were put into effect within a few years. Once their country had attained global power during World War II, top American leaders were clearly unwilling to relinquish that position.

Primary Source

Our present national policies require us to: Maintain occupation forces in Europe and the Pacific; prepare for a possible contribution of forces to a world security organization; maintain national security while the world remains unstable and later on a more permanent or stable basis.

[. . .]

FOR THE COMMON DEFENSE

To fulfill its responsibility for protecting this Nation against foreign enemies, the Army must project its planning beyond the immediate future. In this connection I feel that I have a duty, a responsibility, to present publicly at this time my conception, from a military point of view, of what is required to prevent another international catastrophe.

For years men have been concerned with individual security. Modern nations have given considerable study and effort to the establishment of social security systems for those unable or unwise enough to provide for themselves. But effective insurance against the disasters which have slaughtered millions of people and leveled their homes is long overdue.

We finish each bloody war with a feeling of acute revulsion against this savage form of human behavior, and yet on each occasion we confuse military preparedness with the causes of war and then drift almost deliberately into another catastrophe. . . .

It no longer appears practical to continue what we once conceived as hemispheric defense as a satisfactory basis for our security. We are now concerned with the peace of the entire world. And the peace can only be maintained by the strong.

What then must we do to remain strong and still not bankrupt ourselves on military expenditures to maintain a prohibitively expensive professional army even if one could be recruited? President Washington answered that question in recommendations to the first Congress to convene under the United States Constitution. He proposed a program for the peacetime training of a citizen army. At that time the conception of a large professional Regular Army was considered dangerous to the liberties of the Nation. It is still so today. But the determining factor in solving this problem will inevitably be the relation between the maintenance of

military power and the cost in annual appropriations. No system, even if actually adopted in the near future, can survive the political pressure to reduce the military budget if the costs are high—and professional armies are very costly.

There is now another disadvantage to a large professional standing army. Wars in the twentieth century are fought with the total resources, economic, scientific, and human of entire nations. Every specialized field of human knowledge is employed. Modern war requires the skill and knowledge of the individuals of a nation.

Obviously we cannot all put on uniforms and stand ready to repel invasion. The greatest energy in peacetime of any successful nation must be devoted to productive and gainful labor. But all Americans can, in the next generations, prepare themselves to serve their country in maintaining the peace or against the tragic hour when peace is broken, if such a misfortune again overtakes us. This is what is meant by Universal Military *Training*. It is not universal military *service*—the actual induction of men into the combatant forces. Such forces would be composed during peacetime of volunteers. The trainees would be in separate organizations maintained for training purposes only. Once trained, young men would be freed from further connection with the Army unless they chose, as they now may, to enroll in the National Guard or an organized reserve unit, or to volunteer for service in the small professional army. When the Nation is in jeopardy they could be called, just as men are now called, by a committee of local neighbors, in an order of priority and under such conditions as directed at that time by the Congress.

The concept of universal military training is not founded, as some may believe, on the principle of a mass Army. The Army has been accused of rigidly holding to this doctrine in the face of modern developments. Nothing, I think, could be farther from the fact, as the record of the mobilization for this war demonstrates. Earlier in this report I explained how we had allocated manpower to exploit American technology. Out of our entire military mobilization of 14,000,000 men, the number of infantry troops was less than 1,500,000 Army and Marine.

The remainder of our armed forces, sea, air, and ground, was largely fighting a war of machinery. Counting those engaged in war production there were probably 75 to 80,000,000 Americans directly involved in

prosecution of the war. To technological warfare we devoted 98 percent of our entire effort.

Nor is it proposed now to abandon this formula which has been so amazingly successful. The harnessing of the basic power of the universe will further spur our efforts to use brain for brawn in safeguarding the United States of America.

However, technology does not eliminate the need for men in war. The Air Forces, which were the highest developed technologically of any of our armed forces in this war, required millions of men to do their job. Every B-29 that winged over Japan was dependent on the efforts of 12 officers and 73 men in the immediate combat area alone. . . .

This war has made it clear that the security of the Nation, when challenged by an armed enemy, requires the services of virtually all able-bodied male citizens within the effective military group.

In war the Nation cannot depend on the numbers of men willing to volunteer for active service; nor can our security in peace.

In another national emergency, the existence of a substantial portion of the Nation's young manpower already trained or in process of training, would make it possible to fill out immediately the peacetime ranks of the Navy, the Regular Army, the National Guard, and the Organized Reserve. As a result our Armed Forces would be ready for almost immediate deployment to counter initial hostile moves, ready to prevent an enemy from gaining footholds from which he could launch destructive attack against our industries and our homes. By this method we would establish, for the generations to come, a national military policy: (1) which is entirely within the financial capabilities of our peacetime economy and is absolutely democratic in its nature, and (2) which places the military world and therefore the political world on notice that this vast power, linked to our tremendous resources, wealth, and production, is immediately available. There can be no question that all the nations of the world will respect our views accordingly, creating at least a probability of peace on earth and of good will among men rather than disaster upon disaster in a tormented world where the very processes of civilization itself are constantly threatened. . . .

The terms of the final peace settlement will provide a basis for determining the strength of the regular or

permanent postwar military forces of the United States, air, ground, and naval, but they cannot, in my opinion, alter the necessity for a system of Universal Military Training.

The yardstick by which the size of the permanent force must be measured is maximum security with minimum cost in men, materiel, and maintenance. So far as they can foresee world conditions a decade from now, War Department planners, who have taken every conceivable factor into consideration, believe that our position will be sound if we set up machinery which will permit the mobilization of an Army of 4,000,000 men within a period of 1 year following any international crisis resulting in a national emergency for the United States.

The Regular Army must be comprised largely of a strategic force, heavy in air power, partially deployed in the Pacific and the Caribbean ready to protect the Nation against a sudden hostile thrust and immediately available for emergency action wherever required. It is obvious that another war would start with a lightning attack to take us unaware. The pace of the attack would be at supersonic speeds of rocket weapons closely followed by a striking force which would seek to exploit the initial and critical advantage. We must be sufficiently prepared against such a threat to hold the enemy at a distance until we can rapidly mobilize our strength. The Regular Army, and the National Guard, must be prepared to meet such a crisis.

Another mission of the Regular Army is to provide the security garrisons for the outlying bases. We quickly lost the Philippines, Guam, and Wake Islands at the beginning of this war and are still expending lives and wealth in recovering them.

The third mission of the permanent Army is to furnish the overhead, the higher headquarters which must keep the machine and the plans up to date for whatever national emergency we may face in the future. This overhead includes the War Department, the War College, the service schools, and the headquarters of the military area into which continental United States is subdivided to facilitate decentralized command and coordination of the peacetime military machine. This was about all we had on the eve of this war, planners and a small number of men who had little to handle in practice but sound ideas on how to employ the wartime hosts that would be gathered in the

storm. Had it not been for the time the British Empire and the Soviets bought us, those plans and ideas would have been of little use.

The fourth and probably the most important mission of the Regular Army is to provide the knowledge, the expert personnel, and the installations for training the citizen-soldier upon whom, in my view, the future peace of the world largely depends. . . .

Only by Universal Military Training can full vigor and life be instilled in to the Reserve system. It creates a pool of well-trained men and officers from which the National Guard and the Organized Reserve can draw volunteers; it provides opportunities for the Guard and Reserve units to participate in corps and Army maneuvers, which are vital preparations to success in military campaigns. Without these trained men and officers, without such opportunities to develop skill through actual practice in realistic maneuvers, neither the Regular Army, the National Guard, nor the Reserve can hope to bring efficiency to their vital missions. . . .

An unbroken period of 1 year's training appears essential to the success of a sound security plan based on the concept of a citizen army.

It is possible to train individual soldiers as replacements for veteran divisions and air groups as we now do in a comparatively short period of time. The training of the unit itself cannot be accomplished at best in less than a year; air units require even more time. The principle is identical to that of coaching a football team. A halfback can quickly learn how to run with the ball, but it takes time and much practice and long hours of team scrimmage before he is proficient at carrying the ball through an opposing team. So it is with an army division or combat air group. Men learn to fire a rifle or machine gun quickly, but it takes long hours of scrimmage, which the army calls maneuver, before the firing of the rifle is coordinated with the activities of more than 14,000 other men on the team.

[. . .]

The peacetime army must not only be prepared for immediate mobilization of an effective war army, but it must have in reserve the weapons needed for the first months of the fighting and clear-cut plans for immediately producing the tremendous additional quantities of materiel necessary in total war. We must never again

face a great national crisis with ammunition lacking to serve our guns, few guns to fire, and no decisive procedures for procuring vital arms in sufficient quantities.

The necessity for continuous research into the military ramifications of man's scientific advance is now clear to all and it should not be too difficult to obtain the necessary appropriations for this purpose in peacetime. There is, however, always much reluctance to expenditure of funds for improvement of war-making instruments, particularly where there is no peacetime usefulness in the product.

The development of combat airplanes is closely allied with development of civil aeronautics; the prototypes of many of our present transport planes and those soon to come were originally bombers. Many of the aeronautical principles that helped give this Nation the greatest Air Force in the world grew out of commercial development and our production know-how at the start of this war was partially the fruit of peacetime commercial enterprise. Since many vital types of weapons have no commercial counterpart, the peacetime development of these weapons has been grossly neglected. Antiaircraft weapons are a good example. The highly efficient antiaircraft of today did not materialize until long after the fighting began. The consequent cost in time, life, and money of this failure to spend the necessary sums on such activity in peacetime has been appalling.

There is another phase of scientific research which I think has been somewhat ignored—the development of expeditious methods for the mass production of war materiel. This is of great importance since it determines how quickly we can mobilize our resources if war comes and how large and costly our reserve stocks of war materiel must be. Serious thought and planning along this line can save millions of tax dollars.

We can be certain that the next war, if there is one, will be even more total than this one. The nature of war is such that once it now begins it can end only as this one is ending, in the destruction of the vanquished, and it should be assumed that another reconversion from peace to war production will take place initially under distant enemy bombardment. Industrial mobilization plans must be founded on these assumptions and so organized that they will meet them and any other situation that may develop. Yet they must in no way retard or inhibit the course of peacetime production.

If this Nation is to remain great it must bear in mind now and in the future that war is not the choice of those who wish passionately for peace. It is the choice of those who are willing to resort to violence for political advantage. We can fortify ourselves against disaster, I am convinced, by the measures I have here outlined. In these protections we can face the future with a rea-

sonable hope for the best and with quiet assurance that even though the worst may come, we are prepared for it.

11. Ho Chi Minh: Declaration of Independence of the Democratic Republic of Vietnam, 2 September 1945

Introduction

On 2 September 1945, as the provinces of colonial French Indochina waited for the defeated Japanese forces to leave, Ho Chi Minh, the most prominent Vietnamese communist and nationalist leader, declared in Hanoi that an independent state now existed in Vietnam. Until taken over by Japan during the war, Vietnam, together with present-day Laos and Cambodia, had been under French colonial rule. Hoping to secure the support of the United States, which was officially committed to anticolonialism, Ho deliberately modeled his statement on the American Declaration of Independence. This strategy failed to persuade the administration of President Harry S. Truman to endorse his claim for an independent Vietnamese state. Although French forces, assisted by British troops, returned to Indochina in the fall of 1945 and temporarily ousted Ho, he continued to lead the Vietnamese battle for independence, eventually driving out the French in 1954. During the final years of colonial rule in Vietnam, the U.S. government, by this time strongly committed to opposing communism in Asia, provided extensive economic and military aid to the French, although American ground forces were never deployed in French Indochina. Under the 1954 Geneva Accords, the country was temporarily divided at the 17th Parallel, with elections to choose a government for a united Vietnam supposedly scheduled within the next two years. Subsequent American attempts to maintain the southern portion of Vietnam as an independent noncommunist state and prevent its unification with the communist northern portion ruled by Ho ultimately embroiled the United States in the lengthy and divisive Vietnam War, the most frustrating and humiliating American military intervention of the entire Cold War.

Primary Source

All men are created equal; they are endowed by their Creator with certain unalienable Rights; among these are Life, Liberty, and the pursuit of Happiness.

This immortal statement was made in the Declaration of Independence of the United States of America in 1776. In a broader sense, this means: All the peoples on the earth are equal from birth, all the peoples have a right to live, to be happy and free.

The Declaration of the French Revolution made in 1791 on the Rights of Man and the Citizen also states: “All men are born free and with equal rights, and must always remain free and have equal rights.”

Those are undeniable truths.

Nevertheless, for more than eighty years, the French imperialists, abusing the standard of Liberty, Equality, and Fraternity, have violated our Fatherland and oppressed our fellow citizens. They have acted contrary to the ideals of humanity and justice.

In the field of politics, they have deprived our people of every democratic liberty.

They have enforced inhuman laws; they have set up three distinct political regimes in the North, the Center, and the South of Viet-Nam in order to wreck our national unity and prevent our people from being united.

They have built more prisons than schools. They have mercilessly slain our patriots; they have drowned our uprisings in rivers of blood.

They have fettered public opinion; they have practiced obscurantism against our people.

To weaken our race they have forced us to use opium and alcohol.

In the field of economics, they have fleeced us to the backbone, impoverished our people and devastated our land.

They have robbed us of our rice fields, our mines, our forests, and our raw materials. They have monopolized the issuing of bank notes and the export trade.

They have invented numerous unjustifiable taxes and reduced our people, especially our peasantry, to a state of extreme poverty.

They have hampered the prospering of our national bourgeoisie; they have mercilessly exploited our workers.

In the autumn of 1940, when the Japanese fascists violated Indochina's territory to establish new bases in their fight against the Allies, the French imperialists went down on their bended knees and handed over our country to them.

Thus, from that date, our people were subjected to the double yoke of the French and the Japanese. Their sufferings and miseries increased. The result was that, from the end of last year to the beginning of this year, from Quang Tri Province to the North of Viet-Nam, more than two million of our fellow citizens died from starvation. On March 9 [1945], the French troops were disarmed by the Japanese. The French colonialists either fled or surrendered, showing that not only were they incapable of "protecting" us, but that, in the span of five years, they had twice sold our country to the Japanese.

On several occasions before March 9, the Viet Minh League urged the French to ally themselves with it against the Japanese. Instead of agreeing to this proposal, the French colonialists so intensified their terrorist activities against the Viet Minh members that

before fleeing they massacred a great number of our political prisoners detained at Yen Bay and Cao Bang.

Notwithstanding all this, our fellow citizens have always manifested toward the French a tolerant and humane attitude. Even after the Japanese *Putsch* of March, 1945, the Viet Minh League helped many Frenchmen to cross the frontier, rescued some of them from Japanese jails, and protected French lives and property.

From the autumn of 1940, our country had in fact ceased to be a French colony and had become a Japanese possession.

After the Japanese had surrendered to the Allies, our whole people rose to regain our national sovereignty and to found the Democratic Republic of Viet-Nam.

The truth is that we have wrested our independence from the Japanese and not from the French.

The French have fled, the Japanese have capitulated, Emperor Bao Dai has abdicated. Our people have broken the chains which for nearly a century have fettered them and have won independence for the Fatherland. Our people at the same time have overthrown the monarchic regime that has reigned supreme for dozens of centuries. In its place has been established the present Democratic Republic.

For these reasons, we, members of the Provisional Government, representing the whole Vietnamese people, declare that from now on we break off all relations of a colonial character with France; we repeal all the international obligation[s] that France has so far subscribed to on behalf of Viet-Nam, and we abolish all the special rights the French have unlawfully acquired in our Fatherland.

The whole Vietnamese people, animated by a common purpose, are determined to fight to the bitter end against any attempt by the French colonialists to reconquer their country.

We are convinced that the Allied nations, which at Teheran and San Francisco have acknowledged the principles of self-determination and equality of nations,

will not refuse to acknowledge the independence of Viet-Nam.

A people who have courageously opposed French domination for more than eighty years, a people who have fought side by side with the Allies against the fascists during these last years, such a people must be free and independent.

For these reasons, we, members of the Provisional Government of the Democratic Republic of Viet-Nam,

solemnly declare to the world that Viet-Nam has the right to be a free and independent country—and in fact it is so already. The entire Vietnamese people are determined to mobilize all their physical and mental strength, to sacrifice their lives and property in order to safeguard their independence and liberty.

12. Josef Stalin: “Conflict Is Inevitable,” 9 February 1946

Introduction

Within six months of the ending of World War II, Soviet leader Josef Stalin was showing himself to be suspicious of his Western allies. Addressing the Supreme Soviet as it prepared to “elect” him to a new term as general secretary, he cited Marxist-Leninist ideological teaching and blamed the two world wars on conflicts among the various capitalist powers. Implicitly, Stalin was suggesting that a third such conflict was likely to occur, for which the Soviet Union must be prepared. Announcing the next Five-Year Plan, Stalin stated that its priorities would include not just the restoration of agricultural and industrial production to prewar levels and the provision of cheaper more abundant cheaper consumer goods but also a major initiative in scientific research. By this he meant primarily the development of nuclear weapons and other technological innovations to improve Soviet armaments. Aiming to make the country self-sufficient and immune to potential attack, he had long-term plans to triple production of iron, coal, and oil. His resumption of anticapitalist ideological rhetoric marked a break with his public addresses since June 1941 and was symptomatic of growing disharmony among the ill-assorted wartime allies: the Soviet Union, Great Britain, and the United States.

Primary Source

Comrades! Eight years have elapsed since the last election to the Supreme Soviet. This was a period abounding in events of decisive moment. The first four years passed in intensive effort on the part of Soviet men and women to fulfill the third Five-Year Plan. The second four years embrace the events of the war against the German and Japanese aggressors, the events of the Second World War. Undoubtedly, the war was the principal event in the past period.

It would be wrong to think that the Second World War was a casual occurrence or the result of mistakes of any particular statesmen, though mistakes undoubtedly were made. Actually, the war was the inevitable result of the development of world economic and political forces on the basis of modern monopoly capitalism. Marxists have declared more than once that the capi-

talist system of world economy harbors elements of general crises and armed conflicts and that, hence, the development of world capitalism in our time proceeds not in the form of smooth and even progress but through crises and military catastrophes.

The fact is, that the unevenness of development of the capitalist countries usually leads in time to violent disturbance of equilibrium in the world system of capitalism, that one group of capitalism considers itself worse provided than others with raw materials and markets usually making attempts to alter the situation and repartition the “spheres of influence” in its favor by armed force. The result is a splitting of the capitalist world into two hostile camps and war between them.

Perhaps military catastrophes might be avoided if it were possible for raw materials and markets to be

periodically redistributed among the various countries in accordance with their economic importance, by agreement and peaceable settlement. But that is impossible to do under present capitalist conditions of the development of world economy.

Thus the First World War was the result of the first crisis of the capitalist system of world economy, and the Second World War was the result of a second crisis.

[. . .]

Now a few words about the Communist Party's plans of work for the immediate future. As is known these plans are set forth in the new Five-Year Plan which is shortly to be endorsed. The principal aims of the new Five-Year Plan are to rehabilitate the ravaged areas of the country, to restore the prewar level in industry and agriculture, and then to surpass this level in more or less substantial measure. To say nothing of the fact that the rationing system will shortly be abolished [*stormy, prolonged applause*], special attention will be devoted to extending the production of consumer goods, to raising the living standard of the working people by steadily lowering the prices of all goods [*stormy, prolonged applause*], and to the widespread construction of all manner of scientific research institu-

tions [*applause*] that can give science the opportunity to develop its potentialities. [*Stormy applause.*]

I have no doubt that if we give our scientists proper assistance they will be able in the near future not only to overtake but to surpass the achievements of science beyond the boundaries of our country. [*Prolonged applause.*]

As regards the plans for a longer period ahead, the Party means to organize a new mighty upsurge in the national economy, which would allow us to increase our industrial production, for example three times over as compared with the prewar period. We must achieve a situation where our industry can produce annually up to 50 million tons of pig iron [*prolonged applause*], up to 500 million tons of coal [*prolonged applause*], and up to 60 million tons of oil [*prolonged applause*]. Only under such conditions can we consider that our homeland will be guaranteed against all possible accidents. [*Stormy applause.*] That will take three more Five-Year Plans, I should think, if not more. But it can be done and we must do it. [*Stormy applause.*]

13. George F. Kennan: Containment Doctrine, 1946

Introduction

By February 1946, Soviet relations with the Western Allies had deteriorated dramatically as crises erupted over Soviet demands on Iran and Turkey and the occupying powers found it impossible to reach agreement on the treatment of Germany. At this juncture, the State Department in Washington, D.C., cabled the U.S. embassy in Moscow requesting an assessment of Soviet behavior and recommendations on future policies toward the Soviet Union. The request was handed to the highly erudite diplomat George F. Kennan, minister-counselor at the embassy and one of the State Department's leading experts on Russian and Soviet policy. Kennan quickly drafted the 8,000-word "Long Telegram" in which he stated that Soviet leaders were firmly committed to Marxist-communist ideology, according to whose dictates there existed no possibility of "permanent peaceful coexistence" with the capitalist world. Soviet officials, he argued, had inherited the "traditional and instinctive Russian sense of insecurity" toward the West and, to justify the harshness of their own rule, needed the excuse of an external enemy, just as the former tsarist state had done. Given this mind-set, little chance existed of genuine understanding or cooperation between the West and the Soviet Union. Kennan expected that the Soviet Union would seek to take advantage of every opportunity to enhance Soviet power and to weaken the position of the West. "In summary," he stated, "we have here a political force committed fanatically to the belief that with the US there can be no perma-

nent *modus vivendi*, that it is desirable and necessary that the internal harmony of our society be disrupted, our traditional way of life be destroyed, the international authority of our state be broken, if Soviet power is to be secure.” According to Kennan, the United States nonetheless possessed viable options when dealing with the Soviet Union. Soviet policy, he argued, was normally opportunistic and “highly sensitive to logic of force”—meaning that Soviet leaders would draw back when they encountered firm opposition—and the United States must have faith in its own principles. Kennan’s telegram arrived at precisely the right psychological moment, as officials in Washington sought to understand Soviet behavior and also wanted guidance on future policy. The document was circulated extensively within the foreign policy bureaucracy, and Kennan was soon recalled to Washington to become the first director of the State Department’s new Policy Planning Staff. In July 1947, he published an article elaborating his views, titled “The Sources of Soviet Conduct,” in the influential journal *Foreign Affairs*, which was widely read by the foreign policy elite. Due to his official position, he signed it simply “X.” The article articulated his policy of containing communism where it already existed at that time and actively preventing its spread to other countries. Although the article was published anonymously, Kennan’s authorship was quickly established. Dubbed the Containment Doctrine, this policy became the foundation of U.S. policy during the Cold War and was enthusiastically embraced by U.S. President Harry Truman. Kennan, who left the diplomatic service in the early 1950s for a lengthy second career as a historian and political commentator, later claimed that he had failed to make it sufficiently clear that containment as he envisaged it would be implemented primarily through nonmilitary means, employing force only as a last resort. Some historians have suggested that Kennan retrospectively minimized the military aspects of containment as he originally conceived it. He subsequently opposed U.S. establishment of the North Atlantic Treaty Organization (NATO) in 1949 and the conclusion of the bilateral U.S.-Japanese Security Treaty two years later, and he repeatedly urged that Germany should be reunited and neutralized in the Cold War, a proposal that would have demanded a degree of trust in their opponents that neither the Western powers nor the Soviet Union demonstrated. Even though the father of containment soon parted company with official Washington, for the remainder of the Cold War the strategy he had formulated remained the guiding principle of U.S. policy.

Primary Source

[. . .]

PART THREE: PROJECTION OF SOVIET OUTLOOK IN PRACTICAL POLICY ON OFFICIAL LEVEL

We have now seen nature and background of Soviet program. What may we expect by way of its practical implementation? . . .

On official plane we must look for following:

(A) Internal policy devoted to increasing in every way strength and prestige of Soviet state’s intensive military-industrialization; maximum development of armed forces; great displays to impress outsiders; continued secretiveness about internal matters, designed to conceal weaknesses and to keep opponents in dark.

(B) Wherever it is considered timely and promising, efforts will be made to advance official limits of Soviet power. For the moment, these efforts are restricted to

certain neighboring points conceived of here as being of immediate strategic necessity, such as Northern Iran, Turkey, possibly Bornholm. However, other points may at any time come into question, if and as concealed Soviet political power is extended to new areas. Thus a “friendly” Persian Government might be asked to grant Russia a port on Persian Gulf. Should Spain fall under communist control, question of Soviet base at Gibraltar Strait might be activated. But such claims will appear on official level only when unofficial preparation is complete.

(C) Russians will participate officially in international organizations where they see opportunity of extending Soviet power or of inhibiting or diluting power of others. Moscow sees in UNO [United Nations Organization] not the mechanism for a permanent and stable world society founded on mutual interest and aims of all nations, but an arena in which aims just mentioned can be favorably pursued. As long as UNO is considered here to serve this purpose, Soviets will remain with it. But if at any time they come to conclusion that

it is serving to embarrass or frustrate their aims for power expansion and if they see better prospects for pursuit of these aims along other lines, they will not hesitate to abandon UNO. This would imply, however, that they felt themselves strong enough to split unity of other nations by their withdrawal, to render UNO ineffective as a threat to their aims or security, and to replace it with an international weapon more effective from their viewpoint. Thus Soviet attitude toward UNO will depend largely on loyalty of other nations to it, and on degree of vigor, decisiveness and cohesion with which these nations defend in UNO the peaceful and hopeful concept of international life, which that organization represents to our way of thinking. I reiterate, Moscow has no abstract devotion to UNO ideals. Its attitude to that organization will remain essentially pragmatic and tactical.

(D) Toward colonial areas and backward or dependent peoples, Soviet policy, even on official plane, will be directed toward weakening of power and influence and contacts of advanced western nations, on theory that in so far as this policy is successful, there will be created a vacuum which will favor communist-Soviet penetration. Soviet pressure for participation in trusteeship arrangements thus represents, in my opinion, a desire to be in a position to complicate and inhibit exertion of western influence at such points rather than to provide major channel for exerting of Soviet power. Latter motive is not lacking, but for this Soviets prefer to rely on other channels than official trusteeship arrangements. Thus we may expect to find Soviets asking for admission everywhere to trusteeship or similar arrangements and using levers thus acquired to weaken western influence among such peoples.

(E) Russians will strive energetically to develop Soviet representation in, and official ties with, countries in which they sense strong possibilities of opposition to western centers of power. This applies to such widely separated points as Germany, Argentina, Middle Eastern countries, etc.

(F) In international economic matters, Soviet policy will really be dominated by pursuit of autarchy for Soviet Union and Soviet-dominated adjacent areas taken together. That, however, will be underlying policy. As

far as official line is concerned, position is not yet clear. Soviet Government has shown strange reticence since termination hostilities on subject foreign trade. If large scale long term credits should be forthcoming, I believe Soviet Government may eventually again do lip service, as it did in nineteen-thirties to desirability of building up international economic exchange in general. Otherwise I think it possible Soviet foreign trade may be restricted largely to Soviet's own security sphere, including occupied areas in Germany, and that a cold official shoulder may be turned to principle of general economic collaboration among nations.

(G) With respect to cultural collaboration, lip service will likewise be rendered to desirability of deepening cultural contacts between peoples, but this will not in practice be interpreted in any way which could weaken security position of Soviet peoples. Actual manifestations of Soviet policy in this respect will be restricted to arid channels of closely shepherded official visits and functions, with super-abundance of vodka and speeches and dearth of permanent effects.

(H) Beyond this, Soviet official relations will take what might be called "correct" course with individual foreign governments, with great stress being laid on prestige of Soviet Union and its representatives and with punctilious attention to protocol, as distinct from good manners.

**PART FOUR: FOLLOWING MAY BE SAID
AS TO WHAT WE MAY EXPECT BY WAY
OF IMPLEMENTATION OF BASIC
SOVIET POLICIES ON UNOFFICIAL, OR
SUBTERRANEAN PLANE, I.E., ON PLANE
FOR WHICH SOVIET GOVERNMENT
ACCEPTS NO RESPONSIBILITY**

(A) To undermine general political and strategic potential of major western powers. Efforts will be made in such countries to disrupt national self-confidence, to hamstring measures of national defense, to increase social and industrial unrest, to stimulate all forms of disunity. All persons with grievances, whether economic or racial, will be urged to seek redress not in mediation and compromise, but in defiant violent struggle for destruction of other elements of society. Here poor will be set against rich, black against white,

young against old, newcomers against established residents, etc.

(B) On unofficial plane particularly violent efforts will be made to weaken power and influence of western powers of colonial, backward, or dependent peoples. On this level, no holds will be barred. . . .

(C) Where individual governments stand in path of Soviet purposes pressure will be brought for their removal from office. . . .

(D) In foreign countries Communists will, as a rule, work toward destruction of all forms of personal independence, economic, political or moral. . . .

(E) Everything possible will be done to set major western powers against each other. . . .

(F) In general, all Soviet efforts on unofficial international plane will be negative and destructive in character, designed to tear down sources of strength beyond reach of Soviet control. This is only in line with basic Soviet instinct that there can be no compromise with rival power and that constructive work can start only when communist power is dominant. But behind all this will be applied insistent, unceasing pressure for penetration and command of key positions in administration and especially in police apparatus of foreign countries. The Soviet regime is a police regime par excellence, reared in the dim half world of Tsarist police intrigue, accustomed to think primarily in terms of police power. This should never be lost sight of in gauging Soviet motives.

PART FIVE

In summary, we have here a political force committed fanatically to the belief that with US there can be no permanent *modus vivendi*, that it is desirable and necessary that the internal harmony of our society be disrupted, our traditional way of life be destroyed, the international authority of our state be broken, if Soviet power is to be secure. This political force has complete power of disposition over energies of one of world's greatest peoples and resources of world's richest national territory, and is borne along by deep and powerful currents of Russian nationalism. In addition, it has

an elaborate and far flung apparatus for exertion of its influence in other countries, an apparatus of amazing flexibility and versatility, managed by people whose experience and skill in underground methods are presumably without parallel in history. Finally, it is seemingly inaccessible to considerations of reality in its basic reactions. For it, the vast fund of objective fact about human society is not, as with us, the measure against which outlook is constantly being tested and re-formed, but a grab bag from which individual items are selected arbitrarily and tendentiously to bolster an outlook already preconceived. This is admittedly not a pleasant picture. Problem of how to cope with this force is undoubtedly greatest task our diplomacy has ever faced and probably greatest it will ever have to face. It should be point of departure from which our political general staff work at present juncture should proceed. It should be approached with same thoroughness and care as solution of major strategic problem in war, and if necessary, with no smaller outlay in planning effort. I cannot attempt to suggest all answers here. But I would like to record my conviction that problem is within our power to solve—and that without recourse to any general military conflict. And in support of this conviction there are certain observations of a more encouraging nature I should like to make:

(One) Soviet power, unlike that of Hitlerite Germany, is neither schematic nor adventuristic. It does not work by fixed plans. It does not take unnecessary risks. Impervious to logic of reason, and it is highly sensitive to logic of force. For this reason it can easily withdraw—and usually does—when strong resistance is encountered at any point. Thus, if the adversary has sufficient force and makes clear his readiness to use it, he rarely has to do so. If situations are properly handled there need be no prestige engaging showdowns.

(Two) Gauged against western world as a whole, Soviets are still by far the weaker force. Thus, their success will really depend on degree of cohesion, firmness and vigor which western world can muster. And this is factor which it is within our power to influence.

(Three) Success of Soviet system, as form of internal power, is not yet finally proven. It has yet to be demonstrated that it can survive supreme test of successive transfer of power from one individual or group to another. Lenin's death was first such transfer, and its

effects wracked Soviet state for 15 years after. Stalin's death or retirement will be second. But even this will not be final test. Soviet internal system will now be subjected, by virtue of recent territorial expansions, to series of additional strains which once proved severe tax on Tsardom. We here are convinced that never since termination of civil war have mass of Russian people been emotionally farther removed from doctrines of communist party than they are today. In Russia, party has now become a great and—for the moment—highly successful apparatus of dictatorial administration, but it has ceased to be a source of emotional inspiration. Thus, internal soundness and permanence of movement need not yet be regarded as assured.

(Four) All Soviet propaganda beyond Soviet security sphere is basically negative and destructive. It should therefore be relatively easy to combat it by any intelligent and really constructive program.

For these reasons I think we may approach calmly and with good heart problem of how to deal with Russia. As to how this approach should be made, I only wish to advance, by way of conclusion, following comments:

(One) Our first step must be to apprehend, and recognize for what it is, the nature of the movement with which we are dealing. We must study it with same courage, detachment, objectivity, and same determination not to be emotionally provoked or unseated by it, with which doctor studies unruly and unreasonable individual.

(Two) We must see that our public is educated to realities of Russian situation. I cannot over-emphasize importance of this. Press cannot do this alone. It must be done mainly by government, which is necessarily more experienced and better informed on practical problems involved. In this we need not be deterred by [ugliness] of picture. I am convinced that there would be far less hysterical anti-Sovietism in our country today if realities of this situation were better understood by our people. There is nothing as dangerous or as terrifying as the unknown. It may also be argued that to reveal more information on our difficulties with Russia would reflect unfavorably on Russian American relations. I feel that if there is any real risk here

involved, it is one which we should have courage to face, and sooner the better. But I cannot see what we would be risking. Our stake in this country, even coming on heels of tremendous demonstrations of our friendship for Russian people, is remarkably small. We have here no investments to guard, no actual trade to lose, virtually no citizens to protect, few cultural contacts to preserve. Our only stake lies in what we hope rather than what we have; and I am convinced we have better chance of realizing those hopes if our public is enlightened and if our dealings with Russians are placed entirely on realistic and matter of fact basis.

(Three) Much depends on health and vigor of our own society. World communism is like malignant parasite which feeds only on diseased tissue. This is point at which domestic and foreign policies meet. Every courageous and incisive measure to solve internal problems of our own society, to improve self-confidence, discipline, morale and community spirit of our own people, is a diplomatic victory over Moscow worth a thousand diplomatic notes and joint communiqués. If we cannot abandon fatalism and indifference in face of deficiencies of our own society, Moscow will profit—Moscow cannot help profiting by them in its foreign policies.

(Four) We must formulate and put forward for other nations a much more positive and constructive picture of sort of world we would like to see than we have put forward in past. It is not enough to urge people to develop political processes similar to our own. Many foreign peoples, in Europe at least, are tired and frightened by experiences of past, and are less interested in abstract freedom than in security. They are seeking guidance rather than responsibilities. We should be better able than Russians to give them this. And unless we do, Russians certainly will.

(Five) Finally we must have courage and self-confidence to cling to our own methods and conceptions of human society. After all, the greatest danger that can befall us in coping with this problem of Soviet Communism, is that we shall allow ourselves to become like those with whom we are coping.

14. Winston Churchill: “The Sinews of Peace” (Iron Curtain Speech), 5 March 1946

Introduction

In a commencement address entitled “The Sinews of Peace” delivered at Westminster College in Fulton, Missouri, on 5 March 1946, former British prime minister Winston Churchill painted a picture of the post–World War II world and the emerging struggle between democracy and communism. Although Churchill was out of office, he spoke with all the prestige of “the greatest living Englishman,” the charismatic British leader who in 1940 had caught the world’s imagination when he proclaimed his country’s determination to stand alone against Adolf Hitler’s German forces, which had already conquered Western Europe. President Harry S. Truman escorted Churchill when he gave this speech, which Truman had seen in advance and which—although Churchill was supposedly speaking as a private citizen—had also been quietly cleared with the British government. Describing the birth of the Cold War, Churchill proclaimed that an “iron curtain” had descended across Europe behind which the Soviet Union exercised unlimited control with no regard for basic human rights. He called upon the United States to join with Great Britain in preventing the further extension of Soviet power. Churchill’s phrase caught the popular imagination, and the speech was widely publicized throughout the Western world. The iron curtain metaphor remained in prominent use throughout the Cold War.

Primary Source

[. . .]

From Stettin in the Baltic to Trieste in the Adriatic, an iron curtain has descended across the Continent. Behind that line lie all the capitals of the ancient states of Central and Eastern Europe. Warsaw, Berlin, Prague, Vienna, Budapest, Belgrade, Bucharest and Sofia, all these famous cities and the populations around them lie in what I must call the Soviet sphere, and all are subject in one form or another, not only to Soviet influence but to a very high and, in some cases, increasing measure of control from Moscow. Athens alone—Greece with its immortal glories—is free to decide its future at an election under British, American and French observation. The Russian-dominated Polish Government has been encouraged to make enormous and wrongful inroads upon Germany, and mass expulsions of millions of Germans on a scale grievous and undreamed-of are now taking place. The Communist parties, which were very small in all these Eastern States of Europe, have been raised to pre-eminence and power far beyond their numbers and are seeking everywhere to obtain totalitarian control. Police governments are prevailing in nearly every case, and so far, except in Czechoslovakia, there is no true democracy.

[. . .]

In front of the iron curtain which lies across Europe are other causes for anxiety. In Italy the Communist Party is seriously hampered by having to support the Communist-trained Marshal Tito’s claims to former Italian territory at the head of the Adriatic. Nevertheless the future of Italy hangs in the balance. Again one cannot imagine a regenerated Europe without a strong France. All my public life I have worked for a strong France and I never lost faith in her destiny, even in the darkest hours. I will not lose faith now. However, in a great number of countries, far from the Russian frontiers and throughout the world, Communist fifth columns are established and work in complete unity and absolute obedience to the directions they receive from the Communist centre. Except in the British Commonwealth and in the United States where Communism is in its infancy, the Communist parties or fifth columns constitute a growing challenge and peril to Christian civilisation. These are somber facts for anyone to have to recite on the morrow of a victory gained by so much splendid comradeship in arms and in the cause of freedom and democracy; but we should be most unwise not to face them squarely while time remains.

[. . .]

On the other hand I repulse the idea that a new war is inevitable; still more that it is imminent. It is because I am sure that our fortunes are still in our own hands and that we hold the power to save the future, that I feel the duty to speak out now that I have the occasion and the opportunity to do so. I do not believe that Soviet Russia desires war. What they desire is the fruits of war and the indefinite expansion of their power and doctrines. But what we have to consider here today while time remains, is the permanent prevention of war and the establishment of conditions of freedom and democracy as rapidly as possible in all countries. Our difficulties and dangers will not be removed by closing our eyes to them. They will not be removed by mere waiting to see what happens; nor will they be removed by a policy of appeasement. What is needed is a settlement, and the longer this is delayed, the more difficult it will be and the greater our dangers will become.

From what I have seen of our Russian friends and Allies during the war, I am convinced that there is nothing they admire so much as strength, and there is nothing for which they have less respect than for weakness, especially military weakness. For that reason the old doctrine of a balance of power is unsound. We cannot afford, if we can help it, to work on narrow margins, offering temptations to a trial of strength. If the Western Democracies stand together in strict adherence to the principles of the United Nations Charter, their influence for furthering those principles will be immense and no one is likely to molest them. If however they become divided or falter in their duty and if these all-important years are allowed to slip away then indeed catastrophe may overwhelm us all.

15. Josef Stalin: Reply to Winston Churchill, 13 March 1946

Introduction

One week after former British prime minister Winston Churchill delivered his “Sinews of Peace” speech in Fulton, Missouri, Soviet leader Josef Stalin responded angrily, using an official newspaper interview to denounce Churchill as a “warmonger.” Irked by Churchill’s calls for an alliance of the “English-speaking peoples”—the British Empire, Canada, and the United States—Stalin charged that Churchill and his like-minded British and American friends were displaying a sense of racist superiority over all other nations closely akin to what German Nazi leader Adolf Hitler had shown. Churchill’s speech, according to Stalin, amounted to “a call for war on the U.S.S.R.” Defending the Soviet sphere of influence in Eastern Europe, Stalin recalled the “colossal” wartime casualties, far greater than those of Britain and the United States combined, that his country had suffered in World War II. While pointing out that East European governments included some noncommunists, Stalin defended communist predominance in those states on the grounds that these were the individuals who had been most involved in wartime antifascist resistance. In practice, Soviet occupation forces in Eastern Europe normally favored the communist political parties and facilitated their access to power. Clearly, however, Stalin was not prepared to loosen the Soviet hold on these governments. Defiantly, Stalin ended by recalling Churchill’s 1918–1920 efforts as British minister of war to overthrow the new Bolshevik government that had seized power in Russia and reminding him that these had been unsuccessful. Although symptoms rather than causes of the growing estrangement between the Soviet Union and its Western allies, Churchill’s speech and Stalin’s response clearly did nothing to improve their relations.

Primary Source

Question: How do you assess the recent speech of Mr. Churchill, which was made in the United States?

Answer: I assess it as a dangerous act, calculated to sow the seed of discord among the Allied governments and hamper their cooperation.

[. . .]

Q: How do you assess that part of Mr. Churchill's speech in which he attacks the democratic regime of the European countries which are our neighbors and in which he criticizes the good neighborly relations established between these countries and the Soviet Union?

A: This part of Mr. Churchill's speech is a mixture of the elements of the libel with the elements of rudeness and lack of tact. Mr. Churchill maintains that Warsaw, Berlin, Prague, Vienna, Budapest, Belgrade, Bucharest and Sofia, all these famous cities and the populations of those areas, are within the Soviet sphere and are all subjected to Soviet influence and to the increasing control of Moscow.

Mr. Churchill qualifies this as the "boundless expansionist tendencies of the Soviet Union." It requires no special effort to show that Mr. Churchill rudely and shamelessly libels not only Moscow but also the above-mentioned States neighborly to the U.S.S.R.

To begin with, it is quite absurd to speak of the exclusive control of the U.S.S.R. in Vienna and Berlin, where there are Allied control councils with representatives of four States, where the U.S.S.R. has only one-fourth of the voices.

It happens sometimes that some people are unable to refrain from libel, but still they should know a limit.

Secondly, one cannot forget the following fact: the Germans carried out an invasion of the U.S.S.R. through Finland, Poland, Rumania, Bulgaria and Hungary. The Germans were able to carry out the invasion through these countries by reason of the fact that these countries had governments inimical to the Soviet Union.

As a result of the German invasion, the Soviet Union has irrevocably lost in battles with the Germans, and also during the German occupation and through the expulsion of Soviet citizens to German slave labor camps, about 7,000,000 people. In other words, the Soviet Union has lost in men several times more than Britain and the United States together.

It may be that some quarters are trying to push into oblivion these sacrifices of the Soviet people which insured the liberation of Europe from the Hitlerite yoke.

But the Soviet Union cannot forget them. One can ask, therefore, what can be surprising in the fact that the Soviet Union, in a desire to ensure its security for the future, tries to achieve that these countries should have governments whose relations to the Soviet Union are loyal? How can one, without having lost one's reason, qualify these peaceful aspirations of the Soviet Union as "expansionist tendencies" of our Government?

Mr. Churchill further maintains that the Polish Government under Russian lordship has been spurred to an unjust and criminal spoliation against Germany. Here, every word is a rude and offensive libel. Contemporary, democratic Poland is led by outstanding men. They have shown in deeds that they know how to defend the interests and worth of their homeland, as the predecessors failed to do.

What reason has Mr. Churchill to maintain that the leaders of contemporary Poland can submit their country to a lordship by representatives of any country whatever? Does Mr. Churchill here libel the Russians because he has intentions of sowing the seeds of discord between Poland and the Soviet Union?

Mr. Churchill is not pleased that Poland should have turned her policy toward friendship and alliance with the U.S.S.R. There was a time when in the mutual relations between Poland and the U.S.S.R. there prevailed an element of conflict and contradiction. This gave a possibility to statesmen, of the kind of Mr. Churchill, to play on these contradictions, to take Poland in hand under the guise of protection from the Russians, to frighten Russia by specters of a war between Poland and herself, and to take for themselves the role of arbiters.

But this time is past. For enmity between Poland and Russia has given place to friendship between them, and Poland, present democratic Poland, does not wish any longer to be a playing-ball in the hands of foreigners. It

seems to be that this is just what annoys Mr. Churchill and urges him to rude, tactless outbursts against Poland. After all, it is no laughing matter for him. He is not allowed to play for other people's stakes.

As for Mr. Churchill's attack on the Soviet Union in connection with the extending of the western boundaries of Poland, as compensation for the territories seized by the Germans in the past, there it seems to me that he quite blatantly distorts the facts.

As is known, the western frontiers of Poland were decided upon at the Berlin conference of the three powers, on the basis of Poland's demands.

The Soviet Union repeatedly declared that it considered Poland's demands just and correct. It may well be that Mr. Churchill is not pleased with this decision. But why does Mr. Churchill, not sparing his darts against the Russians in the matter, conceal from his readers the fact that the decision was taken at the Berlin conference unanimously, that not only the Russians voted for this decision but also the English and Americans?

Why did Mr. Churchill have to delude people? Mr. Churchill further maintains that the Communist parties were very insignificant in all these Eastern European countries but reached exceptional strength, exceeding their numbers by far, and are attempting to establish totalitarian control everywhere; that police-government prevailed in almost all these countries, even up to now, with the exception of Czechoslovakia, and that there exists in them no real democracy.

As is known in Britain at present there is one party which rules the country—the Labour party. The rest of the parties are barred from the Government of the country. This is called by Churchill a true democracy, meanwhile Poland, Rumania, Yugoslavia, Bulgaria and Hungary are governed by several parties—from four to six parties. And besides, the opposition, if it is loyal, is guaranteed the right to participate in the Government. This, Churchill calls totalitarian and the Government of police.

On what grounds? Do you expect an answer from Churchill? Does he not understand the ridiculous situ-

ation he is putting himself in by such speeches on the basis of totalitarianism and police rule. Churchill would have liked Poland to be ruled by Sosnkowski and Anders, Yugoslavia by Mikhailovitch, Rumania by Prince Stirbey and Radescu, Hungary and Austria by some king from the House of Habsburg, and so on.

Mr. Churchill wants to assure us that these gentlemen from the Fascist servants' hall can ensure true democracy. Such is the Democracy of Mr. Churchill. Mr. Churchill wanders around the truth when he speaks of the growth of the influence of the Communist parties in Eastern Europe. It should, however, be noted that he is not quite accurate. The influence of Communist parties grew not only in Eastern Europe but in almost every country of Europe where fascism has ruled before: Italy, Germany, Hungary, Bulgaria, Rumania, Finland, and in countries which have suffered German, Italian or Hungarian occupation. France, Belgium, Holland, Norway, Denmark, Poland, Czechoslovakia, Yugoslavia, Greece, the Soviet Union and so on.

The growth of the influence of communism cannot be considered accidental. It is a normal function. The influence of the Communists grew because during the hard years of the mastery of fascism in Europe, Communists showed themselves to be reliable, daring and self-sacrificing fighters against fascist regimes for the liberty of peoples.

Mr. Churchill sometimes recalls in his speeches the common people from small houses, patting them on the shoulder in a lordly manner and pretending to be their friend. But these people are not so simple-minded as it might appear at first sight. Common people, too, have their opinions and their own politics. And they know how to stand up for themselves.

It is they, millions of these common people, who voted Mr. Churchill and his party out in England, giving their votes to the Labor party. It is they, millions of these common people, who isolated reactionaries in Europe, collaborators with fascism, and gave preference to Left democratic parties.

It is they, millions of these common people, having tried the Communists in the fire of struggle and resist-

ance to fascism, who decided that the Communists deserve completely the confidence of the people. Thus grew the Communists' influence in Europe. Such is the law of historical development.

Of course, Mr. Churchill does not like such a development of events. And he raised the alarm, appealing to force. But he also did not like the appearance of the Soviet regime in Russia after the First World War. Then, too, he raised the alarm and organized an armed expedition of fourteen states against Russia with the aim of turning back the wheel of history.

But history turned out to be stronger than Churchill's intervention and the quixotic antics of Churchill resulted in his complete defeat. I do not know whether Mr. Churchill and his friends will succeed in organizing after the Second World War a new military expedition against eastern Europe. But if they succeed in this, which is not very probable, since millions of common people stand on guard over the peace, then one man confidently says that they will be beaten, just as they were beaten twenty-six years ago.

16. Harry S. Truman: The Truman Doctrine, 1947

Introduction

The growing economic and military weakness of Great Britain was one reason that the United States gradually assumed the role of being the major protagonist in the developing Cold War. In February 1947, British officials informed the U.S. government that economic difficulties prevented them from continuing their previous aid to Greece and Turkey, countries bordering the strategically important supply routes for Middle Eastern oil. In Greece a civil war between communists and noncommunists was in progress, while Turkey faced Soviet pressure to grant the Russians partial control of the Dardanelles straits separating Europe and Asia, the only route that Soviet vessels could take to pass from the Black Sea to the Mediterranean. President Harry S. Truman responded on 12 March 1947. In an address before the U.S. Congress, he laid out foreign policy guidelines for the United States in the early days of the Cold War that subsequently became known as the Truman Doctrine. At heart, the policy was one that mandated an active role for the United States in containing the spread of communism around the world. Truman specifically requested aid, primarily financial, for Greece and Turkey but placed this in the broader context of a wide-ranging international communist threat around the world, which he argued mandated American assistance to any nation menaced by either internal or external communist forces. He portrayed a world divided between the forces of freedom and democracy and the forces of authoritarian totalitarianism, and he effectively pledged virtually unlimited U.S. assistance to the former. In this case, the aid that Truman envisaged was primarily financial, which Congress granted by appropriating \$400 million to the two countries. The Truman Doctrine laid the groundwork for the Marshall Plan, announced three months later, that extended similar aid to all of Western Europe. More broadly, it also formed the backbone of America's Cold War policy and led to both financial and military entanglements throughout the world, including the Korean War and the Vietnam War. Truman's speech was drafted in part by future Secretary of State Dean Acheson, who later stated that although he might have exaggerated the communist threat and depicted the international situation in overly black-and-white apocalyptic terms, such tactics were necessary to win support for these policies from the somewhat reluctant American people and their representatives in Congress.

Primary Source

The gravity of the situation which confronts the world today necessitates my appearance before a joint session of the Congress. The foreign policy and the national security of this country are involved.

One aspect of the present situation which I wish to present to you at this time for your consideration and decision concerns Greece and Turkey. The United States has received from the Greek government an urgent appeal for financial and economic assistance.

Preliminary reports from the American economic mission now in Greece and reports from the American ambassador in Greece corroborate the statement of the Greek government that assistance is imperative if Greece is to survive as a free nation.

[. . .]

The British government has informed us that, owing to its own difficulties, it can no longer extend financial or economic aid to Turkey. As in the case of Greece, if Turkey is to have the assistance it needs, the United States must supply it. We are the only country able to provide that help.

I am fully aware of the broad implications involved if the United States extends assistance to Greece and Turkey, and I shall discuss these implications with you at this time.

One of the primary objectives of the foreign policy of the United States is the creation of conditions in which we and other nations will be able to work out a way of life free from coercion. This was a fundamental issue in the war with Germany and Japan. Our victory was won over countries which sought to impose their will and their way of life upon other nations.

To insure the peaceful development of nations, free from coercion, the United States has taken a leading part in establishing the United Nations. The United Nations is designed to make possible lasting freedom and independence for all its members. We shall not realize our objectives, however, unless we are willing to help free peoples to maintain their free institutions and their national integrity against aggressive movements that seek to impose upon them totalitarian regimes. This is no more than a frank recognition that totalitarian regimes imposed on free peoples, by direct or indirect aggression, undermine the foundations of international peace and hence the security of the United States.

The peoples of a number of countries of the world have recently had totalitarian regimes forced upon them against their will. The government of the United States has made frequent protests against coercion and

intimidation, in violation of the Yalta Agreement, in Poland, Rumania, and Bulgaria. I must also state that in a number of other countries there have been similar developments.

At the present moment in world history nearly every nation must choose between alternative ways of life. The choice is too often not a free one.

One way of life is based upon the will of the majority, and is distinguished by free institutions, representative government, free elections, guarantees of individual liberty, freedom of speech and religion, and freedom from political oppression. The second way of life is based upon the will of a minority forcibly imposed upon the majority. It relies upon terror and oppression, a controlled press and radio, fixed elections, and the suppression of personal freedoms.

I believe that it must be the policy of the United States to support free peoples who are resisting attempted subjugation by armed minorities or by outside pressures. I believe that we must assist free peoples to work out their own destinies in their own way. I believe that our help should be primarily through economic and financial aid, which is essential to economic stability and orderly political processes.

The world is not static and the status quo is not sacred. But we cannot allow changes in the status quo in violation of the Charter of the United Nations by such methods as coercion or by such subterfuges as political infiltration. In helping free and independent nations to maintain their freedom, the United States will be giving effect to the principles of the Charter of the United Nations.

It is necessary only to glance at a map to realize that the survival and integrity of the Greek nation are of grave importance in a much wider situation. If Greece should fall under the control of an armed minority, the effect upon its neighbor, Turkey, would be immediate and serious. Confusion and disorder might well spread throughout the entire Middle East. Moreover, the disappearance of Greece as an independent state would have a profound effect upon those countries in Europe whose peoples are struggling against great difficulties

to maintain their freedoms and their independence while they repair the damages of war.

It would be an unspeakable tragedy if these countries, which have struggled so long against overwhelming odds, should lose that victory for which they sacrificed so much. Collapse of free institutions and loss of independence would be disastrous not only for them but for the world. Discouragement and possibly failure would quickly be the lot of neighboring peoples striving to maintain their freedom and independence.

Should we fail to aid Greece and Turkey in this fateful hour, the effect will be far-reaching to the West as well as to the East. We must take immediate and resolute action.

I therefore ask the Congress to provide authority for assistance to Greece and Turkey in the amount of \$400 million for the period ending June 30, 1948. In requesting these funds, I have taken into consideration the maximum amount of relief assistance which would be furnished to Greece out of the \$350 million which I recently requested that the Congress authorize for the prevention of starvation and suffering in countries devastated by the war.

In addition to funds, I ask the Congress to authorize the detail of American civilian and military personnel to Greece and Turkey, at the request of those countries, to assist in the tasks of reconstruction, and for the purpose of supervising the use of such financial and material assistance as may be furnished. I recommend that authority also be provided for the instruction and training of selected Greek and Turkish personnel.

Finally, I ask that the Congress provide authority which will permit the speediest and most effective use, in

terms of needed commodities, supplies, and equipment, of such funds as may be authorized.

If further funds, or further authority, should be needed for purposes indicated in this message, I shall not hesitate to bring the situation before the Congress. On this subject the executive and legislative branches of the government must work together.

This is a serious course upon which we embark. I would not recommend it except that the alternative is much more serious.

The United States contributed \$341 billion toward winning World War II. This is an investment in world freedom and world peace. The assistance that I am recommending for Greece and Turkey amounts to little more than one-tenth of 1 percent of this investment. It is only common sense that we should safeguard this investment and make sure that it was not in vain.

The seeds of totalitarian regimes are nurtured by misery and want. They spread and grow in the evil soil of poverty and strife. They reach their full growth when the hope of a people for a better life has died. We must keep that hope alive.

The free peoples of the world look to us for support in maintaining their freedoms. If we falter in our leadership, we may endanger the peace of the world—and we shall surely endanger the welfare of our own nation.

Great responsibilities have been placed upon us by the swift movement of events. I am confident that the Congress will face these responsibilities squarely.

17. Harry S. Truman: Executive Order 9835, Truman Loyalty Oath, 1947

Introduction

On 12 March 1947, President Harry S. Truman addressed Congress and declared that the United States should assist any country that faced a communist threat, either through internal subversion or outside pressure from another

state. This stance, christened the Truman Doctrine, made it more difficult for his administration to resist demands that the U.S. government move decisively against communists and radicals at home. Since the 1930s, conservatives in Congress had claimed that the Democratic administrations of President Franklin D. Roosevelt and Truman himself were riddled with leftists, socialists, and potential traitors whose first loyalties were to the Soviet Union rather than their own country. In 1938 Congressman Martin Dies established the House Un-American Activities Committee (HUAC), which until its abolition in 1975 investigated the role of leftists in New Deal and other government programs and numerous private organizations and businesses, including the movie industry and the media, suspected of being communist fronts. Hoping to avert further criticism and to control the process, less than ten days after announcing the Truman Doctrine the president instituted a wide-ranging loyalty program covering all federal employees. Every individual who took any civilian federal position was liable to being subjected to extensive investigation intended to prove beyond doubt his or her loyalty to the U.S. government. Loyalty review boards were established for that purpose. The creation of the loyalty program failed to satisfy conservative critics, who continued their own parallel activities within and outside government and in some ways even encouraged a climate in which not just dissent but even independent thinking became suspect and dangerous. In many cases, much of the evidence submitted to the loyalty review boards consisted of malicious hearsay, subjective opinions, or innuendo, and even when they initially gave an individual appropriate security clearance, this was liable to further challenges, causing particular employees to become targets of repeated investigation. Assorted junior American diplomats who correctly predicted a communist victory in China became favorite targets of the loyalty review boards, as their professional assessments were taken as evidence that they were fellow travelers if not actual communist agents.

Primary Source

EXECUTIVE ORDER 9835

PRESCRIBING PROCEDURES FOR THE ADMINISTRATION OF AN EMPLOYEES LOYALTY PROGRAM IN THE EXECUTIVE BRANCH OF THE GOVERNMENT

Whereas each employee of the Government of the United States is endowed with a measure of trusteeship over the democratic processes which are the heart and sinew of the United States; and

Whereas it is of vital importance that persons employed in the Federal service be of complete and unswerving loyalty to the United States; and

Whereas, although the loyalty of by far the overwhelming majority of all Government employees is beyond question, the presence within the Government service of any disloyal or subversive person constitutes a threat to our democratic processes; and

Whereas maximum protection must be afforded the United States against infiltration of disloyal persons into the ranks of its employees, and equal protection from unfounded accusations of disloyalty must be afforded the loyal employees of the Government:

Now, Therefore, by virtue of the authority vested in me by the Constitution and statutes of the United States, including the Civil Service Act of 1883 (22 Stat. 403), as amended, and section 9A of the act approved August 2, 1939 (18 U.S.C. 61i), and as President and Chief Executive of the United States, it is hereby, in the interest of the internal management of the Government, ordered as follows:

PART I—INVESTIGATION OF APPLICANTS

1. There shall be a loyalty investigation of every person entering the civilian employment of any department or agency of the executive branch of the Federal Government. . . .
2. The investigations of persons entering the employ of the executive branch may be conducted after any such person enters upon actual employment therein, but in any such case the appointment of such person shall be conditioned upon a favorable determination with respect to his loyalty. . . .
3. An investigation shall be made of all applicants at all available pertinent sources of information and shall include reference to:
 - a. Federal Bureau of Investigation files.
 - b. Civil Service Commission files.

- c. Military and naval intelligence files.
 - d. The files of any other appropriate government investigative or intelligence agency.
 - e. House Committee on un-American Activities files.
 - f. Local law-enforcement files at the place of residence and employment of the applicant, including municipal, county, and State law-enforcement files.
 - g. Schools and colleges attended by applicant.
 - h. Former employers of applicant.
 - i. References given by applicant.
 - j. Any other appropriate source.
4. Whenever derogatory information with respect to loyalty of an applicant is revealed a full investigation shall be conducted. A full field investigation shall also be conducted of those applicants, or of applicants for particular positions, as may be designated by the head of the employing department or agency, such designations to be based on the determination by any such head of the best interests of national security.

PART II—INVESTIGATION OF EMPLOYEES

1. The head of each department and agency in the executive branch of the Government shall be personally responsible for an effective program to assure that disloyal civilian officers or employees are not retained in employment in his department or agency. . . .
2. The head of each department and agency shall appoint one or more loyalty boards, each composed of not less than three representatives of the department or agency concerned, for the purpose of hearing loyalty cases arising within such department or agency and making recommendations with respect to the removal of any officer or employee of such department or agency on grounds relating to loyalty, and he shall prescribe regulations for the conduct of the proceedings before such boards. . . .
3. A recommendation of removal by a loyalty board shall be subject to appeal by the officer or employee affected, prior to his removal, to the head of the employing department or agency or to such person or persons as may be designated by

such head, under such regulations as may be prescribed by him, and the decision of the department or agency concerned shall be subject to appeal to the Civil Service Commission's Loyalty Review Board, hereinafter provided for, for an advisory recommendation.

4. The rights of hearing, notice thereof, and appeal therefrom shall be accorded to every officer or employee prior to his removal on grounds of disloyalty, irrespective of tenure, or of manner, method, or nature of appointment, but the head of the employing department or agency may suspend any officer or employee at any time pending a determination with respect to loyalty.
5. The loyalty boards of the various departments and agencies shall furnish to the Loyalty Review Board, hereinafter provided for, such reports as may be requested concerning the operation of the loyalty program in any such department or agency.

[. . .]

PART V—STANDARDS

1. The standard for the refusal of employment or the removal from employment in an executive department or agency on grounds relating to loyalty shall be that, on all the evidence, reasonable grounds exist for belief that the person involved is disloyal to the Government of the United States.
2. Activities and associations of an applicant or employee which may be considered in connection with the determination of disloyalty may include one or more of the following:
 - a. Sabotage, espionage, or attempts or preparations therefor, or knowingly associating with spies or saboteurs;
 - b. Treason or sedition or advocacy thereof;
 - c. Advocacy of revolution or force or violence to alter the constitutional form of government of the United States;
 - d. Intentional, unauthorized disclosure to any person, under circumstances which may indicate disloyalty to the United States, of documents or information of a confidential or non-public character obtained by the person making the disclosure as a result of his employment by the Government of the United States;

- e. Performing or attempting to perform his duties, or otherwise acting, so as to serve the interests of another government in preference to the interests of the United States.
- f. Membership in, affiliation with or sympathetic association with any foreign or domestic organization, association, movement, group or combination of persons, designated by the Attorney General as totalitarian, fascist, communist, or

subversive, or as having adopted a policy of advocating or approving the commission of acts of force or violence to deny other persons their rights under the Constitution of the United States, or as seeking to alter the form of government of the United States by unconstitutional means.

18. George C. Marshall: Remarks by the Secretary of State (Marshall Plan), 5 June 1947

Introduction

By spring 1947, it was becoming clear that Western Europe was unlikely to recover from the devastation of World War II without a major infusion of outside funds. The harsh winter of 1946–1947 brought short-time working, power cuts, food and fuel shortages, and social unrest in France and Italy, enhancing the political position of domestic communist parties in the latter two countries. European leaders, spearheaded by the British, appealed to the United States for economic aid. State Department officials such as Undersecretary of State Will Clayton who toured Europe in early 1947 returned convinced that without such assistance, the West European nations were likely to collapse, and communist regimes that looked to Moscow for guidance might well come to power there. On 5 June 1947 in a speech at the commencement ceremony of Harvard College in Cambridge, Massachusetts, U.S. Secretary of State George C. Marshall proposed that the United States grant financial aid to countries in need to prevent them from succumbing to communism. U.S. President Harry S. Truman later dubbed the proposal the Marshall Plan, and it became one of the major U.S. initiatives of the early Cold War. American officials invited all European countries, including the communist satellite states in Eastern Europe, to participate in the plan, which envisaged a carefully coordinated scheme to revive the economies of all the European nations rather than a series of bilateral programs between the individual countries and the United States. To join the enterprise, each nation had to provide accurate and detailed economic information. Several East European states initially expressed interest in taking part but, on Soviet instructions, eventually withdrew. Congress debated the Marshall Plan throughout 1948 and eventually enacted a series of laws to implement the plan, officially known as the European Recovery Program and run by the Economic Cooperation Administration. By 1953 the United States had provided approximately \$13 billion in aid under the Marshall Plan, most of it directed to European nations but some to China, whose political allies in Congress demanded that China be included. The Marshall Plan gave a great boost to European economic recovery and helped to usher in two decades of prosperity in Western Europe. The plan also helped to intensify the Cold War. The inclusion of the Federal Republic of Germany (FRG, West Germany) in the Marshall Plan led Soviet leader Josef Stalin to fear that any German economic revival would eventually lead to a German military resurgence that would once more threaten the security of the Soviet state, and this was one reason for the Berlin Blockade of 1948–1949, a period when for almost a year East German and Soviet forces denied the Western powers land access to West Berlin. In 1948 Soviet-backed coups in Hungary and Czechoslovakia also ejected all noncommunist elements from the governments of those two states, tightening Soviet control. In response, in 1949 the Western powers established the North Atlantic Treaty Organization security pact in which the United States, Canada, and ten West European states agreed to come to each other's assistance should any of them be attacked by another power.

Primary Source

I need not tell you gentlemen that the world situation is very serious. That must be apparent to all intelligent people. I think one difficulty is that the problem is one of such enormous complexity that the very mass of facts presented to the public by press and radio make it exceedingly difficult for the man in the street to reach a clear appraisal of the situation. Furthermore, the people of this country are distant from the troubled areas of the earth and it is hard for them to comprehend the plight and consequent reaction of the long-suffering peoples, and the effect of those reactions on their governments in connection with our efforts to promote peace in the world.

In considering the requirements for the rehabilitation of Europe the physical loss of life, the visible destruction of cities, factories, mines, and railroads was correctly estimated, but it has become obvious during recent months that this visible destruction was probably less serious than the dislocation of the entire fabric of the European economy. For the past 10 years conditions have been highly abnormal. The feverish maintenance of the war effort engulfed all aspects of national economies. Machinery has fallen into disrepair or is entirely obsolete. Under the arbitrary and destructive Nazi rule, virtually every possible enterprise was geared into the German war machine. Long-standing commercial ties, private institutions, banks, insurance companies and shipping companies disappeared, through the loss of capital, absorption through nationalization or by simple destruction. In many countries, confidence in the local currency has been severely shaken. The breakdown of the business structure of Europe during the war was complete. Recovery has been seriously retarded by the fact that 2 years after the close of hostilities a peace settlement with Germany and Austria has not been agreed upon. But even given a more prompt solution of these difficult problems, the rehabilitation of the economic structure of Europe quite evidently will require a much longer time and greater effort than had been foreseen.

There is a phase of this matter which is both interesting and serious. The farmer has always produced the foodstuffs to exchange with the city dweller for the other necessities of life. This division of labor is the

basis of modern civilization. At the present time it is threatened with breakdown. The town and city industries are not producing adequate goods to exchange with the food-producing farmer. Raw materials and fuel are in short supply.

Machinery is lacking or worn out. The farmer or the peasant cannot find the goods for sale which he desires to purchase. So the sale of his farm produce for money which he cannot use seems to him an unprofitable transaction. He, therefore, has withdrawn many fields from crop cultivation and is using them for grazing. He feeds more grain to stock and finds for himself and his family an ample supply of food, however short he may be on clothing and the other ordinary gadgets of civilization. Meanwhile people in the cities are short of food and fuel. So the governments are forced to use their foreign money and credits to procure these necessities abroad. This process exhausts funds which are urgently needed for reconstruction. Thus a very serious situation is rapidly developing which bodes no good for the world. The modern system of the division of labor upon which the exchange of products is based is in danger of breaking down.

The truth of the matter is that Europe's requirements for the next 3 or 4 years of foreign food and other essential products—principally from America—are so much greater than her present ability to pay that she must have substantial additional help, or face economic, social, and political deterioration of a very grave character.

The remedy lies in breaking the vicious circle and restoring the confidence of the European people in the economic future of their own countries and of Europe as a whole. The manufacturer and the farmer throughout wide areas must be able and willing to exchange their products for currencies the continuing value of which is not open to question.

Aside from the demoralizing effect on the world at large and the possibilities of disturbances arising as a result of the desperation of the people concerned, the consequences to the economy of the United States should be apparent to all. It is logical that the United States should do whatever it is able to do to assist in

the return of normal economic health in the world, without which there can be no political stability and no assured peace. Our policy is directed not against any country or doctrine but against hunger, poverty, desperation, and chaos. Its purpose should be the revival of a working economy in the world so as to permit the emergence of political and social conditions in which free institutions can exist. Such assistance, I am convinced, must not be on a piecemeal basis as various crises develop. Any assistance that this Government may render in the future should provide a cure rather than a mere palliative. Any government that is willing to assist in the task of recovery will find full cooperation, I am sure, on the part of the United States Government. Any government which maneuvers to block the recovery of other countries cannot expect help from us. Furthermore, governments, political parties, or groups which seek to perpetuate human misery in order to profit therefrom politically or otherwise will encounter the opposition of the United States.

It is already evident that, before the United States Government can proceed much further in its efforts to alleviate the situation and help start the European world on its way to recovery, there must be some agreement among the countries of Europe as to the require-

ments of the situation and the part those countries themselves will take in order to give proper effect to whatever action might be undertaken by this Government. It would be neither fitting nor efficacious for this Government to undertake to draw up unilaterally a program designed to place Europe on its feet economically. This is the business of the Europeans. The initiative, I think, must come from Europe. The role of this country should consist of friendly aid in the drafting of a European program and of later support of such a program so far as it may be practical for us to do so. The program should be a joint one, agreed to by a number, if not all European nations.

An essential part of any successful action on the part of the United States is an understanding on the part of the people of America of the character of the problem and the remedies to be applied. Political passion and prejudice should have no part. With foresight, and a willingness on the part of our people to face up to the vast responsibilities which history has clearly placed upon our country, the difficulties I have outlined can and will be overcome.

19. National Security Act, 26 July 1947

Introduction

At the end of World War II, American officials believed that the demands of national security required a major overhaul of the associated bureaucracy, aimed at the consolidated administration of the country's armed forces and foreign policy apparatus. Until that time, the army and the navy had functioned as two separate and often rival bureaucracies that often had difficulty consolidating their operations. Against considerable opposition from the navy, on 26 July 1947 the National Security Act placed the various branches of the U.S. armed forces under one administrative unit, the National Military Establishment, that replaced the War and Navy Departments. The National Military Establishment was to be overseen by the secretary of defense. This position was a new one, replacing the secretary of war, and was superior to the subordinated individual service secretaries of the army, navy, and air force. The air force, which had been a branch of the U.S. Army, became a separate service. This reorganization suited the needs of the country in light of the ongoing Cold War, which because of its unique characteristic of not being an actual military war had fallen outside the purview of the secretary of war. The National Military Establishment was renamed the Department of Defense two years later, at which time the authority of the secretary of defense over the individual services was also strengthened. The National Security Act also created the Central Intelligence Agency (CIA), the first overseas espionage organization created in the United States in time of peace, with a mandate both to gather information and to mount covert operations; the National Security Agency, a surveillance and decrypting organization; the Defense Intelligence Agency, part of the new Defense Department;

and a National Intelligence Council to coordinate all the various governmental intelligence bureaus. In addition, the act established a National Security Council (NSC), its members to include the president and vice president and the heads of all the organizations, including the State and Defense Departments and the CIA, involved in the formulation of diplomatic and military policies to coordinate their making and direction. Every year, the president was required to submit a National Security Strategy Report to Congress. The NSC, based in the White House, fell under the direction of the president's national security advisor, a new position intended to synchronize and integrate the activities of all the bureaucratic agencies involved. Since the national security advisor enjoyed ready access to the president, from the 1960s onward the incumbent of that position often rivaled the secretary of state in influence over the making of foreign policy. The National Security Act gave striking evidence of the dramatic post-World War II expansion of U.S. international activities as the country became the world's greatest economic and military power. Many of the individuals working within the national security apparatus were extremely and assertively conscious of their country's new global stature and wished to maintain it on a permanent basis, a development that the National Security Act facilitated.

Primary Source

Section 401. Congressional declaration of purpose

In enacting this legislation, it is the intent of Congress to provide a comprehensive program for the future security of the United States; to provide for the establishment of integrated policies and procedures for the departments, agencies, and functions of the Government relating to the national security; to provide a Department of Defense, including the three military Departments of the Army, the Navy (including naval aviation and the United States Marine Corps), and the Air Force under the direction, authority, and control of the Secretary of Defense; to provide that each military department shall be separately organized under its own Secretary and shall function under the direction, authority, and control of the Secretary of Defense; to provide for their unified direction under civilian control of the Secretary of Defense but not to merge these departments or services; to provide for the establishment of unified or specified combatant commands, and a clear and direct line of command to such commands; to eliminate unnecessary duplication in the Department of Defense, and particularly in the field of research and engineering by vesting its overall direction and control in the Secretary of Defense; to provide more effective, efficient, and economical administration in the Department of Defense; to provide for the unified strategic direction of the combatant forces, for their operation under unified command, and for their integration into an efficient team of land, naval, and air forces but not to establish a single Chief of Staff over the armed forces nor an overall armed forces general staff.

[. . .]

SUBCHAPTER I—COORDINATION FOR NATIONAL SECURITY

Section 402. National Security Council

(a) Establishment; presiding officer; functions; composition. There is established a council to be known as the National Security Council (hereinafter in this section referred to as the "Council").

The President of the United States shall preside over meetings of the Council: Provided, That in his absence he may designate a member of the Council to preside in his place.

The function of the Council shall be to advise the President with respect to the integration of domestic, foreign, and military policies relating to the national security so as to enable the military services and the other departments and agencies of the Government to cooperate more effectively in matters involving the national security. The Council shall be composed of—

- (1) the President;
- (2) the Vice President;
- (3) the Secretary of State;
- (4) the Secretary of Defense;
- (5) the Director for Mutual Security;
- (6) the Chairman of the National Security Resources Board; and
- (7) the Secretaries and Under Secretaries of other executive departments and of the military departments, the Chairman of the Munitions

Board, and the Chairman of the Research and Development Board, when appointed by the President by and with the advice and consent of the Senate, to serve at his pleasure.

(b) Additional functions. In addition to performing such other functions as the President may direct, for the purpose of more effectively coordinating the policies and functions of the departments and agencies of the Government relating to the national security, it shall, subject to the direction of the President, be the duty of the Council—

- (1) to assess and appraise the objectives, commitments, and risks of the United States in relation to our actual and potential military power, in the interest of national security, for the purpose of making recommendations to the President in connection therewith; and
- (2) to consider policies on matters of common interest to the departments and agencies of the Government concerned with the national security, and to make recommendations to the President in connection therewith.

[. .]

Section 403. Office of the Director of Central Intelligence

(a) Director of Central Intelligence. There is a Director of Central Intelligence who shall be appointed by the President, by and with the advice and consent of the Senate. The Director shall—

- (1) serve as head of the United States intelligence community;
- (2) act as the principal adviser to the President for intelligence matters related to the national security; and
- (3) serve as head of the Central Intelligence Agency.

[. .]

Section 403-1. Central Intelligence Agency

There is a Central Intelligence Agency. The function of the Agency shall be to assist the Director of Central

Intelligence in carrying out the responsibilities referred to in paragraphs (1) through (5) of section 403–3(d) of this title.

Section 403-2. Intelligence Community contracting

The Director of Central Intelligence shall direct that elements of the Intelligence Community, whenever compatible with the national security interests of the United States and consistent with the operational and security concerns related to the conduct of intelligence activities, and where fiscally sound, shall award contracts in a manner that would maximize the procurement of products in the United States. For purposes of this provision, the term “Intelligence Community” has the same meaning as set forth in paragraph 3.4(f) of Executive Order 12333, dated December 4, 1981, or successor orders.

[. .]

Section 403-7. Prohibition on using journalists as agents or assets

(a) Policy. It is the policy of the United States that an element of the Intelligence Community may not use as an agent or asset for the purposes of collecting intelligence any individual who—

- (1) is authorized by contract or by the issuance of press credentials to represent himself or herself, either in the United States or abroad, as a correspondent of a United States news media organization; or
- (2) is officially recognized by a foreign government as a representative of a United States media organization.

(b) Waiver. Pursuant to such procedures as the President may prescribe, the President or the Director of Central Intelligence may waive subsection (a) of this section in the case of an individual if the President or the Director, as the case may be, makes a written determination that the waiver is necessary to address the overriding national security interest of the United States. The Permanent Select Committee on Intelligence of the House of Representatives and the Select Committee on Intelligence of the Senate shall be notified of any waiver under this subsection.

(c) Voluntary cooperation. Subsection (a) of this section shall not be construed to prohibit the voluntary cooperation of any person who is aware that the cooperation is being provided to an element of the United States Intelligence Community.

[. . .]

Section 404. Emergency preparedness

(a) Employment of personnel. The Director of the Federal Emergency Management Agency, subject to the direction of the President, is authorized, subject to the civil-service laws and chapter 51 and subchapter III of chapter 53 of title 5, to appoint and fix the compensation of such personnel as may be necessary to assist him in carrying out his functions.

(b) Functions. It shall be the function of the Director of the Federal Emergency Management Agency to advise the President concerning the coordination of military, industrial, and civilian mobilization, including—

- (1) policies concerning industrial and civilian mobilization in order to assure the most effective mobilization and maximum utilization of the Nation's manpower in the event of war;
- (2) programs for the effective use in time of war of the Nation's natural and industrial resources for

military and civilian needs, for the maintenance and stabilization of the civilian economy in time of war, and for the adjustment of such economy to war needs and conditions;

- (3) policies for unifying, in time of war, the activities of Federal agencies and departments engaged in or concerned with production, procurement, distribution, or transportation of military or civilian supplies, materials, and products;
- (4) the relationship between potential supplies of, and potential requirements for, manpower, resources, and productive facilities in time of war;
- (5) policies for establishing adequate reserves of strategic and critical material, and for the conservation of these reserves;
- (6) the strategic relocation of industries, services, government, and economic activities, the continuous operation of which is essential to the Nation's security.

(c) Utilization of Government resources and facilities. In performing his functions, the Director of the Federal Emergency Management Agency shall utilize to the maximum extent the facilities and resources of the departments and agencies of the Government.

20. Soviet Announcement of the Establishment of the Cominform, 1 September 1947

Introduction

U.S. plans announced by Secretary of State George Marshall in June 1947 to mount and fund a major coordinated initiative for the economic revival of the West European nations, the western sectors of Germany included, alarmed Soviet leader Josef Stalin. The Russians feared that a revitalized Germany would once again pose a military threat to the countries to its east. They were also concerned that the new economic aid plan would serve as a means of detaching their East European satellites from the Soviet bloc. Poland, Czechoslovakia, and Hungary all initially expressed interest in attending the meetings held in Paris in July 1947 by states interested in joining the plan but, under Soviet pressure, eventually declined to do so. The episode impelled the Soviets to develop closer bonds among the various European communist parties in order to coordinate their policies and enhance Soviet influence. In September 1947 representatives of the communist parties of the Soviet Union, Yugoslavia, Bulgaria, Romania, Hungary, Poland, France, Czechoslovakia, and Italy attended a conference at Sklarska Poreba, Poland. The meeting established the Cominform, a bureau whose functions included both propaganda and the harmonization of policies among the various European communist parties. Although restricted to European communist parties, the new

organization was a successor to the Comintern, established by the Soviet Union at the end of World War I to promote and direct international revolution, that had been disbanded during World War II. Cominform headquarters were originally set up in Belgrade, the Yugoslav capital. In 1948, however, the growing independence of Marshal Josip Broz Tito, Yugoslav communist leader, caused Yugoslavia's expulsion from the Comintern, and the body moved to Bucharest, Romania. The Cominform effectively provided an apparatus that facilitated Soviet attempts to control the policies of the assorted European communist parties. In 1956, shortly after a reconciliation had been effected between the Soviet and Yugoslav communist governments, the Cominform was disbanded. The measure was considered part of the campaign for de-Stalinization launched by new Soviet leader Nikita Khrushchev to dismantle the worst aspects of his predecessor's rule.

Primary Source

The conference states that the absence of connections between Communist parties who have taken part in this conference is in the present situation a serious shortcoming. Experience has shown that such division between Communist parties is incorrect and harmful. The requirement for an exchange of experience and voluntary coordination of actions of the separate parties has become particularly necessary now in conditions of the complicated post-war international situation and when the disunity of Communist parties may lead to damage for the working class.

Because of this, members of the conference agreed on the following:

First, to set up an Information Bureau of representatives of the Communist party of Yugoslavia, the Bulgarian Workers party (of Communists) of Rumania, the Hungarian Communist party, the Polish Workers party, the All-Union Communist party (bolshevik), the Communist party of France, the Communist party of Czechoslovakia, the Communist party of Italy.

Second, the task given to the Information Bureau is to organize and exchange experiences and, in case of necessity, coordinate the activity of communist parties on foundation of mutual agreement.

Third, the Information Bureau will have in it representatives of the Central Committee—two from each Central Committee. Delegations of the Central Committee must be appointed and replaced by the Central Committees.

Fourth, the Information Bureau is to have printed an organ—fortnightly and, later on, weekly. The organ is to be published in French and Russian and, if possible, in other languages.

Fifth, the Information Bureau is to be in Belgrade.

21. Rio de Janeiro Conference for the Maintenance of Continental Peace and Security (Rio Pact), August–September 1947

Introduction

Since the early nineteenth century, the United States had arrogated to itself a position of predominance in the Western Hemisphere. After World War II, the administration of President Harry S. Truman moved to safeguard U.S. interests in Latin America, including the strategically important Panama Canal. During the 1930s, American officials had been particularly alarmed by the readiness of some nations, especially those such as Argentina and Paraguay that were ruled by autocratic dictators, to contemplate military cooperation with the Axis states: Germany, Italy, and Japan. Once the United States entered World War II, however, all the Latin American states with the exception of Uruguay, which remained neutral, followed suit and declared war on the Axis. Under the Act of Cha-

pultepec, signed at the Conference on Inter-American Problems of War and Peace held in Mexico City in 1945, the United States and the Latin American nations—but not Canada—agreed to establish a regional organization to maintain peace and security in the Western Hemisphere. This was accomplished at a conference held in Rio de Janeiro, Brazil, two years later during which the United States and nineteen Latin American signatory states agreed that “an armed attack by any State against an American State shall be considered as an attack against all the American states.” To allay fears by some Latin American signatories that this might involve their countries in unwanted conflicts, the pact included a provision that any collective action required the consent of two-thirds of the parties and that no one state could be forced to take action if it did not wish to do so. The delegates also found it impossible to agree on precisely what constituted “an act of aggression” or on just how the signatories should respond. These reservations reflected the fears of many Latin American nations that the treaty opened the way for future American intervention in their affairs, although small states also perceived it as a guarantee against encroachments by larger and more powerful neighbors. Article 51 of the United Nations Charter had provided for such regional defensive arrangements, and the Rio Pact was the first such to be negotiated. The U.S. Senate, which perceived the agreement as tangible evidence of their country’s effective hegemony over the Western Hemisphere, gave the treaty an enthusiastic reception, with a 72–1 vote in favor of ratification. Latin American leaders hoped that the U.S. government would complement the Rio Pact with a substantial economic assistance and development program, resembling the contemporaneous Marshall Plan for European recovery, but the Truman administration preferred to leave this largely to the private sector. The Rio Pact was first invoked in December 1948 when Nicaraguan dictator Anastasio Somoza Debayle sponsored an invasion of Costa Rica by a right-wing exile force and the Costa Rican government requested its withdrawal, which ultimately occurred. During the 1950s and 1960s, Rio Pact signatories frequently sought assistance under its provisions. Unilateral U.S. interventions, often covert, against communist or leftist regimes in Guatemala in 1953, Cuba in 1961, and the Dominican Republic in 1965 were undertaken outside the Rio Pact framework, evidence of the extent to which the United States not only dominated the Rio Pact but could at its pleasure ignore the treaty’s stipulations. Again, in Chile, top American officials were at least cognizant of a projected 1973 coup against populist President Salvador Allende, in the course of which Allende died. Although several newly independent small states later joined the pact—Trinidad and Tobago in 1967, Belize in 1981, and the Bahamas in 1982—during the 1980s and 1990s it became something of a dead letter, as the Reagan administration and its successors responded forcefully to crises in Nicaragua, Central America, Panama, and Haiti without reference to the treaty. The United States did, however, resort to invoking the Rio Pact in 2001 after the radical Muslim organization al-Qaeda launched terrorist attacks against the Pentagon building in Washington, D.C., and the World Trade Center in New York City.

Primary Source

Inter-American Treaty of Reciprocal Assistance

[. . .]

Article 1. The High Contracting Parties formally condemn war and undertake in their international relations not to resort to the threat or the use of force in any manner inconsistent with the provisions of the Charter of the United Nations or of this Treaty.

Article 2. As a consequence of the principle set forth in the preceding Article, the High Contracting Parties undertake to submit every controversy which may arise between them to methods of peaceful settlement and to endeavor to settle any such controversy among them-

selves by means of the procedures in force in the Inter-American System before referring it to the General Assembly or the Security Council of the United Nations.

Article 3.

1. The High Contracting Parties agree that an armed attack by any State against an American State shall be considered as an attack against all the American States and, consequently, each one of the said Contracting Parties undertakes to assist in meeting the attack in the exercise of the inherent right of individual or collective self-defense recognized by Article 51 of the Charter of the United Nations.

2. On the request of the State or States directly attacked and until the decision of the Organ of Consultation of the Inter-American System, each one of the Contracting Parties may determine the immediate measures which it may individually take in fulfillment of the obligation contained in the preceding paragraph and in accordance with the principle of continental solidarity. The Organ of Consultation shall meet without delay for the purpose of examining those measures and agreeing upon the measures of a collective character that should be taken.
3. The provisions of this Article shall be applied in case of any armed attack which takes place within the region described in Article 4 or within the territory of an American State. When the attack takes place outside of the said areas, the provisions of Article 6 shall be applied.
4. Measures of self-defense provided for under this Article may be taken until the Security Council of the United Nations has taken the measures necessary to maintain international peace and security.

[. .]

Article 5. The High Contracting Parties shall immediately send to the Security Council of the United Nations, in conformity with Articles 51 and 54 of the Charter of the United Nations, complete information concerning the activities undertaken or in contemplation in the exercise of the right of self-defense or for the purpose of maintaining inter-American peace and security.

Article 6. If the inviolability or the integrity of the territory or the sovereignty or political independence of any American State should be affected by an aggression which is not an armed attack or by an extra-continental or intra-continental conflict, or by any other fact or situation that might endanger the peace of America, the Organ of Consultation shall meet immediately in order to agree on the measures which must be taken in case of aggression to assist the victim of the aggression or, in any case, the measures which should be taken for the common defense and for the maintenance of the peace and security of the Continent.

Article 7. In the case of a conflict between two or more American States, without prejudice to the right of self-defense in conformity with Article 51 of the Charter of the United Nations, the High Contracting Parties, meeting in consultation shall call upon the contending States to suspend hostilities and restore matters to the *status quo ante bellum*, and shall take in addition all other necessary measures to reestablish or maintain inter-American peace and security and for the solution of the conflict by peaceful means. The rejection of the pacifying action will be considered in the determination of the aggressor and in the application of the measures which the consultative meeting may agree upon.

Article 8. For the purposes of this Treaty, the measures on which the Organ of Consultation may agree will comprise one or more of the following: recall of chiefs of diplomatic missions; breaking of diplomatic relations; breaking of consular relations; partial or complete interruption of economic relations or of rail, sea, air, postal, telegraphic, telephonic, and radiotelephonic or radio-telegraphic communications; and use of armed force.

Article 9. In addition to other acts which the Organ of Consultation may characterize as aggression, the following shall be considered as such:

- a. Unprovoked armed attack by a State against the territory, the people, or the land, sea or air forces of another State;
- b. Invasion, by the armed forces of a State, of the territory of an American State, through the trespassing of boundaries demarcated in accordance with a treaty, judicial decision, or arbitral award, or, in the absence of frontiers thus demarcated, invasion affecting a region which is under the effective jurisdiction of another State.

Article 10. None of the provisions of this Treaty shall be construed as impairing the rights and obligations of the High Contracting Parties under the Charter of the United Nations.

22. Charter of the Organization of American States, Bogotá Conference of American States, 30 March–2 May 1948

Introduction

The Organization of American States (OAS), a Pan-American body to encourage regional cooperation, traces its origins back to the International Union of American Republics, founded in 1890, a body that later, in 1910, became the Pan American Union. The current OAS was established at the Ninth International Conference of American States held in Bogotá from March to May 1948, an occasion marred by fierce anti-American protests directed at U.S. Secretary of State George C. Marshall. Twenty-one American countries signed the organization's charter, binding themselves to battle communism in the Western Hemisphere and adopting the American Declaration of the Rights and Duties of Man, the first human rights manifesto accepted by any international gathering of states. The OAS was designed to supplement the Rio Pact, a defensive military and security alliance concluded in September 1947 that linked the United States (but not, until 1990, Canada) and nineteen Latin American nations. According to the OAS Charter, the broad purposes of its signatories were "to achieve an order of peace and justice, to promote their solidarity, to strengthen their collaboration, and to defend their sovereignty, their territorial integrity and their independence." The principles and objectives that the new body sought to facilitate included strengthening peace and security throughout the Western Hemisphere; the promotion of democracy; nonintervention in the affairs of other states; the peaceful settlement of disputes among member states; common action against aggression; the resolution of political, economic, and judicial problems; the promotion of economic, social, and cultural development; the eradication of poverty; and arms control and limitation. Modeled on the United Nations, the OAS was headquartered in Washington, D.C., and possessed a General Secretariat headed by a secretary general, a Permanent Council, and a General Assembly. The OAS held regular meetings. As more Latin American states, mostly in the Caribbean, gained independence, all joined the OAS, which had thirty-five members by the early twenty-first century. The OAS member states could undertake collective action against transgressors, but this required a two-thirds majority of the foreign ministers. The OAS sought to mediate disagreements among members in order to prevent them from exploding into outright confrontation and successfully resolved a substantial number of border disputes. Between 1962 and 2002, OAS observers supervised more than one hundred elections in member states in order to ensure that they were free and fair. During the Cold War, the OAS tended to endorse American Cold War policies, suspending Cuba's membership in 1961 after that state had declared itself a Marxist-Leninist nation but leaving undisturbed as members American-backed military dictatorships that held power in Argentina, Brazil, Chile, and Guatemala. In response to Cuban efforts to promote revolution elsewhere in Latin America, between 1964 and 1975 the OAS imposed economic sanctions on Cuba while withdrawing diplomatic recognition. During the Cuban Missile Crisis, the OAS supported President John F. Kennedy's naval quarantine of Cuba, and in 1965 it endorsed the unilateral U.S. intervention to prevent a leftist government from gaining power in the Dominican Republic. Toward the end of the Cold War, the OAS began to exhibit greater independence of the United States. It declined to oppose the left-wing Sandinista government that ruled Nicaragua from 1979 to 1990 on the grounds that however opprobrious it was to the United States, this regime posed no real threat to hemispheric security. The OAS also issued regular reports on the state of human rights in the various Latin American nations and increasingly stressed its role in encouraging peace, social justice, democracy, and economic development.

Primary Source

In the name of their peoples, the States represented at the Ninth International Conference of American States,

[. . .]

Have agreed upon the following

CHARTER OF THE ORGANIZATION OF AMERICAN STATES

PART ONE

CHAPTER 1: NATURE AND PURPOSES

ARTICLE 1

The American States establish by this Charter the international organization that they have developed to achieve an order of peace and justice, to promote their solidarity, to strengthen their collaboration, and to defend their sovereignty, their territorial integrity and their independence. Within the United Nations, the Organization of American States is a regional agency.

ARTICLE 2

All American States that ratify the present Charter are Members of the Organization.

ARTICLE 3

Any new political entity that arises from the union of several Member States and that, as such, ratifies the present Charter, shall become a Member of the Organization. The entry of the new political entity into the Organization shall result in the loss of membership of each one of the States which constitute it.

ARTICLE 4

The Organization of American States, in order to put into practice the principles on which it is founded and to fulfill its regional obligations under the Charter of the United Nations, proclaims the following essential purposes:

- a) To strengthen the peace and security of the continent;
- b) To prevent possible causes of difficulties and to ensure the pacific settlement of disputes that may arise among the Member States;

- c) To provide for common action on the part of those States in the event of aggression;
- d) To seek the solution of political, juridical and economic problems that may arise among them; and
- e) To promote, by cooperative action, their economic, social and cultural development.

CHAPTER II: PRINCIPLES

ARTICLE 5

The American States reaffirm the following principles:

- a) International law is the standard of conduct of States in their reciprocal relations;
- b) International order consists essentially of respect for the personality, sovereignty and independence of States, and the faithful fulfillment of obligations derived from treaties and other sources of international law;
- c) Good faith shall govern the relations between States;
- d) The solidarity of the American States and the high aims which are sought through it require the political organization of those States on the basis of the effective exercise of representative democracy;
- e) The American States condemn war of aggression: victory does not give rights;
- f) An act of aggression against one American State is an act of aggression against all the other American States;
- g) Controversies of an international character arising between two or more American States shall be settled by peaceful procedures;
- h) Social justice and social security are bases of lasting peace;
- i) Economic cooperation is essential to the common welfare and prosperity of the peoples of the continent;
- j) The American States proclaim the fundamental rights of the individual without distinction as to race, nationality, creed or sex;
- k) The spiritual unity of the continent is based on respect for the cultural values of the American countries and requires their close cooperation for the high purposes of civilization;
- l) The education of peoples should be directed toward justice, freedom and peace.

CHAPTER III: FUNDAMENTAL RIGHTS AND DUTIES OF STATES

ARTICLE 6

States are juridically equal, enjoy equal rights and equal capacity to exercise these rights, and have equal duties. The rights of each State depend not upon its power to ensure the exercise thereof, but upon the mere fact of its existence as a person under international law.

ARTICLE 7

Every American State has the duty to respect the rights enjoyed by every other State in accordance with international law.

ARTICLE 8

The fundamental rights of States may not be impaired in any manner whatsoever.

ARTICLE 9

The political existence of the State is independent of recognition by other States. Even before being recognized, the State has the right to defend its integrity and independence, to provide for its preservation and prosperity, and consequently to organize itself as it sees fit, to legislate concerning its interests, to administer its services, and to determine the jurisdiction and competence of its courts. The exercise of these rights is limited only by the exercise of the rights of other States in accordance with international law.

ARTICLE 10

Recognition implies that the State granting it accepts the personality of the new State, with all the rights and duties that international law prescribes for the two States.

ARTICLE 11

The right of each State to protect itself and to live its own life does not authorize it to commit unjust acts against another State.

ARTICLE 12

The jurisdiction of States within the limits of their national territory is exercised equally over all the inhabitants, whether nationals or aliens.

ARTICLE 13

Each State has the right to develop its cultural, political and economic life freely and naturally. In this free development, the State shall respect the rights of the individual and the principles of universal morality.

ARTICLE 14

Respect for and the faithful observance of treaties constitute standards for the development of peaceful relations among States. International treaties and agreements should be public.

ARTICLE 15

No State or group of States has the right to intervene, directly or indirectly, for any reason whatever, in the internal or external affairs of any other State. The foregoing principle prohibits not only armed force but also any other form of interference or attempted threat against the personality of the State or against its political, economic and cultural elements.

ARTICLE 16

No State may use or encourage the use of coercive measures of an economic or political character in order to force the sovereign will of another State and obtain from it advantages of any kind.

ARTICLE 17

The territory of a State is inviolable; it may not be the object, even temporarily, of military occupation or of other measures of force taken by another State, directly or indirectly, on any grounds whatever. No territorial acquisitions or special advantages obtained either by force or by other means of coercion shall be recognized.

ARTICLE 18

The American States bind themselves in their international relations not to have recourse to the use of force, except in the case of self defense in accordance with existing treaties or in fulfillment thereof.

ARTICLE 19

Measures adopted for the maintenance of peace and security in accordance with existing treaties do not constitute a violation of the principles set forth in Articles 15 and 17.

CHAPTER IV: PACIFIC SETTLEMENT OF DISPUTES

ARTICLE 20

All international disputes that may arise between American States shall be submitted to the peaceful procedures set forth in this Charter, before being referred to the Security Council of the United Nations.

ARTICLE 21

The following are peaceful procedures: direct negotiation, good offices, mediation, investigation and conciliation, judicial settlement, arbitration, and those which the parties to the dispute may especially agree upon at any time.

ARTICLE 22

In the event that a dispute arises between two or more American States which, in the opinion of one of them, cannot be settled through the usual diplomatic channels, the Parties shall agree on some other peaceful procedure that will enable them to reach a solution.

ARTICLE 23

A special treaty will establish adequate procedures for the pacific settlement of disputes and will determine the appropriate means for their application, so that no dispute between American States shall fail of definitive settlement within a reasonable period.

CHAPTER V: COLLECTIVE SECURITY

ARTICLE 24

Every act of aggression by a State against the territorial integrity or the inviolability of the territory or against the sovereignty or political independence of an American State shall be considered an act of aggression against the other American States.

ARTICLE 25

If the inviolability or the integrity of the territory or the sovereignty or political independence of any American State should be affected by an armed attack or by an act of aggression that is not an armed attack, or by an extra-continental conflict, or by a conflict between two or more American States, or by any other fact or situation that might endanger the peace of America, the American States, in furtherance of the principles of continental solidarity or collective self-defense, shall

apply the measures and procedures established in the special treaties on the subject.

CHAPTER VI: ECONOMIC STANDARDS

ARTICLE 26

The Member States agree to cooperate with one another, as far as their resources may permit and their laws may provide, in the broadest spirit of good neighborliness, in order to strengthen their economic structure, develop their agriculture and mining, promote their industry and increase their trade.

ARTICLE 27

If the economy of an American State is affected by serious conditions that cannot be satisfactorily remedied by its own unaided effort, such State may place its economic problems before the Inter-American Economic and Social Council to seek through consultation the most appropriate solution for such problems.

CHAPTER VII: SOCIAL STANDARDS

ARTICLE 28

The Member States agree to cooperate with one another to achieve just and decent living conditions for their entire populations.

ARTICLE 29

The Member States agree upon the desirability of developing their social legislation on the following bases:

- a) All human beings, without distinction as to race, nationality, sex, creed or social condition, have the right to attain material well-being and spiritual growth under circumstances of liberty, dignity, equality of opportunity, and economic security;
- b) Work is a right and a social duty; it shall not be considered as an article of commerce; it demands respect for freedom of association and for the dignity of the worker; and it is to be performed under conditions that ensure life, health and a decent standard of living, both during the working years and during old age, or when any circumstance deprives the individual of the possibility of working.

CHAPTER VIII: CULTURAL STANDARDS

ARTICLE 30

The Member States agree to promote, in accordance with their constitutional provisions and their material resources, the exercise of the right to education, on the following bases:

- a) Elementary education shall be compulsory and, when provided by the State, shall be without cost;
- b) Higher education shall be available to all, without distinction as to race, nationality, sex, language, creed or social condition.

ARTICLE 31

With due consideration for the national character of each State, the Member States undertake to facilitate free cultural interchange by every medium of expression.

23. Harry S. Truman: Statement Recognizing the Creation of Israel, 15 May 1948

Introduction

Since well before World War I, Zionists around the world had sought the reestablishment of a Jewish state in Palestine, the biblical Holy Land. In the November 1917 Balfour Declaration, Great Britain, which took administration of the area under a League of Nations mandate after World War I, promised international Jewry a homeland in Palestine, although the terms of this statement left it unclear whether or not this would be a separate state. Between the world wars, hundreds of thousands of Jews immigrated to Palestine, where the local Arab community deeply resented their presence. After World War II, Zionists, often citing the deaths of 6 million European Jews at the hands of Hitler's Germany, again took up the cause of an independent Jewish state. Against the advice of Secretary of State George Marshall, who feared that creating such an entity would permanently alienate Arab countries throughout the oil-rich Middle East, President Harry S. Truman supported its creation in the former British mandate. As soon as the state of Israel came into existence, Truman recognized it. Israel was immediately confronted by a military attack from its Arab neighbors, and the Soviet Union, which had also recognized the new state, sent massive arms shipments as they competed for its allegiance. Caught between the passionate support that American Jews accorded Israel and their fear of further alienating resentful and oil-rich Arab states, whose anger might propel them toward the Soviets, in 1948 U.S. officials launched the first of many successive and still-continuing efforts to negotiate a lasting Middle East peace settlement between Arabs and Israelis. Meanwhile, the powerful domestic Jewish lobby ensured that the small beleaguered Israeli state quickly became the single largest recipient of American military and economic aid, a virtual U.S. client.

Text of Letter from the Agent of the Provisional Government of Israel to the President of the U.S.
[Released to the press by the White House on
15 May]

My Dear Mr. President:

I have the honor to notify you that the state of Israel has been proclaimed as an independent republic within frontiers approved by the General Assembly of

the United Nations in its Resolution of November 29, 1947, and that a provisional government has been charged to assume the rights and duties of government for preserving law and order within the boundaries of Israel, for defending the state against external aggression, and for discharging the obligations of Israel to the other nations of the world in accordance with international law. The Act of Independence will become effective at one minute after six o'clock on the evening of 14 May 1948, Washington time.

With full knowledge of the deep bond of sympathy which has existed and has been strengthened over the past thirty years between the Government of the United States and the Jewish people of Palestine, I have been authorized by the provisional government of the new state to tender this message and to express the hope that your government will recognize and will welcome Israel into the community of nations.

Very respectfully yours,
Eliahu Epstein
Agent, Provisional Government of Israel

Statement by President Truman [Released to the press by the White House on 14 May]

This Government has been informed that a Jewish state has been proclaimed in Palestine, and recognition has been requested by the provisional government thereof.

The United States recognizes the provisional government as the *de facto* authority of the new State of Israel.

24. Vandenberg Resolution (Senate Resolution 239), 80th Congress, 11 June 1948

Introduction

Arthur H. Vandenberg of Michigan, chairman of the Senate Foreign Relations Committee in 1948, was a leading Republican senator who played a major role in converting his once isolationist party to support for internationalist policies during World War II. As a delegate to the 1945 San Francisco Conference that drew up the final United Nations Charter, Vandenberg, already suspicious of Soviet communism, obtained the inclusion of an article permitting the creation of separate regional security organizations. Seeking to ensure Republican support for its foreign policy initiatives, the Democratic administration of President Harry S. Truman sedulously cultivated Vandenberg, including him in the U.S. delegations to postwar meetings of Big Four (U.S., Soviet, British, and Chinese) foreign ministers in New York, Paris, and London intended to resolve remaining outstanding questions from World War II. These assignments convinced Vandenberg of the impossibility of reaching agreements with the Soviet Union. As chairman of the Senate Foreign Relations Committee in 1947 and 1948, he therefore worked diligently to implement the Truman Doctrine aid program for Greece and Turkey and the Marshall Plan. In 1948 he introduced a resolution in the Senate endorsing the creation of regional collective security arrangements among specific nations. Passed in June 1948, the Vandenberg Resolution paved the way for the Senate to approve the creation in April 1949 of the North Atlantic Treaty Organization (NATO), a defensive security pact whereby twelve North American and West European countries, including the United States, pledged themselves to come to each other's assistance should any be attacked by another power. Although no potential enemy was mentioned, this was implicitly an anti-Soviet alliance, designed to protect the signatories from any potential Soviet or communist threat.

Primary Source

Whereas peace with justice and the defense of human rights and fundamental freedoms require international cooperation through more effective use of the United Nations: Therefore be it

Resolved, That the Senate reaffirm the policy of the United States to achieve international peace and security through the United Nations so that armed force shall not be used except in the common interest, and

that the President be advised of the sense of the Senate that this Government, by constitutional process, should particularly pursue the following objectives within the United Nations Charter:

1. Voluntary agreement to remove the veto from all questions involving pacific settlements of international disputes and situations, and from the admission of new members.

2. Progressive development of regional and other collective arrangements for individual and collective self-defense in accordance with the purposes, principles, and provisions of the Charter.
 3. Association of the United States, by constitutional process, with such regional and other collective arrangements as are based on continuous and effective self-help and mutual aid, and as affect its national security.
 4. Contributing to the maintenance of peace by making clear its determination to exercise the right of individual or collective self-defense under article 51 should any armed attack occur affecting its national security.
 5. Maximum efforts to obtain agreements to provide the United Nations with armed forces as provided by the Charter, and to obtain agreement among member nations upon universal regulation and reduction of armaments under adequate and dependable guaranty against violation.
 6. If necessary, after adequate effort toward strengthening the United Nations, review of the Charter at an appropriate time by a General Conference called under article 109 or by the General Assembly.

25. Cominform Resolution on Yugoslavia and the Yugoslav Reply, June–July 1948

Introduction

Soviet demands that all other communist parties subordinate themselves to Soviet direction gave rise to major divisions within the communist bloc. Within Eastern Europe, Soviet military forces driving the German armies back at the end of World War II had normally installed communist governments in those states that they liberated or conquered. In mountainous Yugoslavia, however, indigenous communist resistance forces had waged a brutal guerrilla war against both German occupying forces and their own political rivals. At the end of World War II, Soviet forces had temporarily entered Yugoslavia to assist the communist partisans led by Josip Broz Tito in defeating the Germans, but at the end of hostilities the Soviet troops left. Tito soon followed an independent line in foreign policy. Although Soviet leader Josef Stalin had agreed with British Prime Minister Winston Churchill that Greece would fall within the British sphere of influence, for several years Tito encouraged and assisted a serious communist insurgency in that country. He was also eager to unite Yugoslavia with Bulgaria and Albania, a policy that although initially favored by Stalin may have aroused the Russian dictator's fears that such territorial aggrandizement would unduly enhance Tito's own power. Ideological differences over agricultural policy and internal party structure also divided the Soviet Union and Russia. In June 1948 the newly established Cominform, set up in September 1947 to coordinate the activities of European communist parties with Soviet policy and headquartered in Belgrade, passed a resolution denouncing Tito's policies and expelling Yugoslavia. Yugoslavia responded defiantly, rejecting all the Cominform's charges and stating that the Cominform was in breach of its founding principles, under which every member communist party was free to reach its own conclusions and should not be subject to Cominform dictation. Stalin, perhaps remembering the Germans' inability to subdue Yugoslavia during World War II and bearing in mind Tito's proven prowess as a guerrilla leader, refrained from any military attack on Yugoslavia. Instead, the Soviets turned to rooting out Titoism and undesirable symptoms of independence in any other East European communist party. Tito, meanwhile, turned to the Western powers for economic assistance. U.S. officials welcomed this evidence of internal dissensions within the communist camp and hoped that other communist parties, including that of China, would emulate Tito in breaking with the Soviet Union. In 1956 Nikita Khrushchev, who rejected much of Stalin's legacy, initiated a reconciliation with Tito, but Yugoslavia always remained outside the Warsaw Pact and chose to follow its own course, independent of Soviet direction.

Primary Source

Cominform Communiqué, 28 June 1948

Resolution of the Information Bureau Concerning the Situation in the Communist Party of Yugoslavia

The Information Bureau, composed of the representatives of the Bulgarian Workers' Party (Communists), Rumanian Workers' Party, Hungarian Workers' party, Polish Workers' Party, The Communist Party of the Soviet Union (Bolsheviks) (CPSU (B)), Communist Party of France, Communist Party of Czechoslovakia and the Communist Party of Italy, upon discussing the situation in the Communist Party of Yugoslavia and announcing that the representatives of the Communist Party of Yugoslavia had refused to attend the meeting of the Information Bureau, unanimously reached the following conclusions:

1. The Information Bureau notes that recently the leadership of the Communist Party of Yugoslavia has pursued an incorrect line on the main questions of home and foreign policy, a line which represents a departure from Marxism-Leninism. In this connection the Information Bureau approves the action of the Central Committee of the Communist Party of the Soviet Union (B), which took the initiative in exposing this incorrect policy of the Central Committee of the Communist Party of Yugoslavia, particularly the incorrect policy of Comrades Tito, Kardelj, Djilas and Rankovic.

2. The Information Bureau declares that the leadership of the Yugoslav Communist Party is pursuing an unfriendly policy toward the Soviet Union and the CPSU (B). An undignified policy of defaming Soviet military experts and discrediting the Soviet Union, has been carried out in Yugoslavia. A special regime was instituted for Soviet civilian experts in Yugoslavia, whereby they were under surveillance of Yugoslav state security organs and were continually followed. The representative of the CPSU (B) in the Information Bureau, Comrade Yudin, and a number of official representatives of the Soviet Union in Yugoslavia, were followed and kept under observation by Yugoslav state security organs.

All these and similar facts show that the leaders of the Communist Party of Yugoslavia have taken a stand

unworthy of Communists, and have begun to identify the foreign policy of the Soviet Union with the foreign policy of the imperialist powers, behaving toward the Soviet Union in the same manner as they behave to the bourgeois states. Precisely because of this anti-Soviet stand, slanderous propaganda about the 'degeneration' of the CPSU (B), about the 'degeneration' of the USSR, and so on, borrowed from the arsenal of counter-revolutionary Trotskyism, is current within the Central Committee of the Communist Party of Yugoslavia.

The Information Bureau denounces this anti-Soviet attitude of the leaders of the Communist Party of Yugoslavia, as being incompatible with Marxism-Leninism and only appropriate to nationalists.

3. In home policy, the leaders of the Communist Party of Yugoslavia are departing from the positions of the working class and are breaking with the Marxist theory of classes and class struggle. They deny that there is a growth of capitalist elements in their country, and consequently, a sharpening of the class struggle in the countryside. This denial is the direct result of the opportunist tenet that the class struggle does not become sharper during the period of transition from capitalism to socialism, as Marxism-Leninism teaches, but dies down, as was affirmed by opportunists of the Bukharin type, who propagated the theory of the peaceful growing over of capitalism into socialism.

[. . .]

4. The Information Bureau considers that the leadership of the Communist Party of Yugoslavia is revising the Marxist-Leninist teachings about the Party. According to the theory of Marxism-Leninism, the Party is the main guiding and leading force in the country, which has its own, specific programme, and does not dissolve itself among the non-Party masses. The Party is the highest form of organization and the most important weapon of the working class.

In Yugoslavia, however, the People's Front, and not the Communist Party, is considered to be the main leading force in the country. The Yugoslav leaders belittle the role of the Communist Party and actually dissolve the Party in the non-party People's Front, which is com-

posed of the most varied class elements (workers, peasants engaged in individual farming, kulaks, traders, small manufacturers, bourgeois intelligentsia, etc.) as well as mixed political groups which include certain bourgeois parties. The Yugoslav leaders stubbornly refuse to recognize the falseness of their tenet that the Communist Party of Yugoslavia allegedly cannot and should not have its own specific programme and that it should be satisfied with the programme of the People's Front.

[. . .]

The Information Bureau believes that this policy of the Central Committee of the Communist Party of Yugoslavia threatens the very existence of the Communist Party, and ultimately carries with it the danger of the degeneration of the People's Republic of Yugoslavia.

5. The Information Bureau considers that the bureaucratic regime created inside the Party by its leaders is disastrous for the life and development of the Yugoslav Communist Party. There is no inner Party democracy, no elections, and no criticism and self-criticism in the Party. Despite the unfounded assurances of Comrades Tito and Kardelj, the majority of the Central Committee of the Communist Party of Yugoslavia is composed of co-opted, and not of elected members. The Communist Party is actually in a position of semi-legality. Party meetings are either not held at all, or meet in secret—a fact which can only undermine the influence of the Party among the masses. This type of organization of the Yugoslav Communist Party cannot be described as anything but a sectarian-bureaucratic organization. It leads to the liquidation of the Party as an active, self-acting organism, it cultivates military methods of leadership in the Party similar to the methods advocated in his day by Trotsky.

It is a completely intolerable state of affairs when the most elementary rights of members in the Yugoslav Communist Party are suppressed, when the slightest criticism of incorrect measures in the Party is brutally repressed.

The Information Bureau regards as disgraceful such actions as the expulsion from the Party and the arrest

of the Central Committee members, Comrades Djuiovic and Hebrang, because they dared to criticize the anti-Soviet attitude of the leaders of the Yugoslav Communist Party, and called for friendship between Yugoslavia and the Soviet Union.

The Information Bureau considers that such a disgraceful, purely Turkish, terrorist regime cannot be tolerated in the Communist Party. The interests of the very existence and development of the Yugoslav Communist Party demand that an end be put to this regime.

6. The Information Bureau considers that the criticism made by the Central Committee of the Communist Party of the Soviet Union (B) and Central Committees of the other Communist Parties of the mistakes of the Central Committee of the Communist Party of Yugoslavia, and who in this way rendered fraternal assistance to the Yugoslav Communist Party, provides the Communist Party of Yugoslavia with all the conditions necessary to speedily correct the mistakes committed.

However, instead of honestly accepting this criticism and taking the Bolshevik path of correcting these mistakes, the leaders of the Communist Party of Yugoslavia, suffering from boundless ambition, arrogance and conceit, met this criticism with belligerence and hostility. They took the anti-Party path of indiscriminately denying all their mistakes, violated the doctrine of Marxism-Leninism regarding the attitude of a political party to its mistakes and thus aggravated their anti-Party mistakes.

[. . .]

7. Taking into account the situation in the Communist Party of Yugoslavia, and seeking to show the leaders of the Party the way out of this situation, the Central Committee of the Communist Party of the Soviet Union (B) and the Central Committees of other fraternal parties, suggested that the matter of the Yugoslav Communist Party should be discussed at a meeting of the Information Bureau, on the same, normal party footing as that on which the activities of other Communist Parties were discussed at the first meeting of the Information Bureau.

However, the Yugoslav leaders rejected the repeated suggestions of the fraternal Communist Parties to discuss the situation in the Yugoslav Party at a meeting of the Information Bureau.

[. . .]

8. In view of this, the Information Bureau expresses complete agreement with the estimation of the situation in the Yugoslav Communist Party, with the criticism of the mistakes of the Central Committee of the Party, and with the political analysis of these mistakes contained in letters from the Central Committee of the Communist Party of the Soviet Union (B) to the Central Committee of the Communist Party of Yugoslavia between March and May 1948.

The Information Bureau unanimously concludes that by their anti-Party and anti-Soviet views, incompatible with Marxism-Leninism, by their whole attitude and their refusal to attend the meeting of the Information Bureau, the leaders of the Communist Party of Yugoslavia have placed themselves in opposition to the Communist Parties affiliated to the Information Bureau, have taken the path of seceding from the united socialist front against imperialism, have taken the path of betraying the cause of international solidarity of the working people, and have taken up a position of nationalism.

The Information Bureau condemns this anti-Party policy and attitude of the Central Committee of the Communist Party of Yugoslavia.

The Information Bureau considers that, in view of all this, the Central Committee of the Communist Party of Yugoslavia has placed itself and the Yugoslav Party outside the family of the fraternal Communist Parties, outside the united Communist front and consequently outside the ranks of the Information Bureau.

The Information Bureau considers that the basis of these mistakes made by the leadership of the Communist Party of Yugoslavia lies in the undoubted fact that nationalist elements, which previously existed in a disguised form, managed in the course of the past five or

six months to reach a dominant position in the leadership of the Communist Party of Yugoslavia, and that consequently the leadership of the Yugoslav Communist Party has broken with the international traditions of the Communist Party of Yugoslavia and has taken the road of nationalism.

Considerably overestimating the internal, national forces of Yugoslavia and their influence, the Yugoslav leaders think that they can maintain Yugoslavia's independence and build socialism without the support of the Communist Parties of other countries, without the support of the people's democracies, without the support of the Soviet Union. They think that the new Yugoslavia can do without the help of these revolutionary forces.

Showing their poor understanding of the international situation and their intimidation by the blackmailing threats of the imperialists, the Yugoslav leaders think that by making concessions they can curry favour with the Imperialist states. They think they will be able to bargain with them for Yugoslavia's independence and, gradually, get the people of Yugoslavia orientated on these states, that is, on capitalism. In this they proceed tacitly from the well-known bourgeois-nationalist thesis that 'capitalist states are a lesser danger to the independence of Yugoslavia than the Soviet Union'.

The Yugoslav leaders evidently do not understand or, probably, pretend they do not understand, that such a nationalist line can only lead to Yugoslavia's degeneration into an ordinary bourgeois republic, to the loss of its independence and to its transformation into a colony of the imperialist countries.

The Information Bureau does not doubt that inside the Communist Party of Yugoslavia there are sufficient healthy elements, loyal to Marxism-Leninism, to the international traditions of the Yugoslav Communist Party and to the united socialist front.

Their task is to compel their present leaders to recognize their mistakes openly and honestly and to rectify them; to break with nationalism, return to internationalism; and in every way to consolidate the united socialist front against imperialism.

Should the present leaders of the Yugoslav Communist Party prove incapable of doing this, their job is to replace them and to advance a new internationalist leadership of the Party.

The Information Bureau does not doubt that the Communist Party of Yugoslavia will be able to fulfil this honourable task.

Statement of the Central Committee of Communist Party of Yugoslavia on the Resolution of the Information Bureau of Communist Parties on the Situation in the Communist Party of Yugoslavia, 29 June 1948
[. . .]

In connection with the publication of the Resolution of the Information Bureau, the Central Committee (CC) of the Communist Party of Yugoslavia (CPY) makes the following statement:

1. The criticism contained in the Resolution is based on inaccurate and unfounded assertions and represents an attempt to destroy the prestige of the CPY both abroad and in the country, to arouse confusion amongst the masses in the country and in the international workers' movement, to weaken the unity within the CPY and its leading role. . . .

2. The Resolution maintains, without citing any proof, that the leadership of the CPY carried out a hostile policy towards the USSR. The statement that Soviet military specialists in Yugoslavia have been treated with scant respect, and that Soviet civilian citizens have been under the surveillance of state security agents does not in the least correspond to the truth.

[. . .]

On the contrary, it is correct, as stated in the letter to the CC of the CPSU of 13 April, and based on numerous reports of members of the CPY to their Party organizations as well as on statements of other citizens of our country, that from the liberation up to date the Soviet intelligence service sought to enroll them. The CC of the CPY considered and considers that such an

attitude towards a country where the communists are the ruling party and which is advancing toward socialism is impermissible—and that it leads towards the demoralization of the citizens of the Federated People's Republic of Yugoslavia and towards the weakening and undermining of the governmental and Party leadership. The CC of the CPY considered and considers that the relationship of Yugoslavia toward the USSR must be based exclusively on confidence and sincerity and, in keeping with this principle, Yugoslav State organs never even dreamed of following or exercising any control over Soviet citizens in Yugoslavia.

[. . .]

8. The CC of the CPY does not consider that by refusing to discuss the mistakes of which it is not guilty, it has in any way injured the unity of the communist front. The unity of this front is not based on the admission of invented or fabricated errors and slanders, but on the fact of whether or not the policy of a Party is actually internationalist. One cannot, however, ignore the fact that the Information Bureau has committed a breach of the principles on which it was based and which provide for the voluntary adoption of conclusions by every Party. The Informbureau, however, not only forces the leaders of the CPY to admit errors which they did not commit but also calls members of the CPY to rebellion within the Party, to shatter the unity of the Party. The CC of the CPY can never agree to a discussion about its policy on the basis of inventions and uncomradely behaviour without mutual confidence. Such a basis is not one of principle and in this and only in this sense the CC of the CPY considered that it was not on an equal footing in the discussion and that it could not accept discussion on that basis. Further, in connection with the above, the CC of the CPY resolutely rejects the accusation that the CPY has passed on to positions of nationalism. By its entire internal and foreign policy, and especially by its struggle during the national liberation war and the proper solution of the national question in Yugoslavia, the CPY has given proof of the exact opposite.

By the above-mentioned unjust charges, the greatest historical injustice has been done to our Party, our

working class and working masses, the peoples in Yugoslavia in general and their unselfish and heroic struggle.

It is clear to the CC of the CPY that the charges of the CC of the CPSU against the CC of the CPY will be used by enemy propaganda for the purpose of slandering the Soviet Union, Yugoslavia and other democratic countries. The CC of the CPY, however, declares that it bears no responsibility for all these phenomena as it did not provoke them by any act of its own.

The CC of the CPY calls upon the Party membership to close their ranks in the struggle for the realization of

the Party line and for even greater strengthening of Party unity, while it calls upon the working class and other working masses, gathered in the People's Front, to continue to work even more persistently on the building of our socialist homeland. This is the only way, the only method to prove in full and by deeds the unjustness of the abovementioned charges.

26. Soviet and Allied Statements on the Berlin Blockade, July 1948

Introduction

From spring 1945 when the World War II Allies defeated Germany until 1948, growing Cold War tensions meant that the former Allies were unable to reach agreement on the future government of Germany. In May 1948 the three Western powers—the United States, the United Kingdom, and France, each of which, with the Soviet Union, had since 1945 occupied one sector of Berlin, the symbolically significant former German capital—decided to merge their zones and introduce the new west German *deutsche mark* there. They also announced that western Germany would definitely participate in the newly formulated European Recovery Program (also known as the Marshall Plan), designed to facilitate Europe's postwar economic revival. From late March 1948 onward the apprehensive Soviet Union had begun to tighten its grip on freight traffic into Berlin. On 24 June the Soviets dramatically cut off all land access—by rail, road, or water—to western Berlin, which lay deep within the Soviet occupation zone of Germany, soon to become the German Democratic Republic (GDR, East Germany). The Soviet objective was to take over all Berlin, where they announced that the four-power administration had ceased and the Allies no longer possessed any rights. This would have eliminated the western bastion of Berlin, which not only possessed symbolic significance but also served as a conduit through which, between 1945 and 1952, 2 million East Germans migrated to the West, an embarrassing hemorrhage that also deprived the East of many young, well-qualified workers. Soviet obduracy met Western resolve. Beginning on 26 June, a massive American and British airlift ferried all essential supplies into West Berlin and also transported West Berlin's greatly reduced industrial exports to the West. A Western counterblockade of the Soviet zone in turn proved economically damaging, and each side progressively took incremental steps to tighten its control. In February 1949, for example, the West announced that in the future only German marks were legal tender in Berlin, while the Soviets expropriated the homes, land, and businesses of East Berlin residents deemed to be bourgeois or capitalist in outlook. Although the Soviets lifted the blockade in May 1949, flights continued until September, and during a fifteen-month period 275,000 flights transported in all more than 2.323 million tons of food, fuel, machinery, and other supplies at a cost of \$224 million. Initially, international tensions continued to increase. The two sides exchanged hostile notes, each affirming their own position, and compromise seemed unlikely. By mid-July the Soviet army of occupation in East Germany had swelled to forty divisions, whereas the Allies still had only eight divisions in the western sectors. Both sides nonetheless demonstrated the practical caution that often characterized Cold War crises. The Western powers avoided any potential direct military confrontation with Soviet forces by eschewing attempts to resupply Berlin by road across Soviet-occupied territory, rejecting early recommendations from General Lucius D. Clay, military governor of the U.S. zone of Germany, that armed supply convoys be sent along East German highways to Berlin. Despite their strong protests and sporadic public

announcements that they required the air corridors for their own military maneuvers, the Soviets likewise refrained from shooting down Western aircraft resupplying Berlin, although during the fifteen months in which such missions were flown, sixty fliers lost their lives in airplane crashes. The Berlin Blockade contributed to the Western decision to abandon hope of German reunification and establish a separate state, the Federal Republic of Germany, in the former Western occupation sectors. With its foundation and that of East Germany in 1949, the territorial borders of Cold War Europe were clearly delineated, in many ways helping to stabilize a division that lasted until 1989. The first Berlin crisis also persuaded the United States to sign the 1949 North Atlantic Treaty, concluding a permanent military alliance with most West European states to which it extended a security guarantee. The blockade helped to persuade West Germans that their future lay in an alliance with the West.

Primary Source

*Note from the United States to the Soviet Union,
6 July 1948*

The United States Government wishes to call to the attention of the Soviet Government the extremely serious international situation which has been brought about by the actions of the Soviet Government in imposing restrictive measures on transport which amount now to a blockade against the sectors in Berlin occupied by the United States, United Kingdom and France. The United States Government regards these measures of blockade as a clear violation of existing agreements concerning the administration of Berlin by the four occupying powers.

The rights of the United States as a joint occupying power in Berlin derive from the total defeat and unconditional surrender of Germany. The international agreements undertaken in connection therewith by the Governments of the United States, United Kingdom, France and the Soviet Union defined the zones in Germany and the sectors in Berlin which are occupied by these powers. They established the quadripartite control of Berlin on a basis of friendly cooperation which the Government of the United States earnestly desires to continue to pursue.

These agreements implied the right of free access to Berlin. This right has long been confirmed by usage. It was directly specified in a message sent by President Truman to Premier Stalin on June 14, 1945, which agreed to the withdrawal of United States forces to the zonal boundaries, provided satisfactory arrangements could be entered into between the military commanders, which would give access by rail, road and air to United States forces in Berlin. Premier Stalin replied on June 16 suggesting a change in date but no other

alteration in the plan proposed by the President. Premier Stalin then gave assurances that all necessary measures would be taken in accordance with the plan. Correspondence in a similar sense took place between Premier Stalin and Mr. Churchill. In accordance with this understanding, the United States, whose armies had penetrated deep into Saxony and Thuringia, parts of the Soviet zone, withdrew its forces to its own area of occupation in Germany and took up its position in its own sector in Berlin. Thereupon the agreements in regard to the occupation of Germany and Berlin went into effect. The United States would not have so withdrawn its troops from a large area now occupied by the Soviet Union had there been any doubt whatsoever about the observance of its agreed right of free access to its sector of Berlin. The right of the United States to its position in Berlin thus stems from precisely the same source as the right of the Soviet Union. It is impossible to assert the latter and deny the former.

It clearly results from these undertakings that Berlin is not a part of the Soviet zone, but is an international zone of occupation. Commitments entered into in good faith by the zone commanders, and subsequently confirmed by the Allied Control Authority, as well as practices sanctioned by usage, guarantee the United States together with other powers, free access to Berlin for the purpose of fulfilling its responsibilities as an occupying power. The facts are plain. Their meaning is clear. Any other interpretation would offend all the rules of comity and reason.

In order that there should be no misunderstanding whatsoever on this point, the United States Government categorically asserts that it is in occupation of its sector in Berlin with free access thereto as a matter of established right deriving from the defeat and surrender

of Germany and confirmed by formal agreements among the principal Allies. It further declares that it will not be induced by threats, pressures or other actions to abandon these rights. It is hoped that the Soviet Government entertains no doubts whatsoever on this point.

This Government now shares with the Governments of France and the United Kingdom the responsibility initially undertaken at Soviet request on July 7, 1945, for the physical well-being of 2,400,000 persons in the western sectors of Berlin. Restrictions recently imposed by the Soviet authorities in Berlin have operated to prevent this Government and the Governments of the United Kingdom and of France from fulfilling that responsibility in an adequate manner.

The responsibility which this Government bears for the physical well-being and the safety of the German population in its sector of Berlin is outstandingly humanitarian in character. This population includes hundreds of thousands of women and children, whose health and safety are dependent on the continued use of adequate facilities for moving food, medical supplies and other items indispensable to the maintenance of human life in the western sectors of Berlin. The most elemental of these human rights which both our Governments are solemnly pledged to protect are thus placed in jeopardy by these restrictions. It is intolerable that any one of the occupying authorities should attempt to impose a blockade upon the people of Berlin.

The United States Government is therefore obliged to insist that in accordance with existing agreements the arrangements for the movement of freight and passenger traffic between the western zones and Berlin be fully restored. There can be no question of delay in the restoration of these essential services, since the needs of the civilian population in the Berlin area are imperative.

Holding these urgent views regarding its rights and obligations in the United States sector of Berlin, yet eager always to resolve controversies in the spirit of fair consideration for the viewpoints of all concerned, the Government of the United States declares that duress should not be invoked as a method of attempting to dis-

pose of any disagreements which may exist between the Soviet Government and the Government of the United States in respect of any aspect of the Berlin situation.

Such disagreements if any should be settled by negotiation or by any of the other peaceful methods provided for in Article 33 of the Charter in keeping with our mutual pledges as copartners in the United Nations. For these reasons the Government of the United States is ready as a first step to participate in negotiations in Berlin among the four Allied Occupying Authorities for the settlement of any question in dispute arising out of the administration of the city of Berlin. It is, however, a prerequisite that the lines of communication and the movement of persons and goods between the United Kingdom, the United States and the French sectors in Berlin and the Western Zones shall have been fully restored.

[. .]

*Note from the Soviet Union to the United States,
14 July 1948*

1. The Soviet Government has familiarized itself with the note of the Government of the United States of America of July 6, 1948 in which the situation which has been created at the present time in Berlin is described as a result of measures taken by the Soviet side. The Soviet Government cannot agree with this statement of the Government of the United States and considers that the situation which has been created in Berlin has arisen as a result of violation by the Governments of the United States of America, Great Britain, and France of agreed decisions taken by the four powers in regard to Germany and Berlin which [violation] has found its expression in the carrying out of a separate currency reform, in the introduction of a special currency for the western sectors of Berlin and in the policy of the dismemberment of Germany. The Soviet Government has more than once warned the Governments of the United States of America, Great Britain, and France in regard to the responsibility which they would take upon themselves in following along the path of the violation of agreed decisions previously adopted by the four powers in regard to Germany. The decisions adopted at the Yalta and Potsdam Conferences and also the agreement of the four powers concerning the

control mechanism in Germany have as their aim the demilitarization and democratization of Germany, the removal of the base itself of German militarism and the prevention of the revival of Germany as an aggressive power and thereby the transformation of Germany into a peace-loving and democratic state. These agreements envisage the obligation of Germany to pay reparations and thereby to make at least partial compensation for the damage to those countries which suffered from German aggression. In accordance with these agreements the Governments of the four powers took upon themselves the responsibility for the administration of Germany and bound themselves jointly to draw up a statute for Germany or for any areas including Berlin which were part of German territory and to conclude with Germany a peace treaty which should be signed by a Government of a democratic Germany adequate for that purpose.

These most important agreements of the four powers in regard to Germany have been violated by the Governments of the United States of America, Great Britain, and France. Measures for the demilitarization of Germany have not been completed and such a very important center of German military industry as the Ruhr district has been taken out from under the control of the four powers. The execution of decisions concerning reparations from the western zones of occupation of Germany has been interrupted by the Governments of the U. S. A., the U. K., and France. By the separate actions of the Governments of the U. S. A., Great Britain, and France the four power control mechanism in Germany has been destroyed and the Control Council as a result thereof has ceased its activity.

Following the London meeting of the three powers with the participation of Benelux, measures have been undertaken by the Governments of the U. S. A., Great Britain, and France directed towards the division and dismemberment of Germany including preparations which are now in progress for the designation of a separate Government for the western zones of Germany and the separate currency reform for the western zones of occupation carried out on June 18th of this year.

In as much as the situation created in Berlin as well as in all Germany is the direct result of the systematic

violation by the Governments of the U. S. A., Great Britain, and France of the decisions of the Potsdam Conference and also of the agreement of the four powers concerning the control mechanism in Germany, the Soviet Government must reject as completely unfounded the statement of the Government of the U. S. to the effect that the measures for the restriction of transport communications between Berlin and the western zones of occupation of Germany introduced by the Soviet command for the defense of the economy of the Soviet zone against its disorganization are allegedly in violation of the existing agreements concerning the administration of Berlin.

2. The Government of the U. S. declares that it is occupying its sector in Berlin by right arising out of the defeat and capitulation of Germany, referring in this connection to agreements between the four powers in regard to Germany and Berlin. This merely confirms the fact that the exercise of the above mentioned right in regard to Berlin is linked to the obligatory execution by the powers occupying Germany of the four power agreements, concluded among themselves in regard to Germany as a whole. In conformity with these agreements Berlin was envisaged as the seat of the supreme authority of the four powers occupying Germany, in which connection the agreement concerning the administration of 'Greater Berlin' under the direction of the Control Council was reached.

Thus the agreement concerning the four power administration of Berlin is an inseparable component part of the agreement for the four power administration of Germany as a whole. After the U. S. A., Great Britain, and France by their separate actions in the western zones of Germany destroyed the system of four power administration of Germany and had begun to set up a capital for a Government for Western Germany in Frankfurt-am-Main, they thereby undermined as well the legal basis which assured their right to participation in the administration of Berlin.

The Government of the United States in its note points out that its right to be in Berlin is based also on the fact that the United States withdrew its forces from certain regions of the Soviet zone of occupation into which they had penetrated during the period of

hostilities in Germany, and that if it [the United States Government] had foreseen the situation, which has been created in Berlin, it would not have withdrawn its forces from those regions. However, the Government of the United States well knows that in removing its troops to the boundaries of the American zone established by agreement of the four powers concerning zones of occupation in Germany it was only carrying out an obligation which it had taken upon itself, the execution of which could alone accord the right of the entry of the troops of the U. S. into Berlin. An examination of the letter referred to in the note of the Government of the U. S. A. of President Truman to Premier Stalin of June 14, 1945 and the letter in reply of Premier Stalin of June 16, 1945 confirms the fact that, thanks to the agreement then reached, the forces of the U. S. A., Great Britain, and France were given the opportunity to enter not only the capital of Germany Berlin, but also the capital of Austria, Vienna, which as is known, were taken only by the forces of the Soviet Army. In addition, it is known that the agreements referred to concerning the question of Berlin and also of Vienna were only a part of the agreements concerning Germany and Austria upon the fulfillment of which the Soviet Government continues to insist.

3. The Government of the United States declares that the temporary measures put into effect by the Soviet Command for the restriction of transport communications between Berlin and the western zones have created difficulties in supplying the Berlin population of the western sectors. It is impossible, however, to deny the fact that these difficulties were occasioned by the actions of the Governments of the U. S. A., Great Britain and France, and primarily by their separate actions in the introduction of new currency in the western zones of Germany and special currency in the western sectors of Berlin.

Berlin lies in the center of the Soviet zone and is a part of that zone. The interests of the Berlin population do not permit a situation in which in Berlin or only in the western sectors of Berlin there shall be introduced special currency which has no validity in the Soviet zone. Moreover, the carrying out of a separate monetary reform in the western zones of Germany has placed Berlin and the whole Soviet zone of occupation as well

in a situation in which the entire mass of currency notes which were cancelled in the western zone threatened to pour into Berlin and the Soviet zone of occupation of Germany.

The Soviet Command has been forced therefore to adopt certain urgent measures for the protection of the interests of the German population and also of the economy of the Soviet zone of occupation and the area of 'Greater Berlin'. The danger of the disruption of the normal economic activity of the Soviet zone and of Berlin has not been eliminated even at the present time, in as much as the United States, Great Britain and France continue to maintain in Berlin their special currency.

Furthermore, the Soviet Command has consistently displayed and is displaying concern for the well being of the Berlin population and for assuring to them normal supply in all essentials and is striving for the speediest elimination of the difficulties which have arisen recently in this matter. In this connection, if the situation requires, the Soviet Government would not object to assuring by its own means adequate supply for all 'Greater Berlin'.

With reference to the statement of the Government of the United States that it will not be compelled by threats, pressure or other actions to renounce its right to participation in the occupation of Berlin, the Soviet Government does not intend to enter into discussion of this statement since it has no need for a policy of pressure, since by violation of the agreed decisions concerning the administration of Berlin the above-mentioned Governments themselves are reducing to naught their right to participation in the occupation of Berlin.

4. The Government of the United States in its note of July 6 expresses the readiness to begin negotiations between the four Allied occupying authorities for consideration of the situation created in Berlin but passes by in silence the question of Germany as a whole.

The Soviet Government, while not objecting to negotiations, considers, however, it necessary to state that it cannot link the inauguration of these negotiations with the fulfilling of any preliminary conditions whatsoever

and that, in the second place, four-power conversations could be effective only in the event that they were not limited to the question of the administration of Berlin, since that question cannot be severed from the general question of four-power control in regard to Germany.

Source: U.S. Department of State, *The Berlin Crisis: A Report on the Moscow Discussions, 1948, Including Text of a Note Addressed to the Soviet Government on September 26 by the Governments of the United States, the United Kingdom and France, Publication 3298* (Washington, DC: U.S. Government Printing Office, 1948).

27. United Nations: Universal Declaration of Human Rights, 1948

Introduction

The Holocaust and revelations of other World War II atrocities made international leaders more sensitive to the need to protect basic human rights. Soon after the United Nations (UN) was established in 1945, delegates suggested that the UN Charter did not define with sufficient clarity those rights that were protected. The UN secretariat therefore decided to formulate a declaration on the subject. The burden of drafting rested primarily on John Peters Humphrey of Canada, with substantial assistance from fellow delegate Eleanor Roosevelt, widow of President Franklin D. Roosevelt, who took a strong interest in the subject. René Cassin of France, Charles Malik of Lebanon, and P. C. Chang of China also contributed to the declaration. Individuals were guaranteed the right to life, liberty, and security of person; access to education; freedom from torture and from cruel and inhumane treatment or punishment; and freedom of thought, conscience, religion, expression, and opinion. Many ideals expressed in the U.S. Declaration of Independence (1776) are reflected in the Universal Declaration of Human Rights, which was adopted unanimously by the UN General Assembly as Resolution 217 A(III) on 10 December 1948, at a time when the U.S. presence in the organization was especially powerful. Eight countries, including all the Soviet bloc, South Africa, and Saudi Arabia, abstained from voting, the communist powers because they feared that it might undermine their control over their populations, South Africa due to fears of criticism of its racial policies, and Saudi Arabia because of its statements on the position of women. The declaration does not formally constitute international law, but it does facilitate the application of moral and diplomatic pressures to governments. Since its adoption, the UN's declaration has justified the organization's involvement in a wide variety of situations around the globe. It has also served as the foundation of two legally binding UN covenants, the International Covenant on Civil and Political Rights and the International Covenant on Economic, Social, and Cultural Rights.

Primary Source

PREAMBLE

Whereas recognition of the inherent dignity and of the equal and inalienable rights of all members of the human family is the foundation of freedom, justice and peace in the world,

Whereas disregard and contempt for human rights have resulted in barbarous acts which have outraged the conscience of mankind, and the advent of a world in which human beings shall enjoy freedom of speech and belief and freedom from fear and want has been proclaimed as the highest aspiration of the common people,

Whereas it is essential, if man is not to be compelled to have recourse, as a last resort, to rebellion against

tyranny and oppression, that human rights should be protected by the rule of law,

Whereas it is essential to promote the development of friendly relations between nations,

Whereas the peoples of the United Nations have in the Charter reaffirmed their faith in fundamental human rights, in the dignity and worth of the human person and in the equal rights of men and women and have determined to promote social progress and better standards of life in larger freedom,

Whereas Member States have pledged themselves to achieve, in cooperation with the United Nations, the promotion of universal respect for an observance of human rights and fundamental freedoms,

Whereas a common understanding of these rights and freedoms is of the greatest importance for the realization of this pledge,

Now, therefore, the General Assembly proclaims this Universal Declaration of Human Rights as a common standard of achievement for all peoples and all nations, to the end that every individual and every organ of society, keeping this Declaration constantly in mind, shall strive by teaching and education to promote respect for these rights and freedoms and by progressive measures, national and international, to secure their universal and effective recognition and observance, both among the peoples of Member States themselves and among the peoples of territories under their jurisdiction.

ARTICLE 1

All human beings are born free and equal in dignity and rights. They are endowed with reason and conscience and should act towards one another in a spirit of brotherhood.

ARTICLE 2

Everyone is entitled to all the rights and freedoms set forth in this Declaration, without distinction of any kind, such as race, colour, sex, language, religion, political or other opinion, national or social origin, property, birth or other status.

Furthermore, no distinction shall be made on the basis of the political, jurisdictional or international status of the country or territory to which a person belongs, whether it be independent, trust, non-self-governing or under any other limitation of sovereignty.

ARTICLE 3

Everyone has the right to life, liberty and security of person.

ARTICLE 4

No one shall be held in slavery or servitude; slavery and the slave trade shall be prohibited in all their forms.

ARTICLE 5

No one shall be submitted to torture or to cruel, inhuman or degrading treatment or punishment.

ARTICLE 6

Everyone has the right to recognition everywhere as a person before the law.

ARTICLE 7

All are equal before the law and are entitled without any discrimination to equal protection of the law. All are entitled to equal protection against any discrimination in violation of this Declaration and against any incitement to such discrimination.

ARTICLE 8

Everyone has the right to an effective remedy by the competent national tribunals for acts violating the fundamental rights granted him by the constitution or by law.

ARTICLE 9

No one shall be subjected to arbitrary arrest, detention or exile.

ARTICLE 10

Everyone is entitled in full equality to a fair and public hearing by an independent and impartial tribunal, in the determination of his rights and obligations and of any criminal charge against him.

ARTICLE 11

1. Everyone charged with a penal offense has the right to be presumed innocent until proved guilty according to the law in a public trial at which he has had all the guarantees necessary for his defense.

2. No one shall be held guilty of any penal offense on account of any act or omission which did not constitute a penal offense, under national or international law, at the time when it was committed. Nor shall a heavier penalty be imposed than the one that was applicable at the time the penal offense was committed.

ARTICLE 12

No one shall be subjected to arbitrary interference with his privacy, family, home or correspondence, nor to attacks upon his honour and reputation. Everyone has the right to the protection of the law against such interference or attacks.

ARTICLE 13

1. Everyone has the rights to freedom of movement and residence within the borders of each State.
2. Everyone has the right to leave any country, including his own, and to return to his country.

ARTICLE 14

1. Everyone has the right to seek and to enjoy in other countries asylum from persecution.
2. This right may not be invoked in the case of prosecutions genuinely arising from non-political crimes or from acts contrary to the purposes and principles of the United Nations.

ARTICLE 15

1. Everyone has the right to a nationality.
2. No one shall be arbitrarily deprived of his nationality nor denied the right to change his nationality.

ARTICLE 16

1. Men and women of full age, without any limitation due to race, nationality or religion, have the right to marry and to found a family. They are entitled to equal rights as to marriage, during marriage and at its dissolution.
2. Marriage shall be entered into only with the free and full consent of the intending spouses.
3. The family is the natural and fundamental group unit of society and is entitled to protection by society and the State.

ARTICLE 17

1. Everyone has the right to own property alone as well as in association with others.
2. No one shall be arbitrarily deprived of his property.

ARTICLE 18

Everyone has the right to freedom of thought, conscience and religion; this right includes freedom to change his religion or belief, and freedom, either alone or in community with others and in public or private,

to manifest his religion or belief in teaching, practice, worship and observance.

ARTICLE 19

Everyone has the right to freedom of opinion and expression; this right includes freedom to hold opinions without interference and to seek, receive and impart information and ideas through any media and regardless of frontiers.

ARTICLE 20

1. Everyone has the right to freedom of peaceful assembly and association.
2. No one may be compelled to belong to an association.

ARTICLE 21

1. Everyone has the right to take part in the government of his country, directly or through freely chosen representatives.
2. Everyone has the right of equal access to public service in his country.
3. The will of the people shall be the basis of the authority of government; this will shall be expressed in periodic and genuine elections which shall be by universal and equal suffrage and shall be held by secret vote or by equivalent free voting procedures.

ARTICLE 22

Everyone, as a member of society, has the right to social security and is entitled to realization, through national effort and international cooperation and in accordance with the organization and resources of each State, of the economic, social and cultural rights indispensable for his dignity and the free development of his personality.

ARTICLE 23

1. Everyone has the right to work, to free choice of employment, to just and favourable conditions of work and to protection against unemployment.
2. Everyone, without any discrimination, has the right to equal pay for equal work.

3. Everyone who works has the right to just and favourable remuneration ensuring for himself and his family an existence worthy of human dignity, and supplemented, if necessary, by other means of social protection.

4. Everyone has the right to form and join trade unions for the protection of his interests.

ARTICLE 24

Everyone has the right to rest and leisure, including reasonable limitation of working hours and periodic holidays and pay.

ARTICLE 25

1. Everyone has the right to a standard of living adequate for the health and well-being of himself and his family, including food, clothing, housing and medical care and necessary social services, and the right to security in the event of unemployment, sickness, disability, widowhood, old age or other lack of livelihood in circumstances beyond his control.

2. Motherhood and childhood are entitled to special care and assistance. All children, whether born in or out of wedlock, shall enjoy the same social protection.

ARTICLE 26

1. Everyone has the right to education. Education shall be free, at least in the elementary and fundamental stages. Elementary education shall be compulsory. Technical and professional education shall be made generally available and higher education shall be equally accessible to all on the basis of merit.

2. Education shall be directed to the full development of the human personality and the strengthening of respect for human rights and fundamental freedoms. It shall promote understanding, tolerance and friendship among all nations, racial or religious groups, and shall further the activities of the United Nations for the maintenance of peace.

3. Parents have a prior right to choose the kind of education that shall be given to their children.

ARTICLE 27

1. Everyone has the right freely to participate in the cultural life of the community, and to enjoy the arts and to share in scientific advancement and its benefits.

2. Everyone has the right to the protection of the moral and material interests resulting from any scientific, literary or artistic production of which he is the author.

ARTICLE 28

Everyone is entitled to a social and international order in which the rights and freedoms set forth in this Declaration can be fully realized.

ARTICLE 29

1. Everyone has duties to the community in which alone the free and full development of his personality is possible.

2. In the exercise of his rights and freedoms, everyone shall be subject only to such limitations as are determined by law solely for the purpose of securing due recognition and respect for the rights and freedoms of others and of meeting the just requirements of morality, public order and the general welfare in a democratic society.

3. These rights and freedoms may in no case be exercised contrary to the purposes and principles of the United Nations.

ARTICLE 30

Nothing in this Declaration may be interpreted as implying for any State, group or person any right to engage in any activity or to perform any act aimed at the destruction of any of the rights and freedoms set forth herein.

28. North Atlantic Treaty, 1949

Introduction

Signed on 4 April 1949, the North Atlantic Treaty created the North Atlantic Treaty Organization (NATO), a mutual defense alliance of nations from Europe and North America. NATO was organized to defend member nations from the possible aggression of the Soviet Union and the nations of Eastern Europe, which formed the Warsaw Treaty Organization six years later. Originally NATO was comprised of the United States, Canada, and ten West European nations, including Great Britain, France, Italy, Belgium, the Netherlands, Luxembourg, Iceland, Denmark, Norway, and Portugal. In 1955 the Federal Republic of Germany (FRG, West Germany) became a member, a move that reawakened bitter Soviet memories of past German attacks on Russia and impelled Soviet leaders to respond by establishing the Warsaw Pact. Greece and Turkey both joined NATO in 1952, and Spain joined in 1982 after dictator Francisco Franco's death brought the restoration of democracy in that country. NATO was intended as a purely defensive alliance whose very existence would deter any Soviet attack on any of the signatory nations, since all of them were bound to come to the assistance of any member that came under attack from an outside power. The alliance did not cover attacks on or uprisings within the colonies of the various European signatories. Perhaps one of the greatest successes of NATO was that no signatory ever found it necessary to invoke the alliance during the Cold War, a fact that was either a tribute to its deterrent effect or, perhaps, evidence that the Soviet Union never had any intention of attacking any of its signatories. NATO was the first permanent military alliance ever concluded by the United States, a development that marked a new departure in American foreign policy. Although it was initially intended that NATO military forces in Europe should be small and the United States only committed two divisions there, the outbreak of the Korean War in 1950 soon brought the dispatch of an additional four divisions to Western Europe. One unspoken purpose of the alliance was to counter any potential future military resurgence on the part of Germany, whose belligerent record since the mid-nineteenth century prompted fears on the part of other NATO members, especially France, that German leaders might once again seek to dominate Europe by force of arms. Despite differences among members and the withdrawal of France in the mid-1960s, NATO endured even the end of the Cold War. As East-West tensions eased, former Soviet satellites—including the Czech Republic, Hungary, and Poland in 1999 and Bulgaria, Estonia, Latvia, Lithuania, Romania, Slovakia, and Slovenia in 2004—joined the alliance, perceiving it in part as a guarantee of their own security should Russia once again seek to dominate them. The Warsaw Pact, by contrast, collapsed. NATO also sought to redefine its role, participating in the 1991 Persian Gulf War and seeking to maintain peace in former Yugoslavia during the 1990s. The NATO alliance was formally invoked for the first time in September 2001 after Muslim al-Qaeda extremists mounted suicide aircraft attacks on the World Trade Center in New York City and the Pentagon building in Washington, D.C., when NATO forces took part in the subsequent war against Afghanistan.

Primary Source

Treaty establishing the North Atlantic

Treaty Organization

The Parties to this Treaty reaffirm their faith in the purposes and principles of the Charter of the United Nations and their desire to live in peace with all peoples and all governments.

They are determined to safeguard the freedom, common heritage and civilization of their peoples, founded on the principles of democracy, individual liberty and the rule of law.

They seek to promote stability and well-being in the North Atlantic area.

They are resolved to unite their efforts for collective defense and for the preservation of peace and security.

They therefore agree to this North Atlantic Treaty:

ARTICLE 1

The Parties undertake, as set forth in the Charter of the United Nations, to settle any international dispute in which they may be involved by peaceful means in

such a manner that international peace and security and justice are not endangered, and to refrain in their international relations from the threat or use of force in any manner inconsistent with the purposes of the United Nations.

ARTICLE 2

The Parties will contribute toward the further development of peaceful and friendly international relations by strengthening their free institutions, by bringing about a better understanding of the principles upon which these institutions are founded, and by promoting conditions of stability and well-being. They will seek to eliminate conflict in their international economic policies and will encourage economic collaboration between any or all of them.

ARTICLE 3

In order more effectively to achieve the objectives of this Treaty, the Parties, separately and jointly, by means of continuous and effective self-help and mutual aid, will maintain and develop their individual and collective capacity to resist armed attack.

ARTICLE 4

The Parties will consult together whenever, in the opinion of any of them, the territorial integrity, political independence or security of any of the Parties is threatened.

ARTICLE 5

The Parties agree that an armed attack against one or more of them in Europe or North America shall be considered an attack against them all, and consequently they agree that, if such an armed attack occurs, each of them, in exercise of the right of individual or collective self-defense recognized by Article 51 of the Charter of the United Nations, will assist the Party or Parties so attacked by taking forthwith, individually, and in concert with the other Parties, such action as it deems necessary, including the use of armed force, to restore and maintain the security of the North Atlantic area.

Any such armed attack and all measures taken as a result thereof shall immediately be reported to the [United Nations] Security Council. Such measures shall be terminated when the Security Council has taken

the measures necessary to restore and maintain international peace and security.

ARTICLE 6

For the purpose of Article 5, an armed attack on one or more of the Parties is deemed to include an armed attack:

- (a) on the territory of any of the Parties in Europe or North America, on the Algerian Departments of France, on the territory of Turkey or on the islands under the jurisdiction of any of the Parties in the North Atlantic area north of the Tropic of Cancer;
- (b) on the forces, vessels, or aircraft of any of the Parties, when in or over these territories or any area in Europe in which occupation forces of any of the Parties were stationed on the date when the Treaty entered into force or the Mediterranean Sea or the North Atlantic area north of the Tropic of Cancer.

ARTICLE 7

The Treaty does not affect, and shall not be interpreted as affecting, in any way the rights and obligations under the Charter of the Parties which are members of the United Nations, or the primary responsibility of the Security Council for the maintenance of international peace and security.

ARTICLE 8

Each Party declares that none of the international engagements now in force between it and any other of the Parties or any third State is in conflict with the provisions of this Treaty, and undertakes not to enter into any international engagement in conflict with this Treaty.

ARTICLE 9

The Parties hereby establish a Council, on which each of them shall be represented to consider matters concerning the implementation of this Treaty. The Council shall be so organized as to be able to meet promptly at any time. The Council shall set up such subsidiary bodies as may be necessary; in particular it shall establish immediately a defense committee which shall recommend measures for the implementation of Articles 3 and 5.

ARTICLE 10

The Parties may, by unanimous agreement, invite any other European State in a position to further the principles of this Treaty and to contribute to the security of the North Atlantic area to accede to this Treaty. Any State so invited may become a party to the Treaty by depositing its instrument of accession with the Government of the United States of America. The Gov-

ernment of the United States of America will inform each of the Parties of the deposit of each such instrument of accession.

29. Geneva Convention relative to the Treatment of Prisoners of War, 12 August 1949

Introduction

World War II was perhaps the most brutal war in human history, with prisoners frequently mistreated and civilians subjected to bombing and other attacks and in some cases imprisoned in death camps. Since 1864, when the first Geneva Convention was held, several attempts had been made to codify the humane treatment of soldiers and civilians during wars. From April to August 1949, international representatives held a conference at Geneva that passed four conventions, updating the various existing conventions on the humane conduct of warfare. The subjects covered included the treatment of the sick and wounded, including captured enemies, during wartime; the treatment of prisoners of war; and civilians in areas where hostilities were in progress. Prisoners of war could not be murdered, tortured, used as hostages, or subjected to humiliating treatment and were entitled to regular medical attention; the terms of their labor, mail, living conditions, and receipt of care packages were also enumerated in detail. Prisoners of war were only required to provide basic personal details to their captors and were not to be subjected to threats or torture in an effort to force them to divulge further information. The conventions also covered noncombatant civilians in war zones, who were entitled to access to education and medical care and could not be put at risk. Noncombatants, including both prisoners and civilians, were at all times to be treated humanely, and if they were accused of any crime, they were entitled to legal representation and fair trial. Neither prisoners of war nor civilians in areas affected by hostilities could renounce any of their rights under the Geneva Conventions. The International Red Cross or neutral nonbelligerent countries were expected to supervise the implementation of the Geneva Conventions in areas where hostilities existed. More than 200 countries ratified the new conventions, although breaches of their stipulations still frequently occurred.

Primary Source

PART I

GENERAL PROVISIONS

[. . .]

Article 3

In the case of armed conflict not of an international character occurring in the territory of one of the High Contracting Parties, each party to the conflict shall be bound to apply, as a minimum, the following provisions:

1. Persons taking no active part in the hostilities, including members of armed forces who have laid down their arms and those placed hors de

combat by sickness, wounds, detention, or any other cause, shall in all circumstances be treated humanely, without any adverse distinction founded on race, colour, religion or faith, sex, birth or wealth, or any other similar criteria.

To this end the following acts are and shall remain prohibited at any time and in any place whatsoever with respect to the above-mentioned persons:

- (a) Violence to life and person, in particular murder of all kinds, mutilation, cruel treatment and torture;
- (b) Taking of hostages;

- (c) Outrages upon personal dignity, in particular, humiliating and degrading treatment;
- (d) The passing of sentences and the carrying out of executions without previous judgment pronounced by a regularly constituted court affording all the judicial guarantees which are recognized as indispensable by civilized peoples.

2. The wounded and sick shall be collected and cared for.

An impartial humanitarian body, such as the International Committee of the Red Cross, may offer its services to the Parties to the conflict.

The Parties to the conflict should further endeavour to bring into force, by means of special agreements, all or part of the other provisions of the present Convention.

The application of the preceding provisions shall not affect the legal status of the Parties to the conflict.

Article 4

A. Prisoners of war, in the sense of the present Convention, are persons belonging to one of the following categories, who have fallen into the power of the enemy:

1. Members of the armed forces of a Party to the conflict as well as members of militias or volunteer corps forming part of such armed forces.
2. Members of other militias and members of other volunteer corps, including those of organized resistance movements, belonging to a Party to the conflict and operating in or outside their own territory, even if this territory is occupied, provided that such militias or volunteer corps, including such organized resistance movements, fulfil the following conditions:
 - (a) That of being commanded by a person responsible for his subordinates;
 - (b) That of having a fixed distinctive sign recognizable at a distance;
 - (c) That of carrying arms openly;
 - (d) That of conducting their operations in accordance with the laws and customs of war.
3. Members of regular armed forces who profess allegiance to a government or an authority not recognized by the Detaining Power.

4. Persons who accompany the armed forces without actually being members thereof, such as civilian members of military aircraft crews, war correspondents, supply contractors, members of labour units or of services responsible for the welfare of the armed forces, provided that they have received authorization from the armed forces which they accompany, who shall provide them for that purpose with an identity card similar to the annexed model.
5. Members of crews, including masters, pilots and apprentices, of the merchant marine and the crews of civil aircraft of the Parties to the conflict, who do not benefit by more favourable treatment under any other provisions of international law.
6. Inhabitants of a non-occupied territory, who on the approach of the enemy spontaneously take up arms to resist the invading forces, without having had time to form themselves into regular armed units, provided they carry arms openly and respect the laws and customs of war.

B. The following shall likewise be treated as prisoners of war under the present Convention:

1. Persons belonging, or having belonged, to the armed forces of the occupied country, if the occupying Power considers it necessary by reason of such allegiance to intern them, even though it has originally liberated them while hostilities were going on outside the territory it occupies, in particular where such persons have made an unsuccessful attempt to rejoin the armed forces to which they belong and which are engaged in combat, or where they fail to comply with a summons made to them with a view to internment.
2. The persons belonging to one of the categories enumerated in the present Article, who have been received by neutral or non-belligerent Powers on their territory and whom these Powers are required to intern under international law, without prejudice to any more favourable treatment which these Powers may choose to give and with the exception of Articles 8, 10, 15, 30, fifth paragraph, 58–67, 92, 126 and, where diplomatic relations exist between the Parties to the conflict and the neutral or non-belligerent Power concerned, those

Articles concerning the Protecting Power. Where such diplomatic relations exist, the Parties to a conflict on whom these persons depend shall be allowed to perform towards them the functions of a Protecting Power as provided in the present Convention, without prejudice to the functions which these Parties normally exercise in conformity with diplomatic and consular usage and treaties.

[. . .]

Article 7

Prisoners of war may in no circumstances renounce in part or in entirety the rights secured to them by the present Convention, and by the special agreements referred to in the foregoing Article, if such there be.

[. . .]

Article 9

The provisions of the present Convention constitute no obstacle to the humanitarian activities which the International Committee of the Red Cross or any other impartial humanitarian organization may, subject to the consent of the Parties to the conflict concerned, undertake for the protection of prisoners of war and for their relief.

[. . .]

PART II GENERAL PROTECTION OF PRISONERS OF WAR

Article 12

Prisoners of war are in the hands of the enemy Power, but not of the individuals or military units who have captured them. Irrespective of the individual responsibilities that may exist, the Detaining Power is responsible for the treatment given them.

Prisoners of war may only be transferred by the Detaining Power to a Power which is a party to the Convention and after the Detaining Power has satisfied itself of the willingness and ability of such transferee Power to apply the Convention. When prisoners of war are transferred under such circumstances, responsibility for

the application of the Convention rests on the Power accepting them while they are in its custody.

Nevertheless if that Power fails to carry out the provisions of the Convention in any important respect, the Power by whom the prisoners of war were transferred shall, upon being notified by the Protecting Power, take effective measures to correct the situation or shall request the return of the prisoners of war. Such requests must be complied with.

Article 13

Prisoners of war must at all times be humanely treated. Any unlawful act or omission by the Detaining Power causing death or seriously endangering the health of a prisoner of war in its custody is prohibited, and will be regarded as a serious breach of the present Convention. In particular, no prisoner of war may be subjected to physical mutilation or to medical or scientific experiments of any kind which are not justified by the medical, dental or hospital treatment of the prisoner concerned and carried out in his interest.

Likewise, prisoners of war must at all times be protected, particularly against acts of violence or intimidation and against insults and public curiosity. Measures of reprisal against prisoners of war are prohibited.

Article 14

Prisoners of war are entitled in all circumstances to respect for their persons and their honour. Women shall be treated with all the regard due to their sex and shall in all cases benefit by treatment as favourable as that granted to men. Prisoners of war shall retain the full civil capacity which they enjoyed at the time of their capture. The Detaining Power may not restrict the exercise, either within or without its own territory, of the rights such capacity confers except in so far as the captivity requires.

Article 15

The Power detaining prisoners of war shall be bound to provide free of charge for their maintenance and for the medical attention required by their state of health.

Article 16

Taking into consideration the provisions of the present Convention relating to rank and sex, and subject to any

privileged treatment which may be accorded to them by reason of their state of health, age or professional qualifications, all prisoners of war shall be treated alike by the Detaining Power, without any adverse distinction based on race, nationality, religious belief or political opinions, or any other distinction founded on similar criteria.

PART III CAPTIVITY

SECTION I BEGINNING OF CAPTIVITY

Article 17

Every prisoner of war, when questioned on the subject, is bound to give only his surname, first names and rank, date of birth, and army, regimental, personal or serial number, or failing this, equivalent information. If he wilfully infringes this rule, he may render himself liable to a restriction of the privileges accorded to his rank or status.

Each Party to a conflict is required to furnish the persons under its jurisdiction who are liable to become prisoners of war, with an identity card showing the owner's surname, first names, rank, army, regimental, personal or serial number or equivalent information, and date of birth. The identity card may, furthermore, bear the signature or the fingerprints, or both, of the owner, and may bear, as well, any other information the Party to the conflict may wish to add concerning persons belonging to its armed forces. As far as possible the card shall measure 6.5 × 10 cm. and shall be issued in duplicate. The identity card shall be shown by the prisoner of war upon demand, but may in no case be taken away from him.

No physical or mental torture, nor any other form of coercion, may be inflicted on prisoners of war to secure from them information of any kind whatever. Prisoners of war who refuse to answer may not be threatened, insulted, or exposed to any unpleasant or disadvantageous treatment of any kind.

Prisoners of war who, owing to their physical or mental condition, are unable to state their identity, shall be handed over to the medical service. The identity of such prisoners shall be established by all possible means, subject to the provisions of the preceding paragraph.

The questioning of prisoners of war shall be carried out in a language which they understand.

[. . .]

Article 19

Prisoners of war shall be evacuated, as soon as possible after their capture, to camps situated in an area far enough from the combat zone for them to be out of danger.

Only those prisoners of war who, owing to wounds or sickness, would run greater risks by being evacuated than by remaining where they are, may be temporarily kept back in a danger zone.

Prisoners of war shall not be unnecessarily exposed to danger while awaiting evacuation from a fighting zone.

Article 20

The evacuation of prisoners of war shall always be effected humanely and in conditions similar to those for the forces of the Detaining Power in their changes of station.

The Detaining Power shall supply prisoners of war who are being evacuated with sufficient food and potable water, and with the necessary clothing and medical attention. The Detaining Power shall take all suitable precautions to ensure their safety during evacuation, and shall establish as soon as possible a list of the prisoners of war who are evacuated.

If prisoners of war must, during evacuation, pass through transit camps, their stay in such camps shall be as brief as possible.

SECTION II INTERNMENT OF PRISONERS OF WAR

Chapter I GENERAL OBSERVATIONS

Article 21

The Detaining Power may subject prisoners of war to internment. It may impose on them the obligation of not leaving, beyond certain limits, the camp where they are interned, or if the said camp is fenced in, of

not going outside its perimeter. Subject to the provisions of the present Convention relative to penal and disciplinary sanctions, prisoners of war may not be held in close confinement except where necessary to safeguard their health and then only during the continuation of the circumstances which make such confinement necessary.

[. . .]

Article 22

Prisoners of war may be interned only in premises located on land and affording every guarantee of hygiene and healthfulness. Except in particular cases which are justified by the interest of the prisoners themselves, they shall not be interned in penitentiaries.

Prisoners of war interned in unhealthy areas, or where the climate is injurious for them, shall be removed as soon as possible to a more favourable climate.

[. . .]

Article 23

No prisoner of war may at any time be sent to or detained in areas where he may be exposed to the fire of the combat zone, nor may his presence be used to render certain points or areas immune from military operations.

Prisoners of war shall have shelters against air bombardment and other hazards of war, to the same extent as the local civilian population. With the exception of those engaged in the protection of their quarters against the aforesaid hazards, they may enter such shelters as soon as possible after the giving of the alarm. Any other protective measure taken in favour of the population shall also apply to them.

Detaining Powers shall give the Powers concerned, through the intermediary of the Protecting Powers, all useful information regarding the geographical location of prisoner of war camps.

Whenever military considerations permit, prisoner of war camps shall be indicated in the day-time by the letters PW or PG, placed so as to be clearly visible from

the air. The Powers concerned may, however, agree upon any other system of marking. Only prisoner of war camps shall be marked as such.

Article 24

Transit or screening camps of a permanent kind shall be fitted out under conditions similar to those described in the present Section, and the prisoners therein shall have the same treatment as in other camps.

Chapter II QUARTERS, FOOD AND CLOTHING OF PRISONERS OF WAR

Article 25

Prisoners of war shall be quartered under conditions as favourable as those for the forces of the Detaining Power who are billeted in the same area. The said conditions shall make allowance for the habits and customs of the prisoners and shall in no case be prejudicial to their health.

The foregoing provisions shall apply in particular to the dormitories of prisoners of war as regards both total surface and minimum cubic space, and the general installations, bedding and blankets.

The premises provided for the use of prisoners of war individually or collectively, shall be entirely protected from dampness and adequately heated and lighted, in particular between dusk and lights out. All precautions must be taken against the danger of fire.

In any camps in which women prisoners of war, as well as men, are accommodated, separate dormitories shall be provided for them.

Article 26

The basic daily food rations shall be sufficient in quantity, quality and variety to keep prisoners of war in good health and to prevent loss of weight or the development of nutritional deficiencies. Account shall also be taken of the habitual diet of the prisoners.

The Detaining Power shall supply prisoners of war who work with such additional rations as are necessary for the labour on which they are employed.

Sufficient drinking water shall be supplied to prisoners of war. The use of tobacco shall be permitted.

Prisoners of war shall, as far as possible, be associated with the preparation of their meals; they may be employed for that purpose in the kitchens. Furthermore, they shall be given the means of preparing, themselves, the additional food in their possession.

Adequate premises shall be provided for messing.

Collective disciplinary measures affecting food are prohibited.

Article 27

Clothing, underwear and footwear shall be supplied to prisoners of war in sufficient quantities by the Detaining Power, which shall make allowance for the climate of the region where the prisoners are detained. Uniforms of enemy armed forces captured by the Detaining Power should, if suitable for the climate, be made available to clothe prisoners of war.

The regular replacement and repair of the above articles shall be assured by the Detaining Power. In addition, prisoners of war who work shall receive appropriate clothing, wherever the nature of the work demands.

[. . .]

Chapter III HYGIENE AND MEDICAL ATTENTION

Article 29

The Detaining Power shall be bound to take all sanitary measures necessary to ensure the cleanliness and healthfulness of camps and to prevent epidemics.

Prisoners of war shall have for their use, day and night, conveniences which conform to the rules of hygiene and are maintained in a constant state of cleanliness. In any camps in which women prisoners of war are accommodated, separate conveniences shall be provided for them.

Also, apart from the baths and showers with which the camps shall be furnished, prisoners of war shall be provided with sufficient water and soap for their personal

toilet and for washing their personal laundry; the necessary installations, facilities and time shall be granted them for that purpose.

Article 30

Every camp shall have an adequate infirmary where prisoners of war may have the attention they require, as well as appropriate diet. Isolation wards shall, if necessary, be set aside for cases of contagious or mental disease.

Prisoners of war suffering from serious disease, or whose condition necessitates special treatment, a surgical operation or hospital care, must be admitted to any military or civilian medical unit where such treatment can be given, even if their repatriation is contemplated in the near future. Special facilities shall be afforded for the care to be given to the disabled, in particular to the blind, and for their rehabilitation, pending repatriation.

Prisoners of war shall have the attention, preferably, of medical personnel of the Power on which they depend and, if possible, of their nationality.

[. . .]

Chapter V RELIGIOUS, INTELLECTUAL AND PHYSICAL ACTIVITIES

Article 34

Prisoners of war shall enjoy complete latitude in the exercise of their religious duties, including attendance at the service of their faith, on condition that they comply with the disciplinary routine prescribed by the military authorities.

Adequate premises shall be provided where religious services may be held.

Article 35

Chaplains who fall into the hands of the enemy Power and who remain or are retained with a view to assisting prisoners of war, shall be allowed to minister to them and to exercise freely their ministry amongst prisoners of war of the same religion, in accordance with their religious conscience. They shall be allocated among

the various camps and labour detachments containing prisoners of war belonging to the same forces, speaking the same language or practising the same religion. They shall enjoy the necessary facilities, including the means of transport provided for in Article 33, for visiting the prisoners of war outside their camp. They shall be free to correspond, subject to censorship, on matters concerning their religious duties with the ecclesiastical authorities in the country of detention and with international religious organizations. Letters and cards which they may send for this purpose shall be in addition to the quota provided for in Article 71.

Article 36

Prisoners of war who are ministers of religion, without having officiated as chaplains to their own forces, shall be at liberty, whatever their denomination, to minister freely to the members of their community. For this purpose, they shall receive the same treatment as the chaplains retained by the Detaining Power. They shall not be obliged to do any other work.

Article 37

When prisoners of war have not the assistance of a retained chaplain or of a prisoner of war minister of their faith, a minister belonging to the prisoners' or a similar denomination, or in his absence a qualified layman, if such a course is feasible from a confessional point of view, shall be appointed, at the request of the prisoners concerned, to fill this office. This appointment, subject to the approval of the Detaining Power, shall take place with the agreement of the community of prisoners concerned and, wherever necessary, with the approval of the local religious authorities of the same

faith. The person thus appointed shall comply with all regulations established by the Detaining Power in the interests of discipline and military security.

Article 38

While respecting the individual preferences of every prisoner, the Detaining Power shall encourage the practice of intellectual, educational, and recreational pursuits, sports and games amongst prisoners, and shall take the measures necessary to ensure the exercise thereof by providing them with adequate premises and necessary equipment.

Prisoners shall have opportunities for taking physical exercise, including sports and games, and for being out of doors. Sufficient open spaces shall be provided for this purpose in all camps.

Chapter VI **DISCIPLINE** [. . .]

Article 42

The use of weapons against prisoners of war, especially against those who are escaping or attempting to escape, shall constitute an extreme measure, which shall always be preceded by warnings appropriate to the circumstances.

30. First U.S. Acknowledgment of Soviet Atomic Bomb Detonation, September 1949

Introduction

From July 1945 until August 1949, the United States and Britain enjoyed a nuclear monopoly that the Soviet Union was determined to break. On learning of the success of the first U.S. atomic test, Soviet leader Josef Stalin immediately launched a crash program to build a Soviet bomb. Due in part to the help of spies within the Anglo-American Manhattan Project laboratories at Los Alamos, New Mexico, four years later, on 29 August 1949, the Soviet Union successfully tested an atomic device. Three days later, specially equipped U.S. radar airplanes detected atmospheric debris from the test. The newly established Central Intelligence Agency (CIA) had predicted that Soviet scientists would eventually develop a bomb but had not expected this to occur for several more years. Soviet success

in doing so led to a rapid re-evaluation of the U.S. national security position. In late September, President Harry S. Truman tersely informed the American people that the Soviet Union now possessed atomic weapons, stating that this reinforced the need to bring nuclear power under “truly effective enforceable international control.” In practice, neither the United States nor the Soviet Union was prepared to relinquish direction of its own atomic weapons to an outside body. At that juncture, American scientists and government officials were debating whether or not to mount an expensive program to develop thermonuclear weapons in the form of the immensely more powerful hydrogen bomb. On 31 January 1950, Truman authorized this project and ordered that it be implemented as expeditiously as possible. Soviet scientists likewise began work on such weapons, which both sides developed in the mid-1950s, bringing a mutual escalation of the nuclear arms race that eventually helped to generate growing popular and official support for arms control negotiations. In early 1950 the president also instructed the State Department Policy Planning Staff and the National Security Council (NSC) to undertake a major review of U.S. national security policies, which resulted in the April 1950 paper NSC-68, a document that urged major increases in U.S. defense spending and overseas commitments and bases and envisaged the quadrupling of military budgets. Truman initially rejected these conclusions on the grounds that they were too expensive, but with the outbreak of the Korean War in late June 1950, most of NSC-68’s recommendations were eventually implemented. Russian possession of atomic weapons contributed to a new sense of U.S. vulnerability, one reason that the domestic anticommunism of Senator Joseph McCarthy and other Truman administration critics appealed to so many Americans in the early 1950s.

Primary Source

President Harry S. Truman
September 23, 1949.

I believe the American people, to the fullest extent consistent with national security, are entitled to be informed of all developments in the field of atomic energy. That is my reason for making public the following information.

We have evidence that within recent weeks an atomic explosion occurred in the U.S.S.R.

Ever since atomic energy was first released by man, the eventual development of this new force by other nations was to be expected. This probability has always been taken into account by us.

Nearly 4 years ago I pointed out that “scientific opinion appears to be practically unanimous that the essen-

tial theoretical knowledge upon which the discovery is based is already widely known. There is also substantial agreement that foreign research can come abreast of our present theoretical knowledge in time.” And, in the Three-Nation Declaration of the President of the United States and the Prime Ministers of the United Kingdom and of Canada, dated November 15, 1945, it was emphasized that no single nation could in fact have a monopoly of atomic weapons.

This recent development emphasizes once again, if indeed such emphasis were needed, the necessity for that truly effective enforceable international control of atomic energy which this Government and the large majority of the members of the United Nations support.

31. Dean Acheson: National Press Club Speech, “Crisis in Asia—An Examination of U.S. Policy,” 12 January 1950

Introduction

By late 1947 or early 1948, the U.S. Department of State anticipated that the Chinese communists would emerge victorious from their civil war with the Guomindang (Nationalist) government. This, in turn, called for a reorientation of American Pacific strategy, as a communist China was unlikely to be a dependable ally for the United States

and might indeed become an opponent. Speaking at the National Press Club in January 1950 three months after the Chinese communists took power, Secretary of State Dean Acheson expounded American policy in Asia in light of this new development. Seeking to defuse domestic criticisms that the Guomindang government in China had collapsed due to lack of support from the United States and that communist fellow travelers within the administration of President Harry S. Truman had been responsible for this, Acheson ascribed the Guomindang's downfall to its own incompetence. As he also had in private sessions with the Senate Foreign Relations Committee, he stated that the Soviet Union sought to exploit China and take over the northern regions of Manchuria, Mongolia, and Xinjiang, policies that Acheson believed would soon cause the two states to become antagonists. Acheson also expounded the new American strategy toward Asia. By the time the communists proclaimed the foundation of the People's Republic of China (PRC) in October 1949, the Truman administration had come to accept that Japan, the defeated enemy of World War II, would become the key U.S. ally in Asia. American strategy would be organized around a great crescent or arc of countries along the fringes of the Asian mainland, from Pakistan through Thailand, Malaya, the Philippines, and Japan, forming a defensive perimeter of friendly nations that would contain the further outward spread of communism. Acheson stated that the United States would almost certainly come to the defense of Japan and the Philippines if either were attacked. Other areas, including the Republic of Korea (ROK, South Korea), Southeast Asia, and India and Pakistan, were not necessarily of vital strategic interest to the United States but could turn to the United Nations for assistance if needed. After the Democratic People's Republic of Korea (DPRK, North Korea) launched a war against South Korea in late June 1950, Acheson's speech attracted heavy retrospective criticism, as his political enemies argued that excluding South Korea from U.S. vital security interests was tantamount to an invitation to North Korea to invade South Korea. It does seem that Soviet leader Josef Stalin and North Korean Premier Kim Il Sung both interpreted this address as a green light to mount such an attack, and both believed—wrongly, as it transpired—that the United States would not respond. Radical critics later suggested that Acheson had deliberately intended to provoke such a war in order to implement the major expansion of U.S. defense spending and commitments envisaged in the planning paper NSC-68. Although such conspiratorial interpretations are far-fetched, Acheson's words on this occasion were undoubtedly some of his most controversial utterances as secretary of state.

[. . .]

Recent Developments in China

Now, may I suggest to you that much of the bewilderment which has seized the minds of many of us about recent developments in China comes from a failure to understand this basic revolutionary force which is loose in Asia. The reasons for the fall of the Nationalist Government in China are preoccupying many people. All sorts of reasons have been attributed to it. Most commonly, it is said in various speeches and publications that it is the result of American bungling, that we are incompetent, that we did not understand, that American aid was too little, that we did the wrong things at the wrong time. Other people go on and say: "No it is not quite like that, but that an American general did not like Chiang Kai-shek and out of all that relationship grows the real trouble." And they say: "Well, you have to add to that there are a lot of women fooling around in politics in China."

Nobody, I think, says that the Nationalist Government fell because it was confronted by overwhelming military force which it could not resist. Certainly no one in his right mind suggests that. Now, what I ask you to do is to stop looking for a moment under the bed and under the chair and under the rug to find out these reasons, but rather to look at the broad picture and see whether something doesn't suggest itself.

The broad picture is that after the war, Chiang Kai-shek emerged as the undisputed leader of the Chinese people. Only one faction, the Communists, up in the hills, ill-equipped, ragged, a very small force, was determinedly opposed to his position. He had overwhelming military power, greater military power than any ruler had ever had in the entire history of China. He had tremendous economic and military support and backing from the United States. He had the acceptance of all other foreign countries, whether sincerely or insincerely in the case of the Soviet Union is not really material to this matter. Here he was in this position,

and 4 years later what do we find? We find that his armies have melted away. His support largely outside the country has melted away, and he is a refugee on a small island off the coast of China with the remnants of his forces.

As I said, no one says that vast armies moved out of the hills and defeated him. To attribute this to the inadequacy of American aid is only to point out the depth and power of the forces which were miscalculated or ignored. What has happened in my judgment is that the almost inexhaustible patience of the Chinese people in their misery ended. They did not bother to overthrow this government. There was really nothing to overthrow. They simply ignored it throughout the country. They took the solution of their immediate village problems into their own hands. If there was any trouble or interference with the representatives of the government, they simply brushed them aside. They completely withdrew their support from this government, and when that support was withdrawn, the whole military establishment disintegrated. Added to the grossest incompetence ever experienced by any military command was this total lack of support both in the armies and in the country, and so the whole matter just simply disintegrated.

The Communists did not create this. The Communists did not create this condition. They did not create this revolutionary spirit. They did not create a great force which moved out from under Chiang Kai-shek. But they were shrewd and cunning to mount it, to ride this thing into victory and into power.

That, I suggest to you, is an explanation which has certain roots in realism and which does not require all this examination of intricate and perhaps irrelevant details. So much for the attitudes of the peoples of Asia.

U.S. Attitude Toward Asia

Let's consider for a moment another important factor in this relationship. That is the attitude of our own people to Asia. What is that fundamental attitude out of which our policy has grown? What is the history of it? Because history is very important, and history furnishes the belief on the one side in the reality and truth of the attitude.

What has our attitude been toward the peoples of Asia? It has been, I submit to you, that Americans as individuals are interested in the peoples of Asia. We are not interested in them as pawns or as subjects for exploitation but just as people.

For 100 years some Americans have gone to Asia to bring in what they thought was the most valuable thing they had their faith. They wanted to tell them what they thought about the nature and relationship of man to God. Others went to them to bring to them what they knew of learning. Others went to them to bring them healing of their bodies. Others and perhaps fewer went to them to learn the depth and beauty of their own cultures, and some went to them to trade and they traded with them. But this trade was a very small part of American interest in the Far East, and it was a very small part of American interest in trade. It was a valid interest; it was a good interest. There was nothing wrong about it, but out of the total sum of the interests of the American people in Asia, it was a comparatively small part.

Through all this period of time also, we had, and still have great interests in Asia. But let me point out to you one very important factor about our interests in Asia. That is that our interests have been parallel to the interests of the people of Asia. For 50 years, it has been the fundamental belief of the American people—and I am not talking about announcements of government but I mean a belief of people in little towns and villages and churches and missionary forces and labor unions throughout the United State—it has been their profound belief that the control of China by a foreign power was contrary to American interests. The interesting part about that is it was not contrary to the interests of the people of China. There was not conflict but parallelism in that interest. And so from the time of the announcement of the open door policy through the 9-power treaty to the very latest resolution of the General Assembly of the United Nations, we have stated that principle and we believe it. And similarly in all the rest of Asia in the Philippines, in India, in Pakistan and Indonesia, and in Korea for years and years and years, the interests of Americans throughout this country have been in favor of their independence. This is where their independence, societies, and their patriotic groups

have come for funds and sympathy. The whole policy of our government insofar as we have responsibility in the Philippines was to bring about the accomplishment of independence and our sympathy and help. The very real help which we have given other nations in Asia has been in that direction, and it is still in that direction.

The Factor of Communism

Now, I stress this, which you may think is a platitude, because of a very important fact: I hear almost every day someone say that the real interest of the United States is to stop the spread of communism. Nothing seems to me to put the cart before the horse more completely than that. Of course we are interested in stopping the spread of communism. But we are interested for a far deeper reason than any conflict between the Soviet Union and the United States. We are interested in stopping the spread of communism because communism is a doctrine that we don't happen to like. Communism is the most subtle instrument of Soviet foreign policy that has ever been devised, and it is really the spearhead of Russian imperialism which would, if it could, take from these people what they have won, what we want them to keep and develop, which is their own national independence, their own individual independence, their own development of their own resources for their own good and not as mere tributary states to this great Soviet Union.

Now, it is fortunate that this point that I made does not represent any real conflict. It is an important point because people will do more damage and create more misrepresentation in the Far East by saying our interest is merely to stop the spread of communism than any other way. Our real interest is in those people as people. It is because communism is hostile to that interest that we want to stop it. But it happens that the best way of doing things is to do just exactly what the peoples of Asia want to do and what we want to help them to do, which is to develop a soundness of administration of these new governments and to develop their resources and their technical skills so that they are not subject to penetration either through ignorance, or because they believe these false promises, or because there is real distress in their areas. If we can help that development, if we can go forward with it, then we

have brought about the best way that anyone knows of stopping this spread of communism.

It is important to take this attitude not as a mere negative reaction to communism but as the most positive affirmation of the most affirmative truth that we hold, which is in the dignity and right of every nation, of every people, and of every individual to develop in their own way, making their own mistakes, reaching their own triumphs but acting under their own responsibility. That is what we are pressing for in the Far East, and that is what we must affirm and not get mixed up with purely negative and inconsequential statements.

Soviet Attitude

Now, let me come to another underlying and important factor which determines our relations and, in turn, our policy with the peoples of Asia. That is the attitude of the Soviet Union toward Asia, and particularly towards those parts of Asia which are contiguous to the Soviet Union, and with great particularity this afternoon, to north China.

The attitude and interest of the Russians in north China, and in these other areas as well, long antedates communism. This is not something that has come out of communism at all. It long antedates it. But the Communist regime has added new methods, new skills, and new concepts to the thrust [of] Russian imperialism. This Communistic concept and techniques have armed Russian imperialism with a new and most insidious weapon of penetration. Armed with these new powers, what is happening in China is that the Soviet Union is detaching the northern provinces [areas] of China from China and is attaching them to the Soviet Union. This process is complete in outer Mongolia. It is nearly complete in Manchuria, and I am sure that in inner Mongolia and in Sinkiang there are very happy reports coming from Soviet agents to Moscow. This is what is going on. It is the detachment of these whole areas, vast areas—populated by Chinese—the detachment of these areas from China and their attachment to the Soviet Union.

I wish to state this and perhaps sin against my doctrine of nondogmatism, but I should like to suggest at any

rate that this fact that the Soviet Union is taking the four northern provinces of China is the single most significant, most important fact, in the relation of any foreign power with Asia.

[. . .]

What does that mean for us? It means something very, very significant. It means that nothing that we do and nothing that we say must be allowed to obscure the reality of this fact. All the efforts of propaganda will not be able to obscure it. The only thing that can obscure it is the folly of ill-conceived adventures on our part which easily could do so, and I urge all who are thinking about these foolish adventures to remember that we must not seize the unenviable position which the Russians have carved out for themselves. We must not undertake to deflect from the Russians to ourselves the righteous anger, and the wrath, and the hatred of the Chinese people which must develop. It would be folly to deflect it to ourselves. We must take the position we have always taken—that anyone who violates the integrity of China is the enemy of China and is acting contrary to our own interest. That, I suggest to you this afternoon, is the first and the greatest rule in regard to the formulation of American policy toward Asia.

I suggest that the second rule is very like the first. That is to keep our own purposes perfectly straight, perfectly pure, and perfectly aboveboard and do not get them mixed-up with legal quibbles or the attempt to do one thing and really achieve another.

The consequences of this Russian attitude and this Russian action in China are perfectly enormous. They are saddling all those in China who are proclaiming their loyalty to Moscow, and who are allowing themselves to be used as puppets of Moscow, with the most awful responsibility which they must pay for. Furthermore, these actions of the Russians are making plainer than any speech, or any utterance, or any legislation can make throughout all of Asia, what the true purposes of the Soviet Union are and what the true function of communism as an agent of Russian imperialism is. These I suggest to you are the fundamental factors,

fundamental realities of attitude out of which our relations and policies must grow.

Military Security in the Pacific

Now, let's in the light of that consider some of these policies. First of all, let's deal with the question of military security. I deal with it first because it is important and because, having stated our policy in that regard, we must clearly understand that the military menace is not the most immediate.

What is the situation with regard to the military security of the Pacific area, and what is our policy in regard to it?

In the first place, the defeat and the disarmament of Japan has placed upon the United States the necessity of assuming the military defense of Japan so long as that is required, both in the interests of our security and in the interests of the security of the entire Pacific area and, in all honor, in the interest of Japanese security. We have American—and there are Australian—troops in Japan. I am not in a position to speak for the Australians, but I can assure you that there is no intention of any sort of abandoning or weakening the defenses of Japan and that whatever arrangements are to be made either through permanent settlement or otherwise, that defense must and shall be maintained.

This defensive perimeter runs along the Aleutians to Japan and then goes to the Ryukyus. We hold important defense positions in the Ryukyu Islands, and those we will continue to hold. In the interest of the population of the Ryukyu Islands, we will at an appropriate time offer to hold these islands under trusteeship of the United Nations. But they are essential parts of the defensive perimeter of the Pacific, and they must and will be held.

The defensive perimeter runs from the Ryukyus to the Philippine Islands. Our relations, our defensive relations with the Philippines are contained in agreements between us. Those agreements are being loyally carried out and will be loyally carried out. Both peoples have learned by bitter experience the vital connections between our mutual defense requirements. We

are in no doubt about that, and it is hardly necessary for me to say that an attack on the Philippines could not and would not be tolerated by the United States. But I hasten to say that no one perceives the imminence of any such attack.

So far as the military security of other areas in the Pacific is concerned, it must be clear that no person can guarantee these areas against military attack. But it must also be clear that such a guarantee is hardly necessary or sensible within the real of practical relationship.

Should such an attack occur—one hesitates to say where such an armed attack could come from—the initial reliance must be on the people attacked to resist it and then on the commitments of the entire civilized world under the Charter of the United Nations which so far has not proved a weak reed to lean on by any people who are determined to protect their independence against outside aggression. But it is a mistake, I think, in considering Pacific and Far Eastern problems to become obsessed with military considerations. Important as they are, there are other problems that press, and these problems are not capable of solution through military means. These problems arise out of the susceptibility of many areas, and many countries in the Pacific area, to subversion and penetration. That cannot be stopped by military means.

Susceptibility to Penetration

The susceptibility to penetration arises because in many areas there are new governments which have little experience in governmental administration and have not become firmly established or perhaps firmly accepted in their countries. They grow, in part, from some very serious economic problems, some of them growing directly out of the last war, others growing indirectly out of the last war because of the disruptions of trade with other parts of the world, with the disruption of arrangements which furnished credit and management to these areas for many years. That has resulted in dislocation of economic effort and in a good deal of suffering among the peoples concerned. In part this susceptibility to penetration comes from the great social upheaval about which I have been speaking, an upheaval which was carried on and confused a great deal

by the Japanese occupation and by the propaganda which has gone on from Soviet sources since the war.

Here, then, are the problems in these other areas which require some policy on our part, and I should like to point out two facts to you and then discuss in more detail some of these areas.

The first fact is the great difference between our responsibility and our opportunities in the northern part of the Pacific area and in the southern part of the Pacific area. In the north, we have direct responsibility in Japan and we have direct opportunity to act. The same thing to a lesser degree is true in Korea. There we had direct responsibility, and there we did act, and there we have a greater opportunity to be effective than we have in the more southerly part.

In the southerly part of the area, we are one of many nations who can do no more than help. The direct responsibility lies with the peoples concerned. They are proud of their new national responsibility. You cannot sit around in Washington, or London, or Paris, or The Hague and determine what the policies are going to be in those areas. You can be willing to help, and you can help only when the conditions are right for help to be effective.

Limitations of U.S. Assistance

That leads me to the other thing I wanted to point out, and that is the limitation of effective American assistance. American assistance can be effective when it is the missing component in a situation which might otherwise be solved. The United States cannot furnish all these components to solve the question. It can not furnish determination, it can not furnish the will, and it can not furnish the loyalty of a people to its government. But if the will and if the determination exists and if the people are behind their government, then, and not always then, is there a very good chance. In that situation American help can be effective, and it can lead to an accomplishment which could not otherwise be achieved.

Japan.—Let's take the situation in Japan for a moment. There are three great factors to be faced. The security matter I have dealt with. Aside from that, there are the

economic questions and the political questions. In the political field, General MacArthur has been very successful and the Japanese are hammering out with some effort, and with some backsliding, and regaining again of progress, a political system which is based on non-militaristic institutions.

In the economic field, we have not been so successful. That is in very large part due to the inherent difficulty of the problem. The problem arises with the necessity of Japan being able to buy raw materials and sell goods. The former connections of Japan with the mainland and with some of the islands have been disrupted. That has produced difficulties. The willingness of other countries to receive Japanese goods has very much contracted since the war.

Difficulties of currency have added to those problems. But those matters have got to be faced and have got to be solved. Whether they are solved under a treaty or if the procedural difficulties of that are too great under some other mechanism, they must be solved along lines which permit the Japanese greater freedom—complete freedom if possible—to buy what they need in the world and to sell what they have to offer on the mainland of Asia, in southeast Asia, and in other parts of the world. That is the nature of the problem and it is a very tough one. It is one on which the occupation authorities, the Japanese government, ourselves, and others are working. There can be no magic solution to it.

Korea.—In Korea, we have taken great steps which have ended our military occupation, and in cooperation with the United Nations we have established an independent and sovereign country recognized by nearly all the rest of the world. We have given that nation great help in getting itself established. We are asking the Congress to continue that help until it is firmly established, and that legislation is now pending before the Congress. The idea that we should scrap all of that, that we should stop half way through the achievement of the establishment of the country, seems to me to be the most utter defeatism and utter madness in our interests in Asia. But there our responsibilities are more direct and our opportunities more clear. When you move to the south, you find that our opportunity is much slighter and that our responsibilities,

except in the Philippines and there indirectly, are very small. Those problems are very confusing.

Philippines.—In the Philippines, we acted with vigor and speed to set up an independent sovereign nation which we have done. We have given the Philippines a billion dollars of direct economic aid since the war. We have spent another billion dollars in such matters as veterans' benefits and other payments in the Philippines. Much of that money has not been used as wisely as we wish it had been used, but here again, we come up against the matter of responsibility. It is the Philippine government which is responsible. It is the Philippine government which must make its own mistakes. What we can do is advise and urge, and if help continues to be misused, to stop giving the help. We can not direct, we should not direct, we have not the slightest desire to direct. I believe that there are indications that the Philippines may be facing serious economic difficulties. With energetic, determined action, they can perhaps be avoided or certainly minimized. Whether that will be true or not, I can not say, but it does not rest within the power of the American Government to determine that. We are always ready to help and to advise. That is all we can and all we should do.

Asia.—Elsewhere in southeast Asia, the limits of what we can do are to help where we are wanted. We are organizing the machinery through which we can make effective help possible. The western powers are all interested. We all know the techniques. We have all had experiences which can be useful to those governments which are newly starting out if they want it. It can not be useful if they don't want it. We know techniques of administration. We know techniques of organizing school districts, and road districts, and taxation districts. We know agricultural and industrial techniques, all of which can be helpful, and those we are preparing to make available if they are wanted, where they are wanted, and under circumstances where they have a fighting chance to be successful. We will not do these things for the mere purpose of being active. They will not be done for the mere purpose of running around and doing good, but for the purpose of moving in where we are wanted to a situation where we have the missing component which, if put into the rest of the picture, will spell success.

The situation in the different countries of southeast Asia is difficult. It is highly confused in Burma where five different factions have utterly disrupted the immediate government of the country. Progress is being made in Indochina where the French, although moving slowly, are moving. There are noticeable signs of progress in transferring responsibility to a local administration and getting the adherence of the population to this local administration. We hope that the situation will be such that the French can make further progress and make it quickly, but I know full well the difficulties which are faced by the Foreign Minister of France and my admiration and respect for him are so great that I would not want one word I say to add a feather to the burden that he carries.

In Malaya, the British have and are discharging their responsibility harmoniously with the people of Malaya and are making progress.

Indonesia.—In Indonesia, a great success has been achieved within the last few weeks and over a period of months. The round table conferences at The Hague in which great statesmanship and restraint were displayed, both on the Dutch and the Indonesian side, have resulted in this new government being formed. Relations of this government with the Dutch will be very good, and the Dutch can furnish them great help and advice, and we will be willing to stand by to give whatever help we can rightly and profitably give. The situation is one which is full of encouragement although it is full of difficulty also.

India and Pakistan.—As one goes to the end of this semicircle and comes to India and Pakistan, we find really grave troubles facing the world and facing these two countries there, both with respect to Kashmir, and to the utter difficulties—economic difficulties growing out of the differences in devaluation, settlement of monetary plans back and forth, et cetera. We know that they have assured one another, and they have assured

the world, that as stubborn as these difficulties may be and difficult as they may be of solution, they are not going to resort to war to solve them. We are glad to hear those assurances and the whole world is glad to hear it, but we know also that the problems are in such a situation and in such an area that they are most inflammable, and we believe that in addition to these most desirable assurances there should be some accommodation of wills to bring about a result as soon as possible.

In India and Pakistan we are willing to be of such help as we can be. Again, the responsibility is not ours. Again we can only be helpful friends. Again the responsibility lies with people who have won their freedom and who are very proud of it.

The New Day for Asia

So after this survey, what we conclude, I believe, is that there is a new day which has dawned in Asia. It is a day in which the Asian peoples are on their own, and know it, and intend to continue on their own. It is a day in which the old relationships between east and west are gone, relationships which at their worst were exploitation, and which at their best were paternalism. That relationship is over, and the relationship of east and west must now be in the Far East one of mutual respect and mutual helpfulness. We are their friends. Others are their friends. We and those others are willing to help, but we can help only where we are wanted and only where the conditions of help are really sensible and possible. So what we can see is that this new day in Asia, this new day which is dawning, may go on to a glorious noon or it may darken and it may drizzle out. But that decision lies within the countries of Asia and within the power of the Asian people. It is not a decision which a friend or even an enemy from the outside can decide for them.

32. Treaty of Friendship, Alliance and Mutual Assistance between the Union of Soviet Socialist Republics and the People's Republic of China, 14 February 1950

Introduction

After a lengthy civil war, in October 1949 the Chinese Communist Party, led by Chairman Mao Zedong, won control of Mainland China and established the People's Republic of China (PRC). Soviet leader Josef Stalin had initially been willing to cooperate with the Guomindang (Nationalist) government of China headed by Jiang Jieshi and had earlier attempted to moderate Mao's ambitions, suggesting that the Chinese communists only seek to control China north of the Yangtse River. When communist victory in China was assured, however, Stalin quickly moved to demonstrate fraternal solidarity with the new regime. Despite some hopes by American officials, including U.S. Secretary of State Dean Acheson, that China would ultimately turn to the United States, Mao regarded his party as the standard-bearer of international revolution, particularly in Asia, and regarded the United States as the ultimate capitalist enemy. He also resented the fact that during World War II and his subsequent civil war against the Guomindang, massive amounts of American economic and military aid had been directed to Jiang's government, strengthening it against the communists. In January and February 1950, Mao and Chinese Premier Zhou Enlai visited Moscow. Their first order of business was to negotiate a formal thirty-year alliance with the Soviet Union. Under the terms of the alliance, the two agreed to come to each other's aid if either were attacked by Japan or an ally of Japan. Secret protocols to the treaty, which have never been published, gave the Soviet Union special rights amounting to a virtual sphere of influence in the border provinces of Manchuria and Xinjiang. All other foreigners were excluded from Xinjiang. Russia kept its existing railway and naval concessions in Manchuria until 1954, including a share in the administration of the East Changchun Railway and a naval base at Lushun (Port Arthur). China also received a \$300 million low-interest loan from Russia. While in Moscow, Mao also asked Stalin for Russian economic and military assistance in the projected Chinese invasion of the island of Taiwan, to which Jiang and the remnants of his Guomindang forces had retreated. The conclusion of the Sino-Soviet treaty was an international demonstration that, in a polarized world increasingly perceived in terms of ideological and strategic competition between communist and noncommunist states, the new Chinese government had aligned itself firmly with the Soviet Union.

Primary Source

The Presidium of the Supreme Soviet of the Union of Soviet Socialist Republics and the Central People's Government of the People's Republic of China,

Being determined, by strengthening friendship and co-operation between the Union of Soviet Socialist Republics and the People's Republic of China, jointly to prevent the revival of Japanese imperialism and the repetition of aggression on the part of Japan or of any other State that might in any way join with Japan in acts of aggression,

Being anxious to promote a lasting peace and general security in the Far East and throughout the world in accordance with the purposes and principles of the United Nations,

Being firmly convinced that the strengthening of good-neighbourly and friendly relations between the Union of Soviet Socialist Republics and the People's Republic of China is in accordance with the fundamental interests of the peoples of the Soviet Union and China,

Have decided for this purpose to conclude the present Treaty and have appointed as their plenipotentiaries:

The Presidium of the Supreme Soviet of the Union of Soviet Socialist Republics: Andrei Yanuarevich Vyshinsky, Minister of Foreign Affairs of the USSR;

The Central People's Government of the People's Republic of China: Chou En-lai, Chairman of the State Administrative Council and Minister of Foreign Affairs of China.

The two plenipotentiary representatives, having exchanged their full powers, found in good and due form, have agreed as follows:

Article 1

The two Contracting Parties undertake to carry out jointly all necessary measures within their power to prevent a repetition of aggression and breach of the peace by Japan or any other State which might directly or indirectly join with Japan in acts of aggression. Should either of the Contracting Parties be attacked by Japan or by States allied with Japan and thus find itself in a state of war, the other Contracting Party shall immediately extend military and other assistance with all the means at its disposal.

The Contracting Parties likewise declare that they are prepared to participate, in a spirit of sincere co-operation, in all international action designed to safeguard peace and security throughout the world, and will devote all their energies to the speediest realization of these aims.

Article 2

The two Contracting Parties undertake, by common agreement, to strive for the conclusion at the earliest possible date, in conjunction with the other Powers which were their Allies during the Second World War, of a Peace Treaty with Japan.

Article 3

Neither of the Contracting Parties shall enter into any alliance directed against the other Party, or participate in any coalition or in any action or measures directed against the other Party.

Article 4

The two Contracting Parties shall consult together on all important international questions involving the common interests of the Soviet Union and China, with a view to strengthening peace and universal security.

Article 5

The two Contracting Parties undertake, in a spirit of friendship and cooperation and in accordance with the principles of equal rights, mutual interests, mutual respect for State sovereignty and territorial integrity, and non-intervention in the domestic affairs of the other Party, to develop and strengthen the economic and cultural ties between the Soviet Union and China, to render each other all possible economic assistance and to effect the necessary economic co-operation.

33. Joseph McCarthy: Speech on the Spread of Communism in the United States, 20 February 1950

Introduction

In February 1950, Senator Joseph McCarthy of Wisconsin spoke before the Women's Club of Wheeling, West Virginia, and claimed that he had a list of 205 known communists working in the U.S. State Department. McCarthy, whose senate record was decidedly mediocre, was apparently looking for an issue that would help him win reelection in 1952. His allegations came a few months after the Chinese Communist Party had won the four-year Chinese Civil War and established the People's Republic of China (PRC). In 1949 the Soviet Union also successfully tested an atomic bomb, an event that made the United States feel more vulnerable to sudden and devastating external attack than ever before in its history. It soon became public that some Canadian, American, and British scientists working in the American-financed nuclear program had passed information to the Soviets, accelerating the development of Russian atomic weapons. In 1949 Alger Hiss, a former State Department official accused of passing secret government information to the Soviet Union during the 1930s and 1940s, had also been tried and convicted for perjury, although his former associate Secretary of State Dean Acheson publicly refused to condemn him. McCarthy's accusations therefore came at a psychologically fertile moment. They quickly made him into the foremost leader of the eponymous McCarthyism, the movement in the early 1950s to weed out communists and communist

sympathizers in the U.S. government and American society in general. McCarthy was not inhibited by any considerations of accuracy or even credibility, accusing such leading Cold Warriors as Acheson and former secretary of state George Marshall of being communist sympathizers or dupes, if not outright agents. McCarthy's charges touched off a hailstorm of controversy that led to loyalty investigations of numerous diplomats, especially those concerned with China policy, and other government officials. As chairman of the Senate Permanent Investigating Subcommittee of the Government Operations Committee, McCarthy held well-broadcast public hearings to determine the political ideologies of political figures and public personalities, including movie stars. He was taking advantage of a climate of increasing suspicion of leftist dissent, exemplified by the antiradical activities of the House Un-American Activities Committee (HUAC) from the 1930s onward and later by President Harry S. Truman's Executive Order 9835, issued in March 1947, establishing a loyalty-security program for federal employees. McCarthy later submitted his speech to Congress so that it could be recorded in the Congressional Record, but he changed the number of known communists to 57. For several years, few Americans dared to challenge McCarthy, fearing that they themselves would be attacked as communist agents. McCarthy also appealed to the populist resentment that many ordinary Americans harbored toward the internationally oriented East Coast elite, whose members tended to dominate the U.S. diplomatic and national security apparatus. In the long run, however, his inaccuracies and a general disregard of facts led to McCarthy's downfall, although he ruined the reputations of several prominent people in the process and generated a climate of fear that discouraged dissent from or even honest criticism of American foreign policies.

Primary Source

Five years after a world war has been won, men's hearts should anticipate a long peace, and men's minds should be free from the heavy weight that comes from war. But this is not such a period—for this is not a period of peace. This is a time of the "cold war." This is a time when all the world is split into two vast, increasingly hostile armed camps. . . .

The reason why we find ourselves in a position of impotency is not because our only powerful potential enemy has sent men to invade our shores, but rather because of the traitorous actions of those who have been treated so well by this Nation. It has not been the less fortunate or members of minority groups who have been selling this Nation out, but rather those who have had all the benefits that the wealthiest nation on earth has to offer—the finest homes, the finest college education, and the finest jobs in Government.

This is glaringly true in the State Department. There the bright young men who are born with silver spoons in their mouths are the ones who have been the worst. . . . In my opinion, the State Department, which is one of the most important government departments, is thoroughly infested with Communists.

I have in my hand 205 cases of individuals who would appear to be either card carrying members or certainly

loyal to the Communist Party, but who nevertheless are still helping to shape our foreign policy. . . .

As you know, very recently the Secretary of State proclaimed his loyalty to a man guilty of what has always been considered as the most abominable of all crimes—of being a traitor to the people who gave him a position of great trust. The Secretary of State in attempting to justify his continued devotion to the man who sold out the Christian world to the atheistic world, referred to Christ's Sermon on the Mount as a justification and reason therefor, and the reaction of the American people to this would have made the heart of Abraham Lincoln happy.

When this pompous diplomat in striped pants, with a phony British accent, proclaimed to the American people that Christ on the Mount endorsed communism, high treason, and a betrayal of a sacred trust, the blasphemy was so great that it awakened the dormant indignation of the American people.

He has lighted the spark which is resulting in a moral uprising and will end only when the whole sorry mess of twisted, warped thinkers are swept from the national scene so that we may have a new birth of national honesty and decency in government.

34. Dean Acheson: "The Situation in the Far East," U.S. Senate, Committee on Foreign Relations, 29 March 1950

Introduction

In October 1949 the Chinese Communist Party (CCP), which had for several years been locked in civil war with the Guomindang (Nationalist) government headed by President Jiang Jieshi, won control of Mainland China and proclaimed the new People's Republic of China (PRC). Jiang and his followers fled to the island of Taiwan, about one hundred miles off the coast of Fujian Province. U.S. President Harry S. Truman and his secretary of state, Dean Acheson, had anticipated this development for some time. They now faced the question of whether the United States should withdraw recognition from the Nationalists and accord diplomatic recognition to the new communist state headed by Mao Zedong. Speaking in a closed session to the U.S. Senate Foreign Relations Committee in October 1949, Acheson chose to defer the matter of recognition, stating "that nobody will profit by any precipitate recognition of the Communist government." The secretary believed that the United States should not offer the new regime any gifts or loans but declined to consider either blockading China or equipping Chinese forces that sought to attack the new regime, "vastly expensive and in the long run . . . futile" measures that he feared would only "solidify the Chinese people against us and in favor of the Communist government." Acheson reiterated these principles in January 1950. Three months later, he provided the committee with a clearer reasoned exposition of his thinking on both China and Taiwan (Formosa). His first priority was to drive a wedge between China and the Soviet Union and "do everything you can to separate them from Moscow." He expected that relations between the two communist powers would soon deteriorate. He also anticipated that China would soon mount an invasion of the island of Taiwan, which Jiang was using as a platform from which to mount major bombing raids on Chinese cities. American assistance to Jiang on Taiwan, Acheson argued, would only alienate the new Chinese government and drive it closer to Russia, and the island was not "vital" to U.S. security interests. A mainland takeover of Taiwan would, of course, have settled the issue of which Chinese government the United States should recognize, as the People's Republic of China would then have been the only one still surviving. The outbreak of the Korean War three months later changed this strategy, as the Truman administration deployed the Seventh Fleet in the Taiwan Strait to prevent a mainland invasion of the island. From then on, the Republic of China (ROC) on Taiwan would effectively fall under the protection of the United States, and not until 1979 would the U.S. government switch diplomatic recognition to the mainland regime.

Primary Source

SENATOR SMITH of New Jersey. Mr. Secretary, I get the impression, and I got it from Mr. Jessup's statement, that there is no immediate prospect of our recognizing China.

SECRETARY ACHESON. I see no immediate prospect of that.

SENATOR SMITH of New Jersey. It seems to me that it would be a terrible mistake.

SECRETARY ACHESON. I see no prospect; I see no particular advantage. It is something on which I think we should not take a position that we do not reconsider the matter from time to time. We want to be flexible on it.

SENATOR SMITH of New Jersey. I just wanted to be relieved, that there is no immediate step of recognizing them contemplated.

THE CHAIRMAN. He has said three times since he has been there that there is no prospect of that.

[. . .]

SECRETARY ACHESON. I think there is a tendency all the time to discuss Formosa as a question of Formosa, so it becomes one of the major questions of American foreign policy.

Now, in and of itself, simply the island of Formosa is not a great question in American foreign policy, but it

may become a very great question if it obscures or changes or interferes with what we are trying to do in regard to China. Formosa is of importance only as it relates to our hopes and our activities in regard to China.

[. . .]

What we are concerned with in China are two great things. The first one is that whoever runs China, even if the devil himself runs China, if he is an independent devil. That is infinitely better than if he is a stooge of Moscow or China comes under Russia. The No. 1 objective is, whoever runs it, good, bad, indifferent, whatever his politics, if his group is independent and is doing better or worse but what they think is the right thing for Formosa and for China, that is an objective of our policy.

The second thing is, if we can have somebody other than Communists running China, we would like that, because Communists try to gravitate to Moscow. Those are the objectives.

Now you find that the Communists are in control of China, and therefore when you look at the problem you see that there are two great objects or methods in which you can operate. One is to fight them. You can send over, directly or indirectly, airplanes, ships, soldiers, and go in and fight.

The other one is to do everything you can to separate them from Moscow.

Now, which of those is the most productive? On which of those would you put your money?

I would put my money clearly on the second. I do not think we are going to or can put the amount of money, men, and material that would be necessary into a military overthrow of Communist China.

SENATOR SMITH OF NEW JERSEY. You and I agree entirely on that.

SECRETARY ACHESON. That is the purpose. We agree entirely on that. We think we have a great force operating with us, and instead of fighting that force if

what you do is roll with it, you get the advantage of the gravitation of the earth or the turning of the earth, whatever it is that is behind that force: That is, that the Chinese inevitably, we believe, will come into conflict with Moscow, because the very basic objectives of Moscow are hostile to the very basic objectives of China, and that is what we have been trying to point out, what we have been trying to hammer by propaganda, leaflets, and everything we can get into China, including the speeches I made in California and elsewhere.

What we want to say to the Chinese is: watch out! Look what has happened. You will see that all this area, swinging around from Sinkiang all the way around to the north to the China Sea, you will find little by little, or sometimes very swiftly, that the Russians will be moving in. Watch and see if there aren't some secret clauses to these treaties by which the Russians have military posts under the guise of protecting the northern area of China. Watch and see what happens about that. See what develops about this great gesture where they say they are going to give up Port Arthur and their rights. They aren't even going to talk about this for some years. See if they do it. We bet they don't do it. We bet they will say you have breached your agreements and it will never come to pass.

Watch and see whether the control of the Russians over the railways doesn't turn into a situation where there is an area on each side of the road patrolled by Russian troops. Watch all of this and see if there aren't airfields with Russian airmen established in China. See if there aren't controls put up as Russian bases.

Now, we are putting all of these into our propaganda. Some of them are going to happen, because we think what the Russians are primarily interested in is nailing down these great northern border areas. That is the No. 1 objective.

No. 2 is all of China if they can get it, but much better take something which they are sure of, than gamble on the whole.

Then we say, look at this economic help that you are going to get. What have you got? A little piddling loan over 5 years, \$60 million a year, and the first thing they

do is to revalue the ruble so that they cheat you out of \$15 million and get it down to \$45 million each year.

In order to get that, what have you done? You have entered into arrangements under which you are sure you are always going to have a colonial economy. You are going to be contributory to the development of Siberia. All of your valuables are going to Siberia, and the dream of the Chinese that there is going to be a great industrial development of China will never come true. Here is this pitiful loan of \$45 million a year, compared to a grant in 1 year, in 1948, when the U.S. Congress gave you \$400 million. They gave you more than these people are going to lend you over five years in one year. We are building up all of that.

SENATOR SMITH OF NEW JERSEY. How do you plan to get that information through to the Chinese? I agree with you entirely. How are we going to get it through, through the broadcasting business, the "Voice of America"?

SECRETARY ACHESON. The "Voice of America" does it, people do it, radio does it. This is one of the main efforts. There are various other ways which we do not want to discuss here but that can be done also.

These are the ideas that we are planting there, and they are not fake ideas, because this is what is happening.

Now, we believe that as the Moscow dominated group begins to try and exercise the central control which is the core of the Communist strategy in China, they are going to get into trouble, as all central governments have in China, and there will be a tendency to split off, and that tendency we want to increase and work with when it develops, and that is what we think is the best bet in China.

Now, it is against that that you talk about Formosa. How does what you do in Formosa affect the objectives that I have just discussed? The fundamental facts that you have about Formosa are, first of all, that it is controlled and run by Chiang Kai-shek. Mr. Jessup has told you what the feeling in Asia is about Chiang Kai-shek. Whatever his merits, whatever he may have done in the past, he is not the person who is going to liberate

China. He cannot get anyone to rally to him and any kind of effort which is made by him through military attack is going to have exactly the opposite result. It is going to solidify everybody against him.

SENATOR SMITH OF NEW JERSEY. I do not want to argue with you, but I want the record to show I do not share your conclusions.

Now, assuming you can't use him, what are we going to do with Formosa?

SECRETARY ACHESON. The fact I am pointing out is that he is there, he is running it. How is he running it? He is running it by carrying on an aggressive, offensive war against the mainland, bombing Nanking and other cities. Each of these bombing raids results in the deaths of between one thousand and two thousand Chinese civilians. All of these raids are carried out by American planes, the bombs dropped are American. All of these have been given to him by the United States Government.

That does not make for the popularity of the United States in China. You are not going, and we are not trying, to win a popularity contest, but we do not want to deflect from the Russians to ourselves the historic Chinese xenophobia, and that is what is happening.

SENATOR LODGE. Then why isn't it true that the sooner we disconnect ourselves completely from China the better?

SECRETARY ACHESON. There are many reasons why that is not upon us, including the attitude of a large number of people in the United States and Congress.

SENATOR LODGE. I am of the Congress and I am of the United States, and my attitude is that we ought to. It seems to me it is just fatal to carry that old man of the sea on our backs all the time.

SECRETARY ACHESON. We have it very definitely on our backs.

SENATOR LODGE. Wouldn't we be much better off if we got him off?

SECRETARY ACHESON. If, instead of carrying on an aggressive way, he was doing something else, then you might perhaps decide it would be very important to see if you can build up Formosa something like a good show. These are the choices that we now have.

Now, the second thing, not only is Chiang Kai-shek in charge, not only is he behaving in this way, but whether by this conduct or whether by the opposite conduct, but chiefly by this one, he is inviting a first-class invasion of his island from the mainland. Under present circumstances, the Communists would be criminally crazy if they did not put an end to it just as soon as possible.

SENATOR SMITH OF NEW JERSEY. I might say that was one of the reasons I wanted to explore the possibility of militarization of the island. That is over the dam now.

SECRETARY ACHESON. This probably is inevitable, that there will be an assault on the island. He is in a position where, if he husbanded his resources instead of wasting them in what he is doing now, he could for a very considerable time, if he had decent administration on the island, hold it. But if he runs out of supplies, then he won't be able to.

Furthermore, if the nuisance of this thing is great enough and both the blockade of Shanghai and these bombings are a very serious nuisance, then the Communists will accelerate their cooperation with the Russian military, bomb the life out of the place, and before long they will take it.

Very well. Now that is what you are faced with.

SENATOR SMITH OF NEW JERSEY. You think the Russians would participate in that actively?

SECRETARY ACHESON. I am sure they would, and I am sure we think they are now.

SENATOR SMITH OF NEW JERSEY. I think so too.

SECRETARY ACHESON. I do not mean they would send their own forces, but they would fix it so they would help.

[. . .]

The situation therefore being that by reason of present conduct and past conduct an assault is inevitable on this island, the question then arises, what are we going to do? Now, if we go to Chiang Kai-shek and say "If you will stop doing this we will guarantee your safety," in the first place I do not think he would do it, because everyone who has talked with him comes back with one thought, and that is that he believes World War III is absolutely inevitable, that the United States will have to go back and conquer China, and that he will come riding in on our coat tails. That is quite wrong, but he believes it. He has no other thought.

What he is doing with this bombing is purely provocative, to provoke the very thing we have been talking about, to get us involved, to get us committed to the thing, and then we are either in World War III or in a war with the Chinese.

Supposing we go in and say, "If you stop this, we will do that." The only thing he knows and our military knows and everybody else knows, the only way you can ever assure that Taiwan is not going to fall in the face of Chinese assault, which I now say is inevitable, is by the intervention of American military force. We could beat it back. Nobody else could beat it back.

Now, do we want to assume that commitment? And, if so, why? What do we gain by doing that? We lose the very things that I was trying to point out at the beginning are the objectives of our policy in China. We become militarily committed to continue a long guerilla warfare with the Chinese for the purpose of holding an island which as a military outpost is not one which we must hold. It will be better for us to have it in friendly hands than enemy hands, but it is not one of our vital security points in the Far East.

Why should we reverse our entire objectives as regards China in order to fight the Chinese for an island which is not vital?

That is the situation as we see it. There may be all sorts of developments. I am not saying that this is a complete writing off or that we are through or anything more than

giving you the analysis of the matter as it stands at the present time, and the reasons why we cannot assume responsibility for Chiang Kai-shek. We cannot tell him what he has to do because he asks a price for it, and the price is that we guarantee the security of the island.

You can say that you can assume a whole lot of things might happen, and maybe they might, and if they did

we would reconsider this thing, but they are not happening and the thing is marching now down this road.

35. NSC-68: U.S. Objectives and Programs for National Security, 1950

Introduction

By 1949 the European Cold War was rapidly stabilizing as the Marshall Plan took effect and NATO was established. At least some American officials nonetheless felt a pervasive sense of threat, due in part to Russia's successful detonation of an atomic bomb in August 1949 and the seizure of power by the Chinese Communist Party (CCP) in October. U.S. President Harry S. Truman met on 31 January 1950 with Secretary of Defense Louis A. Johnson, Secretary of State Dean Acheson, and Chairman of the Atomic Energy Commission David Lilienthal to discuss the status of the U.S. nuclear program. Truman asked the National Security Council (NSC) to draw up a report on the state of U.S. defenses and the country's position in regard to world affairs. Various officials in the State and Defense Departments, led by Paul H. Nitze, who had replaced George F. Kennan as director of the State Department's Policy Planning Staff, argued that should war break out, the United States lacked the military resources to meet even its existing international commitments. Implicitly, they endorsed the 1947 Truman Doctrine pledging American assistance to any nation facing internal or external communist threat. The planning paper NSC-68, which they drafted and submitted to Truman on 7 April 1950, is widely regarded as the U.S. military blueprint for much of the Cold War. NSC-68 demanded massive enhancements in American conventional and nuclear military capabilities, including substantially increased American troop contributions to North Atlantic Treaty Organization (NATO) forces in Europe. The paper envisaged increasing the existing U.S. defense budget from \$13.5 billion to anywhere between \$18 billion and \$50 billion, recommendations that the economy-conscious Truman initially rejected, although ultimately he might well have endorsed more modest increases. The outbreak of the Korean War in June 1950 proved crucial both in implementing NSC-68 and in effectively globalizing the Cold War. American officials regarded this conflict as proof positive that in Asia and globally, the international communist camp, united under Soviet leadership, actively sought to expand its territory. U.S. defense spending soared in Europe as well as in Asia, reaching \$48 billion in fiscal 1951 and \$61 billion the following year. After the 1953 Korean armistice, U.S. defense budgets still remained far higher than in the past. In June 1950 the United States had 1.46 million military personnel, of whom 280,000 were stationed abroad. Four years later, the totals were 3.555 million and 963,000, respectively. Fearing that Korea was only a faint intended to divert attention from a forthcoming threat to Europe, in late 1950 Truman sent four additional American divisions to join the two understrength formations already on the continent, a deployment that effectively soon became permanent. These measures were only part of a broader expansion of American overseas commitments and alliances in Asia and the Middle East during the 1950s, a web of bases, treaties, and economic and military assistance that, by the end of the decade, made U.S. Cold War strategy global in nature.

TOP SECRET

TERMS OF REFERENCE

The following report is submitted in response to the President's directive of January 31 which reads:

That the President direct the Secretary of State and the Secretary of Defense to undertake a reexamination of our objectives in peace and war and of the effect of these objectives on our strategic plans, in the light of the probable fission bomb capability and possible thermonuclear bomb capability of the Soviet Union.

The document which recommended that such a directive be issued reads in part: It must be considered whether a decision to proceed with a program directed toward determining feasibility prejudices the more fundamental decisions (a) as to whether, in the event that a test of a thermonuclear weapon proves successful, such weapons should be stockpiled, or (b) if stockpiled, the conditions under which they might be used in war. If a test of a thermonuclear weapon proves successful, the pressures to produce and stockpile such weapons to be held for the same purposes for which fission bombs are then being held will be greatly increased. The question of use policy can be adequately assessed only as a part of a general reexamination of this country's strategic plans and its objectives in peace and war. Such reexamination would need to consider national policy not only with respect to possible thermonuclear weapons, but also with respect to fission weapons—viewed in the light of the probable fission bomb capability and the possible thermonuclear bomb capability of the Soviet Union. The moral, psychological, and political questions involved in this problem would need to be taken into account and be given due weight. The outcome of this reexamination would have a crucial bearing on the further question as to whether there should be a revision in the nature of the agreements, including the international control of atomic energy, which we have been seeking to reach with the U.S.S.R.

ANALYSIS

[. . .]

IV. The Underlying Conflict in the Realm of ideas and Values between the U.S. Purpose and the Kremlin Design

A. Nature of Conflict

The Kremlin regards the United States as the only major threat to the conflict between idea of slavery under the grim oligarchy of the Kremlin, which has come to a crisis with the polarization of power described in Section I, and the exclusive possession of atomic weapons by the two protagonists. The idea of freedom, moreover, is peculiarly and intolerably subversive of the idea of slavery. But the converse is not true. The implacable purpose of the slave state to eliminate the challenge of freedom has placed the two great powers at opposite poles. It is this fact which gives the present polarization of power the quality of crisis.

The free society values the individual as an end in himself, requiring of him only that measure of self-discipline and self-restraint which make the rights of each individual compatible with the rights of every other individual. The freedom of the individual has as its counterpart, therefore, the negative responsibility of the individual not to exercise his freedom in ways inconsistent with the freedom of other individuals and the positive responsibility to make constructive use of his freedom in the building of a just society.

From this idea of freedom with responsibility derives the marvelous diversity, the deep tolerance, the lawfulness of the free society. This is the explanation of the strength of free men. It constitutes the integrity and the vitality of a free and democratic system. The free society attempts to create and maintain an environment in which every individual has the opportunity to realize his creative powers. It also explains why the free society tolerates those within it who would use their freedom to destroy it. By the same token, in relations between nations, the prime reliance of the free society is on the strength and appeal of its idea, and it feels no compulsion sooner or later to bring all societies into conformity with it.

For the free society does not fear, it welcomes, diversity. It derives its strength from its hospitality even to antipathetic ideas. It is a market for free trade in ideas,

secure in its faith that free men will take the best wares, and grow to a fuller and better realization of their powers in exercising their choice.

The idea of freedom is the most contagious idea in history, more contagious than the idea of submission to authority. For the breadth of freedom cannot be tolerated in a society which has come under the domination of an individual or group of individuals with a will to absolute power. Where the despot holds absolute power—the absolute power of the absolutely powerful will—all other wills must be subjugated in an act of willing submission, a degradation willed by the individual upon himself under the compulsion of a perverted faith. It is the first article of this faith that he finds and can only find the meaning of his existence in serving the ends of the system. The system becomes God, and submission to the will of God becomes submission to the will of the system. It is not enough to yield outwardly to the system—even Gandhian non-violence is not acceptable—for the spirit of resistance and the devotion to a higher authority might then remain, and the individual would not be wholly submissive.

The same compulsion which demands total power over all men within the Soviet state without a single exception, demands total power over all Communist Parties and all states under Soviet domination. Thus Stalin has said that the theory and tactics of Leninism as expounded by the Bolshevik party are mandatory for the proletarian parties of all countries. A true internationalist is defined as one who unhesitatingly upholds the position of the Soviet Union and in the satellite states true patriotism is love of the Soviet Union. By the same token the “peace policy” of the Soviet Union, described at a Party Congress as “a more advantageous form of fighting capitalism,” is a device to divide and immobilize the non-Communist world, and the peace the Soviet Union seeks is the peace of total conformity to Soviet policy.

The antipathy of slavery to freedom explains the iron curtain, the isolation, the autarchy of the society whose end is absolute power. The existence and persistence of the idea of freedom is a permanent and continuous threat to the foundation of the slave society; and it

therefore regards as intolerable the long continued existence of freedom in the world. What is new, what makes the continuing crisis, is the polarization of power which now inescapably confronts the slave society with the free.

The assault on free institutions is world-wide now, and in the context of the present polarization of power a defeat of free institutions anywhere is a defeat everywhere. The shock we sustained in the destruction of Czechoslovakia was not in the measure of Czechoslovakia’s material importance to us. In a material sense, her capabilities were already at Soviet disposal. But when the integrity of Czechoslovak institutions was destroyed, it was in the intangible scale of values that we registered a loss more damaging than the material loss we had already suffered.

Thus unwillingly our free society finds itself mortally challenged by the Soviet system. No other value system is so wholly irreconcilable with ours, so implacable in its purpose to destroy ours, so capable of turning to its own uses the most dangerous and divisive trends in our own society, no other so skillfully and powerfully evokes the elements of irrationality in human nature everywhere, and no other has the support of a great and growing center of military power.

B. Objectives

The objectives of a free society are determined by its fundamental values and by the necessity for maintaining the material environment in which they flourish. Logically and in fact, therefore, the Kremlin’s challenge to the United States is directed not only to our values but to our physical capacity to protect their environment. It is a challenge which encompasses both peace and war and our objectives in peace and war must take account of it.

1. Thus we must make ourselves strong, both in the way in which we affirm our values in the conduct of our national life, and in the development of our military and economic strength.
2. We must lead in building a successfully functioning political and economic system in the free world. It is

only by practical affirmation, abroad as well as at home, of our essential values, that we can preserve our own integrity, in which lies the real frustration of the Kremlin design.

3. But beyond thus affirming our values our policy and actions must be such as to foster a fundamental change in the nature of the Soviet system, a change toward which the frustration of the design is the first and perhaps the most important step. Clearly it will not only be less costly but more effective if this change occurs to a maximum extent as a result of internal forces in Soviet society.

In a shrinking world, which now faces the threat of atomic warfare, it is not an adequate objective merely to seek to check the Kremlin design, for the absence of order among nations is becoming less and less tolerable. This fact imposes on us, in our own interests, the responsibility of world leadership. It demands that we make the attempt, and accept the risks inherent in it, to bring about order and justice by means consistent with the principles of freedom and democracy. We should limit our requirement of the Soviet Union to its participation with other nations on the basis of equality and respect for the rights of others. Subject to this requirement, we must with our allies and the former subject peoples seek to create a world society based on the principle of consent. Its framework cannot be inflexible. It will consist of many national communities of great and varying abilities and resources, and hence of war potential. The seeds of conflicts will inevitably exist or will come into being. To acknowledge this is only to acknowledge the impossibility of a final solution. Not to acknowledge it can be fatally dangerous in a world in which there are no final solutions.

All these objectives of a free society are equally valid and necessary in peace and war. But every consideration of devotion to our fundamental values and to our national security demands that we seek to achieve them by the strategy of the cold war. It is only by developing the moral and material strength of the free world that the Soviet regime will become convinced of the falsity of its assumptions and that the preconditions for workable agreements can be created. By practically demonstrating the integrity and vitality of

our system the free world widens the area of possible agreement and thus can hope gradually to bring about a Soviet acknowledgement of realities which in sum will eventually constitute a frustration of the Soviet design. Short of this, however, it might be possible to create a situation which will induce the Soviet Union to accommodate itself, with or without the conscious abandonment of its design, to coexistence on tolerable terms with the non-Soviet world. Such a development would be a triumph for the idea of freedom and democracy. It must be an immediate objective of United States policy.

[. . .]

C. Means

The free society is limited in its choice of means to achieve its ends.

Compulsion is the negation of freedom, except when it is used to enforce the rights common to all. The resort to force, internally or externally, is therefore a last resort for a free society. The act is permissible only when one individual or groups of individuals within it threaten the basic rights of other individuals or when another society seeks to impose its will upon it. The free society cherishes and protects as fundamental the rights of the minority against the will of a majority, because these rights are the inalienable rights of each and every individual.

The resort to force, to compulsion, to the imposition of its will is therefore a difficult and dangerous act for a free society, which is warranted only in the face of even greater dangers. The necessity of the act must be clear and compelling; the act must commend itself to the overwhelming majority as an inescapable exception to the basic idea of freedom; or the regenerative capacity of free men after the act has been performed will be endangered.

[. . .]

Practical and ideological considerations therefore both impel us to the conclusion that we have no choice but to demonstrate the superiority of the idea of freedom by its constructive application, and to attempt to change

the world situation by means short of war in such a way as to frustrate the Kremlin design and hasten the decay of the Soviet system.

For us the role of military power is to serve the national purpose by deterring an attack upon us while we seek by other means to create an environment in which our free society can flourish, and by fighting, if necessary, to defend the integrity and vitality of our free society and to defeat any aggressor. The Kremlin uses Soviet military power to back up and serve the Kremlin design. It does not hesitate to use military force aggressively if that course is expedient in the achievement of its design. The differences between our fundamental purpose and the Kremlin design, therefore, are reflected in our respective attitudes toward and use of military force.

Our free society, confronted by a threat to its basic values, naturally will take such action, including the use of military force, as may be required to protect those values. The integrity of our system will not be jeopardized by any measures, covert or overt, violent or non-violent, which serve the purposes of frustrating the Kremlin design, nor does the necessity for conducting ourselves so as to affirm our values in actions as well as words forbid such measures, provided only they are appropriately calculated to that end and are not so excessive or misdirected as to make us enemies of the people instead of the evil men who have enslaved them.

But if war comes, what is the role of force? Unless we so use it that the Russian people can perceive that our effort is directed against the regime and its power for aggression, and not against their own interests, we will unite the regime and the people in the kind of last ditch fight in which no underlying problems are solved, new ones are created, and where our basic principles are obscured and compromised. If we do not in the application of force demonstrate the nature of our objectives we will, in fact, have compromised from the outset our fundamental purpose. In the words of the *Federalist* (No. 28) "The means to be employed must be proportioned to the extent of the mischief." The mischief may be a global war or it may be a Soviet campaign for limited objectives. In either case we should

take no avoidable initiative which would cause it to become a war of annihilation, and if we have the forces to defeat a Soviet drive for limited objectives it may well be to our interest not to let it become a global war. Our aim in applying force must be to compel the acceptance of terms consistent with our objectives, and our capabilities for the application of force should, therefore, within the limits of what we can sustain over the long pull, be congruent to the range of tasks which we may encounter.

[. . .]

VII. Present Risks

A. General

It is apparent from the preceding sections that the integrity and vitality of our system is in greater jeopardy than ever before in our history. Even if there were no Soviet Union we would face the great problem of the free society, accentuated many fold in this industrial age, of reconciling order, security, the need for participation, with the requirement of freedom. We would face the fact that in a shrinking world the absence of order among nations is becoming less and less tolerable. The Kremlin design seeks to impose order among nations by means which would destroy our free and democratic system. The Kremlin's possession of atomic weapons puts new power behind its design, and increases the jeopardy to our system. It adds new strains to the uneasy equilibrium-without-order which exists in the world and raises new doubts in men's minds whether the world will long tolerate this tension without moving toward some kind of order, on somebody's terms.

The risks we face are of a new order of magnitude, commensurate with the total struggle in which we are engaged. For a free society there is never total victory, since freedom and democracy are never wholly attained, are always in the process of being attained. But defeat at the hands of the totalitarian is total defeat. These risks crowd in on us, in a shrinking world of polarized power, so as to give us no choice, ultimately, between meeting them effectively or being overcome by them.

VIII. Atomic Armaments

A. Military Evaluation of U.S. and USSR Atomic Capabilities

1. The United States now has an atomic capability, including both numbers and deliverability, estimated to be adequate, if effectively utilized, to deliver a serious blow against the war-making capacity of the USSR. It is doubted whether such a blow, even if it resulted in the complete destruction of the contemplated target systems, would cause the USSR to sue for terms or prevent Soviet forces from occupying Western Europe against such ground resistance as could presently be mobilized. A very serious initial blow could, however, so reduce the capabilities of the USSR to supply and equip its military organization and its civilian population as to give the United States the prospect of developing a general military superiority in a war of long duration.

2. As the atomic capability of the USSR increases, it will have an increased ability to hit at our atomic bases and installations and thus seriously hamper the ability of the United States to carry out an attack such as that outlined above. It is quite possible that in the near future the USSR will have a sufficient number of atomic bombs and a sufficient deliverability to raise a question whether Britain with its present inadequate air defense could be relied upon as an advance base from which a major portion of the U.S. attack could be launched.

It is estimated that, within the next four years, the USSR will attain the capability of seriously damaging vital centers of the United States, provided it strikes a surprise blow and provided further that the blow is opposed by no more effective opposition than we now have programmed. Such a blow could so seriously damage the United States as to greatly reduce its superiority in economic potential.

Effective opposition to this Soviet capability will require among other measures greatly increased air warning systems, air defenses, and vigorous development and implementation of a civilian defense program which has been thoroughly integrated with the military defense systems.

In time the atomic capability of the USSR can be expected to grow to a point where, given surprise and

no more effective opposition than we now have programmed, the possibility of a decisive initial attack cannot be excluded.

3. In the initial phases of an atomic war, the advantages of initiative and surprise would be very great. A police state living behind an iron curtain has an enormous advantage in maintaining the necessary security and centralization of decision required to capitalize on this advantage.

4. For the moment our atomic retaliatory capability is probably adequate to deter the Kremlin from a deliberate direct military attack against ourselves or other free peoples. However, when it calculates that it has a sufficient atomic capability to make a surprise attack on us, nullifying our atomic superiority and creating a military situation decisively in its favor, the Kremlin might be tempted to strike swiftly and with stealth. The existence of two large atomic capabilities in such a relationship might well act, therefore, not as a deterrent, but as an incitement to war.

5. A further increase in the number and power of our atomic weapons is necessary in order to assure the effectiveness of any U.S. retaliatory blow, but would not of itself seem to change the basic logic of the above points. Greatly increased general air, ground, and sea strength, and increased air defense and civilian defense programs would also be necessary to provide reasonable assurance that the free world could survive an initial surprise atomic attack of the weight which it is estimated the USSR will be capable of delivering by 1954 and still permit the free world to go on to the eventual attainment of its objectives. Furthermore, such a build-up of strength could safeguard and increase our retaliatory power, and thus might put off for some time the date when the Soviet Union could calculate that a surprise blow would be advantageous. This would provide additional time for the effects of our policies to produce a modification of the Soviet system.

6. If the USSR develops a thermonuclear weapon ahead of the U.S., the risks of greatly increased Soviet pressure against all the free world, or an attack against the U.S., will be greatly increased.

7. If the U.S. develops a thermonuclear weapon ahead of the USSR, the U.S. should for the time being be able to bring increased pressure on the USSR.

[. . .]

IX. Possible Courses of Action

Introduction. Four possible courses of action by the United States in the present situation can be distinguished. They are:

- a. Continuation of current policies, with current and currently projected programs for carrying out these policies;
- b. Isolation;
- c. War; and
- d. A more rapid building up of the political, economic, and military strength of the free world than provided under a, with the purpose of reaching, if possible, a tolerable state of order among nations without war and of preparing to defend ourselves in the event that the free world is attacked.

[. . .]

A. THE FIRST COURSE— CONTINUATION OF CURRENT POLICIES, WITH CURRENT AND CURRENTLY PROJECTED PROGRAMS FOR CARRYING OUT THESE POLICIES

1. Military aspects. On the basis of current programs, the United States has a large potential military capability but an actual capability which, though improving, is declining relative to the USSR, particularly in light of its probable fission bomb capability and possible thermonuclear bomb capability. The same holds true for the free world as a whole relative to the Soviet world as a whole. If war breaks out in 1950 or in the next few years, the United States and its allies, apart from a powerful atomic blow, will be compelled to conduct delaying actions, while building up their strength for a general offensive. A frank evaluation of the requirements, to defend the United States and its vital interests and to support a vigorous initiative in the cold war, on the one hand, and of present capabilities, on the other, indicates that there is a sharp and growing disparity between them.

A review of Soviet policy shows that the military capabilities, actual and potential, of the United States and the rest of the free world, together with the apparent determination of the free world to resist further Soviet expansion, have not induced the Kremlin to relax its pressures generally or to give up the initiative in the cold war. On the contrary, the Soviet Union has consistently pursued a bold foreign policy, modified only when its probing revealed a determination and an ability of the free world to resist encroachment upon it. The relative military capabilities of the free world are declining, with the result that its determination to resist may also decline and that the security of the United States and the free world as a whole will be jeopardized.

From the military point of view, the actual and potential capabilities of the United States, given a continuation of current and projected programs, will become less and less effective as a war deterrent. Improvement of the state of readiness will become more and more important not only to inhibit the launching of war by the Soviet Union but also to support a national policy designed to reverse the present ominous trends in international relations. A building up of the military capabilities of the United States and the free world is a pre-condition to the achievement of the objectives outlined in this report and to the protection of the United States against disaster.

Fortunately, the United States military establishment has been developed into a unified and effective force as a result of the policies laid down by the Congress and the vigorous carrying out of these policies by the Administration in the fields of both organization and economy. It is, therefore, a base upon which increased strength can be rapidly built with maximum efficiency and economy.

2. Political aspects. The Soviet Union is pursuing the initiative in the conflict with the free world. Its atomic capabilities, together with its successes in the Far East, have led to an increasing confidence on its part and to an increasing nervousness in Western Europe and the rest of the free world. We cannot be sure, of course, how vigorously the Soviet Union will pursue its initiative, nor can we be sure of the strength or weakness of

the other free countries in reacting to it. There are, however, ominous signs of further deterioration in the Far East. There are also some indications that a decline in morale and confidence in Western Europe may be expected. In particular, the situation in Germany is unsettled. Should the belief or suspicion spread that the free nations are not now able to prevent the Soviet Union from taking, if it chooses, the military actions outlined in Chapter V, the determination of the free countries to resist probably would lessen and there would be an increasing temptation for them to seek a position of neutrality.

Politically, recognition of the military implications of a continuation of present trends will mean that the United States and especially other free countries will tend to shift to the defensive, or to follow a dangerous policy of bluff, because the maintenance of a firm initiative in the cold war is closely related to aggregate strength in being and readily available.

This is largely a problem of the incongruity of the current actual capabilities of the free world and the threat to it, for the free world has an economic and military potential far superior to the potential of the Soviet Union and its satellites. The shadow of Soviet force falls darkly on Western Europe and Asia and supports a policy of encroachment. The free world lacks adequate means—in the form of forces in being—to thwart such expansion locally. The United States will therefore be confronted more frequently with the dilemma of reacting totally to a limited extension of Soviet control or of not reacting at all (except with ineffectual protests and half measures). Continuation of present trends is likely to lead, therefore, to a gradual withdrawal under the direct or indirect pressure of the Soviet Union, until we discover one day that we have sacrificed positions of vital interest. In other words, the United States would have chosen, by lack of the necessary decisions and actions, to fall back to isolation in the Western Hemisphere. This course would at best result in only a relatively brief truce and would be ended either by our capitulation or by a defensive war—on unfavorable terms from unfavorable positions—against a Soviet Empire compromising all or most of Eurasia. (See Section B.)

3. Economic and social aspects. As was pointed out in Chapter VI, the present foreign economic policies and programs of the United States will not produce a solution to the problem of international economic equilibrium, notably the problem of the dollar gap, and will not create an economic base conducive to political stability in many important free countries.

The European Recovery Program has been successful in assisting the restoration and expansion of production in Western Europe and has been a major factor in checking the dry rot of Communism in Western Europe. However, little progress has been made toward the resumption by Western Europe of a position of influence in world affairs commensurate with its potential strength. Progress in this direction will require integrated political, economic, and military policies and programs, which are supported by the United States and the Western European countries and which will probably require a deeper participation by the United States than has been contemplated.

The Point IV Program and other assistance programs will not adequately supplement, as now projected, the efforts of other important countries to develop effective institutions, to improve the administration of their affairs, and to achieve a sufficient measure of economic development. The moderate regimes now in power in many countries, like India, Indonesia, Pakistan, and the Philippines, will probably be unable to restore or retain their popular support and authority unless they are assisted in bringing about a more rapid improvement of the economic and social structure than present programs will make possible.

The Executive Branch is now undertaking a study of the problem of the United States balance of payments and of the measures which might be taken by the United States to assist in establishing international economic equilibrium. This is a very important project and work on it should have a high priority. However, unless such an economic program is matched and supplemented by an equally far-sighted and vigorous political and military program, we will not be successful in checking and rolling back the Kremlin's drive.

4. Negotiation. In short, by continuing along its present course the free world will not succeed in making effective use of its vastly superior political, economic, and military potential to build a tolerable state of order among nations. On the contrary, the political, economic, and military situation of the free world is already unsatisfactory and will become less favorable unless we act to reverse present trends.

This situation is one which militates against successful negotiations with the Kremlin—for the terms of agreements on important pending issues would reflect present realities and would therefore be unacceptable, if not disastrous, to the United States and the rest of the free world. Unless a decision had been made and action undertaken to build up the strength, in the broadest sense, of the United States and the free world, an attempt to negotiate a general settlement on terms acceptable to us would be ineffective and probably long drawn out, and might thereby seriously delay the necessary measures to build up our strength.

This is true despite the fact that the United States now has the capability of delivering a powerful blow against the Soviet Union in the event of war, for one of the present realities is that the United States is not prepared to threaten the use of our present atomic superiority to coerce the Soviet Union into acceptable agreements. In light of present trends, the Soviet Union will not withdraw and the only conceivable basis for a general settlement would be spheres of influence and of no influenced “settlement” which the Kremlin could readily exploit to its great advantage. The idea that Germany or Japan or other important areas can exist as islands of neutrality in a divided world is unreal, given the Kremlin design for world domination.

B. THE SECOND COURSE—ISOLATION

Continuation of present trends, it has been shown above, will lead progressively to the withdrawal of the United States from most of its present commitments in Europe and Asia and to our isolation in the Western Hemisphere and its approaches. This would result not from a conscious decision but from a failure to take the actions necessary to bring our capabilities into line

with our commitments and thus to a withdrawal under pressure. This pressure might come from our present Allies, who will tend to seek other “solutions” unless they have confidence in our determination to accelerate our efforts to build a successfully functioning political and economic system in the free world.

There are some who advocate a deliberate decision to isolate ourselves. Superficially, this has some attractiveness as a course of action, for it appears to bring our commitments and capabilities into harmony by reducing the former and by concentrating our present, or perhaps even reduced, military expenditures on the defense of the United States.

This argument overlooks the relativity of capabilities. With the United States in an isolated position, we would have to face the probability that the Soviet Union would quickly dominate most of Eurasia, probably without meeting armed resistance. It would thus acquire a potential far superior to our own, and would promptly proceed to develop this potential with the purpose of eliminating our power, which would, even in isolation, remain as a challenge to it and as an obstacle to the imposition of its kind of order in the world. There is no way to make ourselves inoffensive to the Kremlin except by complete submission to its will. Therefore isolation would in the end condemn us to capitulate or to fight alone and on the defensive, with drastically limited offensive and retaliatory capabilities in comparison with the Soviet Union. (These are the only possibilities, unless we are prepared to risk the future on the hazard that the Soviet Empire, because of over-extension or other reasons, will spontaneously destroy itself from within.)

The argument also overlooks the imponderable, but nevertheless drastic, effects on our belief in ourselves and in our way of life of a deliberate decision to isolate ourselves. As the Soviet Union came to dominate free countries, it is clear that many Americans would feel a deep sense of responsibility and guilt for having abandoned their former friends and allies. As the Soviet Union mobilized the resources of Eurasia, increased its relative military capabilities, and heightened its threat to our security, some would be tempted to accept

“peace” on its terms, while many would seek to defend the United States by creating a regimented system which would permit the assignment of a tremendous part of our resources to defense. Under such a state of affairs our national morale would be corrupted and the integrity and vitality of our system subverted.

Under this course of action, there would be no negotiation, unless on the Kremlin’s terms, for we would have given up everything of importance.

It is possible that at some point in the course of isolation, many Americans would come to favor a surprise attack on the Soviet Union and the area under its control, in a desperate attempt to alter decisively the balance of power by an overwhelming blow with modern weapons of mass destruction. It appears unlikely that the Soviet Union would wait for such an attack before launching one of its own. But even if it did and even if our attack were successful, it is clear that the United States would face appalling tasks in establishing a tolerable state of order among nations after such a war and after Soviet occupation of all or most of Eurasia for some years. These tasks appear so enormous and success so unlikely that reason dictates an attempt to achieve our objectives by other means.

C. THE THIRD COURSE—WAR

Some Americans favor a deliberate decision to go to war against the Soviet Union in the near future. It goes without saying that the idea of “preventive” war—in the sense of a military attack not provoked by a military attack upon us or our allies—is generally unacceptable to Americans. Its supporters argue that since the Soviet Union is in fact at war with the free world now and that since the failure of the Soviet Union to use all-out military force is explainable on grounds of expediency, we are at war and should conduct ourselves accordingly. Some further argue that the free world is probably unable, except under the crisis of war, to mobilize and direct its resources to the checking and rolling back of the Kremlin’s drive for world dominion. This is a powerful argument in the light of history, but the considerations against war are so compelling that the free world must demonstrate that this argument is wrong. The case for war is premised on the assumption that the United States could launch and sustain an

attack of sufficient impact to gain a decisive advantage for the free world in a long war and perhaps to win an early decision.

The ability of the United States to launch effective offensive operations is now limited to attack with atomic weapons. A powerful blow could be delivered upon the Soviet Union, but it is estimated that these operations alone would not force or induce the Kremlin to capitulate and that the Kremlin would still be able to use the forces under its control to dominate most or all of Eurasia. This would probably mean a long and difficult struggle during which the free institutions of Western Europe and many freedom-loving people would be destroyed and the regenerative capacity of Western Europe dealt a crippling blow.

Apart from this, however, a surprise attack upon the Soviet Union, despite the provocativeness of recent Soviet behavior, would be repugnant to many Americans. Although the American people would probably rally in support of the war effort, the shock of responsibility for a surprise attack would be morally corrosive. Many would doubt that it was a “just war” and that all reasonable possibilities for a peaceful settlement had been explored in good faith. Many more, proportionately, would hold such views in other countries, particularly in Western Europe and particularly after Soviet occupation, if only because the Soviet Union would liquidate articulate opponents. It would, therefore, be difficult after such a war to create a satisfactory international order among nations. Victory in such a war would have brought us little if at all closer to victory in the fundamental ideological conflict.

These considerations are no less weighty because they are imponderable, and they rule out an attack unless it is demonstrably in the nature of a counter-attack to a blow which is on its way or about to be delivered. (The military advantages of landing the first blow become increasingly important with modern weapons, and this is a fact which requires us to be on the alert in order to strike with our full weight as soon as we are attacked, and, if possible, before the Soviet blow is actually delivered.) If the argument of Chapter IV is accepted, it follows that there is no “easy” solution and that the only sure victory lies in the frustration of the Kremlin

design by the steady development of the moral and material strength of the free world and its projection into the Soviet world in such a way as to bring about an internal change in the Soviet system.

D. THE REMAINING COURSE OF ACTION—A RAPID BUILD-UP OF POLITICAL, ECONOMIC, AND MILITARY STRENGTH IN THE FREE WORLD

A more rapid build-up of political, economic, and military strength and thereby of confidence in the free world than is now contemplated is the only course which is consistent with progress toward achieving our fundamental purpose. The frustration of the Kremlin design requires the free world to develop a successfully functioning political and economic system and a vigorous political offensive against the Soviet Union. These, in turn, require an adequate military shield under which they can develop. It is necessary to have the military power to deter, if possible, Soviet expansion, and to defeat, if necessary, aggressive Soviet or Soviet-directed actions of a limited or total character. The potential strength of the free world is great; its ability to develop these military capabilities and its will to resist Soviet expansion will be determined by the wisdom and will with which it undertakes to meet its political and economic problems.

1. Military aspects. It has been indicated in Chapter VI that U.S. military capabilities are strategically more defensive in nature than offensive and are more potential than actual. It is evident, from an analysis of the past and of the trend of weapon development, that there is now and will be in the future no absolute defense. The history of war also indicates that a favorable decision can only be achieved through offensive action. Even a defensive strategy, if it is to be successful, calls not only for defensive forces to hold vital positions while mobilizing and preparing for the offensive, but also for offensive forces to attack the enemy and keep him off balance.

The two fundamental requirements which must be met by forces in being or readily available are support of foreign policy and protection against disaster. To meet the second requirement, the forces in being or readily

available must be able, at a minimum, to perform certain basic tasks:

- a. To defend the Western Hemisphere and essential allied areas in order that their war-making capabilities can be developed;
- b. To provide and protect a mobilization base while the offensive forces required for victory are being built up;
- c. To conduct offensive operations to destroy vital elements of the Soviet war-making capacity, and to keep the enemy off balance until the full offensive strength of the United States and its allies can be brought to bear;
- d. To defend and maintain the lines of communication and base areas necessary to the execution of the above tasks; and
- e. To provide such aid to allies as is essential to the execution of their role in the above tasks.

In the broadest terms, the ability to perform these tasks requires a build-up of military strength by the United States and its allies to a point at which the combined strength will be superior for at least these tasks, both initially and throughout a war, to the forces that can be brought to bear by the Soviet Union and its satellites. In specific terms, it is not essential to match item for item with the Soviet Union, but to provide an adequate defense against air attack on the United States and Canada and an adequate defense against air and surface attack on the United Kingdom and Western Europe, Alaska, the Western Pacific, Africa, and the Near and Middle East, and on the long lines of communication to these areas. Furthermore, it is mandatory that in building up our strength, we enlarge upon our technical superiority by an accelerated exploitation of the scientific potential of the United States and our allies.

Forces of this size and character are necessary not only for protection against disaster but also to support our foreign policy. In fact, it can be argued that larger forces in being and readily available are necessary to inhibit a would-be aggressor than to provide the nucleus of strength and the mobilization base on which the tremendous forces required for victory can be built. For example, in both World Wars I and II the ultimate

victors had the strength, in the end, to win though they had not had the strength in being or readily available to prevent the outbreak of war. In part, at least, this was because they had not had the military strength on which to base a strong foreign policy. At any rate, it is clear that a substantial and rapid building up of strength in the free world is necessary to support a firm policy intended to check and to roll back the Kremlin's drive for world domination.

Moreover, the United States and the other free countries do not now have the forces in being and readily available to defeat local Soviet moves with local action, but must accept reverses or make these local moves the occasion for war—for which we are not prepared. This situation makes for great uneasiness among our allies, particularly in Western Europe, for whom total war means, initially, Soviet occupation. Thus, unless our combined strength is rapidly increased, our allies will tend to become increasingly reluctant to support a firm foreign policy on our part and increasingly anxious to seek other solutions, even though they are aware that appeasement means defeat. An important advantage in adopting the fourth course of action lies in its psychological impact—the revival of confidence and hope in the future. It is recognized, of course, that any announcement of the recommended course of action could be exploited by the Soviet Union in its peace campaign and would have adverse psychological effects in certain parts of the free world until the necessary increase in strength has been achieved. Therefore, in any announcement of policy and in the character of the measures adopted, emphasis should be given to the essentially defensive character and care should be taken to minimize, so far as possible, unfavorable domestic and foreign reactions.

2. Political and economic aspects. The immediate objectives—to the achievement of which such a build-up of strength is a necessary though not a sufficient condition—are a renewed initiative in the cold war and a situation to which the Kremlin would find it expedient to accommodate itself, first by relaxing tensions and pressures and then by gradual withdrawal. The United States cannot alone provide the resources required for such a build-up of strength. The other free countries must carry their part of the burden, but their

ability and determination to do it will depend on the action the United States takes to develop its own strength and on the adequacy of its foreign political and economic policies. Improvement in political and economic conditions in the free world, as has been emphasized above, is necessary as a basis for building up the will and the means to resist and for dynamically affirming the integrity and vitality of our free and democratic way of life on which our ultimate victory depends.

At the same time, we should take dynamic steps to reduce the power and influence of the Kremlin inside the Soviet Union and other areas under its control. The objective would be the establishment of friendly regimes not under Kremlin domination. Such action is essential to engage the Kremlin's attention, keep it off balance, and force an increased expenditure of Soviet resources in counteraction. In other words, it would be the current Soviet cold war technique used against the Soviet Union.

A program for rapidly building up strength and improving political and economic conditions will place heavy demands on our courage and intelligence; it will be costly; it will be dangerous. But half-measures will be more costly and more dangerous, for they will be inadequate to prevent and may actually invite war. Budgetary considerations will need to be subordinated to the stark fact that our very independence as a nation may be at stake.

A comprehensive and decisive program to win the peace and frustrate the Kremlin design should be so designed that it can be sustained for as long as necessary to achieve our national objectives. It would probably involve:

1. The development of an adequate political and economic framework for the achievement of our long-range objectives.
2. A substantial increase in expenditures for military purposes adequate to meet the requirements for the tasks listed in Section D-1.
3. A substantial increase in military assistance programs, designed to foster cooperative efforts, which will adequately and efficiently meet the

requirements of our allies for the tasks referred to in Section D-1-e.

4. Some increase in economic assistance programs and recognition of the need to continue these programs until their purposes have been accomplished.
5. A concerted attack on the problem of the United States balance of payments, along the lines already approved by the President.
6. Development of programs designed to build and maintain confidence among other peoples in our strength and resolution, and to wage overt psychological warfare calculated to encourage mass defections from Soviet allegiance and to frustrate the Kremlin design in other ways.
7. Intensification of affirmative and timely measures and operations by covert means in the fields of economic warfare and political and psychological warfare with a view to fomenting and supporting unrest and revolt in selected strategic satellite countries.
8. Development of internal security and civilian defense programs.
9. Improvement and intensification of intelligence activities.
10. Reduction of Federal expenditures for purposes other than defense and foreign assistance, if necessary by the deferment of certain desirable programs.
11. Increased taxes.

Essential as prerequisites to the success of this program would be (a) consultations with Congressional leaders designed to make the program the object of non-partisan legislative support, and (b) a presentation to the public of a full explanation of the facts and implications of present international trends.

The program will be costly, but it is relevant to recall the disproportion between the potential capabilities of the Soviet and non-Soviet worlds (cf. Chapters V and VI). The Soviet Union is currently devoting about 40 percent of available resources (gross national product plus reparations, equal in 1949 to about \$65 billion) to military expenditures (14 percent) and to investment (26 percent), much of which is in war-supporting industries. In an emergency the Soviet Union could increase

the allocation of resources to these purposes to about 50 percent, or by one-fourth.

The United States is currently devoting about 22 percent of its gross national product (\$255 billion in 1949) to military expenditures (6 percent), foreign assistance (2 percent), and investment (14 percent), little of which is in war-supporting industries. (As was pointed out in Chapter V, the "fighting value" obtained per dollar of expenditure by the Soviet Union considerably exceeds that obtained by the United States, primarily because of the extremely low military and civilian living standards in the Soviet Union.) In an emergency the United States could devote upward of 50 percent of its gross national product to these purposes (as it did during the last war), an increase of several times present expenditures for direct and indirect military purposes and foreign assistance.

From the point of view of the economy as a whole, the program might not result in a real decrease in the standard of living, for the economic effects of the program might be to increase the gross national product by more than the amount being absorbed for additional military and foreign assistance purposes. One of the most significant lessons of our World War II experience was that the American economy, when it operates at a level approaching full efficiency, can provide enormous resources for purposes other than civilian consumption while simultaneously providing a high standard of living. After allowing for price changes, personal consumption expenditures rose by about one-fifth between 1939 and 1944, even though the economy had in the meantime increased the amount of resources going into Government use by \$60-\$65 billion (in 1939 prices).

This comparison between the potentials of the Soviet Union and the United States also holds true for the Soviet world and the free world and is of fundamental importance in considering the courses of action open to the United States.

The comparison gives renewed emphasis to the fact that the problems faced by the free countries in their efforts to build a successfully functioning system lie not so much in the field of economics as in the field of politics. The building of such a system may require

more rapid progress toward the closer association of the free countries in harmony with the concept of the United Nations. It is clear that our long-range objectives require a strengthened United Nations, or a successor organization, to which the world can look for the maintenance of peace and order in a system based on freedom and justice. It also seems clear that a unifying ideal of this kind might awaken and arouse the latent spiritual energies of free men everywhere and obtain their enthusiastic support for a positive program for peace going far beyond the frustration of the Kremlin design and opening vistas to the future that would outweigh short-run sacrifices.

The threat to the free world involved in the development of the Soviet Union's atomic and other capabilities will rise steadily and rather rapidly. For the time being, the United States possesses a marked atomic superiority over the Soviet Union which, together with the potential capabilities of the United States and other free countries in other forces and weapons, inhibits aggressive Soviet action. This provides an opportunity for the United States, in cooperation with other free countries, to launch a build-up of strength which will support a firm policy directed to the frustration of the Kremlin design. The immediate goal of our efforts to build a successfully functioning political and economic system in the free world backed by adequate military strength is to postpone and avert the disastrous situation which, in light of the Soviet Union's probable fission bomb capability and possible thermonuclear bomb capability, might arise in 1954 on a continuation of our present programs. By acting promptly and vigorously in such a way that this date is, so to speak, pushed into the future, we would permit time for the process of accommodation, withdrawal and frustration to produce the necessary changes in the Soviet system. Time is short, however, and the risks of war attendant upon a decision to build up strength will steadily increase the longer we defer it.

CONCLUSIONS AND RECOMMENDATIONS

Conclusions

The foregoing analysis indicates that the probable fission bomb capability and possible thermonuclear bomb

capability of the Soviet Union have greatly intensified the Soviet threat to the security of the United States. This threat is of the same character as that described in NSC 20/4 (approved by the President on November 24, 1948) but is more immediate than had previously been estimated. In particular, the United States now faces the contingency that within the next four or five years the Soviet Union will possess the military capability of delivering a surprise atomic attack of such weight that the United States must have substantially increased general air, ground, and sea strength, atomic capabilities, and air and civilian defenses to deter war and to provide reasonable assurance, in the event of war, that it could survive the initial blow and go on to the eventual attainment of its objectives. In return, this contingency requires the intensification of our efforts in the fields of intelligence and research and development.

[. .]

A continuation of present trends would result in a serious decline in the strength of the free world relative to the Soviet Union and its satellites. This unfavorable trend arises from the inadequacy of current programs and plans rather than from any error in our objectives and aims. These trends lead in the direction of isolation, not by deliberate decision but by lack of the necessary basis for a vigorous initiative in the conflict with the Soviet Union.

Our position as the center of power in the free world places a heavy responsibility upon the United States for leadership. We must organize and enlist the energies and resources of the free world in a positive program for peace which will frustrate the Kremlin design for world domination by creating a situation in the free world to which the Kremlin will be compelled to adjust. Without such a cooperative effort, led by the United States, we will have to make gradual withdrawals under pressure until we discover one day that we have sacrificed positions of vital interest.

It is imperative that this trend be reversed by a much more rapid and concerted build-up of the actual strength of both the United States and the other nations

of the free world. The analysis shows that this will be costly and will involve significant domestic financial and economic adjustments.

The execution of such a build-up, however, requires that the United States have an affirmative program beyond the solely defensive one of countering the threat posed by the Soviet Union. This program must light the path to peace and order among nations in a system based on freedom and justice, as contemplated in the Charter of the United Nations. Further, it must envisage the political and economic measures with which and the military shield behind which the free world can work to frustrate the Kremlin design by the strategy of the cold war; for every consideration of devotion to our fundamental values and to our national security demands that we achieve our objectives by the strategy of the cold war, building up our military strength in order that it may not have to be used. The only sure victory lies in the frustration of the Kremlin design by the steady development of the moral and material strength of the free world and its projection into the Soviet world in such a way as to bring about an internal change in the Soviet system. Such a positive program—harmonious with our fundamental national purpose and our objectives—is necessary if we are to regain and retain the initiative and to win and hold the necessary popular support and cooperation in the United States and the rest of the free world.

This program should include a plan for negotiation with the Soviet Union, developed and agreed with our allies and which is consonant with our objectives. The United States and its allies, particularly the United Kingdom and France, should always be ready to negotiate with the Soviet Union on terms consistent with our objectives. The present world situation, however, is one which militates against successful negotiations with the Kremlin—for the terms of agreements on important pending issues would reflect present realities and would therefore be unacceptable, if not disastrous, to the United States and the rest of the free world. After a decision and a start on building up the strength

of the free world has been made, it might then be desirable for the United States to take an initiative in seeking negotiations in the hope that it might facilitate the process of accommodation by the Kremlin to the new situation. Failing that, the unwillingness of the Kremlin to accept equitable terms or its bad faith in observing them would assist in consolidating popular opinion in the free world in support of the measures necessary to sustain the build-up.

In summary, we must, by means of a rapid and sustained build-up of the political, economic, and military strength of the free world, and by means of an affirmative program intended to wrest the initiative from the Soviet Union, confront it with convincing evidence of the determination and ability of the free world to frustrate the Kremlin design of a world dominated by its will. Such evidence is the only means short of war which eventually may force the Kremlin to abandon its present course of action and to negotiate acceptable agreements on issues of major importance.

The whole success of the proposed program hangs ultimately on recognition by this Government, the American people, and all free peoples, that the cold war is in fact a real war in which the survival of the free world is at stake. Essential prerequisites to success are consultations with Congressional leaders designed to make the program the object of non-partisan legislative support, and a presentation to the public of a full explanation of the facts and implications of the present international situation. The prosecution of the program will require of us all the ingenuity, sacrifice, and unity demanded by the vital importance of the issue and the tenacity to persevere until our national objectives have been attained.

36. Josef Stalin, Mao Zedong, and Zhou Enlai: Telegram Exchange, 1950

Introduction

After General Douglas MacArthur led a surprise invasion at Inchon in central Korea in September 1950, United Nations (UN) troops crossed the 38th Parallel into the Democratic People's Republic of Korea (DPRK, North Korea), turning the tide in the Korean War. As UN forces neared complete victory at the beginning of October, Soviet leader Josef Stalin and Chinese leader Mao Zedong exchanged telegrams on how they should react to the UN advance. Stalin, clearly not prepared to commit Soviet troops, begged Mao to send his own forces, in the guise of volunteers, to aid beleaguered North Korean leader Kim Il Sung. According to the official Chinese published version, Mao promptly did so, cabling back the next day. Documents now available in Soviet archives, however, give a more complex picture, revealing that the Soviets did not receive this message. Mao initially refused to dispatch Chinese troops to the Korean War, arguing that there was a danger that this would expand the war into a full-scale confrontation between China and the United States, which might even involve the Soviet Union. V. N. Roshchin, Soviet ambassador in Beijing, commented that Mao had retreated from earlier promises of military assistance to North Korea. It is not clear whether Mao was genuinely wavering, whether he sought to obtain more generous aid from Stalin for China's war effort, or whether, facing substantial opposition within the Chinese politburo, he felt unable to promise Chinese intervention. Within two weeks, Roshchin was able to inform Stalin that Mao had reversed his position, a decision that quickly triggered large-scale Chinese troop deployments in North Korea. The new Chinese forces quickly drove the surprised UN troops back well beyond the 38th Parallel but were unable to achieve a total victory over their opponents. By spring of the following year, the war had settled into a near stalemate that would last until an armistice was signed in summer 1953.

Primary Source

Telegram from Filippov [Stalin] to Mao Zedong and Zhou Enlai, 1 October 1950

I am far away from Moscow on vacation and somewhat detached from events in Korea. However, judging by the information that I have received from Moscow today, I see that the situation of our Korean friends is getting desperate.

It was on 16 September already that Moscow warned our Korean friends that the landing of the U.S. troops at Chemulp'o [Inchon] had great significance and was aimed at cutting off the First and Second Army Groups of the North Koreans from their rear in the North. Moscow admonished them to withdraw at least four divisions from the South immediately, to set up a front-line to the north and east of Seoul, and later to gradually pull out most of the troops fighting in the South northward, thereby providing for the defense of the 38th parallel. However, the 1 and 2 Army Groups' Commands failed to implement Kim Il Sung's order for the withdrawal of troops northward, which allowed the U.S. troops to cut them off and surround them. Our Korean friends have no troops capable of resistance in the

vicinity of Seoul. Hence, one needs to consider the way toward the 38th parallel wide open.

I think that if in the current situation you consider it possible to send troops to assist the Koreans, then you should move at least five–six divisions toward the 38th parallel at once so as to give our Korean comrades an opportunity to organize combat reserves north of the 38th parallel under the cover of your troops. The Chinese divisions could be considered as volunteers, with Chinese in command at the head, of course.

I have not informed and am not going to inform our Korean friends about this idea, but I have no doubt in my mind that they will be glad when they learn about it. I await your reply.

Telegram from Mao Zedong to Josef Stalin, 2 October 1950

1. We have decided to send some of our troops to Korea under the name of [Chinese People's] Volunteers to fight the United States and its lackey Syngman Rhee and to aid our Korean comrades. From the following considerations, we think it necessary to do so:

the Korean revolutionary force will meet with a fundamental defeat, and the American aggressors will rampage unchecked once they occupy the whole of Korea. This will be unfavorable to the entire East.

2. Since we have decided to send Chinese troops to fight the Americans in Korea, we hold that, first, we should be able to solve the problem; that is, [we are] ready to annihilate and drive out the invading armies of the United States and other countries. Second, since Chinese troops are to fight American troops in Korea (although we will use the name Volunteers), we must be prepared for a declaration of war by the United States and for the subsequent use of the U.S. air force to bomb many of China's main cities and industrial bases, as well as an attack by the U.S. Navy on [our] coastal areas.

3. Of these two problems, the primary problem is whether or not the Chinese troops can annihilate the American troops in Korea and effectively resolve the Korean issue. Only when it is possible for our troops to annihilate the American troops in Korea, principally the Eighth Army (an old army with combat effectiveness), can the situation become favorable to the revolutionary camp and to China, although the second problem (a declaration of war by the United States) is still a serious one. This means that the Korean issue will be solved in reality along with the defeat of American troops (in name it probably will remain unsolved because the United States most likely will not admit Korea's victory for a considerable period of time). Consequently, even if the United States declares war on China, the war will probably not be of great scope or last long. The most unfavorable situation, we hold, would result from the inability of the Chinese troops to annihilate American troops in Korea and the involvement of the two countries' troops in a stalemate while the United States publicly declares war on China, undermines the plans for China's economic reconstruction, which has already begun, and sparks the dissatisfaction of [China's] national bourgeoisie and other segments of the people (they are very afraid of war).

4. Under the current situation, we have reached a decision to order the 12 divisions stationed in advance in South Manchuria to set off on October 15. They

will be deployed in appropriate areas in North Korea (not necessarily reaching to the 38th Parallel). On the one hand, they will fight the enemies who dare to cross the 38th Parallel. At the initial stage, they will merely engage in defensive warfare to wipe out small detachments of enemy troops and ascertain the enemy's situation; on the other hand, they will wait for the delivery of Soviet weapons. Once they are [well] equipped, they will cooperate with the Korean comrades in counterattacks to annihilate American aggressor troops.

5. According to our intelligence to date, an American corps (composed of two infantry divisions and a mechanized division) has 1,500 guns of 70mm to 240mm caliber, including tank cannons and anti-aircraft guns. In comparison, each of our corps (composed of three divisions) has only 36 such guns. The enemy dominates the air. By comparison, we have only just started training pilots. We shall not be able to employ more than 300 aircraft in combat until February 1951. Accordingly, we do not now have any certainty of success in annihilating a single American corps in one blow. Since we have made the decision to fight the Americans, we certainly must be prepared to deal with a situation in which the U.S. headquarters will employ one American corps against our troops in one [of the Korean] theaters. For the purpose of eliminating completely one enemy corps with a certainty of success, we should in such a situation assemble four times as many troops as the enemy (employing four corps to deal with one enemy corps) and firepower from one-and-a-half times to twice as heavy as the enemy's (using 2,200 to 3,000 guns of more than 70mm caliber to deal with 1,500 enemy guns of the same caliber).

6. In addition to the above-mentioned 12 divisions, we are moving 24 divisions from south of the Yangtze River and from Shaanxi and Gansu provinces to areas along the Xuzhou-Lanzhou, Tianjin-Pukou, and Beijing-Shenyang railroad lines. We plan to employ these divisions as the second and third groups of troops sent to aid Korea in the spring and summer of next year as the future situation requires.

37. Harry S. Truman and Clement Attlee: Joint Communiqué, 8 December 1950

Introduction

The intervention of communist China in the Korean War in November 1950 came as a major shock to the Western powers. Before this event, United Nations (UN) commander Douglas MacArthur had promised that the war would be over by Christmas. The entry of China transformed the war. Initially, the Chinese drove South Korean and UN forces back down the Korean peninsula and well across the former 38th Parallel border dividing the Democratic People's Republic of Korea (DPRK, North Korea) and the Republic of Korea (ROK, South Korea). By spring of 1951, the noncommunist forces had recovered some of the lost ground, and the two sides eventually found themselves facing each other in positions not far removed from the original frontier between the two states. Even so, the conflict had changed decisively from one in which full-scale victory was anticipated in the near future to a limited war of attrition in which all the major powers were seeking to restrain the further spread of hostilities and prevent any broadening of the war beyond its existing boundaries. The British, who had contributed substantial forces to the UN Korea force, were particularly eager to avoid any expansion of the war. Using this opportunity to demonstrate his country's loyalty to the United States, its foremost NATO ally, in July 1950 British Prime Minister Clement Attlee committed British troops to the American-led UN forces. British officials welcomed the massive American enhancement of NATO forces that quickly resulted from the Korean conflict. Even so, Attlee was anxious to restrain the United States, fearing that American leaders might escalate the Korean intervention into full-scale war with China and perhaps even the Soviet Union, jeopardizing Britain's Asian colonies, alienating India, diverting American forces from Europe and the Middle East, and, in the worst eventuality, risking Soviet devastation of Western Europe. Attlee supported the fall 1950 UN decision to cross the 38th Parallel, believing that neither the Soviets nor the Chinese would intervene. When the Chinese did so, British leaders sought to prevent the conflict's further expansion. President Harry S. Truman's public comments that month that the United States might employ atomic weapons reinforced their anxieties. In early December, Attlee flew to Washington seeking to reassure the British public, restrain the United States, and reaffirm Britain's status within the Atlantic alliance. In a series of six meetings with Attlee, Truman and Secretary of State Dean Acheson endorsed Attlee's view that UN forces in Korea should not seek total victory but should only aim to achieve an acceptable battlefield position giving them a line along which they could negotiate an armistice. They refused, however, to offer China political or diplomatic concessions in exchange for a cease-fire. Publicly, the two Western leaders issued a joint communiqué announcing that they would continue their strong support of UN forces in Korea and cooperate in building up their military forces in Europe as well as in Asia. They did, however, open the door to negotiations with their opponents and left open the question of the future status of Taiwan. Attlee exaggerated his successes when he returned to Britain, and the belief became widespread that he had prevented further American escalation of the war. Alarmed by UN commander General Douglas MacArthur's bellicose subsequent pronouncements on the potential use of nuclear weapons, Attlee welcomed the general's dismissal by Truman in April 1951.

Primary Source

[. . .]

We have reviewed together the outstanding problems facing our two countries in international affairs. The objectives of our two nations in foreign policy are the same: to maintain world peace and respect for the fights and interests of all peoples, to promote strength and confidence among the freedom-loving countries of the

world, to eliminate the causes of fear, want and discontent, and to advance the democratic way of life.

We first reviewed the changed aspect of world affairs arising from the massive intervention of Chinese Communists in Korea. We have discussed the problems of the Far East and the situation as it now presents itself in Europe. We have surveyed the economic problems and the defense programs of our respective countries,

and particularly the existing and threatened shortages of raw materials. We have considered the arrangements for the defense of the Atlantic community, and our future course in the United Nations.

The unity of objectives of our two countries underlay all the discussions. There is no difference between us as to the nature of the threat which our countries face or the basic policies which must be pursued to overcome it. We recognize that many of the problems which we have discussed can only be decided through the procedures of the United Nations or the North Atlantic Treaty Organization.

The peoples of the United States and the United Kingdom will act together with resolution and unity to meet the challenge to peace which recent weeks have made clear to all.

The situation in Korea is one of great gravity and far-reaching consequences. By the end of October, the forces of the United Nations had all but completed the mission set for them by the United Nations “to repel the armed attack and to restore international peace and security in the area.” A free and unified Korea—the objective which the United Nations has long sought—was well on the way to being realized. At that point Chinese Communist forces entered Korea in large numbers, and on November 27 launched a large-scale attack on the United Nations troops. The United Nations forces have the advantage of superior air power and naval support, but on the ground they are confronted by a heavy numerical superiority.

The United Nations forces were sent into Korea on the authority and at the recommendation of the United Nations. The United Nations has not changed the mission which it has entrusted to them and the forces of our two countries will continue to discharge their responsibilities.

We were in complete agreement that there can be no thought of appeasement or of rewarding aggression, whether in the Far East or elsewhere. Lasting peace and the future of the United Nations as an instrument for world peace depend upon strong support for resistance against aggression.

For our part we are ready, as we have always been, to seek an end to the hostilities by means of negotiation. The same principles of international conduct should be applied to this situation as are applied, in accordance with our obligations under the Charter of the United Nations, to any threat to world peace. Every effort must be made to achieve the purposes of the United Nations in Korea by peaceful means and to find a solution of the Korean problem on the basis of a free and independent Korea. We are confident that the great majority of the United Nations takes the same view. If the Chinese on their side display any evidence of a similar attitude, we are hopeful that the cause of peace can be upheld. If they do not, then it will be for the peoples of the world, acting through the United Nations, to decide how the principles of the Charter can best be maintained. For our part, we declare in advance our firm resolve to uphold them.

We considered two questions regarding China which are already before the United Nations. On the question of the Chinese seat in the United Nations, the two governments differ. The United Kingdom has recognized the Central People’s Government and considers that its representatives should occupy China’s seat in the United Nations. The United States has opposed and continues to oppose the seating of the Chinese communist representatives in the United Nations. We have discussed our difference of view on this point and are determined to prevent it from interfering with our united effort in support of our common objectives.

On the question of Formosa, we have noted that both Chinese claimants have insisted upon the validity of the Cairo Declaration and have expressed reluctance to have the matter considered by the United Nations. We agreed that the issues should be settled by peaceful means and in such a way as to safeguard the interests of the people of Formosa and the maintenance of peace and security in the Pacific, and that consideration of this question by the United Nations will contribute to these ends.

The free nations of Asia have given strong support to the United Nations and have worked for world peace. Communist aggression in Korea increases the danger

to the security and independence of these nations. We reaffirm our intention to continue to help them.

The pressure of communist expansion existed in Europe and elsewhere long before the aggression against Korea, and measures were taken to meet it. The need to strengthen the forces of collective security had already been recognized and action for this purpose is under way. Clearly, decisions regarding the Far East have their repercussions and effects elsewhere. In considering the necessities of the Far Eastern situation, we have kept in mind the urgency of building up the strength of the whole free world. We are in complete agreement on the need for immediate action by all the North Atlantic Treaty countries to intensify their efforts to build up their defenses and to strength[en] the Atlantic Community.

We recognize that adequate defense forces are essential if war is to be prevented.

Accordingly, we have reached the following conclusions:

1. The military capabilities of the United States and the United Kingdom should be increased as rapidly as possible.
2. The two countries should expand the production of arms which can be used by the forces of all the free nations that are joined together in common defense. Together with those other nations the United States and the United Kingdom should continue to work out mutual arrangements by which all will contribute appropriately to the common defense.

We agreed that as soon as the plan now nearing completion in the North Atlantic Treaty Organization for an effective integrated force for the defense of Europe is approved, a Supreme Commander should be appointed. It is our joint desire that this appointment shall be made soon.

In addition to these decisions on increasing our military strength, we have agreed that the maintenance of healthy civilian economies is of vital importance to the success of our defense efforts. We agreed that, while defense production must be given the highest practi-

cable priority in the case of raw materials whose supply is inadequate, the essential civilian requirements of the free countries must be met so far as practicable. In order to obtain the necessary materials and to devote them as rapidly as possible to these priority purposes, we have agreed to work closely together for the purpose of increasing supplies of raw materials. We have recognized the necessity of international action to assure that basic raw materials are distributed equitably in accordance with defense and essential civilian needs. We discussed certain immediate problems of raw materials shortages and consideration of these specific matters will continue. We are fully conscious of the increasing necessity of preventing materials and items of strategic importance from flowing into the hands of those who might use them against the free world.

In the circumstances which confront us throughout the world our nations have no other choice but to devote themselves with all vigor to the building up of our defense forces. We shall do this purely as a defensive measure. We believe that the communist leaders of the Soviet Union and China could, if they chose, modify their conduct in such a way as to make these defense preparations unnecessary. We shall do everything that we can, through whatever channels are open to us, to impress this view upon them and to seek a peaceful solution of existing issues.

The President stated that it was his hope that world conditions would never call for the use of the atomic bomb. The President told the Prime Minister that it was also his desire to keep the Prime Minister at all times informed of developments which might bring about a change in the situation.

In this critical period, it is a source of satisfaction to us that the views of our governments on basic problems are so similar. We believe that this identity of aims will enable our governments to carry out their determination to work together to strengthen the unity which has already been achieved among the free nations and to defend those values which are of fundamental importance to the people we represent.

38. Harry S. Truman: Truman's Declaration of a National Emergency, 16 December 1950

Introduction

Until late November 1950, when it became apparent that communist Chinese forces had intervened in large numbers in the Korean War, the Democratic administration of President Harry S. Truman assumed that by the end of 1950 the conflict would be over and would have ended in a sweeping United Nations (UN) victory, uniting all Korea under a pro-Western government. Chinese intervention ensured that the fighting would be protracted and would eventually end in a stalemate, a compromise that completely satisfied none of the combatants. It also meant that the United States would have to make far greater efforts than originally expected to attain even these limited goals. As the forces under General Douglas MacArthur's command retreated in a near rout throughout December, Truman proclaimed a national state of emergency, urging the American people to make all necessary sacrifices to ensure their country's ultimate triumph over communism. In apocalyptic terms, Truman warned that unless they did so, they faced a communist threat to their way of life, which would mean that Americans would lose the freedoms of religion, speech, thought, education, and political and economic activity that they currently enjoyed. The draft was reinstated for young men of military age, and rationing and price controls were imposed. The United States also launched a massive military buildup, implementing the permanent expansion of its armed forces and American overseas bases and commitments envisaged the previous year in the policy planning paper NSC-68.

Primary Source

By the President of the United States of America a Proclamation

WHEREAS recent events in Korea and elsewhere constitute a grave threat to the peace of the world and imperil the efforts of this country and those of the United Nations to prevent aggression and armed conflict; and

WHEREAS world conquest by communist imperialism is the goal of the forces of aggression that have been loosed upon the world; and

WHEREAS, if the goal of communist imperialism were to be achieved, the people of this country would no longer enjoy the full and rich life they have with God's help built for themselves and their children; they would no longer enjoy the blessings of the freedom of worshipping as they severally choose, the freedom of reading and listening to what they choose, the right of free speech including the right to criticize their Government, the right to choose those who conduct their Government, the right to engage freely in collective bargaining, the right to engage freely in their own business enterprises, and the many other freedoms and rights which are a part of our way of life; and

WHEREAS the increasing menace of the forces of communist aggression requires that the national defense of the United States be strengthened as speedily as possible:

Now, THEREFORE, I, HARRY S. TRUMAN, President of the United States of America, do proclaim the existence of a national emergency, which requires that the military, naval, air, and civilian defenses of this country be strengthened as speedily as possible to the end that we may be able to repel any and all threats against our national security and to fulfill our responsibilities in the efforts being made through the United Nations and otherwise to bring about lasting peace.

I summon all citizens to make a united effort for the security and well-being of our beloved country and to place its needs foremost in thought and action that the full moral and material strength of the Nation may be readied for the dangers which threaten us.

I summon our farmers, our workers in industry, and our businessmen to make a mighty production effort to meet the defense requirements of the Nation and to this end to eliminate all waste and inefficiency and to subordinate all lesser interests to the common good.

I summon every person and every community to make, with a spirit of neighborliness, whatever sacrifices are necessary for the welfare of the Nation.

I summon all State and local leaders and officials to cooperate fully with the military and civilian defense agencies of the United States in the national defense program.

I summon all citizens to be loyal to the principles upon which our Nation is founded, to keep faith with our friends and allies, and to be firm in our devotion to the

peaceful purposes for which the United Nations was founded.

I am confident that we will meet the dangers that confront us with courage and determination, strong in the faith that we can thereby “secure the Blessings of Liberty to ourselves and our Posterity.”

39. Irving Kaufman: Rosenberg Trial, Statement upon Sentencing, 1951

Introduction

On 5 April 1951, U.S. judge Irving Kaufman sentenced American husband and wife Julius and Ethel Rosenberg to death after they had been convicted on charges of revealing nuclear secrets to the Soviet Union. The charges against the Rosenbergs were brought soon after the Soviet Union had successfully detonated an atomic bomb, a development for which the couple were—probably wrongly—held partly responsible. When sentencing them, Kaufman went so far as to argue that had the Soviets not possessed the atomic bomb, the Korean War would not have begun, holding the Rosenbergs directly responsible for this. Their prosecution became a radical cause célèbre, with leftist sympathizers arguing that the pair were innocent as well as drawing attention to numerous legal shortcomings in their defense and alleging that from the beginning the judge was prejudiced against them, depriving them of a fair trial. The case became extremely controversial and excited a great deal of public interest in the United States and around the globe, especially as the Rosenbergs appeared at first as such ordinary citizens. Both were Jewish, and to some it seemed that their prosecution had anti-Semitic overtones. Their conviction, however, heightened fears of a communist insurgency in America during the apex of the Cold War and gave additional impetus to the forces of McCarthyism. The Venona transcripts of intercepted Soviet cables and Soviet materials that have become available since the ending of the Cold War have confirmed that Julius Rosenberg, an aeronautical engineer who, like Ethel, had been a communist since the mid-1930s, had passed on documents on radar and aviation design to the Soviet Union, although nothing substantive relating to atomic weapons. Ethel's brother, Sergeant David Greenglass, who worked on the Los Alamos nuclear project, had also furnished information to Soviet representatives. Ethel Rosenberg's role was less clear. At most, it seems, she typed up some notes for her brother and husband. Her trial on charges of conspiracy to commit treason was apparently initiated largely as an unsuccessful effort to exert pressure on her husband to cooperate with the prosecution and finger other potential Soviet agents. Greenglass, who was spared the death penalty, later stated that he had exaggerated Ethel's involvement in order to reduce his own sentence. In the overheated anticommunist atmosphere of the early 1950s, however, with the Korean War in progress and McCarthyism at its height, leniency was in short supply. Although the Rosenbergs appealed their case to the U.S. Supreme Court, both of them were executed in the electric chair on 19 June 1953.

Primary Source

Citizens of this country who betray their fellow-countrymen can be under none of the delusions about the

benignity of Soviet power that they might have been prior to World War II. The nature of Russian terrorism is now self-evident. Idealism as a rationale dissolves . . .

I consider your crime worse than murder. Plain deliberate contemplated murder is dwarfed in magnitude by comparison with the crime you have committed. In committing the act of murder, the criminal kills only his victim. The immediate family is brought to grief and when justice is meted out the chapter is closed. But in your case, I believe your conduct in putting into the hands of the Russians the A-bomb years before our best scientists predicted Russia would perfect the bomb has already caused, in my opinion, the Communist aggression in Korea, with the resultant casualties exceeding 50,000 and who knows but that millions more of innocent people may pay the price of your treason. Indeed, by your betrayal you undoubtedly have altered the course of history to the disadvantage of our country.

No one can say that we do not live in a constant state of tension. We have evidence of your treachery all around us every day—for the civilian defense activities throughout the nation are aimed at preparing us for an atom bomb attack. Nor can it be said in mitigation of the offense that the power which set the conspiracy in motion and profited from it was not openly hostile to the United States at the time of the conspiracy. If this was your excuse the error of your ways in setting yourselves above our properly constituted authorities and the decision of those authorities not to share the information with Russia must now be obvious . . .

In the light of this, I can only conclude that the defendants entered into this most serious conspiracy against their country with full realization of its implications . . .

The statute of which the defendants at the bar stand convicted is clear. I have previously stated my view

that the verdict of guilty was amply justified by the evidence. In the light of the circumstances, I feel that I must pass such sentence upon the principals in this diabolical conspiracy to destroy a God-fearing nation, which will demonstrate with finality that this nation's security must remain inviolate; that traffic in military secrets, whether promoted by slavish devotion to a foreign ideology or by a desire for monetary gains must cease.

The evidence indicated quite clearly that Julius Rosenberg was the prime mover in this conspiracy. However, let no mistake be made about the role which his wife, Ethel Rosenberg, played in this conspiracy. Instead of deterring him from pursuing his ignoble cause, she encouraged and assisted the cause. She was a mature woman—almost three years older than her husband and almost seven years older than her younger brother. She was a full-fledged partner in this crime.

Indeed the defendants Julius and Ethel Rosenberg placed their devotion to their cause above their own personal safety and were conscious that they were sacrificing their own children, should their misdeeds be detected—all of which did not deter them from pursuing their course. Love for their cause dominated their lives—it was even greater than their love for their children.

40. Harry S. Truman: Statement and Order by the President on Relieving General MacArthur, April 1951

Introduction

Communist Chinese intervention in the Korean War in November 1950 helped bring to a head simmering tensions between President Harry S. Truman, by virtue of his position as commander in chief of all U.S. military forces, and General Douglas MacArthur, the strong-willed commander of United Nations (UN) forces in Korea. Truman feared that unduly forceful prosecution of the war might escalate it into a full-scale, nuclear-armed world war between the United States and the Soviet Union, which to date had only provided limited assistance to the North

Korean and Chinese armies. He was, moreover, mindful that since 1949 the Soviets had possessed usable nuclear weapons. Truman therefore sought to keep the conflict a limited war and confine it to the territory of Korea itself. The president took his cue in part from the fact that the Chinese troops fighting in Korea were nominally “volunteers,” a diplomatic fig leaf that allowed the new People’s Republic of China (PRC) to disclaim formal responsibility for its actions as and when Chinese leaders pleased, on the pretext that China itself had not gone to war. MacArthur favored a far more aggressive strategy, involving notably the use of atomic weapons against the Chinese industrial heartland of Manchuria, close to the North Korean border, and against other major Chinese cities as well as assisting Guomindang (Nationalist) Chinese troops now confined to Taiwan to mount a counterinvasion of the mainland. Such policies might well have brought open war between the United States and China. MacArthur’s open support for such tactics in the spring of 1951, in defiance of Truman’s expressed wishes, came at a time when the United States sought to open peace negotiations with the Chinese and North Koreans. Stating that the subordination of the military to civilian authority was one of the basic principles of the U.S. Constitution, in April 1951 Truman finally relieved the general of his command. Explaining his decision in a radio address to the American people that evening, Truman warned that had the United States adopted the strategy MacArthur advocated, it risked full-scale war with China and possibly even with the Soviet Union, although he suspected that the Soviet Union would sit on the sidelines and perhaps seek gains in Europe while the United States was preoccupied in Asia. While affirming his determination to maintain the independence of the Republic of Korea (ROK, South Korea), Truman argued that a war for limited objectives was the only prudent course open to the United States. His outlook epitomized one fundamental dilemma facing all the major powers throughout the Cold War: while none of the great powers wished to diminish its own credibility, none could afford to risk full-scale warfare with each other.

Primary Source

Statement by the President

With deep regret I have concluded that General of the Army Douglas MacArthur is unable to give his wholehearted support to the policies of the United States Government and of the United Nations in matters pertaining to his official duties. In view of the specific responsibilities imposed upon me by the Constitution of the United States and the added responsibility which has been entrusted to me by the United Nations, I have decided that I must make a change of command in the Far East. I have, therefore, relieved General MacArthur of his commands and have designated Lt. Gen. Matthew B. Ridgway as his successor.

Full and vigorous debate on matters of national policy is a vital element in the constitutional system of our free democracy. It is fundamental, however, that military commanders must be governed by the policies and directives issued to them in the manner provided by our laws and Constitution. In time of crisis, this consideration is particularly compelling.

General MacArthur’s place in history as one of our greatest commanders is fully established. The Nation owes him a debt of gratitude for the distinguished and

exceptional service which he has rendered his country in posts of great responsibility. For that reason I repeat my regret at the necessity for the action I feel compelled to take in his case.

Order by the President to General MacArthur

I deeply regret that it becomes my duty as President and Commander in Chief of the United States military forces to replace you as Supreme Commander, Allied Powers; Commander in Chief, United Nations Command; Commander in Chief, Far East; and Commanding General, U.S. Army, Far East.

You will turn over your commands, effective at once, to Lt. Gen. Matthew B. Ridgway. You are authorized to have issued such orders as are necessary to complete desired travel to such place as you select.

My reasons for your replacement will be made public concurrently with the delivery to you of the foregoing order, and are contained in the next following message. [See Statement by the President.]

Radio Report to the American People on Korea and on U.S. Policy in the Far East, 11 April 1951

My fellow, Americans:

I want to talk to you plainly tonight about what we are doing in Korea and about our policy in the Far East.

In the simplest terms, what we are doing in Korea is this: We are trying to prevent a third world war.

I think most people in this country recognized that fact last June. And they warmly supported the decision of the Government to help the Republic of Korea against the Communist aggressors. Now, many persons, even some who applauded our decision to defend Korea, have forgotten the basic reason for our action.

It is right for us to be in Korea now. It was right last June. It is right today.

[. . .]

The aggression against Korea is the boldest and most dangerous move the Communists have yet made.

The attack on Korea was part of a greater plan for conquering all of Asia.

I would like to read to you from a secret intelligence report which came to us after the attack on Korea. It is a report of a speech a Communist army officer in North Korea gave to a group of spies and saboteurs last May, one month before South Korea was invaded. The report shows in great detail how this invasion was part of a carefully prepared plot. Here, in part, is what the Communist officer, who had been trained in Moscow, told his men: "Our forces," he said, "are scheduled to attack South Korean forces about the middle of June. . . . The coming attack on South Korea marks the first step toward the liberation of Asia."

Notice that he used the word "liberation." This is Communist doubletalk meaning "conquest."

I have another secret intelligence report here. This one tells what another Communist officer in the Far East told his men several months before the invasion of Korea. Here is what he said: "In order to successfully undertake the long-awaited world revolution, we must first unify Asia. . . . Java, Indochina, Malaya, India, Tibet, Thailand, Philippines, and Japan are our

ultimate targets. . . . The United States is the only obstacle on our road for the liberation of all the countries in southeast Asia. In other words, we must unify the people of Asia and crush the United States." Again, "liberation" in "commie" language means conquest.

That is what the Communist leaders are telling their people, and that is what they have been trying to do.

They want to control all Asia from the Kremlin.

[. . .]

So far, by fighting a limited war in Korea, we have prevented aggression from succeeding, and bringing on a general war. And the ability of the whole free world to resist Communist aggression has been greatly improved.

We have taught the enemy a lesson. He has found that aggression is not cheap or easy. Moreover, men all over the world who want to remain free have been given new courage and new hope. They know now that the champions of freedom can stand up and fight, and that they will stand up and fight.

Our resolute stand in Korea is helping the forces of freedom now fighting in Indochina and other countries in that part of the world. It has already slowed down the timetable of conquest.

In Korea itself there are signs that the enemy is building up his ground forces for a new mass offensive. We also know that there have been large increases in the enemy's available air forces.

If a new attack comes, I feel confident it will be turned back. The United Nations fighting forces are tough and able and well equipped. They are fighting for a just cause. They are proving to all the world that the principle of collective security will work. We are proud of all these forces for the magnificent job they have done against heavy odds. We pray that their efforts may succeed, for upon their success may hinge the peace of the world.

[. . .]

The dangers are great. Make no mistake about it. Behind the North Koreans and Chinese Communists in the front lines stand additional millions of Chinese soldiers. And behind the Chinese stand the tanks, the planes, the submarines, the soldiers, and the scheming rulers of the Soviet Union.

Our aim is to avoid the spread of the conflict.

The course we have been following is the one best calculated to avoid an all-out war. It is the course consistent with our obligation to do all we can to maintain international peace and security. Our experience in Greece and Berlin shows that it is the most effective course of action we can follow.

First of all, it is clear that our efforts in Korea can blunt the will of the Chinese Communists to continue the struggle. The United Nations forces have put up a tremendous fight in Korea and have inflicted very heavy casualties on the enemy. Our forces are stronger now than they have been before. These are plain facts which may discourage the Chinese Communists from continuing their attack.

Second, the free world as a whole is growing in military strength every day. In the United States, in Western Europe, and throughout the world, free men are alert to the Soviet threat and are building their defenses. This may discourage the Communist rulers from continuing the war in Korea—and from undertaking new acts of aggression elsewhere.

If the Communist authorities realize that they cannot defeat us in Korea, if they realize it would be foolhardy to widen the hostilities beyond Korea, then they may recognize the folly of continuing their aggression. A peaceful settlement may then be possible. The door is always open.

Then we may achieve a settlement in Korea which will not compromise the principles and purposes of the United Nations.

I have thought long and hard about this question of extending the war in Asia. I have discussed it many

times with the ablest military advisers in the country. I believe with all my heart that the course we are following is the best course.

I believe that we must try to limit the war to Korea for these vital reasons: to make sure that the precious lives of our fighting men are not wasted; to see that the security of our country and the free world is not needlessly jeopardized; and to prevent a third world war.

A number of events have made it evident that General MacArthur did not agree with that policy. I have therefore considered it essential to relieve General MacArthur so that there would be no doubt or confusion as to the real purpose and aim of our policy.

It was with the deepest personal regret that I found myself compelled to take this action. General MacArthur is one of our greatest military commanders. But the cause of world peace is much more important than any individual.

The change in commands in the Far East means no change whatever in the policy of the United States. We will carry on the fight in Korea with vigor and determination in an effort to bring the war to a speedy and successful conclusion. The new commander, Lt. Gen. Matthew Ridgway, has already demonstrated that he has the great qualities of military leadership needed for this task.

We are ready, at any time, to negotiate for a restoration of peace in the area. But we will not engage in appeasement. We are only interested in real peace.

Real peace can be achieved through a settlement based on the following factors:

One: The fighting must stop.

Two: Concrete steps must be taken to insure that the fighting will not break out again.

Three: There must be an end to the aggression.

A settlement founded upon these elements would open the way for the unification of Korea and the withdrawal of all foreign forces.

In the meantime, I want to be clear about our military objective. We are fighting to resist an outrageous aggression in Korea. We are trying to keep the Korean conflict from spreading to other areas. But at the same time we must conduct our military activities so as to insure the security of our forces. This is essential if they are to continue the fight until the enemy abandons its ruthless attempt to destroy the Republic of Korea.

That is our military objective—to repel attack and to restore peace.

In the hard fighting in Korea, we are proving that collective action among nations is not only a high principle but a workable means of resisting aggression. Defeat of aggression in Korea may be the turning point in the world's search for a practical way of achieving peace and security.

The struggle of the United Nations in Korea is a struggle for peace.

Free nations have united their strength in an effort to prevent a third world war.

That war can come if the Communist rulers want it to come. But this Nation and its allies will not be responsible for its coming.

We do not want to widen the conflict. We will use every effort to prevent that disaster. And in so doing, we know that we are following the great principles of peace, freedom, and justice.

41. Douglas MacArthur: Postrecall Speech to Congress, 19 April 1951

Introduction

U.S. General Douglas MacArthur, Allied commander of United Nation (UN) forces during the Korean War, was an able general but also a controversial figure whom top American officials in Washington feared might readily use nuclear weapons to ignite World War III. MacArthur, commander of U.S. military forces in the Pacific during World War II, headed the postwar Allied forces that occupied Japan. In early July 1950, shortly after the onset of the Korean War, he was appointed commander of the UN forces that were to be deployed to Korea. MacArthur, a fierce anticommunist, also had close ties to Jiang Jieshi, the Chinese Guomindang (Nationalist) leader who fled to Taiwan in 1949 with the remnants of his forces as the Chinese Communist Party (CCP) conquered Mainland China. In defiance of Secretary of State Dean Acheson's policies, by June 1950 MacArthur already favored a continuing American commitment to Taiwan and hoped that U.S. forces would ultimately attack and overthrow the new People's Republic of China (PRC). As UN commander, in September 1950 MacArthur reversed the initial North Korean advances in the war by taking the enemy from behind after a daring amphibious landing at Inchon. The original remit of the UN resolution authorizing military intervention in Korea had been merely to drive North Korean troops out of the Republic of Korea (ROK, South Korea), but MacArthur's UN forces quickly drove the enemy back well beyond the earlier 38th Parallel border that had previously divided the Democratic People's Republic of Korea (DPRK, North Korea). MacArthur ignored Chinese warnings that should non-Korean troops cross this boundary and try to unite Korea under a noncommunist government, the PRC would in its turn intervene. In November 1950 hundreds of thousands of Chinese People's Volunteer Army (PLA) troops came to the assistance of North Korea, once more driving the UN army back well beyond the 38th Parallel boundary. Ignoring repeated instructions from President Harry S. Truman that he would not authorize the use of nuclear weapons against the PRC, a move that Truman feared might provoke Soviet intervention, in early 1951 MacArthur publicly advocated the employment of atomic bombs to devastate the northeastern Manchurian provinces, the Chinese industrial heartland bordering on North Korea, and thirty to fifty Chinese cities. Whereas Truman wished to wage a limited war, MacArthur favored total war, even at the risk of provoking World War III. MacArthur's bellicose

rhetoric was intended to undercut moves by Truman to open peace negotiations with the North Koreans and Chinese. It deeply alarmed the European allies of the United States, most of whom were contributing military contingents to the UN army but who feared that the Korean conflict might escalate into a full-scale great-power confrontation. Infuriated by the arrogant general's constant insubordination, Truman relieved MacArthur of his office on 11 April 1951. Eight days later, on 19 April, the still charismatic MacArthur used masterly rhetoric to deliver a farewell address to Congress, offering a defense of his actions in Korea. His speech was interrupted by thirty ovations. MacArthur's public popularity soared and that of Truman declined, but although MacArthur harbored political ambitions, he never served again in any significant public office. His criticisms of Truman's policies did, however, give additional ammunition to Senator Joseph McCarthy and others who repeatedly attacked Truman administration officials, claiming that they were overly soft on communism and that such figures as Secretary of State Dean Acheson and Secretary of Defense George C. Marshall were communist agents or at least gullible fellow travelers. During the Truman administration's final two years in office, such allegations helped to make both the Korean War and many of Truman's top officials extremely unpopular.

Primary Source

Mr. President, Mr. Speaker and distinguished members of the Congress:

I stand on this rostrum with a sense of deep humility and great pride—humility in the wake of those great American architects of our history who have stood here before me, pride in the reflection that this forum of legislative debate represents human liberty in the purest form yet devised.

[. . .]

Long exploited by the so-called colonial powers, with little opportunity to achieve any degree of social justice, individual dignity, or a higher standard of life such as guided our own noble administration of the Philippines, the peoples of Asia found their opportunity in the war just past to throw off the shackles of colonialism, and now see the dawn of new opportunity, a heretofore unfelt dignity, and the self-respect of political freedom.

Mustering half of the earth's population and 60 per cent of its natural resources, these peoples are rapidly consolidating a new force, both moral and material, with which to raise the living standard and erect adaptations of the design of modern progress to their own distinct cultural environments.

Whether one adheres to the concept of colonization or not, this is the direction of Asian progress and it may not be stopped. It is a corollary to the shift of the world

economic frontiers, as the whole epicenter of world affairs rotates back toward the area whence it started.

In this situation it becomes vital that our own country orient its policies in consonance with this basic evolutionary condition rather than pursue a course blind to the reality that the colonial era is now passed and the Asian peoples covet the right to shape their own free destiny. What they seek now is friendly guidance, understanding and support, not imperious direction; the dignity of equality and not the shame of subjugation. Their prewar standard of life, pitifully low, is infinitely lower now in the devastation left in war's wake.

World ideologies play little part in Asian thinking and are little understood. What the people strive for is the opportunity for a little more food in their stomachs, a little better clothing on their backs, and a little firmer roof over their heads, and the realization of the normal nationalist urge for political freedom.

These political-social conditions have but an indirect bearing upon our own national security but do form a backdrop to contemporary planning which must be thoughtfully considered if we are to avoid the pitfalls of unrealism.

Of more direct and immediate bearing upon our national security are the changes wrought in the strategic potential of the Pacific Ocean in the course of the past war. Prior thereto, the western strategic frontier of the United States lay on the littoral line of the Americas

with an exposed island salient extending out through Hawaii, Midway and Guam to the Philippines.

That salient proved not an outpost of strength but an avenue of weakness along which the enemy could and did attack. The Pacific was a potential area of advance for any predatory force intent upon striking at the bordering land areas.

All this was changed by our Pacific victory. Our strategic frontier then shifted to embrace the entire Pacific Ocean, which became a vast moat to protect us as long as we held it.

Indeed, it acts as a protective shield for all of the Americas and all free lands of the Pacific Ocean area. We control it to the shores of Asia by a chain of islands extending in an arc from the Aleutians to the Marianas held by us and our free allies.

From this island chain we can dominate with sea and air power every Asiatic port from Vladivostok to Singapore—with sea and air power, as I said, every port from Vladivostok to Singapore—and prevent any hostile movement into the Pacific. Any predatory attack from Asia must be an amphibious effort. No amphibious force can be successful without control of the sea lanes and the air over those lanes in its avenue of advance.

With naval and air supremacy and modest ground elements to defend bases, any major attack from continental Asia toward us or our friends in the Pacific would be doomed to failure. Under such conditions the Pacific no longer represents menacing avenues of approach for a prospective invader. It assumes instead the friendly aspect of a peaceful lake.

Our line of defense is a natural one and can be maintained with a minimum of military effort and expense. It envisions no attack against anyone, nor does it provide the bastions essential for offensive operations, but properly maintained would be an invincible defense against aggression.

The holding of this littoral defense line in the Western Pacific is entirely dependent upon holding all segments

thereof. For any major breach of this line by an unfriendly power would render vulnerable to determined attack every other major segment.

This is a military estimate as to which I have yet to find a military leader who will take exception.

For that reason I have strongly recommended in the past as a matter of military urgency that under no circumstances must Formosa fall under Communist control.

Such an eventuality would at once threaten the freedom of the Philippines and the loss of Japan, and might well force our western frontier back to the coast of California, Oregon and Washington.

[. . .]

While I was not consulted prior to the President's decision to intervene in support of the Republic of Korea, that decision, from a military standpoint, proved a sound one. As I say, it proved a sound one, as we hurled back the invader and decimated his forces. Our victory was complete and our objectives within reach when Red China intervened with numerically superior ground forces.

This created a new war and an entirely new situation, a situation not contemplated when our forces were committed against the North Korean invaders, a situation which called for new decisions in the diplomatic sphere to permit the realistic adjustment of military strategy.

Such decisions have not been forthcoming.

While no man in his right mind would advocate sending our ground forces into continental China, and such was never given a thought, the new situation did urgently demand a drastic revision of strategic planning if our political aim was to defeat this new enemy as we had defeated the old.

Apart from the military need, as I saw it, to neutralize the sanctuary protection given the enemy north of Yalu, I felt that military necessity in the conduct of the war made necessary, first, the intensification of our economic blockade against China; second, the imposition

of a naval blockade against the China coast; third, removal of restrictions on air reconnaissance of China's coastal areas and of Manchuria; fourth, removal of restrictions on the forces of the Republic of China on Formosa with logistical support to contribute to their effective operations against the Chinese mainland.

For entertaining these views, all professionally designed to support our forces committed to Korea and bring hostilities to an end with the least possible delay at a saving of countless American and Allied lives, I have been severely criticized in lay circles, principally abroad, despite my understanding that from a military standpoint the above views have been fully shared in the past by practically every military leader concerned with the Korean campaign, including our own Joint Chiefs of Staff.

I called for reinforcements, but was informed that reinforcements were not available. I made clear that, if not permitted to destroy the enemy-built-up bases north of the Yalu, if not permitted to utilize the friendly Chinese force of some 600,000 men on Formosa, if not permitted to blockade the China coast to prevent the Chinese Reds from getting succor from without, and if there were to be no hope of major reinforcements, the position of the command from the military standpoint forbade victory.

We could hold in Korea by constant maneuver, and at an approximate area where our supply-line advantages were in balance with the supply-line disadvantages of the enemy. But we could hope at best for only an indecisive campaign with its terrible and constant attrition upon our forces if the enemy utilized his full military potential.

I have constantly called for the new political decisions essential to a solution. Efforts have been made to distort my position. It has been said in effect that I was a warmonger. Nothing could be further from the truth.

I know war as few other men now living know it, and nothing, to me, is more revolting. I have long advocated its complete abolition, as its very destructiveness on both friend and foe has rendered it useless as a means of settling international disputes. Indeed, on

the second day of September, 1945, just following the surrender of the Japanese nation on the battleship *Misouri*, I formally cautioned as follows:

"Men, since the beginning of time, have sought peace. Various methods, through the ages, have been attempted to devise an international process to prevent or settle disputes between nations. From the very start, workable methods were found insofar as individual citizens were concerned, but the mechanics of an instrumentality of larger international scope have never been successful. Military alliances, balances of power, leagues of nations, all in turn failed, leaving the only path to be by way of the crucible of war."

The utter destructiveness of war now blots out this alternative. We have had our last chance. If we will not devise some greater and more equitable system, Armageddon will be at our door.

The problem basically is still logical and involves a spiritual recrudescence and improvement of human character that will synchronize with our almost matchless advances in science, art, literature, and all material and cultural developments of the past 2,000 years. It must be of the spirit if we are to save the flesh.

But once war is forced upon us, there is no other alternative than to apply every available means to bring it to a swift end. War's very object is victory, not prolonged indecision.

In war there is no substitute for victory. There are some who, for varying reasons, would appease Red China. They are blind to history's clear lesson, for history teaches, with unmistakable emphasis, that appeasement but begets new and bloodier war. It points to no single instance where this end has justified that means, where appeasement has led to more than a sham peace. Like blackmail, it lays the basis for new and successively greater demands until, as in blackmail, violence becomes the only other alternative. Why, my soldiers asked of me, surrender military advantages to an enemy in the field? I could not answer.

42. Security Treaty between Australia, New Zealand, and the United States of America (ANZUS Pact), 1 September 1951

Introduction

The ANZUS Treaty was a security treaty between Australia, New Zealand, and the United States signed on 1 September 1951 and named after the initial letters of the signatory states. Its intent was to establish a coalition of Western powers in the Pacific region for mutual defense in case of attack. The establishment of the communist People's Republic of China (PRC) in October 1949 followed by the onset of the Korean War in June 1950 alarmed Australia and New Zealand, small countries that felt vulnerable to outside attack from communist neighbors. Given that World War II had ended only six years earlier, both powers also feared the revival of Japan, as anticipated in the U.S.-Japan Security Treaty signed one week after the ANZUS Pact. Australia and New Zealand were both British dominions but recognized that Great Britain lacked the military strength to protect them against regional threats. The two Pacific nations therefore sought alliance and protection from the United States, and to bolster their efforts to obtain this both sent troops to support the United States in the contemporaneous Korean War. The ANZUS Pact was striking evidence of the manner in which the United States had by the early 1950s taken over Great Britain's earlier hegemonic international role.

Primary Source

The Parties to this Treaty,

Reaffirming their faith in the purposes and principles of the Charter of the United Nations and their desire to live in peace with all peoples and all Governments, and desiring to strengthen the fabric of peace in the Pacific Area. . . .

Desiring further to co-ordinate their efforts for collective defense for the preservation of peace and security pending the development of a more comprehensive system of regional security in the Pacific Area,

Therefore declare and agree as follows:

Article 1

The Parties undertake, as set forth in the Charter of the United Nations, to settle any international disputes in which they may be involved by peaceful means in such a manner that international peace and security and justice are not endangered and to refrain in their international relations from the threat or use of force in any manner inconsistent with the purposes of the United Nations.

Article 2

In order more effectively to achieve the objective of this Treaty the Parties separately and jointly by means

of continuous and effective self-help and mutual aid will maintain and develop their individual and collective capacity to resist armed attack.

Article 3

The Parties will consult together whenever in the opinion of any of them the territorial integrity, political independence or security of any of the Parties is threatened in the Pacific.

Article 4

Each Party recognizes that an armed attack in the Pacific Area on any of the Parties would be dangerous to its own peace and safety and declares that it would act to meet the common danger in accordance with its constitutional processes. . . .

Article 6

This Treaty does not affect and shall not be interpreted as affecting in any way the rights and obligations of the Parties under the Charter of the United Nations or the responsibility of the United Nations for the maintenance of international peace and security. . . .

Article 10

This Treaty shall remain in force indefinitely.

43. United States–Japan Security Treaty, 8 September 1951

Introduction

Japan ended World War II a defeated enemy, but within six years it became the cornerstone of U.S. security in Asia. As it became increasingly likely in the late 1940s that communist forces would win the civil war in China, the United States began to regard Japan as its major potential ally in Asia. U.S. policy lost much of its punitive emphasis and turned to facilitating the regeneration of Japan. The outbreak of the Korean War in June 1950 made Japan even more significant in security terms. The United States–Japan Security Treaty was signed on 8 September 1951, the same day as the U.S.-Japan Peace Treaty, and went into effect on 28 April 1952. In order to regain control of their own affairs under the peace treaty, the Japanese subordinated their foreign and national security policies to those of the United States. By signing the treaty, the United States committed itself to defending Japan, and in return Japan provided bases for U.S. forces. The United States, together with Australia, New Zealand, and many Southeast Asian powers, all of whom had bitter memories of World War II, feared a resurgence of Japanese military ambitions and therefore deliberately left the Japanese armed forces extremely weak. Japanese defense spending was restricted to 1 percent of gross national product, and the armed forces remained restricted to those needed for internal security and could not serve outside Japan. To further reassure its Pacific allies as well as provide them with assistance against any potential Chinese communist threat, the United States simultaneously signed the ANZUS Pact, a security pact with Australia and New Zealand. The U.S.-Japan Security Treaty was designed to provide Japan with a strong basis for economic and social recovery after World War II. With its security guaranteed by the United States—along with generous financial aid—Japan was able to achieve a successful economic recovery, effectively trading its independence in external affairs for wealth and influence. By the early twenty-first century, the continued presence of U.S. bases had become a somewhat contentious domestic political issue in Japan, while American officials—still welcoming the subordination of Japanese security policies to their own country’s—sometimes appeared to wish that Japan would carry more of the burden of its own defense.

Primary Source

Japan has this day signed a Treaty of Peace with the Allied Powers. On the coming into force of that Treaty, Japan will not have the effective means to exercise its inherent right of self-defense because it has been disarmed.

There is danger to Japan in this situation because irresponsible militarism has not yet been driven from the world. Therefore Japan desires a Security Treaty with the United States of America to come into force simultaneously with the Treaty of Peace between the United States of America and Japan.

The Treaty of Peace recognizes that Japan as a Sovereign nation has the right to enter into collective security arrangements, and further, the Charter of the United Nations recognizes that all nations possess an inherent right of individual and collective self-defense.

In exercise of these rights, Japan desires, as a provisional arrangement for its defense, that the United States of

America should maintain armed forces of its own in and about Japan so as to deter armed attack upon Japan.

The United States of America, in the interest of peace and security, is presently willing to maintain certain of its armed forces in and about Japan, in the expectation, however, that Japan will itself increasingly assume responsibility for its own defense against direct and indirect aggression, always avoiding any armament which could be an offensive threat or serve other than to promote peace and security in accordance with the purposes and principles of the United Nations Charter.

Accordingly, the two countries have agreed as follows:

ARTICLE I

Japan grants, and the United States of America accepts, the right, upon the coming into force of the Treaty of Peace and of this Treaty, to dispose United States land, air and sea forces in and about Japan. Such forces may be utilized to contribute to the maintenance of international peace and security in the Far East and to the

security of Japan against armed attack from without, including assistance given at the express request of the Japanese Government to put down large-scale internal riots and disturbances in Japan, caused through instigation or intervention by an outside power or powers.

ARTICLE II

During the exercise of the right referred to in Article I, Japan will not grant, without the prior consent of the United States of America, any bases or any rights, powers or authority whatsoever, in or relating to bases or the right of garrison or of maneuver, or transit of ground, air or naval forces to any third power.

ARTICLE III

The conditions which shall govern the disposition of armed forces of the United States of America in and

about Japan shall be determined by administrative agreements between the two Governments.

ARTICLE IV

This Treaty shall expire whenever in the opinion of the Governments of the United States of America and Japan there shall have come into force such United Nations arrangements or such alternative individual or collective security dispositions as will satisfactorily provide for the maintenance by the United Nations or otherwise of international peace and security in the Japan Area.

44. Bricker Amendment, 1952

Introduction

As foreign policy came to bulk ever larger in American politics after World War II, the U.S. Congress showed itself wary of the concomitant expansion of presidential power and also of a potential loss of U.S. independence to such international institutions as the United Nations. In the 1950s, John Bricker, a conservative Republican senator from Ohio, spearheaded a drive for a constitutional amendment related to treaties and executive agreements granting Congress more say in such matters. From 1951 onward, Bricker repeatedly introduced congressional resolutions to this effect. The only occasion on which Congress voted on this amendment was in 1953, after its introduction as Senate Joint Resolution 1 of the 83rd Congress. Although the amendment fell just short of receiving the necessary two-thirds majority in Congress, in the ensuing years politicians offered more than sixty-five other proposals along the same lines, none of which passed. Only after the demoralizing Vietnam War, during which Congress had given President Lyndon B. Johnson virtually a free hand in determining policy, did Congress succeed in partially reining in the imperial presidency by passing the War Powers Act of November 1973.

Primary Source

Section 1. A provision of a treaty which conflicts with this Constitution shall not be of any force or effect.

Section 2. A treaty shall become effective as internal law in the United States only through legislation which would be valid in the absence of treaty.

Section 3. Congress shall have power to regulate all executive and other agreements with any foreign power

or international organization. All such agreements shall be subject to the limitations imposed on treaties by this article.

Section 4. The congress shall have power to enforce this article by appropriate legislation.

45. Korean Armistice Agreement, 1953

Introduction

By the spring of 1951 the Korean War was effectively stalemated, with neither side able to attain full victory. Hostilities, however, continued until June 1953, although armistice negotiations intended to end actual fighting in the Korean War opened in July 1951 and continued, with intermissions, for two years. One major stumbling block was the repatriation of North Korean and Chinese prisoners of war who did not wish to return to their home countries, an issue eventually resolved by permitting those who wished to return to do so and handing over the remainder to a neutral commission, leaving their ultimate disposition undetermined or at least unstated. South Korean President Syngman Rhee hoped that hostilities would continue until, with American assistance, he had unified his country, but U.S. President Dwight D. Eisenhower, who took office in January 1953, was determined to end the unpopular war as soon as possible. In exchange for Rhee's acquiescence in the armistice, the following November the United States signed a bilateral security treaty with the Republic of Korea (ROK, South Korea). The death of Soviet leader Josef Stalin in March 1953 was another factor facilitating an armistice. Whereas Stalin apparently welcomed the entanglement of both communist China, a potential rival, and the United States, his major opponent, in the costly and protracted war, his successors were more inclined to end the stalemated conflict, which placed some aid burdens upon the Soviet Union. On 27 July 1953, representatives from the United Nations, which included delegates from both the United States and South Korea, met with top communist officials from China and the Democratic People's Republic of Korea (DPRK, North Korea) to sign an armistice ending the Korean War, which had raged on the Korean peninsula since June 1950. The signatories intended that a formal peace treaty, to be negotiated at a conference to be held in Geneva the following summer, would follow the armistice, but when the Geneva Conference took place, it proved impossible for the interested parties to agree on any such permanent settlement. The supposedly temporary armistice therefore remained in force into the twenty-first century, with the demilitarized zone separating the two opposed Korean states flanked by massive defenses on each side. Numerous minor violations of the cease-fire became almost routine occurrences, but in the half century following the armistice, the war was not resumed.

AGREEMENT BETWEEN THE COMMANDER-IN-CHIEF, UNITED NATIONS COMMAND, ON THE ONE HAND, AND THE SUPREME COMMANDER OF THE KOREAN PEOPLE'S ARMY AND THE COMMANDER OF THE CHINESE PEOPLE'S VOLUNTEERS, ON THE OTHER HAND, CONCERNING A MILITARY ARMISTICE IN KOREA.

PREAMBLE

The undersigned, the Commander-in-Chief, United Nations Command, on the one hand, and the Supreme Commander of the Korean People's Army and the Commander of the Chinese People's Volunteers, on the other hand, in the interest of stopping the Korean conflict, with its great toll of suffering and bloodshed on both sides, and with the objective of establishing an armistice which will insure a complete cessation of hostilities and of all acts of armed force in Korea until

a final peaceful settlement is achieved, do individually, collectively, and mutually agree to accept and to be bound and governed by the conditions and terms of armistice set forth in the following Articles and Paragraphs, which said conditions and terms are intended to be purely military in character and to pertain solely to the belligerents in Korea.

ARTICLE I: MILITARY DEMARCATION LINE AND DEMILITARIZED ZONE

1. A Military Demarcation Line shall be fixed and both sides shall withdraw two (2) kilometers from this line so as to establish a Demilitarized Zone between opposing forces. A Demilitarized Zone shall be established as a buffer zone to prevent the occurrence of incidents which might lead to a resumption of hostilities.
2. The Military Demarcation Line is located as indicated on the attached map.

3. The Demilitarized Zone is defined by a northern and a southern boundary as indicated on the attached map.

4. The Military Demarcation Line shall be plainly marked as directed by the Military Armistice Commission hereinafter established. The Commanders of the opposing sides shall have suitable markers erected along the boundary between the Demilitarized Zone and their respective areas. The Military Armistice Commission shall supervise the erection of all markers placed along the Military Demarcation Line and along the boundaries of the Demilitarized Zone.

5. The waters of the Han River Estuary shall be open to civil shipping of both sides wherever one bank is controlled by one side and the other bank is controlled by the other side. The Military Armistice Commission shall prescribe rules for the shipping in that part of the Han River Estuary indicated on the attached map. Civil shipping of each side shall have unrestricted access to land under the military control of that side.

6. Neither side shall execute any hostile act within, from, or against the Demilitarized Zone.

7. No person, military or civilian, shall be permitted to cross the Military Demarcation Line unless specifically authorized to do so by the Military Armistice Commission.

8. No person, military or civilian, in the Demilitarized Zone shall be permitted to enter the territory under the military control of either side unless specifically authorized to do so by the Commander into whose territory entry is sought.

9. No person, military or civilian, shall be permitted to enter the Demilitarized Zone except persons concerned with the conduct of civil administration and relief and persons specifically authorized to enter by the Military Armistice Commission.

10. Civil administration and relief in that part of the Demilitarized Zone which is south of the Military Demarcation Line shall be the responsibility of the Commander-in-Chief, United Nations Command; and civil administration and relief in that part of the Demil-

itarized Zone which is north of the Military Demarcation Line shall be the joint responsibility of the Supreme Commander of the Korean People's Army and the Commander of the Chinese People's Volunteers. The number of persons, military or civilian, from each side who are permitted to enter the Demilitarized Zone for the conduct of civil administration and relief shall be as determined by the respective Commanders, but in no case shall the total number authorized by either side exceed one thousand (1,000) persons at any one time. The number of civil police and the arms to be carried by them shall be as prescribed by the Military Armistice Commission. Other personnel shall not carry arms unless specifically authorized to do so by the Military Armistice Commission.

11. Nothing contained in this Article shall be construed to prevent the complete freedom of movement to, from, and within the Demilitarized Zone by the Military Armistice Commission, its assistants, its Joint Observer Teams with their assistants, the Neutral Nations Supervisory Commission hereinafter established, its assistants, and of any other persons, materials, and equipment specifically authorized to enter the Demilitarized Zone by the Military Armistice Commission. Convenience of movement shall be permitted through the territory under the military control of either side over any route necessary to move between points within the Demilitarized Zone where such points are not connected by roads lying completely within the Demilitarized Zone.

[. . .]

ARTICLE III: ARRANGEMENTS RELATING TO PRISONERS OF WAR

51. The release and repatriation of all prisoners of war held in the custody of each side at the time this Armistice Agreement becomes effective shall be effected in conformity with the following provisions agreed upon by both sides prior to the signing of this Armistice Agreement.

a. Within sixty (60) days after this Armistice Agreement becomes effective, each side shall, without offering any hindrance, directly repatriate and hand over in groups all those prisoners of war in its custody who

insist on repatriation to the side to which they belonged at the time of capture. Repatriation shall be accomplished in accordance with the related provisions of this Article. In order to expedite the repatriation process of such personnel, each side shall, prior to the signing of the Armistice Agreement, exchange the total numbers, by nationalities, of personnel to be directly repatriated. Each group of prisoners of war delivered to the other side shall be accompanied by rosters, prepared by nationality, to include name, rank (if any) and internment or military serial number.

b. Each side shall release all those remaining prisoners of war, who are not directly repatriated, from its military control and from its custody and hand them over to the Neutral Nations Repatriation Commission for disposition in accordance with the provisions in the Annex hereto: "Terms of Reference for Neutral Nations Repatriation Commission".

c. So that there may be no misunderstanding owing to the equal use of three languages, the act of delivery of a prisoner of war by one side to the other side shall, for the purposes of this Armistice Agreement, be called "repatriation" in English, "[Korean characters]" (SONG HWAN) in Korean, and "[Chinese characters]" (CH' IEN FAN) in Chinese, notwithstanding the nationality or place of residence of such prisoner of war.

52. Each side insures that it will not employ in acts of war in the Korean conflict any prisoner of war released

and repatriated incident to the coming into effect of this Armistice Agreement.

53. All the sick and injured prisoners of war who insist upon repatriation shall be repatriated with priority. Insofar as possible, there shall be captured medical personnel repatriated concurrently with the sick and injured prisoners of war, so as to provide medical care and attendance en route.

54. The repatriation of all prisoners of war required by Sub-paragraph 51a hereof shall be completed within a time limit of sixty (60) days after this Armistice Agreement becomes effective. Within this time limit each side undertakes to complete the repatriation of the above-mentioned prisoners of war in its custody at the earliest practicable time.

55. PANMUNJOM is designated as the place where prisoners of war will be delivered and received by both sides. Additional place(s) of delivery and reception of prisoners of war in Demilitarized Zone may be designated, if necessary, by the Committee for Repatriation of Prisoners of War.

46. Loy Henderson: Letter from the Ambassador in Iran to the Department of State on the Coup in Iran, 23 August 1953

Introduction

By the early 1950s, the United States had taken on commitments that implied it would oppose the emergence of communist regimes anywhere in the world. Successive American Cold War presidents turned to the Central Intelligence Agency (CIA) to help overthrow foreign governments that appeared unfriendly to the United States, due either to their ideological complexion or their antagonism toward U.S. economic or strategic interests. The first occasion when the CIA was instrumental in successfully ousting another government came in Iran in 1953. Until the early Cold War, Iran had been largely under British and Russian influence. The British Anglo-Iranian Oil Company controlled Iran's petroleum resources, and during World War II the British and Russians overthrew the Nazi-oriented monarch, Shah Reza Pahlavi I, and jointly occupied Iran to deny those resources to Germany and safeguard supply routes to the Soviet Union. In 1946 British and Russian forces left Iran, the Russians at least reluctantly, as they had hoped to set up a pro-Soviet republic in the north that they had previously controlled. As early

as World War II, U.S. diplomats already believed that their own nation, which they felt the Iranians knew was untainted by past exploitation of Iran, had an opportunity to win that country's loyalties. In 1951 the Iranian government announced its intention of nationalizing the Anglo-Iranian Oil Company. The British, who controlled the refineries, withdrew their technicians and blockaded all exports of Iranian oil, provoking severe economic difficulties within Iran. The government headed by Prime Minister Mohammed Mossadegh stood firm, and eventually, after an abortive attempt to replace him by the young Shah Reza Pahlavi II, declared a national emergency and took control of the Iranian military. In alliance with radical Muslims and the leftist Soviet-leaning Tudeh Party, in 1952 Mossadegh implemented socialist reforms, especially in agriculture, and broke diplomatic relations with the United Kingdom. Britain turned to the United States for assistance, characterizing Mossadegh as a radical who was edging toward communism and steering Iran into the Soviet orbit. The administration of Republican President Dwight D. Eisenhower, which took office in January 1953, proved sympathetic and authorized the CIA to spend up to US\$1 million removing Mossadegh. CIA agents in Tehran spread rumors and disinformation and in some cases acted as agents provocateurs. Economic problems intensified, and Mossadegh suspended parliament and extended his emergency powers. The CIA sought to persuade the indecisive young shah to dismiss Mossadegh, while Mossadegh urged the monarch to leave the country. Eventually, in 1953, the shah dismissed Mossadegh, but the latter refused to step down from office, and the shah took refuge in Italy. Major protests for and against the monarchy took place throughout the country, as Iranians of all political stripes assumed that before long Mossadegh would declare Iran a republic and himself head of state. Promonarchy forces, heavily funded by the CIA, gained the upper hand, and Iranian tanks and troops entered Tehran, the Iranian capital, and besieged the prime minister's residence until Mossadegh surrendered. He was subsequently put on trial for treason and sentenced to three years in prison. General Fazlollah Zahedi, one of the military leaders who arrested Mossadegh, became prime minister, and the shah flew back and resumed power. From then until his overthrow in 1979, Iran would be a key U.S. ally in the Middle East. Speaking to Loy Henderson, the U.S. ambassador in Iran, the shah expressed his fervent gratitude to the Americans for their role in his return, adroitly stressed his wish to carry out social reforms that would benefit the poorest Iranians, and declared that a communist regime was the only alternative to his own. He made it very clear that to carry out such policies he badly needed American aid and also discreetly intimated that the Americans should not "interfere in personnel matters of [the Iranian] Government." The shah soon reached an agreement with the British and Americans, under whose terms the foreign oil companies still made substantial profits, and large amounts of Iranian oil once more flowed to world markets. These revenues enabled the shah to modernize his country and make it a strong military state, but his authoritarian policies, persecution of opponents, and the social disruptions caused by his reforms eventually alienated many Iranians and were among the reasons that in 1979 an Islamic fundamentalist revolt ended his rule. Only in the late 1990s did the U.S. government publicly acknowledge the extent of CIA involvement in the overthrow of Mossadegh. The eventual success of this undertaking subsequently emboldened CIA director Allen W. Dulles and other agency officials to try to orchestrate comparable operations against several other foreign governments—in Guatemala, Cuba, the Dominican Republic, and Chile—that many U.S. leaders found unpalatable.

Primary Source

[1.] At Shah's request that I visit him privately without publicity, I saw him six o'clock this evening. Pirnia, master of ceremonies, who met me rear entrance Palace, said I would find Shah changed man. He was right. Shah showed vigor, decisiveness and certain amount clear thinking which I had not found in him before. Only time will determine whether this change merely temporary result discovery that people of country had deeper sense of loyalty him than he had realized. In

any event, I did not find hesitation, brooding, discouragement and air "what can I do" which I had noticed practically all previous conversations.

2. He greeted me warmly and expressed deep appreciation of friendship which US had shown him and Iran during period. I read oral message from President to which I had taken liberty of adding introductory paragraph as follows: "I congratulate you for the great moral courage which you displayed at a critical time in your

country's history. I am convinced that by your action you contributed much to the preservation of the independence and to the future prosperity of Iran." The Shah wept as I read this message and asked me in reply to tell the President how grateful he was for interest which President and Government of US had shown in Iran. He would always feel deeply indebted for this proof of genuine friendship. Miracle of saving Iran which had just been wrought was due to friendship West, to patriotism Iranian people and to intermediation God. It impossible for him believe so many factors could have contributed simultaneously to this salvation his country unless Providence had so willed.

3. Shah dwelt for some time on part which "common people of Iran" had played. People of poorest classes who were ill-clad and hungry had been willing sacrifice their lives on his behalf. He could never forget this and he would never be satisfied until hunger had been eliminated from his country. Iran had been saved but victory would be short-lived unless substantial aid came from US immediately. No time could be lost. This was Iran's last chance to survive as an independent country. I said I agreed that if present government should fail, Communism seemed to be only alternative. He said "if I fail, no alternative but Communism. People have shown their trust in me and it rests upon me prove their trust merited. I must help new government live up to expectations and I cannot do that without quick aid from the US. How soon can this aid come and in what quantities and form?"

4. I replied US prepared extend aid but it must be given in orderly way and in circumstances which would be acceptable US public as well as Iranian public. I had been endeavoring all day to get in touch with financial and economic experts new government in order begin conversations. If he wished quick aid, he should take steps see that conversations begin immediately. He promised talk to Zahedi this evening in effort accelerate.

5. Shah said he not completely happy re Cabinet which Zahedi had presented him on his arrival. Same old faces which had been rotating in office for years. He had hoped for Cabinet which would stimulate country particularly youth. He had been told Americans had

insisted Amini be included as Minister Finance and that Cabinet be selected before his arrival and presented to him as *fait accompli*. I told him information incorrect.

I do not know who had selected Amini. Certainly not Americans. There had been feeling in Embassy that Cabinet should be formed quickly so Government could begin to function earliest possible moment, no idea endeavoring have members selected without consultation with him. He said he relieved hear me say this. He sure Americans would not begin trying interfere in personnel matters of Government. They should know from experience this would be surest way change friendship into suspicion. Particularly important no interference in future in his control armed forces. Neither foreigners nor Iranians should come between him and army. Razmara had been unsuccessful in trying to separate army from Shah. Mosadeq had been able to break down army unity. It was his task and it would be difficult and delicate one to rebuild army as solid block loyal to him. Otherwise there would be no stability in country.

6. I asked if I to infer he dissatisfied with way Zahedi had been conducting affairs or if he under impression Zahedi attempting exert authority which should be vested in him. He replied negative insisting he had complete confidence in Zahedi. He did not believe Zahedi had ambitions other than serve Iran and its Shah, nevertheless he thought that certain advisers around Zahedi were pressing latter to take actions without proper consultation with him. He had had several discussions with Zahedi and was sure that he had achieved understanding with him re extent consultation in future.

I said Zahedi and many other army officers had risked their lives for Shah and country. I hoped Shah would show in some way his appreciation. He said he intended to do so but he must disappoint many retired army officers expecting resume active service. Most of them outmoded, some corrupt. He could give them decorations and other awards but not jobs.

7. In discussing failure of plans on night of August 15 he said someone must have betrayed them. Could it have been British agents?

I expressed surprise. I pointed out on various previous conversations he had said if Iran to be saved necessary for British and Americans to have common policy re Iran and work with mutual confidence. This situation had been achieved and I hoped he would never again make either to British or Americans remarks which might tend undermine that mutual confidence. I knew for fact that British were dealing honestly with him and he should get out of his head once for all idea they engaging in double dealing. He said he relieved hear this and believed me. I told him Communists espionage facilities well developed. They had many dangerous hearing devices. He said perhaps they had broken down code telegrams exchanged between Tehran and Ramsar. I agreed this quite possible.

8. I said if Iran wanted British and US pursue common policy re Iran Government should not expect receive substantial aid from US while it was making British whipping boy. I worried lest when Majlis reassembled there would again take place long tirades against British. I also concerned re Tudeh press in this respect. He said he would endeavor arrange for those members Majlis who had not resigned to meet and vote dissolution Majlis. Elections would then be held in spring so Government could accomplish much with-out inter-

ference Majlis. It was his intention also not to convene Senate until new Majlis elected. He intended taking steps also to reward in some way although not with Cabinet positions small band Majlis members who had at risk lives refused resign. It also his intention completely root out subversive press. He determined completely wreck Tudeh organization while at same time maintaining as correct relations as possible with USSR.

9. In terminating conversation he again urged me impress on US Government importance receiving substantial and immediate financial and economic aid. In absence Majlis it would be difficult arrange for loan. Therefore most of this aid must be in form grant. I said if this true we might be severely hampered in our efforts. For instance it might be easier quickly to obtain funds for road building and similar programs through loans rather than grants. He promised look into legal aspects this problem but said he feared it might be impossible for Iranian Government to accept loans without consent Majlis.

47. Mutual Defense Treaty between the United States of America and the Republic of Korea, 1 October 1953

Introduction

As the United States and China came close to agreeing to terms for an armistice settlement to the Korean War, Republic of Korea (ROK, South Korea) President Syngman Rhee proved extremely obstructive. Ideally, Rhee hoped that the war would continue until U.S. forces had unified the entire Korean peninsula under his rule. On 4 June 1953, after the peace negotiators at Panmunjom had finally agreed on all aspects of the repatriation of prisoners of war, Rhee publicly stated that he would only endorse a settlement that mandated the simultaneous withdrawal of all United Nations (UN) and communist troops from Korean territory on the conditions that South Korea should conclude a mutual security pact with the United States and receive massive economic aid and the commitment of substantial American military and naval forces to South Korea. He made these demands secure in the knowledge that the communist forces would find them unacceptable and continue to fight on. After threatening to withdraw his troops, who comprised two-thirds of those manning the front line, from the UN command, Rhee hinted that even after an armistice they might refuse to lay down their arms. He then ordered the release of 27,000 prisoners of war who were not scheduled for repatriation, formed them into labor battalions, and enlisted them in the ROK Army. Rhee hoped that this incident, which led the communist negotiators to question the ability of UN representatives to speak for him and his armed forces, would generate recriminations so bitter as to sabotage the negotiations completely, but if anything it made the exasperated participants on both sides even more determined

to reach an agreement in which he would be forced to acquiesce. UN and communist representatives alike united in denouncing his action and agreed to resume their truce talks on 12 July 1953. The same day, the United States dispatched Assistant Secretary of State Walter Robertson to Seoul to persuade Rhee not to obstruct any settlement, and after two weeks Robertson finally extorted the president's pledge to accept a cease-fire that was signed immediately, on 27 July 1953. In return, Rhee was promised a U.S.-ROK mutual security treaty, which was concluded almost immediately, on 8 August 1953; was signed on 1 October; and became effective on 17 November 1954. The U.S. government also stationed large contingents of American forces in South Korea and agreed to provide \$200 million in immediate economic aid, only the first installment of a long-term assistance program, to assist in expanding the ROK Army to twenty divisions. The Mutual Security Treaty, a bilateral security alliance outside the broader Southeast Asia Treaty Organization (SEATO) framework negotiated by U.S. Secretary of State John Foster Dulles, was a definite guarantee that should the Democratic People's Republic of Korea (DPRK, North Korea) once again attack South Korea, the Republic of Korea could count on the United States to assist in its defense. The original expectation after the armistice was that a comprehensive Korean peace treaty would subsequently be negotiated at the 1954 Geneva Conference, but the two Korean states found themselves unable to agree on terms acceptable to both, so the supposedly temporary armistice remained in force indefinitely, enduring well into the twenty-first century. The fact that the situation in Korea was still often precarious and volatile was probably one reason that the South Korean state was excluded from the weaker September 1954 SEATO pact, which bound its signatories to consult should one or more of them face a threat but not necessarily to take any definite action.

Primary Source

The Parties to this Treaty,

Reaffirming their desire to live in peace with all peoples and all governments, and desiring to strengthen the fabric of peace in the Pacific area,

Desiring to declare publicly and formally their common determination to defend themselves against external armed attack so that no potential aggressor could be under the illusion that either of them stands alone in the Pacific area,

Desiring further to strengthen their efforts for collective defense for the preservation of peace and security pending the development of a more comprehensive and effective system of regional security in the Pacific area,

Have agreed as follows:

ARTICLE I

The Parties undertake to settle any international disputes in which they may be involved by peaceful means in such a manner that international peace and security and justice are not endangered and to refrain in their international relations from the threat or use of force in any manner inconsistent with the Purposes of the

United Nations, or obligations assumed by any Party toward the United Nations.

ARTICLE II

The Parties will consult together whenever, in the opinion of either of them, the political independence or security of either of the Parties is threatened by external armed attack. Separately and jointly, by self help and mutual aid, the Parties will maintain and develop appropriate means to deter armed attack and will take suitable measures in consultation and agreement to implement this Treaty and to further its purposes.

ARTICLE III

Each Party recognizes that an armed attack in the Pacific area on either of the Parties in territories now under their respective administrative control, or hereafter recognized by one of the Parties as lawfully brought under the administrative control of the other, would be dangerous to its own peace and safety and declares that it would act to meet the common danger in accordance with its constitutional processes.

ARTICLE IV

The Republic of Korea grants, and the United States of America accepts, the right to dispose United States land, air and sea forces in and about the territory of the Republic of Korea as determined by mutual agreement.

ARTICLE V

This Treaty shall be ratified by the United States of America and the Republic of Korea in accordance with their respective constitutional processes and will come into force when instruments of ratification thereof have been exchanged by them at Washington.

ARTICLE VI

This Treaty shall remain in force indefinitely. Either Party may terminate it one year after notice has been given to the other Party.

[. . .]

UNDERSTANDING OF THE UNITED STATES

Whereas the Senate of the United States of America by their resolution of January 26, 1954, two-thirds of

the Senators present concurring therein, did advise and consent to the ratification of the said Treaty with the following understanding:

“It is the understanding of the United States that neither party is obligated, under Article III of the above Treaty, to come to the aid of the other except in case of an external armed attack against such party; nor shall anything in the present Treaty be construed as requiring the United States to give assistance to Korea except in the event of an armed attack against territory which has been recognized by the United States as lawfully brought under the administrative control of the Republic of Korea.”

48. Dwight D. Eisenhower: “Atoms for Peace” Speech, 8 December 1953

Introduction

As Cold War tensions escalated, U.S. President Dwight D. Eisenhower delivered this address to the United Nations (UN) General Assembly in New York City on 8 December 1953 discussing the buildup of nuclear weapons and the U.S. goals involved. In November 1952 the United States detonated its first thermonuclear device, a weapon whose destructive capacity alarmed many officials and ordinary people. Eisenhower sought to direct nuclear power away from weaponry and instead to utilize its potential for productive, peaceful development. His speech generated a variety of peaceful nuclear programs. The most important of these was the International Atomic Energy Agency (IAEA), established under the aegis of the UN to stockpile uranium and fissionable materials designated for peaceful development. Eisenhower hoped that his speech would also provide the impetus for talks with the Soviet Union on the control and limitation of ever more destructive nuclear weapons.

Primary Source

Madam President and Members of the General Assembly;

When Secretary General Hammarskjöld’s invitation to address the General Assembly reached me in Bermuda, I was just beginning a series of conferences with the Prime Ministers and Foreign Ministers of the United Kingdom and France. Our subject was some of the problems that beset our world. During the remainder of the Bermuda Conference, I had constantly in mind that ahead of me lay a great honor. That honor is

mine today as I stand here, privileged to address the General Assembly of the United Nations.

At the same time that I appreciate the distinction of addressing you, I have a sense of exhilaration as I look upon this Assembly. Never before in history has so much hope for so many people been gathered together in a single organization. Your deliberations and decisions during these somber years have already realized part of those hopes.

But the great tests and the great accomplishments still lie ahead. And in the confident expectation of those

accomplishments, I would use the office which, for the time being, I hold, to assure you that the Government of the United States will remain steadfast in its support of this body. This we shall do in the conviction that you will provide a great share of the wisdom, of the courage and of the faith which can bring to this world lasting peace for all nations, and happiness and well-being for all men.

[. . .]

There is at least one new avenue of peace which has not been well explored—an avenue now laid out by the General Assembly of the United Nations.

In its resolution of 28 November 1953 (resolution 715 (VIII)) this General Assembly suggested: “that the Disarmament Commission study the desirability of establishing a sub-committee consisting of representatives of the Powers principally involved, which should seek in private an acceptable solution and report . . . on such a solution to the General Assembly and to the Security Council not later than 1 September 1954.”

The United States, heeding the suggestion of the General Assembly of the United Nations, is instantly prepared to meet privately with such other countries as may be “principally involved,” to seek “an acceptable solution” to the atomic armaments race which overshadows not only the peace, but the very life, of the world.

We shall carry into these private or diplomatic talks a new conception. The United States would seek more than the mere reduction or elimination of atomic materials for military purposes. It is not enough to take this weapon out of the hands of the soldiers. It must be put into the hands of those who will know how to strip its military casing and adapt it to the arts of peace.

The United States knows that if the fearful trend of atomic military build-up can be reversed, this greatest of destructive forces can be developed into a great boon, for the benefit of all mankind. The United States knows that peaceful power from atomic energy is no dream of the future. The capability, already proved, is here today. Who can doubt that, if the entire

body of the world’s scientists and engineers had adequate amounts of fissionable material with which to test and develop their ideas, this capability would rapidly be transformed into universal, efficient and economic usage?

To hasten the day when fear of the atom will begin to disappear from the minds the people and the governments of the East and West, there are certain steps that can be taken now.

I therefore make the following proposal.

The governments principally involved, to the extent permitted by elementary prudence, should begin now and continue to make joint contributions from their stockpiles of normal uranium and fissionable materials to an international atomic energy agency. We would expect that such an agency would be set up under the aegis of the United Nations. The ratios of contributions, the procedures and other details would properly be within the scope of the “private conversations” I referred to earlier.

The United States is prepared to undertake these explorations in good faith. Any partner of the United States acting in the same good faith will find the United States a not unreasonable or ungenerous associate.

Undoubtedly, initial and early contributions to this plan would be small in quantity. However, the proposal has the great virtue that it can be undertaken without the irritations and mutual suspicions incident to any attempt to set up a completely acceptable system of world-wide inspection and control.

The atomic energy agency could be made responsible for the impounding, storage and protection of the contributed fissionable and other materials. The ingenuity of our scientists will provide special safe conditions under which such a bank of fissionable material can be made essentially immune to surprise seizure.

The more important responsibility of this atomic energy agency would be to devise methods whereby this fissionable material would be allocated to serve the peaceful pursuits of mankind. Experts would be mobilized

to apply atomic energy to the needs of agriculture, medicine and other peaceful activities. A special purpose would be to provide abundant electrical energy in the power-starved areas of the world.

Thus the contributing Powers would be dedicating some of their strength to serve the needs rather than the fears of mankind.

The United States would be more than willing—it would be proud to take up with others “principally involved” the development of plans whereby such peaceful use of atomic energy would be expedited.

Of those “principally involved” the Soviet Union must, of course, be one.

I would be prepared to submit to the Congress of the United States, and with every expectation of approval, any such plan that would, first, encourage world-wide investigation into the most effective peacetime uses of fissionable material, and with the certainty that the investigators had all the material needed for the conducting of all experiments that were appropriate; second, begin to diminish the potential destructive power of the world’s atomic stockpiles; third, allow all peoples of all nations to see that, in this enlightened age, the great Powers of the earth, both of the East and of the West, are interested in human aspirations first rather

than in building up the armaments of war; fourth, open up a new channel for peaceful discussion and initiate at least a new approach to the many difficult problems that must be solved in both private and public conversations if the world is to shake off the inertia imposed by fear and is to make positive progress towards peace.

Against the dark background of the atomic bomb, the United States does not wish merely to present strength, but also the desire and the hope for peace. The coming months will be fraught with fateful decisions. In this Assembly, in the capitals and military headquarters of the world, in the hearts of men everywhere, be they governed or governors, may they be the decisions which will lead this world out of fear and into peace.

To the making of these fateful decisions, the United States pledges before you, and therefore before the world, its determination to help solve the fearful atomic dilemma—to devote its entire heart and mind to finding the way by which the miraculous inventiveness of man shall not be dedicated to his death, but consecrated to his life.

49. John Foster Dulles: Speech on Massive Retaliation, 12 January 1954

Introduction

At the height of the Cold War, U.S. Secretary of State John Foster Dulles delivered this address, an excerpt of which appears below, to the Council on Foreign Relations on 12 January 1954, discussing the defense policies of the administration of U.S. President Dwight D. Eisenhower. Primarily for budgetary reasons, the Eisenhower administration had adopted the New Look strategic doctrine that was heavily dependent upon nuclear weapons, which were less expensive than conventional forces. Dulles implied that in any international crisis, the United States would be prepared to use nuclear weapons, regardless of their highly destructive nature. U.S. allies found rather alarming Dulles’s apparent readiness to escalate relatively minor confrontations to the level of outright nuclear war, which they feared might easily spiral out of control and provoke a third world war.

Primary Source

It is now nearly a year since the Eisenhower administration took office. During that year I have often spo-

ken of various parts of our foreign policies. Tonight I should like to present an overall view of those policies which relate to our security.

First of all, let us recognize that many of the preceding foreign policies were good. Aid to Greece and Turkey had checked the Communist drive to the Mediterranean. The European Recovery Program had helped the peoples of Western Europe to pull out of the post-war morass. The Western powers were steadfast in Berlin and overcame the blockade with their airlift. As a loyal member of the United Nations, we had reacted with force to repel the Communist attack in Korea. When that effort exposed our military weakness, we rebuilt rapidly our military establishment. We also sought a quick buildup of armed strength in Western Europe.

These were the acts of a nation which saw the danger of Soviet communism; which realized that its own safety was tied up with that of others; which was capable of responding boldly and promptly to emergencies. These are precious values to be acclaimed. Also, we can pay tribute to congressional bipartisanship which puts the nation above politics.

But we need to recall that what we did was in the main emergency action, imposed on us by our enemies.

Let me illustrate.

1. We did not send our army into Korea because we judged in advance that it was sound military strategy to commit our Army to fight land battles in Asia. Our decision had been to pull out of Korea. It was Soviet-inspired action that pulled us back.

2. We did not decide in advance that it was wise to grant billions annually as foreign economic aid. We adopted that policy in response to the Communist efforts to sabotage the free economies of Western Europe.

3. We did not build up our military establishment at a rate which involved huge budget deficits, a depreciating currency, and a feverish economy because this seemed, in advance, a good policy. Indeed, we decided otherwise until the Soviet military threat was clearly revealed.

We live in a world where emergencies are always possible and our survival may depend upon our capacity to meet emergencies. Let us pray that we shall always

have that capacity. But, having said that, it is necessary also to say that emergency measures—however good for the emergency—do not necessarily make good permanent policies. Emergency measures are costly; they are superficial; and they imply that the enemy has the initiative. They cannot be depended on to serve our long-time interests.

This “long time” factor is of critical importance.

The Soviet Communists are planning for what they call “an entire historical era,” and we should do the same. They seek, through many types of maneuvers, gradually to divide and weaken the free nations by overextending them in efforts which, as Lenin put it, are “beyond their strength, so that they come to practical bankruptcy.” Then, said Lenin, “our victory is assured.” Then, said Stalin, will be “the moment for the decisive blow.”

In the face of this strategy, measures cannot be judged adequate merely because they ward off an immediate danger. It is essential to do this, but it is also essential to do so without exhausting ourselves.

When the Eisenhower administration applied this test, we felt that some transformations were needed.

It is not sound military strategy permanently to commit U.S. land forces to Asia to a degree that leaves us no strategic reserves.

It is not sound economics, or good foreign policy, to support permanently other countries; for in the long run, that creates as much ill will as good will.

Also, it is not sound to become permanently committed to military expenditures so vast that they lead to “practical bankruptcy.” . . .

What the Eisenhower administration seeks is a . . . maximum deterrent at a bearable cost. . . .

The total cost of our security efforts, at home and abroad, was over \$50 billion per annum, and involved, for 1953, a projected budgetary deficit of \$9 billion; and \$11 billion for 1954. This was on top of taxes compa-

rable to wartime taxes; and the dollar was depreciating in effective value. Our allies were similarly weighed down. This could not be continued for long without grave budgetary, economic, and social consequences.

But before military planning could be changed, the President and his advisers, as represented by the National Security Council, had to take some basic policy decisions. This has been done. The basic decision was to depend primarily upon a great capacity to retaliate, instantly, by means and at places of our choosing. Now the Department of Defense and the Joint Chiefs of Staff can shape our military establishment to fit what is our policy, instead of having to try to be ready to meet the enemy's many choices. That permits of a selection of military means instead of a multiplication of means. As a result, it is now possible to get, and share, more basic security at less cost.

Let us now see how this concept has been applied to foreign policy, taking first the Far East.

In Korea this administration effected a major transformation. The fighting has been stopped on honorable terms. That was possible because the aggressor, already thrown back to and behind his place of beginning, was faced with the possibility that the fighting might, to his own great peril, soon spread beyond the limits and methods which he had selected. . . .

I have said in relation to Indochina that, if there were open Red Chinese army aggression there, that would have "grave consequences which might not be confined to Indochina."

I expressed last month the intention of the United States to maintain its position in Okinawa. This is needed to insure adequate striking power to implement the collective security concept which I describe. . . .

We have persisted, with our allies, in seeking the unification of Germany and the liberation of Austria. Now the Soviet rulers have agreed to discuss these questions. We expect to meet them soon in Berlin. I hope they will come with sincerity which will equal our own.

We have sought a conference to unify Korea and relieve it of foreign troops. So far, our persistence is unrewarded; but we have not given up.

These efforts at negotiation are normal initiatives that breathe the spirit of freedom. They involve no plan for a partnership division of world power with those who suppress freedom. . . .

50. Dwight D. Eisenhower: "The Row of Dominoes," Presidential Press Conference, 7 April 1954

Introduction

From summer 1945 onward, France sought to restore French colonial rule in French Indochina but faced increasingly effective opposition from the nationalist and communist Viet Minh forces led by Ho Chi Minh, who had declared Vietnam's independence in September 1945. Despite substantial U.S. financial support, by early 1954 French efforts to defeat Ho's forces in the Democratic Republic of Vietnam (DRV, North Vietnam) had stalled. In mid-March that year, the French Army found itself encircled by Viet Minh forces at the mountain fortress of Dien Bien Phu. France urged the United States to intervene militarily, but President Dwight D. Eisenhower, on finding that Britain was not prepared to join in any such effort, refused to commit American forces to Indochina. The beleaguered French Army surrendered in early May, a humiliating defeat for France that marked the end of almost a decade of French efforts to maintain its colonial position in Indochina. Despite his decision against intervention, Eisenhower clearly disliked the prospect of a communist Indochina. At a press conference held while the French garrison at Dien Bien Phu was still besieged and the United States had made no formal decision, the president set out the domino theory that would become so influential as a justification for subsequent American assistance to

Vietnam: that if one nation went communist its neighbors would inevitably be affected, and eventually the communist infection would spread from state to state throughout Asia and beyond.

Primary Source

Q. Robert Richards, Copley Press: Mr. President, would you mind commenting on the strategic importance of Indochina for the free world? I think there has been, across the country, some lack of understanding on just what it means to us.

The President. You have, of course, both the specific and the general when you talk about such things.

First of all, you have the specific value of a locality in its production of materials that the world needs.

Then you have the possibility that many human beings pass under a dictatorship that is inimical to the free world.

Finally, you have broader considerations that might follow what you would call the “falling domino” principle. You have a row of dominoes set up, you knock over the first one, and what will happen to the last one is the certainty that it will go over very quickly. So you could have a beginning of a disintegration that would have the most profound influences.

Now, with respect to the first one, two of the items from this particular area that the world uses are tin and tungsten. They are very important. There are others, of course, the rubber plantations and so on.

Then with respect to more people passing under this domination, Asia, after all, has already lost some 450 million of its peoples to the Communist dictatorship, and we simply can’t afford greater losses.

But when we come to the possible sequence of events, the loss of Indochina, of Burma, of Thailand, of the Peninsula, and Indonesia following, now you begin to talk about areas that not only multiply the disadvantages that you would suffer through the loss of materials, sources of materials, but now you are talking really about millions and millions and millions of people.

Finally, the geographical position achieved thereby does many things. It turns the so-called island defen-

sive chain of Japan, Formosa, of the Philippines and to the southward; it moves in to threaten Australia and New Zealand.

It takes away, in its economic aspects, that region that Japan must have as a trading area or Japan, in turn, will have only one place in the world to go—that is, toward the Communist areas in order to live.

So, the possible consequences of the loss are just incalculable to the free world. . . .

Q. Raymond Brandt, St. Louis Post-Dispatch: Mr. President, what response has Secretary Dulles and the administration got [from Great Britain] to the request for united action in Indochina?

The President. So far as I know, there are no positive reactions as yet, because the time element would almost forbid.

Q. Robert G. Spivack, New York Post: Mr. President, do you agree with Senator [John F.] Kennedy that independence must be guaranteed the people of Indochina in order to justify an allout effort there?

The President. Well, I don’t know, of course, exactly in what way a Senator was talking about this thing.

I will say this: for many years, in talking to different countries, different governments, I have tried to insist on this principle: no outside country can come in and be really helpful unless it is doing something that the local people want.

Now, let me call your attention to this independence theory. Senator Lodge, on my instructions, stood up in the United Nations and offered one country independence if they would just simply pass a resolution saying they wanted it, or at least said, “I would work for it.” They didn’t accept it. So I can’t say that the associated states want independence in the sense that the United States is independent. I do not know what they want.

I do say this: the aspirations of those people must be met, otherwise there is in the long run no final answer to the problem.

Q. Joseph Dear, Capital Times: Do you favor bringing this Indochina situation before the United Nations?

The President. I really can't say. I wouldn't want to comment at too great a length at this moment, but I do believe this: this is the kind of thing that must not be

handled by one nation trying to act alone. We must have a concert of opinion, and a concert of readiness to react in whatever way is necessary.

Of course, the hope is always that it is peaceful conciliation and accommodation of these problems.

51. Army-McCarthy Hearings Testimony, 1954

Introduction

On 22 April 1954, after several years of enduring Senator Joseph McCarthy's false charges about subversion in the military forces, the U.S. Army, represented by attorney Joseph N. Welch, went on the offensive and attacked McCarthy with a charge of corruption at the height of his public campaign to weed out communists from the U.S. government. The army's charge was based on the fact that McCarthy and his counsel, Roy Cohn, had demanded special treatment for former associate Private G. David Schine. Cohn had threatened that if he were not satisfied, he would use his political influence as McCarthy's aide to "wreck the army." In more than a month of televised congressional hearings, Welch proceeded to show how McCarthy had doctored photographs and created other false documents to provide evidence for his unsubstantiated earlier charges. McCarthy's erratic behavior and the constant traps that Welch laid to catch him lying made it obvious to the television audience which side was telling the truth. After the televised hearings and McCarthy's public humiliation, a majority of senators finally felt sufficiently secure enough to vote to censure him on 2 December 1954. This dramatic excerpt from the hearings of 9 June 1954, when Welch responded to charges by McCarthy that one of Welch's aides had ties to a communist organization, includes as participants Welch (chief counsel for the U.S. Army), Cohn (special counsel to the Special Senate Committee on Charges and Countercharges), Senator Karl E. Mundt, and McCarthy himself.

Primary Source

[. . .]

Mr. Welch: Mr. Cohn, tell me once more: Every time you learn of a Communist or a spy anywhere, is it your policy to get them out as fast as possible?

Mr. Cohn: Surely, we want them out as fast as possible, sir.

Mr. Welch: And whenever you learn of one from now on, Mr. Cohn, I beg of you, will you tell somebody about them quick?

Mr. Cohn: Mr. Welch, with great respect, I work for the committee here. They know how we go about handling situations of Communist infiltration. If they are

displeased with the speed with which I and the group of men who work with me proceed, if they are displeased with the order in which we move, I am sure they will give me appropriate instructions along those lines, and I will follow any which they give me.

Mr. Welch: May I add my small voice, sir, and say whenever you know about a subversive or a Communist or a spy, please hurry. Will you remember those words? . . .

Senator McCarthy: Mr. Chairman, in view of that question—

Senator Mundt: Have you a point of order?

Senator McCarthy: Not exactly, Mr. Chairman, but in view of Mr. Welch's request that the information be

given once we know of anyone who might be performing any work for the Communist Party, I think we should tell him that he has in his law firm a young man named Fisher whom he recommended, incidentally, to do work on this committee, who has been for a number of years a member of an organization which was named, oh, years and years ago, as the legal bulwark of the Communist Party, an organization which always swings to the defense of . . . [any] Communists. I certainly assume that Mr. Welch did not know of this young man at the time he recommended him as the assistant counsel for this committee, but he has such terror and such a great desire to know where anyone is located who may be serving the Communist cause, Mr. Welch, that I thought we should just call to your attention the fact that your Mr. Fisher, who is still in your law firm today, whom you asked to have down here looking over the secret and classified material, is a member of an organization, not named by me but named by various committees, named by the Attorney General, as I recall, and I think I quote this verbatim, as "the legal bulwark of the Communist Party." He belonged to that for a sizeable number of years, according to his own admission, and he belonged to it long after it had been exposed as the legal arm of the Communist Party.

Knowing that, Mr. Welch, I just felt that I had a duty to respond to your urgent request that before sundown, when we know of anyone serving the Communist cause, we let the agency know. We are now letting you know that your man did belong to this organization for either three or four years, belonged to it long after he was out of law school. . . . I have hesitated bringing that up, but I have been rather bored with your phony requests to Mr. Cohn here that he personally get every Communist out of government before sundown. Therefore, we will give you information about the young man in your own organization.

I am not asking you at this time to explain why you tried to foist him on this committee. Whether you knew he was a member of that Communist organization or not, I don't know. I assume you did not, Mr. Welch, because I get the impression that, while you are quite an actor, you play for a laugh. I don't think you have any con-

ception of the danger of the Communist Party. I don't think you yourself would ever knowingly aid the Communist cause. I think you are unknowingly aiding it when you try to burlesque this hearing in which we are attempting to bring out the facts, however . . .

Mr. Welch: Mr. Chairman, under these circumstances I must have something approaching a personal privilege.

Senator Mundt: You may have it, sir. It will not be taken out of your time.

Mr. Welch: Senator McCarthy, I did not know—Senator, sometimes you say "May I have your attention?"

Senator McCarthy: I am listening to you. I can listen with one ear.

Mr. Welch: This time I want you to listen with both.

Senator McCarthy: Yes.

Mr. Welch: Senator McCarthy, I think until this moment—

Senator McCarthy: Jim, will you get the news story to the effect that this man belonged to this Communist-front organization? Will you get the citations showing that this was the legal arm of the Communist Party, and the length of time that he belonged, and the fact that he was recommended by Mr. Welch? I think that should be in the record.

Mr. Welch: You won't need anything in the record when I have finished telling you this.

Until this moment, Senator, I think I never really gaged your cruelty or your recklessness. Fred Fisher is a young man who went to the Harvard Law School and came into my firm and is starting what looks to be a brilliant career with us.

When I decided to work for this committee I asked Jim St. Clair, who sits on my right, to be my first assistant. I said to Jim, "Pick somebody in the firm who works under you that you would like." He chose Fred

Fisher and they came down on an afternoon plane. That night, when he had taken a little stab at trying to see what the case was about, Fred Fisher and Jim St. Clair and I went to dinner together. I then said to these two young men, “Boys, I don’t know anything about you except I have always liked you, but if there is anything funny in the life of either one of you that would hurt anybody in this case you speak up quick.”

Fred Fisher said, “Mr. Welch, when I was in law school and for a period of months after, I belonged to the Lawyers Guild,” as you have suggested, Senator. He went on to say, “I am secretary of the Young Republicans League in Newton with the son of Massachusetts’ Governor, and I have the respect and admiration of my community and I am sure I have the respect and admiration of the twenty-five lawyers or so in Hale & Dorr.”

I said, “Fred, I just don’t think I am going to ask you to work on the case. If I do, one of these days that will come out and go over national television and it will just hurt like the dickens.”

So, Senator, I asked him to go back to Boston.

Little did I dream you could be so reckless and so cruel as to do injury to that lad. It is true he is still with Hale & Dorr. It is, I regret to say, equally true that I fear he shall always bear a scar needlessly inflicted by you. If it were in my power to forgive you for your reckless cruelty, I will do so. I like to think I am a gentleman, but your forgiveness will have to come from someone other than me.

Senator McCarthy: Mr. Chairman.

Senator Mundt: Senator McCarthy?

Senator McCarthy: May I say that Mr. Welch talks about this being cruel and reckless. He was just baiting; he has been baiting Mr. Cohn here for hours, requesting that Mr. Cohn, before sundown, get out of any department of Government anyone who is serving the Communist cause. I just give this man’s record, and I want to say, Mr. Welch, that it has been labeled long before he became a member, as early as 1944—

Mr. Welch: Senator, may we not drop this? We know he belonged to the Lawyers Guild, and Mr. Cohn nods his head at me. I did you, I think, no personal injury, Mr. Cohn.

Mr. Cohn: No, sir.

Mr. Welch: I meant to do you no personal injury, and if I did, I beg your pardon.

Let us not assassinate this lad further, Senator. You have done enough. Have you no sense of decency, sir, at long last? Have you left no sense of decency?

Cohn, and Francis P. Carr. Hearings* (Washington, DC: U.S. Government Printing Office 1954), 2424–2430.

52. *Brown v. Board of Education, Topeka, Kansas, 1954*

Introduction

By the mid-twentieth century, continuing racial segregation in the Southern states of the United States had become a serious embarrassment to American leaders’ Cold War claims that their country represented democracy, freedom, and equal rights. Despite fierce opposition from the Southern states, political and legal challenges to segregation intensified after World War II. Few if any twentieth-century cases better demonstrate the ability of the U.S. Supreme Court to alter understandings of the U.S. Constitution—and thus provide a substitute for constitutional amendment—than *Brown v. Board of Education*. Here, the Court overturned the doctrine of separate but equal that had been sanctioned in *Plessy v. Ferguson* (1896) and declared that segregation would have no place in U.S. public education. This opinion, in turn, sparked both support and opposition in the battle over segregation in all aspects of American life that culminated in the civil rights movement.

Primary Source

MR. CHIEF JUSTICE WARREN delivered the opinion of the Court.

These cases come to us from the States of Kansas, South Carolina, Virginia, and Delaware. They are premised on different facts and different local conditions, but a common legal question justifies their consideration together in this consolidated opinion.

In each of the cases, minors of the Negro race, through their legal representatives, seek the aid of the courts in obtaining admission to the public schools of their community on a nonsegregated basis. In each instance, they had been denied admission to schools attended by white children under laws requiring or permitting segregation according to race. This segregation was alleged to deprive the plaintiffs of the equal protection of the laws under the Fourteenth Amendment. In each of the cases other than the Delaware case, a three-judge federal district court denied relief to the plaintiffs on the so-called “separate but equal” doctrine announced by this Court in *Plessy v. Ferguson*. Under that doctrine, equality of treatment is accorded when the races are provided substantially equal facilities, even though these facilities be separate. In the Delaware case, the Supreme Court of Delaware adhered to that doctrine, but ordered that the plaintiffs be admitted to the white schools because of their superiority to the Negro schools.

The plaintiffs contend that segregated public schools are not “equal” and cannot be made “equal,” and that hence they are deprived of the equal protection of the laws. Because of the obvious importance of the question presented, the Court took jurisdiction. Argument was heard in the 1952 Term, and reargument was heard this Term on certain questions propounded by the Court.

Reargument was largely devoted to the circumstances surrounding the adoption of the Fourteenth Amendment in 1868. It covered exhaustively consideration of the Amendment in Congress, ratification by the states, then existing practices in racial segregation, and the views of proponents and opponents of the Amendment. This discussion and our own investigation convince us

that, although these sources cast some light, it is not enough to resolve the problem with which we are faced. At best, they are inconclusive. The most avid proponents of the post-War Amendments undoubtedly intended them to remove all legal distinctions among “all persons born or naturalized in the United States.” Their opponents, just as certainly, were antagonistic to both the letter and the spirit of the Amendments and wished them to have the most limited effect. What others in Congress and the state legislatures had in mind cannot be determined with any degree of certainty.

An additional reason for the inconclusive nature of the Amendment’s history, with respect to segregated schools, is the status of public education at that time. In the South, the movement toward free common schools, supported by general taxation, had not yet taken hold. Education of white children was largely in the hands of private groups. Education of Negroes was almost nonexistent, and practically all of the race were illiterate. In fact, any education of Negroes was forbidden by law in some states. Today, in contrast, many Negroes have achieved outstanding success in the arts and sciences as well as in the business and professional world. It is true that public school education at the time of the Amendment had advanced further in the North, but the effect of the Amendment on Northern States was generally ignored in the congressional debates. Even in the North, the conditions of public education did not approximate those existing today. The curriculum was usually rudimentary; ungraded schools were common in rural areas; the school term was but three months a year in many states; and compulsory school attendance was virtually unknown. As a consequence, it is not surprising that there should be so little in the history of the Fourteenth Amendment relating to its intended effect on public education.

In the first cases in this Court construing the Fourteenth Amendment, decided shortly after its adoption, the Court interpreted it as proscribing all state-imposed discriminations against the Negro race. The doctrine of “separate but equal” did not make its appearance in this Court until 1896 in the case of *Plessy v. Ferguson*, involving not education but transportation. American courts have since labored with the doctrine for over

half a century. In this Court, there have been six cases involving the “separate but equal” doctrine in the field of public education. In *Cumming v. County Board of Education*, and *Gong Lum v. Rice*, the validity of the doctrine itself was not challenged. In more recent cases, all on the graduate school level, inequality was found in that specific benefits enjoyed by white students were denied to Negro students of the same educational qualifications. . . . In none of these cases was it necessary to re-examine the doctrine to grant relief to the Negro plaintiff. And in *Sweatt v. Painter*, the Court expressly reserved decision on the question whether *Plessy v. Ferguson* should be held inapplicable to public education.

In the instant cases, that question is directly presented. Here, unlike *Sweatt v. Painter*, there are findings below that the Negro and white schools involved have been equalized, or are being equalized, with respect to buildings, curricula, qualifications and salaries of teachers, and other “tangible” factors. Our decision, therefore, cannot turn on merely a comparison of these tangible factors in the Negro and white schools involved in each of the cases. We must look instead to the effect of segregation itself on public education.

In approaching this problem, we cannot turn the clock back to 1868 when the Amendment was adopted, or even to 1896 when *Plessy v. Ferguson* was written. We must consider public education in the light of its full development and its present place in American life throughout the Nation. Only in this way can it be determined if segregation in public schools deprives these plaintiffs of the equal protection of the laws.

Today, education is perhaps the most important function of state and local governments. Compulsory school attendance laws and the great expenditures for education both demonstrate our recognition of the importance of education to our democratic society. It is required in the performance of our most basic public responsibilities, even service in the armed forces. It is the very foundation of good citizenship. Today it is a principal instrument in awakening the child to cultural values, in preparing him for later professional training, and in helping him to adjust normally to his environment. In these days, it is doubtful that any child may

reasonably be expected to succeed in life if he is denied the opportunity of an education. Such an opportunity, where the state has undertaken to provide it, is a right which must be made available to all on equal terms.

We come then to the question presented: Does segregation of children in public schools solely on the basis of race, even though the physical facilities and other “tangible” factors may be equal, deprive the children of the minority group of equal educational opportunities? We believe that it does.

In *Sweatt v. Painter*, in finding that a segregated law school for Negroes could not provide them equal educational opportunities, this Court relied in large part on “those qualities which are incapable of objective measurement but which make for greatness in a law school.” In *McLaurin v. Oklahoma State Regents*, the Court, in requiring that a Negro admitted to a white graduate school be treated like all other students, again resorted to intangible considerations: “. . . his ability to study, to engage in discussions and exchange views with other students, and, in general, to learn his profession.” Such considerations apply with added force to children in grade and high schools. To separate them from others of similar age and qualifications solely because of their race generates a feeling of inferiority as to their status in the community that may affect their hearts and minds in a way unlikely ever to be undone. The effect of this separation on their educational opportunities was well stated by a finding in the Kansas case by a court which nevertheless felt compelled to rule against the Negro plaintiffs:

Segregation of white and colored children in public schools has a detrimental effect upon the colored children. The impact is greater when it has the sanction of the law; for the policy of separating the races is usually interpreted as denoting the inferiority of the negro group. A sense of inferiority affects the motivation of a child to learn. Segregation with the sanction of law, therefore, has a tendency to [retard] the educational and mental development of negro children and to deprive them of some of the benefits they would receive in a racial[ly] integrated school system.

Whatever may have been the extent of psychological knowledge at the time of *Plessy v. Ferguson*, this finding is amply supported by modern authority. Any language in *Plessy v. Ferguson* contrary to this finding is rejected.

We conclude that in the field of public education the doctrine of “separate but equal” has no place. Separate educational facilities are inherently unequal. Therefore, we hold that the plaintiffs and others similarly situated for whom the actions have been brought are, by reason of the segregation complained of, deprived of the equal protection of the laws guaranteed by the Fourteenth Amendment. This disposition makes unnecessary any discussion whether such segregation also violates the Due Process Clause of the Fourteenth Amendment.

Because these are class actions, because of the wide applicability of this decision, and because of the great variety of local conditions, the formulation of decrees in these cases presents problems of considerable com-

plexity. On reargument, the consideration of appropriate relief was necessarily subordinated to the primary question—the constitutionality of segregation in public education. We have now announced that such segregation is a denial of the equal protection of the laws. In order that we may have the full assistance of the parties in formulating decrees, the cases will be restored to the docket, and the parties are requested to present further argument on Questions 4 and 5 previously propounded by the Court for the reargument this Term. The Attorney General of the United States is again invited to participate. The Attorneys General of the states requiring or permitting segregation in public education will also be permitted to appear as amici curiae upon request to do so by September 15, 1954, and submission of briefs by October 1, 1954.

It is so ordered.

53. Final Declaration of the Geneva Conference on the Problem of Restoring Peace in Indo-China, 21 July 1954

Introduction

The Geneva Conference, an international meeting cochaired by Great Britain and the Soviet Union, took place in Switzerland from April to July 1954. The conference’s first weeks were spent in an unsuccessful effort to reach a final peace settlement in Korea. The conferees then switched their attention to Indochina, where the French, defeated earlier that year at Dien Bien Phu, had announced their intention to withdraw and grant independence to the constituent states. In Cambodia and Laos, where communist insurgencies were relatively weak, monarchical governments headed by traditional indigenous leaders were established. In each country, rebel forces disbanded and were integrated into the royal militaries. Vietnam, where the nationalist communist leader Ho Chi Minh and his Viet Minh forces were far stronger, was more complicated. Neither the People’s Republic of China (PRC) nor the Soviet Union, two powers that had only within the previous year extricated themselves from their involvement in the Korean War, was eager to become embroiled in another protracted Asian conflict. Both communist big powers therefore put pressure upon Ho to sign the Geneva Accords, under whose terms Vietnam would be temporarily partitioned at the 17th Parallel of latitude, with the Viet Minh controlling the northern portion (the Democratic Republic of Vietnam) and noncommunist Vietnamese representatives the southern portion (later the Republic of Vietnam). The Geneva Accords called for countrywide elections to be held within two years to choose a government for a united Vietnam. The agreement was supposedly made between Cambodia, the two Vietnams, France, Laos, the PRC, the Soviet Union, the United Kingdom, and the United States. France and the Democratic Republic of Vietnam were the only two states that actually signed the accords. The United States refused to recognize them and encouraged the southern Republic of Vietnam and its first president, Ngo Dinh Diem, to also ignore them and to become a permanent independent state, backed by massive quantities of U.S. economic and

military aid. It was widely expected that Ho's nationalist credentials would ensure the Viet Minh victory in the national elections, so when the date scheduled for them arrived, the southern government simply ignored this. The accords established an International Control Commission of three neutral states—India, Canada, and Poland—to supervise the implementation of these agreements but had no powers to enforce them, so they became a dead letter. In the late 1950s the northern communist state, determined to unite the country, had begun a policy of armed struggle in the southern portion, intended to destabilize and destroy Diem's government and bring about national unification.

Primary Source

1. The Conference takes note of the agreements ending hostilities in Cambodia, Laos and Vietnam and organizing international control and the supervision of the execution of the provisions of these agreements.

2. The Conference expresses satisfaction at the ending of hostilities in Cambodia, Laos and Vietnam. The Conference expresses its conviction that the execution of the provisions set out in the present declaration and in the agreements on the cessation of hostilities will permit Cambodia, Laos and Vietnam henceforth to play their part, in full independence and sovereignty, in the peaceful community of nations.

3. The Conference takes note of the declarations made by the Governments of Cambodia and of Laos of their intention to adopt measures permitting all citizens to take their place in the national community, in particular by participating in the next general elections, which, in conformity with the constitution of each of these countries, shall take place in the course of the year 1955, by secret ballot and in conditions of respect for fundamental freedoms.

4. The Conference takes note of the clauses in the agreement on the cessation of hostilities in Vietnam prohibiting the introduction into Vietnam of foreign troops and military personnel as well as of all kinds of arms and munitions. The Conference also takes note of the declarations made by the Governments of Cambodia and Laos of their resolution not to request foreign aid, whether in war material, in personnel or in instructors except for the purpose of the effective defense of their territory and, in the case of Laos, to the extent defined by the agreements on the cessation of hostilities in Laos.

5. The Conference takes note of the clauses in the agreement on the cessation of hostilities in Vietnam to

the effect that no military base under the control of a foreign state may be established in the regrouping zones of the two parties, the latter having the obligation to see that the zones allotted to them shall not constitute part of any military alliance and shall not be utilized for the resumption of hostilities or in the service of an aggressive policy. The Conference also takes note of the declarations of the Governments of Cambodia and Laos to the effect that they will not join in any agreement with other States if this agreement includes the obligation to participate in a military alliance not in conformity with the principles of the Charter of the United Nations or, in the case of Laos, with the principles of the agreement on the cessation of hostilities in Laos or, so long as their security is not threatened, the obligation to establish bases on Cambodian or Laotian territory for the military forces of foreign Powers.

6. The Conference recognizes that the essential purpose of the agreement relating to Vietnam is to settle military questions with a view to ending hostilities and that the military demarcation line is provisional and should not in any way be interpreted as constituting a political or territorial boundary. The Conference expresses its conviction that the execution of the provisions set out in the present declaration and in the agreement on the cessation of hostilities creates the necessary basis for the achievement in the near future of a political settlement in Vietnam.

7. The Conference declares that, so far as Vietnam is concerned, the settlement of political problems, effected on the basis of respect for the principles of independence, unity and territorial integrity, shall permit the Vietnamese people to enjoy the fundamental freedoms, guaranteed by democratic institutions established as a result of free general elections by secret ballot.

In order to ensure that sufficient progress in the restoration of peace has been made, and that all the necessary conditions obtain for free expression of the national will, general elections shall be held in July 1956, under the supervision of an international commission composed of representatives of the Member States of the International Supervisory Commission, referred to in the agreement on the cessation of hostilities. Consultations will be held on this subject between the competent representative authorities of the two zones from April 20, 1955, onwards.

8. The provisions of the agreements on the cessation of hostilities intended to ensure the protection of individuals and of property must be most strictly applied and must, in particular, allow everyone in Vietnam to decide freely in which zone he wishes to live.

9. The competent representative authorities of the Northern and Southern zones of Vietnam, as well as the authorities of Laos and Cambodia, must not permit any individual or collective reprisals against persons who have collaborated in any way with one of the parties during the war, or against members of such persons' families.

10. The Conference takes note of the declaration of the Government of the French Republic to the effect that it is ready to withdraw its troops from the territory of Cambodia, Laos and Vietnam, at the request of the

governments concerned and within periods which shall be fixed by agreement between the parties except in the cases where, by agreement between the two parties, a certain number of French troops shall remain at specified points and for a specified time.

11. The Conference takes note of the declaration of the French Government to the effect that for the settlement of all the problems connected with the re-establishment and consolidation of peace in Cambodia, Laos and Vietnam, the French Government will proceed from the principle of respect for the independence and sovereignty, unity and territorial integrity of Cambodia, Laos and Vietnam.

12. In their relations with Cambodia, Laos and Vietnam, each member of the Geneva Conference undertakes to respect the sovereignty, the independence, the unity and the territorial integrity of the above-mentioned states, and to refrain from any interference in their internal affairs.

13. The members of the Conference agree to consult one another on any question which may be referred to them by the International Supervisory Commission, in order to study such measures as may prove necessary to ensure that the agreements on the cessation of hostilities in Cambodia, Laos, and Vietnam are respected.

54. Southeast Asia Collective Defense Treaty, Manila, Philippines, 8 September 1954

Introduction

By the mid-1950s, the reach of the United States had become truly global. After the Korean War, the administration of Republican President Dwight D. Eisenhower sought to construct a security pact among its Asian-Pacific allies that might serve as the counterpart to the North Atlantic Treaty Organization (NATO) in Europe. Their concern for the region was sharpened by the outcome of the Geneva conference of great powers, held from April to July 1954, to discuss outstanding problems in Korea and Vietnam, especially the situation in Korea and Indochina. The conference failed to negotiate a permanent settlement of the Korean War, leaving the peninsula in a state of armistice that would endure for more than half a century. In Indochina, the French colonial authorities withdrew entirely. Laos and Cambodia became independent kingdoms, while Vietnam was partitioned at the 17th Parallel of latitude into northern communist and southern noncommunist states, whose unification after countrywide elections was anticipated within two years. In Laos, Cambodia, and Vietnam alike, communist forces carried consider-

able weight, although only in Vietnam were they thought likely to control the country within the near future. Only in 1954 did the Philippine authorities, assisted by American diplomats, covert operatives, and aid programs, suppress the agrarian rebellion of the communist-led Hukbalahaps, which since the late 1940s had come close to toppling the government. In Malaya, the British colonial authorities were still in the process of overcoming a communist insurgency. In September 1954 U.S. Secretary of State John Foster Dulles took the lead in negotiating the Southeast Asia Treaty Organization (SEATO), a defensive alliance of Australia, France, New Zealand, Pakistan, the Philippines, Thailand, the United Kingdom, and the United States. The new body was based in Bangkok, the Thai capital. Unlike the NATO alliance, this treaty did not oblige its members to come to each other's defense should one be attacked but rather only to consult with each other and to respond—although how was left unspecified—in collaboration with the United Nations (UN). The agreement did, however, envisage extensive military cooperation among the members at all times as well as comparable collaboration for economic and social development. The United States provided a specific “understanding” that the treaty's scope was not restricted to attacks by communist forces against its members. SEATO proved a rather ineffective alliance. Britain and France were included primarily because both still possessed colonial interests in Asia, but to many critics their presence in the grouping, together with Australia and New Zealand, made it appear primarily a white man's club, with just a few token Asian members. The political status of both the Republic of Korea (ROK, South Korea) and Taiwan was so sensitive that neither was included, although both came under the protection of separate bilateral security treaties with the United States. Japan, which also had such a bilateral arrangement with the United States, was likewise excluded, although this was probably because memories of Japanese behavior before and during World War II still rankled member states. Stipulations in the Geneva Accords on the status of Cambodia, Laos, and Vietnam meant that none of those countries could join. The military forces of the eight member states held joint exercises and maneuvers on an annual basis. During the 1960s, SEATO's members failed to take joint action on conflicts in Vietnam, Cambodia, and Laos, as they found themselves unable to agree on appropriate responses. After communist forces took power in all three Indochinese states, the organization was widely perceived as a largely ineffective dead letter and was dissolved in 1977.

Primary Source

The Parties to this Treaty,

Recognizing the sovereign equality of all the Parties,

Reiterating their faith in the purposes and principles set forth in the Charter of the United Nations and their desire to live in peace with all peoples and all governments,

Reaffirming that, in accordance with the Charter of the United Nations, they uphold the principle of equal rights and self-determination of peoples, and declaring that they will earnestly strive by every peaceful means to promote self-government and to secure the independence of all countries whose peoples desire it and are able to undertake its responsibilities,

Desiring to strengthen the fabric of peace and freedom and to uphold the principles of democracy, individual liberty and the rule of law, and to promote the eco-

nomic well-being and development of all peoples in the treaty area,

Intending to declare publicly and formally their sense of unity, so that any potential aggressor will appreciate that the Parties stand together in the area, and

Desiring further to coordinate their efforts for collective defense for the preservation of peace and security,

Therefore agree as follows:

ARTICLE I

The Parties undertake, as set forth in the Charter of the United Nations, to settle any international disputes in which they may be involved by peaceful means in such a manner that international peace and security and justice are not endangered, and to refrain in their international relations from the threat or use of force in any manner inconsistent with the purposes of the United Nations.

ARTICLE II

In order more effectively to achieve the objectives of this Treaty, the Parties, separately and jointly, by means of continuous and effective self-help and mutual aid will maintain and develop their individual and collective capacity to resist armed attack and to prevent and counter subversive activities directed from without against their territorial integrity and political stability.

ARTICLE III

The Parties undertake to strengthen their free institutions and to cooperate with one another in the further development of economic measures, including technical assistance, designed both to promote economic progress and social well-being and to further the individual and collective efforts of governments toward these ends.

ARTICLE IV

1. Each Party recognizes that aggression by means of armed attack in the treaty area against any of the Parties or against any State or territory which the Parties by unanimous agreement may hereafter designate, would endanger its own peace and safety, and agrees that it will in that event act to meet the common danger in accordance with its constitutional processes. Measures taken under this paragraph shall be immediately reported to the Security Council of the United Nations.

2. If, in the opinion of any of the Parties, the inviolability or the integrity of the territory or the sovereignty or political independence of any Party in the treaty area or of any other State or territory to which the provisions of paragraph 1 of this Article from time to time apply is threatened in any way other than by armed attack or is affected or threatened by any fact or situation which might endanger the peace of the area, the Parties shall consult immediately in order to agree on the measures which should be taken for the common defense.

3. It is understood that no action on the territory of any State designated by unanimous agreement under paragraph 1 of this Article or on any territory so designated shall be taken except at the invitation or with the consent of the government concerned.

ARTICLE V

The Parties hereby establish a Council, on which each of them shall be represented, to consider matters concerning the implementation of this Treaty. The Council shall provide for consultation with regard to military and any other planning as the situation obtaining in the treaty area may from time to time require. The Council shall be so organized as to be able to meet at any time.

ARTICLE VI

This Treaty does not affect and shall not be interpreted as affecting in any way the rights and obligations of any of the Parties under the Charter of the United Nations or the responsibility of the United Nations for the maintenance of international peace and security. Each Party declares that none of the international engagements now in force between it and any other of the Parties or any third party is in conflict with the provisions of this Treaty, and undertakes not to enter into any international engagement in conflict with this Treaty.

ARTICLE VII

Any other State in a position to further the objectives of this Treaty and to contribute to the security of the area may, by unanimous agreement of the Parties, be invited to accede to this Treaty. Any State so invited may become a Party to the Treaty by depositing its instrument of accession with the Government of the Republic of the Philippines. The Government of the Republic of the Philippines shall inform each of the Parties of the deposit of each such instrument of accession.

ARTICLE VIII

As used in this Treaty, the “treaty area” is the general area of Southeast Asia, including also the entire territories of the Asian Parties, and the general area of the Southwest Pacific not including the Pacific area north of 21 degrees 30 minutes north latitude. The Parties may, by unanimous agreement, amend this Article to include within the treaty area the territory of any State acceding to this Treaty in accordance with Article VII or otherwise to change the treaty area.

[. . .]

UNDERSTANDING OF THE UNITED STATES OF AMERICA

The United States of America in executing the present Treaty does so with the understanding that its recognition of the effect of aggression and armed attack and its agreement with reference thereto in Article IV, paragraph 1, apply only to communist aggression but

affirms that in the event of other aggression or armed attack it will consult under the provisions of Article IV, paragraph 2.

55. Joseph McCarthy: Censure by the U.S. Senate, 10 November 1954

Introduction

In a speech delivered on 9 February 1950, Senator Joseph McCarthy brandished a piece of paper on which he claimed was a list supplied by the Federal Bureau of Investigation (FBI) of 205 names of U.S. State Department employees who were known to be “card-carrying communists.” It was a false claim, but his dramatic demeanor and the fact that he was a senator lent credibility to the charges, thus sparking mass public hysteria regarding the pervasiveness of communism in American society. Fueling the public’s paranoia, McCarthy then led a series of congressional hearings into communist activity that lasted well into 1954—gaining prestige and power as he went—despite the fact that he could not produce any evidence and kept changing the number of names he had when pressed by reporters. Many of his congressional colleagues joined him in this modern-day witch-hunt. Prominent Republican politicians did not necessarily believe his charges, but since most of the charges were aimed at Democrats and the Republicans wished to discredit the Democratic administration of President Harry S. Truman and win the 1952 presidential election, they were prepared to tolerate McCarthy’s behavior. During the 1952 election campaign, Republican candidate Dwight D. Eisenhower refused to repudiate McCarthy, even when he attacked former Secretary of State General George C. Marshall, Eisenhower’s wartime superior, as a communist or a fellow traveler. Once Eisenhower had won the election, however, McCarthy began to represent something of a domestic and international embarrassment to the United States, and support for him declined. Finally, in 1954, McCarthy’s reign of terror was brought to an end after it was shown by an attorney for the U.S. Army that McCarthy had produced false evidence in the televised Army-McCarthy Hearings. After the televised hearings and McCarthy’s public humiliation, a majority of senators finally felt sufficiently secure to vote to censure him on 2 December 1954. By this time, however, McCarthy and his followers had ruined numerous careers and created a broader intellectual climate in which diplomats, government officials, politicians, and opinion leaders often feared to state their views forthrightly if these might conceivably brand them as procommunist. Such practical caution contributed to U.S. involvement in Vietnam and to successive presidents’ reluctance to recognize Mainland China.

Primary Source

Resolved, That the Senator from Wisconsin, Mr. McCarthy, failed to cooperate with the Subcommittee on Privileges and Elections of the Senate Committee on Rules and Administration in clearing up matters referred to that subcommittee which concerned his conduct as a Senator and affected the honor of the Senate and, instead, repeatedly abused the subcommittee and its members who were trying to carry out assigned duties, thereby obstructing the constitutional processes of the Senate, and that this conduct of the

Senator from Wisconsin, Mr. McCarthy, is contrary to senatorial traditions and is hereby condemned.

Section 2. The Senator from Wisconsin, Mr. McCarthy, in writing to the chairman of the Select Committee to Study Censure Charges (Mr. Watkins) after the Select Committee had issued its report and before the report was presented to the Senate charging three members of the Select Committee with “deliberate deception” and “fraud” for failure to disqualify themselves; in stating to the press on November 4, 1954, that the special

Senate session that was to begin November 8, 1954, was a “lynch-party”; in repeatedly describing this special Senate session as a “lynch bee” in a nationwide television and radio show on November 7, 1954; in stating to the public press on November 13, 1954, that the chairman of the Select Committee (Mr. Watkins) was guilty of “the most unusual, most cowardly things I’ve ever heard of” and stating further: “I expected he would be afraid to answer the questions, but didn’t think he’d be stupid enough to make a public statement”; and in characterizing the said committee as the “unwitting handmaiden,” “involuntary agent” and “attorneys-in-fact” of the Communist Party and in charging that the said committee in writing its report “imitated Communist methods—that it distorted, mis-

represented, and omitted in its effort to manufacture a plausible rationalization” in support of its recommendations to the Senate, which characterizations and charges were contained in a statement released to the press and inserted in the Congressional Record of November 10, 1954, acted contrary to senatorial ethics and tended to bring the Senate into dishonor and disrepute, to obstruct the constitutional processes of the Senate, and to impair its dignity; and such conduct is hereby condemned.

56. Mutual Defense Treaty between the United States of America and the Republic of China, 2 December 1954

Introduction

Before the Korean War began in June 1950, the administration of U.S. President Harry S. Truman had considered simply acquiescing should the Communist People’s Republic of China (PRC) take over the island of Taiwan, to which the remnants of the Guomindang (Nationalist) had fled. The outbreak of that war, however, had led American officials to block any such move by interposing the U.S. Seventh Fleet between Taiwan and the mainland. By the time the Korean War ended in 1953, the U.S. government would have found it extremely difficult to abandon Taiwan, a client and ally, to communist rule. As it would do for over two decades more, the United States still recognized the government of the Republic of China (ROC) on Taiwan, headed by President Jiang Jieshi, as the only legal government of China. At the same time, President Dwight D. Eisenhower and other officials in his administration feared that Jiang, desperate to regain the mainland, was liable to provoke a major war with China in the hopes that the United States would come to his assistance and restore him to power in Beijing. In September 1954 Secretary of State John Foster Dulles negotiated the Manila Treaty, which established the Southeast Asia Treaty Organization (SEATO), a security pact based on the earlier North Atlantic Treaty (NATO) alliance whereby Canada, the United States, and the West European states promised to come to the aid of any cosignatory that suffered an external military attack. SEATO members included Thailand, the United States, Australia, France, New Zealand, Pakistan, the Philippines, and the United Kingdom, all of whom feared the destabilizing effect that subversion, probably backed by Mainland China, might have on their own territory or that of their Asian colonies. Jiang’s bellicosity and the vulnerability of both Taiwan itself and, even more, of several of its associated offshore islands to mainland attack made American officials and their SEATO partners extremely wary of including Taiwan in the SEATO alliance. Mainland China might have also considered this a provocative move and responded by launching an all-out attack on Taiwan. Instead, Dulles offered Jiang a bilateral defensive security treaty under whose terms the United States would be obliged to defend the territory of Taiwan against external attack. The status of the various offshore islands, including Jinmen, Mazu, and the Pescadores, was deliberately left ambivalent, as the Eisenhower administration was not eager to risk outright hostilities over these strategically insignificant and rather vulnerable islands yet did not wish to seem to encourage their forcible annexation by the Mainland. When major crises between Taiwan and the Mainland over these islands erupted in 1954–1955 and again in 1958 as the

PRC shelled Taiwan heavily, the Eisenhower administration still left its precise commitments and potential responses under this treaty sedulously ambiguous and undefined. While seeking to prevent a Mainland takeover of Taiwan itself, the United States did not want to find itself involved in a major war with communist China.

Primary Source

The Parties to this Treaty,

Reaffirming their faith in the purposes and principles of the Charter of the United Nations and their desire to live in peace with all peoples and all Governments, and desiring to strengthen the fabric of peace in the West Pacific Area,

Recalling with mutual pride the relationship which brought their two peoples together in a common bond of sympathy and mutual ideals to fight side by side against imperialist aggression during the last war,

Desiring to declare publicly and formally their sense of unity and their common determination to defend themselves against external armed attack, so that no potential aggressor could be under the illusion that either of them stands alone in the West Pacific Area, and

Desiring further to strengthen their present efforts for collective defense for the preservation of peace and security pending the development of a more comprehensive system of regional security in the West Pacific Area,

Have agreed as follows:

ARTICLE I

The Parties undertake, as set forth in the Charter of the United Nations, to settle any international dispute in which they may be involved by peaceful means in such a manner that international peace, security and justice are not endangered and to refrain in their international relations from the threat or use of force in any manner inconsistent with the purposes of the United Nations.

ARTICLE II

In order more effectively to achieve the objective of this Treaty, the Parties separately and jointly by self-help and mutual aid will maintain and develop their individual and collective capacity to resist armed attack and communist subversive activities directed from

without against their territorial integrity and political stability.

ARTICLE III

The Parties undertake to strengthen their free institutions and to cooperate with each other in the development of economic progress and social well-being and to further their individual and collective efforts toward these ends.

ARTICLE IV

The Parties, through their Foreign Ministers or their deputies, will consult together from time to time regarding the implementation of this Treaty.

ARTICLE V

Each Party recognizes that an armed attack in the West Pacific Area directed against the territories of either of the Parties would be dangerous to its own peace and safety and declares that it would act to meet the common danger in accordance with its constitutional processes.

Any such armed attack and all measures taken as a result thereof shall be immediately reported to the Security Council of the United Nations. Such measures shall be terminated when the Security Council has taken the measures necessary to restore and maintain international peace and security.

ARTICLE VI

For the purposes of Articles II and V, the terms “territorial” and “territories” shall mean in respect of the Republic of China, Taiwan and the Pescadores; and in respect of the United States of America, the island territories in the West Pacific under its jurisdiction. The provisions of Articles II and V will be applicable to such other territories as may be determined by mutual agreement.

ARTICLE VII

The Government of the Republic of China grants, and the Government of the United States of America

accepts, the right to dispose such United States land, air and sea forces in and about Taiwan and the Pescadores as may be required for their defense, as determined by mutual agreement.

ARTICLE VIII

This Treaty does not affect and shall not be interpreted as affecting in any way the rights and obligations of the Parties under the Charter of the United Nations or the responsibility of the United Nations for the maintenance of international peace and security.

ARTICLE IX

This Treaty shall be ratified by the United States of America and the Republic of China in accordance with their respective constitutional processes and will come into force when instruments of ratification thereof have been exchanged by them at Taipei.

ARTICLE X

This Treaty shall remain in force indefinitely. Either Party may terminate it one year after notice has been given to the other Party.

[. . .]

*Exchange of Notes between John Foster Dulles,
Secretary of State, and Chinese Minister of Foreign
Affairs George K. C. Yeh on 10 December 1954*

To Yeh from Dulles

EXCELLENCY:

I have the honor to refer to recent conversations between representatives of our two Governments and to confirm the understandings reached as a result of those conversations, as follows:

The Republic of China effectively controls both the territory described in Article VI of the Treaty of Mutual Defense between the Republic of China, and the United States of America signed on December 2, 1954, at Washington and other territory. It possesses with respect to all territory now and hereafter under its control the inherent right of self-defense. In view of the obligations of the two Parties under the said Treaty and of the fact that the use of force from either of these

areas by either of the Parties affects the other, it is agreed that such use of force will be a matter of joint agreement, subject to action of an emergency character which is clearly an exercise of the inherent right of self-defense. Military elements which are a product of joint effort and contribution by the two Parties will not be removed from the territories described in Article VI to a degree which would substantially diminish the defensibility of such territories without mutual agreement.

Accept, Excellency, the assurances of my highest consideration.

JOHN FOSTER DULLES

Secretary of State of the
United States of America

To Dulles from Yeh

EXCELLENCY:

I have the honor to acknowledge the receipt of Your Excellency's Note of today's date, which reads as follows:

"I have the honor to refer to recent conversations between representatives of our two Governments and to confirm the understandings reached as a result of those conversations, as follows:

"The Republic of China effectively controls both the territory described in Article VI of the Treaty of Mutual Defense between the Republic of China and the United States of America signed on December 2, 1954, at Washington and other territory. It possesses with respect to all territory now and hereafter under its control the inherent right of self-defense. In view of the obligations of the two Parties under the said Treaty and of the fact that the use of force from either of these areas by either of the Parties affects the other, it is agreed that such use of force will be a matter of joint agreement, subject to action of an emergency character which is clearly an exercise of the inherent right of self-defense. Military elements which are a product of joint effort and contribution by the two Parties will not be removed from the territories described in Article VI to a degree which would substantially diminish the defensibility of such territories without mutual agreement."

I have the honor to confirm, on behalf of my Government, the understanding set forth in Your Excellency's Note under reply.

I avail myself of this opportunity to convey to Your Excellency the assurances of my highest consideration.

GEORGE K. C. YEH

Minister for Foreign Affairs of the Republic of China

57. CIA Memorandum: CIA's Role in the Overthrow of Arbenz, 1954

Introduction

By the 1950s, the new U.S. Central Intelligence Agency (CIA) was aggressively waging the Cold War, attempting to prevent not just communist but also leftist governments from attaining power and, when they did, seeking to overthrow them. Dwight D. Eisenhower, who became president in 1953, later proudly boasted that during his two terms in office no American soldier lost his life in combat. The reason for this was in part that Eisenhower preferred to rely on covert operations. In 1953 CIA agents working with local Iranians succeeding in ousting from power Mohammed Mossadegh, the nationalist and Left-leaning prime minister of Iran, and concentrating power in the hands of the young monarch Mohammad Reza Shah Pahlavi, who was expected to follow more pro-American policies. CIA officials adopted similar tactics when a radical nationalist government headed by President Jacobo Arbenz Guzmán won the 1951 elections in the small Central American state of Guatemala. In 1952 Arbenz instituted sweeping agrarian redistribution policies and other social and economic reforms, which put him at odds not just with wealthy landowners and some of the Guatemalan military but also with the United Fruit Company, a U.S. corporation that dominated much of the Guatemalan economy. In 1953 the Arbenz government expropriated United Fruit from much of its massive landholdings, causing the company's executives to file complaints with the U.S. State Department for assistance. American diplomats, concerned not just with the interests of United Fruit but also more broadly with the radical character of the Arbenz government, which they feared would encourage the spread of leftist infection throughout the Western Hemisphere, reduced economic aid drastically and also quietly placed obstacles in the way of Guatemalan commerce with the United States. The CIA initially began planning for a coup in 1952 but called off an early operation when an indiscreet collaborator, Dominican dictator Rafael Trujillo, leaked information on the scheme to fellow Latin American leaders. In early 1953 Guatemalan rebels launched a second coup, a premature attempt that failed. In August 1953 after the successful Iranian coup, the U.S. National Security Council (NSC) reactivated the Guatemala project. The CIA trained Guatemalan exiles in camps in neighboring Nicaragua, Honduras, and El Salvador, while American businessmen were encouraged to block trade with Guatemala, reducing foreign earnings and creating shortages of vital imports. U.S. propaganda organs deliberately disseminated false allegations that Guatemala was receiving Soviet arms, reports triumphantly vindicated when it became known that Arbenz had negotiated secretly with Czechoslovakia to purchase 2,000 tons of surplus German weapons captured in World War II. The U.S. Navy imposed a full-scale sea blockade against Guatemala, inspecting all ships bound for Guatemala for illicit armaments. The Organization of American States (OAS) acquiesced in the U.S. campaign against Guatemala. The U.S. Information Agency (USIA) launched a massive psychological warfare offensive, utilizing rumors, pamphlets, posters, and radio broadcasts. Sympathetic student groups within Guatemala undertook propaganda and harassment against the regime and its sympathizers, while covert operatives also worked to win the loyalties of the army. On 18 June 1953, 400 Guatemalan exiles led by Colonel Carlos Castillo Armas entered the country. They were initially rebuffed, but Arbenz then allowed them to proceed deep into the country in the hope that they would be conclusively crushed. Radio reports untruthfully claimed that additional contingents of exiles and U.S. forces had entered the country. The Guatemalan military, fearing U.S. intervention, declined to move against the rebels, and on 27 June Arbenz resigned, eventually to be replaced as president by Armas, who proved both ineffective and corrupt. The United Nations (UN) and the international press condemned

the invasion as an example of U.S. neocolonialism. Postcoup CIA investigations of Guatemalan official files unearthed little documentary evidence of links between Arbenz and the Soviet Union, and it became apparent that Guatemalan socialism was largely homegrown. The Guatemalan operation nonetheless served as a model for other such efforts, notably the less successful 1961 Bay of Pigs invasion attempt of Cuba and moves in 1970 to prevent President Salvador Allende Gossens from assuming office in Chile. It was an example of the manner in which successive American presidential administrations for decades felt entitled to destabilize and try to bring about the downfall of foreign governments that they considered unacceptably procommunist or leftist. Such policies discredited U.S. pledges in numerous international agreements eschewing intervention in the internal affairs of other states. For many years, the U.S. government downplayed the CIA's role in the coup against Arbenz. Initially, the relevant volume of the State Department's *Foreign Relations of the United States* series, published in 1983, concealed the extent of CIA involvement. Twenty years later, the department published a supplementary volume that documented in detail the U.S. government's central role in overthrowing Arbenz.

Memorandum Prepared in the Central Intelligence

Agency

Washington, D.C. May 12, 1975

Source: Central Intelligence Agency, Job 79-01025A, Box 153, Folder 3. Secret.

Subject: CIA's Role in the Overthrow of Arbenz

In August 1953, the Operations Coordinating Board directed CIA to assume responsibility for operations against the Arbenz regime. Appropriate authorization was issued to permit close and prompt cooperation with the Departments of Defense, State and other Government agencies in order to support the Agency in this task. The plan of operations called for cutting off military aid to Guatemala, increasing aid to its neighbors, exerting diplomatic and economic pressure against Arbenz and attempts to subvert and or defect Army and political leaders, broad scale psychological warfare and paramilitary actions. During the period August through December 1953 a CIA staff was assembled and operational plans were prepared.

Following are the specific operational mechanisms utilized by the Agency in the overall missions against the Arbenz government:

- a. Paramilitary Operations. Approximately 85 members of the Castillo Armas group received training in Nicaragua. Thirty were trained in sabotage, six as shock troop leaders and 20 others as support-type personnel. Eighty-nine tons of equipment were prepared. The support of this operation was staged inside the borders of Honduras and Nicaragua. [1½ lines of source text not declassified]

There were an estimated 250 men in Honduras and El Salvador for use as shock troops and specialists, outside of the training personnel that had been sent to Nicaragua.

- b. Air Operations. The planning for providing air operational support was broken down into three phases; i.e. the initial stockpiling of equipment; the delivering of equipment to advance bases by black flight; and the aerial resupply of troops in the field. Thirty days prior to D-day, a fourth phase, fighter support, was initiated. There were approximately 80 missions flown during the 14-29 June 1954 period, by various type aircraft such as C-47's, F-47's and Cessnas which were used to discharge cargo, distribute propaganda and for strafing and bombing missions.
- c. Clandestine Communications. A clandestine radio broadcasting station was established in Nicaragua. The purpose of these broadcasts was to intimidate members of the Communist Party and public officials who were sympathetic to the Communist cause. The radio station, prior to D-day, broadcasted programs on why they were on the air; dramatized examples of Communist tyranny; the ideologies and aims of the Liberation Movement and what effect was intended vis-à-vis each individual who was listening; an aggressive program outlining the activities which would ultimately bring down the Communist threat, etc.
- d. Q Program. The objective was spreading responsibility for the operation throughout as many Latin American countries as possible in order to lessen the impact of United States participation.

- e. Indigenous agent radio operator training program. This included 13 radio operators, including seven residents and six tactical, and one cryptographer who were trained in Nicaragua from 6 March–9 June 1954.

One of the propaganda ploys was to fabricate reports of Soviet arms deliveries to Guatemala by submarine, and then arranging to have a CIA planted cache of Soviet arms discovered and publicized. The mythical arms deliveries were superseded by the real thing when a ship carrying 2,000 tons of Czech weapons and ammunition arrived. This shipment created an international furor and provided clinching proof of what had been the main CIA propaganda theme, that Guatemala under Arbenz had become a Soviet satellite.

The results of the operational efforts described above were positive, however key Guatemalan Army officers wanted either official assurance of U.S. Government support or an overt military incident which would demonstrate Castillo's power and determination. On 1 June the Arbenz regime began a wave of arrests which obliterated Castillo's intelligence nets and action assets inside the country and on 8 June a 30-day suspension of all constitutional liberties was announced.

On 17–18 June five shock teams trained by the Agency crossed into Guatemala. The turning point came on 25 June when Castillo's forces repulsed a counterattack and later bombed a fortress in Guatemala City.

On 27 June Arbenz resigned and turned the government over to another Communist, Carlos Enrique Diaz, chief of the armed forces. Following the resignation the Chief of Station and another agency officer held a negotiating session with Guatemalan Army officers. The Agency representatives argued that Diaz was unacceptable [*less than 1 line of source text not declassified*]. Following assurances from the U.S. Ambassador that Monzon was indeed the U.S. choice, those present agreed that Monzon would be the head of a junta. The agreement soon broke down when Diaz doublecrossed Monzon by appointing him as Minister of Government while Diaz retained his position. Diaz caved in following bombings by F-47's.

Negotiations took place between Castillo and Monzon, President of the Junta, who agreed to accept Castillo as a member. In early July Castillo became President of the Junta with Major Enrique Oliva and Monzon as the other two members.

The budget allocation for this activity was \$3,000,000 and the actual cost, less recoverable assets, was just under the original allocation.

58. Pact of Mutual Co-operation between Iraq and Turkey, Baghdad, Iraq, 24 February 1955

Introduction

The Baghdad Pact was originally a mutual security agreement modeled on the North Atlantic Treaty Organization (NATO) that Iraq, Turkey, Pakistan, Iran, and the United Kingdom signed in 1955. The United States encouraged the development of this organization by promising military and economic aid and established a military liaison arrangement with it but initially chose not to join itself, fearing that doing so might lose it the goodwill of various other Middle Eastern states that President Dwight D. Eisenhower's administration also sought to cultivate. The objective was to encourage the signatories to collaborate against potential Soviet expansionism in the area by erecting a bastion of anticommunist states along the Soviet Union's southwestern frontier. The alliance was originally known as the Middle Eastern Treaty Organization (METO). After Iraq, the only Arab member, withdrew in 1958 in the aftermath of a bloody revolution led by the leftist and Moscow-oriented Baath Party, the United States

joined as a full member, and the grouping became the Central Treaty Organization (CENTO). The organization proved largely ineffective in preventing the spread of Soviet influence in the Middle East. During the 1960s and 1970s, the Soviet Union simply bypassed the CENTO states to develop close military and economic ties with Egypt, Syria, Iraq, Yemen, Somalia, and Libya, establishing bases in Egypt, Somalia, and Yemen. CENTO lacked a single military command structure, and the links between the member states remained relatively loose. The organization did facilitate American access to bases in Iran with useful communications and intelligence capabilities, while from the late 1950s onward Pakistan allowed the United States to utilize airfields on its own soil to launch U-2 espionage and surveillance flights over Soviet territory. Great Britain at times also made use of bases in Pakistan and, like the United States, of similar facilities in Turkey, although the latter arrangements were organized through the NATO alliance. Never a particularly successful alliance, CENTO largely fell into disuse after Turkey invaded Cyprus in 1974, causing the British to withdraw their forces from CENTO. In 1979 Islamic radicals overthrew the Iranian monarchy, whose collapse brought the formal end of CENTO.

Primary Source

Whereas the friendly and brotherly relations existing between Iraq and Turkey are in constant progress, and in order to complement the contents of the Treaty of friendship and good neighbourhood concluded between His Majesty The King of Iraq and His Excellency The President of the Turkish Republic signed in Ankara on the 29th of March, 1946 which recognised the fact that peace and security between the two countries is an integral part of the peace and security of all the Nations of the world and in particular the Nations of the Middle East, and that it is the basis for their foreign policies;

Whereas Article 11 of the Treaty of Joint Defence and Economic Co-operation between the Arab League States provides that no provision of that Treaty shall in any way affect, or is designed to affect any of the rights and obligations accruing to the contracting parties from the United Nations Charter;

And having realised the great responsibilities borne by them in their capacity as members of the United Nations concerned with the maintenance of peace and security in the Middle East region which necessitate taking the required measures in accordance with Article 51 of the United Nations Charter;

They have been fully convinced of the necessity of concluding a pact fulfilling these aims and for that purpose have appointed as their Plenipotentiaries . . . who, having communicated their full powers, found to be in good and due form, have agreed as follows:

Article 1

Consistent with Article 51 of the United Nations Charter the High Contracting Parties will co-operate for their security and defence. Such measures as they agree to take to give effect to this co-operation may form the subject of special agreements with each other.

Article 2

In order to ensure the realisation and effect application of the co-operation provided for in Article 1 above, the competent authorities of the High Contracting Parties will determine the measures to be taken as soon as the present Pact enters into force. These measures will become operative as soon as they have been approved by the Governments of the High Contracting Parties.

Article 3

The High Contracting Parties undertake to refrain from any interference whatsoever in each other's internal affairs. They will settle any dispute between themselves in a peaceful way in accordance with the United Nations Charter.

Article 4

The High Contracting Parties declare that the dispositions of the present Pact are not in contradiction with any of the international obligations contracted by either of them with any third state or states. They do not derogate from, and cannot be interpreted as derogating from, the said international obligations. The High Contracting Parties undertake not to enter into any international obligation incompatible with the present Pact.

Article 5

This Pact shall be open for accession to any member state of the Arab League or any other state actively concerned with the security and peace in this region and which is fully recognised by both of the High Contracting Parties. Accession shall come into force from the date of which the instrument of accession of the state concerned is deposited with the Ministry of Foreign Affairs of Iraq.

Any acceding State Party to the present Pact may conclude special agreements, in accordance with Article 1, with one or more states Parties to the present Pact. The competent authority of any acceding State may determine measures in accordance with Article 2. These measures will become operative as soon as they have been approved by the Governments of the Parties concerned.

Article 6

A Permanent Council at Ministerial level will be set up to function within the framework of the purposes of

this Pact when at least four Powers become parties to the Pact.

The Council will draw up its own rules of procedure.

Article 7

This Pact remains in force for a period of five years renewable for other five year periods. Any Contracting Party may withdraw from the Pact by notifying the other parties in writing of its desire to do so, six months before the expiration of any of the above-mentioned periods, in which case the Pact remains valid for the other Parties.

59. Sukarno: Speech at the Opening of the Bandung Conference, 18 April 1955

Introduction

Many states, especially decolonized nations and those in the developing world, resented both Soviet and American demands that they favor one side or the other in the Cold War. As early as 1946, Chinese Communist leader Mao Zedong suggested that there existed a "vast intermediate zone," to which he thought China belonged, of countries that professed allegiance to neither Cold War superpower. A formal Non-Aligned Movement was only established in the 1970s, but ad hoc conferences were held at symbolically important locations: Bandung (Indonesia) in 1955, Belgrade (Yugoslavia) in 1961, and Cairo (Egypt) in 1962. India and Egypt led the movement, which attracted communist mavericks such as Yugoslavia and Albania as well as numerous Asian, African, and Latin American countries. They tended to focus primarily on postcolonial issues and the problems that developing economies shared. Reflecting a certain geographic and psychological distance from Eurocentric Cold War preoccupations, and for China perhaps also growing Sino-Soviet dissension, even China and Japan sent representatives to these meetings. As Asian states whose past bitter experiences of humiliation at Western hands meant that they often felt real sympathy for decolonizing countries, both nations directed substantial amounts of economic aid to nonaligned states, a strategy that also helped to enhance their own international influence. From the mid-1950s the Soviet Union, following a pragmatic united front rationale that treated as friendly any country not allied with the West, endorsed the movement. Representatives from almost thirty states in Africa and Asia attended the first such conference in Bandung, with the intent of establishing their independence from either superpower during the Cold War and thus reaffirming their status as nonaligned nations. Speaking as host on this occasion, President Sukarno of Indonesia, a nationalist leader who had fought for his country's independence, articulated the resentment that many of those

attending felt toward the continuing formal or informal “colonial” dominance exercised by the great powers and warned that they often failed to consider the interests of smaller nations, for whom peace and economic development rather than Cold War strategic or ideological rivalries were often the highest priorities.

Primary Source

This twentieth century has been a period of terrific dynamism. Perhaps the last fifty years have seen more developments and more material progress than the previous five hundred years. Man has learned to control many of the scourges which once threatened him. He has learned to consume distance. He has learned to project his voice and his picture across oceans and continents. He has probed deep into the secrets of nature and learned how to make the desert bloom and the plants of the earth increase their bounty. He has learned how to release the immense forces locked in the smallest particles of matter.

But has man’s political skill marched hand-in-hand with his technical and scientific skill? Man can chain lightning to his command—can he control the society in which he lives? The answer is No! The political skill of man has been far outstripped by technical skill, and what lie has made he cannot be sure of controlling.

The result of this is fear. And man gasps for safety and morality.

Perhaps now more than at any other moment in the history of the world, society, government and statesmanship need to be based upon the highest code of morality and ethics. And in political terms, what is the highest code of morality? It is the subordination of everything to the well-being of mankind. But today we are faced with a situation where the well-being of mankind is not always the primary consideration. Many who are in places of high power think, rather, of controlling the world.

Yes, we are living in a world of fear. The life of man today is corroded and made bitter by fear. Fear of the future, fear of the hydrogen bomb, fear of ideologies. Perhaps this fear is a greater danger than the danger itself, because it is fear which drives men to act foolishly, to act thoughtlessly, to act dangerously. . . .

All of us, I am certain, are united by more important things than those which superficially divide us. We are

united, for instance, by a common detestation of colonialism in whatever form it appears. We are united by a common detestation of racialism. And we are united by a common determination to preserve and stabilise peace in the world. . . .

We are often told “Colonialism is dead.” Let us not be deceived or even soothed by that. I say to you, colonialism is not yet dead. How can we say it is dead, so long as vast areas of Asia and Africa are unfree.

And, I beg of you do not think of colonialism only in the classic form which we of Indonesia, and our brothers in different parts of Asia and Africa, knew. Colonialism has also its modern dress, in the form of economic control, intellectual control, actual physical control by a small but alien community within a nation. It is a skilful and determined enemy, and it appears in many guises. It does not give up its loot easily. Wherever, whenever and however it appears, colonialism is an evil thing, and one which must be eradicated from the earth. . . .

Not so very long ago we argued that peace was necessary for us because an outbreak of fighting in our part of the world would imperil our precious independence, so recently won at such great cost.

Today, the picture is more black. War would not only mean a threat to our independence, it may mean the end of civilisation and even of human life. There is a force loose in the world whose potentiality for evil no man truly knows. Even in practice and rehearsal for war the effects may well be building up into something of unknown horror.

Not so long ago it was possible to take some little comfort from the idea that the clash, if it came, could perhaps be settled by what were called “conventional weapons”—bombs, tanks, cannon and men. Today that little grain of comfort is denied us for it has been made clear that the weapons of ultimate horror will certainly be used, and the military planning of nations

is on that basis. The unconventional has become the conventional, and who knows what other examples of misguided and diabolical scientific skill have been discovered as a plague on humanity.

And do not think that the oceans and the seas will protect us. The food that we eat, the water that we drink, yes, even the very air that we breathe can be contaminated by poisons originating from thousands of miles away. And it could be that, even if we ourselves escaped lightly, the unborn generations of our children would bear on their distorted bodies the marks of our failure to control the forces which have been released on the world.

No task is more urgent than that of preserving peace. Without peace our independence means little. The rehabilitation and upbuilding of our countries will have little meaning. Our revolutions will not be allowed to run their course. . . .

What can we do? We can do much! We can inject the voice of reason into world affairs. We can mobilise all the spiritual, all the moral, all the political strength of Asia and Africa on the side of peace. Yes, we! We, the peoples of Asia and Africa, 1,400,000,000 strong, far more than half the human population of the world, we can mobilise what I have called the Moral Violence of Nations in favour of peace. We can demonstrate to the minority of the world which lives on the other continents that we, the majority are for peace, not for war, and that whatever strength we have will always be thrown on to the side of peace.

In this struggle, some success has already been scored. I think it is generally recognised that the activity of the Prime Ministers of the Sponsoring Countries which invited you here had a not unimportant role to play in ending the fighting in Indo-China.

Look, the peoples of Asia raised their voices, and the world listened. It was no small victory and no negli-

gible precedent! The five Prime Ministers did not make threats. They issued no ultimatum, they mobilised no troops. Instead they consulted together, discussed the issues, pooled their ideas, added together their individual political skills and came forward with sound and reasoned suggestions which formed the basis for a settlement of the long struggle in Indo-China.

I have often since then asked myself why these five were successful when others, with long records of diplomacy, were unsuccessful, and, in fact, had allowed a bad situation to get worse, so that there was a danger of the conflict spreading. . . . I think that the answer really lies in the fact that those five Prime Ministers brought a fresh approach to bear on the problem. They were not seeking advantage for their own countries. They had no axe of power-politics to grind. They had but one interest—how to end the fighting in such a way that the chances of continuing peace and stability were enhanced. . . .

So, let this Asian-African Conference be a great success! Make the “Live and let live” principle and the “Unity in Diversity” motto [be] the unifying force which brings us all together—to seek in friendly, uninhibited discussion, ways and means by which each of us can live his own life, and let others live their own lives, in their own way, in harmony, and in peace.

If we succeed in doing so, the effect of it for the freedom, independence and the welfare of man will be great on the world at large. The Light of Understanding has again been lit, the Pillar of Cooperation again erected. The likelihood of success of this Conference is proved already by the very presence of you all here today. It is for us to give it strength, to give it the power of inspiration—to spread its message all over the World.

60. Warsaw Security Pact, 1955

Introduction

Signed on 14 May 1955, the Warsaw Security Pact established a mutual defense alliance between the countries of Eastern Europe, all of which were under Soviet control. Besides the Soviet Union, member states were Bulgaria, Czechoslovakia, the German Democratic Republic (GDR, East Germany), Hungary, Poland, and Romania. The pact was intended to function as a counterbalance to the North Atlantic Treaty Organization (NATO), established by the countries of Western Europe and the United States in 1949. The immediate impetus for the formation of the Warsaw Pact was NATO's acceptance of the Federal Republic of Germany (FRG, West Germany) into its alliance, a move that aroused bitter memories of past German eastward military attacks and fears of their recurrence. The Soviet Union directed Warsaw Pact policies and operations, and the organization had no independent headquarters of its own. In practice, another major function of the Warsaw Pact was to maintain Soviet control of Eastern Europe, as Poland and Hungary proved recalcitrant in 1956, Czechoslovakia in 1968, and Poland during the early 1980s. Hungary's announcement in October 1956 of its intention to withdraw from the Warsaw Pact triggered a Soviet invasion. The Warsaw Pact remained in effect until the collapse of communism in Eastern Europe in 1989 and 1990 but then collapsed as the East European states all withdrew, in several cases entering NATO soon afterward.

Primary Source

Treaty of friendship, cooperation and mutual assistance between the People's Republic of Albania, the People's Republic of Bulgaria, the Hungarian People's Republic, the German Democratic Republic, the Polish People's Republic, the Rumanian People's Republic, the Union of Soviet Socialist Republics, and the Czechoslovak Republic, May 1, 1955

The contracting parties, Reaffirming their desire for the organization of a system of collective security in Europe, with the participation of all the European states, irrespective of their social and state systems, which would make it possible to combine their efforts in the interests of securing peace in Europe,

Taking into consideration at the same time the situation obtaining in Europe as the result of ratification of the Paris agreements, which provide for the formation of a new military grouping in the shape of the "Western European Union" together with a remilitarised Western Germany, and for the integration of Western Germany in the North Atlantic bloc, which increases the threat of another war and creates a menace to the national security of the peace-loving states,

Convinced that, under these circumstances, the peace-loving states of Europe should take the necessary measures for safeguarding their security, and in the interests of maintaining peace in Europe,

Guided by the purposes and principles of the United Nations Charter,

In the interests of further strengthening and promoting friendship, co-operation and mutual assistance, in accordance with the principles of respect for the independence and sovereignty of states, and also with the principle of noninterference in their internal affairs,

Have resolved to conclude this Treaty of Friendship, Co-operation and Mutual Assistance.

Article 1.

The contracting parties undertake, in accordance with the Charter of the United Nations Organization, to refrain in their international relations from the threat or use of force, and to settle their international disputes by peaceful means so as not to endanger international peace and security.

Article 2.

The contracting parties declare their readiness to take part, in the spirit of sincere co-operation, in all international undertakings intended to safeguard international peace and security and they shall use all their energies for the realization of these aims.

Moreover, the contracting parties shall work for the adoption, in agreement with other states desiring to co-operate in this matter, of effective measures

towards a general reduction of armaments and prohibition of atomic, hydrogen and other weapons of mass destruction.

Article 3.

The contracting parties shall take council among themselves on all important international questions relating to their common interests, guided by the interests of strengthening international peace and security.

They shall take council among themselves immediately, whenever, in the opinion of any of them, there has arisen the threat of an armed attack on one or several states that are signatories of the treaty, in the interests of organizing their joint defense and of upholding peace and security.

Article 4.

In the event of an armed attack in Europe on one or several states that are signatories of the treaty by any state or group of states, each state that is a party to this treaty shall, in the exercise of the right to individual or collective self-defense in accordance with Article 51 of the Charter of the United Nations Organization, render the state or states so attacked immediate assistance, individually and in agreement with other states that are parties to this treaty, by all the means it may consider necessary, including the use of armed force. The states that are parties to this treaty shall immediately take council among themselves concerning the necessary joint measures to be adopted for the purpose of restoring and upholding international peace and security.

In accordance with the principles of the Charter of the United Nations Organization, the Security Council shall be advised of the measures taken on the basis of the present article. These measures shall be stopped as soon as the Security Council has taken the necessary measures for restoring and upholding international peace and security.

Article 5.

The contracting parties have agreed on the establishment of a joint command for their armed forces, which shall be placed, by agreement among these parties, under this command, which shall function on the basis

of jointly defined principles. They shall also take other concerted measures necessary for strengthening their defense capacity, in order to safeguard the peaceful labour of their peoples, to guarantee the inviolability of their frontiers and territories and to provide safeguards against possible aggression.

Article 6.

For the purpose of holding the consultations provided for in the present treaty among the states that are parties to the treaty, and for the purpose of considering problems arising in connection with the implementation of this treaty, a political consultative committee shall be formed in which each state that is a party to this treaty shall be represented by a member of the government, or any other specially appointed representative.

The committee may form the auxiliary organs for which the need may arise.

Article 7.

The contracting parties undertake not to participate in any coalitions and alliances, and not to conclude any agreements the purposes of which would be at variance with those of the present treaty.

The contracting parties declare that their obligations under existing international treaties are not at variance with the provisions of this treaty.

Article 8.

The contracting parties declare that they will act in the spirit of friendship and co-operation with the object of furthering the development of, and strengthening the economic and cultural relations between them, adhering to the principles of mutual respect for their independence and sovereignty, and of non-interference in their internal affairs.

Article 9.

The present treaty is open to be acceded to by other states—irrespective of their social and state systems—which may express their readiness to assist, through participation in the present treaty, in combining the efforts of the peaceloving states for the purpose of safeguarding the peace and security of nations. This act of acceding to the treaty shall become effective, with the

consent of the states that are parties to this treaty, after the instrument of accedence has been deposited with the government of the Polish People's Republic.

Article 10.

The present treaty is subject to ratification, and the instruments of ratification shall be deposited with the government of the Polish People's Republic.

The treaty shall take effect on the date on which the last ratification instrument is deposited. The government of the Polish People's Republic shall advise the other states that are parties to the treaty of each ratification instrument deposited with it.

Article 11.

The present treaty shall remain in force for 20 years. For the contracting parties which will not have submitted

to the government of the Polish People's Republic a statement denouncing the treaty a year before the expiration of its term, it shall remain in force throughout the following ten years.

In the event of the organization of a system of collective security in Europe and the conclusion of a general European treaty of collective security to that end, which the contracting parties shall unceasingly seek to bring about, the present treaty shall cease to be effective on the date the general European treaty comes into force.

61. Einstein-Russell Appeal, 1955

Introduction

The development of ever more destructive atomic and then thermonuclear weapons during the 1940s and 1950s alarmed many including some scientists, notably physicist Albert Einstein, who had originally urged the U.S. government to establish an atomic program. In July 1955 Einstein and British philosopher Bertrand Russell called a packed public meeting in London, shortly after the successful testing of the hydrogen bomb, to discuss measures that might be taken to bring nuclear weapons under control. Their final resolution, the Einstein-Russell Appeal, published by Einstein and Russell in the *New York Times* on 10 July 1955, was an impassioned plea for world peace and argued that the development of nuclear weapons made the threat of worldwide destruction more ominous and more likely than ever before. Russell had long aligned himself with international pacifism, but Einstein's support for the movement brought it new respect and made many scientists rethink their positions on the role of science in the world. Fears of the destructive impact of nuclear war soon became one of the forces behind the establishment in 1957 of the British Campaign for Nuclear Disarmament. Especially after Nikita Khrushchev emerged as the Soviet Union's leader in the mid-1950s, such apprehensions also impelled President Dwight D. Eisenhower to seek to open a Soviet-American dialogue on the control of nuclear weapons.

Primary Source

In the tragic situation which confronts humanity, we feel that scientists should assemble in conference to appraise the perils that have arisen as a result of the development of weapons of mass destruction, and to discuss a resolution in the spirit of the appended draft.

We are speaking on this occasion, not as members of this or that nation, continent or creed, but as human beings, members of the species man, whose continued

existence is in doubt. The world is full of conflicts; and, overshadowing all minor conflicts, the titanic struggle between Communism and anti-Communism.

Almost everybody who is politically conscious has strong feelings about one or more of these issues; but we want you, if you can, to set aside such feelings and consider yourselves only as members of a biological species which has had a remarkable history, and whose disappearance none of us can desire.

[. . .]

Many warnings have been uttered by eminent men of science and by authorities in military strategy. None of them will say that the worst results are certain. What they do say is that these results are possible, and no one can be sure that they will not be realized. We have not yet found that the views of experts depend in any degree upon their politics or prejudices. They depend only, so far as our researches have revealed, upon the extent of the particular expert's knowledge. We have found that the men who know most are the most gloomy.

The abolition of war will demand distasteful limitations of national sovereignty. But what perhaps impedes understanding of the situation more than anything else is that the term *mankind* feels vague and abstract. People scarcely realize in imagination that the danger is to themselves and their children and their grandchildren, and not only to a dimly apprehended humanity. They can scarcely bring themselves to grasp that they, individually, and those whom they love are in imminent danger of perishing agonizingly. And so they hope that perhaps war may be allowed to continue provided modern weapons are prohibited.

This hope is illusory. Whatever agreements not to use the H-bombs had been reached in time of peace, they would no longer be considered binding in time of war, and both sides would set to work to manufacture H-bombs as soon as war broke out, for, if one side manufactured the bombs and the other did not, the side that manufactured them would inevitably be victorious.

Although an agreement to renounce nuclear weapons as part of a general reduction of armaments would not afford an ultimate solution, it would serve certain important purposes.

First: Any agreement between East and West is to the good in so far as it tends to diminish tension. Second: The abolition of thermonuclear weapons, if each side

believed that the other had carried it out sincerely, would lessen the fear of a sudden attack in the style of Pearl Harbor, which at present keeps both sides in a state of nervous apprehension. We should, therefore, welcome such an agreement, though only as a first step.

Most of us are not neutral in feeling, but as human beings, we have to remember that, if the issues between East and West are to be decided in any manner that can give any possible satisfaction to anybody, whether Communist or anti-Communist, whether Asian or European or American, whether white or black, then these issues must not be decided by war. We should wish this to be understood, both in the East and in the West.

There lies before us, if we choose, continual progress in happiness, knowledge and wisdom. Shall we, instead, choose death, because we cannot forget our quarrels? We appeal, as human beings, to human beings: Remember your humanity and forget the rest. If you can do so, the way lies open to a new paradise; if you cannot, there lies before you the risk of universal death.

Resolution

We invite this congress [to be convened], and through it the scientists of the world and the general public, to subscribe to the following resolution:

“In view of the fact that in any future world war nuclear weapons will certainly be employed, and that such weapons threaten the continued existence of mankind, we urge the governments of the world to realize, and to acknowledge publicly, that their purposes cannot be furthered by a world war, and we urge them, consequently, to find peaceful means for the settlement of all matters of dispute between them.”

62. Nikita Khrushchev: Speech on the Cult of Personality (Secret Speech), 25 February 1956

Introduction

The death in 1953 of Soviet leader Josef Stalin, who had ruled his country with great brutality ever since the late 1920s, marked a new era in the Cold War. After a protracted power struggle, in 1955 Nikita Khrushchev emerged as the supreme Soviet leader. A former factory worker whose personal style was somewhat uncouth and erratic, Khrushchev nonetheless rejected much of his predecessor's legacy, particularly Stalin's emphasis on terror and his cult of personality. As an aspiring Communist Party official, Khrushchev had himself acquiesced in Stalin's brutal treatment of supposed opponents, and the new Soviet leader apparently resented Stalin's past ability to force him to carry out policies for which he subsequently felt considerable guilt. Addressing the Twentieth Party Congress of the Communist Party of the Soviet Union (CPSU) on 25 February 1956, in a "secret speech" Khrushchev shocked his colleagues by denouncing Stalin's policies and the cult of personality he had erected around himself, behavior that Khrushchev claimed ran counter to the teachings of Vladimir Lenin, communist Russia's founding father. From this point on Khrushchev, with the vigorous support of his party, attacked Stalin's legacy within the Soviet Union and abroad. At home, Khrushchev placed more emphasis on improving the performance of agriculture and providing more consumer goods to the Soviet people. Although Soviet communism still ultimately depended on the sanction of force, the use of terror against political opponents became less egregious. When Khrushchev himself was ousted from power in 1964, for example, he retained no formal authority but was allowed to live in reasonable comfort rather than being imprisoned or executed. While still committed to the belief that ultimately the entire world would become communist, Khrushchev thought it possible that this would occur through relatively nonviolent change rather than force and proclaimed his belief in peaceful coexistence with the West, seeking to open serious arms control negotiations. This did not, however, mean that he eschewed the use of force. In late 1956 Soviet troops intervened to prevent Hungary's withdrawal from the Warsaw Pact military alliance and institution of multiparty democracy and elections, killing or later executing hundreds of Hungarian rebels. Khrushchev's rejection of Stalin's legacy was one reason that Soviet relations with communist China deteriorated. Mao Zedong, the dominating Chinese leader who had constructed a massive personality cult around himself, felt personally threatened by the degrading of Stalin, which he feared might inspire his own comrades to treat him likewise. Mao, who had ambitions to be the greatest communist theoretician of all time, was also committed to an ideology of permanent revolution and ceaseless confrontation with the capitalist world that led him to consider Khrushchev's espousal of peaceful coexistence a betrayal of basic communist principles. By the late 1950s, therefore, Khrushchev's policies had contributed to an open schism between the two communist great powers that grew much wider during the 1960s.

Primary Source

Comrades, in the report of the Central Committee of the party at the 20th Congress, in a number of speeches by delegates to the Congress, as also formerly during the plenary CC/CPSU sessions, quite a lot has been said about the cult of the individual and about its harmful consequences. . . .

Allow me first of all to remind you how severely the classics of Marxism-Leninism denounced every manifestation of the cult of the individual. In a letter to the German political worker, Wilhelm Bloss, Marx stated:

"From my antipathy to any cult of the individual, I never made public during the existence of the International the numerous addresses from various countries which recognized my merits and which annoyed me. I did not even reply to them, except sometimes to rebuke their authors. Engels and I first joined the secret society of Communists on the condition that everything making for superstitious worship of authority would be deleted from its statute." . . .

The great modesty of the genius of the revolution, Vladimir Ilyich Lenin, is known. Lenin had always

stressed the role of the people as the creator of history, the directing and organizational role of the party as a living and creative organism, and also the role of the central committee.

Marxism does not negate the role of the leaders of the workers' class in directing the revolutionary liberation movement.

While ascribing great importance to the role of the leaders and organizers of the masses, Lenin at the same time mercilessly stigmatized every manifestation of the cult of the individual, inexorably combated the foreign-to-Marxism views about a "hero" and a "crowd" and countered all efforts to oppose a "hero" to the masses and to the people.

Lenin taught that the party's strength depends on its indissoluble unity with the masses, on the fact that behind the party follow the people—workers, peasants and intelligentsia. "Only he will win and retain the power," said Lenin, "who believes in the people, who submerges himself in the fountain of the living creativeness of the people." . . .

During Lenin's life the central committee of the party was a real expression of collective leadership of the party and of the Nation. Being a militant Marxist-revolutionist, always unyielding in matters of principle, Lenin never imposed by force his views upon his co-workers. He tried to convince; he patiently explained his opinions to others. Lenin always diligently observed that the norms of party life were realized, that the party statute was enforced, that the party congresses and the plenary sessions of the central committee took place at the proper intervals.

In addition to the great accomplishments of V. I. Lenin for the victory of the working class and of the working peasants, for the victory of our party and for the application of the ideas of scientific communism to life, his acute mind expressed itself also in this that he detected in Stalin in time those negative characteristics which resulted later in grave consequences. Fearing the future fate of the party and of the Soviet nation, V. I. Lenin made a completely correct characterization of Stalin, pointing out that it was necessary to consider

the question of transferring Stalin from the position of Secretary General because of the fact that Stalin is excessively rude, that he does not have a proper attitude toward his comrades, that he is capricious, and abuses his power. . . .

Vladimir Ilyich said: "Stalin is excessively rude, and this defect, which can be freely tolerated in our midst and in contacts among us Communists, becomes a defect which cannot be tolerated in one holding the position of the Secretary General. Because of this, I propose that the comrades consider the method by which Stalin would be removed from this position and by which another man would be selected for it, a man, who above all, would differ from Stalin in only one quality, namely, greater tolerance, greater loyalty, greater kindness, and more considerate attitude toward the comrades, a less capricious temper, etc."

As later events have proven, Lenin's anxiety was justified; in the first period after Lenin's death Stalin still paid attention to his (i.e., Lenin's) advice, but, later he began to disregard the serious admonitions of Vladimir Ilyich.

When we analyze the practice of Stalin in regard to the direction of the party and of the country, when we pause to consider everything which Stalin perpetrated, we must be convinced that Lenin's fears were justified. The negative characteristics of Stalin, which, in Lenin's time, were only incipient, transformed themselves during the last years into a grave abuse of power by Stalin, which caused untold harm to our party. . . .

Stalin acted not through persuasion, explanation, and patient cooperation with people, but by imposing his concepts and demanding absolute submission to his opinion. Whoever opposed this concept or tried to prove his viewpoint, and the correctness of his position, was doomed to removal from the leading collective and to subsequent moral and physical annihilation. This was especially true during the period following the 17th party congress, when many prominent party leaders and rank-and-file party workers, honest and dedicated to the cause of communism, fell victim to Stalin's despotism. . . .

Stalin originated the concept enemy of the people. This term automatically rendered it unnecessary that the ideological errors of a man or men engaged in a controversy be proven; this term made possible the usage of the most cruel repression, violating all norms of revolutionary legality, against anyone who in any way disagreed with Stalin, against those who were only suspected of hostile intent, against those who had bad reputations. This concept, enemy of the people, actually eliminated the possibility of any kind of ideological fight or the making of one's views known on this or that issue, even those of a practical character. In the main, and in actuality, the only proof of guilt used, against all norms of current legal science, was the confession of the accused himself, and, as subsequent probing proved, confessions were acquired through physical pressures against the accused. . . .

Lenin used severe methods only in the most necessary cases, when the exploiting classes were still in existence and were vigorously opposing the revolution, when the struggle for survival was decidedly assuming the sharpest forms, even including a civil war.

Stalin, on the other hand, used extreme methods and mass repressions at a time when the revolution was already victorious, when the Soviet state was strengthened, when the exploiting classes were already liquidated, and Socialist relations were rooted solidly in all phases of national economy, when our party was politically consolidated and had strengthened itself both numerically and ideologically. It is clear that here Stalin showed in a whole series of cases his intolerance, his brutality, and his abuse of power. Instead of proving his political correctness and mobilizing the masses, he often chose the path of repression and physical annihilation, not only against actual enemies, but also against individuals who had not committed any crimes against the party and the Soviet Government. Here we see no wisdom but only a demonstration of the brutal force which had once so alarmed V. I. Lenin. . . .

[. . .]

Comrades, the cult of the individual acquired such monstrous size chiefly because Stalin himself, using all conceivable methods, supported the glorification of his

own person. This is supported by numerous facts. One of the most characteristic examples of Stalin's self-glorification and of his lack of even elementary modesty is the edition of his Short Biography, which was published in 1948.

This book is an expression of the most dissolute flattery, an example of making a man into a godhead, of transforming him into an infallible sage, "the greatest leader," "sublime strategist of all times and nations." Finally no other words could be found with which to lift Stalin up to the heavens.

We need not give here examples of the loathsome adulation filling this book. All we need to add is that they all were approved and edited by Stalin personally and some of them were added in his own handwriting to the draft text of the book. . . .

Comrades, if we sharply criticize today the cult of the individual which was so widespread during Stalin's life and if we speak about the many negative phenomena generated by this cult which is so alien to the spirit of Marxism-Leninism, various persons may ask: How could it be? Stalin headed the party and the country for 30 years and many victories were gained during his lifetime. Can we deny this? In my opinion, the question can be asked in this manner only by those who are blinded and hopelessly hypnotized by the cult of the individual, only by those who do not understand the essence of the revolution and of the Soviet State, only by those who do not understand, in a Leninist manner, the role of the party and of the nation in the development of the Soviet society. . . .

Our historical victories were attained thanks to the organizational work of the party, to the many provincial organizations, and to the self-sacrificing work of our great nation. These victories are the result of the great drive and activity of the nation and of the party as a whole; they are not at all the fruit of the leadership of Stalin, as the situation was pictured during the period of the cult of the individual. . . .

Let us consider the first Central Committee plenum after the 19th party congress when Stalin, in his talk at the plenum, characterized Vyacheslav Mikhailovich

Molotov and Anastas Ivanovich Mikoyan and suggested that these old workers of our party were guilty of some baseless charges. It is not excluded that had Stalin remained at the helm for another several months, Comrades Molotov and Mikoyan would probably have not delivered any speeches at this congress.

Stalin evidently had plans to finish off the old members of the political bureau. He often stated that political bureau members should be replaced by new ones. . . .

We can assume that this was also a design for the future annihilation of the old political bureau members and in this way a cover for all shameful acts of Stalin, acts which we are now considering.

Comrades, in order not to repeat errors of the past, the central committee has declared itself resolutely against the cult of the individual. We consider that Stalin was excessively extolled. However, in the past Stalin doubtless performed great services to the party, to the working class, and to the international workers' movement. . . .

We should in all seriousness consider the question of the cult of the individual. We cannot let this matter get out of the party, especially not to the press. It is for this reason that we are considering it here at a closed congress session. We should know the limits; we should not give ammunition to the enemy; we should not wash our dirty linen before their eyes. I think that the delegates to the congress will understand and assess properly all these proposals.

Comrades, we must abolish the cult of the individual decisively, once and for all; we must draw the proper conclusions concerning both ideological-theoretical and practical work.

It is necessary for this purpose:

First, in a Bolshevik manner to condemn and to eradicate the cult of the individual as alien to Marxism-Leninism and not consonant with the principles of party leadership and the norms of party life, and to fight inexorably all attempts at bringing back this practice in one form or another.

To return to and actually practice in all our ideological work, the most important theses of Marxist-Leninist science about the people as the creator of history and as the creator of all material and spiritual good of humanity, about the decisive role of the Marxist party in the revolutionary fight for the transformation of society, about the victory of communism.

In this connection we will be forced to do much work in order to examine critically from the Marxist-Leninist viewpoint and to correct the widely spread erroneous views connected with the cult of the individual in the sphere of history, philosophy, economy, and of other sciences, as well as in the literature and the fine arts. It is especially necessary that in the immediate future we compile a serious textbook of the history of our party which will be edited in accordance with scientific Marxist objectivism, a textbook of the history of Soviet society, a book pertaining to the events of the civil war and the great patriotic war.

Secondly, to continue systematically and consistently the work done by the party's central committee during the last years, a work characterized by minute observation in all party organizations, from the bottom to the top, of the Leninist principles of party leadership, characterized, above all, by the main principle of collective leadership, characterized by the observation of the norms of party life described in the statutes of our party, and, finally, characterized by the wide practice of criticism and self-criticism.

Thirdly, to restore completely the Leninist principles of Soviet Socialist democracy, expressed in the constitution of the Soviet Union, to fight willfulness of individuals abusing their power. The evil caused by acts violating revolutionary Socialist legality which have accumulated during a long time as a result of the negative influence of the cult of the individual has to be completely corrected.

Comrades, the 20th Congress of the Communist Party of the Soviet Union has manifested with a new strength the unshakable unity of our party, its cohesiveness around the central committee, its resolute will to accomplish the great task of building communism. And the fact that we present in all the ramifications the basic

problems of overcoming the cult of the individual which is alien to Marxism-Leninism, as well as the problem of liquidating its burdensome consequences, is an evidence of the great moral and political strength of our party.

We are absolutely certain that our party, armed with the historical resolutions of the 20th Congress, will lead

the Soviet people along the Leninist path to new successes, to new victories.

Long live the victorious banner of our party—Leninism.

63. John Foster Dulles: “The Cost of Peace,” Iowa State College, Ames, Iowa, 9 June 1956

Introduction

U.S. leaders tended to assume that their position in the Cold War was so self-evidently justified and the conflict so clearly one between right and wrong that no other state could afford to stand on the sidelines. Republican Secretary of State John Foster Dulles, by that time well known for tactless pronouncements, riled the sensibilities of nonaligned nations in 1956 when, in the course of a lengthy address justifying his country’s very substantial defense and foreign aid expenditures, which absorbed 10 percent of the U.S. gross national product, as essential to the maintenance of peace, he attacked “the principle of neutrality, which pretends that a nation can best gain safety for itself by being indifferent to the fate of others.” Dulles proclaimed that neutrality had “increasingly become an obsolete conception, and except under very exceptional circumstances, it is an immoral and shortsighted conception.” His speech promptly became controversial and was frequently cited as an example of overbearing American behavior toward other nations. Ironically, Dulles included these words in an effort to defuse the tensions already caused three days earlier by President Dwight D. Eisenhower, who had stated in a 6 June 1956 press conference that while all countries were entitled and in some cases might find it most prudent to hold themselves aloof from military alliances, and some openly and clearly stated that they considered themselves “neutral,” this should not “be interpreted to mean, neutral as between right and wrong or decency and indecency.” One day later, on 7 June, the White House issued a clarification, stating that “the President does believe that there are special conditions which justify political neutrality but that no nation has the right to be indifferent to the fate of another.” Such rather clumsy assumptions of moral superiority by top American officials irritated rather than soothed those states who preferred to consider themselves nonaligned. Equally galling and more damaging to U.S. credibility, in his address Dulles welcomed signs that the peoples of Eastern Europe and the Soviet Union itself were demanding greater freedom, yet four months later, during the Hungarian revolt, the United States offered nothing beyond rhetorical assistance as Soviet military forces brutally suppressed the uprising.

Primary Source

Each one of you is going out into a world where you hope to enjoy in peace the blessings of liberty.

That is the kind of a world which United States foreign policy tries to provide.

Today we have peace; no nation is at war with the United States.

Also, we have many blessings. We have good relations with most of the nations of the world. We do not fear

them nor do they fear us. We trade with each other and our peoples visit back and forth, all to our mutual profit and enjoyment.

For that peace, and for those blessings that we enjoy, we can be profoundly grateful.

But all of this is not to be had for nothing. Others before you have gone out into the world with eager hopes. But those hopes ended on the field of battle. And those at home were heavy of heart. And the means

for economic well-being were dissipated in the wastages of war.

That kind of a price, paid in the coin of war, will always be paid unless men are willing, in time of peace, to pay to preserve peace.

That lesson seems never to be learned. The illusion constantly persists that peace is to be had merely by wanting it. If that were true, war would have been abolished many centuries ago. The fact is that to keep peace is as hard, indeed harder, than to win a war. Wars have been won. But lasting peace has never yet been won. To win a final victory over war will take planning and action that is farsighted, well calculated, courageous, and at times sacrificial. Such sacrifice will be required under conditions less dramatic and apparently less urgent than those of war. But peace will never be enduring as long as men reserve for war their finest qualities of mind and spirit. Peace, too, has its price.

I want to illustrate that in terms of one phase of the peace effort our Nation is now making. It could be described as a peace insurance policy, and it costs about \$40 billion a year.

Our Peace Insurance Policy

The basic elements of this peace insurance policy are drawn from early and successful American foreign policy. We go back to the Monroe Doctrine.

In 1823 President Monroe proclaimed to the despotic alliance then headed by Czarist Russia that "we should consider any attempt on their part to extend their system to any portion of this hemisphere as dangerous to our peace and safety" and that we would not "behold such interposition in any form with indifference."

It was indeed farsighted and bold for our young Nation thus to identify its own self-interest with the fate of freedom thousands of miles away. Yet the pronouncement of that principle, Webster recorded, was greeted with "one general glow of exultation."

That principle has now been extended. Its broadest application is found in the United Nations Charter. But because veto power makes United Nations action

undependable, many nations have made with each other treaties which embody the principle of the Monroe Doctrine. Within the last 10 years the United States, always acting in a bipartisan manner, has made such treaties with 42 countries of America, Europe, and Asia.

These treaties abolish, as between the parties, the principle of neutrality, which pretends that a nation can best gain safety for itself by being indifferent to the fate of others. This has increasingly become an obsolete conception, and, except under very exceptional circumstances, it is an immoral and shortsighted conception. The free world today is stronger, and peace is more secure, because so many free nations courageously recognize the now demonstrated fact that their own peace and safety would be endangered by assault on freedom elsewhere.

However, it is not enough under present conditions for the free nations merely to proclaim their purpose to stand together. There is need for forces-in-being to give authority to those words.

At the outset of World War I and World War II, the United States had little military strength in being. In the case of the Korean War, our initial strength was inadequate. But on these past occasions the conditions of warfare gave us time within which to build up our strength.

But since then, man's capacity to destroy has suddenly expanded to a degree that passes comprehension. Today, a single bomb can release destructive power equal to that used in the 5 years of World War II. Potential enemies could destroy so much, so quickly, if initially unopposed, that we dare not gamble on developing military power after an attack has occurred. To deter aggression, to prevent miscalculation, we need not only to warn but to back that warning by forces-in-being which include retaliatory striking power. That is why our peace insurance policy is so expensive.

The cost of our United States military establishment, at home and abroad, is about \$36 billion a year. That is about 90 percent of the total of a little over \$40 billion a year which our peace insurance policy costs.

The other 10 percent, roughly \$4 billion, goes to promote strength in other lands under our mutual security program. I want to discuss that program and explain why it is part of our total peace insurance policy.

I shall be speaking in terms of expected expenditures. But to keep going at this rate we shall for next year need an appropriation larger than expected expenditures, because the appropriation for this year is less than current expenditures by about \$1 billion.

The Far East

The largest expenditures under our mutual security program are in the Pacific and Far East. They help strengthen countries with which we have collective defense treaties. This area is today under obvious hostile pressure.

In Korea there is an armistice. But the Chinese Communists have never been willing to make a peace which would unify Korea through free elections held under the auspices of the United Nations. So hostile armed forces face each other across an armistice line.

In Taiwan (Formosa), where the Republic of China now has its home, there is the constant menace of war. The Chinese Communist regime persistently refuses to make a meaningful renunciation of force covering this area.

Then there is Viet-Nam, where again there is an armistice but no formal peace.

I have already pointed out that we have, by treaties, solemnly recognized that an armed attack in these areas would be dangerous to our own peace and security. And Congress, with only four dissenting votes, has authorized the President to use United States forces to defend Taiwan (Formosa) if he deems it necessary. But we do not want it to be necessary to fight to save freedom in these areas. Our purpose is to deter war. So we give military and financial aid to enable the free governments there to maintain their own armed forces to an extent which we and they judge reasonably related to the threat of aggression and our coordinated plans to prevent it.

We expect next year to spend about \$1.5 billion for military aid and defense-support assistance in this area. It goes mostly to the Republics of Korea and China and to the three nations of Indochina. There are lesser amounts for other area allies—the Philippines, Thailand, and Japan.

The Middle East

Let me turn now to the Middle East. This area produces the oil required for the industry of Western Europe and for the military establishment of NATO. If this were unavailable, it would involve tragedy for the producing countries, which are largely dependent upon the oil royalties. Also, it would require us to share with Europe the oil resources of this hemisphere, and there would be scarcity instead of plenty.

So we assist those four Middle East countries which hold the gateway to the south where the oil reserves are located; and just beyond is the gateway to Africa.

The estimate of expenditure for military aid and defense support for these countries in the next year is in the neighborhood of \$800 million.

NATO

I turn next to Western Europe. There the military forces of NATO stand guard over the greatest industrial and military treasure that there is within the free world except for the United States itself. So important do we consider this area that nearly six divisions of the United States Armed Forces are stationed in Western Europe for its defense. The European members of NATO themselves make a large contribution to the defense of the area. However, we help by supplying them with certain types of weapons, the cost of which is in our mutual security budget.

We help to support West Berlin as a symbol of freedom behind the Iron Curtain. We are developing bases in Spain, and this involves substantial costs. We also think it prudent to help Yugoslavia, so long as it remains determined to maintain genuine independence. It does not have the form of society that we like. But Marshal Tito defied Moscow and won out. And even though that struggle is today calmed, Yugoslavia pro-

vides a notable example of national independence in Eastern Europe.

This European aspect of the mutual security program involves an estimated cost for next year of approximately \$1 billion.

The expenditures I have described are designed to make secure, at minimum cost to us, countries whose safety is part of our own safety. The resultant widespread, interlocking system of security provides, as a valuable byproduct, diversified locations around the globe from which we and our allies could strike back at an aggressor if he struck any of us. Diversification, in this respect, is immensely valuable; for launching facilities limited to a single area could be wiped out by an initial assault. Also, the present system enables less expensive planes with shorter range to carry out missions which otherwise would require far more costly planes.

Thus, these expenditures serve our peace and our safety.

Economic Aid

There remains about \$700 million to be accounted for, or about 2 percent of our total peace insurance cost. This is so-called economic aid. The primary purpose is to help newly independent nations and less developed countries to maintain their independence, as against the plotting of international communism.

As the Caracas Resolution pointed out in relation to this hemisphere, if international communism obtains control of the political institutions of any nation, that endangers peace and security elsewhere. This portion of the mutual security program offsets efforts by hostile forces to expand their power by gaining new human and material resources and new strategic locations. But it has a broader justification.

The United States has far and away the most highly developed economy of any nation in the world. Our productivity almost equals that of all the rest of the world put together.

Always the economically developed nations have helped less developed countries to develop. We were

helped from Europe when we were beginning to develop this continent. That is a law of social life and we cannot violate it except at our peril.

The burden on us is lessened by the fact that a considerable part of our economic assistance goes in the form of surplus agricultural products. Also, upwards of \$200 million takes the form of repayable loans, not gifts.

The importance of this economic part of our peace insurance policy is emphasized by the fact that the Soviet Union is now pushing its own interests by means of credits extended to other countries.

The new Communist tactics make it more than ever imperative that we should continue, and perhaps enlarge, the economic phase of our mutual security program. It would indeed be ironical if we should drop out of that field just at the time when the Soviet Union is moving into it.

These programs which I have described—\$36 billion, plus \$3.3 billion, plus \$700 million—make up the grand total of about \$40 billion, which is the annual cost of our peace insurance policy. As to the \$36 billion spent on our own military establishment, there are differences of opinion as to *how* it shall be spent. But few deny that this much money should be spent. There is more controversy about the \$4 billion which is used, in ways I have described, under our mutual security program.

I should like now to answer some questions about that.

No "Give Away"

First of all, is this a "give away" program, whereby Americans are taxed merely to aid foreigners?

Emphatically no. I hope what I have said already makes that clear. It is quite true that the mutual security money does help others. But no program can properly be labeled "give away" merely because it helps others. Often by helping others we help ourselves more effectively than we could do in any other way. That is the case with our mutual security program. It makes our freedom safer by creating an environment of freedom.

The decisive reason for each item of expense is our own enlightened self-interest.

Let me be specific and emphatic on this point of motivation: not a single dollar is sought for this program for any reason other than an American reason. Our Nation has recognized, since its infancy, that liberty elsewhere was vital to our own peace and safety. When that liberty has been jeopardized by war, we have gone into war to save it. That is the most costly way to protect ourselves. We hope now to protect ourselves in less costly ways. That is the reason for our mutual security program.

[. . .]

Are Local Forces Needed?

Another question sometimes asked is, Does not the deterrent striking power of the United States make local forces unnecessary, so that their cost could be saved? Certainly our strategic power reduces the need for local forces. It would indeed be impractical to have local forces all around the orbit of the Soviet world sufficient to stop a large scale attack wherever it might be mounted. But we cannot rely wholly on centrally located strategic power. Nations that are menaced feel an impelling need to be able to fight in their own defense. Indeed, if they did not feel that way, support from us might not be merited or effective. Also, there needs to be loyal local strength to prevent subversion backed by international communism.

The deterrent to aggression is found not only in our strategic power but in the knowledge that subversion cannot be easily achieved and that an open armed attack would be met at once by brave and competent resistance. This, when reinforced by treaty pledges of collective action, will assure consequences which no aggressor could control or limit. That knowledge is the great deterrent.

This problem of balance between the strategic power of the U.S.A. and local power is admittedly difficult. Equally difficult is the problem of balance between military and economic effort. These problems are constantly receiving the closest attention of the National Security Council. In each case, the balance is subject to adjustment in the light of changing conditions.

Is There an End?

Finally, it will be asked, Will this cost go on forever? Can we see no end to this gigantic expenditure, totaling about \$40 billion a year, as the cost of our peace insurance policy?

The answer is that, so long as the danger persists, for so long must we pay to combat that danger.

The Soviet rulers are engaged in a gigantic effort to build up their military establishment and to extend the area of their dominance. They maintain a military establishment approximately comparable to our own and spare no cost in striving to excel us. They give military aid to Communist China and to their Eastern European satellite allies. This is measured in terms of billions of dollars. They now woo free nations by offers of credit for economic and military goods. Credits totaling nearly \$500 million have already been concluded, and several hundred more million have been offered. They devote about \$500 million a year to foreign propaganda.

The Soviet Union is spending, for military and foreign-policy purposes hostile to us, about 20 percent of the gross product of the Soviet nation. So long as this is going on, we may have to expend about 10 percent of our gross national product, as we are now doing, for peace insurance purposes.

We can do so while at the same time raising our living standards. The demonstration of that fact has had a potent influence on the international scene.

Never will a responsible administration put its faith in protestations of peace and good will that have no dependable foundation, or expose the Nation to being isolated in the world, or deny it the retaliatory facilities needed to deter surprise attack.

But there are signs that a new day may be dawning. The Soviet rulers now profess to renounce the doctrine that violence is a necessary part of their foreign policy. They are debasing Stalin, who for 25 years was treated as a demigod. Writings of his, which for 25 years formed the Communist creed, are now withdrawn from circulation. This year, for the first time since the Bol-

shevik revolution, the Christian Bible is being printed and sold in Russia. The Russian people are getting more personal security, and labor is getting increased freedom of choice.

Obviously, there is a rising demand on the part of the captive nations to have more independence and on the part of the subject people, within and without Russia, to have more freedom from fear and to enjoy more of the fruits of their labor instead of having those fruits diverted to serve policies of aggrandizement. This popular demand must be broad in scope and intense in degree. Only that can explain the extraordinary exertions being made by the Soviet rulers to make it seem that they are offering a change. Out of all of this there may come—not this year, or next year, but some year—a government which is responsive to the just aspira-

tions of the people and which renounces expansionist goals.

Enough is happening to make us confident that if we remain strong, if we support freedom and make evident the blessings of liberty, that policy will prevail.

The time will never come when we can safely stop planning and working for peace and making sacrifices for peace. But we can see that, if we remain steadfast, the time may come when the danger will be much less and when the cost can be correspondingly reduced. Until that time is here, the clear course of patriotic duty is to hold fast that which has proved good.

64. Mao Zedong: "U.S. Imperialism Is a Paper Tiger," 14 July 1956

Introduction

For international communist revolutionaries during the Cold War, the United States represented the head and front of the capitalist forces raised against them. Chinese Communist Party (CCP) chairman Mao Zedong regarded the United States as the foremost enemy that China would ultimately have to confront and overcome. A leader who favored dramatic and grandiloquent rhetoric, Mao nonetheless urged his countrymen and leftists around the world not to fear the United States, characterizing it as a "paper tiger" that was far less formidable than it appeared. Strong though the United States was in military and economic terms, its power could, he proclaimed, be destroyed piecemeal and incrementally, although this would take time. In the mid-1950s Mao called on all the oppressed peoples of the world to launch armed struggle against the United States and its allies, and China provided training and military aid to a wider variety of international revolutionary movements. His approach differed from that of the new Soviet premier Nikita Khrushchev, who now sought peaceful coexistence with the West, and contributed to growing divisions between Soviet Russia and Communist China that culminated in an outright split by the end of the decade. Soviet leaders thought Mao's policies likely to destabilize the international system and perhaps provoke nuclear war. Ironically, in practice Mao was far more cautious than his rhetoric implied in challenging the United States, suggesting that he himself may have been something of a paper tiger. After intervening in 1950 against United Nations forces in the lengthy, expensive, and wearing Korean War, which ended in stalemate, Mao was careful in successive international crises over Taiwan and Vietnam to avoid provoking outright war between China and the United States (UN). Eventually, moreover, when Sino-Soviet hostility led to outright fighting on the joint border in 1969, Mao even initiated a rapprochement with the United States, for two decades supposedly China's greatest enemy, as a means of countering the potential Soviet menace.

Primary Source

The United States is flaunting the anti-communist banner everywhere in order to perpetrate aggression against other countries.

The United States owes debts everywhere. It owes debts not only to the countries of Latin America, Asia and Africa, but also to the countries of Europe and Oceania. The whole world, Britain included, dislikes

the United States. The masses of the people dislike it. Japan dislikes the United States because it oppresses her. None of the countries in the East is free from U.S. aggression. The United States has invaded our Taiwan Province. Japan, Korea, the Philippines, Viet Nam and Pakistan all suffer from U.S. aggression, although some of them are allies of the United States. The people are dissatisfied and in some countries so are the authorities.

All oppressed nations want independence.

Everything is subject to change. The big decadent forces will give way to the small new-born forces. The small forces will change into big forces because the majority of the people demand this change. The U.S. imperialist forces will change from big to small because the American people, too, are dissatisfied with their government.

In my own lifetime I myself have witnessed such changes. Some of us present were born in the Ching Dynasty and others after the 1911 Revolution.

The Ching Dynasty was overthrown long ago. By whom? By the party led by Sun Yat-sen, together with the people. Sun Yat-sen's forces were so small that the Ching officials didn't take him seriously. He led many uprisings which failed each time. In the end, however, it was Sun Yat-sen who brought down the Ching Dynasty. Bigness is nothing to be afraid of. The big will be overthrown by the small. The small will become big. After overthrowing the Ching Dynasty, Sun Yat-sen met with defeat. For he failed to satisfy the demands of the people, such as their demands for land and for opposition to imperialism. Nor did he understand the necessity of suppressing the counter-revolutionaries who were then moving about freely. Later, he suffered defeat at the hands of Yuan Shih-kai, the chieftain of the Northern warlords. Yuan Shih-kai's forces were larger than Sun Yat-sen's. But here again this law operated: small forces linked with the people become strong, while big forces opposed to the people become weak. Subsequently Sun Yat-sen's bourgeois-democratic revolutionaries co-operated with us Communists and together we defeated the warlord set-up left behind by Yuan Shih-kai.

Chiang Kai-shek's rule in China was recognized by the governments of all countries and lasted twenty-two years, and his forces were the biggest. Our forces were small, fifty thousand Party members at first but only a few thousand after counter-revolutionary suppressions. The enemy made trouble everywhere. Again this law operated: the big and strong end up in defeat because they are divorced from the people, whereas the small and weak emerge victorious because they are linked with the people and work in their interest. That's how things turned out in the end.

During the anti-Japanese war, Japan was very powerful, the Kuomintang troops were driven to the hinterland, and the armed forces led by the Communist Party could only conduct guerrilla warfare in the rural areas behind the enemy lines. Japan occupied large Chinese cities such as Peking, Tientsin, Shanghai, Nanking, Wuhan and Canton. Nevertheless, like Germany's Hitler the Japanese militarists collapsed in a few years, in accordance with the same law.

We underwent innumerable difficulties and were driven from the south to the north, while our forces fell from several hundred thousand strong to a few tens of thousands. At the end of the 25,000-*li* Long March we had only 25,000 men left.

[. .]

During the War of Resistance, our troops grew and became 900,000 strong through fighting against Japan. Then came the War of Liberation. Our arms were inferior to those of the Kuomintang. The Kuomintang troops then numbered four million, but in three years of fighting we wiped out eight million of them all told. The Kuomintang, though aided by U.S. imperialism, could not defeat us. The big and strong cannot win, it is always the small and weak who win out.

Now U.S. imperialism is quite powerful, but in reality it isn't. It is very weak politically because it is divorced from the masses of the people and is disliked by everybody and by the American people too. In appearance it is very powerful but in reality it is nothing to be afraid of, it is a paper tiger. Outwardly a tiger, it is made of

paper, unable to withstand the wind and the rain. I believe the United States is nothing but a paper tiger.

History as a whole, the history of class society for thousands of years, has proved this point: the strong must give way to the weak. This holds true for the Americas as well.

Only when imperialism is eliminated can peace prevail. The day will come when the paper tigers will be wiped out. But they won't become extinct of their own accord, they need to be battered by the wind and the rain.

When we say U.S. imperialism is a paper tiger, we are speaking in terms of strategy. Regarding it as a whole, we must despise it. But regarding each part, we must take it seriously. It has claws and fangs. We have to destroy it piecemeal. For instance, if it has ten fangs, knock off one the first time, and there will be nine left; knock off another, and there will be eight left. When all the fangs are gone, it will still have claws. If we deal with it step by step and in earnest, we will certainly succeed in the end.

Strategically, we must utterly despise U.S. imperialism. Tactically, we must take it seriously. In struggling against it, we must take each battle, each encounter, seriously. At present, the United States is powerful, but when looked at in a broader perspective, as a whole and from a long-term viewpoint, it has no popular support, its policies are disliked by the people, because it oppresses and exploits them. For this reason, the tiger is doomed. Therefore, it is nothing to be afraid of and can be despised. But today the United States still has strength, turning out more than 100 million tons of

steel a year and hitting out everywhere. That is why we must continue to wage struggles against it, fight it with all our might and wrest one position after another from it. And that takes time.

It seems that the countries of the Americas, Asia and Africa will have to go on quarrelling with the United States till the very end, till the paper tiger is destroyed by the wind and the rain.

To oppose U.S. imperialism, people of European origin in the Latin-American countries should unite with the indigenous Indians. Perhaps the white immigrants from Europe can be divided into two groups, one composed of rulers and the other of ruled. This should make it easier for the group of oppressed white people to get close to the local people, for their position is the same.

Our friends in Latin America, Asia and Africa are in the same position as we and are doing the same kind of work, doing something for the people to lessen their oppression by imperialism. If we do a good job, we can root out imperialist oppression. In this we are comrades.

We are of the same nature as you in our opposition to imperialist oppression, differing only in geographical position, nationality and language. But we are different in nature from imperialism, and the very sight of it makes us sick.

What use is imperialism? The Chinese people will have none of it, nor will the people in the rest of the world. There is no reason for the existence of imperialism.

65. Hungarian Revolution: Sixteen Political, Economic, and Ideological Points

Introduction

Soviet control of Eastern Europe was rarely popular. In 1956, reformers in both Hungary and Poland challenged Soviet dominance and sought greater autonomy and an end to Soviet intervention in their countries' affairs. In Poland, Władysław Gomułka, who took power in summer 1956, withstood Soviet pressure and, after pledging his

country's continuing loyalty to the Soviet Union and the Warsaw Pact and promising to end press criticism of the Soviet Union, was left in power. The Polish example and Gomulka's successful retention of some autonomy helped to embolden Hungarian rebels. On 22 October 1956, a group of students in Budapest issued this manifesto as a call to arms in the Hungarian Revolution. The following day, what was initially a small pro-Gomulka demonstration soon escalated into a major threat to Soviet control as more than 100,000 Hungarians demonstrated against continued Soviet rule. Students and reformers vowed to free Hungary from the repressive rule of Soviet leader Josef Stalin and quickly gained support for their measures from both the public and many of Hungary's political leaders. On 23 October the government of Ernő Gerő collapsed, and Imre Nagy replaced him as prime minister. The Hungarians announced their intention to leave the Warsaw Pact military alliance of the Soviet Union's East European satellites and also planned to introduce a multiparty democratic system, a direct challenge to communist control. In response, Stalin ordered the Soviet Army into Budapest. An early intervention by Soviet troops already present in Hungary proved ineffective, but on 4 November additional Soviet forces entered the country, where they brutally suppressed the uprising, killing or imprisoning hundreds of people in the process of regaining Soviet control of the country. Sporadic fighting and resistance continued until 10 November. With Soviet backing, in December 1956 Janos Kádár formed a new government. Apart from those killed in the actual fighting, approximately 1,200 Hungarians, including former prime minister Nagy, were tried and executed. The episode was a forceful demonstration of Soviet determination to retain military control of Eastern Europe, which Russian leaders considered vital to their own country's security, and also of Western reluctance to risk war with the Soviet Union by giving any kind of military assistance to East European rebels.

RESOLUTION ADOPTED AT PLENARY MEETING OF THE BUILDING INDUSTRY TECHNOLOGY UNIVERSITY

Students of Budapest!

The following resolution was born on 22 October 1956, at the dawn of a new period in Hungarian history, in the Hall of the Building Industry Technological University as a result of the spontaneous movement of several thousand of the Hungarian youth who love their Fatherland:

- (1) We demand the immediate withdrawal of all Soviet troops in accordance with the provisions of the Peace Treaty.
- (2) We demand the election of new leaders in the Hungarian Workers' Party on the low, medium and high levels by secret ballot from the ranks upwards. These leaders should convene the Party Congress within the shortest possible time and should elect a new central body of leaders.
- (3) The Government should be reconstituted under the leadership of Comrade Imre Nagy; all criminal

leaders of the Stalinist-Rákosi era should be relieved of their posts at once.

(4) We demand a public trial in the criminal case of Mihály Farkas and his accomplices. Mátyás Rákosi, who is primarily responsible for all the crimes of the recent past and for the ruin of this country, should be brought home and brought before a People's Court of judgment.

(5) We demand general elections in this country, with universal suffrage, secret ballot and the participation of several Parties for the purpose of electing a new National Assembly. We demand that the workers should have the right to strike.

(6) We demand a re-examination and re-adjustment of Hungarian-Soviet and Hungarian-Yugoslav political, economic and intellectual relations on the basis of complete political and economic equality and of non-intervention in each other's internal affairs.

(7) We demand the re-organization of the entire economic life of Hungary, with the assistance of specialists. Our whole economic system based on planned economy should be re-examined with an eye to Hun-

garian conditions and to the vital interests of the Hungarian people.

(8) Our foreign trade agreements and the real figures in respect of reparations that can never be paid should be made public. We demand frank and sincere information concerning the country's uranium deposits, their exploitation and the Russian concession. We demand that Hungary should have the right to sell the uranium ore freely at world market prices in exchange for hard currency.

(9) We demand the complete revision of norms in industry and an urgent and radical adjustment of wages to meet the demands of workers and intellectuals. We demand that minimum living wages for workers should be fixed.

(10) We demand that the delivery system should be placed on a new basis and that produce should be used rationally. We demand equal treatment of peasants farming individually.

(11) We demand the re-examination of all political and economic trials by independent courts and the release and rehabilitation of innocent persons. We demand the immediate repatriation of prisoners-of-war and of civilians deported to the Soviet Union, including prisoners who have been condemned beyond the frontiers of Hungary.

(12) We demand complete freedom of opinion and expression, freedom of the Press and a free Radio, as well as a new daily newspaper of large circulation for the MEFESZ [League of Hungarian University and College Student Associations] organization. We demand that the existing "screening material" should be made public and destroyed.

(13) We demand that the Stalin statue—the symbol of Stalinist tyranny and political oppression—should be removed as quickly as possible and that a memorial worthy of the freedom fighters and martyrs of 1848–49 should be erected on its site.

(14) In place of the existing coat of arms, which is foreign to the Hungarian people, we wish the re-introduction of the old Hungarian Kossuth arms. We demand for the Hungarian Army new uniforms worthy of our national traditions. We demand that 15 March should be a national holiday and a non-working day and that 6 October should be a day of national mourning and a school holiday.

(15) The youth of the Technological University of Budapest unanimously express their complete solidarity with the Polish and Warsaw workers and youth in connexion with the Polish national independence movement.

(16) The students of the Building Industry Technological University will organize local units of MEFESZ as quickly as possible, and have resolved to convene a Youth Parliament in Budapest for the 27th of this month (Saturday) at which the entire youth of this country will be represented by their delegates. The students of the Technological University and of the various other Universities will gather in the Gorkij Fasor before the Writers' Union Headquarters tomorrow, the 23rd. of this month, at 2.30 P.M., whence they will proceed to the Pálffy Tér (Bern Tér) to the Bern statue, on which they will lay wreaths in sign of their sympathy with the Polish freedom movement. The workers of the factories are invited to join in this procession.

66. Hungarian Revolution: Declaration of the Soviet Government, 30 October 1956

Introduction

The Hungarian Revolution of 1956 was a popular uprising of students and reformers in communist Hungary bent on changing several key aspects of Hungarian society and modifying the version of communism that existed there.

However, as a satellite state of the Soviet Union and part of the Eastern bloc, Hungary played an important role in maintaining the idea that Soviet control over Eastern Europe was inviolable. Therefore, in the fall of 1956 the Soviet Army marched into Hungary and brutally suppressed the revolution, executing all of its leaders and imprisoning hundreds of people for their involvement. On 30 October 1956, the Soviet government issued an official explanation regarding the army's action. The Hungarian revolution nonetheless had a major impact on Soviet credibility, impelling many prominent communists outside the Soviet Union to leave the party on the grounds that Soviet intervention in the internal affairs of another communist state was unacceptable. U.S. inaction during the Hungarian Revolution also greatly disappointed many around Europe and beyond. President Dwight D. Eisenhower and Secretary of State John Foster Dulles had campaigned in 1952 as Republicans who would wage the Cold War more aggressively than Democrats such as President Harry S. Truman and his secretary of state, Dean Acheson. Eisenhower and Dulles had promised that rather than simply acquiescing in Soviet control of Eastern Europe, they would actively seek to roll back Soviet domination of that area. When Hungarian revolutionaries appealed for U.S. support, however, Dulles and Eisenhower, unwilling to risk nuclear war over an area that the Soviets considered part of their own sphere of influence and essential to Soviet security, refused to provide anything more than rhetorical support to the beleaguered Hungarians, a stance that for many tarnished the international image of the United States.

Primary Source

[. . .]

The Soviet Government regards it as indispensable to make a statement in connection with the events in Hungary.

The course of the events has shown that the working people of Hungary, who have achieved great progress on the basis of their people's democratic order, correctly raised the question of the necessity of eliminating serious shortcomings in the field of economic building, the further raising of the material well-being of the population, and the struggle against bureaucratic excesses in the state apparatus.

However, this just and progressive movement of the working people was soon joined by forces of black reaction and counterrevolution, which are trying to take advantage of the discontent of part of the working people to undermine the foundations of the people's democratic order in Hungary and to restore the old landlord and capitalist order.

The Soviet Government and all the Soviet people deeply regret that the development of events in Hungary has led to bloodshed. On the request of the Hungarian People's Government the Soviet Government consented to the entry into Budapest of the Soviet Army units to assist the Hungarian People's Army and the Hungarian authorities to establish order in the town. Believing that the further presence of Soviet Army units in Hungary can serve as a cause for even greater deterioration of the situation, the Soviet Government has given instructions to its military command to withdraw the Soviet Army units from Budapest as soon as this is recognized as necessary by the Hungarian Government.

At the same time, the Soviet Government is ready to enter into relevant negotiations with the Government of the Hungarian People's Republic and other participants of the Warsaw Treaty on the question of the presence of Soviet troops on the territory of Hungary.

67. Imre Nagy: Final Message to the Hungarian People, 1956

Introduction

Imre Nagy served as prime minister of Hungary from 1953 to 1955 before falling from Soviet favor and losing office. He proved a sympathetic supporter of the Hungarian Revolution of 1956, during which students and reformers attempted to undermine Soviet control of Hungary and revise the communist system in a democratic and multi-party direction. On 23 October 1956, as demonstrations against Soviet rule expanded almost uncontrollably, Nagy was reappointed as prime minister. Fearing Soviet intervention, he sought to bring events under control, introducing reforms and offering amnesty to demonstrators while placating the Soviets and seeking to negotiate the peaceable withdrawal of Soviet troops from Hungary. When Nagy realized that his efforts had failed to persuade the Soviets to eschew military intervention, he finally announced Hungary's withdrawal from the Warsaw Pact, the Soviet-run military alliance of its East European satellite states. On 4 November 1956 Soviet troops invaded Hungary, capturing Nagy and numerous other Hungarian leaders. As Soviet troops surrounded the capital city of Budapest, Nagy delivered his final message to the Hungarian people, appealing for support from other countries. His hopes of assistance from the Western powers or the United Nations (UN) were illusory, since—despite their proclaimed wish to roll back communism in Eastern Europe—U.S. President Dwight D. Eisenhower and his secretary of state, John Foster Dulles, were not prepared to risk nuclear war over an area that they knew the Soviet Union considered essential to its own national security. In 1958, the Soviets executed Nagy for his involvement in the revolution. After the Soviets relinquished control of Eastern Europe in 1989, Nagy was posthumously rehabilitated.

Primary Source

This fight is the fight for freedom by the Hungarian people against the Russian intervention, and it is possible that I shall only be able to stay at my post for one or two hours. The whole world will see how the Russian armed forces, contrary to all treaties and conventions, are crushing the resistance of the Hungarian people. They will also see how they are kidnapping the Prime Minister of a country which is a Member of the United Nations, taking him from the capital, and therefore it cannot be doubted at all that this is the most brutal form of intervention. I should like in these last mo-

ments to ask the leaders of the revolution, if they can, to leave the country. I ask that all that I have said in my broadcast, and what we have agreed on with the revolutionary leaders during meetings in Parliament, should be put in a memorandum, and the leaders should turn to all the peoples of the world for help and explain that today it is Hungary and tomorrow, or the day after tomorrow, it will be the turn of other countries because the imperialism of Moscow does not know borders, and is only trying to play for time.

68. Nikita Khrushchev: Report from the *London Times* on “We Will Bury You” Speech, 19 November 1956

Introduction

Nikita Khrushchev, who eventually succeeded Josef Stalin as general secretary of the Communist Party of the Soviet Union (CPSU), was less formidable than his predecessor but at times could be erratic. He frequently expressed his hopes for peaceful coexistence with the West, believing that nonsocialist countries would either evolve into communist states or experience autonomous revolutions that were not fomented by Soviet operatives. Fearing the devastating potential impact of nuclear war, Khrushchev also sought to reach understandings on arms control. This did not, however, mean that he had abandoned his faith in communism, the political creed he had embraced as a young factory worker before World War I. Khrushchev was also notorious for somewhat erratic behavior, especially when he had imbibed plentiful quantities of vodka. In mid-1956, shortly after Soviet troops

brutally suppressed the Hungarian Revolution and before the resolution of the Suez Crisis that occurred when Israel, Great Britain, and France invaded Egypt and the United States exerted economic pressure to force the three powers to withdraw, Khrushchev attended receptions at the Kremlin and the Polish embassy. In remarks at both venues, he took the opportunity to condemn the Suez invasion while characterizing Soviet intervention in Hungary as a justifiable exercise in counterrevolution. Warning that “Fascist bands” sought to destroy communist parties in Italy, France, and elsewhere outside the Soviet sphere, Khrushchev proclaimed that “history is on our side” and warned the Western diplomats present: “We will bury you.” In practice, the Russian words Khrushchev used were less menacing than they appeared in translation and in the original meant something approximating: “We will attend your funeral.” Khrushchev apparently meant that the Western powers would collapse of their own volition, but the journalists present reported a somewhat sensational version of his remarks. Indeed, some years later Khrushchev himself looked back on this episode and commented that he had “got into trouble for it” when he had only wished to say that the working classes of the Western states would themselves overthrow their rulers. Khrushchev’s speech nonetheless impelled all the Western ambassadors to leave, and the episode was widely reported around the world as an instance of his bullying, blustering style and was taken as a threat to the West. In the popular memory, “we will bury you” would become one of Khrushchev’s best-remembered utterances.

Primary Source

Sir William Hayter, the British Ambassador, and diplomatic representatives of other North Atlantic Treaty Organization countries, walked out from a Kremlin reception last night in protest at a speech by Mr. Khrushchev, the Soviet Communist Party chairman, in which he used the words “Fascist” and “bandits” in referring to Britain and France and Israel.

The reception was in honour of Mr. Gomulka, who was concluding his visit to Moscow.

Out of courtesy to Mr. Gomulka, the N.A.T.O. ambassadors and representative of Israel waited until Mr. Gomulka had responded with a toast that was devoid of references to Egypt or Hungary and limited to advocating friendly ties with the Soviet Union based on equality and mutual benefit. Immediately on the conclusion of the translation into Russian of Mr. Gomulka’s toast, read in Polish, the western diplomatists strode from the long white and gold St. George’s Hall.

Mr. Khrushchev declared that the “bandit-like attack by Britain, France, and their puppet, Israel, on Egypt is a desperate attempt by colonializers to regain their lost positions, to frighten the peoples of dependent countries with force. But the time has passed when imperialists could seize weak countries with impunity. The freedom-loving people of Egypt have administered a fitting rebuff to the aggressors, and its just strug-

gle against foreign invaders has evoked warm support all over the world.”

Mr. Khrushchev, words tumbling from his lips in rapid fashion, continued by extending his accusations against other Powers besides Britain, France, and Israel. “Feverish activity is now in progress on the part of all the forces of reaction against the forces of Socialism and democracy. Fascist bands are making frenzied attacks on the advanced detachments of the working class, on the Communist parties of France, Italy, and other countries.”

At a reception this evening at the Polish Embassy, Mr. Khrushchev delivered himself of a longer but more mildly worded address criticizing the western Powers. However, most western ambassadors, including Sir William Hayter, restricted themselves to wandering to an adjoining room while Mr. Khrushchev spoke.

Moscow, Nov. 18.—In his speech Mr. Khrushchev, who appeared to be directing his remarks to the western diplomatists, said: “We say this not only for the socialist States, who are more akin to us. We base ourselves on the idea that we must peacefully co-exist. About the capitalist States, it doesn’t depend on you whether or not we exist. If you don’t like us, don’t accept our invitations and don’t invite us to come to see you. Whether you like it or not, history is on our side. We will bury you.”

There was applause from Mr. Khrushchev's colleagues, and Mr. Gomulka, who had been standing at one side rather glumly, laughed.

Mr. Khrushchev said that many mistakes had been made in building socialism in the Soviet Union because of the lack of examples and the lack of personnel. He continued: "If we could have the revolution over again we would carry it out more sensibly and with smaller losses; but history does not repeat itself. The situation is favourable for us. If God existed, we would thank him for this."

"We had Hungary thrust upon us. We are very sorry that such a situation exists there. We are sure that the Hungarian working class will find the strength to overcome the difficulties. But most important is that the counter-revolution must be shattered."

Turning to Mr. Gomulka, he said: "I am sorry to be making such a speech on the territory of a foreign State. The western Powers are trying to denigrate Nasser. He is not a Communist. Politically, he is closer to those who are waging war on him and he has even put Communists in gaol."

"We sent sharp letters to Britain, France, and Israel—well, Israel, that was just for form, because, as you know, Israel carries no weight in the world, and if it plays any role it was just to start a fight. If Israel hadn't felt the support of Britain, France, and others, the Arabs would have been able to box her ears and she would have remained at peace."

"The situation is serious and we are realists. The fire must be put out. I think the British and French will be wise enough to withdraw their forces, and then Egypt will emerge stronger than ever. We must seek a *rap-prochement*. We must seek a settlement so that coexistence will be peaceful and advantageous."

Referring to the Soviet Government's latest disarmament plan, he said: "You say we want war, but you have now got yourselves into a position I would call idiotic. (Mr. Mikoyan interjected: "Let's say delicate.") But we don't want to profit by it."

"If you withdraw your troops from Germany, France, and Britain—I'm speaking of American troops—we will not stay one day in Poland, Hungary, and Rumania. But we, Mr. Capitalists, we are beginning to understand your methods. You have given us a lesson in Egypt. If we had a quarter of our present friendship for the Poles, Czechs, and Slovaks before the war, the war would never have started."

"Nobody should pretend to know the best methods of socialism. The Bulgarians, Poles, Yugoslavs, Rumanians, Czechs, and Soviets—all have their own; but, comrades, it is really better to hawk one's own wares, and if they are good, they will find a buyer on their own. So when our enemies try to bring us into conflict over which is the best method of socialism we reject this. It is not in the interests of socialism."

69. Dwight D. Eisenhower: The Eisenhower Doctrine, 5 January 1957

Introduction

On 5 January 1957, U.S. President Dwight D. Eisenhower addressed a special joint session of the U.S. Congress regarding unfolding events in the Middle East. During the Suez Crisis the previous November—when Britain, France, and Israel invaded Egypt and tried to retake the Suez Canal, only to retreat under U.S. financial and diplomatic pressure—the Soviet Union had threatened to intervene unless the attackers withdrew. The Middle East had the world's most substantial oil reserves, strategic resources that were increasingly vital to the heavily energy-dependent U.S. domestic economy as well as to its war-making capacity. Convinced that the tumultuous political situation in the Middle East had become a battleground of the Cold War, Eisenhower demanded that Congress grant him the military and financial resources to aid those Middle Eastern powers attempting to fend off communism,

advocating a high level of U.S. involvement in the Middle East that became known as the Eisenhower Doctrine. Congress complied, thus initiating a period of extensive U.S. involvement in the Middle East that continues to this day.

Primary Source

In my forthcoming State of the Union Message, I shall review the international situation generally. There are worldwide hopes which we can reasonably entertain, and there are worldwide responsibilities which we must carry to make certain that freedom—including our own—may be secure.

There is, however, a special situation in the Middle East which I feel I should, even now, lay before you.

Before doing so it is well to remind ourselves that our basic national objective in international affairs remains peace—a world peace based on justice. Such a peace must include all areas, all peoples of the world if it is to be enduring. There is no nation, great or small, with which we would refuse to negotiate, in mutual good faith, with patience and in the determination to secure a better understanding between us. Out of such understandings must, and eventually will, grow confidence and trust, indispensable ingredients to a program of peace and to plans for lifting from us all the burdens of expensive armaments. To promote these objectives, our government works tirelessly, day by day, month by month, year by year. But until a degree of success crowns our efforts that will assure to all nations peaceful existence, we must, in the interests of peace itself, remain vigilant, alert and strong.

I. The Middle East has abruptly reached a new and critical stage in its long and important history. In past decades many of the countries in that area were not fully self-governing. Other nations exercised considerable authority in the area and the security of the region was largely built around their power. But since the First World War there has been a steady evolution toward self-government and independence. This development the United States has welcomed and has encouraged. Our country supports without reservation the full sovereignty and independence of each and every nation of the Middle East.

The evolution to independence has in the main been a peaceful process. But the area has been often troubled.

Persistent cross-currents of distrust and fear with raids back and forth across national boundaries have brought about a high degree of instability in much of the Middle East. Just recently there have been hostilities involving Western European nations that once exercised much influence in the area. Also the relatively large attack by Israel in October has intensified the basic differences between that nation and its Arab neighbors. All this instability has been heightened and, at times, manipulated by International Communism.

II. Russia's rulers have long sought to dominate the Middle East. That was true of the Czars and it is true of the Bolsheviks. The reasons are not hard to find. They do not affect Russia's security, for no one plans to use the Middle East as a base for aggression against Russia. Never for a moment has the United States entertained such a thought.

The Soviet Union has nothing whatsoever to fear from the United States in the Middle East, or anywhere else in the world, so long as its rulers do not themselves first resort to aggression.

That statement I make solemnly and emphatically.

Neither does Russia's desire to dominate the Middle East spring from its own economic interest in the area. Russia does not appreciably use or depend upon the Suez Canal. In 1955 Soviet traffic through the Canal represented only about three fourths of 1% of the total. The Soviets have no need for, and could provide no market for, the petroleum resources which constitute the principal natural wealth of the area. Indeed, the Soviet Union is a substantial exporter of petroleum products.

The reason for Russia's interest in the Middle East is solely that of power politics. Considering her announced purpose of Communizing the world, it is easy to understand her hope of dominating the Middle East.

This region has always been the crossroads of the continents of the Eastern Hemisphere. The Suez Canal

enables the nations of Asia and Europe to carry on the commerce that is essential if these countries are to maintain well-rounded and prosperous economies. The Middle East provides a gateway between Eurasia and Africa.

It contains about two thirds of the presently known oil deposits of the world and it normally supplies the petroleum needs of many nations of Europe, Asia and Africa. The nations of Europe are peculiarly dependent upon this supply, and this dependency relates to transportation as well as to production! This has been vividly demonstrated since the closing of the Suez Canal and some of the pipelines. Alternate ways of transportation and, indeed, alternate sources of power can, if necessary, be developed. But these cannot be considered as early prospects.

These things stress the immense importance of the Middle East. If the nations of that area should lose their independence, if they were dominated by alien forces hostile to freedom, that would be both a tragedy for the area and for many other free nations whose economic life would be subject to near strangulation. Western Europe would be endangered just as though there had been no Marshall Plan, no North Atlantic Treaty Organization. The free nations of Asia and Africa, too, would be placed in serious jeopardy. And the countries of the Middle East would lose the markets upon which their economies depend. All this would have the most adverse, if not disastrous, effect upon our own nation's economic life and political prospects.

Then there are other factors which transcend the material. The Middle East is the birthplace of three great religions—Moslem, Christian and Hebrew. Mecca and Jerusalem are more than places on the map. They symbolize religions which teach that the spirit has supremacy over matter and that the individual has a dignity and rights of which no despotic government can rightfully deprive him. It would be intolerable if the holy places of the Middle East should be subjected to a rule that glorifies atheistic materialism.

International Communism, of course, seeks to mask its purposes of domination by expressions of good will and by superficially attractive offers of political, economic

and military aid. But any free nation, which is the subject of Soviet enticement, ought, in elementary wisdom, to look behind the mask.

Remember Estonia, Latvia and Lithuania! In 1939 the Soviet Union entered into mutual assistance pacts with these then independent countries; and the Soviet Foreign Minister, addressing the Extraordinary Fifth Session of the Supreme Soviet in October 1939, solemnly and publicly declared that “we stand for the scrupulous and punctilious observance of the pacts on the basis of complete reciprocity, and we declare that all the nonsensical talk about the Sovietization of the Baltic countries is only to the interest of our common enemies and of all anti-Soviet provocateurs.” Yet in 1940, Estonia, Latvia and Lithuania were forcibly incorporated into the Soviet Union.

Soviet control of the satellite nations of Eastern Europe has been forcibly maintained in spite of solemn promises of a contrary intent, made during World War II.

Stalin's death brought hope that this pattern would change. And we read the pledge of the Warsaw Treaty of 1955 that the Soviet Union would follow in satellite countries “the principles of mutual respect for their independence and sovereignty and non-interference in domestic affairs.” But we have just seen the subjugation of Hungary by naked armed force. In the aftermath of this Hungarian tragedy, world respect for and belief in Soviet promises have sunk to a new low. International Communism needs and seeks a recognizable success.

Thus, we have these simple and indisputable facts:

1. The Middle East, which has always been coveted by Russia, would today be prized more than ever by International Communism.
2. The Soviet rulers continue to show that they do not scruple to use any means to gain their ends.
3. The free nations of the Mid East need, and for the most part want, added strength to assure their continued independence.

III. Our thoughts naturally turn to the United Nations as a protector of small nations. Its charter gives it primary

responsibility for the maintenance of international peace and security. Our country has given the United Nations its full support in relation to the hostilities in Hungary and in Egypt. The United Nations was able to bring about a cease-fire and withdrawal of hostile forces from Egypt because it was dealing with governments and peoples who had a decent respect for the opinions of mankind as reflected in the United Nations General Assembly. But in the case of Hungary, the situation was different. The Soviet Union vetoed action by the Security Council to require the withdrawal of Soviet armed forces from Hungary. And it has shown callous indifference to the recommendations, even the censure, of the General Assembly. The United Nations can always be helpful, but it cannot be a wholly dependable protector of freedom when the ambitions of the Soviet Union are involved.

IV. Under all the circumstances I have laid before you, a greater responsibility now devolves upon the United States. We have shown, so that none can doubt, our dedication to the principle that force shall not be used internationally for any aggressive purpose and that the integrity and independence of the nations of the Middle East should be inviolate. Seldom in history has a nation's dedication to principle been tested as severely as ours during recent weeks.

There is general recognition in the Middle East, as elsewhere, that the United States does not seek either political or economic domination over any other people. Our desire is a world environment of freedom, not servitude. On the other hand many, if not all, of the nations of the Middle East are aware of the danger that stems from International Communism and welcome closer cooperation with the United States to realize for themselves the United Nations goals of independence, economic well-being and spiritual growth.

If the Middle East is to continue its geographic role of uniting rather than separating East and West; if its vast economic resources are to serve the well-being of the peoples there, as well as that of others; and if its cultures and religions and their shrines are to be preserved for the uplifting of the spirits of the peoples, then the United States must make more evident its willingness

to support the independence of the freedom-loving nations of the area.

V. Under these circumstances I deem it necessary to seek the cooperation of the Congress. Only with that cooperation can we give the reassurance needed to deter aggression, to give courage and confidence to those who are dedicated to freedom and thus prevent a chain of events which would gravely endanger all of the free world.

[. . .]

VI. It is nothing new for the President and the Congress to join to recognize that the national integrity of other free nations is directly related to our own security.

[. . .]

The action which I propose would have the following features.

It would, first of all, authorize the United States to cooperate with and assist any nation or group of nations in the general area of the Middle East in the development of economic strength dedicated to the maintenance of national independence.

It would, in the second place, authorize the Executive to undertake in the same region programs of military assistance and cooperation with any nation or group of nations which desires such aid.

It would, in the third place, authorize such assistance and cooperation to include the employment of the armed forces of the United States to secure and protect the territorial integrity and political independence of such nations, requesting such aid, against overt armed aggression from any nation controlled by International Communism.

These measures would have to be consonant with the treaty obligations of the United States, including the Charter of the United Nations and with any action or recommendations of the United Nations. They would also, if armed attack occurs, be subject to the overriding

authority of the United Nations Security Council in accordance with the Charter.

The present proposal would, in the fourth place, authorize the President to employ, for economic and defensive military purposes, sums available under the Mutual Security Act of 1954, as amended, without regard to existing limitations.

The legislation now requested should not include the authorization or appropriation of funds because I believe that, under the conditions I suggest, presently appropriated funds will be adequate for the balance of the present fiscal year ending June 30. I shall, however, seek in subsequent legislation the authorization of \$200,000,000 to be available during each of the fiscal years 1958 and 1959 for discretionary use in the area, in addition to the other mutual security programs for the area hereafter provided for by the Congress.

[. . .]

VIII. Let me refer again to the requested authority to employ the armed forces of the United States to assist to defend the territorial integrity and the political independence of any nation in the area against Communist armed aggression. Such authority would not be exercised except at the desire of the nation attacked. Beyond this it is my profound hope that this authority would never have to be exercised at all.

Nothing is more necessary to assure this than that our policy with respect to the defense of the area be promptly and clearly determined and declared. Thus

the United Nations and all friendly governments, and indeed governments which are not friendly, will know where we stand.

If, contrary to my hope and expectation, a situation arose which called for the military application of the policy which I ask the Congress to join me in proclaiming, I would of course maintain hour-by-hour contact with the Congress if it were in session. And if the Congress were not in session, and if the situation had grave implications, I would, of course, at once call the Congress into special session.

In the situation now existing, the greatest risk, as is often the case, is that ambitious despots may miscalculate. If power-hungry Communists should either falsely or correctly estimate that the Middle East is inadequately defended, they might be tempted to use open measures of armed attack. If so, that would start a chain of circumstances which would almost surely involve the United States in military action. I am convinced that the best insurance against this dangerous contingency is to make clear now our readiness to cooperate fully and freely with our friends of the Middle East in ways consonant with the purposes and principles of the United Nations. I intend promptly to send a special mission to the Middle East to explain the cooperation we are prepared to give.

70. Nikita Khrushchev and Richard Nixon: Kitchen Debate, 1959

Introduction

In July 1959 U.S. Vice President Richard Nixon, who had a reputation as a staunch anticommunist, visited Moscow to attend the opening of the American National Exhibition. The highlight of the U.S. pavilion was an entire house that, it was claimed, demonstrated the kind of dwelling that an average, ordinary American family could afford. The exhibit featured numerous new devices and technologies, including a television, an electric oven, a washing machine, central heating, air conditioners, and the like. The U.S. government was eager to prove that despite the Soviets' success of 1957 in launching *Sputnik 1*, the first satellite in space, their own country had the technological edge in other areas. Soviet General Secretary Nikita Khrushchev attended the exhibition with Nixon, and when

the two men reached the kitchen they had an impromptu debate as to which economic system—capitalism or communism—was superior. Nixon drew Khrushchev's attention to the various household appliances, such as the washing machine and television, seeking to show that ordinary Americans enjoyed a far better lifestyle under capitalism than they would under communism. Nixon also wished to divert attention from Soviet attainments in the military field, not least because U.S. leaders regarded their rival's proficiency in space technology as a national humiliation. He argued that it was the American free market system that permitted his countrymen to afford such houses, built according to their own individual specifications. Khrushchev, by contrast, proclaimed himself appalled when he entered the kitchen, on the grounds that the appliances—he termed them “gadgets”—were too luxurious, unnecessary, and wasteful, with “no useful purpose,” and he repeatedly declared that the Russian people focused not just on material comfort but on building things that genuinely mattered. He also claimed that the Soviet Union was ahead not just in space technology but also in such areas as the development of color television and that Soviet houses were just as well equipped as their American counterparts. The encounter, conducted through interpreters, was filmed in color on videotape and later aired on national television in the United States. The publicity that Nixon gained in his own country from this debate, from which most Americans believed he came out the winner, helped to enhance his political standing and win him the Republican nomination for the presidency in 1960. Ironically, thirty years later, when Mikhail Gorbachev sought to reform the communist system and permit more interchange with the West, the screening of imported television shows with sets that included American kitchens apparently helped to make Soviet citizens dissatisfied with the incomparably more spartan cooking facilities they possessed under communism.

Primary Source

Khrushchev: “We want to live in peace and friendship with Americans because we are the two most powerful countries and if we live in friendship then other countries will also live in friendship. But if there is a country that is too war-minded we could pull its ears a little and say: Don't you dare; fighting is not allowed now; this is a period of atomic armament; some foolish one could start a war and then even a wise one couldn't finish the war. Therefore, we are governed by this idea in our policy—internal and foreign. How long has America existed? Three hundred years?”

Nixon: “One hundred and fifty years.”

Khrushchev: “One hundred and fifty years? Well, then, we will say America has been in existence for 150 years and this is the level she has reached. We have existed not quite forty-two years and in another seven years we will be on the same level as America.

“When we catch you up, in passing you by, we will wave to you. Then if you wish we can stop and say: Please follow up. Plainly speaking, if you want capitalism you can live that way. That is your own affair and doesn't concern us. We can still feel sorry for you but since you don't understand us—live as you do understand.

“We are all glad to be here at the exhibition with Vice President Nixon. I personally, and on behalf of my colleagues, express my thanks for the President's message. I have not as yet read it but I know beforehand that it contains good wishes. I think you will be satisfied with your visit and if I cannot go on without saying it—if you would not take such a decision [proclamation by the United States Government of Captive Nations Week, a week of prayer for peoples enslaved by the Soviet Union] which has not been thought out thoroughly, as was approved by Congress, your trip would be excellent. But you have churned the water yourselves—why this was necessary God only knows.

“What happened? What black cat crossed your path and confused you? But that is your affair, we do not interfere with your problems. [Wrapping his arms about a Soviet workman] Does this man look like a slave laborer? [Waving at others] With men with such spirit how can we lose?”

[. . .]

Nixon: “You must not be afraid of ideas.”

Khrushchev: “We are telling you not to be afraid of ideas. We have no reason to be afraid. We have already broken free from such a situation.”

Nixon: "Well, then, let's have more exchange of them. We are all agreed on that. All right? All right?"

Khrushchev: "Fine. [Aside] Agree to what? All right, I am in agreement. But I want to stress what I am in agreement with. I know that I am dealing with a very good lawyer. I also want to uphold my own miner's flag so that the coal miners can say: Our man does not concede."

Nixon: "No question about that."

Khrushchev: "You are a lawyer for capitalism and I am a lawyer for communism. Let's compete."

Nixon: "The way you dominate the conversation you would make a good lawyer yourself. If you were in the United States Senate you would be accused of filibustering." [Halting Khrushchev at model kitchen in model house]: "You had a very nice house in your exhibition in New York. My wife and I saw and enjoyed it very much. I want to show you this kitchen. It is like those of our houses in California."

Khrushchev [after Nixon called attention to a built-in panel-controlled washing machine]: "We have such things."

Nixon: "This is the newest model. This is the kind which is built in thousands of units for direct installation in the houses." He added that Americans were interested in making life easier for their women.

Mr. Khrushchev remarked that in the Soviet Union, they did not have "the capitalist attitude toward women."

Nixon: "I think that this attitude toward women is universal. What we want to do is make easier the life of our housewives."

He explained that the house could be built for \$14,000 and that most veterans had bought houses for between \$10,000 and \$15,000.

Nixon: "Let me give you an example you can appreciate. Our steelworkers, as you know, are on strike. But any steelworker could buy this house. They earn \$3 an

hour. This house costs about \$100 a month to buy on a contract running twenty-five to thirty years."

Khrushchev: "We have steel workers and we have peasants who also can afford to spend \$14,000 for a house." He said American houses were built to last only twenty years, so builders could sell new houses at the end of that period. "We build firmly. We build for our children and grandchildren."

Mr. Nixon said he thought American houses would last more than twenty years, but even so, after twenty years many Americans want a new home or a new kitchen, which would be obsolete then. The American system is designed to take advantage of new inventions and new techniques, he said.

Khrushchev: "This theory does not hold water."

He said some things never got out of date—furniture and furnishings, perhaps, but not houses. He said he did not think that what Americans had written about their houses was all strictly accurate.

Nixon [pointing to television screen]: "We can see here what is happening in other parts of the home."

Khrushchev: "This is probably always out of order."

Nixon: "Da [yes]."

Khrushchev: "Don't you have a machine that puts food into the mouth and pushes it down? Many things you've shown us are interesting but they are not needed in life. They have no useful purpose. They are merely gadgets. We have a saying, if you have bedbugs you have to catch one and pour boiling water into the ear."

Nixon: "We have another saying. This is that the way to kill a fly is to make it drink whisky. But we have a better use for whisky. [Aside] I like to have this battle of wits with the Chairman. He knows his business."

Khrushchev [manifesting a lack of interest in a data processing machine that answers questions about the United States]: "I have heard of your engineers. I am

well aware of what they can do. You know for launching our missiles we need lots of calculating machines.”

[. . .]

Khrushchev: “The Americans have created their own image of the Soviet man and think he is as you want him to be. But he is not as you think. You think the Russian people will be dumbfounded to see these things, but the fact is that newly built Russian houses have all this equipment right now. Moreover, all you have to do to get a house is to be born in the Soviet Union. You are entitled to housing. I was born in the Soviet Union. So I have a right to a house. In America, if you don’t have a dollar—you have the right to choose between sleeping in a house or on the pavement. Yet you say that we are slaves of communism.”

Nixon: “I appreciate that you are very articulate and energetic.”

Khrushchev: “Energetic is not the same as wise.”

Nixon: “If you were in our Senate, we would call you a filibusterer. You do all the talking and don’t let anyone else talk. To us, diversity, the right to choose, the fact that we have 1,000 builders building 1,000 different houses, is the most important thing. We don’t have one decision made at the top by one government official. This is the difference.”

Khrushchev: “On political problems we will never agree with you. For instance Mikoyan likes very peppery soup. I do not. But this does not mean that we do not get along.”

Nixon: “You can learn from us and we can learn from you. There must be a free exchange. Let the people choose the kind of house, the kind of soup, the kind of ideas they want.”

Mr. Khrushchev shifted the talk back to washing machines.

Nixon: “We have many different manufacturers and many different kinds of washing machines so that the housewives have a choice.”

Khrushchev [noting Nixon gazing admiringly at young women modeling bathing suits and sports clothes]: “You are for the girls too.”

Nixon [indicating a floor sweeper that works by itself and other appliances]: “You don’t need a wife.”

Khrushchev chuckled.

Nixon: “We do not claim to astonish the Russian people. We hope to show our diversity and our right to choose. We do not wish to have decisions made at the top by government officials who say that all homes should be built in the same way. Would it not be better to compete in the relative merits of washing machines than in the strength of rockets. Is this the kind of competition you want?”

Khrushchev: “Yes that’s the kind of competition we want. But your generals say: ‘Let’s compete in rockets. We are strong and we can beat you.’ But in this respect we can also show you something.”

Nixon: “To me you are strong and we are strong. In some ways, you are stronger than we are. In others, we are stronger. We are both strong not only from the standpoint of weapons but from the standpoint of will and spirit. Neither should use that strength to put the other in a position where he in effect has an ultimatum. In this day and age that misses the point. With modern weapons it does not make any difference if war comes. We both have had it.”

Khrushchev: “For the fourth time I have to say I cannot recognize my friend Mr. Nixon. If all Americans agree with you then who don’t we agree [with]? This is what we want.”

Nixon: “Anyone who believes the American Government does not reflect the people is not an accurate observer of the American scene. I hope the Prime Minister understands all the implications of what I have just said. Whether you place either one of the powerful nations or any other in a position so that they have no choice but to accept dictation or fight, then you are playing with the most destructive force in the world.

"This is very important in the present world context. It is very dangerous. When we sit down at a conference table it cannot all be one way. One side cannot put an ultimatum to another. It is impossible. But I shall talk to you about this later."

Khrushchev: "Who is raising an ultimatum?"

Nixon: "We will discuss that later."

Khrushchev: "If you have raised the questions, why not go on with it now while the people are listening? We know something about politics, too. Let your correspondents compare watches and see who is filibustering. You put great emphasis on 'diktat' [dictation]. Our country has never been guided by 'diktat'. 'Diktat' is a foolish policy."

Nixon: "I am talking about it in the international sense."

Khrushchev: "It sounds to me like a threat. We, too, are giants. You want to threaten—we will answer threats with threats."

Nixon: "That's not my point. We will never engage in threats."

Khrushchev: "You wanted indirectly to threaten me. But we have the means to threaten too."

Nixon: "Who wants to threaten?"

Khrushchev: "You are talking about implications. I have not been. We have the means at our disposal. Ours are better than yours. It is you who want to compete. Da Da Da."

Nixon: "We are well aware of that. To me who is best is not material."

Khrushchev: "You raised the point. We want peace and friendship with all nations, especially with America."

Nixon: "We want peace too and I believe that you do also."

Khrushchev: "Yes, I believe that."

Nixon: "I see that you want to build a good life. But I don't think that the cause of peace is helped by reminders that you have greater strength than us because that is a threat too."

Khrushchev: "I was answering your words. You challenged me. Let's argue fairly."

Nixon: "My point was that in today's world it is immaterial which of the two great countries at any particular moment has the advantage. In war, these advantages are illusory. Can we agree on that?"

Khrushchev: "Not quite. Let's not beat around the bush."

Nixon: "I like the way he talks."

Khrushchev: "We want to liquidate all bases from foreign lands. Until that happens, we will speak different languages. One who is for putting an end to bases on foreign lands is for peace. One who is against it is for war. We have liquidated our forces and offered to make a peace treaty and eliminate the point of friction in Berlin. Until we settle that question, we will talk different languages."

Nixon: "Do you think it can be settled at Geneva?"

Khrushchev: "If we considered it otherwise, we would not have incurred the expense of sending our foreign minister to Geneva. Gromyko [foreign minister Andrei A. Gromyko] is not an idler. He is a very good man."

Nixon: "We have great respect for Mr. Gromyko. Some people say he looks like me. I think he is better looking. I hope it [the Geneva conference] will be successful."

Khrushchev: "It does not depend on us."

Nixon: "It takes two to make an agreement. You cannot have it all your own way."

Khrushchev: "These are questions that have the same aim. To put an end to the vestiges of war, to make a peace treaty with Germany—that is what we want. It is

very bad that we quarrel over the question of war and peace.”

Nixon: “There is no question but that your people and you want the Government of the United States being for peace—anyone who thinks that it is not for peace is not an accurate observer of America. In order to have peace, Mr. Prime Minister, even in an argument between friends, there must be sitting down around a round table. There must be discussion. Each side must find areas where it looks at the other’s point of view. The world looks to you today with regard to Geneva. I believe it would be a grave mistake and a blow to peace if it were allowed to fail.”

Khrushchev: “That is our understanding as well.”

Nixon: “So this is something. The present position is stalemate. Ways must be found to discuss it.”

Khrushchev: “The two sides must seek ways of agreement.”

In the evening, after formal speeches, Mr. Khrushchev and Mr. Nixon, in departing, stopped by a table laden with glasses of wine, Mr. Khrushchev proposed a toast to “elimination of all military bases in foreign lands.” Mr. Nixon sidestepped, suggested that they drink to peace instead.

Khrushchev: “We stand for peace and elimination of bases. Those are our words and they do not conflict with our deeds. If you are not willing to eliminate bases—then I won’t drink this toast.”

Nixon: “I don’t like this wine.”

Khrushchev: “I like this wine but not the policy.”

Nixon: “I have always heard that the Prime Minister is a vigorous defender of his policy, not only officially but unofficially.”

Khrushchev: “I defend the real policy, which is to assure peace. How can peace be assured when we are surrounded by military bases?”

Nixon: “We will talk about that later. Let’s drink to talking—as long as we are talking we are not fighting.”

Khrushchev [indicating a waitress]: “Let’s drink to the ladies!”

Nixon: “We can all drink to the ladies.”

A Waiter: “A hundred years of life to Mr. Khrushchev.”

Nixon: “I will drink to that. We may disagree but we want you to be in good health.”

Khrushchev: “We accept your hundred years’ proposal. But when I reach 99 we will discuss it further—why should we be in haste?”

71. Nikita Khrushchev: “On Peaceful Coexistence,” October 1959

Introduction

From 1955 onward, Soviet General Secretary Nikita Khrushchev, who succeeded the far less conciliatory and suspicious Josef Stalin after the latter’s death in 1953, frequently proclaimed his belief in peaceful coexistence with the Western powers. This did not imply that he thought communism and capitalism would both endure indefinitely. An orthodox Marxist since his teens, Khrushchev believed that internal weaknesses within capitalist states would lead them to collapse of their own volition, without any outside encouragement from the Soviet Union or other communist states. One advantage, from his perspective, was that this outlook left the Soviet Union free to divert its attention from military spending to the improvement of agriculture and the provision of more consumer goods for ordinary Russians. Khrushchev’s new approach by no means eliminated all international tensions. He

remained quite willing to use force to maintain Soviet control of its East European satellites, as he did when Soviet troops intervened to restore order in East Berlin in 1953 and Hungary in 1956. He was also prepared to provoke international crises, including a protracted dispute over the status and control of West Berlin that lasted from 1958 until the construction of the Berlin Wall in 1962. As he prepared to visit the United States in September 1959, a trip that he hoped might result in a treaty of peace and friendship with the United States and the expansion of bilateral trade between the two countries, Khrushchev contributed an article, “On Peaceful Coexistence,” to *Foreign Affairs*, the premier and highly prestigious U.S. journal of international relations. He suggested that the only alternative to peaceful coexistence was full-scale thermonuclear war, which both great powers clearly had an interest in avoiding, and urged that both powers renounce war as a means of settling international disputes. He contended that peaceful coexistence would allow the two rival economic and ideological systems of communism and capitalism to compete as to which could best satisfy human needs, and he reaffirmed his belief that ultimately communism would prove superior to and vanquish capitalism. Khrushchev put forward several specific demands, asking the West to recognize the permanence of socialist systems wherever these existed, end all political and economic discrimination against the Soviet Union and other communist powers, and accept Soviet proposals on the status of Berlin and Germany that would have effectively left West Berlin under East German control. American officials had made it clear that if they had no other alternative, they would use nuclear weapons to defend the status quo resulting from the Potsdam Agreements, whereby West Berlin’s independent status ultimately rested on its continuing postwar occupation by the United States, Britain, and France. In several public addresses during his visit to the United States, Khrushchev further affirmed his desire for peace and reiterated his belief that nuclear war had become so devastating that it was unthinkable. His embrace of peaceful coexistence helped to alleviate Soviet-Western tensions but was also a factor in causing a major breach between the Soviet Union and the Communist People’s Republic of China (PRC) from the late 1950s onward. PRC leader Mao Zedong, who saw himself as a preeminent communist theoretician, believed in continuous revolution and publicly claimed that Khrushchev’s efforts to assuage Western fears represented an unacceptable betrayal of communist ideological purity.

Primary Source

I have been told that the question of peaceful coexistence of states with different social systems is uppermost today in the minds of many Americans—and not only Americans. The question of coexistence, particularly in our day, interests literally every man and woman on the globe.

We all of us well know that tremendous changes have taken place in the world. Gone, indeed, are the days when it took weeks to cross the ocean from one continent to the other or when a trip from Europe to America, or from Asia to Africa, seemed a very complicated undertaking. The progress of modern technology has reduced our planet to a rather small place; it has even become, in this sense, quite congested. And if in our daily life it is a matter of considerable importance to establish normal relations with our neighbors in a densely inhabited settlement, this is so much the more necessary in the relations between states, in particular states belonging to different social systems.

You may like your neighbor or dislike him. You are not obliged to be friends with him or visit him. But you live side by side, and what can you do if neither you nor he has any desire to quit the old home and move to another town? All the more so in relations between states. It would be unreasonable to assume that you can make it so hot for your undesirable neighbor that he will decide to move to Mars or Venus. And vice versa, of course.

What, then, remains to be done? There may be two ways out: either war—and war in the rocket and H-bomb age is fraught with the most dire consequences for all nations—or peaceful coexistence. Whether you like your neighbor or not, nothing can be done about it, you have to find some way of getting on with him, for you both live on one and the same planet.

But the very concept of peaceful coexistence, it is said, by its alleged complexity frightens certain people who have become unaccustomed to trusting their neighbors and who see a double bottom in each suitcase. People

of this kind, on hearing the word “coexistence,” begin to play around with it in one way and another, sizing it up and applying various yardsticks to it. Isn’t it a fraud? Isn’t it a trap? Does not coexistence signify the division of the world into areas separated by high fences, which do not communicate with each other? And what is going to happen behind those fences?

The more such questions are piled up artificially by the cold-war mongers, the more difficult it is for the ordinary man to make head or tail of them. It would therefore be timely to rid the essence of this question of all superfluous elements and to attempt to look soberly at the most pressing problem of our day—the problem of peaceful competition.

[. . .]

What, then, is the policy of peaceful coexistence?

In its simplest expression it signifies the repudiation of war as a means of solving controversial issues. However, this does not cover the entire concept of peaceful coexistence. Apart from the commitment to non-aggression, it also presupposes an obligation on the part of all states to desist from violating each other’s territorial integrity and sovereignty in any form and under any pretext whatsoever. The principle of peaceful coexistence signifies a renunciation of interference in the internal affairs of other countries with the object of altering their system of government or mode of life or for any other motives. The doctrine of peaceful coexistence also presupposes that political and economic relations between countries are to be based upon complete equality of the parties concerned, and on mutual benefit.

It is often said in the West that peaceful coexistence is nothing else than a tactical method of the socialist states. There is not a grain of truth in such allegations. Our desire for peace and peaceful coexistence is not conditioned by any time-serving or tactical considerations. It springs from the very nature of socialist society in which there are no classes or social groups interested in profiting by war or seizing and enslaving other people’s territories. The Soviet Union and the other socialist countries, thanks to their socialist system, have

an unlimited home market and for this reason they have no need to pursue an expansionist policy of conquest and an effort to subordinate other countries to their influence.

It is the people who determine the destinies of the socialist states. The socialist states are ruled by the working people themselves, the workers and peasants, the people who themselves create all the material and spiritual values of society. And people of labor cannot want war. For to them war spells grief and tears, death, devastation and misery. Ordinary people have no need for war.

Contrary to what certain propagandists hostile to us say, the coexistence of states with different social systems does not mean that they will only fence themselves off from one another by a high wall and undertake the mutual obligation not to throw stones over the wall or pour dirt upon each other. No! Peaceful coexistence does not mean merely living side by side in the absence of war but with the constantly remaining threat of its breaking out in the future. *Peaceful coexistence can and should develop into peaceful competition for the purpose of satisfying man’s needs in the best possible way.*

We say to the leaders of the capitalist states: Let us try out in practice whose system is better, let us compete without war. This is much better than competing in who will produce more arms and who will smash whom. We stand and always will stand for such competition as will help to raise the well-being of the people to a higher level.

The principle of peaceful competition does not at all demand that one or another state abandon the system and ideology adopted by it. It goes without saying that the acceptance of this principle cannot lead to the immediate end of disputes and contradictions which are inevitable between countries adhering to different social systems. But the main thing is ensured: the states which decided to adopt the path of peaceful coexistence repudiate the use of force in any form and agree on a peaceful settlement of possible disputes and conflicts, bearing in mind the mutual interests of the parties concerned. In our age of the H-bomb and atomic techniques this is the main thing of interest to every man.

[. . .]

The Communist Party of the Soviet Union at its Twentieth Congress made it perfectly clear and obvious that the allegations that the Soviet Union intends to overthrow capitalism in other countries by means of “exporting” revolution are absolutely unfounded. I cannot refrain from reminding you of my words at the Twentieth Congress: “It goes without saying that among us Communists there are no adherents of capitalism. But this does not mean that we have interfered or plan to interfere in the internal affairs of countries where capitalism still exists. Romain Rolland was right when he said that ‘freedom is not brought in from abroad in baggage trains like Bourbons.’ It is ridiculous to think that revolutions are made to order.”

We Communists believe that the idea of Communism will ultimately be victorious throughout the world, just as it has been victorious in our country, in China and in many other states. Many readers of FOREIGN AFFAIRS will probably disagree with us. Perhaps they think that the idea of capitalism will ultimately triumph. It is their right to think so. We may argue, we may disagree with one another. *The main thing is to keep to the positions of ideological struggle, without resorting to arms in order to prove that one is right.* The point is that with military techniques what they are today, there are no inaccessible places in the world. Should a world war break out, no country will be able to shut itself off from a crushing blow.

We believe that ultimately that system will be victorious on the globe which will offer the nations greater opportunities for improving their material and spiritual life. It is precisely socialism that creates unprecedentedly great prospects for the inexhaustible creative enthusiasm of the masses, for a genuine flourishing of science and culture, for the realization of man’s dream of a happy life, a life without destitute and unemployed people, of a happy childhood and tranquil old age, of the realization of the most audacious and ambitious human projects, of man’s right to create in a truly free manner in the interests of the people.

But when we say that in the competition between the two systems, the capitalist and the socialist, our system

will win, this does not mean, of course, that we shall achieve victory by interfering in the internal affairs of the capitalist countries. Our confidence in the victory of Communism is of a different kind. It is based on a knowledge of the laws governing the development of society. Just as in its time capitalism, as the more progressive system, took the place of feudalism, so will capitalism be inevitably superseded by Communism—the more progressive and more equitable social system. We are confident of the victory of the socialist system because it is a more progressive system than the capitalist system. Soviet power has been in existence for only a little more than 40 years, and during these years we have gone through two of the worst wars, repulsing the attacks of enemies who attempted to strangle us. Capitalism in the United States has been in existence for more than a century and a half, and the history of the United States has developed in such a way that never once have enemies landed on American territory.

Yet the dynamics of the development of the U.S.S.R. and the U.S.A. are such that the 42-year-old land of the Soviets is already able to challenge the 150-year-old capitalist state to economic competition; and the most farsighted American leaders are admitting that the Soviet Union is fast catching up with the United States and will ultimately outstrip it. Watching the progress of this competition, anyone can judge which is the better system, and we believe that in the long run all the peoples will embark on the path of struggle for the building of socialist societies.

[. . .]

So we come back to what we started with. In our day there are only two ways: peaceful coexistence or the most destructive war in history. There is no third choice.

The problem of peaceful coexistence between states with different social systems has become particularly pressing in view of the fact that since the Second World War the development of relations between states has entered a new stage, that now we have approached a period in the life of mankind when there is a real chance of excluding war once and for all from the life of society. The new alignment of international forces which has developed since the Second World War offers

ground for the assertion that a new world war is no longer a fatal inevitability, that it can be averted.

First, today not only all the socialist states, but many countries in Asia and Africa which have embarked upon the road of independent national statehood, and many other states outside the aggressive military groupings, are actively fighting for peace.

Secondly, the peace policy enjoys the powerful "support of the broad masses of the people all over the world.

Thirdly, the peaceful socialist states are in possession of very potent material means, which cannot but have a deterring effect upon the aggressors.

[. . .]

What does the future hold in store for us?

As a result of the fulfillment and overfulfillment of the present Seven Year Plan of economic development of the U.S.S.R., as well as of the plans of the other socialist countries of Europe and Asia, the countries of the socialist system will then account for a little more than half of the world output. Their economic power will grow immeasurably, and this will help to an even greater extent to consolidate world peace: the material might and moral influence of the peace-loving states will be so great that any bellicose militarist will have to think ten times before risking going to war. It is the good fortune of mankind that a community of socialist states which are not interested in new war has been set up, because to build socialism and Communism the socialist countries need peace. Today the community of socialist countries which has sprung up on the basis of complete equality holds such a position in the development of all branches of economy, science and culture as to be able to exert an influence towards preventing the outbreak of new world wars.

Hence we are already in a practical sense near to that stage in the life of humanity when nothing will prevent people from devoting themselves wholly to peaceful labor, when war will be wholly excluded from the life of society.

But if we say that there is no fatal inevitability of war at present, this by no means signifies that we can rest on our laurels, fold our arms and bask in the sun in the hope that an end has been put to wars once and for all. Those in the West who believe that war is to their benefit have not yet abandoned their schemes. They control considerable material forces, as well as military and political levers, and there is no guarantee that some tragic day they will not attempt to set them in motion. That is why it is so much the more necessary to continue an active struggle in order that the policy of peaceful coexistence may triumph throughout the world not in words but in deeds.

Of much importance, of course, is the fact that this policy has in our day merited not only the widest moral approval but also international legal recognition. The countries of the socialist camp in their relations with the capitalist states are guided precisely by this policy. The principles of peaceful coexistence are reflected in the decisions of the Bandung Conference of Asian and African countries. Furthermore, many countries of Europe, Asia and Africa have solemnly proclaimed this principle as the basis of their foreign policy. Finally, the idea of peaceful coexistence has found unanimous support in the decisions of the twelfth and thirteenth sessions of the United Nations General Assembly.

[. . .]

What, then, is preventing us from making the principles of peaceful coexistence an unshakable international standard and daily practice in the relations between the West and East?

Of course, different answers may be given to this question. But in order to be frank to the end, we should also say the following: *It is necessary that everybody should understand the irrevocable fact that the historic process is irreversible.* It is impossible to bring back yesterday. It is high time to understand that the world of the twentieth century is not the world of the nineteenth century, that two diametrically opposed social and economic systems exist in the world today side by side, and that the socialist system, in spite of all the attacks upon it, has grown so strong, has developed into such a force, as to make any return to the past impossible.

[. .]

We have always considered the Americans realistic people. All the more are we astonished to find that leading representatives of the United States still number in their midst individuals who insist on their own way in the face of the obvious failure of the policy of “rolling back” Communism. But is it not high time to take a sober view of things and to draw conclusions from the lessons of the last 15 years? Is it not yet clear to everybody that consistent adherence to the policy of peaceful coexistence would make it possible to improve the international situation, to bring about a drastic cut in military expenditures and to release vast material resources for wiser purposes?

[. .]

It is readily seen that the policy of peaceful coexistence receives a firm foundation only with increase in extensive and absolutely unrestricted international trade. It can be said without fear of exaggeration that there is no good basis for improvement of relations between our countries other than development of international trade.

If the principle of peaceful coexistence of states is to be adhered to, not in words, but in deeds, it is perfectly obvious that no ideological differences should be an obstacle to the development and extension of mutually advantageous economic contacts, to the exchange of everything produced by human genius in the sphere of peaceful branches of material production.

[. .]

Peaceful coexistence is the only way which is in keeping with the interests of all nations. To reject it would mean under existing conditions to doom the whole world to a terrible and destructive war at a time when it is fully possible to avoid it.

Is it possible that when mankind has advanced to a plane where it has proved capable of the greatest discoveries and of making its first steps into outer space, it should not be able to use the colossal achievements of its genius for the establishment of a stable peace, for

the good of man, rather than for the preparation of another war and for the destruction of all that has been created by its labor over many millennia? Reason refuses to believe this. It protests.

The Soviet people have stated and declare again that they do not want war. If the Soviet Union and the countries friendly to it are not attacked, we shall never use any weapons either against the United States or against any other countries. We do not want any horrors of war, destruction, suffering and death for ourselves or for any other peoples. We say this not because we fear anyone. Together with our friends, we are united and stronger than ever. But precisely because of that do we say that war can and should be prevented. Precisely because we want to rid mankind of war, we urge the Western powers to peaceful and lofty competition. We say to all: Let us prove to each other the advantages of one's own system not with fists, not by war, but by peaceful economic competition in conditions of peaceful coexistence.

As for the social system in some state or other, that is the domestic affair of the people of each country. We always have stood and we stand today for non-interference in the internal affairs of other countries. We have always abided, and we shall abide, by these positions. The question, for example, what system will exist in the United States or in other capitalist countries cannot be decided by other peoples or states. This question can and will be decided only by the American people themselves, only by the people of each country.

The existence of the Soviet Union and of the other socialist countries is a real fact. It is also a real fact that the United States of America and the other capitalist countries live in different social conditions, in the conditions of capitalism. Then let us recognize this real situation and proceed from it in order not to go against reality, against life itself. Let us not try to change this situation by interferences from without, by means of war on the part of some states against other states.

I repeat, there is only one way to peace, one way out of the existing tension: peaceful coexistence.

72. Harold Macmillan: “Winds of Change,” Cape Town, South Africa, 3 February 1960

Introduction

Decolonization of the Western empires was a major development of the Cold War period, with both the Soviet Union and the United States competing for the loyalty of these newly independent nations. European states often found that maintaining their colonial position, especially when faced with strong and often violent nationalist opposition movements, was too burdensome and expensive. This was particularly the case since, after World War II, the forcible imposition of one nation's rule over another, especially when the colonizers were generally white and the colonized were Asians or Africans, became increasingly unacceptable on the international scene. During the 1950s, the majority of European colonies in Asia became independent countries. In the 1960s, the focus switched to the continent of Africa, divided among the European nations during the late nineteenth century and still largely under colonial rule at the beginning of the decade. Conservative British Prime Minister Harold Macmillan gave great impetus to the process when, at the end of a lengthy tour of Africa, he addressed the South African houses of parliament in February 1960, famously stating that a nationalist “wind of change” was blowing throughout the continent, as the various African colonies demanded their independence. He also took the opportunity to criticize, albeit in relatively tactful terms, the racial segregationist policies known as apartheid introduced in South Africa since World War II, and his remarks provoked a bitter response from South African Prime Minister Henrik Verwoerd. Macmillan's speech inaugurated a decade during which most of Britain's African colonies, together with those ruled by other Western powers, including France and Belgium, were granted independence and established governments dominated by local Africans, although in Rhodesia (present-day Zimbabwe) resentful white settlers unilaterally declared independence in 1965 and black majority rule was not introduced until 1980. Despite Macmillan's pleas for greater racial harmony in South Africa, for several more decades that country followed racially repressive and segregationist policies, which were enforced with considerable violence. Apartheid was not dismantled until 1992, and a black majority government only came into existence in 1994.

Primary Source

[. . .]

As I have traveled through the Union I have found everywhere, as I expected, a deep preoccupation with what is happening in the rest of the African continent. I understand and sympathize with your interest in these events, and your anxiety about them.

Ever since the break-up of the Roman Empire one of the constant facts of political life in Europe has been the emergence of independent nations. They have come into existence over the centuries in different shapes with different forms of government. But all have been inspired with a keen feeling of nationalism, which has grown as nations have grown.

In the twentieth century, and especially since the end of the war, the processes which gave birth to the nation-states of Europe have been repeated all over

the world. We have seen the awakening of national consciousness in peoples who have for centuries lived in dependence on some other power.

Fifteen years ago this movement spread through Asia. Many countries there, of different races and civilizations, pressed their claim to an independent national life.

Today the same thing is happening in Africa. The most striking of all the impressions I have formed since I left London a month ago is of the strength of different places. It may take different forms but it is happening everywhere. The wind of change is blowing through the continent.

Whether we like it or not, this growth of national consciousness is a political fact. We must all accept it as a fact. Our national policies must take account of it.

Of course, you understand this as well as anyone. You are sprung from Europe, the home of nationalism. And here in Africa you have yourselves created a full nation—a new nation. Indeed, in the history of our times yours will be recorded as the first of the African nationalisms.

And this tide of national consciousness which is now rising in Africa is a fact for which you and we and the other nations of the western world are ultimately responsible.

For its causes are to be found in the achievement of western civilization in pushing forward the frontiers of knowledge, applying science in the service of human needs, expanding food production, speeding and multiplying means of communication, and, above all, spreading education.

As I have said, the growth of national consciousness in Africa is a political fact and we must accept it as such. I sincerely believe that if we cannot do so, we may imperil the precarious balance of east and west on which the peace of the world depends.

The world today is divided into three great groups. First, there are what we call the western Powers. You in South Africa and we in Britain belong to this group, together with our friends and allies in other parts of the Commonwealth, in the United States of America, and in Europe.

Secondly, there are the Communists—Russia and her satellites in Europe and China, whose population will rise by 1970 to the staggering total of 800 million. Thirdly, there are those parts of the world whose people are at present uncommitted either to Communism or to our western ideas. In this context we think first of Asia and of Africa.

As I see it, the great issue in this second half of the twentieth century is whether the uncommitted peoples of Asia and Africa will swing to the east or to the west. Will they be drawn into the Communist camp? Or will the great experiments in self-government that are now being made in Asia and Africa, especially within the Commonwealth, prove so successful, and by their ex-

ample so compelling, that the balance will come down in favour of freedom and order and justice?

The struggle is joined and it is a struggle for the minds of men. What is now on trial is much more than our military strength or our diplomatic and administrative skill. It is our way of life.

The uncommitted nations want to see before they choose. What can we show them to help them choose aright? Each of the independent members of the Commonwealth must answer that question for itself.

It is the basic principle for our modern Commonwealth that we respect each other's sovereignty in matters of internal policy. At the same time, we must recognize that, today, the internal policies of one nation may have effects outside it. We may sometimes be tempted to say to each other, "Mind your own business." But in these days I would myself expand the old saying so that it runs, "Mind your own business, but mind how it affects my business, too."

Let me be very frank with you, my friends. What Governments and Parliaments in the United Kingdom have done since the war in according independence to India, Pakistan, Ceylon, Malaya, and Ghana, and what they will do for Nigeria and the other countries now nearing independence—all this, though we take full and sole responsibility for it, we do in the belief that it is the only way to establish the future of the Commonwealth and of the free world on sound foundations.

All this, of course, is also of deep and close concern to you, for nothing we do in this small world can be done in a corner or remain hidden. What we do today in West, Central, and East Africa becomes known to everyone in the Union, whatever his language, colour, or tradition.

Let me assure you in all friendliness that we are well aware of this, and that we have acted and will act with full knowledge of the responsibility we have to you and to all our friends. Nevertheless, I am sure you will agree that in our own areas of responsibility we must each do what we think right. What we think right derives from long experience, both of failure and success, in the management of our own affairs.

We have tried to learn and apply the lessons of both. Our judgment of right and wrong and of justice is rooted in the same soil as yours—in Christianity and in the rule of law as the basis of a free society.

This experience of our own explains why it has been our aim, in countries for which we have borne responsibility, not only to raise the material standards of living but to create a society which respects the right of individuals—a society in which men are given the opportunity to grow to their full stature, and that must in our view include the opportunity to have an increasing share in political power and responsibility; a society in which individual merit, and individual merit alone, is the criterion for man's advancement whether political or economic.

Finally, in countries inhabited by several different races, it has been our aim to find the means by which the community can become more of a community, and fellowship can be fostered between its various parts.

This problem is by no means confined to Africa, nor is it always the problem of the European minority. In Malaya, for instance, though there are Indian and European minorities, Malays and Chinese make up the great bulk of the population, and the Chinese are not much fewer in numbers than Malays. Yet these two peoples must learn to live together in harmony and unity, and the strength of Malaya as a nation will de-

pend on the different contributions which the two races can make.

The attitude of the United Kingdom Government towards this problem was clearly expressed by the Foreign Secretary, Mr. Selwyn Lloyd, speaking at the United Nations General Assembly on September 17, 1959. These are his words:—

“In those territories where different races or tribes live side by side, the task is to ensure that all the people may enjoy security and freedom and the chance to contribute as individuals to the progress and well being of these countries. We reject the idea of any inherent superiority of one race over another. Our policy therefore is non-racial. It offers a future in which Africans, Europeans, Asians, the peoples of the Pacific, and others with whom we are concerned, will all play their full part as citizens in the countries where they live and in which feelings of race will be submerged in loyalty to the new nations.”

I have thought you would wish me to state plainly and with full candour the policy for which we in Britain stand.

73. Soviet Statement on the U-2 Crisis, May 1960

Introduction

In May 1960 the Soviet capture of a U.S. U-2 spy plane on an espionage mission over Soviet territory provoked an international crisis and effectively aborted a major summit meeting between President Dwight D. Eisenhower and Soviet leader Nikita Khrushchev. On 1 May 1960 a Soviet missile battery shot down an American U-2 surveillance plane deep over Soviet territory, capturing the pilot, Francis Gary Powers, alive and obtaining his public confession that he had undertaken an espionage mission planned by the Central Intelligence Agency (CIA). Between 1956 and 1960 the United States used the light, jet-powered sailplane to make twenty to thirty high-altitude photographic reconnaissance flights along an arc that ran from Pakistan to Norway, violating Soviet airspace but providing vital information on the number, strength, and location of Soviet nuclear missiles and other weapons. Numerous other less-controversial missions were flown along the Soviet borders. Pilots, who could rejoin the American military without loss of seniority after their tour, were officially employed by Lockheed and were attached to a Weather Observation Squadron based in Turkey and making heavy use of bases in Pakistan. The United States initially denied any espionage, claiming that a meteorological observation flight had accidentally violated Soviet

airspace, but on 7 May Soviet authorities revealed that Powers was alive and had not only told his captors of his CIA affiliation but also provided numerous details of his espionage mission and the program of which it was part. Turkey, Pakistan, and Norway all protested publicly to the United States over the involvement of their facilities in the American surveillance program. Ignoring Soviet hints that he should disavow all knowledge of the operation, Eisenhower took full responsibility, arguing that failure to do so would suggest that as chief executive he was incompetent to control his own government. He declined to promise to cease all such flights or publicly apologize for them. The capture of Powers effectively derailed Eisenhower's hopes that before he left office in early 1961, the United States and the Soviet Union might conclude a nuclear test ban treaty and settle their ongoing dispute over West Berlin, which Khrushchev claimed should be entirely under East German control. In early 1960 the two superpowers and Britain progressed steadily toward acceptable treaty terms, expecting to finalize the agreement at a May 1960 Paris summit meeting between Eisenhower and Khrushchev. An atmosphere of acute hostility pervaded the summit, no progress was made toward the contemplated treaty, and Eisenhower left after two days. Even so, each side made certain conciliatory gestures. Khrushchev affirmed continuing Soviet support for peaceful co-existence and arms control negotiations, while Eisenhower stated that the espionage flights, although not formally abandoned, had been suspended and likewise reiterated his support for disarmament negotiations. Despite frequent crises and confrontations, in practice the two great powers had a mutual interest in communicating with each other and limiting the nuclear arms race.

Primary Source

A provocative act is known to have been committed recently with regard to the Soviet Union by the American Air Force. It consisted in the fact that on May 1 a United States military reconnaissance aircraft invaded the Soviet Union while executing a specific espionage mission to obtain information on military and industrial installations on the territory of the U.S.S.R. After the aggressive purpose of its flight became known, the aircraft was shot down by units of the Soviet rocket troops. Unfortunately, this was not the only case of aggressive and espionage actions by the United States Air Force against the Soviet Union.

Naturally, the Soviet Government was compelled to give appropriate qualification to these acts and show up their treacherous nature, which is incompatible with the elementary requirements of the maintenance of normal relations between states in time of peace, not to speak of its being in gross contradiction to the task of lessening international tension and creating the necessary conditions for the fruitful work of the summit conferences. This was done both in my speeches at the session of the Supreme Soviet of the U.S.S.R. and in a special note of protest sent to the United States Government.

At first, the United States State Department launched the ridiculous version that the American plane had vio-

lated the borders of the U.S.S.R. by accident and had no espionage or sabotage assignments. When irrefutable facts clearly proved the falsity of this version, the United States State Department on May 7, and then the Secretary of State on May 9, stated on behalf of the United States Government that American aircraft made incursions into the Soviet Union with military espionage aims in accordance with a program endorsed by the United States Government and by the President, personally.

Two days later, President Eisenhower himself confirmed that execution of flights of American aircraft over the territory of the Soviet Union had been and remained the calculated policy of the United States. The same was declared by the United States Government in a note to the Soviet Government on May 12. Thereby the United States Government is crudely flouting the universally accepted standards of international law and the lofty principles of the United Nations Charter, under which stands the signature of the United States of America also.

The Soviet Government and the entire people of the Soviet Union met these declarations of leading statesmen of the U.S.A. with indignation, as did every honest man and woman in the world who displays concern for the destinies of peace.

[. . .]

The Soviet Government reserves the right in all such cases to take the appropriate retaliatory measures against those who violate the state sovereignty of the U.S.S.R. and engage in such espionage and sabotage regarding the Soviet Union. The U.S.S.R. Government reiterates that, with regard to those states that, by making their territory available for America military bases, become accomplices in aggressive actions against the U.S.S.R., the appropriate measures will also be taken, not excluding a blow against these bases.

In this connection it is impossible to ignore the statement by President Eisenhower to the effect that under the threat of a peace treaty with the German Democratic Republic he could not take part in the summit conference, though what he called a threat was merely the declaration by the Soviet Government of its firm resolve to do away with the vestiges of war in Europe and conclude a peace, and thus to bring the situation—particularly in West Berlin—in line with the requirements of life and the interests of insuring the peace and security of the European nations.

How then can the Soviet Government take part in negotiations under conditions of an actual threat emanating from the United States Government which declared that it would continue to violate the U.S.S.R. borders and that American aircraft had flown and would continue to fly over the Soviet Union's territory? The United States government has thereby declared its intention to continue unheard of and unprecedented actions directed against the sovereignty of the Soviet state, which constitutes a sacred and immutable principle in international relations.

[. . .]

It stands to reason that if the United States Government were to declare that in the future the United States will not violate the state borders of the U.S.S.R. with its aircraft, that it deplores the provocative actions undertaken in the past and will punish those directly guilty of such actions, which would assure the Soviet Union equal conditions with other powers, I, as head of the Soviet Government, would be ready to participate in the conference and exert all efforts to contribute to its success.

As a result of the provocative flights of American military aircraft and, above all, as a result of such provocative flights being declared national policy of the United States of America for the future in regard to the Socialist countries, new conditions have appeared in international relationships.

Naturally, under such conditions, we cannot work at the conference; we cannot because we see the positions from which it is intended to talk with us; under the threat of aggressive reconnaissance flights. Espionage flights are known to be undertaken with reconnaissance purposes with the object of starting a war. We, therefore, reject the conditions the United States of America is creating for us. We cannot participate in any negotiations and in the solution of even those questions which have already matured; we cannot because we see that the United States has no desire to reach a settlement.

It is considered to be a leader in the Western countries. Therefore, the conference would at present be a useless waste of time and a deception of the public opinion of all countries. I repeat, we cannot under the obtaining situation take part in the negotiations.

We want to participate in the talks only on an equal footing, with equal opportunities for both one and the other side.

We consider it necessary for the peoples of all the countries of the world to understand us correctly. The Soviet Union is not renouncing efforts to achieve agreement. And we are sure that reasonable agreements are possible, but, evidently, not at this but at another time.

For this, however, it is necessary first of all that the United States admits that the provocative policy it has declared by a policy of "unrestricted" flights over our country is to be condemned and that it rejects it and admits that it has committed aggression and admits that it regrets it.

[. . .]

The Soviet Union on its part, will not lessen its effort to reach an agreement. I think that public opinion will

correctly understand our position, will understand that we were deprived of the possibility to participate in these negotiations.

However, we firmly believe in the necessity of peaceful coexistence because to lose faith in peaceful coexistence would mean to doom mankind to war, would mean to agree with the inevitability of wars, and under the circumstances it is known what disasters would be brought by a war to all nations on our planet.

I wish to address the people of the United States of America. I was in the U.S.A. and met there with various sections of the American people and I am deeply convinced that all the strata of the American people do not want war. An exception constitutes but a small frantic group in the Pentagon and, supporting it, militarist quarters that benefit from the armaments race, gaining huge profits, which disregard the interests of the American people and in general the interests of the peoples of all countries, and which pursue an adventurous policy.

[. . .]

We regret that this meeting has been torpedoed by the reactionary circles of the United States of America by provocative flights of American military planes over the Soviet Union.

We regret that this meeting has not brought about the results expected by all nations of the world.

Let the disgrace and responsibility for this rest with those who have proclaimed a bandit polity toward the Soviet Union.

[. . .]

The Soviet Government states that on its part it will continue to do its utmost to facilitate the relaxation of international tension, to facilitate the solution of problems that still divide us today. In that we shall be guided by the interests of strengthening the great cause of peace on the basis of peaceful coexistence of states with different social systems.

74. Dwight D. Eisenhower: U-2 Incident Speech, 25 May 1960

Introduction

On 1 May 1960, the Soviet Union shot down an American U-2 reconnaissance plane flying at high altitude over Soviet territory. Although U.S. officials initially tried to pass the mission off as a weather flight, they were later compelled to publicly admit that the pilot, Francis Gary Powers, had been spying on the Soviet Union. Two weeks later, U.S. President Dwight D. Eisenhower and Soviet Premier Nikita Khrushchev met in Paris for a previously arranged summit meeting. The U-2 incident greatly heightened tensions at the meeting, however, especially as Eisenhower refused to apologize for the U.S. spying missions and even admitted that they had been going on for more than four years. Khrushchev ended the talks abruptly and left Paris in a rage. Back in the United States, on 25 May 1960 Eisenhower delivered this address to the nation regarding the entire episode.

Primary Source

My Fellow Americans:

Tonight I want to talk with you about the remarkable events last week in Paris, and their meaning to our future.

[. . .]

Our safety, and that of the free world, demand, of course, effective systems for gathering information about the military capabilities of other powerful nations, especially those that make a fetish of secrecy. This involves many techniques and methods. In these times of vast military machines and nuclear-tipped missiles, the ferreting out of this information is indispensable to free-world security.

This has long been one of my most serious preoccupations. It is part of my grave responsibility within the overall problem of protecting the American people, to guard ourselves and our allies against surprise attack.

During the period leading up to World War II, we learned from bitter experience the imperative necessity of a continuous gathering of intelligence information, the maintenance of military communications and contact, and alertness of command.

An additional word seems appropriate about this matter of communications and command. While the secretary of defense and I were in Paris, we were, of course, away from our normal command posts. He recommended that under the circumstances we test the continuing readiness of our military communications. I personally approved. Such tests are valuable and will be frequently repeated in the future.

Moreover, as President, charged by the Constitution with the conduct of America's foreign relations, and as commander in chief, charged with the direction of the operations and activities of our armed forces and their supporting services, I take full responsibility for approving all the various programs undertaken by our government to secure and evaluate military intelligence.

It was in the prosecution of one of these intelligence programs that the widely publicized U-2 incident occurred.

Aerial photography has been one of many methods we have used to keep ourselves and the free world abreast of major Soviet military developments. The usefulness of this work has been well established through four years of effort. The Soviets were well aware of it. Chairman Khrushchev has stated that he became aware of these flights several years ago. Only last week, in this Paris press conference, Chairman Khrushchev confirmed that he knew of these flights when he visited the United States last September.

Incidentally, this raises the natural question—why all the furor concerning one particular flight? He did not, when in America last September, charge that these flights were any threat to Soviet safety. He did not

then see any reason to refuse to confer with American representatives. This he did only about the flight that unfortunately failed, on May 1, far inside Russia.

Now, two questions have been raised about this particular flight: first, as to its timing, considering the imminence of the summit meeting; second, our initial statements when we learned the flight had failed.

As to the timing, the question was really whether to halt the program and thus forgo the gathering of important information that was essential and that was likely to be unavailable at a later date. The decision was that the program should not be halted. The plain truth is this: When a nation needs intelligence activity, there is no time when vigilance can be relaxed. Incidentally, from Pearl Harbor we learned that even negotiation itself can be used to conceal preparations for a surprise attack.

Next, as to our government's initial statement about the flight, this was issued to protect the pilot, his mission, and our intelligence processes, at a time when the true facts were still undetermined.

Our first information about the failure of this mission did not disclose whether the pilot was still alive, was trying to escape, was avoiding interrogation, or whether both plane and pilot had been destroyed. Protection of our intelligence system and the pilot, and concealment of the plane's mission, seemed imperative. It must be remembered that over a long period these flights had given us information of the greatest importance to the nation's security. In fact, their success has been nothing short of remarkable.

For these reasons, what is known in intelligence circles as a "covering statement" was issued. It was issued on assumptions that were later proved incorrect. Consequently, when later the status of the pilot was definitely established and there was no further possibility of avoiding exposure of the project, the factual details were set forth.

I then made two facts clear to the public: First, our program of aerial reconnaissance had been undertaken with my approval; second, this government is compelled

to keep abreast, by one means or another, of military activities of the Soviets, just as their government has for years engaged in espionage activities in our country and throughout the world. Our necessity to proceed with such activities was also asserted by our secretary of state, who, however, had been careful—as was I—not to say that these particular flights would be continued.

In fact, before leaving Washington I had directed that these U-2 flights be stopped. Clearly their usefulness was impaired. Moreover, continuing this particular activity in these new circumstances could not but complicate the relations of certain of our allies with the Soviets. And of course, new techniques, other than aircraft, are constantly being developed.

Now, I wanted no public announcement of this decision until I could personally disclose it at the summit meeting in conjunction with certain proposals I had prepared for the conference.

At my first Paris meeting with Mr. Khrushchev, and before his tirade was made public, I informed him of this discontinuance and the character of the constructive proposals I planned to make. These contemplated the establishment of a system of aerial surveillance operated by the United Nations. The day before the first scheduled meeting, Mr. Khrushchev had advised President de Gaulle and Prime Minister Macmillan that he would make certain demands upon the United States as a precondition for beginning a summit conference. Although the United States was the only power against which he expressed his displeasure, he did not communicate this information to me. I was, of course, informed by our allies.

At the four-power meeting on Monday morning, he demanded of the United States four things: first, condemnation of U-2 flights as a method of espionage; second, assurance that they would not be continued; third, a public apology on behalf of the United States; and, fourth, punishment of all those who had any responsibility respecting this particular mission.

I replied by advising the Soviet leader that I had, during the previous week, stopped these flights and that they would not be resumed. I offered also to discuss the

matter with him in personal meetings, while the regular business of the summit might proceed. Obviously, I would not respond to his extreme demands. He knew, of course, by holding to those demands the Soviet Union was scuttling the summit conference.

In torpedoing the conference, Mr. Khrushchev claimed that he acted as the result of his own high moral indignation over alleged American acts of aggression. As I said earlier, he had known of these flights for a long time. It is apparent that the Soviets had decided even before the Soviet delegation left Moscow that my trip to the Soviet Union should be canceled and that nothing constructive from their viewpoint would come out of the summit conference.

In evaluating the results, however, I think we must not write the record all in red ink. There are several things to be written in the black. Perhaps the Soviet action has turned the clock back in some measure, but it should be noted that Mr. Khrushchev did not go beyond invective—a timeworn Soviet device to achieve an immediate objective, in this case, the wrecking of the conference.

On our side, at Paris, we demonstrated once again America's willingness, and that of her allies, always to go the extra mile in behalf of peace. Once again Soviet intransigence reminded us all of the unpredictability of despotic rule and the need for those who work for freedom to stand together in determination and in strength.

The conduct of our allies was magnificent. My colleagues and friends—President de Gaulle and Prime Minister Macmillan—stood sturdily with the American delegation in spite of persistent Soviet attempts to split the Western group. The NATO meeting after the Paris conference showed unprecedented unity and support for the alliance and for the position taken at the summit meeting. I salute our allies for us all.

And now, most importantly, what about the future?

All of us know that, whether started deliberately or accidentally, global war would leave civilization in a shambles. This is as true of the Soviet system as of all others. In a nuclear war there can be no victors—only

losers. Even despots understand this. Mr. Khrushchev stated last week that he well realizes that general nuclear war would bring catastrophe for both sides. Recognition of this mutual destructive capability is the basic reality of our present relations. Most assuredly, however, this does not mean that we shall ever give up trying to build a more sane and hopeful reality—a better foundation for our common relations.

To do this, here are the policies we must follow, and to these I am confident the great majority of our people, regardless of party, give their support:

First, we must keep up our strength, and hold it steady for the long pull—a strength not neglected in complacency nor overbuilt in hysteria. So doing, we can make it clear to everyone that there can be no gain in the use of pressure tactics or aggression against us and our allies.

Second, we must continue businesslike dealings with the Soviet leaders on outstanding issues, and improve the contacts between our own and the Soviet peoples, making clear that the path of reason and common sense is still open if the Soviets will but use it.

Third, to improve world conditions in which human freedom can flourish, we must continue to move ahead

with positive programs at home and abroad, in collaboration with free nations everywhere. In doing so, we shall continue to give our strong support to the United Nations and the great principles for which it stands.

Now as to the first of these purposes—our defenses are sound. They are tailored to the situation confronting us. Their adequacy has been my primary concern for these past seven years—indeed, throughout my adult life. In no respect have the composition and size of our forces been based on or affected by any Soviet blandishment. Nor will they be. We will continue to carry forward the great improvements already planned in these forces. They will be kept ready and under constant review. Any changes made necessary by technological advances or world events will be recommended at once.

This strength—by far the most potent on earth—is, I emphasize, for deterrent, defensive, and retaliatory purposes only without threat or aggressive intent toward anyone.

75. Nikita Khrushchev: Speech on Decolonization, 23 September 1960

Introduction

On 23 September 1960, Soviet Premier Nikita Khrushchev delivered a speech before the General Assembly of the United Nations (UN) that set forth the Soviet position on a variety of outstanding international issues. Khrushchev enthusiastically endorsed decolonization efforts around the globe, representing himself as the champion of freedom, liberty, and self-determination. In truth, he encouraged decolonization because he knew that it would undermine the power of Great Britain and France, both of which were in the process of dismantling large overseas empires. Most important, the Soviet Union saw the political instability that almost always followed decolonization as an opportunity to spread communism around the world. Many decolonizing and newly independent countries resented their former domination by Western powers, and such nationalist sentiments often inclined them to turn toward the Soviet Union for assistance. Within the UN itself, the growing numbers of independent Asian, African, and Middle Eastern states often functioned as an anti-Western voting bloc, enabling the Soviet Union to put pressure on its international opponents. Besides expressing his support for decolonization, Khrushchev also took the opportunity offered by his UN address to condemn overflights of the Soviet Union by American U-2 photographic spy planes, recalling how when Russian antiaircraft batteries downed one of these aircraft the previous May, he had

aborted his Paris summit meeting with President Dwight D. Eisenhower. Khrushchev also assailed the United States for its opposition to the new revolutionary regime of Fidel Castro in Cuba, charging that Cuba's economic backwardness was the product of decades of exploitation by American business. Predictably but with little hope of success, Khrushchev called for the reunification of both Germany and Korea on terms that would facilitate communist domination of such united states. He also suggested that the UN should be headed not by one secretary-general but by a three-man executive, one each from the capitalist, communist, and neutral blocs. Perhaps most significantly, the Soviet leader appealed for the resumption of disarmament negotiations, which had stalled the previous year. Although his proposals for the complete elimination of all means of delivering nuclear weapons were unlikely to appeal to the Western powers, the fact that he raised the subject was evidence of the fact that neither Soviet nor Western leaders could afford to ignore the enormously destructive power of such weapons but were effectively compelled to find some means of bringing this under control.

Primary Source

Our century is the century of the struggle for freedom, the century in which nations are liberating themselves from foreign domination. The peoples desire a worthwhile life and are fighting to secure it.

[. . .]

The peoples of all countries—workers, peasants, intellectuals and the bourgeoisie, excluding a small handful of militarists and monopolists—want not war but peace, and peace alone. And if, therefore, the peoples actively fight to tie the hands of the militarist and monopolist circles, peace can be ensured. . . .

No one can dispute the fact that the Soviet Union has been unsparing in its efforts to ensure the continuation of this welcome trend in the development of international relations. But the sinister forces which profit from the maintenance of international tension are clinging tenaciously to their positions. Though only a handful of individuals is involved, they are quite powerful and exert a strong influence on the policy of their respective States. A major effort is therefore required to break their resistance. As soon as the policy of causing international tension begins to yield tangible results, they immediately resort to extreme measures in order to ensure that the people should feel no relief; they strain every nerve to plunge the world back again and again into an atmosphere of gloom and to exacerbate international tension.

We saw a dangerous manifestation of the work of these forces last spring when the aircraft of one of the largest State Members of the United Nations, the United

States of America, treacherously invaded the air space of the Soviet Union and that of other States. What is more, the United States has elevated such violations of international law into a principle of deliberate State policy.

The aggressive intrusion into our country by a United States aircraft and the whole course of the United States Government's subsequent behaviour showed the peoples that they were dealing with a calculated policy on the part of the United States Government, which was trying to substitute brigandage for international law and treachery for honest negotiations between sovereign and equal States. . . .

The flights by the United States spy aircraft are also instructive in another respect. They have shown us the danger to peace presented by the network of United States bases in which dozens of States in Europe, Asia, Africa and Latin America are enmeshed.

Like a deep-seated form of acute infection in a living organism, these bases disrupt the normal political and economic life of the States upon which they have been foisted. They hinder the establishment of normal relations between those States and their neighbours. How, indeed, can there be any question of normal relations if the people of these neighbouring countries cannot sleep peacefully, if they have to live with the threat of being subjected to an annihilating blow whenever the United States militarists take it into their heads to embark on fresh acts of provocation? . . .

United States relations with Cuba are illuminating. As you know, before the victory of the popular revolution,

all branches of the Cuban economy were wholly dominated by United States monopolies which earned vast profits from exploiting the working people of Cuba and the wealth of their fertile soil.

Some people in the United States occasionally like to boast that the standard of living in their country is higher than that in other countries. There is no gain-saying the fact that the standard of living in the United States is now higher than in Cuba, but why is that so? Is it because the Cuban people are less industrious or because the Cuban soil is less fertile? No, this of course is not the reason. The Cuban people are well known for their industry and for their attachment to their country and to their soil. The explanation is entirely different. For many years the fruits of the Cuban people's toil were enjoyed not by the Cuban people but by United States monopolies. Is it therefore surprising that in 1958, for example, the per capita income in Cuba was 6.5 times lower than in the United States? This telling fact speaks for itself. . . .

We are all witnesses to the fact that many peoples are being continually subjected to hostile acts and crude pressure by a certain group of States which seek to set at naught the legitimate interests and rights of other countries. This is why the international situation is fraught with acute conflicts, the danger of which is intensified by the mounting arms race.

[. . .]

As regards the Soviet Union, I can say frankly that we are glad to see a great number of new States making their appearance in the United Nations. We have always opposed and we shall continue to oppose any curtailment of the rights of peoples who have won their national independence. We share with these States the desire to preserve and strengthen peace, to create on our planet conditions for the peaceful coexistence and co-operation of countries regardless of their political and social structure, in accordance with the peaceful principles proclaimed at the Conference of African and Asia States at Bandung. The facts show that the liberation of nations and peoples under colonial domination leads to an improvement in international relations, an increase in international co-operation and the reinforcement of world peace. . . .

It would be difficult to exaggerate the vast significance which the abolition of the colonial system would have for the entire world. Everyone knows that the economies of the colonies and the Trust Territories are at present subordinated to the mercenary interests of foreign monopolies, and the industrialization of these countries is being deliberately impeded. Imagine that the situation has changed and that these countries and territories, having become independent, are in a position to make ample use of their rich natural resources and to proceed with their industrialization, and that a better life has begun for their peoples. This would lead to a tremendous growth in the capacity of the world market, which would no doubt have a beneficial effect, not only on the economic development of the countries of the East but also on the economies of the industrially developed countries of the West. . . .

[. . .]

The peoples of the Soviet Union and the Soviet Government are striving unremittingly to have the principles of peaceful coexistence firmly established in relations between States, and to ensure that these principles become the fundamental law of life for the whole of modern society. There is no communist-devised "trick" behind these principles, but simple truths dictated by life itself, such as that relations between all States should develop peacefully, without the use of force, without war and without interference in each other's internal affairs.

I am revealing no secret when I say that we have no liking for capitalism. But we do not want to impose our system on other peoples by force. Let those, then, who determine the policy of States with a different social system from ours, renounce their fruitless and dangerous attempts to dictate their will. It is time they also recognized that the choice of a particular way of life is the domestic concern of every people. Let us build up our relations having regard to actual realities. That is true peaceful coexistence. . . .

The policy of peaceful coexistence assumes a readiness to solve all outstanding issues without resort to force, by means of negotiations and reasonable compromises. We all know that during the cold war years such ques-

tions for the most part did not find a solution, and that led to the creation of dangerous foci of tension in Europe, Asia and other parts of the world.

The Soviet Union considers that, in order to strengthen peace in the Far East and throughout the world, it is most essential to settle the Korean question.

Only madmen could think of settling the Korean question by armed force. The only correct proposal, namely to leave the solution of the question of the peaceful reunification of Korea to the Koreans themselves with no interference from outside, is finding ever wider acceptance. An essential condition for this is the immediate and complete withdrawal of all United States troops from South Korea, for their presence poisons the atmosphere not only in Korea but throughout the Far East and has made possible such shameful facts as the rigging of elections in South Korea. The proposal of the Government of the Democratic People's Republic of Korea to establish a confederation of North and South Korea is just as reasonable as the proposal of the Government of the German Democratic Republic to set up a confederation of the two German States. It is the only way to lay a sound foundation for the reunification of these States. . . .

We are now firmly convinced that the time has come to take steps to create conditions for an improved functioning both of the United Nations as a whole and of the Organization's executive, working organ. I repeat, the matter relates primarily to the Secretary-General and his staff. We must particularly bear in mind the necessity for certain changes and improvements, with a view to the immediate future. . . .

We consider it reasonable and just for the executive organ of the United Nations to consist not of a single person—the Secretary-General—but of three persons invested with the highest trust of the United Nations, persons representing the States belonging to the three

basic groups I have mentioned. The point at issue is not the title of the organ but that this executive organ should represent the States belonging to the military block of the Western Powers, the socialist States and the neutralist States. This composition of the United Nations executive organ would create conditions for a more correct implementation of the decisions taken. . . .

The Soviet Government hopes that the proposals it has raised for questions to be considered at the present session of the General Assembly will meet with support and understanding, since they are prompted by a sincere desire to secure a better life and tranquillity on our planet. . . .

The Soviet Government is ready to do its utmost in order that colonial servitude may be destroyed here and now, that here and now the problems of disarmament may find their concrete and effective solution.

The Soviet Government is ready to do its utmost in order that the testing of nuclear weapons may be prohibited here and now, that this means of mass destruction may be prohibited and destroyed.

It could be said that these are complicated problems and that they cannot be solved at one stroke. But these are problems posed by life itself and they must be solved before it is too late. Their solution cannot be evaded.

In concluding my statement I wish to emphasize once again that the Soviet Government, guided by the interests of the Soviet people, by the interests of the citizens of a free socialist State, once again proposes to all: let us talk, let us argue, but let us settle the questions of general and complete disarmament and let us bury colonialism that is accursed of all mankind.

76. Dwight D. Eisenhower: Farewell Address, 17 January 1961

Introduction

On 17 January 1961, just days before he left office after completing his second term, U.S. President Dwight D. Eisenhower delivered this radio and television broadcast to the American people. The speech, with its warnings against a growing military-industrial complex at the federal level—consisting of the U.S. military and industries associated with it, a grouping with a vested interest in heavy military expenditures and therefore in maintaining a state of crisis—alarmed many Americans. Eisenhower cautioned that overly heavy military expenditures could be responsible for high levels of taxation and might also divert limited funds from more productive economic development. He also expressed concern that the national security state disregarded civil liberties, effectively compromising the very democratic values that the United States supposedly represented in the Cold War. Eisenhower was probably responding in part to unfounded Democratic claims during the past presidential campaign that a missile gap existed and that the United States had fallen badly behind the Soviet Union in nuclear missiles, allegations that Eisenhower had resented but felt unable for national security reasons to rebut. It is perhaps worth asking whether his misgivings would have been more effective had he expressed them somewhat earlier in his presidency. His address represented the first crack in the American public's faith in the U.S. government, which found full expression with the Vietnam War and the Watergate scandal in the coming decades.

Primary Source

My Fellow Americans:

[. . .]

We now stand ten years past the midpoint of a century that has witnessed four major wars among great nations. Three of these involved our own country. Despite these holocausts, America is today the strongest, the most influential, and most productive nation in the world. Understandably proud of this preeminence, we yet realize that America's leadership and prestige depend not merely upon our unmatched material progress, riches, and military strength but on how we use our power in the interests of world peace and human betterment.

Throughout America's adventure in free government our basic purposes have been to keep the peace, to foster progress in human achievement, and to enhance liberty, dignity, and integrity among people and among nations. To strive for less would be unworthy of a free and religious people. Any failure traceable to arrogance or our lack of comprehension or readiness to sacrifice would inflict upon us grievous hurt both at home and abroad.

Progress toward these noble goals is persistently threatened by the conflict now engulfing the world. It com-

mands our whole attention, absorbs our very beings. We face a hostile ideology—global in scope, atheistic in character, ruthless in purpose, and insidious in method. Unhappily, the danger it poses promises to be of indefinite duration. To meet it successfully there is called for not so much the emotional and transitory sacrifices of crisis but rather those which enable us to carry forward steadily, surely, and without complaint the burdens of a prolonged and complex struggle—with liberty the stake. Only thus shall we remain, despite every provocation, on our charted course toward permanent peace and human betterment.

Crises there will continue to be. In meeting them, whether foreign or domestic, great or small, there is a recurring temptation to feel that some spectacular and costly action could become the miraculous solution to all current difficulties. A huge increase in newer elements of our defense, development of unrealistic programs to cure every ill in agriculture, a dramatic expansion in basic and applied research—these and many other possibilities, each possibly promising in itself, may be suggested as the only way to the road we wish to travel.

But each proposal must be weighed in the light of a broader consideration: the need to maintain balance in and among national programs—balance between the private and the public economy, balance between cost

and hoped-for advantage, balance between the clearly necessary and the comfortably desirable, balance between our essential requirements as a nation and the duties imposed by the nation upon the individual, balance between actions of the moment and the national welfare of the future. Good judgment seeks balance and progress; lack of it eventually finds imbalance and frustration.

The record of many decades stands as proof that our people and their government have, in the main, understood these truths and have responded to them well in the face of stress and threat. But threats, new in kind or degree, constantly arise. I mention two only.

A vital element in keeping the peace is our military establishment. Our arms must be mighty, ready for instant action, so that no potential aggressor may be tempted to risk his own destruction.

Our military organization today bears little relation to that known by any of my predecessors in peacetime, or indeed by the fighting men of World War II or Korea.

Until the latest of our world conflicts, the United States had no armaments industry. American makers of plowshares could, with time and as required, make swords as well. But now we can no longer risk emergency improvisation of national defense; we have been compelled to create a permanent armaments industry of vast proportions. Added to this, 3.5 million men and women are directly engaged in the defense establishment. We annually spend on military security more than the net income of all United States corporations.

This conjunction of an immense military establishment and a large arms industry is new in the American experience. The total influence—economic, political, even spiritual—is felt in every city, every statehouse, every office of the federal government. We recognize the imperative need for this development. Yet we must not fail to comprehend its grave implications. Our toil, resources, and livelihood are all involved; so is the very structure of our society.

In the councils of government we must guard against the acquisition of unwarranted influence, whether

sought or unsought, by the military-industrial complex. The potential for the disastrous rise of misplaced power exists and will persist.

We must never let the weight of this combination endanger our liberties or democratic processes. We should take nothing for granted. Only an alert and knowledgeable citizenry can compel the proper meshing of the huge industrial and military machinery of defense with our peaceful methods and goals so that security and liberty may prosper together.

Akin to, and largely responsible for, the sweeping changes in our industrial-military posture has been the technological revolution during recent decades. In this revolution, research has become central; it also becomes more formalized, complex, and costly. A steadily increasing share is conducted for, by, or at the direction of the federal government.

Today, the solitary inventor, tinkering in his shop, has been overshadowed by task forces of scientists in laboratories and testing fields. In the same fashion, the free university, historically the fountainhead of free ideas and scientific discovery, has experienced a revolution in the conduct of research. Partly because of the huge costs involved, a government contract becomes virtually a substitute for intellectual curiosity. For every old blackboard there are now hundreds of new electronic computers.

The prospect of domination of the nation's scholars by federal employment, project allocations, and the power of money is ever present and is gravely to be regarded. Yet, in holding scientific research and discovery in respect, as we should, we must also be alert to the equal and opposite danger that public policy could itself become the captive of a scientific-technological elite. It is the task of statesmanship to mold, to balance, and to integrate these and other forces, new and old, within the principles of our democratic system—ever aiming toward the supreme goals of our free society.

Another factor in maintaining balance involves the element of time. As we peer into society's future, we—you and I, and our government—must avoid the impulse to live only for today, plundering for our own ease and

convenience the precious resources of tomorrow. We cannot mortgage the material assets of our grandchildren without risking the loss also of their political and spiritual heritage. We want democracy to survive for all generations to come, not to become the insolvent phantom of tomorrow.

Down the long lane of the history yet to be written, America knows that this world of ours, ever growing smaller, must avoid becoming a community of dreadful fear and hate, and be, instead, a proud confederation of mutual trust and respect. Such a confederation must be one of equals. The weakest must come to the conference table with the same confidence as do we, protected as we are by our moral, economic, and military strength. That table, though scarred by many past frustrations, cannot be abandoned for the certain agony of the battlefield.

Disarmament, with mutual honor and confidence, is a continuing imperative. Together we must learn how to compose differences, not with arms but with intellect and decent purpose. Because this need is so sharp and apparent, I confess that I lay down my official responsibilities in this field with a definite sense of dis-

appointment. As one who has witnessed the horror and the lingering sadness of war, as one who knows that another war could utterly destroy this civilization which has been so slowly and painfully built over thousands of years, I wish I could say tonight that a lasting peace is in sight.

Happily, I can say that war has been avoided. Steady progress toward our ultimate goal has been made. But so much remains to be done. As a private citizen I shall never cease to do what little I can to help the world advance along that road.

So, in this, my last good night to you as your President, I thank you for the many opportunities you have given me for public service in war and peace. I trust that in that service you find some things worthy; as for the rest of it, I know you will find ways to improve performance in the future.

77. John F. Kennedy: Executive Order 10924, Creation of the Peace Corps, 1 March 1961

Introduction

The Peace Corps, established in March 1961 by President John F. Kennedy, was inspired by fears current in the 1950s that U.S. officials were overly remote from the day-to-day concerns and lives of ordinary people in developing countries, anxieties well expressed in the influential best-selling novel by Eugene Burdick and William Lederer, *The Ugly American* (1958). Alarmed that emphasis on military rather than economic aid and American support for elites risked losing for the United States support from the third world in the Cold War, in his presidential campaign Kennedy called on Americans, particularly though not exclusively the young, to spend two years working in education, community development, or technological assistance programs in such countries, receiving relatively low salaries and sharing their hosts' living and working conditions. While abroad, Peace Corps workers worked on a wide variety of projects such as building schools, introducing medical reforms, and constructing irrigation systems. Such efforts were intended to restore the original goals of President Harry S. Truman's Point Four program of assistance to underdeveloped areas. Created by executive order, the Peace Corps became one of the Kennedy administration's signature programs, as young college graduates and others responded to his appeal for public service. Kennedy felt that the establishment of the Peace Corps was sufficiently important to warrant a personal speech. The Peace Corps was extremely popular with recent college graduates in the 1960s, although its membership waned subsequently. Headed for its first five years by Sargent Shriver, Kennedy's brother-in-law, the Peace

Corps rapidly sent thousands of volunteers each year to what would eventually be more than 138 countries throughout Asia, Africa, Latin America and, with the ending of the Cold War, the former Soviet Union and Eastern Europe. Numbers of volunteers peaked at 15,000 in 1966, then fell rapidly during the 1970s, and throughout the 1980s were somewhere below 5,000 annually. By 2005, 178,000 Americans had served as Peace Corps volunteers. The majority of volunteers provided educational services, but agriculture, food production, health, environmental, conservation, and community development services were also well represented. Initially an independent agency created by the Peace Corps Act of 1961, in 1971 the organization was placed under the umbrella federal agency ACTION, established to coordinate both domestic and overseas volunteer programs, before regaining its independence in 1981. Winning over initially skeptical congressmen, the Peace Corps quickly succeeded in attracting strong bipartisan support for its relatively modest and unassuming programs and appropriations that has continued to the present. Although the Peace Corps' inception owed much to Cold War preoccupations and both American radicals and host countries on occasion characterized it as an agent of U.S. cultural imperialism, the agency made strenuous efforts to remain apolitical. Volunteers, the majority recent college graduates, were sent only to countries that specifically requested their services and were strictly forbidden to become involved in local politics or to have any contact with the Central Intelligence Agency (CIA). The emphasis was on person-to-person contact. Volunteers did not bring expensive equipment with them, only their own skills and abilities. Even so, potential host countries often viewed the Peace Corps as an agent of cultural imperialism. Supporters promoted the organization as an effective way of fostering peace and understanding between different cultures.

Primary Source

By virtue of the authority vested in me by the Mutual Security Act of 1954, 68 Stat. 832, as amended (22 U.S.C. 1750 *et seq.*), and as President of the United States, it is hereby ordered as follows:

Section 1. *Establishment of the Peace Corps.* The Secretary of State shall establish an agency in the Department of State which shall be known as the Peace Corps. The Peace Corps shall be headed by a Director.

Section 2. *Functions of the Peace Corps.* (a) The Peace Corps shall be responsible for the training and service abroad of men and women of the United States in new programs of assistance to nations and areas of the world, and in conjunction with or in support of existing economic assistance programs of the United States and of the United Nations and other international organizations.

(b) The Secretary of State shall delegate, or cause to be delegated, to the Director of the Peace Corps such of the functions under the Mutual Security Act of 1954, as amended, vested in the President and delegated to

the Secretary, or vested in the Secretary, as the Secretary shall deem necessary for the accomplishment of the purposes of the Peace Corps.

Section 3. *Financing of the Peace Corps.* The Secretary of State shall provide for the financing of the Peace Corps with funds available to the Secretary for the performance of functions under the Mutual Security Act of 1954, as amended.

Section 4. *Relation to Executive Order No. 10893.* This order shall not be deemed to supersede or derogate from any provision of Executive Order No. 10893 of November 8, 1960, as amended, and any delegation made by or pursuant to this order shall, unless otherwise specifically provided therein, be deemed to be in addition to any delegation made by or pursuant to that order.

78. John F. Kennedy: Address before the American Society of Newspaper Editors on the Bay of Pigs, 20 April 1961

Introduction

On 1 January 1959 an indigenous revolutionary movement led by Fidel Castro seized power from Fulgencio Batista, dictator of Cuba since 1933 and a U.S. client. Although Castro initially declared that he was not a communist, from the spring of 1959 he covertly sought Soviet aid and military protection, and American economic pressure and boycotts soon gave him an excuse to move openly into the Soviet camp. In response, in March 1960 President Dwight D. Eisenhower authorized the Central Intelligence Agency (CIA) to devise a scheme to train Cuban exiles based in Guatemala to invade the island and overthrow Castro, reserving to himself the right to decide whether or not this plan should ultimately be implemented. On taking office in January 1961, President John F. Kennedy, Eisenhower's successor, inherited this projected operation. Perhaps fearing to appear soft on communism, despite lukewarm assessments from the Joint Chiefs of Staff (JCS) of the risk of failure and the misgivings of Secretary of State Dean Rusk, in March the president approved its implementation. Kennedy also insisted on modifications that greatly jeopardized the operation's chances of success, refusing to allow any American troops or pilots to participate in the venture. Initial air strikes against Cuba's airbases launched on 15 April 1961 by Cuban exile pilots flying surplus American B-26s inflicted damage but failed to destroy the entire Cuban Air Force. Alarmed by news reports exposing the deceptive American cover story that, as U.S. Ambassador Adlai Stevenson publicly stated in the United Nations (UN), defectors from Castro's military had flown these missions, Kennedy refused to authorize a scheduled second air strike, which had been expected to eliminate the remaining Cuban airplanes. On 17 April 1961, 1,400 Cuban exiles mounted an invasion landing attempt at the Bay of Pigs, south of the city of Matanzas, only to meet strong opposition from Castro's air, naval, and ground forces. A few escaped, but 114 were killed and 1,113 captured. The U.S. government initially denied any involvement in the invasion attempt, but after three days Kennedy publicly took full responsibility for the operation, justifying it as a measure required to defend freedom and democracy and prevent communist penetration of Latin America. Privately, he blamed Allen Welsh Dulles, the near-legendary CIA director, for the mission's failure and replaced him the following year. The Bay of Pigs represented a humiliating international failure for the United States, vindicating those critics who characterized it as an overbearing, imperialist state that backed unpopular right-wing forces around the globe. Coming only three months after the grandiose rhetoric of Kennedy's inaugural address, the episode suggested that he possessed more style than substance. Kennedy's reckless authorization and subsequent halfhearted implementation of the operation may have helped to convince Soviet General Secretary Nikita Khrushchev that Kennedy was a lightweight who ultimately lacked the resolve to confront the Soviet Union. Undoubtedly, the botched invasion and Castro's fear of another such attempt were major reasons impelling him to ask Khrushchev to install in Cuba those Soviet missiles whose presence provoked the 1962 Cuban Missile Crisis.

Primary Source

The President of a great democracy such as ours, and the editors of great newspapers such as yours, owe a common obligation to the people: an obligation to present the facts, to present them with candor, and to present them in perspective. It is with that obligation in mind that I have decided in the last 24 hours to discuss briefly at this time the recent events in Cuba.

On that unhappy island, as in so many other arenas of the contest for freedom, the news has grown worse

instead of better. I have emphasized before that this was a struggle of Cuban patriots against a Cuban dictator. While we could not be expected to hide our sympathies, we made it repeatedly clear that the armed forces of this country would not intervene in any way.

Any unilateral American intervention, in the absence of an external attack upon ourselves or an ally, would have been contrary to our traditions and to our international obligations. But let the record show that our restraint is not inexhaustible. Should it ever appear that

the inter-American doctrine of non-interference merely conceals or excuses a policy of nonaction—if the nations of this Hemisphere should fail to meet their commitments against outside Communist penetration—then I want it clearly understood that this Government will not hesitate in meeting its primary obligations which are to the security of our Nation!

Should that time ever come, we do not intend to be lectured on “intervention” by those whose character was stamped for all time on the bloody streets of Budapest! Nor would we expect or accept the same outcome which this small band of gallant Cuban refugees must have known that they were chancing, determined as they were against heavy odds to pursue their courageous attempts to regain their Island’s freedom.

But Cuba is not an island unto itself; and our concern is not ended by mere expressions of non-intervention or regret. This is not the first time in either ancient or recent history that a small band of freedom fighters has engaged the armor of totalitarianism.

It is not the first time that Communist tanks have rolled over gallant men and women fighting to redeem the independence of their homeland. Nor is it by any means the final episode in the eternal struggle of liberty against tyranny, anywhere on the face of the globe, including Cuba itself.

Mr. Castro has said that these were mercenaries. According to press reports, the final message to be relayed from the refugee forces on the beach came from the rebel commander when asked if he wished to be evacuated. His answer was: “I will never leave this country.” That is not the reply of a mercenary. He has gone now to join in the mountains countless other guerrilla fighters, who are equally determined that the dedication of those who gave their lives shall not be forgotten, and that Cuba must not be abandoned to the Communists. And we do not intend to abandon it either!

The Cuban people have not yet spoken their final piece. And I have no doubt that they and their Revolutionary Council, led by Dr. Cardona—and members of the families of the Revolutionary Council, I am informed by the Doctor yesterday, are involved them-

selves in the Islands—will continue to speak up for a free and independent Cuba.

Meanwhile we will not accept Mr. Castro’s attempts to blame this nation for the hatred which his onetime supporters now regard his repression. But there are from this sobering episode useful lessons for us all to learn. Some may be still obscure, and await further information. Some are clear today.

First, it is clear that the forces of communism are not to be underestimated, in Cuba or anywhere else in the world. The advantages of a police state—its use of mass terror and arrests to prevent the spread of free dissent—cannot be overlooked by those who expect the fall of every fanatic tyrant. If the self-discipline of the free cannot match the iron discipline of the mailed fist—in economic, political, scientific and all the other kinds of struggles as well as the military—then the peril to freedom will continue to rise.

Secondly, it is clear that this Nation, in concert with all the free nations of this hemisphere, must take an ever closer and more realistic look at the menace of external Communist intervention and domination in Cuba. The American people are not complacent about Iron Curtain tanks and planes less than 90 miles from their shore. But a nation of Cuba’s size is less a threat to our survival than it is a base for subverting the survival of other free nations throughout the hemisphere. It is not primarily our interest or our security but theirs which is now, today, in the greater peril. It is for their sake as well as our own that we must show our will.

The evidence is clear—and the hour is late. We and our Latin friends will have to face the fact that we cannot postpone any longer the real issue of survival of freedom in this hemisphere itself. On that issue, unlike perhaps some others, there can be no middle ground. Together we must build a hemisphere where freedom can flourish; and where any free nation under outside attack of any kind can be assured that all of our resources stand ready to respond to any request for assistance.

Third, and finally, it is clearer than ever that we face a relentless struggle in every corner of the globe that

goes far beyond the clash of armies or even nuclear armaments. The armies are there, and in large number. The nuclear armaments are there. But they serve primarily as the shield behind which subversion, infiltration, and a host of other tactics steadily advance, picking off vulnerable areas one by one in situations which do not permit our own armed intervention.

Power is the hallmark of this offensive—power and discipline and deceit. The legitimate discontent of yearning people is exploited. The legitimate trappings of self-determination are employed. But once in power, all talk of discontent is repressed, all self-determination disappears, and the promise of a revolution of hope is betrayed, as in Cuba, into a reign of terror. Those who on instruction staged automatic “riots” in the streets of free nations over the efforts of a small group of young Cubans to regain their freedom should recall the long roll call of refugees who cannot now go back—to Hungary, to North Korea, to North Viet-Nam, to East Germany, or to Poland, or to any of the other lands from which a steady stream of refugees pours forth, in eloquent testimony to the cruel oppression now holding sway in their homeland.

We dare not fail to see the insidious nature of this new and deeper struggle. We dare not fail to grasp the new concepts, the new tools, the new sense of urgency we will need to combat it—whether in Cuba or South Viet-Nam. And we dare not fail to realize that this struggle is taking place every day, without fanfare, in thousands of villages and markets—day and night—and in classrooms all over the globe.

The message of Cuba, of Laos, of the rising din of Communist voices in Asia and Latin America—these

messages are all the same. The complacent, the self-indulgent, the soft societies are about to be swept away with the debris of history. Only the strong, only the industrious, only the determined, only the courageous, only the visionary who determine the real nature of our struggle can possibly survive.

No greater task faces this country or this administration. No other challenge is more deserving of our every effort and energy. Too long we have fixed our eyes on traditional military needs, on armies prepared to cross borders, on missiles poised for flight. Now it should be clear that this is no longer enough—that our security may be lost piece by piece, country by country, without the firing of a single missile or the crossing of a single border.

We intend to profit from this lesson. We intend to re-examine and reorient our forces of all kinds—our tactics and our institutions here in this community. We intend to intensify our efforts for a struggle in many ways more difficult than war, where disappointment will often accompany us.

For I am convinced that we in this country and in the free world possess the necessary resource, and the skill, and the added strength that comes from a belief in the freedom of man. And I am equally convinced that history will record the fact that this bitter struggle reached its climax in the late 1950's and the early 1960's. Let me then make clear as the President of the United States that I am determined upon our system's survival and success, regardless of the cost and regardless of the peril!

79. Charles de Gaulle: Speech Denouncing the Algiers Putsch, 23 April 1961

Introduction

The dismantling of colonial empires could on occasion prove both bloody and divisive. This was certainly the case in Algeria, a French colony since 1830, when it was incorporated outright into France as a province. In 1954 nationalist groups in Algeria launched an uprising whose objective was full independence from France. Since 1840, numerous French settlers had moved to Algeria, and the colons, as they were known, were for the most part unrelentingly opposed to Algerian independence. The war was fought with great brutality on both sides, as nationalist

forces in the National Liberation Front (FLN) intimidated the local population when necessary, assassinating opponents and detonating bombs in public places, while the French Army showed equal savagery toward both the FLN and anyone suspected of supporting it, frequently resorting to torture. By 1956 the situation was out of control, with 400,000 French troops in Algeria unable to maintain order. In May 1958 dissident army officers and Algerian colons, working with supporters of General Charles de Gaulle, successfully mounted a coup against the Fourth French Republic to put the general in power. The French Parliament approved de Gaulle's appointment as president, and a new constitution was approved, establishing the Fifth French Republic that, unlike its predecessor in which presidents had rarely retained office for more than a year, featured a strong president elected for a seven-year term. The Algerian colons and the French military hoped that de Gaulle would prove more effective in prosecuting the war, and he initially made a broad if vague appeal to all Algerians, urging them to work together as part of France and promising extensive economic, social, and political reforms that would benefit the mass of native Algerians. These inducements failed to persuade the FLN to renounce its objectives. In 1958–1959 the French Army made major gains in Algeria, but the French public turned against the war, in part because it was extremely expensive and costly in terms of lives and also because revelations of the extensive torture and brutality that the French military employed when waging war in Algeria helped to discredit their cause. In September 1959 de Gaulle, who had decided that the war could be won but was impossible to defend on the international scene, pledged self-determination for Algeria, albeit in some kind of formal association with France. The following January the colons, with tacit support from the French military and police, launched an insurrection in Algiers, demanding de Gaulle's resignation, but he rallied the French Army behind him, and after a week the uprising fizzled out. In April 1961 the Generals' Putsch—a second attempt to overthrow de Gaulle—took place. In the wake of a referendum held in both France and Algeria on the future status of the colony in which 75 percent approved self-determination for Algeria, several retired generals in France joined forces with the colons and the French military in Algeria to stage a revolt and demanded de Gaulle's resignation. Donning his military uniform, he addressed the nation on television, urging the army to support him, the rule of law, and the Fifth French Republic. The constitution was amended to permit de Gaulle to assume emergency powers. His exhortations were successful. Within four days the revolt in Algeria was suppressed, and peace talks with the FLN continued. The Evian Accords, the peace settlement reached in March 1962, guaranteed all existing residents of Algeria equal political and civil rights and protected their property but required them to choose between French and Algerian citizenship within three years. Those who remained French would then become aliens and lose their political rights. A new colon organization, the Secret Army Organization (OAS), promptly mounted a major terrorist campaign in Algeria, one that targeted both FLN and French representatives and was designed to sabotage the peace settlement by provoking the FLN into breaking the cease-fire. In March, the OAS detonated on average 120 bombs per day, hitting hospitals and schools as well as military and government targets. In a June 1962 referendum on the accords, 91 percent of the French electorate nonetheless approved them. The OAS and FLN concluded a truce, and within a year the great majority of the colons, at least 1.75 million, had left Algeria, as did many of the indigenous Algerian Muslims who had fought in the French Army during the civil war. Something over half a million Algerians died during the Algerian Civil War, while the French Army lost 18,000 dead and 65,000 wounded, and perhaps 2 million Algerians became refugees. The Algerian war was testimony to just how brutal and divisive anticolonial struggles could become. The bitter past experience of civil war, during which violence had become habitual and acceptable, may have been one reason that during the 1990s, Algeria endured another protracted internal conflict.

Primary Source

An insurrectional power has set itself up in Algeria by a military pronunciamiento. Those guilty of this usurpation have exploited the passion of officers of certain special units, the inflamed support of one part of the population of European origin, misguided by fears and

myths, the impotence of authorities overwhelmed by the military conspiracy.

This power has an appearance: a quartet of retired generals. It has a reality: a group of partisan, ambitious and fanatical officers. This group and this quartet possess a

limited and expeditious ability, but they see and know the nation and the world only as deformed by their fanaticism.

Their venture cannot but lead to a national disaster. For the immense effort of recovery in France—begun at the depths of the abyss on June 18, 1940; continued later despite everything until victory was gained, independence assured, the Republic restored; resumed three years ago in order to remake the State, maintain the national unity, rebuild our power, restore our position in the world, pursue our task overseas through a necessary decolonization—all this risks being made useless, on the very eve of success, by the odious and stupid adventure in Algeria.

Now the State is flouted, the nation defied, our power degraded, our international prestige lowered, our role and our place in Africa jeopardized. And by whom? Alas! Alas! By men whose duty, honor and reason for being was to serve and obey.

In the name of France, I order that all means—I say all means—be employed everywhere to bar the route to these men, until they are subjugated. I forbid any Frenchmen, and first of all any soldier, to execute any of their orders. The argument that it might be locally necessary to accept their command under the pretext of operational or administrative obligations can fool no one.

The civil and military leaders who have the right to assume responsibilities are those who have been legally

named and precisely those the insurgents prevent from doing so.

The future of the usurpers should only be that provided for them by the rigor of the law.

In the face of the misfortune which looms over the country and of the threat that hangs over the Republic, I have decided, having formally consulted the Constitutional Council, the Premier, the President of the Senate, the President of the National Assembly, to put into force Article 16 of our Constitution. As of today, I will take, if necessary directly, the measures that appear to me to be required by the circumstances.

In this way, I confirm myself in the French and republican legality which was conferred upon me by the nation and which I will maintain no matter what happens until the end of my term, or until I lack either force or life; and I will take measures to make sure that this legality remains after me.

Frenchwomen, Frenchmen, see where France risks going, compared with what she was again becoming.

Frenchwomen, Frenchmen, help me.

80. John F. Kennedy: Special Message to the Congress on Urgent National Needs on Space, 25 May 1961

Introduction

The early excitement generated by the glamorous John F. Kennedy's accession to the presidency and his appeals to "get this country moving again" fizzled out rather quickly. In April 1961 the U.S. Central Intelligence Agency (CIA) backed a bungled invasion of the island of Cuba, where a procommunist government headed by the radical Fidel Castro had seized power in 1959. The operation ended in humiliating failure for the United States, tarnishing the first months of Kennedy's presidency. Soon afterward, on 21 April 1961, the Soviet Union sent into space the first human astronaut, Yuri Gagarin, who returned safely and became an instant celebrity. This was only the latest of several scientific triumphs for the Soviets, who in 1957 had launched Sputnik, the first nonmanned satellite. In a press conference earlier in April, Kennedy had already mentioned his frustration that the United States had fallen into second place to the Soviet Union in space travel and exploration and warned that it would be some time

before the United States caught up with its rival. In a State of the Union address to Congress the following month, he announced a bold initiative to redress the balance in favor of his own country, pledging that the United States would send a manned spaceflight to the moon by the end of the 1960s. Kennedy requested a greatly increased budget for space exploration and the National Aeronautical and Space Agency (NASA), including \$611 million of additional spending to supplement his request for more than \$1.235 billion the previous March. He also sought to improve American satellite and rocket technology. Although Kennedy did not live to see them attained, these eye-catching goals reflected his personal preference for striking, high-profile initiatives. After his assassination in November 1963, their fulfillment was seen as a tribute to the dead president. In July 1969 the United States launched a successful manned mission to the moon, the first of several such American flights. Since no other nation felt able to mount such an expensive program, for the rest of the twentieth century travel to the moon remained an American monopoly.

Primary Source

[. . .]

These are extraordinary times. And we face an extraordinary challenge. Our strength as well as our convictions have imposed upon this nation the role of leader in freedom's cause.

No role in history could be more difficult or more important. We stand for freedom. That is our conviction for ourselves—that is our only commitment to others. No friend, no neutral and no adversary should think otherwise. We are not against any man—or any nation—or any system—except as it is hostile to freedom. Nor am I here to present a new military doctrine, bearing any one name or aimed at any one area. I am here to promote the freedom doctrine.

[. . .]

IX. SPACE

Finally, if we are to win the battle that is now going on around the world between freedom and tyranny, the dramatic achievements in space which occurred in recent weeks should have made clear to us all, as did the Sputnik in 1957, the impact of this adventure on the minds of men everywhere, who are attempting to make a determination of which road they should take. Since early in my term, our efforts in space have been under review. With the advice of the Vice President, who is Chairman of the National Space Council, we have examined where we are strong and where we are not, where we may succeed and where we may not. Now it is time to take longer strides—time for a great new American enterprise—time for this nation to take

a clearly leading role in space achievement, which in many ways may hold the key to our future on earth.

I believe we possess all the resources and talents necessary. But the facts of the matter are that we have never made the national decisions or marshalled the national resources required for such leadership. We have never specified long-range goals on an urgent time schedule, or managed our resources and our time so as to insure their fulfillment.

Recognizing the head start obtained by the Soviets with their large rocket engines, which gives them many months of lead-time, and recognizing the likelihood that they will exploit this lead for some time to come in still more impressive successes, we nevertheless are required to make new efforts on our own. For while we cannot guarantee that we shall one day be first, we can guarantee that any failure to make this effort will make us last. We take an additional risk by making it in full view of the world, but as shown by the feat of astronaut Shepard, this very risk enhances our stature when we are successful. But this is not merely a race. Space is open to us now; and our eagerness to share its meaning is not governed by the efforts of others. We go into space because whatever mankind must undertake, free men must fully share.

I therefore ask the Congress, above and beyond the increases I have earlier requested for space activities, to provide the funds which are needed to meet the following national goals:

First, I believe that this nation should commit itself to achieving the goal, before this decade is out, of landing

a man on the moon and returning him safely to the earth. No single space project in this period will be more impressive to mankind, or more important for the long-range exploration of space; and none will be so difficult or expensive to accomplish. We propose to accelerate the development of the appropriate lunar space craft. We propose to develop alternate liquid and solid fuel boosters, much larger than any now being developed, until certain which is superior. We propose additional funds for other engine development and for unmanned explorations—explorations which are particularly important for one purpose which this nation will never overlook: the survival of the man who first makes this daring flight. But in a very real sense, it will not be one man going to the moon—if we make this judgment affirmatively, it will be an entire nation. For all of us must work to put him there.

Secondly, an additional 23 million dollars, together with 7 million dollars already available, will accelerate development of the Rover nuclear rocket. This gives promise of some day providing a means for even more exciting and ambitious exploration of space, perhaps beyond the moon, perhaps, to the very end of the solar system itself.

Third, an additional 50 million dollars will make the most of our present leadership, by accelerating the use of space satellites for world-wide communications.

Fourth, an additional 75 million dollars—of which 53 million dollars is for the Weather Bureau—will help give us at the earliest possible time a satellite system for world-wide weather observation.

Let it be clear—and this is a judgment which the Members of the Congress must finally make—let it be clear that I am asking the Congress and the country to accept a firm commitment to a new course of action—a course which will last for many years and carry very heavy costs: 531 million dollars in fiscal '62—an estimated seven to nine billion dollars additional over the next five years. If we are to go only half way, or reduce our sights in the face of difficulty, in my judgment it would be better not to go at all.

Now this is a choice which this country must make, and I am confident that under the leadership of the Space Committees of the Congress, and the Appropriating Committees, that you will consider the matter carefully.

It is a most important decision that we make as a nation. But all of you have lived through the last four years and have seen the significance of space and the adventures in space, and no one can predict with certainty what the ultimate meaning will be of mastery of space.

I believe we should go to the moon. But I think every citizen of this country as well as the Members of the Congress should consider the matter carefully in making their judgment, to which we have given attention over many weeks and months, because it is a heavy burden, and there is no sense in agreeing or desiring that the United States take an affirmative position in outer space, unless we are prepared to do the work and bear the burdens to make it successful. If we are not, we should decide today and this year.

This decision demands a major national commitment of scientific and technical manpower, materiel and facilities, and the possibility of their diversion from other important activities where they are already thinly spread. It means a degree of dedication, organization and discipline which have not always characterized our research and development efforts. It means we cannot afford undue work stoppages, inflated costs of material or talent, wasteful interagency rivalries, or a high turnover of key personnel.

New objectives and new money cannot solve these problems. They could in fact, aggravate them further—unless every scientist, every engineer, every serviceman, every technician, contractor, and civil servant gives his personal pledge that this nation will move forward, with the full speed of freedom, in the exciting adventure of space.

81. Alliance for Progress Charter, 17 August 1961

Introduction

President John F. Kennedy assumed office in 1961 proclaiming his determination that the United States should win the Cold War. One means whereby he hoped to accomplish this was to gain the loyalties of the developing world, including Latin America, through economic assistance and development programs. American collusion with authoritarian dictators and episodes such as the June 1953 coup that the Central Intelligence Agency (CIA) orchestrated against President Jacobo Arbenz Guzmán of Guatemala after the latter threatened to take over land owned by U.S. businesses had damaged U.S. credibility. So, too, did Kennedy's own unsuccessful April 1961 Bay of Pigs invasion attempt against leftist President Fidel Castro of Cuba. To many on the Left and in developing countries, U.S. protestations of liberal ideals and support for freedom and democracy appeared mere hypocritical propaganda rationalizing its imperialist economic and political exploitation of Latin American nations. Attempting to allay such suspicions while alleviating poverty, illiteracy, and disease, widely perceived as precipitating factors in communist insurgencies in the region, in March 1961 Kennedy proposed a ten-year, \$100 billion aid and development program for Latin American nations. Modeled on the very successful 1948 Marshall Plan that had encouraged and facilitated West European economic recovery after World War II, this undertaking was designed to integrate the separate Latin American economies and promote annual growth rates of 2.5 percent, fair wages, stable prices, agrarian reform, tax revision, housing development, health, sanitation, and literacy. It also aimed to facilitate the development of democratic governments in place of military dictatorships. In August 1961 the United States and all Latin American nations except Cuba signed an agreement under which the United States promised the hemisphere \$20 billion over the next decade, while the other nations pledged capital investment of \$80 billion. U.S. aid to Latin America initially tripled, and the United States eventually committed \$22.3 billion to the region in aid and investment, although debt payments and repatriation of profits substantially reduced the amount of net transfers. Overall, the Latin American growth rate during the 1960s was 2.4 percent, with seven out of twenty-one countries surpassing the 2.5 percent target rate. Access to secondary and tertiary education increased, but adult illiteracy rates remained stable. Effective land reform often proved impossible, and in Honduras the Kennedy administration itself blocked measures that would have expropriated American-owned landholdings. The promotion of democracy proved an elusive goal, as military coups overthrew no less than six popularly elected presidents. Like many Cold War programs, the Alliance for Progress was at best only partially successful in accomplishing its ambitious objectives.

Primary Source

[. . .]

Title I. Objective of the Alliance for Progress

It is the purpose of the Alliance for Progress to enlist the full energies of the people and governments of the American republics in a great cooperative effort to accelerate the economic and social development of the participating countries of Latin America, so that they may achieve maximum levels of well-being, with equal opportunities for all, in democratic societies adapted to their own needs and desires.

The American Republics agree to work toward the achievement of the following fundamental goals in the present decade:

1. To achieve in the participating Latin American countries a substantial and sustained growth of per capita income at a rate designed to attain, at the earliest possible date, levels of income capable of assuring self-sustaining development, and sufficient to make Latin American income levels constantly larger in relation to the levels of the more industrialized nations. In this way the gap between the living standards of Latin America and those of the more developed countries can be narrowed. Similarly, presently existing differences in income levels among the Latin American countries will be reduced by accelerating the development of the relatively less developed countries and granting them maximum priority in the distribution of resources and in international

cooperation in general. In evaluating the degree of relative development, account will be taken not only of average levels of real income and gross product per capita, but also of indices of infant mortality, illiteracy, and per capita daily caloric intake.

It is recognized that, in order to reach these objectives within a reasonable time, the rate of economic growth in any country of Latin America should be not less than 2.5 percent per capita per year, and that each participating country should determine its own growth target in the light of its stage of social and economic evolution, resource endowment, and ability to mobilize national efforts for development.

2. To make the benefits of economic progress available to all citizens of all economic and social groups through a more equitable distribution of national income, raising more rapidly the income and standard of living of the needier sectors of the population, at the same time that a higher proportion of the national product is devoted to investment.
3. To achieve balanced diversification in national economic structures, both regional and functional, making them increasingly free from dependence on the export of a limited number of primary products and the importation of capital goods awhile attaining stability in the prices of exports or in income derived from exports.
4. To accelerate the process of rational industrialization so as to increase the productivity of the economy as a whole, taking full advantage of the talents and energies of both the private and public sectors, utilizing the natural resources of the country and providing productive and remunerative employment for unemployed or part-time workers. Within this process of industrialization, special attention should be given to the establishment and development of capital-goods industries.
5. To raise greatly the level of agricultural productivity and output and to improve related storage transportation, and marketing services.
6. To encourage, in accordance with the characteristics of each country, programs of comprehensive agrarian reform leading to the effective transformation, where required, of unjust structures and

systems of land tenure and use, with a view to replacing latifundia and dwarf holdings by an equitable system of land tenure so that, with the help of timely and adequate credit, technical assistance and facilities for the marketing and distribution of products, the land will become for the man who works it the basis of his economic stability, the foundation of his increasing welfare, and the guarantee of his freedom and dignity.

7. To eliminate adult illiteracy and by 1970 to assure, as a minimum, access to 6 years of primary education for each school-age child in Latin America; to modernize and expand vocational, secondary and higher educational and training facilities, to strengthen the capacity for basic and applied research; and to provide the competent personnel required in rapidly-growing societies.
8. To increase life expectancy at birth by a minimum of 5 years, and to increase the ability to learn and produce, by improving individual and public health. To attain this goal it will be necessary, among other measures, to provide adequate potable water supply and sewage disposal to not less than 70 percent of the urban and 50 percent of the rural population; to reduce the mortality rate of children less than 5 years of age by at least one-half; to control the more serious communicable diseases, according to their importance as a cause of sickness, disability, and death; to eradicate those illnesses, especially malaria, for which effective techniques are known; to improve nutrition; to train medical and health personnel to meet at least minimum requirements; to improve basic health services at national and local levels; and to intensify scientific research and apply its results more fully and effectively to the prevention and cure of illness.
9. To increase the construction of low-cost houses for low-income families in order to replace inadequate and deficient housing and to reduce housing shortages; and to provide necessary public services to both urban and rural centers of population.
10. To maintain stable price levels, avoiding inflation or deflation and the consequent social hard-

ships and maldistribution of resources, always bearing in mind the necessity of maintaining an adequate rate of economic growth.

11. To strengthen existing agreements on economic integration, with a view to the ultimate fulfillment of aspirations for a Latin American common market that will expand and diversify trade among the Latin American countries and thus contribute to the economic growth of the region.
12. To develop cooperative programs designed to prevent the harmful effects of excessive fluctuations in the foreign exchange earnings derived from exports of primary products, which are of vital importance to economic and social development; and to adopt the measures necessary to facilitate the access of Latin American exports to goals it will be necessary:

Title II. Economic and Social Development

Chapter I. Basic Requirements for Economic and Social Development

The American Republics recognize that to achieve the foregoing goals it will be necessary:

1. That comprehensive and well-conceived national programs of economic and social development, aimed at the achievement of self-sustaining growth, be carried out in accordance with democratic principles.
2. That national programs of economic and social development be based on the principle of self-help—as established in the Act of Bogota—and on the maximum use of domestic resources, taking into account the special conditions of each country.
3. That in the preparation and execution of plans for economic and social development, women should be placed on an equal footing with men.
4. That the Latin American countries obtain sufficient external financial assistance, a substantial portion of which should be extended on flexible conditions with respect to periods and terms of repayment and forms of utilization, in order to supplement domestic capital formation and reinforce their import capacity; and that, in support of well-conceived programs, which include the necessary structural reforms and measures for the

mobilization of internal resources, a supply of capital from all external sources during the coming 10 years of at least 20 billion dollars be made available to the Latin American countries, with priority to the relatively less developed countries. The greater part of this sum should be in public funds.

5. That institutions in both the public and private sectors, including labor organizations, cooperatives, and commercial, industrial, and financial institutions, be strengthened and improved for the increasing and effective use of domestic resources, and that the social reforms necessary to permit a fair distribution of the fruits of economic and social progress be carried out.

Chapter II. National Development Programs

1. Participating Latin American countries agree to introduce or strengthen systems for the preparation, execution, and periodic revision of national programs for economic and social development consistent with the principles, objectives, and requirements contained in this document. Participating Latin American countries should formulate, if possible within the next eighteen months, long-term development programs. Such programs should embrace, according to the characteristics of each country, the elements outlined in the Appendix.
2. National development programs should incorporate self-help efforts directed to:
 - a. Improvement of human resources and widening of opportunities by raising general standards of education and health; improving and extending technical education and professional training with emphasis on science and technology; providing adequate remuneration for work performed, encouraging the talents of managers, entrepreneurs, and wage earners; providing more productive employment for underemployed manpower; establishing effective systems of labor relations, and procedures for consultation and collaboration among public authorities, employer associations, and labor organizations; promoting the establishment and expansion of local institutions for basic and applied research; and improving the standards of public administration.

- b. Wider development and more efficient use of natural resources, especially those which are now idle or under-utilized, including measures for the processing of raw materials.
- c. The strengthening of the agricultural base, progressively, extending the benefits of the land to those who work it, and ensuring in countries with Indian populations the integration of these populations into the economic, social, and cultural processes of modern life. To carry out these aims, measures should be adopted, among others, to establish or improve, as the case may be, the following services: extension, credit, technical assistance, agricultural research and mechanization; health and education; storage and distribution; cooperatives and farmers' associations; and community development.
- d. More effective, rational and equitable mobilization and use of financial resources through the reform of tax structures, including fair and adequate taxation of large incomes and real estate, and the strict application of measures to improve fiscal administration. Development programs should include the adaptation of budget expenditures to development needs, measures for the maintenance of price stability, the creation of essential credit facilities at reasonable rates of interest, and the encouragement of private savings.
- e. Promotion through appropriate measures, including the signing of agreements for the purpose of reducing or eliminating double taxation, of conditions that will encourage the flow of foreign investments and help to increase the capital resources of participating countries in need of capital.
- f. Improvement of systems distribution and sales in order to make markets more competitive and prevent monopolistic practices.

Chapter III. Immediate and Short-term Action Measures

1. Recognizing that a number of Latin American countries, despite their best efforts, may require emergency financial assistance, the United States will provide assistance from the funds which are or may be established for such purposes. The

United States stands ready to take prompt action on applications for such assistance. Applications relating to existing situations should be submitted within the next 60 days.

2. Participating Latin American countries should, in addition to creating or strengthening machinery for long-term development programming, immediately increase their efforts to accelerate their development by giving special emphasis to the following objectives:
 - a. The completion of projects already underway and the initiation of projects for which the basic studies have been made, in order to accelerate their financing and execution.
 - b. The implementation of new projects which are designed:
 - (1) To meet the most pressing social needs and benefit directly the greatest number of people;
 - (2) To concentrate efforts within each country in the less developed or more depressed areas in which particularly serious social problems exist;
 - (3) To utilize idle capacity or resources, particularly under-employed manpower; and
 - (4) To survey and assess natural resources.
 - c. The facilitation of the preparation and execution of long-term programs through measures designed:
 - (1) To train teachers, technicians, and specialists;
 - (2) To provide accelerated training to workers and farmers;
 - (3) To improve basic statistics;
 - (4) To establish needed credit and marketing facilities; and
 - (5) To improve services and administration.
3. The United States will assist in carrying out these short-term measures with a view to achieving concrete results from the Alliance for Progress at the earliest possible moment. In connection with the measures set forth above, and in accordance with the statement of President Kennedy, the United States will provide assistance under the Alliance, including assistance for the financing of short-term measures, totaling more than one billion dollars in a year ending March 1962.

*Chapter IV. External Assistance in Support of
National Development Programs*

1. The economic and social development of Latin America will require a large amount of additional public and private financial assistance on the part of capital-exporting countries, including the members of the Development Assistance Group and international lending agencies. The measures provided for in the Act of Bogota and the new measures provided for in this Charter, are designed to create a framework within which such additional assistance can be provided and effectively utilized.
2. The United States will assist those participating countries whose development programs establish self-help measures and economic and social policies and programs consistent with the goals and principles of this Charter. To supplement the domestic efforts of such countries, the United States is prepared to allocate resources which, along with those anticipated from other external sources, will be of a scope and magnitude adequate to realize the goals envisaged in this Charter. Such assistance will be allocated to both social and economic development and, where appropriate, will take the form of grants or loans on flexible terms and conditions. The participating countries will request the assistance of other capital-exporting countries and appropriate institutions so that they may provide assistance for the attainment of these objectives.
3. The United States will assist in the financing of technical assistance projects proposed by a participating country or by the General Secretariat of the Organization of American States for the purpose of:
 - a. Providing experts contracted in agreement with governments to work under their direction and to assist them in the preparation of

specific investment projects and the strengthening of national mechanisms for preparing projects, using specialized engineering firms where appropriate;

- b. Carrying out, pursuant to existing agreements for cooperation among the General Secretariat of the Organization of American States, the Economic Commission for Latin America, and the Inter-American Development Bank, field investigations and studies, including those relating to development problems, the organization of national planning agencies and the preparation of development programs, agrarian reform and rural development, health, cooperatives, housing, education and professional training, and taxation and tax administration; and
- c. Convening meetings of experts and officials on development and related problems.

The governments or above mentioned organizations should, when appropriate, seek the cooperation of the United Nations and its specialized agencies in the execution of these activities.

4. The participating Latin American countries recognize that each has in varying degree a capacity to assist fellow republics by providing technical and financial assistance. They recognize that this capacity will increase as their economies grow. They therefore affirm their intention to assist fellow republics increasingly as their individual circumstances permit.

82. John F. Kennedy: Inaugural Address, 20 January 1961

Introduction

The young Democrat John F. Kennedy became president of the United States in January 1961, the youngest man ever elected to that office, succeeding the Republican Dwight D. Eisenhower, the oldest man until that time to be president. Kennedy subscribed almost unthinkingly to orthodox Cold War ideology and proclaimed the need for

the United States to fight Soviet communism more energetically than in the past. Despite serious health problems of which the American people were largely unaware, Kennedy projected an image of youthful dynamism and vigor, and his administration made almost a cult of physical fitness. Young, handsome, and a master of appealing rhetoric, through his style Kennedy caught the imagination not just of Americans but of young people around the world. He appealed to Americans to be prepared to make sacrifices for their country and to wage the Cold War until victory was attained, pledging that the United States would help its allies whatever the price. Breaking with Eisenhower's New Look strategy, which was heavily reliant upon the threat of nuclear weapons, Kennedy sought to make American military forces better able to fight conventional and guerrilla wars. Seeking to win the loyalties of decolonizing and relatively poor states, he also urged ordinary Americans to work closely with their counterparts in developing countries, sharing their living standards and cooperating on projects designed to benefit those nations, an appeal that led to the establishment of the Peace Corps. Despite promising to build up American military forces and to stand firm in the Cold War, he also sought to open serious arms control negotiations with the Soviet Union, evidence of his recognition that neither power could afford an outright nuclear war. In Kennedy's inaugural address, therefore, one can discern the seeds of many of his subsequent policies, including his 1961 decision to support West Berlin, his moves to increase the American commitment to the Republic of Vietnam (RVN, South Vietnam), his demand that the Soviet Union withdraw its missiles from nearby Cuba in 1962, and his support for serious disarmament negotiations and the Atmospheric Nuclear Test Ban Treaty in 1963.

Primary Source

We observe today not a victory of party but a celebration of freedom—symbolizing an end as well as a beginning—signifying renewal as well as change. For I have sworn before you and Almighty God the same solemn oath our forebears prescribed nearly a century and three quarters ago.

The world is very different now. For man holds in his mortal hands the power to abolish all forms of human poverty and all forms of human life. And yet the same revolutionary beliefs for which our forebears fought are still at issue around the globe—the belief that the rights of man come not from the generosity of the state but from the hand of God.

We dare not forget today that we are the heirs of that first revolution. Let the word go forth from this time and place, to friend and foe alike, that the torch has been passed to a new generation of Americans—born in this century, tempered by war, disciplined by a hard and bitter peace, proud of our ancient heritage—and unwilling to witness or permit the slow undoing of those human rights to which this Nation has always been committed, and to which we are committed today at home and around the world.

Let every nation know, whether it wishes us well or ill, that we shall pay any price, bear any burden, meet any

hardship, support any friend, oppose any foe to assure the survival and the success of liberty.

This much we pledge—and more.

To those old allies whose cultural and spiritual origins we share, we pledge the loyalty of faithful friends. United, there is little we cannot do in a host of cooperative ventures. Divided, there is little we can do—for we dare not meet a powerful challenge at odds and split asunder.

To those new states whom we welcome to the ranks of the free, we pledge our word that one form of colonial control shall not have passed away merely to be replaced by a far more iron tyranny. We shall not always expect to find them supporting our view. But we shall always hope to find them strongly supporting their own freedom—and to remember that, in the past, those who foolishly sought power by riding the back of the tiger ended up inside.

To those people in the huts and villages of half the globe struggling to break the bonds of mass misery, we pledge our best efforts to help them help themselves, for whatever period is required—not because the Communists may be doing it, not because we seek their votes, but because it is right. If a free society cannot help the many who are poor, it cannot save the few who are rich.

To our sister republics south of our border, we offer a special pledge—to convert our good words into good deeds—in a new alliance for progress—to assist free men and free governments in casting off the chains of poverty. But this peaceful revolution of hope cannot become the prey of hostile powers. Let all our neighbors know that we shall join with them to oppose aggression or subversion anywhere in the Americas. And let every other power know that this hemisphere intends to remain the master of its own house.

To that world assembly of sovereign states, the United Nations, our last best hope in an age where the instruments of war have far outpaced the instruments of peace, we renew our pledge of support—to prevent it from becoming merely a forum for invective—to strengthen its shield of the new and the weak—and to enlarge the area in which its writ may run.

Finally, to those nations who would make themselves our adversary, we offer not a pledge but a request: that both sides begin anew the quest for peace, before the dark powers of destruction unleashed by science engulf all humanity in planned or accidental self-destruction.

We dare not tempt them with weakness. For only when our arms are sufficient beyond doubt can we be certain beyond doubt that they will never be employed.

But neither can two great and powerful groups of nations take comfort from our present course—both sides overburdened by the cost of modern weapons, both rightly alarmed by the steady spread of the deadly atom, yet both racing to alter that uncertain balance of terror that stays the hand of mankind's final war.

So let us begin anew—remembering on both sides that civility is not a sign of weakness, and sincerity is always subject to proof. Let us never negotiate out of fear. But let us never fear to negotiate.

Let both sides explore what problems unite us instead of belaboring those problems which divide us.

Let both sides, for the first time, formulate serious and precise proposals for the inspection and control of

arms—and bring the absolute power to destroy other nations under the absolute control of all nations.

Let both sides seek to invoke the wonders of science instead of its terrors. Together let us explore the stars, conquer the deserts, eradicate disease, tap the ocean depths, and encourage the arts and commerce.

Let both sides unite to heed in all corners of the earth the command of Isaiah—to “undo the heavy burdens . . . [and] let the oppressed go free.”

And if a beachhead of cooperation may push back the jungle of suspicion, let both sides join in creating a new endeavor, not a new balance of power, but a new world of law, where the strong are just and the weak secure and the peace preserved.

All this will not be finished in the first one hundred days. Nor will it be finished in the first one thousand days, nor in the life of this administration, nor even perhaps in our lifetime on this planet. But let us begin.

In your hands, my fellow citizens, more than mine, will rest the final success or failure of our course. Since this country was founded each generation of Americans has been summoned to give testimony to its national loyalty. The graves of young Americans who answered the call to service surround the globe.

Now the trumpet summons us again—not as a call to bear arms, though arms we need—not as a call to battle, though embattled we are—but a call to bear the burden of a long twilight struggle, year in and year out, “rejoicing in hope, patient in tribulation”—a struggle against the common enemies of man: tyranny, poverty, disease, and war itself.

Can we forge against these enemies a grand and global alliance, North and South, East and West, that can assure a more fruitful life for all mankind? Will you join in that historic effort?

In the long history of the world, only a few generations have been granted the role of defending freedom in its hour of maximum danger. I do not shrink from this responsibility—I welcome it. I do not believe that any

of us would exchange places with any other people or any other generation. The energy, the faith, the devotion which we bring to this endeavor will light our country and all who serve it—and the glow from that fire can truly light the world.

And so, my fellow Americans: ask not what your country can do for you—ask what you can do for your country.

My fellow citizens of the world: ask not what America will do for you, but what together we can do for the freedom of man.

Finally, whether you are citizens of America or citizens of the world, ask of us here the same high standards of strength and sacrifice which we ask of you. With a good conscience our only sure reward, with history the final judge of our deeds, let us go forth to lead the land we love, asking His blessing and His help, but knowing that here on earth God's work must truly be our own.

83. Fidel Castro: Second Declaration of Havana, 4 February 1962

Introduction

On 4 February 1962, Cuban communist leader Fidel Castro delivered this address, which became known as the Second Declaration of Havana. In it, he stated his goal of creating a communist society in Cuba based on the ideology of Marxism-Leninism, with its principles of spreading communist revolution around the globe. Such a goal ensured that Cuba openly challenged U.S.-based notions of democracy and capitalism, positioning itself as the leader of international revolution in Latin America. Castro was motivated to make such a strong statement in part because the U.S. government had already launched several covert operations in Cuba in an attempt to overthrow his government. Seeking protection and security, Castro, in response, turned to the Soviet Union, which was by then supplying him with substantial military aid, and offered to provide bases in Cuba for Soviet nuclear missiles. Soviet leader Nikita Khrushchev accepted and sent substantial numbers of Soviet short- and medium-range missiles to Cuba, together with thousands of Soviet troops. U.S. surveillance planes discovered the missiles in October 1962, sparking what was probably the most dangerous crisis of the entire Cold War.

Primary Source

[. . .]

What is Cuba's history but that of Latin America? What is the history of Latin America but the history of Asia, Africa, and Oceania? And what is the history of all these peoples but the history of the cruelest exploitation of the world by imperialism?

At the end of the last century and the beginning of the present, a handful of economically developed nations had divided the world among themselves subjecting two thirds of humanity to their economic and political domination. Humanity was forced to work for the dominating classes of the group of nations which had a developed capitalist economy.

The historic circumstances which permitted certain European countries and the United States of North

America to attain a high industrial development level, put them in a position which enabled them to subject and exploit the rest of the world.

What motives lay behind this expansion of the industrial powers? Were they moral, "civilizing" reasons, as they claimed? No: their motives were economic.

The discovery of America sent the European conquerors across the seas to occupy and to exploit the lands and peoples of other continents; the lust for riches was the basic motivation for their conduct. America's discovery took place in the search for shorter ways to the Orient, whose products Europe valued highly.

A new social class, the merchants and the producers of articles manufactured for commerce, arose from the feudal society of lords and serfs in the latter part of the Middle Ages.

The lust for gold promoted the efforts of the new class. The lust for profit was the incentive of their behavior throughout its history. As industry and trade developed, the social influence of the new class grew. The new productive forces maturing in the midst of the feudal society increasingly clashed with feudalism and its serfdom, its laws, its institutions, its philosophy, its morals, its art, and its political ideology.

[. . .]

Since the end of the Second World War, the Latin American nations are becoming pauperized constantly. The value of their exports keeps diminishing, costs of imports increase, the per capita income falls. The dreadful percentages of child death rate do not decrease, the number of illiterates grows higher, the peoples lack employment, land, adequate housing, schools, hospitals, communication systems and the means of subsistence. On the other hand, North American investments exceed 10 billion dollars. Latin America, moreover, supplies cheap raw materials and pays high prices for manufactured articles. Like the first Spanish conquerors, who exchanged mirrors and trinkets with the Indians for silver and gold, so the United States trades with Latin America. To hold on to this torrent of wealth, to take greater possession of America's resources and to exploit its long-suffering peoples: this is what is hidden behind the military pacts, the military missions and Washington's diplomatic lobbying.

[. . .]

Wherever roads are closed to the peoples, where repression of workers and peasants is fierce, where the domination of Yankee monopolies is strongest, the first and most important lesson is to understand that it is neither just nor correct to divert the peoples with the vain and fanciful illusion that the dominant classes can be uprooted by legal means which do not and will not exist. The ruling classes are entrenched in all positions of state power. They monopolize the teaching field. They dominate all means of mass communication.

They have infinite financial resources. Theirs is a power which the monopolies and the ruling few will defend by blood and fire with the strength of their police and their armies.

The duty of every revolutionary is to make revolution. We know that in America and throughout the world the revolution will be victorious. But revolutionaries cannot sit in the doorways of their homes to watch the corpse of imperialism pass by. The role of Job does not behoove a revolutionary. Each year by which America's liberation may be hastened will mean millions of children rescued from death, millions of minds freed for learning, infinitudes of sorrow spared the peoples. Even though the Yankee imperialists are preparing a bloodbath for America they will not succeed in drowning the people's struggles. They will evoke universal hatred against themselves. This will be the last act of their rapacious and caveman system.

[. . .]

The People of Cuba

The National General Assembly of the People of Cuba hereby resolves, that this Declaration be known as the Second Declaration of Havana and be translated into the principal languages and distributed throughout the world. It also agrees to request from all the friends of the Cuban Revolution in Latin America that it be widely spread among the working, peasant, student and intellectual masses of the fraternal lands of this continent. We certify that the Second Declaration of Havana was read and approved by the National General Assembly of the People of Cuba, held in the Martí Plaza, Havana, Cuba, Free Territory of America, on 4 February 1962.

84. Port Huron Manifesto, 1962

Introduction

In the early 1960s, young people in the United States, inspired by President John F. Kennedy's appeal to "ask what you can do for your country," actively sought to change their society and the world for the better. Many took part in the civil rights movement, but they envisaged trying to extend the cause of reform to cover other aspects of political life. Students for a Democratic Society (SDS), the decade's most significant manifestation of student radicalism, was founded in 1960 and constituted part of the New Left movement. The first major statement published by the SDS was the Port Huron Manifesto of June 1962, written at a convention of the organization held in Port Huron, Michigan. Its major author was the youthful Tom Hayden, a student from a working-class family at the University of Michigan. The manifesto reflected the dissatisfaction that, despite the comfortable lives they enjoyed, many young Americans of the late 1950s and early 1960s felt toward their society. The ongoing civil rights struggle convinced them that many African Americans were living in conditions of personal and social degradation that contravened the basic promises of equality enshrined in the American way of life and democratic tradition. The Cold War, by this time simply an accepted part of the backdrop of life in the United States, exposed all Americans to the risk of nuclear destruction, while the American armed forces and business had major "economic and military investments in the Cold War status quo." Despite the habitual employment of the rhetoric of democracy, the American political system, the manifesto charged, was dominated by "the irresponsible power of military and business interests," with no demand for fundamental structural change. In an era of economic prosperity, poverty and deprivation were widespread, and work was often unfulfilling. Individuals felt powerless, unable to make any major changes in their community. In idealistic and sweepingly ambitious terms, the manifesto called for the creation of a "new left," dedicated to revitalizing society, politics, the international system, and human relationships and objectives. Among the specific goals were the fairer distribution of resources, tackling both urban and rural poverty, forcing corporations to behave with a sense of public responsibility, strengthening the existing labor movement, and cutting military spending. Students were urged to reform their universities, to make them less bureaucratic and more democratic and responsive to student wishes to focus on social reform and change. The United States, in company with the Soviet Union, was criticized for failing to work for or implement international peace. Both nations were urged to make serious efforts to effect nuclear disarmament and end the Cold War, including the international acceptance by all parties of the divisions of such contentious states as Korea, China, Germany, and Vietnam. Hayden, president of SDS for the academic year 1962–1963, included this criticism of U.S. international policies over the wishes of more conciliatory colleagues, who preferred to avoid controversy by restricting their caveats merely to Soviet policies. The authors of the Port Huron Manifesto demonstrated an almost limitless confidence in what it might be possible for young Americans to achieve, a near utopian faith in their ability to change society and the world that was characteristic of the early 1960s. By the mid-1960s, and especially after President Lyndon B. Johnson committed American ground forces to Vietnam in the spring of 1965, the organization also focused heavily on opposition to the Vietnam War, helping to organize student resistance to the draft that made all young American men liable to conscription and organizing massive antiwar demonstrations and teach-ins. By 1969 SDS had disintegrated into numerous competing factions, divided in terms of political ideology and also over the issue of whether or not to endorse violence as a political tool. By 1972 SDS was defunct, although several of its members, including Hayden, subsequently became significant mainstream political figures.

Primary Source

Introduction: Agenda for a Generation

We are people of this generation, bred in at least modest comfort, housed now in universities, looking uncomfortably to the world we inherit.

When we were kids the United States was the wealthiest and strongest country in the world; the only one with the atom bomb, the least scarred by modern war, an initiator of the United Nations that we thought would distribute Western influence throughout the

world. Freedom and equality for each individual, government of, by, and for the people—these American values we found good principles by which we could live as men. Many of us began maturing in complacency.

As we grew, however, our comfort was penetrated by events too troubling to dismiss. First, the permeating and victimizing fact of human degradation, symbolized by the Southern struggle against racial bigotry, compelled most of us from silence to activism. Second, the enclosing fact of the Cold War, symbolized by the presence of the Bomb, brought awareness that we ourselves, and our friends, and millions of abstract “others” we knew more directly because of our common peril, might die at any time. We might deliberately ignore, or avoid, or fail to feel all other human problems, but not these two, for these were too immediate and crushing in their impact, too challenging in the demand that we as individuals take the responsibility for encounter and resolution.

While these and other problems either directly oppressed us or rankled our consciences and became our own subjective concerns, we began to see complicated and disturbing paradoxes in our surrounding America. The declaration “all men are created equal . . .” rang hollow before the facts of Negro life in the South and the big cities of the North. The proclaimed peaceful intentions of the United States contradicted its economic and military investments in the Cold War status quo.

We witnessed, and continue to witness, other paradoxes. With nuclear energy whole cities can easily be powered, yet the dominant nation-states seem more likely to unleash destruction greater than that incurred in all wars of human history. Although our own technology is destroying old and creating new forms of social organization, men still tolerate meaningless work and idleness. While two-thirds of mankind suffers under nourishment, our own upper classes revel amidst superfluous abundance. Although world population is expected to double in forty years, the nations still tolerate anarchy as a major principle of international conduct and uncontrolled exploitation governs the sapping of the earth’s physical resources. Although mankind desperately needs revolutionary leadership,

America rests in national stalemate, its goals ambiguous and tradition-bound instead of informed and clear, its democratic system apathetic and manipulated rather than “of, by, and for the people.”

Not only did tarnish appear on our image of American virtue, not only did disillusion occur when the hypocrisy of American ideals was discovered, but we began to sense that what we had originally seen as the American Golden Age was actually the decline of an era. The worldwide outbreak of revolution against colonialism and imperialism, the entrenchment of totalitarian states, the menace of war, overpopulation, international disorder, supertechnology—these trends were testing the tenacity of our own commitment to democracy and freedom and our abilities to visualize their application to a world in upheaval.

Our work is guided by the sense that we may be the last generation in the experiment with living. But we are a minority—the vast majority of our people regard the temporary equilibriums of our society and world as eternally functional parts. In this is perhaps the outstanding paradox; we ourselves are imbued with urgency, yet the message of our society is that there is no viable alternative to the present. Beneath the reassuring tones of the politicians, beneath the common opinion that America will “muddle through,” beneath the stagnation of those who have closed their minds to the future, is the pervading feeling that there simply are no alternatives, that our times have witnessed the exhaustion not only of Utopias, but of any new departures as well. Feeling the press of complexity upon the emptiness of life, people are fearful of the thought that at any moment things might be thrust out of control. They fear change itself, since change might smash whatever invisible framework seems to hold back chaos for them now. For most Americans, all crusades are suspect, threatening. The fact that each individual sees apathy in his fellows perpetuates the common reluctance to organize for change. The dominant institutions are complex enough to blunt the minds of their potential critics, and entrenched enough to swiftly dissipate or entirely repel the energies of protest and reform, thus limiting human expectancies. Then, too, we are a materially improved society, and by our own improvements we seem to have weakened the case for further change.

Some would have us believe that Americans feel contentment amidst prosperity—but might it not better be called a glaze above deeply felt anxieties about their role in the new world? And if these anxieties produce a developed indifference to human affairs, do they not as well produce a yearning to believe that there is an alternative to the present, that something can be done to change circumstances in the school, the workplaces, the bureaucracies, the government? It is to this latter yearning, at once the spark and engine of change, that we direct our present appeal. The search for truly democratic alternatives to the present, and a commitment to social experimentation with them, is a worthy and fulfilling human enterprise, one which moves us and, we hope, others today. On such a basis do we offer this document of our convictions and analysis: as an effort in understanding and changing the conditions of humanity in the late twentieth century, an effort rooted in the ancient, still unfulfilled conception of man attaining determining influence over his circumstances of life.

Values

Making values explicit—an initial task in establishing alternatives—is an activity that has been devalued and corrupted. The conventional moral terms of the age, the politician moralities—“free world,” “people’s democracies”—reflect realities poorly, if at all, and seem to function more as ruling myths than as descriptive principles. But neither has our experience in the universities brought us moral enlightenment. Our professors and administrators sacrifice controversy to public relations; their curriculums change more slowly than the living events of the world; their skills and silence are purchased by investors in the arms race; passion is called unscholastic. The questions we might want raised—what is really important? can we live in a different and better way? if we wanted to change society, how would we do it?—are not thought to be questions of a “fruitful, empirical nature,” and thus are brushed aside.

Unlike youth in other countries we are used to moral leadership being exercised and moral dimensions being clarified by our elders. But today, for us, not even the liberal and socialist preachments of the past seem ade-

quate to the forms of the present. Consider the old slogans: Capitalism Cannot Reform Itself, United Front Against Fascism, General Strike, All Out on May Day. Or, more recently, No Cooperation with Commies and Fellow Travelers, Ideologies Are Exhausted, Bipartisanship, No Utopias. These are incomplete, and there are few new prophets. It has been said that our liberal and socialist predecessors were plagued by vision without program, while our own generation is plagued by program without vision. All around us there is astute grasp of method, technique—the committee, the ad hoc group, the lobbyist, the hard and soft sell, the make, the projected image—but, if pressed critically, such expertise is incompetent to explain its implicit ideals. It is highly fashionable to identify oneself by old categories, or by naming a respected political figure, or by explaining “how we would vote” on various issues.

Theoretic chaos has replaced the idealistic thinking of old—and, unable to reconstitute theoretic order, men have condemned idealism itself. Doubt has replaced hopefulness—and men act out a defeatism that is labeled realistic. The decline of utopia and hope is in fact one of the defining features of social life today. The reasons are various: the dreams of the older left were perverted by Stalinism and never re-created; the congressional stalemate makes men narrow their view of the possible; the specialization of human activity leaves little room for sweeping thought; the horrors of the twentieth century symbolized in the gas ovens and concentration camps and atom bombs, have blasted hopefulness. To be idealistic is to be considered apocalyptic, deluded. To have no serious aspirations, on the contrary, is to be “tough-minded.”

In suggesting social goals and values, therefore, we are aware of entering a sphere of some disrepute. Perhaps matured by the past, we have no formulas, no closed theories—but that does not mean values are beyond discussion and tentative determination. A first task of any social movement is to convince people that the search for orienting theories and the creation of human values is complex but worthwhile. We are aware that to avoid platitudes we must analyze the concrete conditions of social order. But to direct such an analysis we

must use the guideposts of basic principles. Our own social values involve conceptions of human beings, human relationships, and social systems.

We regard men as infinitely precious and possessed of unfulfilled capacities for reason, freedom, and love. In affirming these principles we are aware of countering perhaps the dominant conceptions of man in the twentieth century: that he is a thing to be manipulated, and that he is inherently incapable of directing his own affairs. We oppose the depersonalization that reduces human being to the status of things—if anything, the brutalities of the twentieth century teach that means and ends are intimately related, that vague appeals to “posterity” cannot justify the mutilations of the present. We oppose, too, the doctrine of human incompetence because it rests essentially on the modern fact that men have been “competently” manipulated into incompetence—we see little reason why men cannot meet with increasing skill the complexities and responsibilities of their situation, if society is organized not for minority, but for majority, participation in decision-making.

Men have unrealized potential for self-cultivation, self-direction, self-understanding, and creativity. It is this potential that we regard as crucial and to which we appeal, not to the human potentiality for violence, unreason, and submission to authority. The goal of man and society should be human independence: a concern not with image of popularity but with finding a meaning in life that is personally authentic; a quality of mind not compulsively driven by a sense of powerlessness, nor one which unthinkingly adopts status values, nor one which represses all threats to its habits, but one which has full, spontaneous access to present and past experiences, one which easily unites the fragmented parts of personal history, one which openly faces problems which are troubling and unresolved; one with an intuitive awareness of possibilities, an active sense of curiosity, an ability and willingness to learn.

This kind of independence does not mean egotistic individualism—the object is not to have one’s way so much as it is to have a way that is one’s own. Nor do we deify man—we merely have faith in his potential.

Human relationships should involve fraternity and honesty. Human interdependence is contemporary fact; human brotherhood must be willed, however, as a condition of future survival and as the most appropriate form of social relations. Personal links between man and man are needed, especially to go beyond the partial and fragmentary bonds of function that bind men only as worker to worker, employer to employee, teacher to student, American to Russian.

Loneliness, estrangement, isolation describe the vast distance between man and man today. These dominant tendencies cannot be overcome by better personnel management, nor by improved gadgets, but only when a love of man overcomes the idolatrous worship of things by man.

As the individualism we affirm is not egoism, the selflessness we affirm is not self-elimination. On the contrary, we believe in generosity of a kind that imprints one’s unique individual qualities in the relation to other men, and to all human activity. Further, to dislike isolation is not to favor the abolition of privacy; the latter differs from isolation in that it occurs or is abolished according to individual will. We would replace power rooted in possession, privilege, or circumstance by power and uniqueness rooted in love, reflectiveness, reason, and creativity.

As a social system we seek the establishment of a democracy of individual participation, governed by two central aims: that the individual share in those social decisions determining the quality and direction of his life; that society be organized to encourage independence in men and provide the media for their common participation.

In a participatory democracy, the political life would be based in several root principles:

- that decision-making of basic social consequence be carried on by public groupings;
- that politics be seen positively, as the art of collectively creating an acceptable pattern of social relations;
- that politics has the function of bringing people out of isolation and into community, thus being a

- necessary, though not sufficient, means of finding meaning in personal life;
- that the political order should serve to clarify problems in a way instrumental to their solution; it should provide outlets for the expression of personal grievance and aspiration; opposing views should be organized so as to illuminate choices and facilitate the attainment of goals; channels should be commonly available to relate men to knowledge and to power so that private problems—from bad recreation facilities to personal alienation—are formulated as general issues.

The economic sphere would have as its basis the principles:

- that work should involve incentives worthier than money or survival. It should be educative, not stultifying; creative, not mechanical; self-directed, not manipulated, encouraging independence, a respect for others, a sense of dignity, and a willingness to accept social responsibility, since it is this experience that has crucial influence on habits, perceptions and individual ethics;
 - that the economic experience is so personally decisive that the individual must share in its full determination;
- that the economy itself is of such social importance that its major resources and means of production should be open to democratic participation and subject to democratic social regulation.

Like the political and economic ones, major social institutions—cultural, educational, rehabilitative, and others—should be generally organized with the well-being and dignity of man as the essential measure of success.

In social change or interchange, we find violence to be abhorrent because it requires generally the transformation of the target, be it a human being or a community of people, into a depersonalized object of hate. It is imperative that the means of violence be abolished and the institutions—local, national, international—that encourage non-violence as a condition of conflict be developed.

These are our central values, in skeletal form. It remains vital to understand their denial or attainment in the context of the modern world.

85. John F. Kennedy: President Kennedy and Staff Discussing the Cuban Missile Crisis, 18 October 1962

Introduction

On the morning of 16 October 1962, U.S. President John F. Kennedy learned in an intelligence briefing that a large number of Soviet missiles had been installed on the nearby island of Cuba and were apparently close to operational. Since 1959 Cuba had been ruled by a socialist revolutionary government headed by Fidel Castro, which Kennedy and his predecessor, Dwight D. Eisenhower, had both unavailingly tried to topple. The Kennedy administration regarded the secret deployment of these missiles as an unfriendly act. This news marked the beginning of fourteen days of intensive meetings among the president and his top national security advisors, the Executive Committee (Excom) of the administration's most prominent cabinet members, including Vice President Lyndon B. Johnson; Secretary of State Dean Rusk and his deputy; Secretary of Defense Robert S. McNamara and his deputy; Treasury Secretary C. Douglas Dillon; CIA Director John McCone; the Joint Chiefs of Staff (JCS); National Security Advisor McGeorge Bundy; and, on occasion, leading congressmen and senators. The question facing the president and his advisors was how they should respond. At this early stage, they were considering five graduated plans of action (Options I–V) against the missile installations, ranging from various levels of air strikes up to full scale

invasion. Rusk thought that if the United States did not react forcefully to the presence of these missiles in Cuba, it would lose all credibility with both its allies and the Soviet Union. McNamara stated his “personal” view that the presence of Soviet missiles in Cuba did not “change the military equation . . . at all” but nonetheless agreed with Rusk that their presence was “primarily a political problem.” McNamara felt that “holding the alliance together” and “conditioning [Soviet leader Nikita] Khrushchev for our future moves,” together with domestic political considerations, “all require[d] action that . . . the shift in military balance does not require.” Kennedy feared that most U.S. allies regarded its past problems with Cuba as “a fixation of the United States and not a serious military threat.” General Maxwell D. Taylor, chairman of the JCS, warned that time was not in favor of the United States, as increasing numbers of missile sites were likely to become operational on a daily basis. All those attending the meeting were clearly conscious that the situation was extremely dangerous and could easily spiral out of control into a full-scale nuclear war between the United States and the Soviet Union. Yet in the very early stages of the crisis, all the courses of action under consideration involved direct military action against Cuba. Only later did U.S. officials opt for the quarantine option, publicly demanding that the Soviet Union remove the missiles while imposing a naval blockade around Cuba.

Primary Source

[. . .]

McNamara: Mr. President, may I suggest that there are a series of alternative planned arrangements. Roman numeral I was about 50 sorties, directed solely against the known MRBMs, known as of last night, to Roman numeral V, which covers an alternative invasion plan.

All of these plans are based on one very important assumption: That we would attack, with conventional weapons, against an enemy who is not equipped with operational nuclear weapons. If there’s any possibility that the enemy is equipped with operational nuclear weapons, I’m certain the plans would have to be changed.

Last evening we were discussing the relative merits of these forms of military action, assuming that at some point military action was required. It has been the view of the Chiefs, based on discussions within the last two days, and it was certainly my view, that either Roman numeral I or Roman numeral II, very limited air strikes against very limited targets, would be quite inconclusive, very risky, and almost certainly lead to further military action prior to which we would have paid an unnecessary price for the gains we had achieved.

And, therefore, the Chiefs and I would certainly have recommended last night, and I would recommend more

strongly today, that we not consider undertaking either Roman numeral I or Roman numeral II, so that we would consider nothing short of a full invasion as a military action. And this only on the assumption that we’re operating against a force that does not possess operational nuclear weapons.

President Kennedy: Why does this information change the recommendation?

McNamara: Last evening, it was my personal belief that there were more targets than we knew of, and it was probable there would be more targets than we could know of at the start of anyone of these strikes. The information of this morning, I think, simply demonstrates the validity of that conclusion of last evening.

Secondly, when we’re talking of Roman numeral I, it’s a very limited strike against MRBMs only, and it leaves in existence IL-28s with nuclear weapon-carrying capability, and a number of other aircraft with nuclear weapon-carrying capability, and aircraft with strike capability that could be exercised during our attack, or immediately following our attack on the MRBMs, with great possible risk of loss to either Guantanamo and/or the eastern coast of the U.S.

I say great loss, I’m not thinking in terms of tens of thousands, but I’m thinking in terms of sporadic attacks against our civilian population, which would

lead to losses I think we would find it hard to justify in relation to the alternative courses open to us, and in relation to the very limited accomplishment of our limited number of strikes.

Robert Kennedy: What about alternative number II, on the basis that you're going against offensive weapons. You're going to go against the missiles, and you're going to go against the planes. What's the argument against that? I mean that would prevent them from knocking our population base.

McNamara: It must be preferred over number I, in my opinion. It would have to be larger than is shown now because of the additional number of targets required, and it gets very close to alternative III, compared to the number of sorties. The number II [strike] was prepared before we had the additional information of last night's [photo] interpretation. We showed a hundred sorties. I think it more likely that number II, with the information of now, and the information we're likely to have today and tomorrow, will turn into number III, which is a 200-sortie strike. I doubt very much we could stop there.

Taylor: I would agree with that statement of the Secretary's. Really, II is hardly possible now. We're really talking about III, because we have to take the SAM sites out, if you want to go for [unclear] airfield strikes [unclear] targets related [unclear]. I think that's particularly true if we expect to have follow-up surveillance. SAM site facilities have become operational, and even though we take out [unclear] I and II, we [are] still going to have a requirement to know what's going on. [unclear] a long air war I would say, [unclear] under I, II, or III, actually.

President Kennedy: [With] number II, you don't need to take out the SAM sites before they become operational.

Taylor: They'll be operational at the same time.

McNamara: We have almost certainly added 2 more targets than are indicated here. Sixteen targets shown. We have at least 3 more targets from evidence since last night, and we will certainly have some more tonight and

tomorrow. And, therefore, II merges very directly into III. If the SAM sites become operational, II becomes III because, in a very real sense, that's maybe the . . .

President Kennedy: Let me ask you this: If I remember, [we're] talking about III versus V, isn't it?

McNamara: Yes, sir.

President Kennedy: Well, now, the advantage of III is that you would hope to do it in a day.

McNamara: Yes. It could be done in a day.

President Kennedy: Invasion, that would be V, would be 7, 8, or 9 days, with all the consequences . . .

McNamara: That is correct.

President Kennedy: We would increase the tension.

Now, if we did III, we would assume that by the end of the day their ability to use planes against us—after all, we don't have that much range, so they'd have to come back to the field and [unclear]. You would say—

McNamara: You would assume, by the end of the day, their air force could be nearly destroyed. I say nearly because there might be a few sporadic weapons around.

Taylor: And I would just want to say that there'll never be a guarantee of 100 percent.

President Kennedy: As least as far as their [unclear]. I would think you [the Soviets would] have to go on the defensive, are not going to commit nuclear weapons to be used against the United States from Cuba unless you're going to be using them for everywhere.

McNamara: Well, I'm not certain they can stop it, this is why I emphasized the plan I did. I don't believe the Soviets would authorize their use against the U.S., but they might nonetheless be used, and, therefore, I underline this assumption, that all of these cases are premised on the assumption there are no operational nuclear weapons there.

If there's any possibility of that I would strongly recommend that these plans be modified substantially. Now, I evaded the question Secretary Rusk asked me, and I evaded it because I wanted this information. This stuff first. The question he asked me was: How does, in effect, how does the introduction of these weapons to Cuba change the military equation, the military position of the U.S. versus the U.S.S.R.?

And, speaking strictly in military terms, really in terms of weapons, it doesn't change it at all, in my personal opinion. My personal views are not shared by the Chiefs. They are not shared by many others in the Department. However, I feel very strongly on this point, and I think I could argue a case, a strong case, in defense of my position.

This doesn't really have any bearing on the issue, in my opinion, because it is not a military problem that we're facing. It's a political problem. It's a problem of holding the alliance together. It's a problem of properly conditioning Khrushchev for our future moves. And the problem of holding the alliance together, and the problem of conditioning Khrushchev for our future moves, the problem of dealing with our domestic public, all requires action that, in my opinion, the shift in military balance does not require.

President Kennedy: On holding the alliance. Which one would strain the alliance more: this attack by us on Cuba, which most allies regard as a fixation of the United States and not a serious military threat? And you'd have to outline a condition you have to go in, before they would accept, support our action against Cuba, because they think that we're slightly demented on this subject.

So there isn't any doubt that, whatever action we take against Cuba, no matter how good our films are, or what this is going to cause in Latin America, a lot of people would regard this as a mad act by the United States, which is due to a loss of nerve because they will argue that taken at its worst, the presence of these missiles really doesn't change the balance. We started to think the other way, I mean, the view in America. But what's everybody else going to think when it's done to this guy?

McNamara: Aren't the others going to think exactly as I do?

Taylor: May I comment, sir?

With regard to what we've just seen in intelligence, it seems to me three things stand out. The first is the very rapid energy with which they are developing the movement in the first 24 hours since Sunday [October 14]. They are moving very fast to make these weapons operational.

Whether they're operational today? I would agree with the Secretary that probably not, but I don't think anyone can assure you that at any time, that at least one or more of these missiles will not become operational.

Now, number two, the IL-28s. We've been expecting this. But now it turns up in a very powerful location, I would say, and [unclear] ideal place to take them out.

Third, the IRBMs. This really put a new perspective on the way I look at it [this problem]. Yesterday, when we only had a few of the mobile type, I was far from convinced that the big showdown would be required. And we're getting new pictures, and the vision of an island that's going to be a forward base of major importance to the Soviets.

All of the targets that we're seeing, however, are the kind that air attack [words unclear] we can't take this threat out by actions from here. So we had argued more and more that if, indeed, you're going to prevent that kind of thing . . .

Bundy: But you don't mean that you can't prevent it in the sense of stopping it from happening the next day. You mean that—

Taylor: For the long pull—

Bundy:—you're going to have to take the island?

Taylor: Yes, you can't destroy a hole in the ground. We can't prevent these constructions going ahead by any threat. Diplomatic action might stop it, but a totally

diplomatic action [unclear] will not stop a threat of this kind from building up.

Now, if those statements are roughly correct, then what would it mean in terms of time? Well, it means that, insofar as getting the mobile missiles out, time is of the essence. But the faster the better, because it's not

already too late. And I would say that, again, we're not sure that it is not too late, with respect to one or more of the missiles.

86. John F. Kennedy: Cuban Missile Crisis Speech, 22 October 1962

Introduction

The nuclear arms race between the Soviet Union and the United States intensified during the 1950s and 1960s, triggering the most dangerous crisis of the entire Cold War. In the late 1950s many Americans, including Democratic presidential candidate John F. Kennedy during the 1960 election campaign, alleged that a missile gap existed between the Soviet Union and the United States, with the Soviets far surpassing their American rivals in the number of missiles deployed. In reality, the U.S. edge in missiles targeted on the Soviet Union was approximately seventeen to one. Soviet leader Nikita Khrushchev was eager to reduce this imbalance. After a botched American-backed invasion attempt in March 1961 to overthrow the left-wing procommunist regime that Fidel Castro had established in Cuba in 1959, less than 100 miles from American soil, Khrushchev also sought to protect the Cuban revolutionary from further U.S. efforts to destabilize and topple him. In 1962 the Soviet Union therefore secretly installed substantial numbers of short- and medium-range missiles in Cuba, protected by more than 40,000 Soviet troops. These weapons were capable of reaching every American city except Seattle. On 17 October 1962, photographs taken by an American U-2 spy plane revealed the presence of Soviet missile installations and troops, the beginning of eleven days of excruciating tensions. Kennedy and his advisors debated the various options intensely, initially in secret. The choices before them were whether to launch a preemptive strike to destroy the missiles, to mount a full-scale invasion of Cuba, or to follow the more moderate course of mounting a naval blockade of the island. American officials were not aware that some of the missiles were already operational and underestimated the number of Soviet military personnel on the island. On 22 October 1962, Kennedy spoke to the American people in a televised address, explaining to them the developments of the previous week and announcing the imposition of a naval quarantine, or blockade, of Cuba. Several tense days of Soviet-American negotiations ensued before the Soviet Union agreed to remove the missiles in return for a U.S. pledge that American forces would not invade Cuba and a secret understanding that assorted North Atlantic Treaty Organization (NATO) nuclear missiles deployed in Turkey, bordering on the Soviet Union, would also be dismantled. The so-called Cuban Missile Crisis was the closest that the Cold War ever came to exploding into an actual nuclear war between the United States and the Soviet Union. It had a sobering impact on both great powers, impelling them to behave more cautiously in the future. Kennedy, whose relatively low-key and moderate approach toward the crisis was at odds with much of his earlier bellicose Cold War rhetoric, as seen in his 1961 inaugural address, showed a new interest in arms control after the crisis, and in 1963 he signed a treaty with the Soviet Union banning the atmospheric testing of nuclear weapons. The perceived Soviet humiliation during the Cuban Missile Crisis was one reason that an internal Kremlin coup removed Khrushchev from power in the summer of 1964. The sense of Soviet impotence during the crisis also led the Russian military to mount a major nuclear buildup for the rest of the 1960s, which brought the Soviet Union to nuclear parity with the United States but also seriously strained and weakened the Soviet economy.

Primary Source

Good evening, my fellow citizens. This Government, as promised, has maintained the closest surveillance of the

Soviet military build-up on the island of Cuba. Within the past week unmistakable evidence has established the fact that a series of offensive missile sites is now in

preparation on that imprisoned island. The purposes of these bases can be none other than to provide a nuclear strike capability against the Western Hemisphere.

Upon receiving the first preliminary hard information of this nature last Tuesday morning (October 16) at 9:00 A.M., I directed that our surveillance be stepped up. And having now confirmed and completed our evaluation of the evidence and our decision on a course of action, this Government feels obliged to report this new crisis to you in fullest detail.

The characteristics of these new missile sites indicate two distinct types of installations. Several of them include medium-range ballistic missiles capable of carrying a nuclear warhead for a distance of more than 1,000 nautical miles. Each of these missiles, in short, is capable of striking Washington, D.C., the Panama Canal, Cape Canaveral, Mexico City, or any other city in the southeastern part of the United States, in Central America, or in the Caribbean area.

Additional sites not yet completed appear to be designed for intermediate-range ballistic missiles capable of traveling more than twice as far—and thus capable of striking most of the major cities in the Western Hemisphere, ranging as far north as Hudson Bay, Canada, and as far south as Lima, Peru. In addition, jet bombers, capable of carrying nuclear weapons, are now being uncased and assembled in Cuba, while the necessary air bases are being prepared.

This urgent transformation of Cuba into an important strategic base—by the presence of these large, long-range, and clearly offensive weapons of sudden mass destruction—constitutes an explicit threat to the peace and security of all the Americas, in flagrant and deliberate defiance of the Rio Pact of 1947, the traditions of this nation and Hemisphere, the joint Resolution of the 87th Congress, the Charter of the United Nations, and my own public warnings to the Soviets on September 4 and 13.

This action also contradicts the repeated assurances of Soviet spokesmen, both publicly and privately delivered, that the arms build-up in Cuba would retain its original defensive character and that the Soviet Union

had no need or desire to station strategic missiles on the territory of any other nation.

The size of this undertaking makes clear that it has been planned for some months. Yet only last month, after I had made clear the distinction between any introduction of ground-to-ground missiles and the existence of defensive antiaircraft missiles, the Soviet Government publicly stated on September 11 that, and I quote, “The armaments and military equipment sent to Cuba are designed exclusively for defensive purposes,” and, and I quote the Soviet Government, “There is no need for the Soviet Government to shift its weapons for a retaliatory blow to any other country, for instance Cuba,” and that, and I quote the Government, “The Soviet Union has so powerful rockets to carry these nuclear warheads that there is no need to search for sites for them beyond the boundaries of the Soviet Union.” That statement was false.

Only last Thursday, as evidence of this rapid offensive build-up was already in my hand, Soviet Foreign Minister Gromyko told me in my office that he was instructed to make it clear once again, as he said his Government had already done, that Soviet assistance to Cuba, and I quote, “pursued solely the purpose of contributing to the defense capabilities of Cuba,” that, and I quote him, “training by Soviet specialists of Cuban nationals in handling defensive armaments was by no means offensive,” and that “if it were otherwise,” Mr. Gromyko went on, “the Soviet Government would never become involved in rendering such assistance.” That statement also was false.

Neither the United States of America nor the world community of nations can tolerate deliberate deception and offensive threats on the part of any nation, large or small. We no longer live in a world where only the actual firing of weapons represents a sufficient challenge to a nation’s security to constitute maximum peril. Nuclear weapons are so destructive and ballistic missiles are so swift that any substantially increased possibility of their use or any sudden change in their deployment may well be regarded as a definite threat to peace.

For many years both the Soviet Union and the United States, recognizing this fact, have deployed strategic

nuclear weapons with great care, never upsetting the precarious status quo which insured that these weapons would not be used in the absence of some vital challenge. Our own strategic missiles have never been transferred to the territory of any other nation under a cloak of secrecy and deception; and our history, unlike that of the Soviets since the end of World War II, demonstrates that we have no desire to dominate or conquer any other nation or impose our system upon its people. Nevertheless, American citizens have become adjusted to living daily on the bull's eye of Soviet missiles located inside the U.S.S.R. or in submarines.

In that sense missiles in Cuba add to an already clear and present danger—although it should be noted the nations of Latin America have never previously been subjected to a potential nuclear threat. But this secret, swift, and extraordinary build-up of Communist missiles—in an area well known to have a special and historical relationship to the United States and the nations of the Western Hemisphere, in violation of Soviet assurances, and in defiance of American and hemispheric policy—this sudden, clandestine decision to station strategic weapons for the first time outside of Soviet soil—is a deliberately provocative and unjustified change in the status quo which cannot be accepted by this country if our courage and our commitments are ever to be trusted again by either friend or foe.

[. . .]

Acting, therefore, in the defense of our own security and of the entire Western Hemisphere, and under the authority entrusted to me by the Constitution as endorsed by the resolution of the Congress, I have directed that the following initial steps be taken immediately:

First: To halt this offensive build-up, a strict quarantine on all offensive military equipment under shipment to Cuba is being initiated. All ships of any kind bound for Cuba from whatever nation or port will, if found to contain cargoes of offensive weapons, be turned back: This quarantine will be extended, if needed, to other types of cargo and carriers. We are not at this time, however, denying the necessities of life as the Soviets attempted to do in their Berlin blockade of 1948.

Second: I have directed the continued and increased close surveillance of Cuba and its military build-up. The Foreign Ministers of the Organization of American States in their communiqué of October 3 rejected secrecy on such matters in this Hemisphere. Should these offensive military preparations continue, thus increasing the threat to the Hemisphere, further action will be justified. I have directed the Armed Forces to prepare for any eventualities; and I trust that in the interests of both the Cuban people and the Soviet technicians at the sites, the hazards to all concerned of continuing this threat will be recognized.

Third: It shall be the policy of this nation to regard any nuclear missile launched from Cuba against any nation in the Western Hemisphere as an attack by the Soviet Union on the United States, requiring a full retaliatory response upon the Soviet Union.

Fourth: As a necessary military precaution I have re-inforced our base at Guantanamo, evacuated today the dependents of our personnel there, and ordered additional military units to be on a standby alert basis.

Fifth: We are calling tonight for an immediate meeting of the Organ of Consultation, under the Organization of American States, to consider this threat to hemispheric security and to invoke articles six and eight of the Rio Treaty in support of all necessary action. The United Nations Charter allows for regional security arrangements—and the nations of this Hemisphere decided long ago against the military presence of outside powers. Our other allies around the world have also been alerted.

Sixth: Under the Charter of the United Nations, we are asking tonight that an emergency meeting of the Security Council be convoked without delay to take action against this latest Soviet threat to world peace. Our resolution will call for the prompt dismantling and withdrawal of all offensive weapons in Cuba, under the supervision of United Nations observers, before the quarantine can be lifted.

Seventh and finally: I call upon Chairman Khrushchev to halt and eliminate this clandestine, reckless, and provocative threat to world peace and to stable relations

between our two nations. I call upon him further to abandon this course of world domination and to join in an historic effort to end the perilous arms race and transform the history of man. He has an opportunity now to move the world back from the abyss of destruction—by returning to his Government's own words that it had no need to station missiles outside its own territory, and withdrawing these weapons from Cuba—by refraining from any action which will widen or deepen the present crisis—and then by participating in a search for peaceful and permanent solutions.

This nation is prepared to present its case against the Soviet threat to peace, and our own proposals for a peaceful world, at any time and in any forum in the Organization of American States, in the United Nations, or in any other meeting that could be useful—without limiting our freedom of action.

We have in the past made strenuous efforts to limit the spread of nuclear weapons. We have proposed the elimination of all arms and military bases in a fair and effective disarmament treaty. We are prepared to dis-

cuss new proposals for the removal of tensions on both sides—including the possibilities of a genuinely independent Cuba, free to determine its own destiny. We have no wish to war with the Soviet Union, for we are a peaceful people who desire to live in peace with all other peoples.

But it is difficult to settle or even discuss these problems in an atmosphere of intimidation. That is why this latest Soviet threat—or any other threat which is made either independently or in response to our actions this week—must and will be met with determination. Any hostile move anywhere in the world against the safety and freedom of peoples to whom we are committed—including in particular the brave people of West Berlin—will be met by whatever action is needed.

87. John F. Kennedy: Commencement Address at American University in Washington, D.C., 10 June 1963

Introduction

From the 1950s onward, American, Soviet, and European leaders alike, conscious of the dangers that full-scale nuclear warfare posed to their countries, showed considerable interest in disarmament proposals. Little that was concrete came of these, however, until the signature in the summer of 1963 by the Soviet Union and the United States of a treaty banning atmospheric nuclear testing, a practice that had previously been responsible for the release of substantial amounts of radioactive fallout. Somewhat sobered by the Cuban Missile Crisis the previous year, the originally somewhat brash President John F. Kennedy mounted a major lobbying effort to secure the ratification of this treaty by the U.S. Senate. Around the same time, he also announced his intention to mount a major initiative for peace and disarmament and to open serious discussions with the Soviet Union for this purpose. Kennedy expressed his understanding of Soviet sufferings during World War II, which he believed predisposed Russian leaders to wish to avoid future destructive conflicts. Declaring that “both the United States and its allies, and the Soviet Union and its allies, have a mutually deep interest in a just and genuine peace and in halting the arms race,” Kennedy expressed his willingness to tolerate diverse political systems while hoping that the Soviet bloc would eventually change. While affirming American commitments to the various U.S. allies, he pledged the United States to work with the Soviet Union for peace and disarmament. He also announced that the two great powers were establishing a direct telephone hot line to facilitate communication in times of crisis and thereby prevent “dangerous delays, misunderstandings, and misreadings of the other’s actions.” Kennedy’s assassination the following November and the subsequent U.S. preoccupation with the escalating Vietnam War meant that only in the early 1970s, under President Richard Nixon, did the United States and the Soviet Union sign major arms

limitation agreements. Kennedy's address nonetheless indicated a sharpened awareness by American leaders in the wake of the Cuban Missile Crisis that both great powers had a shared stake in avoiding nuclear war and in preventing an unrestrained arms race.

Primary Source

[. . .]

I have, therefore, chose this time and this place to discuss a topic on which ignorance too often abounds and the truth is to rarely perceived—yet it is the most important topic on earth: world peace.

What kind of peace do I mean? What kind of peace do we seek? Not a Pax Americana enforced on the world by American weapons of war. Not the peace of the grave or the security of the slave. I am talking about genuine peace, the kind of peace that makes life on earth worth living, the kind that enables man and nations to grow and to hope and to build a better life for their children—not merely peace for Americans but peace for all men and women—not merely peace in our time but peace for all time.

I speak of peace because of the new face of war. Total war makes no sense in an age when great powers can maintain large and relatively invulnerable nuclear forces and refuse to surrender without resort to those forces. It makes no sense in an age when a single nuclear weapon contains almost ten times the explosive force delivered by all of the allied air forces in the Second World War. It makes no sense in an age when the deadly poisons produced by a nuclear exchange would be carried by the wind and water and soil and seed to the far corners of the globe and to generations unborn.

Today the expenditure of billions of dollars every year on weapons acquired for the purpose of making sure we never need to use them is essential to keeping the peace. But surely the acquisition of such idle stockpiles—which can only destroy and never create—is not the only, much less the most efficient, means of assuring peace.

I speak of peace, therefore, as the necessary rational end of rational men. I realize that the pursuit of peace is not as dramatic as the pursuit of war—and frequently

the words of the pursuer fall on deaf ears. But we have no more urgent task.

[. . .]

First: Let us examine our attitude toward peace itself. Too many of us think it is impossible. Too many of us think it is unreal. But that is a dangerous, defeatist belief. It leads to the conclusion that war is inevitable—that mankind is doomed—that we are gripped by forces we cannot control.

We need not accept that view. Our problems are manmade—therefore, they can be solved by man. And man can be as big as he wants. No problem of human destiny is beyond human beings. Man's reason and spirit have often solved the seemingly unsolvable—and we believe they can do it again.

I am not referring to the absolute, infinite concept of universal peace and good will of which some fantasies and fanatics dream. I do not deny the values of hopes and dreams but we merely invite discouragement and incredulity by making that our only and immediate goal.

Let us focus instead on a more practical, more attainable peace—based not on a sudden revolution in human nature but on a gradual evolution in human institutions—on a series of concrete actions and effective agreements which are in the interest of all concerned. There is no single, simple key to this peace—no grand or magic formula to be adopted by one or two powers. Genuine peace must be the product of many nations, the sum of many acts. It must be dynamic, not static, changing to meet the challenge of each new generation. For peace is a process—a way of solving problems.

[. . .]

So let us persevere. Peace need not be impracticable, and war need not be inevitable. By defining our goal more clearly, by making it seem more manageable and

less remote, we can help all peoples to see it, to draw hope from it, and to move irresistibly toward it.

Second: Let us reexamine our attitude toward the Soviet Union. It is discouraging to think that their leaders may actually believe what their propagandists write. It is discouraging to read a recent authoritative Soviet text on *Military Strategy* and find, on page after page, wholly baseless and incredible claims—such as the allegation that “American imperialist circles are preparing to unleash different types of wars . . . that there is a very real threat of a preventive war being unleashed by American imperialists against the Soviet Union . . . [and that] the political aims of the American imperialists are to enslave economically and politically the European and other capitalist countries . . . [and] to achieve world domination . . . by means of aggressive wars.”

Truly, as it was written long ago: “The wicked flee when no man pursueth.” Yet it is sad to read these Soviet statements—to realize the extent of the gulf between us. But it is also a warning—a warning to the American people not to fall into the same trap as the Soviets, not to see only a distorted and desperate view of the other side, not to see conflict as inevitable, accommodations as impossible and communication as nothing more than an exchange of threats.

[. . .]

Today, should total war ever break out again—no matter how—our two countries would become the primary targets. It is an ironic but accurate fact that the two strongest powers are the two in the most danger of devastation. All we have built, all we have worked for, would be destroyed in the first 24 hours. And even in the cold war, which brings burdens and dangers to so many countries, including this Nation’s closest allies—our two countries bear the heaviest burdens. For we are both devoting massive sums of money to weapons that could be better devoted to combating ignorance, poverty and disease. We are both caught up in a vicious and dangerous cycle in which suspicion on one side breeds suspicion on the other, and new weapons beget counterweapons.

In short, both the United States and its allies, and the Soviet Union and its allies, have a mutually deep inter-

est in a just and genuine peace and in halting the arms race. Agreements to this end are in the interests of the Soviet Union as well as ours—and even the most hostile nations can be relied upon to accept and keep those treaty obligations, and only those treaty obligations, which are in their own interest.

So, let us not be blind to our differences—but let us also direct attention to our common interests and to means by which those differences can be resolved. And if we cannot end now our differences, at least we can help make the world safe for diversity. For, in the final analysis, our most basic common link is that we all inhabit this planet. We all breathe the same air. We all cherish our children’s future. And we are all mortal.

Third: Let us re-examine our attitude toward the cold war, remembering that we are not engaged in a debate, seeking to pile up debating points. We are not here distributing blame or pointing the finger of judgment. We must deal with the world as it is, and not as it might have been had history of the last eighteen years been different.

We must, therefore, preserve in the search for peace in the hope that constructive changes within the Communist bloc might bring within reach solutions which now seem beyond us. We must conduct our affairs in such a way that it becomes in the Communists’ interest to agree on a genuine peace. Above all, while defending our vital interest, nuclear powers must avert those confrontations which bring an adversary to a choice of either a humiliating retreat or a nuclear war. To adopt that kind of course in the nuclear age would be evidence only of the bankruptcy of our policy—or of a collective death-wish for the world.

To secure these ends, America’s weapons are non-provocative, carefully controlled, designed to deter, and capable of selective use. Our military forces are committed to peace and disciplined in self-restraint. Our diplomats are instructed to avoid unnecessary irritants and purely rhetorical hostility.

For we can seek a relaxation of tensions without relaxing our guard. And, for our part, we do not need to use threats to prove that we are resolute. We do not need

to jam foreign broadcasts out of fear our faith will be eroded. We are unwilling to impose our system on any unwilling people—but we are willing and able to engage in peaceful competition with any people on earth.

Meanwhile, we seek to strengthen the United Nations, to help solve its financial problems, to make it a more effective instrument for peace, to develop it into a genuine world security system—a system capable of resolving disputes on the basis of law, of insuring the security of the large and the small, and of creating conditions under which arms can finally be abolished.

At the same time we seek to keep peace inside the non-Communist world, where many nations, all of them our friends, are divided over issues which weaken Western unity, which invite Communist intervention or which threaten to erupt into war. Our efforts in West New Guinea, in the Congo, in the Middle East and in the Indian subcontinent, have been persistent and patient despite criticism from both sides. We have also tried to set an example for others—by seeking to adjust small but significant differences with our own closest neighbors in Mexico and in Canada.

Speaking of other nations, I wish to make one point clear. We are bound to many nations by alliances. These alliances exist because our concern and theirs substantially overlap. Our commitment to defend Western Europe and West Berlin, for example, stands undiminished because of the identity of our vital interests. The United States will make no deal with the Soviet Union at the expense of other nations and other peoples, not merely because they are our partners, but also because their interests and ours converge.

Our interests converge, however, not only in defending the frontiers of freedom, but in pursuing the paths of peace. It is our hope—and the purpose of allied policies—to convince the Soviet Union that she, too, should let each nation choose its own future, so long as that choice does not interfere with the choices of others. The communist drive to impose their political and economic system on others is the primary cause of world tension today. For there can be no doubt that if all nations could refrain from interfering in the self-

determination of others, then peace would be much more assured.

This will require a new effort to achieve world law—a new context for world discussions. It will require increased understanding between the Soviets and ourselves. And increased understanding will require increased contact and communications. One step in this direction is the proposed arrangement for a direct line between Moscow and Washington, to avoid on each side the dangerous delays, misunderstandings, and misreadings of the other's actions which might occur at a time of crisis.

[. . .]

I am taking this opportunity, therefore, to announce two important decisions in this regard.

First: Chairman Khrushchev, Prime Minister Macmillan, and I have agreed that high-level discussions will shortly begin in Moscow looking toward early agreement on a comprehensive test ban treaty. Our hopes must be tempered with the caution of history—but with our hopes go the hopes of all mankind.

Second: To make clear our good faith and solemn convictions on the matter, I now declare that the United States does not propose to conduct nuclear tests in the atmosphere so long as other states do not do so. We will not be the first to resume. Such a declaration is no substitute for a formal binding treaty, but I hope it will help us achieve one. Nor would such a treaty be a substitute for disarmament, but I hope it will help us achieve it.

Finally, my fellow Americans, let us examine our attitude toward peace and freedom here at home. The quality and spirit of our own society must justify and support our efforts abroad. We must show it in the dedication of our own lives—as many of you who are graduating today will have a unique opportunity to do, by serving without pay in the Peace Corps abroad or in the proposed National Service Corps here at home.

But wherever we are, we must all, in our daily lives, live up to the age-old faith that peace and freedom

walk together. In too many of our duties today, the peace is not secure because freedom is incomplete.

It is the responsibility of the executive branch at all levels of government—local, State and National—to provide and protect that freedom for all of our citizens by all means within their authority. It is the responsibility of the legislative branch at all levels, wherever that authority is not now adequate, to make it adequate. And it is the responsibility of all citizens in all sections of this country to respect the rights of all others and to respect the law of the land.

All this is not unrelated to world peace. “When a man’s ways please the Lord,” the Scriptures tell us, “he maketh even his enemies to be at peace with him.” And is not peace, in the last analysis, basically a matter of human rights—the right to live out our lives without fear of devastation—the right to breathe air as nature provided it—the right of future generations to a healthy existence?

While we proceed to safeguard our national interests, let us also safeguard human interests. And the elimi-

nation of war and arms is clearly in the interest of both. No treaty, however much it may be to the advantage of all, however tightly it may be worded, can provide absolute security against the risks of deception and evasion. But it can—if it is sufficiently effective in its enforcement and if it is sufficiently in the interests of its signers—offer far more security and far fewer risks than an unabated, uncontrolled, unpredictable arms race.

The United States, as the world knows, will never start a war. We do not want a war. We do not now expect a war. This generation of Americans has already had enough—more than enough—of war and hate and oppression. We shall be prepared if others wish it. We shall be alert to try to stop it. But we shall also do our part to build a world of peace where the weak are safe and the strong are just. We are not helpless before that task or hopeless of its success. Confident and unafraid, we labor on—not toward a strategy of annihilation but toward a strategy of peace.

88. John F. Kennedy: Remarks in the Rudolph Wilde Platz, Berlin, “Ich bin ein Berliner” Speech, 26 June 1963

Introduction

From 1958 to 1962, a protracted crisis over Berlin inflamed relations between the Western powers, on one side, and the German Democratic Republic (GDR, East Germany) and the Soviet Union, on the other. Throughout the 1950s, hundreds of thousands of East Germans, many of them well-educated professionals, chose to move to the Federal Republic of Germany (FRG, West Germany), a major propaganda and economic blow for the communist East. Often they did so simply by crossing into the western sector of Berlin, the East German capital, that remained a noncommunist enclave deep in the socialist East. Seeking to stem this hemorrhage, during the late 1950s both the Soviets and the East Germans threatened to annex West Berlin, despite its formal status as part of West Germany, and sought to force the Western occupation powers completely out of Berlin. The United States responded firmly to recurrent Soviet and East German threats, sending additional troops to Berlin and orchestrating visits by such high-profile figures as General Lucius D. Clay, U.S. military governor of West Germany during the 1948–1949 Berlin Airlift. Eventually, in August 1961, Walter Ulbricht, the East German president, chose to construct a massive and highly fortified wall to separate East and West Berlin, a barrier that made further defections close to impossible but was nonetheless a major propaganda embarrassment to the East German regime and, more broadly, the communist bloc. West Berliners were also forbidden to visit East Berlin. Visiting Germany in 1963, Kennedy forcefully affirmed the American commitment to Berlin, making the symbolic announcement “Ich bin ein Berliner.” He sought in part to allay complaints that the United States had not reacted forcefully enough to the erection of the

Berlin Wall but rather had simply acquiesced in its construction. Until its demolition in 1989, the Berlin Wall remained the epitome of the iron curtain dividing Cold War Europe.

Primary Source

[. . .]

Two thousand years ago the proudest boast was “*civis Romanus sum*.” Today, in the world of freedom, the proudest boast is “*Ich bin ein Berliner*.”

[. . .]

There are many people in the world who really don't understand, or say they don't, what is the great issue between the free world and the Communist world. Let them come to Berlin. There are some who say that communism is the wave of the future. Let them come to Berlin. And there are some who say in Europe and elsewhere we can work with the Communists. Let them come to Berlin. And there are even a few who say that it is true that communism is an evil system, but it permits us to make economic progress. *Lass' sie nach Berlin kommen*. Let them come to Berlin.

Freedom has many difficulties and democracy is not perfect, but we have never had to put a wall up to keep our people in, to prevent them from leaving us. I want to say, on behalf of my countrymen, who live many miles away on the other side of the Atlantic, who are far distant from you, that they take the greatest pride that they have been able to share with you, even from a distance, the story of the last 18 years. I know of no town, no city, that has been besieged for 18 years that still lives with the vitality and the force, and the hope and the determination of the city of West Berlin. While the wall is the most obvious and vivid demonstration of the failures of the Communist system, for all the world to see, we take no satisfaction in it, for it is, as your Mayor has said, an offense not only against history but an offense against humanity, separating families, divid-

ing husbands and wives and brothers and sisters, and dividing a people who wish to be joined together.

What is true of this city is true of Germany—real, lasting peace in Europe can never be assured as long as one German out of four is denied the elementary right of free men, and that is to make a free choice. In 18 years of peace and good faith, this generation of Germans has earned the right to be free, including the right to unite their families and their nation in lasting peace, with good will to all people. You live in a defended island of freedom, but your life is part of the main. So let me ask you as I close, to lift your eyes beyond the dangers of today, to the hopes of tomorrow, beyond the freedom merely of this city of Berlin, or your country of Germany, to the advance of freedom everywhere, beyond the wall to the day of peace with justice, beyond yourselves and ourselves to all mankind.

Freedom is indivisible, and when one man is enslaved, all are not free. When all are free, then we can look forward to that day when this city will be joined as one and this country and this great Continent of Europe in a peaceful and hopeful globe. When that day finally comes, as it will, the people of West Berlin can take sober satisfaction in the fact that they were in the front lines for almost two decades.

All free men, wherever they may live, are citizens of Berlin, and, therefore, as a free man, I take pride in the words “*Ich bin ein Berliner*.”

89. Nuclear Test Ban Treaty, 1963

Introduction

By the mid-1950s it had become apparent that tests of nuclear weapons contaminated the atmosphere with radioactive fallout, which could be highly detrimental to both human health and the environment. In March 1954 the *Lucky Dragon*, a Japanese fishing boat with a crew of twenty-three, was exposed to fallout from the Bikini Island

hydrogen bomb test. The fishermen suffered from radiation sickness, and one of them died, leading to an international furor in Japan. Scientists also demonstrated that radioactive fallout was carried around the world by the wind system and that no area was immune to it, leading to fears of cumulative genetic damage to humans and others. Negotiations among nuclear powers to ban atmospheric and underwater testing of nuclear weapons began in 1955 but foundered over issues of verification. The Cuban Missile Crisis of October 1962 gave renewed impetus to negotiations for a test ban treaty, and representatives from the Soviet Union, the United States, and Great Britain signed an agreement at Moscow on 5 August 1963. The Nuclear Test Ban Treaty was intended to be the first step toward total nuclear disarmament. It prohibited any of the signatory countries from testing nuclear weapons in outer space, the Earth's atmosphere, or underwater, although underground testing was not banned. During the two months before the treaty went into effect on 10 October, more than one hundred countries around the world added their names to the treaty. Notable exceptions were France and China, two powers that regarded the treaty as an example of collusive Soviet-American ambitions to dominate the rest of the world and reserved the right to test nuclear weapons as they saw fit.

Primary Source

TREATY BANNING NUCLEAR WEAPON TESTS IN THE ATMOSPHERE, IN OUTER SPACE AND UNDER WATER

The governments of the United States of America, the United Kingdom of Great Britain and Northern Ireland, and the Union of Soviet Socialist Republics, hereinafter referred to as the "Original Parties",

Proclaiming as their principal aim the speediest possible achievement of an agreement on general and complete disarmament under strict international control in accordance with the objectives of the United Nations which would put an end to the armaments race and eliminate the incentive to the production and testing of all kinds of weapons, including nuclear weapons,

Seeking to achieve the discontinuance of all test explosions of nuclear weapons for all time, determined to continue negotiations to this end, and desiring to put an end to the contamination of man's environment by radioactive substances,

Have agreed as follows:

ARTICLE 1

1. Each of the Parties to this Treaty undertakes to prohibit, to prevent, and not to carry out any nuclear weapon test explosion, or any other nuclear explosion, at any place under its jurisdiction or control:

- (a) in the atmosphere; beyond its limits, including outer space; or under water, including territorial waters or high seas; or

- (b) in any other environment if such explosion causes radioactive debris to be present outside the territorial limits of the State under whose jurisdiction or control such explosion is conducted. It is understood in this connection that the provisions of this subparagraph are without prejudice to the conclusion of a treaty resulting in the permanent banning of all nuclear test explosions, including all such explosions underground, the conclusion of which, as the Parties have stated in the Preamble to this Treaty, they seek to achieve.

2. Each of the Parties to this Treaty undertakes furthermore to refrain from causing, encouraging, or in any way participating in, the carrying out of any nuclear weapon test explosion, or any other nuclear explosion, anywhere which would take place in any of the environments described, or have the effect referred to, in paragraph 1 of this Article.

ARTICLE 2

1. Any Party may propose amendments to this Treaty. The text of any proposed amendment shall be submitted to the Depositary Governments which shall circulate it to all Parties to this Treaty. Thereafter, if requested to do so by one-third or more of the Parties, the Depositary Governments shall convene a conference, to which they shall invite all the Parties, to consider such amendment.

2. Any amendment to this Treaty must be approved by a majority of the votes of all the Parties to this Treaty,

including the votes of all of the Original Parties. The amendment shall enter into force for all Parties upon the deposit of instruments of ratification by a majority of all the Parties, including the instruments of ratification of all of the Original Parties.

ARTICLE 3

1. This Treaty shall be open to all States for signature. Any State which does not sign this Treaty before its entry into force in accordance with paragraph 3 of this Article may accede to it at any time.

[. .]

[. .]

ARTICLE 4

This Treaty shall be of unlimited duration.

Each Party shall in exercising its national sovereignty have the right to withdraw from the Treaty if it decides that extraordinary events, related to the subject matter of this Treaty, have jeopardized the supreme interests of its country. It shall give notice of such withdrawal to all other Parties to the Treaty three months in advance.

[. .]

90. Martin Luther King Jr.: "I Have a Dream," 28 August 1963

Introduction

By 1963, the civil rights movement demanding the equality of blacks with white Americans and the ending of legalized segregation and discrimination in the South had become a major political force in the United States. Given the stated American commitment to international freedom, democracy, and liberty, it was also potentially a considerable embarrassment to the country's Cold War position. The administration of President John F. Kennedy initially largely ignored the issue, although he did provide some assistance to African Americans who sought to enforce federal rulings and enroll in previously segregated Southern universities. In late August 1963, civil rights leaders organized the March on Washington by black Americans, an event that built on plans for a march devised by veteran civil rights leader A. Philip Randolph in 1941 as a means of pressuring the administration of President Franklin D. Roosevelt to accord African Americans more equal treatment during World War II. The highlight of this occasion was the address by the Reverend Martin Luther King Jr., a young minister who had come to prominence during the 1955–1956 black bus boycott in Montgomery, Alabama. King, who was heavily influenced by the nonviolent teachings of the Indian independence leader Mohandas Gandhi, was committed to policies of peaceful protest. He also had a gift for stirring and appealing rhetoric. His March on Washington address made adroit and moving use of imagery drawn both from the Bible and also from the American democratic tradition, urging his countrymen to live up to the principles enshrined in the Constitution, the Declaration of Independence, and the Bible. Civil rights, he proclaimed, was an issue that the United States could no longer afford to ignore. Many white Americans found King to be a nonthreatening, attractive, and persuasive black leader, and his prominence in the civil rights movement helped to win considerable public support for the Voting Rights Act of 1964 and the Civil Rights Act of 1965.

Primary Source

I am happy to join with you today in what will go down in history as the greatest demonstration for freedom in the history of our nation.

Fivescore years ago, a great American, in whose symbolic shadow we stand today, signed the Emancipation Proclamation. This momentous decree came as a great

beacon light of hope to millions of Negro slaves who had been seared in the flames of withering injustice. It came as a joyous daybreak to end the long night of their captivity.

But one hundred years later, the Negro still is not free; one hundred years later, the life of the Negro is still sadly crippled by the manacles of segregation and the

chains of discrimination; one hundred years later, the Negro lives on a lonely island of poverty in the midst of a vast ocean of material prosperity; one hundred years later, the Negro is still languished in the corners of American society and finds himself in exile in his own land.

So we've come here today to dramatize a shameful condition. In a sense we've come to our nation's capital to cash a check. When the architects of our republic wrote the magnificent words of the Constitution and the Declaration of Independence, they were signing a promissory note to which every American was to fall heir. This note was the promise that all men, yes, black men as well as white men, would be guaranteed the "unalienable Rights of Life, Liberty, and the pursuit of Happiness."

It is obvious today that America has defaulted on this promissory note in so far as her citizens of color are concerned. Instead of honoring this sacred obligation, America has given the Negro people a bad check; a check which has come back marked "insufficient funds." We refuse to believe that there are insufficient funds in the great vaults of opportunity of this nation. And so we've come to cash this check, a check that will give us upon demand the riches of freedom and the security of justice.

We have also come to this hallowed Spot to remind America of the fierce urgency of now. This is no time to engage in the luxury of cooling off or to take the tranquilizing drug of gradualism. Now is the time to make real the promises of democracy; now is the time to rise from the dark and desolate valley of segregation to the sunlit path of racial justice; now is the time to lift our nation from the quicksands of racial injustice to the solid rock of brotherhood; now is the time to make justice a reality for all God's children. It would be fatal for the nation to overlook the urgency of the moment. This sweltering summer of the Negro's legitimate discontent will not pass until there is an invigorating autumn of freedom and equality.

Nineteen sixty-three is not an end, but a beginning. And those who hope that the Negro needed to blow off steam and will now be content, will have a rude awakening if the nation returns to business as usual.

There will be neither rest nor tranquility in America until the Negro is granted his citizenship rights. The whirlwinds of revolt will continue to shake the foundations of our nation until the bright day of justice emerges.

But there is something that I must say to my people who stand on the warm threshold which leads into the palace of justice. In the process of gaining our rightful place we must not be guilty of wrongful deeds.

Let us not seek to satisfy our thirst for freedom by drinking from the cup of bitterness and hatred. We must forever conduct our struggle on the high plane of dignity and discipline. We must not allow our creative protest to degenerate into physical violence. Again and again we must rise to the majestic heights of meeting physical force with soul force.

The marvelous new militancy which has engulfed the Negro community must not lead us to a distrust of all white people, for many of our white brothers, as evidenced by their presence here today, have come to realize that their destiny is tied up with our destiny. And they have come to realize that their freedom is inextricably bound to our freedom. This offense we share mounted to storm the battlements of injustice must be carried forth by a biracial army. We cannot walk alone.

And as we walk, we must make the pledge that we shall always march ahead. We cannot turn back. There are those who are asking the devotees of civil rights, "When will you be satisfied?" We can never be satisfied as long as the Negro is the victim of the unspeakable horrors of police brutality.

We can never be satisfied as long as our bodies, heavy with fatigue of travel, cannot gain lodging in the motels of the highways and the hotels of the cities. We cannot be satisfied as long as the Negro's basic mobility is from a smaller ghetto to a larger one.

We can never be satisfied as long as our children are stripped of their selfhood and robbed of their dignity by signs stating "for whites only." We cannot be satisfied as long as a Negro in Mississippi cannot vote and a

Negro in New York believes he has nothing for which to vote. No, we are not satisfied, and we will not be satisfied until “justice rolls down like waters and righteousness like a mighty stream.”

I am not unmindful that some of you have come here out of excessive trials and tribulation. Some of you have come fresh from narrow jail cells. Some of you have come from areas where your quest for freedom left you battered by the storms of persecution and staggered by the winds of police brutality. You have been the veterans of creative suffering. Continue to work with the faith that unearned suffering is redemptive.

Go back to Mississippi; go back to Alabama; go back to South Carolina; go back to Georgia; go back to Louisiana; go back to the slums and ghettos of the northern cities, knowing that somehow this situation can and will be changed. Let us not wallow in the valley of despair.

So I say to you, my friends, that even though we must face the difficulties of today and tomorrow, I still have a dream. It is a dream deeply rooted in the American dream that one day this nation will rise up and live out the true meaning of its creed: “We hold these truths to be self-evident, that all men are created equal.”

I have a dream that one day on the red hills of Georgia, sons of former slaves and sons of former slave-owners will be able to sit down together at the table of brotherhood.

I have a dream that one day, even the state of Mississippi, a state sweltering with the heat of injustice, sweltering with the heat of oppression, will be transformed into an oasis of freedom and justice.

I have a dream my four little children will one day live in a nation where they will not be judged by the color of their skin but by content of their character. I have a dream today!

I have a dream that one day, down in Alabama, with its vicious racists, with its governor having his lips dripping with the words of “interposition” and “nullification,” that one day, right there in Alabama, little black

boys and black girls will be able to join hands with little white boys and white girls as sisters and brothers. I have a dream today!

I have a dream that one day “every valley shall be exalted, every hill and mountain shall be made low, the rough places shall be made plain, and the crooked places shall be made straight and the glory of the Lord will be revealed and all flesh shall see it together.”

This is our hope. This is the faith that I go back to the South with.

With this faith we will be able to hew out of the mountain of despair a stone of hope. With this faith we will be able to transform the jangling discords of our nation into a beautiful symphony of brotherhood.

With this faith we will be able to work together, to pray together, to struggle together, to go to jail together, to stand up for freedom together, knowing that we will be free one day. This will be the day when all of God’s children will be able to sing with new meaning—“my country ’tis of thee; sweet land of liberty; of thee I sing; land where my fathers died, land of the pilgrim’s pride; from every mountain side, let freedom ring”—and if America is to be a great nation, this must become true.

So let freedom ring from the prodigious hilltops of New Hampshire.

Let freedom ring from the mighty mountains of New York.

Let freedom ring from the heightening Alleghenies of Pennsylvania.

Let freedom ring from the snow-capped Rockies of Colorado.

Let freedom ring from the curvaceous slopes of California.

But not only that.

Let freedom ring from Stone Mountain of Georgia.

Let freedom ring from Lookout Mountain of Tennessee.

Let freedom ring from every hill and molehill of Mississippi, from every mountainside, let freedom ring.

And when we allow freedom to ring, when we let it ring from every village and hamlet, from every state and city, we will be able to speed up that day when all

of God's children—black men and white men, Jews and Gentiles, Catholics and Protestants—will be able to join hands and to sing in the words of the old Negro spiritual: "Free at last, free at last; thank God Almighty, we are free at last."

91. "The Origin and Development of the Differences between the Leadership of the CPSU and Ourselves," *People's Daily*, 6 September 1963

Introduction

A dramatic deterioration in relations between the communist governments of Mainland China and the Soviet Union was one of the major international developments of the late 1950s and 1960s, breaking the ideological solidarity of the communist bloc and eventually providing an opportunity for the United States under President Richard Nixon to play one big power against the other. Both ideological and practical differences precipitated the Sino-Soviet split, which became public in October 1961 at the Twenty-Second Soviet Party Congress. Tensions between Soviet and Chinese nationalist interests had characterized the relationship since well before Mao Zedong attained power in China in 1949. Soviet reluctance to give wholehearted backing to China or risk nuclear war during the Taiwan Strait crises, particularly that of 1958, galled the Chinese, as did the Soviet tilt toward India in the 1959 Sino-Indian border crisis. Chinese officials constantly criticized the poor quality of many Russian economic aid items. Soviet advisors deplored the disastrous Great Leap Forward economic program launched by China in 1958. As tensions grew, in 1960 the Soviet Union unilaterally abrogated its Chinese aid programs, withdrawing all of its remaining experts and advisors. On the ideological front, Mao found Khrushchev's denunciation of Stalin and his readiness to embrace peaceful coexistence with the United States virtual heresy, revisionist backsliding from the international communist cause. The Chinese increasingly presented themselves as guardians of the true communist faith. By the late 1950s, Mao became ever more preoccupied with defining a personal, highly revolutionary brand of communism that made even many of his colleagues uncomfortable and that reached its apogee in the late 1960s in the Great Proletarian Cultural Revolution. The Soviets considered Chinese readiness to risk nuclear confrontation with the Americans foolhardy adventurism. Dissension climaxed over the Chinese nuclear program, which the Soviet Union assisted in the early 1950s. China was determined to acquire an independent nuclear capability. Initially, in October 1957, Soviet officials promised substantial technical and material assistance to this, but they quickly insisted that all weapons must remain under Soviet control, and in 1959 they abrogated the entire agreement. Chinese leaders characterized the gradual warming in Sino-American relations and the nuclear test ban treaties as joint hegemonic attempts to maintain an international monopoly of power and nuclear armaments. By 1962, relations between the two great communist states were almost unrelievedly hostile, and Soviet revisionist influences became a major Cultural Revolution target. Both sought to win support from smaller communist nations and from international communist parties, many of which found the choice between the two embarrassing and fruitlessly sought to encourage a reconciliation. The propaganda agencies and news media of each of the two communist big powers competed in offering expositions of their own country's position and attacking their ideological rival. A 1963 article in the Chinese *People's Daily*, a government mouthpiece, traced the origins of the Sino-Soviet split back to the 1956 Soviet Party Congress, when General Secretary Nikita Khrushchev harshly condemned most

of his predecessor Josef Stalin's legacies, including his deliberate fostering of a personality cult. Mao, who had encouraged a similar cult centering on himself, apparently feared that his own colleagues might seek to emulate their Russian comrades and reject his leadership. By 1969, the Sino-Soviet split had led to open military clashes between the two along their joint border on the Ussuri River. The breach was not healed until the late 1980s, when the pragmatic Deng Xiaoping had come to power in China and the reformer Mikhail Gorbachev presided over the Kremlin.

Primary Source

It is more than a month since the Central Committee of the Communist Party of the Soviet Union published its open letter of July 14 to Party organizations and all Communists in the Soviet Union. This Open Letter, and the steps taken by the leadership of the CPSU since its publication, have pushed Sino-Soviet relations to the brink of a split and have carried the differences in the international communist movement to a new stage of unprecedented gravity.

Now Moscow, Washington, New Delhi and Belgrade are joined in a love feast and the Soviet press is running an endless assortment of fantastic stories and theories attacking China. The leadership of the CPSU has allied itself with U.S. imperialism, the Indian reactionaries and the renegade Tito clique against socialist China and against all Marxist-Leninist parties, in open betrayal of Marxism-Leninism and proletarian internationalism, in brazen repudiation of the 1957 Declaration and the 1960 Statement and in flagrant violation of the Sino-Soviet Treaty of Friendship, Alliance and Mutual Assistance.

The present differences within the international communist movement and between the Chinese and Soviet

Parties involve a whole series of important questions of principle. In its letter of June 14 to the Central Committee of the CPSU, the Central Committee of the CPC systematically and comprehensively discussed the essence of these differences. It pointed out that, in the last analysis, the present differences within the international communist movement and between the Chinese and Soviet Parties involve the questions of whether or not to accept the revolutionary principles of the 1957 Declaration and the 1960 Statement, whether or not to accept Marxism-Leninism and proletarian internationalism, whether or not there is need for revolution, whether or not imperialism is to be opposed, and whether or not the unity of the socialist camp and the international communist movement is desired.

How have the differences in the international communist movement and between the leadership of the CPSU and ourselves arisen? And how have they grown to their present serious dimensions? Everybody is concerned about these questions.

92. Mao Zedong, *Quotations from Chairman Mao Zedong* (The Little Red Book), 1964

Introduction

In 1949, a communist revolution took place in Mainland China, the culmination of a lengthy civil war at the end of which the Chinese Communist Party (CCP) headed by the charismatic Mao Zedong overthrew the Guomindang (Nationalist) government of Jiang Jieshi. Mao, an able military leader with an arrogant and overbearing personality, was also a self-taught intellectual who aspired to become the world's greatest communist theoretician. Fearing that the CCP would eventually generate its own class of elite functionaries, he developed theories of continuing revolution intended to prevent such degeneration. Mao tended to use and sometimes even provoke international crises to eliminate threats to communist control and also to discredit his personal enemies. His actions were largely responsible for both the Sino-Soviet split that began in the late 1950s and the disastrous economic policies of the

Great Leap Forward of 1958–1962, a program of collectivization and back yard industrialization whose effects included a major famine in which several million Chinese died. Massively egotistical, Mao, like Stalin, also deliberately encouraged a cult based on his own personality, which exalted his near-godlike status as the ultimate Chinese communist leader and authority. Seeking to reinforce his power after the Great Leap Forward, in 1964 Mao authorized publication of the volume *Quotations from Chairman Mao Zedong*, also known as the Little Red Book. The book was a series of statements on different aspects of Chinese society and communism made by Mao, a prolific writer and speaker, at various points. Millions of copies were distributed throughout China and abroad, and during the 1960s he became something of a cult figure among Western leftists. In 1966 Mao, seeking both to radicalize China and to shore up his political position and eliminate rivals within the Politburo, launched the Cultural Revolution, which quickly expanded into an attack on all elites, characterized by mass demonstrations and the public humiliation and persecution of any individuals and groups who were characterized as class enemies. For several years, teenagers were withdrawn from education to serve as Red Guards, whose main duty was to enforce the principles of the Cultural Revolution on China's large population. Many urban young people and intellectuals were sent to the countryside or to factories to share the experiences of poor peasants and workers. The book, which articulated Mao's theory of continuous revolution and went through several editions, played a large role in fostering China's Cultural Revolution and became particularly popular among the Red Guards, who were often seen waving copies of the Little Red Book while marching through the streets. At the height of the Cultural Revolution, any Chinese person found to be without a copy was liable to instant punishment.

Primary Source

Chapter 1. The Communist Party

The force at the core leading our cause forward is the Chinese Communist Party. The theoretical basis guiding our thinking is Marxism-Leninism.—Opening address at the First Session of the First National People's Congress of the People's Republic of China (September 15, 1954).

If there is to be revolution, there must be a revolutionary party. Without a revolutionary party, without a party built on the Marxist-Leninist revolutionary theory and in the Marxist-Leninist revolutionary style, it is impossible to lead the working class and the broad masses of the people in defeating imperialism and its running dogs.—“Revolutionary Forces of the World Unite, Fight Against Imperialist Aggression!” (November 1948), *Selected Works*, Vol. IV, p. 284.

Without the efforts of the Chinese Communist Party, without the Chinese Communists as the mainstay of the Chinese people, China can never achieve independence and liberation, or industrialization and the modernization of her agriculture.—“On Coalition Government” (April 24, 1945), *Selected Works*, Vol. III, p. 318.

The Chinese Communist Party is the core of leadership of the whole Chinese people. Without this core,

the cause of socialism cannot be victorious.—Talk at the general reception for the delegates to the Third National Congress of the New Democratic Youth League of China (May 25, 1957).

A well-disciplined Party armed with the theory of Marxism-Leninism, using the method of self-criticism and linked with the masses of the people; an army under the leadership of such a Party; a united front of all revolutionary classes and all revolutionary groups under the leadership of such a Party—these are the three main weapons with which we have defeated the enemy.—“On the People's Democratic Dictatorship” (June 30, 1949), *Selected Works*, Vol. IV, p. 422.

We must have faith in the masses and we must have faith in the Party. These are two cardinal principles. If we doubt these principles, we shall accomplish nothing.—*On the Question of Agricultural Co-operation* (July 31, 1955), 3rd ed., p. 7.

Armed with Marxist-Leninist theory and ideology, the Communist Party of China has brought a new style of work to the Chinese people. A style of work which essentially entails integrating theory with practice, forging close links with the masses and practicing self-criticism.—“On Coalition Government” (April 24, 1945), *Selected Works*, Vol. III, p. 314.

No political party can possibly lead a great revolutionary movement to victory unless it possesses revolutionary theory and knowledge of history and has a profound grasp of the practical movement.—“The Role of the Chinese Communist Party in the National War” (October 1938), *Selected Works*, Vol. II, p. 208.

As we used to say, the rectification movement is “a widespread movement of Marxist education”. Rectification means the whole Party studying Marxism through criticism and self-criticism. We can certainly learn more about Marxism in the course of the rectification movement.—Speech at the Chinese Communist Party’s National Conference on Propaganda Work (March 12, 1957), 1st pocket ed., p. 14.

It is an arduous task to ensure a better life for the several hundred million people of China and to build our economically and culturally backward country into a prosperous and powerful one with a high level of culture. And it is precisely in order to be able to shoulder this task more competently and work better together with all non-Party people who are actuated by high ideals and determined to institute reforms that we must conduct rectification movements both now and in the future, and constantly rid ourselves of whatever is wrong.—*Ibid.*, pp. 15–16.

Policy is the starting-point of all the practical actions of a revolutionary party and manifests itself in the process and the end-result of that party’s actions. A revolutionary party is carrying out a policy whenever it takes any action. If it is not carrying out a correct policy, it is carrying out a wrong policy; if it is not carrying out a given policy consciously, it is doing so blindly. What we call experience is the process and the end-result of carrying out a policy. Only through the prac-

tice of the people, that is, through experience, can we verify whether a policy is correct or wrong and determine to what extent it is correct or wrong. However, people’s practice, especially the practice of a revolutionary party and the revolutionary masses, cannot but be bound up with one policy or another. Therefore, before any action is taken, we must explain the policy, which we have formulated in the light of the given circumstances, to Party members and to the masses. Otherwise, Party members and the masses will depart from the guidance of our policy, act blindly and carry out a wrong policy.—“On the Policy Concerning Industry and Commerce” (February 27, 1948), *Selected Works*, Vol. IV, pp. 204–05.

Our Party has laid down the general line and general policy of the Chinese revolution as well as various specific lines for work and specific policies. However, while many comrades remember our Party’s specific lines for work and specific policies, they often forget its general line and general policy. If we actually forget the Party’s general line and general policy, then we shall be blind, half-baked, muddle-headed revolutionaries, and when we carry out a specific line for work and a specific policy, we shall lose our bearings and vacillate now to the left and now to the right, and the work will suffer.—“Speech at a Conference of Cadres in the Shansi-Suiyuan Liberated Area” (April 1, 1948), *Selected Works*, Vol. IV, p. 238.

Policy and tactics are the life of the Party; leading comrades at all levels must give them full attention and must never on any account be negligent.—“A Circular on the Situation” (March 20, 1948), *Selected Works*, Vol. IV, p. 220.

93. Civil Rights Act, 1964

Introduction

A major demand of the civil rights movement of the 1950s and 1960s was effective legislation that would end decisively all racial segregation and discrimination. Acts passed in the 1940s and 1950s during the administrations of Presidents Harry S. Truman and Dwight D. Eisenhower were half-hearted measures that failed to achieve this. In 1963 a civil rights bill was introduced in Congress, and President John F. Kennedy placed himself firmly behind it

in a June 1963 speech. After Kennedy's November 1963 assassination, his successor, the Texan politician Lyndon B. Johnson, a former senator majority leader whose political bargaining skills far surpassed Kennedy's, took it up. Southern politicians initially tried to filibuster the bill but eventually ceased to do so, and in late June 1964 the Senate passed the bill by a majority of 73 votes to 27. The new Civil Rights Act outlawed discrimination on grounds of race, sex, or religion in all public places and in education, housing, and employment. Any project receiving federal funding was liable to lose this if discrimination occurred. The Civil Rights Act also sought—not entirely successfully—to address literacy tests, poll taxes, and other devices used in the South to deny African Americans the vote without contravening the Fifteenth Amendment to the U.S. Constitution. The following year, Congress passed the Voting Rights Act, a more effective measure that banned all such efforts to deny blacks the right to vote. The two pieces of legislation provided the legal foundation on which all subsequent efforts to ensure racial equality in the United States rested. Southern politicians still vowed to resist them, and some last-ditch opposition remained, but by the end of the decade the system of legalized segregation was practically dismantled. As the twenty-first century began, however, poverty and social and economic deprivation were still disproportionately concentrated within the African American population. White resentment of the new legislation, especially in the South, did much to move the once solidly Democratic Deep South into the Republican camp, contributing to a new conservative atmosphere and essentially ending the Democratic dominance that had characterized U.S. politics from the 1930s through the 1960s.

[. . .]

AN ACT to enforce the constitutional right to vote, to confer jurisdiction upon the district courts of the United States to provide injunctive relief against discrimination in public accommodations, to authorize the Attorney General to institute suits to protect constitutional rights in public facilities and public education, to extend the Commission on Civil Rights, to prevent discrimination in federally assisted programs, to establish a Commission on Equal Employment Opportunity, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled. That this Act may be cited as the "Civil Rights Act of 1964."

TITLE I—VOTING RIGHTS

Section 101. Section 2004 of the Revised Statutes (42 U.S.C. 1971), as amended by section 131 of the Civil Rights Act of 1957 (71 Stat. 637), and as further amended by section 601 of the Civil Rights Act of 1960 (74 Stat. 90), is further amended as follows:

(a) Insert "1" after "(a)" in subsection (a) and add at the end of subsection (a) the following new paragraphs:

"(2) No person acting under color of law shall—

"(A) in determining whether any individual is qualified under State law or laws to vote in any Federal election, apply any standard, practice, or procedure different from the standards, practices, or procedures applied under such law or laws to other individuals within the same county, parish, or similar political subdivision who have been found by State officials to be qualified to vote;

"(B) deny the right of any individual to vote in any Federal election because of an error or omission on any record or paper relating to any application, registration, or other act requisite to voting, if such error or omission is not material in determining whether such individual is qualified under State law to vote in such election; or

"(C) employ any literacy test as a qualification for voting in any Federal election unless (i) such test is administered to each individual and is conducted wholly in writing, and (ii) a certified copy of the test and of the answers given by the individual is furnished to him within twenty-five days of the submission of his request made within the period of time during which records and papers are required to be retained and preserved pursuant to Title III of the Civil Rights Act of 1960 (42 U.S.C. 1974–74e; 74 Stat. 88):

[. . .]

TITLE II—INJUNCTIVE RELIEF AGAINST DISCRIMINATION IN PLACES OF PUBLIC ACCOMMODATION

Section 201. (a) All persons shall be entitled to the full and equal enjoyment of the goods, services, facilities, privileges, advantages, and accommodations of any place of public accommodation, as defined in this section, without discrimination or segregation on the ground of race, color, religion, or national origin.

(b) Each of the following establishments which serves the public is a place of public accommodation within the meaning of this title if its operations affect commerce, if discrimination or segregation by it is supported by State action:

(1) any inn, hotel, motel, or other establishment which provides lodging to transient guests, other than an establishment located within a building which contains not more than five rooms for rent or hire and which is actually occupied by the proprietor of such establishment as his residence;

(2) any restaurant, cafeteria, lunchroom, lunch counter, soda fountain, or other facility principally engaged in selling food for consumption on the premises, including, but not limited to, any such facility located on the premises of any retail establishment; or any gasoline station;

(3) any motion picture house, theater, concert hall, sports arena, stadium or other place of exhibition or entertainment; and

(4) any establishment (A) (i) which is physically located within the premises of any establishment otherwise covered by this subsection, or (ii) within the premises of which is physically located any such covered establishment, and (B) which holds itself out as serving patrons of such covered establishment.

[. . .]

Section 202. All persons shall be entitled to be free, at any establishment or place, from discrimination or segregation of any kind on the ground of race, color, religion, or national origin, if such discrimination or

segregation is or purports to be required by any law, statute, ordinance, regulation, rule, or order of a State or any agency or political subdivision thereof.

Section 203. No person shall (a) withhold, deny, or attempt to withhold or deny, or deprive or attempt to deprive, any person of any right or privilege secured by section 201 or 202, or (b) intimidate, threaten, or coerce, or attempt to intimidate, threaten, or coerce any person with the purpose of interfering with any right or privilege secured by section 201 or 202, or (c) punish or attempt to punish any person for exercising or attempting to exercise any right or privilege secured by section 201 or 202, or (b) intimidate, threaten, or coerce, or attempt to intimidate, threaten, or coerce any person with the purpose of interfering with any right or privilege secured by section 201 or 202, or (c) punish or attempt to punish any person for exercising or attempting to exercise any right or privilege secured by section 201 or 202.

Section 204. (a) Whenever any person has engaged or there are reasonable grounds to believe that any person is about to engage in any act or practice prohibited by section 203, a civil action for preventive relief, including an application for a permanent or temporary injunction, restraining order, or other order, may be instituted by the person aggrieved and, upon timely application, the court may, in its discretion, permit the Attorney General to intervene in such civil action if he certifies that the case is of general public importance. Upon application by the complainant and in such circumstances as the court may deem just, the court may appoint an attorney for such complainant and may authorize the commencement of the civil action without the payment of fees, costs, or security.

[. . .]

TITLE III—DESEGREGATION OF PUBLIC FACILITIES

Section 301. (a) Whenever the Attorney General receives a complaint in writing signed by an individual to the effect that he is being deprived of or threatened with the loss of his right to the equal protection of the laws, on account of his race, color, religion, or national origin, by being denied equal utilization of any public

facility which is owned, operated, or managed by or on behalf of any State or subdivision thereof, other than a public school or public college as defined in section 401 of title IV hereof, and the Attorney General believes the complaint is meritorious and certifies that the signer or signers of such complaint are unable, in his judgment, to initiate and maintain appropriate legal proceedings for relief and that the institution of an action will materially further the orderly progress of desegregation in public facilities, the Attorney General is authorized to institute for or in the name of the United States a civil action in any appropriate district court of the United States against such parties and for such relief as may be appropriate, and such court shall have and shall exercise jurisdiction of proceedings instituted pursuant to this section. The Attorney General may implead as defendants such additional parties as are or become necessary to the grant of effective relief hereunder.

(b) The Attorney General may deem a person or persons unable to initiate and maintain appropriate legal proceedings within the meaning of subsection (a) of this section when such person or persons are unable, either directly or through other interested persons or organizations, to bear the expense of the litigation or to obtain effective legal representation: or whenever he is satisfied that the institution of such litigation would jeopardize the personal safety, employment, or economic standing of such person or persons, their families, or their property.

Section 302. In any action or proceeding under this title the United States shall be liable for costs, including a reasonable attorney's fee, the same as a private person.

Section 303. Nothing in this title shall affect adversely the right of any person to sue for or obtain relief in any court against discrimination in any facility covered by this title.

Section 304. A complaint as used in this title is a writing or document within the meaning of section 1001, title 18, United States Code.

TITLE IV—DESEGREGATION OF PUBLIC EDUCATION

[. . .]

Survey and Report of Educational Opportunities

Section 402. The Commissioner shall conduct a survey and make a report to the President and the Congress, within two years of the enactment of this title, concerning the lack of availability of equal educational opportunities for individuals by reason of race, color, religion, or national origin in public educational institutions at all levels in the United States, its territories and possessions, and the District of Columbia.

[. . .]

TITLE VII—EQUAL EMPLOYMENT OPPORTUNITY

[. . .]

Discrimination Because of Race, Color, Religion, Sex, or National Origin

Section 703.

(a) It shall be an unlawful employment practice for an employer—

(1) to fail or refuse to hire or to discharge any individual, or otherwise to discriminate against any individual with respect to his compensation, terms, conditions, or privileges of employment, because of such individual's race, color, religion, sex, or national origin; or

(2) to limit, segregate, or classify his employees in any way which would deprive or tend to deprive any individual of employment opportunities or otherwise adversely affect his status as an employee, because of such individual's race, color, religion, sex, or national origin.

(b) It shall be an unlawful employment practice for an employment agency to fail or refuse to refer for employment, or otherwise to discriminate against, any individual because of his race, color, religion, sex, or national origin, or to classify or refer for employment any individual on the basis of his race, color, religion, sex, or national origin.

(c) It shall be an unlawful employment practice for a labor organization—

(1) to exclude or to expel from its membership, or otherwise to discriminate against, any individual because of his race, color, religion, sex, or national origin;

(2) to limit, segregate, or classify its membership, or to classify or fail or refuse to refer for employment any individual, in any way which would deprive or tend to deprive any individual of employment opportunities, or would limit such employment opportunities or otherwise adversely affect his status as an employee or as an applicant for employment, because of such individual's race, color, religion, sex, or national origin; or

(3) to cause or attempt to cause an employer to discriminate against an individual in violation of this section.

(d) It shall be an unlawful employment practice for any employer, labor organization, or joint labor-management committee controlling apprenticeship or other training or retraining, including on-the-job training programs to discriminate against any individual because of his race, color, religion, sex, or national origin in admission to, or employment in, any program established to provide apprenticeship or other training.

(e) Notwithstanding any other provision of this title, (1) it shall not be an unlawful employment practice for an employer to hire and employ employees, for an employment agency to classify, or refer for employment any individual, for a labor organization to classify its membership or to classify or refer for employment any individual, or for an employer, labor organization, or joint labor-management committee controlling apprenticeship or other training or retraining programs to admit or employ any individual in any such program, on the basis of his religion, sex, or national origin in those certain instances where religion, sex, or national origin is a bona fide occupational qualification reasonably necessary to the normal operation of that particular business or enterprise, and (2) it shall not be an unlawful employment practice for a school, college, university, or other educational institution or institution of learning to hire and employ employees of particular religion if such school, college, university, or other educational institution or institution of learning is, in whole or in substantial part, owned, supported, controlled, or managed by a particular religion or by a

particular religious corporation, association, or society, or if the curriculum of such school college university or other educational institution or institution of learning is directed toward the propagation of a particular religion.

(f) As used in this title, the phrase "unlawful employment practice" shall not be deemed to include any action or measure taken by an employer, labor organization, joint labor-management committee, or employment agency with respect to an individual who is a member of the Communist Party of the United States or of any other organization required to register as a Commission-action or Commission-front organization by final order of the Subversive Activities Control Board pursuant to the Subversive Activities Control Act of 1950.

(g) Notwithstanding any other provision of this title, it shall not be an unlawful employment practice for an employer to fail or refuse to hire and employ any individual for any position, for an employer to discharge any individual from any position, or for an employment agency to fail or refuse to refer any individual for employment in any position, if—

(1) the occupancy of such position, or access to the premises in or upon which any part of the duties of such position is performed or is to be performed, is subject to any requirement imposed in the interest of the national security of the United States under any security program in effect pursuant to or administered under any statute of the United States or any Executive order of the President; and

(2) such individual has not fulfilled or has ceased to fulfill that requirement.

(h) Notwithstanding any other provision of this title, it shall not be an unlawful employment practice for an employer to apply different standards of compensation, or different terms, conditions, or privileges of employment pursuant to a bona fide seniority or merit system, or a system which measures earnings by quantity or quality of production or to employees who work in different locations, provided that such differences are not the result of an intention to discriminate because of race, color, religion, sex, or national origin, nor shall it

be an unlawful employment practice for an employer to give and to act upon the results of any professionally developed ability test provided that such test, its administration or action upon the results is not designed, intended or used to discriminate because of race, color, religion, sex or national origin. It shall not be an unlawful employment practice under this title for any employer to differentiate upon the basis of sex in determining the amount of the wages of compensation paid or to be paid to employees of such employer if such differentiation is authorized by the provisions of section 6(d) of the Fair Labor Standards Act of 1938, as amended (29 U.S.C. 206 (d)).

(i) Nothing contained in this title shall apply to any business or enterprise on or near an Indian reservation with respect to any publicly announced employment practice of such business or enterprise under which a preferential treatment is given to any individual because he is an Indian living on or near a reservation.

(j) Nothing contained in this title shall be interpreted to require any employer, employment agency, labor organization, or joint labor-management committee subject to this title to grant preferential treatment to any individual or to any group because of the race, color, religion, sex, or national origin of such individual or group on account of an imbalance which may exist with respect to the total number or percentage of persons of any race, color, religion, sex, or national origin employed by an employer, referred or classified for employment by any employment agency or labor organization, admitted to membership or classified by any labor organization, or admitted to, or employed in, any apprenticeship or other training program, in comparison with the total number or percentage of persons of such race, color, religion, sex, or national origin in any community, State, section, or other area, or in the available work force in any community, State, section, or other area.

Other Unlawful Employment Practices Section 704.

(a) It shall be an unlawful employment practice for an employer to discriminate against any of his employees or applicants for employment, for an employment

agency to discriminate against any individual, or for a labor organization to discriminate against any member thereof or applicant for membership, because he has opposed any practice made an unlawful employment practice by this title, or because he has made a charge, testified, assisted, or participated in any manner in an investigation, proceeding, or hearing under this title.

(b) It shall be an unlawful employment practice for an employer, labor organization, or employment agency to print or publish or cause to be printed or published any notice or advertisement relating to employment by such an employer or membership in or any classification or referral for employment by such a labor organization, or relating to any classification or referral for employment by such an employment agency, indicating any preference, limitation, specification, or discrimination, based on race, color, religion, sex, or national origin, except that such a notice or advertisement may indicate a preference, limitation, specification, or discrimination based on religion, sex, or national origin when religion, sex, or national origin is a bona fide occupational qualification for employment.

[. . .]

TITLE VIII—REGISTRATION AND VOTING STATISTICS

Section 801.

The Secretary of Commerce shall promptly conduct a survey to compile registration and voting statistics in such geographic areas as may be recommended by the Commission on Civil Rights. Such a survey and compilation shall, to the extent recommended by the Commission on Civil Rights, only include a count of persons of voting age by race, color, and national origin, and determination of the extent to which such persons are registered to vote, and have voted in any statewide primary or general election in which the Members of the United States House of Representatives are nominated or elected, since January 1, 1960. Such information shall also be collected and compiled in connection with the Nineteenth Decennial Census, and at such other times as the Congress may prescribe. The provisions of section 9 and chapter 7 of title 13, United States Code, shall apply to any survey, collection,

or compilation of registration and voting statistics carried out under this title: Provided, however, That no person shall be compelled to disclose his race, color, national origin, or questioned about his political party affiliation, how he voted, or the reasons therefore, nor shall any penalty be imposed for his failure or refusal to make such disclosure. Every person interrogated orally, by written survey or questionnaire or by any

other means with respect to such information shall be fully advised with respect to his right to fail or refuse to furnish such information.

94. Charles de Gaulle: Speech on the State of Europe, 23 July 1964

Introduction

President Charles de Gaulle, one of the most dominating political figures of twentieth-century France, delivered this speech on Europe's role in world affairs on 23 July 1964. Although he oversaw the diminution of the French Empire, he worked hard to secure for France a leading role in European affairs in the 1960s, primarily by undermining British influence in this arena. Twice, in 1963 and 1967, he vetoed British applications to join the European Economic Community (EEC), or Common Market. He hoped that France would serve as a bridge between the communist and noncommunist worlds and consciously sought to differentiate French policies from those of the United States. In 1964 France recognized the People's Republic of China (PRC), and in early March 1966 de Gaulle withdrew France from the North Atlantic Treaty Organization (NATO), sparking a crisis as NATO headquarters relocated from Paris to Brussels. He also encouraged the creation of a Franco-German partnership, which he anticipated would dominate the making of European international policies.

[. . .]

In discussing Europe and in trying to distinguish what it should be, it is always necessary to ascertain what the world is.

At the end of the last World War, the distribution of forces in the world was as simple, as brutal as possible. It appeared suddenly at Yalta. Only America and Russia had remained powers and all the more considerable powers in that all the rest found themselves dislocated, the vanquished engulfed in their unconditional defeat and the European victors destroyed to their foundations.

For the countries of the free world, threatened by the Soviets' ambition, American leadership could then seem inevitable. The New World was, of all of them, the great victor of the war. Under the command of the United States, owner of atomic bombs—the Atlantic Alliance ensured their security. Thanks to the Marshall Plan their economies were being revived. Wherever the colonial powers were effecting, under more or less

violent conditions, the transfer of their sovereignty to self-governing regimes, there pressure was felt, openly or not, from Washington. At the same time, America was seen to assume the conduct of political and strategic affairs in all the regions where the free world found itself in contact with the direct or indirect action of the Soviets. It did this either unilaterally or through the channels of regional international bodies which in practice were at its disposal: in Europe, NATO; in Western Asia, CENTO; in Southeast Asia, SEATO; in America, the OAS; or, thanks to its supremacy in the North Pacific, or, finally, through military or diplomatic intervention, in Korea, in the Congo, or during the Suez crisis through the offices of the United Nations Organization which it dominated by its preponderance.

It is clear that things have changed. The Western States of our old continent have rebuilt their economies. They are rebuilding their military forces. One of them—France—is becoming a nuclear power. Above all they have become aware of their natural ties. In short, Western Europe appears likely to constitute a major entity full of merit and resources, capable of living its own

life, indeed, not in opposition to the New World, but right alongside it.

On the other hand, the monolithic nature of the totalitarian world is in the process of dislocation. China, separated from Moscow, enters on the world scene by its mass, its needs and its resources, avid for progress and consideration. The Soviet Empire, the last and the largest colonial power of this time, is seeing first the Chinese contest the domination it exercises over vast regions of Asia and second is seeing the European satellites which it had subjugated by force moving further and further away. At the same time the Communist regime, despite the enormous effort it has been making in Russia for a half a century and despite the results it has achieved in certain massive undertakings, is meeting with failure with respect to the standard of living, the satisfaction and the dignity of men in comparison with the system applied in Western Europe which combines *dirigisme* with freedom. Lastly, great aspirations and great difficulties are deeply agitating the developing countries.

The result of all these new factors, complicated, and interrelated, is that the division of the world into two camps led by Washington and Moscow respectively corresponds less and less to the real situation. With respect to the gradually splitting totalitarian world or the problems posed by China, the conduct to be adopted toward many countries of Asia, Africa and Latin America, or the remodeling of the United Nations Organization that necessarily ensues, or the adjustment of world exchanges of all kinds, etc., it appears that Europe, provided that it wishes it, is henceforth called upon to play a role which is its own.

Undoubtedly it should maintain an alliance with America, in which, in the North Atlantic, both are interested so long as the Soviet threat remains. But, the reasons which, for Europe, made this alliance a form of subordination are fading away day by day. Europe must assume its share of the responsibilities. Everything indicates, moreover, that this event would be in accordance with the interest of the United States, whatever may be its merit, its power and its good intentions, for the multiplicity and complexity of the tasks henceforth go beyond, and perhaps dangerously, its means

and its capacity. That is why the United States declares that it wishes to see the old continent unite and organize itself while many among the Gallic, Germanic and Latin peoples cry out "Let us build Europe!"

But which Europe? That is the question. Indeed, the established conveniences, the accepted renunciations, the deep-rooted reservations do not fade away easily. According to us French, it is a question of Europe's being made in order for it to be European. A European Europe means that it exists by itself for itself, in other words in the midst of the world—it has its own policy. But that is precisely what is rejected consciously or unconsciously by some who claim, however, to want it to be established. In reality, the fact that Europe, not having a policy, would be subject to the policy that came to it from the other side of the Atlantic appears to them, even today, normal and satisfactory.

We have seen many people—quite often, what is more, worthy and sincere—advocate for Europe not an independent policy, which in reality they do not visualize, but an organization unsuited to have one, linked in this field as in that of defense and of the economy, to an Atlantic system, in other words, American, and consequently subordinate to what the United States calls its leadership. This organization, entitled federal, would have had as its bases: on the one hand, a council of experts withdrawn from the affiliation to the States, and which would have been dubbed "executive," and on the other hand a Parliament without national qualifications and which would have been called "legislative." Doubtless each of these two elements would have supplied that for which it would have been fitted, that is to say, studies for the council and debates for the Parliament. But, without a doubt, neither of the two would have made what indeed no one wanted them to make, that is a policy, for if the policy must take the debates and studies into account, it is another thing entirely than studies and debates.

A policy is an action, that is to say a body of decisions taken, of things done, of risks assumed, all this with the support of a people. The governments of nations alone can be capable of and responsible for making policy. It is of course not forbidden to imagine that a day will come when all the peoples of our continent will

become one and that then there could be a Government of Europe, but it would be ridiculous to act as if that day had come.

That is why France—refusing to let Europe get bogged down, becoming bogged down herself in a guileful undertaking that would have stripped States, misled peoples and prevented the independence of our continent—took the initiative of proposing to her five partners of the Rome Treaty a beginning for the organization of their cooperation. Thus, we would begin to live in common, pending the time when habit and evolution would gradually draw the ties closer together. We know that the German Government adhered in principle to this project. We know that a meeting of the six States in Paris, then another one in Bonn, seemed at first on the road to success, but that Rome refused to call the decisive meeting, its objections, joined with those of The Hague and Brussels, being powerful enough to halt everything. Finally, we know that the opponents invoked two arguments, moreover contradictory. The first argument: the French plan, which maintains the sovereignty of the States, does not conform to our conception of a Europe having as its Executive a commission of experts, and as its Legislative a Parliament cut off from national realities. The second argument: although Britain does not agree to lose its sovereignty, we will not enter into any European political organization to which it would not belong.

The French plan for European organization not being adopted by Italy and by the Benelux countries; moreover, integration not being able to lead to anything other than an American protectorate; finally, Great Britain having shown throughout the interminable Brussels negotiations that it was not in a position to accept the common economic rules and, by the Nassau agreement, that its defense force, particularly in the nuclear domain, would not be European for lack of being autonomous in relation to the United States—it seemed to the Government of the Federal Republic of Germany and to the Government of the French Republic that their bilateral cooperation could have some value. It was then that, on the proposal of the German Government, the French-German Treaty of January 22, 1963 was concluded, which I had the honor of signing right here with Chancellor Adenauer.

However, it must be noted that, if the French-German Treaty made possible limited results in some areas, also if it led the two Governments and their services to establish contacts which, for our part, and altogether, we judge can be useful and which are, in any case, very pleasant, up to now a common line of conduct has not changed. Assuredly there is not, and there could not be any opposition, strictly speaking, between Bonn and Paris. But, whether it is a matter of the effective solidarity of France and Germany concerning their defense, or even of the stand to take and the action to pursue toward the East, above all the Moscow satellites, or correlatively of the question of boundaries and nationalities in Central and Eastern Europe, or of the recognition of China and of the diplomatic and economic mission which can be opened to Europe in relation to that great people, or of peace in Asia and particularly Indochina and Indonesia, or of the aid to give to the developing countries in Africa, Asia and Latin America, or of the organization of the agricultural common market and consequently the future of the Community of the Six—one could not say that Germany and France have yet agreed to make together a policy and one could not dispute that this results from the fact that Bonn has not believed, up to now, that this policy should be European and independent. If this state of affairs were to last, there would be the risk, in the long run, of doubts among the French people, of misgivings among the German people and, among their four partners of the Rome Treaty, an increased tendency to leave things as they are, while waiting, perhaps, to be split up.

But, throughout the world, the force of things is doing its work. In wanting and in proposing the organization of a Europe having its own policy, France is sure of serving the balance, the peace and the progress of the world. Moreover, she is now strong enough and sure enough of herself to be able to be patient, except for major external changes which would jeopardize everything and therefore lead her to change her direction. Besides, at the last meeting just held between the Governments in Bonn and Paris, Chancellor Erhard gave an indication of a forthcoming German initiative. In waiting for the sky to clear, France is pursuing, by her own means, that which a European and independent policy can and should be. It is a fact that people

everywhere are pleased with it and that for herself it is not an unsatisfactory situation.

95. Tonkin Gulf Resolution, 7 August 1964

Introduction

Passed by the U.S. Congress in August 1964, the Tonkin Gulf Resolution permitted President Lyndon B. Johnson to take whatever measures he considered appropriate to deal with the growing crisis in Vietnam. As the military situation in Vietnam deteriorated in early 1964, Johnson and his advisors decided that only with heavy support from the United States could the government of the Republic of Vietnam (ROV, South Vietnam) survive. Johnson, running for reelection against hard-line Republican Senator Barry Goldwater, feared that a major escalation might jeopardize his campaign, so he relied extensively on covert operations, including DeSoto intelligence-gathering missions undertaken by American destroyers to test North Vietnamese radar efficiency or land South Vietnamese forces on North Vietnamese territory. On the morning of 2 August, three North Vietnamese patrol boats attacked the destroyer USS *Maddox* as it undertook one such mission in the Tonkin Gulf, beyond the 3-mile Vietnamese territorial limits that the United States recognized but within the 12-mile zone that the Democratic Republic of Vietnam (DRV, North Vietnam) claimed. Aircraft from the nearby USS *Ticonderoga* came to its assistance, sinking one patrol boat and disabling the others, and Johnson ordered the *Maddox* to continue patrolling farther offshore in the Gulf, accompanied by a fellow destroyer, the *C. Turner Joy*. On the night of 4 August, both vessels reported hostile attacks, although it was later suggested that nervous radar and sonar operators or malfunctioning equipment probably triggered false alarms. North Vietnam subsequently claimed that none of its patrol boats were responsible, alleging that the U.S. government deliberately fabricated the incident as a pretext to escalate the war. Johnson, nettled by Goldwater's repeated criticisms that his Vietnam policy was irresolute and ineffective, made no attempt to verify or question the reports. Without mentioning their involvement in covert operations, Johnson announced that American ships had encountered an unprovoked "deliberate attack," and he ordered retaliatory American bombing raids on an oil depot and North Vietnamese patrol boat bases. He also submitted to Congress a draft resolution authorizing him to "take all necessary measures" to "repel any armed attack" on U.S. forces, "prevent further aggression," and give any aid necessary, "including the use of armed force," to help any country that requested assistance through the Southeast Asian Treaty Organization (SEATO), to which South Vietnam belonged. The Tonkin Gulf Resolution, passed unanimously by the House and with only two dissenting Senate votes, provided the legal basis for the conflict's future expansion, including massive bombing raids on North Vietnam, which began in February 1965, and two months later a major deployment of American ground troops and the drastic expansion of such forces' operational activities within Vietnam. Only on 30 December 1970, after the Cambodian incursion authorized by President Richard Nixon that spring, did an increasingly restive Congress repeal the Tonkin Gulf Resolution. Skeptical congressional reluctance to ever again give a president a similar blank check was a major factor in the passage of the 1973 War Powers Resolution, drastically limiting the chief executive's future ability to deploy U.S. troops in combat situations.

[H.J. Res. 1145]

To promote the maintenance of international peace and security in southeast Asia.

Whereas naval units of the Communist regime in Vietnam, in violation of the principles of the Charter of the United Nations and of international law, have deliberately and repeatedly attacked United States naval vessels lawfully present in international waters, and have

thereby created a serious threat to international peace; and

Whereas these attacks are part of a deliberate and systematic campaign of aggression that the Communist regime in North Vietnam has been waging against its neighbors and the nations joined with them in the collective defense of their freedom; and

Whereas the United States is assisting the peoples of southeast Asia to protect their freedom and has no territorial, military or political ambitions in that area, but desires only that these peoples should be left in peace to work out their own destinies in their own way: Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the Congress approves and supports the determination of the President, as Commander in Chief, to take all necessary measures to repel any armed attack against the forces of the United States and to prevent further aggression.

SEC. 2. The United States regards as vital to its national interest and to world peace the maintenance of international peace and security in southeast Asia. Consonant with the Constitution of the United States and the Charter of the United Nations and in accordance with its obligations under the Southeast Asia Collective Defense Treaty, the United States is, therefore, prepared, as the President determines, to take all necessary steps, including the use of armed force, to assist any member or protocol state of the Southeast Asia Collective Defense Treaty requesting assistance in defense of its freedom.

SEC. 3. This resolution shall expire when the President shall determine that the peace and security of the area is reasonably assured by international conditions created by action of the United Nations or otherwise, except that it may be terminated earlier by concurrent resolution of the Congress.

96. Lyndon B. Johnson: "Peace without Conquest," Address at Johns Hopkins University, 7 April 1965

Introduction

After the U.S. Congress passed the Tonkin Gulf Resolution in August 1964 authorizing President Lyndon B. Johnson to take action against the Democratic Republic of Vietnam (DRV, North Vietnam), he remained relatively cautious until the 1964 presidential election campaign was behind him. Once safely returned to office for a full four-year term, he decided to mount a major bombing campaign against targets in North Vietnam, an initiative that he hoped would force North Vietnam's leaders to end hostile operations against the Republic of Vietnam (ROV, South Vietnam) and come to the negotiating table. Operation ROLLING THUNDER began in February 1965, with the American airplanes launching these raids based at airfields in South Vietnam, which almost immediately became the target of guerrilla attacks. In March 1965, Johnson and his advisors decided that in order to protect these airstrips, it was necessary to deploy U.S. ground forces in South Vietnam to assist the military forces of South Vietnam. The first such American troops—two battalions of U.S. Marines, as opposed to military advisors—landed in March 1965 and came ashore at Da Nang. On 1 April 1965 the president approved the deployment of two further Marine battalions and one Marine air squadron, plus an additional 18,000–20,000 men for existing support forces in Vietnam. By the end of the year, 150,000 American military personnel were stationed in Vietnam, and by the end of 1966 the number had risen to 385,000. The peak came in early 1968, when more than 500,000 American troops were in the country. As the first deployments were under way, the Johnson administration deliberately tried to keep the news low-key and sought to avoid conveying any impression that a major change in policy had occurred. Addressing an audience at Johns Hopkins University during the first week of April 1965, Johnson defended U.S. military assistance to South Vietnam on the grounds that should the United States abandon South Vietnam, this would

destroy the credibility of American commitments to other allies. Like many other Cold War leaders, he recalled the lessons of the pre–World War II period during which appeasement of dictators and totalitarian governments only whetted their appetite for further conquest. Johnson did not directly discuss the new troop deployments, nor did he give any prognosis on the course of the war. Instead, the highlight of his address was the announcement of increased economic assistance to South Vietnam and the launching of an ambitious major project, modeled on the Tennessee Valley Authority of the New Deal years, to develop Vietnam’s Mekong River Delta so that it would provide food, water, and power for the entire region, eradicating poverty and hunger, revitalizing the country’s people, and providing the long-term basis for lasting peace and prosperity. The success of any such efforts largely depended, however, on winning the war, something that the Johnson administration was never able to achieve.

Primary Source

[. . .]

Tonight Americans and Asians are dying for a world where each people may choose its own path to change.

This is the principle for which our ancestors fought in the valleys of Pennsylvania. It is the principle for which our sons fight tonight in the jungles of Viet-Nam.

Viet-Nam is far away from this quiet campus. We have no territory there, nor do we seek any. The war is dirty and brutal and difficult. And some 400 young men, born into an America that is bursting with opportunity and promise, have ended their lives on Viet-Nam’s steaming soil.

Why must we take this painful road?

Why must this Nation hazard its ease, and its interest, and its power for the sake of a people so far away?

We fight because we must fight if we are to live in a world where every country can shape its own destiny. And only in such a world will our own freedom be finally secure.

This kind of world will never be built by bombs or bullets. Yet the infirmities of man are such that force must often precede reason, and the waste of war, the works of peace.

We wish that this were not so. But we must deal with the world as it is, if it is ever to be as we wish.

THE NATURE OF THE CONFLICT

The world as it is in Asia is not a serene or peaceful place.

The first reality is that North Viet-Nam has attacked the independent nation of South Viet-Nam. Its object is total conquest.

Of course, some of the people of South Viet-Nam are participating in attack on their own government. But trained men and supplies, orders and arms, flow in a constant stream from north to south.

This support is the heartbeat of the war.

And it is a war of unparalleled brutality. Simple farmers are the targets of assassination and kidnapping. Women and children are strangled in the night because their men are loyal to their government. And helpless villages are ravaged by sneak attacks. Large-scale raids are conducted on towns, and terror strikes in the heart of cities.

The confused nature of this conflict cannot mask the fact that it is the new face of an old enemy.

Over this war—and all Asia—is another reality: the deepening shadow of Communist China. The rulers in Hanoi are urged on by Peking. This is a regime which has destroyed freedom in Tibet, which has attacked India, and has been condemned by the United Nations for aggression in Korea. It is a nation which is helping the forces of violence in almost every continent. The contest in Viet-Nam is part of a wider pattern of aggressive purposes.

WHY ARE WE IN VIET-NAM?

Why are these realities our concern? Why are we in South Viet-Nam?

We are there because we have a promise to keep. Since 1954 every American President has offered support to the

people of South Viet-Nam. We have helped to build, and we have helped to defend. Thus, over many years, we have made a national pledge to help South Viet-Nam defend its independence.

And I intend to keep that promise.

To dishonor that pledge, to abandon this small and brave nation to its enemies, and to the terror that must follow, would be an unforgivable wrong.

We are also there to strengthen world order. Around the globe, from Berlin to Thailand, are people whose well-being rests, in part, on the belief that they can count on us if they are attacked. To leave Viet-Nam to its fate would shake the confidence of all these people in the value of an American commitment and in the value of America's word. The result would be increased unrest and instability, and even wider war.

We are also there because there are great stakes in the balance. Let no one think for a moment that retreat from Viet-Nam would bring an end to conflict. The battle would be renewed in one country and then another. The central lesson of our time is that the appetite of aggression is never satisfied. To withdraw from one battlefield means only to prepare for the next. We must say in southeast Asia—as we did in Europe—in the words of the Bible: “Hitherto shalt thou come, but no further.”

There are those who say that all our effort there will be futile—that China's power is such that it is bound to dominate all southeast Asia. But there is no end to that argument until all of the nations of Asia are swallowed up.

There are those who wonder why we have a responsibility there. Well, we have it there for the same reason that we have a responsibility for the defense of Europe. World War II was fought in both Europe and Asia, and when it ended we found ourselves with continued responsibility for the defense of freedom.

OUR OBJECTIVE IN VIET-NAM

Our objective is the independence of South Viet-Nam, and its freedom from attack. We want nothing

for ourselves—only that the people of South Viet-Nam be allowed to guide their own country in their own way.

We will do everything necessary to reach that objective. And we will do only what is absolutely necessary.

In recent months attacks on South Viet-Nam were stepped up. Thus, it became necessary for us to increase our response and to make attacks by air. This is not a change of purpose. It is a change in what we believe that purpose requires.

We do this in order to slow down aggression.

We do this to increase the confidence of the brave people of South Viet-Nam who have bravely borne this brutal battle for so many years with so many casualties.

And we do this to convince the leaders of North Viet-Nam—and all who seek to share their conquest—of a very simple fact:

We will not be defeated.

We will not grow tired.

We will not withdraw, either openly or under the cloak of a meaningless agreement.

We know that air attacks alone will not accomplish all of these purposes. But it is our best and prayerful judgment that they are a necessary part of the surest road to peace.

We hope that peace will come swiftly. But that is in the hands of others besides ourselves. And we must be prepared for a long continued conflict. It will require patience as well as bravery, the will to endure as well as the will to resist.

I wish it were possible to convince others with words of what we now find it necessary to say with guns and planes: Armed hostility is futile. Our resources are equal to any challenge. Because we fight for values and we fight for principles, rather than territory or colonies, our patience and our determination are unending.

Once this is clear, then it should also be clear that the only path for reasonable men is the path of peaceful settlement.

Such peace demands an independent South Viet-Nam—securely guaranteed and able to shape its own relationships to all others—free from outside interference—tied to no alliance—a military base for no other country.

These are the essentials of any final settlement.

We will never be second in the search for such a peaceful settlement in Viet-Nam.

There may be many ways to this kind of peace: in discussion or negotiation with the governments concerned; in large groups or in small ones; in the reaffirmation of old agreements or their strengthening with new ones.

We have stated this position over and over again, fifty times and more, to friend and foe alike. And we remain ready, with this purpose, for unconditional discussions.

And until that bright and necessary day of peace we will try to keep conflict from spreading. We have no desire to see thousands die in battle—Asians or Americans. We have no desire to devastate that which the people of North Viet-Nam have built with toil and sacrifice. We will use our power with restraint and with all the wisdom that we can command.

But we will use it.

This war, like most wars, is filled with terrible irony. For what do the people of North Viet-Nam want? They want what their neighbors also desire: food for their hunger; health for their bodies; a chance to learn; progress for their country; and an end to the bondage of material misery. And they would find all these things far more readily in peaceful association with others than in the endless course of battle.

A COOPERATIVE EFFORT FOR DEVELOPMENT

These countries of southeast Asia are homes for millions of impoverished people. Each day these people

rise at dawn and struggle through until the night to wrestle existence from the soil. They are often wracked by disease, plagued by hunger, and death comes at the early age of 40.

Stability and peace do not come easily in such a land. Neither independence nor human dignity will ever be won, though, by arms alone. It also requires the work of peace. The American people have helped generously in times past in these works. Now there must be a much more massive effort to improve the life of man in that conflict-torn corner of our world.

The first step is for the countries of southeast Asia to associate themselves in a greatly expanded cooperative effort for development. We would hope that North Viet-Nam would take its place in the common effort just as soon as peaceful cooperation is possible.

The United Nations is already actively engaged in development in this area. As far back as 1961 I conferred with our authorities in Viet-Nam in connection with their work there. And I would hope tonight that the Secretary General of the United Nations could use the prestige of his great office, and his deep knowledge of Asia, to initiate, as soon as possible, with the countries of that area, a plan for cooperation in increased development.

For our part I will ask the Congress to join in a billion dollar American investment in this effort as soon as it is underway.

And I would hope that all other industrialized countries, including the Soviet Union, will join in this effort to replace despair with hope, and terror with progress.

The task is nothing less than to enrich the hopes and the existence of more than a hundred million people. And there is much to be done.

The vast Mekong River can provide food and water and power on a scale to dwarf even our own TVA.

The wonders of modern medicine can be spread through villages where thousands die every year from lack of care.

Schools can be established to train people in the skills that are needed to manage the process of development.

And these objectives, and more, are within the reach of a cooperative and determined effort.

I also intend to expand and speed up a program to make available our farm surpluses to assist in feeding and clothing the needy in Asia. We should not allow people to go hungry and wear rags while our own warehouses overflow with an abundance of wheat and corn, rice and cotton.

So I will very shortly name a special team of outstanding, patriotic, distinguished Americans to inaugurate our participation in these programs. This team will be headed by Mr. Eugene Black, the very able former President of the World Bank.

In areas that are still ripped by conflict, of course development will not be easy. Peace will be necessary for final success. But we cannot and must not wait for peace to begin this job.

THE DREAM OF WORLD ORDER

This will be a disorderly planet for a long time. In Asia, as elsewhere, the forces of the modern world are shaking old ways and uprooting ancient civilizations. There will be turbulence and struggle and even violence. Great social change—as we see in our own country now—does not always come without conflict.

We must also expect that nations will on occasion be in dispute with us. It may be because we are rich, or powerful; or because we have made some mistakes; or because they honestly fear our intentions. However, no nation need ever fear that we desire their land, or to impose our will, or to dictate their institutions.

But we will always oppose the effort of one nation to conquer another nation.

We will do this because our own security is at stake.

But there is more to it than that. For our generation has a dream. It is a very old dream. But we have the power and now we have the opportunity to make that dream come true.

For centuries nations have struggled among each other. But we dream of a world where disputes are settled by law and reason. And we will try to make it so.

For most of history men have hated and killed one another in battle. But we dream of an end to war. And we will try to make it so.

For all existence most men have lived in poverty, threatened by hunger. But we dream of a world where all are fed and charged with hope. And we will help to make it so.

The ordinary men and women of North Viet-Nam and South Viet-Nam—of China and India—of Russia and America—are brave people. They are filled with the same proportions of hate and fear, of love and hope. Most of them want the same things for themselves and their families. Most of them do not want their sons to ever die in battle, or to see their homes, or the homes of others, destroyed.

Well, this can be their world yet. Man now has the knowledge—always before denied—to make this planet serve the real needs of the people who live on it.

I know this will not be easy. I know how difficult it is for reason to guide passion, and love to master hate. The complexities of this world do not bow easily to pure and consistent answers.

But the simple truths are there just the same. We must all try to follow them as best we can.

CONCLUSION

We often say how impressive power is. But I do not find it impressive at all. The guns and the bombs, the rockets and the warships, are all symbols of human failure. They are necessary symbols. They protect what we cherish. But they are witness to human folly.

A dam built across a great river is impressive.

In the countryside where I was born, and where I live, I have seen the night illuminated, and the kitchens warmed, and the homes heated, where once the cheerless night and the ceaseless cold held sway. And all this

happened because electricity came to our area along the humming wires of the REA. Electrification of the countryside—yes, that, too, is impressive.

A rich harvest in a hungry land is impressive.

The sight of healthy children in a classroom is impressive.

These—not mighty arms—are the achievements which the American Nation believes to be impressive.

And, if we are steadfast, the time may come when all other nations will also find it so.

Every night before I turn out the lights to sleep I ask myself this question: Have I done everything that I can do to unite this country? Have I done everything I can to help unite the world, to try to bring peace and hope to all the peoples of the world? Have I done enough?

Ask yourselves that question in your homes—and in this hall tonight. Have we, each of us, all done all we could? Have we done enough?

We may well be living in the time foretold many years ago when it was said: “I call heaven and earth to record this day against you, that I have set before you life and death, blessing and cursing: therefore choose life, that both thou and thy seed may live.”

This generation of the world must choose: destroy or build, kill or aid, hate or understand.

We can do all these things on a scale never dreamed of before.

Well, we will choose life. In so doing we will prevail over the enemies within man, and over the natural enemies of all mankind.

[. . .]

97. Freedom of Information Act, 1966

Introduction

The 1966 Freedom of Information Act is the most important U.S. legislation regarding public access to government records. Until the passage of this act, there was no law requiring that federal records be opened to the public. The result was that the federal bureaucracy often operated in secrecy, withholding substantial information from the public. In the 1950s, Representative John Moss of California began a concerted effort to enact legislation reducing government secrecy. After more than a decade of effort, at the height of the Vietnam War, his work resulted in the passage of this act. Congress strengthened the law in 1974 to force greater compliance. Once the legislation was in place, individuals and organizations were able to use it to obtain accurate information on such subjects as illicit government surveillance of suspected subversives and others and U.S. involvement, through the Central Intelligence Agency (CIA) and other bodies in destabilizing other governments overseas. The information thus obtained contributed to a growing climate of public distrust of the U.S. government’s good faith and probity and a loss of confidence that President Jimmy Carter characterized in the late 1970s as a national malaise.

Primary Source

Section 552. Public information; agency rules, opinions, orders, records, and proceedings

(a) Each agency shall make available to the public information as follows:

(1) Each agency shall separately state and currently publish in the Federal Register for the guidance of the public—

(A) descriptions of its central and field organization and the established places at which, the employees

(and in the case of a uniformed service, the members) from whom, and the methods whereby, the public may obtain information, make submittals or requests, or obtain decisions;

(B) statements of the general course and method by which its functions are channeled and determined, including the nature and requirements of all formal and informal procedures available;

(C) rules of procedure, descriptions of forms available or the places at which forms may be obtained, and instructions as to the scope and contents of all papers, reports, or examinations;

(D) substantive rules of general applicability adopted as authorized by law, and statements of general policy or interpretations of general applicability formulated and adopted by the agency; and

(E) each amendment, revision, or repeal of the foregoing. Except to the extent that a person has actual and timely notice of the terms thereof, a person may not in any manner be required to resort to, or be adversely affected by, a matter required to be published in the Federal Register and not so published. For the purpose of this paragraph, matter reasonably available to the class of persons affected thereby is deemed published in the Federal Register when incorporated by reference therein with the approval of the Director of the Federal Register.

(2) Each agency, in accordance with published rules, shall make available for public inspection and copying—

(A) final opinions, including concurring and dissenting opinions, as well as orders, made in the adjudication of cases;

(B) those statements of policy and interpretations which have been adopted by the agency and are not published in the Federal Register; and

(C) administrative staff manuals and instructions to staff that affect a member of the public; unless the materials are promptly published and copies offered for sale. To the extent required to prevent a clearly un-

warranted invasion of personal privacy, an agency may delete identifying details when it makes available or publishes an opinion, statement of policy, interpretation, or staff manual or instruction. However, in each case the justification for the deletion shall be explained fully in writing. Each agency shall also maintain and make available for public inspection and copying current indexes providing identifying information for the public as to any matter issued, adopted, or promulgated after July 4, 1967, and required by this paragraph to be made available or published. Each agency shall promptly publish, quarterly or more frequently, and distribute (by sale or otherwise) copies of each index or supplements thereto unless it determines by order published in the Federal Register that the publication would be unnecessary and impracticable, in which case the agency shall nonetheless provide copies of such index on request at a cost not to exceed the direct cost of duplication. A final order, opinion, statement of policy, interpretation, or staff manual or instruction that affects a member of the public may be relied on, used, or cited as precedent by an agency against a party other than an agency only if—

(i) it has been indexed and either made available or published as provided by this paragraph; or

(ii) the party has actual and timely notice of the terms thereof.

(3) Except with respect to the records made available under paragraphs (1) and (2) of this subsection, each agency, upon any request for records which (A) reasonably describes such records and (B) is made in accordance with published rules stating the time, place, fees (if any), and procedures to be followed, shall make the records promptly available to any person.

(4)(A)(i) In order to carry out the provisions of this section, each agency shall promulgate regulations, pursuant to notice and receipt of public comment, specifying the schedule of fees applicable to the processing of requests under this section and establishing procedures and guidelines for determining when such fees should be waived or reduced. Such schedule shall conform to the guidelines which shall be promulgated, pursuant to notice and receipt of public comment, by

the Director of the Office of Management and Budget and which shall provide for a uniform schedule of fees for all agencies.

(ii) Such agency regulations shall provide that—

(I) fees shall be limited to reasonable standard charges for document search, duplication, and review, when records are requested for commercial use;

(II) fees shall be limited to reasonable standard charges for document duplication when records are not sought for commercial use and the request is made by an educational or noncommercial scientific institution, whose purpose is scholarly or scientific research; or a representative of the news media; and

(III) for any request not described in (I) or (II), fees shall be limited to reasonable standard charges for document search and duplication.

(iii) Documents shall be furnished without any charge or at a charge reduced below the fees established under clause (ii) if disclosure of the information is in the public interest because it is likely to contribute significantly to public understanding of the operations or activities of the government and is not primarily in the commercial interest of the requester.

(iv) Fee schedules shall provide for the recovery of only the direct costs of search, duplication, or review. Review costs shall include only the direct costs incurred during the initial examination of a document for the purposes of determining whether the documents must be disclosed under this section and for the purposes of withholding any portions exempt from disclosure under this section. Review costs may not include any costs incurred in resolving issues of law or policy that may be raised in the course of processing a request under this section. No fee may be charged by any agency under this section—

(I) if the costs of routine collection and processing of the fee are likely to equal or exceed the amount of the fee; or

(II) for any request described in clause (ii) (II) or

(III) of this subparagraph for the first two hours of search time or for the first one hundred pages of duplication.

(v) No agency may require advance payment of any fee unless the requester has previously failed to pay fees in a timely fashion, or the agency has determined that the fee will exceed \$250.

(vi) Nothing in this subparagraph shall supersede fees chargeable under a statute specifically providing for setting the level of fees for particular types of records.

(vii) In any action by a requester regarding the waiver of fees under this section, the court shall determine the matter de novo: Provided, That the court's review of the matter shall be limited to the record before the agency.

(B) On complaint, the district court of the United States in the district in which the complainant resides, or has his principal place of business, or in which the agency records are situated, or in the District of Columbia, has jurisdiction to enjoin the agency from withholding agency records and to order the production of any agency records improperly withheld from the complainant. In such a case the court shall determine the matter de novo, and may examine the contents of such agency records in camera to determine whether such records or any part thereof shall be withheld under any of the exemptions set forth in subsection (b) of this section, and the burden is on the agency to sustain its action.

(C) Notwithstanding any other provision of law, the defendant shall serve an answer or otherwise plead to any complaint made under this subsection within thirty days after service upon the defendant of the pleading in which such complaint is made, unless the court otherwise directs for good cause shown.

[. . .]

(6)(A) Each agency, upon any request for records made under paragraph (1), (2), or (3) of this subsection, shall—

(i) determine within ten days (excepting Saturdays, Sundays, and legal public holidays) after the receipt of

any such request whether to comply with such request and shall immediately notify the person making such request of such determination and the reasons therefor, and of the right of such person to appeal to the head of the agency any adverse determination; and

(ii) make a determination with respect to any appeal within twenty days (excepting Saturdays, Sundays, and legal public holidays) after the receipt of such appeal. If on appeal the denial of the request for records is in whole or in part upheld, the agency shall notify the person making such request of the provisions for judicial review of that determination under paragraph (4) of this subsection.

(B) In unusual circumstances as specified in this subparagraph, the time limits prescribed in either clause (i) or clause (ii) of subparagraph (A) may be extended by written notice to the person making such request setting forth the reasons for such extension and the date on which a determination is expected to be dispatched. No such notice shall specify a date that would result in an extension for more than ten working days. As used in this subparagraph, “unusual circumstances” means, but only to the extent reasonably necessary to the proper processing of the particular request—

(i) the need to search for and collect the requested records from field facilities or other establishments that are separate from the office processing the request;

(ii) the need to search for, collect, and appropriately examine a voluminous amount of separate and distinct records which are demanded in a single request; or

(iii) the need for consultation, which shall be conducted with all practicable speed, with another agency having a substantial interest in the determination of the request or among two or more components of the agency having substantial subject-matter interest therein.

(C) Any person making a request to any agency for records under paragraph (1), (2), or (3) of this subsection shall be deemed to have exhausted his administrative remedies with respect to such request if the agency fails to comply with the applicable time limit provisions of this paragraph. If the Government can

show exceptional circumstances exist and that the agency is exercising due diligence in responding to the request, the court may retain jurisdiction and allow the agency additional time to complete its review of the records. Upon any determination by an agency to comply with a request for records, the records shall be made promptly available to such person making such request. Any notification of denial of any request for records under this subsection shall set forth the names and titles or positions of each person responsible for the denial of such request.

(b) This section does not apply to matters that are—

(1)(A) specifically authorized under criteria established by an Executive order to be kept secret in the interest of national defense or foreign policy and (B) are in fact properly classified pursuant to such Executive order;

(2) related solely to the internal personnel rules and practices of an agency;

(3) specifically exempted from disclosure by statute (other than section 552b of this title), provided that such statute

(A) requires that the matters be withheld from the public in such a manner as to leave no discretion on the issue, or

(B) establishes particular criteria for withholding or refers to particular types of matters to be withheld;

(4) trade secrets and commercial or financial information obtained from a person and privileged or confidential;

(5) inter-agency or intra-agency memorandums or letters which would not be available by law to a party other than an agency in litigation with the agency;

(6) personnel and medical files and similar files the disclosure of which would constitute a clearly unwarranted invasion of personal privacy;

(7) records or information compiled for law enforcement purposes, but only to the extent that the production of such law enforcement records or information

(A) could reasonably be expected to interfere with enforcement proceedings,

(B) would deprive a person of a right to a fair trial or an impartial adjudication,

(C) could reasonably be expected to constitute an unwarranted invasion of personal privacy,

(D) could reasonably be expected to disclose the identity of a confidential source, including a State, local, or foreign agency or authority or any private institution which furnished information on a confidential basis, and, in the case of a record or information compiled by criminal law enforcement authority in the course of a criminal investigation or by an agency conducting a lawful national security intelligence investigation, information furnished by a confidential source,

(E) would disclose techniques and procedures for law enforcement investigations or prosecutions, or would disclose guidelines for law enforcement investigations or prosecutions if such disclosure could reasonably be expected to risk circumvention of the law, or

(F) could reasonably be expected to endanger the life or physical safety of any individual;

(8) contained in or related to examination, operating, or condition reports prepared by, on behalf of, or for the use of an agency responsible for the regulation or supervision of financial institutions; or

(9) geological and geophysical information and data, including maps, concerning wells. Any reasonably segregable portion of a record shall be provided to any person requesting such record after deletion of the portions which are exempt under this subsection

(c)(1) Whenever a request is made which involves access to records described in subsection (b)(7)(A) and—

(A) the investigation or proceeding involves a possible violation of criminal law; and

(B) there is reason to believe that

(i) the subject of the investigation or proceeding is not aware of its pendency, and

(ii) disclosure of the existence of the records could reasonably be expected to interfere with enforcement proceedings, the agency may, during only such time as that circumstance continues, treat the records as not subject to the requirements of this section.

(2) Whenever informant records maintained by a criminal law enforcement agency under an informant's name or personal identifier are requested by a third party according to the informant's name or personal identifier, the agency may treat the records as not subject to the requirements of this section unless the informant's status as an informant has been officially confirmed.

(3) Whenever a request is made which involves access to records maintained by the Federal Bureau of Investigation pertaining to foreign intelligence or counterintelligence, or international terrorism, and the existence of the records is classified information as provided in subsection (b)(1), the Bureau may, as long as the existence of the records remains classified information, treat the records as not subject to the requirements of this section.

(d) This section does not authorize withholding of information or limit the availability of records to the public, except as specifically stated in this section. This section is not authority to withhold information from Congress.

98. Outer Space Treaty, 27 January 1967

Introduction

During the 1960s, ever-increasing activity in space on the part of both the Soviet Union and the United States brought concern that the nuclear arms race would spread even beyond Earth and its atmosphere. Fears were also rife that one or another power would seek to annex and lay claim to the moon or other celestial bodies. In 1967 the three powers then involved in space exploration—Great Britain, the United States, and the Soviet Union—signed a treaty governing these subjects. Each pledged not to install nuclear weapons or other weapons of mass destruction in orbit around Earth. The moon and other celestial bodies, such as planets and asteroids, were also declared to be off-limits to any military use. The signatories agreed that they would not place any nuclear or other weapons of mass destructions or establish military bases, installations, or fortifications on the moon, planets, or other celestial bodies for the purposes of testing weapons or conducting military maneuvers. In addition, all such celestial bodies were declared to belong to all humankind and could therefore not be subjected to colonization, occupation, or sovereignty by any one nation. The treaty was one indication of how, despite their fierce competition to explore space, the expensive prospect of expanding Cold War rivalries and hostilities beyond the stratosphere was something that the great powers found decidedly unenticing.

Primary Source

[. . .]

Article I

The exploration and use of outer space, including the Moon and other celestial bodies, shall be carried out for the benefit and in the interests of all countries, irrespective of their degree of economic or scientific development, and shall be the province of all mankind.

Outer space, including the Moon and other celestial bodies, shall be free for exploration and use by all States without discrimination of any kind, on a basis of equality and in accordance with international law, and there shall be free access to all areas of celestial bodies.

There shall be freedom of scientific investigation in outer space, including the Moon and other celestial bodies, and States shall facilitate and encourage international cooperation in such investigation.

Article II

Outer space, including the Moon and other celestial bodies, is not subject to national appropriation by claim of sovereignty, by means of use or occupation, or by any other means.

Article III

States Parties to the Treaty shall carry on activities in the exploration and use of outer space, including the

Moon and other celestial bodies, in accordance with international law, including the Charter of the United Nations, in the interest of maintaining international peace and security and promoting international cooperation and understanding.

Article IV

States Parties to the Treaty undertake not to place in orbit around the Earth any objects carrying nuclear weapons or any other kinds of weapons of mass destruction, install such weapons on celestial bodies, or station such weapons in outer space in any other manner.

The Moon and other celestial bodies shall be used by all States Parties to the Treaty exclusively for peaceful purposes. The establishment of military bases, installations and fortifications, the testing of any type of weapons and the conduct of military manoeuvres on celestial bodies shall be forbidden. The use of military personnel for scientific research or for any other peaceful purposes shall not be prohibited. The use of any equipment or facility necessary for peaceful exploration of the moon and other celestial bodies shall also not be prohibited.

Article V

States Parties to the Treaty shall regard astronauts as envoys of mankind in outer space and shall render to them all possible assistance in the event of accident, dis-

stress, or emergency landing on the territory of another State Party or on the high seas. When astronauts make such a landing, they shall be safely and promptly returned to the State of registry of their space vehicle.

In carrying on activities in outer space and on celestial bodies, the astronauts of one State Party shall render all possible assistance to the astronauts of other States Parties.

States Parties to the Treaty shall immediately inform the other States Parties to the Treaty or the Secretary-General of the United Nations of any phenomena they discover in outer space, including the Moon and other celestial bodies, which could constitute a danger to the life or health of astronauts.

Article VI

States Parties to the Treaty shall bear international responsibility for national activities in outer space, including the Moon and other celestial bodies, whether such activities are carried on by governmental agencies or by non-governmental entities, and for assuring that national activities are carried out in conformity with the provisions set forth in the present Treaty. The activities of non-governmental entities in outer space, including the Moon and other celestial bodies, shall require authorization and continuing supervision by the appropriate State Party to the Treaty. When activities are carried on in outer space, including the Moon and other celestial bodies, by an international organization, responsibility for compliance with this Treaty shall be borne both by the international organization and by the States Parties to the Treaty participating in such organization.

Article VII

Each State Party to the Treaty that launches or procures the launching of an object into outer space, including the Moon and other celestial bodies, and each State Party from whose territory or facility an object is launched, is internationally liable for damage to another State Party to the Treaty or to its natural or juridical persons by such object or its component parts on the Earth, in air space or in outer space, including the Moon and other celestial bodies.

Article VIII

A State Party to the Treaty on whose registry an object launched into outer space is carried shall retain jurisdiction and control over such object, and over any personnel thereof, while in outer space or on a celestial body. Ownership of objects launched into outer space, including objects landed or constructed on a celestial body, and of their component parts, is not affected by their presence in outer space or on a celestial body or by their return to the Earth. Such objects or component parts found beyond the limits of the State Party of the Treaty on whose registry they are carried shall be returned to that State Party, which shall, upon request, furnish identifying data prior to their return.

Article IX

In the exploration and use of outer space, including the moon and other celestial bodies, States Parties to the Treaty shall be guided by the principle of cooperation and mutual assistance and shall conduct all their activities in outer space, including the Moon and other celestial bodies, with due regard to the corresponding interests of all other States Parties to the Treaty. States Parties to the Treaty shall pursue studies of outer space, including the Moon and other celestial bodies, and conduct exploration of them so as to avoid their harmful contamination and also adverse changes in the environment of the Earth resulting from the introduction of extraterrestrial matter and, where necessary, shall adopt appropriate measures for this purpose. If a State Party to the Treaty has reason to believe that an activity or experiment planned by it or its nationals in outer space, including the Moon and other celestial bodies, would cause potentially harmful interference with activities of other States Parties in the peaceful exploration and use of outer space, including the Moon and other celestial bodies, it shall undertake appropriate international consultations before proceeding with any such activity or experiment. A State Party to the Treaty which has reason to believe that an activity or experiment planned by another State Party in outer space, including the Moon and other celestial bodies, would cause potentially harmful interference with activities in the peaceful exploration and use of outer space, including the moon and other celestial bodies, may request consultation concerning the activity or experiment.

Article X

In order to promote international cooperation in the exploration and use of outer space, including the Moon and other celestial bodies, in conformity with the purposes of this Treaty, the States Parties to the Treaty shall consider on a basis of equality any requests by other States Parties to the Treaty to be afforded an opportunity to observe the flight of space objects launched by those States.

The nature of such an opportunity for observation and the conditions under which it could be afforded shall be determined by agreement between the States concerned.

[. .]

Article XIV

1. This Treaty shall be open to all States for signature. Any State which does not sign this Treaty before its entry into force in accordance with paragraph 3 of this Article may accede to it at any time.

99. Stokely Carmichael: Black Power Speech, Seattle, Washington, 19 April 1967

Introduction

Over time, the civil rights movement became increasingly violent, a development that in turn helped to provoke a white backlash. In 1966 the flamboyant Stokely Carmichael became head of the Student Nonviolent Coordinating Committee (SNCC). Carmichael's experiences as a civil rights activist fighting segregation in the South, where protestors were beaten and sometimes killed, radicalized him. Arrested well over thirty times, he lost patience with tactics of passive resistance and soon became a vocal advocate of violence, at first only in self-defense and later as a means of revolutionary opposition to oppression. In a speech in Greenwood, Mississippi, in June 1966, he coined the slogan and enunciated the principles of black power, declining to cooperate with whites and advocating tactics of black separatism as opposed to accommodation. More moderate civil rights leaders such as Dr. Martin Luther King Jr. and Roy Wilkins of the National Association for the Advancement of Colored People (NAACP) deplored Carmichael's speech and his tactics, which they feared would turn the white majority against civil rights. Financial contributions to the civil rights movement declined dramatically, and the election results of November 1966 demonstrated the beginnings of a white backlash. Carmichael expelled white staff and volunteers from the SNCC before leaving the organization in June 1967 to join the more extreme Black Panther Party, which appealed to blacks to "smash everything Western civilization has created." He applauded the 1967 racial riots in Detroit and other American cities, threatening to train groups of "urban guerrillas" to fight to the death for black rights. Men wearing black berets and carrying guns featured prominently among his supporters. In 1966 and 1967 Carmichael lectured around the United States, urging young African Americans to rise up against whites and identify themselves with African nations. Seeking to nurture their self-esteem, he told them that they should not try to resemble whites but rather should take pride in themselves and believe that "black is beautiful." Carmichael also condemned the Vietnam War, charging that it was a racist, capitalist, and unjust conflict, and, moreover, one in which casualties among black soldiers were disproportionately high. In 1968 Carmichael changed his name to Kwame Toure in honor of two of his friends, the African socialist leaders Kwame Nkrumah and Ahmed Sekou Touré. In 1969 Toure moved permanently to Guinea, West Africa, claiming that there was no real place for blacks in the United States and urging other African Americans to follow his example. From then onward he was very much on the margins of the civil rights movement. By that time, however, the extremism that he had helped to foster had done much to turn average Americans against that movement.

Primary Source

[. . .]

Tonight we want to do several things. We want to talk about some of the basic assumptions from which the Student Non-violent Coordinating Committee moves, and then move into an area of pragmatics and what, in fact, black people gonna have to do if we going to survive in this country and live as human beings.

[. . .]

We want to talk about self-condemnation. Self-condemnation is impossible; nobody can condemn themselves or no people can condemn themselves. If they do they have to punish themselves. See, if I did something wrong, and I admitted that I did it wrong, then I have to punish myself, see. But if I can keep telling lies or if I can rationalize away my guilt, then I'll never feel guilty. Hmm, let me give you some examples.

The Nazis who were brought to trial after Hitler was—after the Hitler regime was brought down, they said, the ones who allowed themselves to live, they said that they killed Jews but that Jews weren't human beings—they were inferior—so they didn't really commit a crime. Or they said that they didn't know what was going on in Germany at the time that Hitler was killing all the Jews. Or they said what most white Americans are saying today, that they were just following law and order.

Now, if they . . . if they said that, they just rationalized away their guilt—they just served their sentences and waited until they got out. But now the ones who admitted that they killed human beings had to commit suicide—they had to commit suicide. You got to understand that. For us in this country, a clear example of that would be in Neshoba County in Philadelphia, Mississippi, a honky by the name of Rainey, decides with eighteen other honkies to kill three people. Now the entire county of Neshoba cannot indict Rainey because they elected him to do just what he was doing, to kill anybody who troubled with the status quo. If they indicted him, then all of them will be guilty, and they can't do that. See, they cannot admit that they are guilty. And in SNCC we say that white America, the

total community, cannot condemn herself for the acts [of] brutality and bestiality that she has heaped upon us as a race, black people. It is impossible for her to do it. She must rationalize away her guilt. She must blame everybody else but herself cause if she were to blame herself she would have to commit suicide. My brother Leroy Jones reminds me that wouldn't be such a bad idea.

Now we want to move from there to the concept of denying one one's freedom. And this is very very important because white people have assumed that they're gods; that they can give somebody your freedom, and so if they don't like the way you act, they won't give you your freedom.

So now what you have to get crystal clear in your mind is that nobody gives anybody their freedom. People can only deny somebody their freedom. It's very important. We are all born free. We are enslaved by the institutions of racism that white America produces. Our job is to stop America from being racist; not to . . . not to give us our freedom. So in reality, our fight is to civilize white America, 'cause it's uncivilized.

Now then, if you take that to its logical conclusion, you would say that any civil rights bill that was passed in this country might have eased the struggle for black people but helped civilize white America.

[. . .]

Now then, we want to talk about definitions 'cause they're very very important. See, white, western society—and you should use the words “western society”, never “western civilization” 'cause they don't know nothin' about it—white western society has been able to define everybody. They just define them to put them in places. And once they're defined, they can't get out of those definitions. And people just stay there. Let me give you some examples so you can understand it much better.

You've watched the red man and the white man on TV? Fighting each other? If the red man is winning, then the white man calls for the cavalry. I mean, here comes the cavalry, and they're riding very white and

very proper, and when they get up to where the battle is, they all get off their horses and they get out their guns and they systematically shoot all the red men; you know, kill 'em dead. They get back on their horses and they ride back to the fort, and at the fort there's always a white woman standing there and she says, [in falsetto] "What happened?" and there's always this lieutenant who says, "We had a victory. We killed all the Indians." This is very good, you know. Now the next time when the reverse happens, when the red man beats the hell out of the white man, you know, and there's one of them left draggin' on the horse, and she says, [in falsetto] "What happened?" "Those dirty Indians; they massacred us."

See, what they are saying, is that a massacre is not as good as a victory. A victory is much better. So here are these poor red people who all their lives gonna fight and they ain't never gonna have a victory. Here's Sitting Bull, the greatest strategist you have in a war; he's won all these wars, but he ain't never gonna have a victory; he's always gonna win a massacre. And a massacre is dirty, so you gotta understand that one in your minds.

You see that on television all the time. Even today about the Vietnam war; do you ever see 'em? Those dirty, filthy, rotten, Communist, rebels threw a Molotov cocktail and killed civilians. And then the other guy comes on and says, "And in the meantime, our good GI boys have been bombing the hell out of North Vietnam."

Or even better, would be a group of students at Nashville decide to take care of some honky cops 'cause they pickin' on them and it's "Fiske Students Riot!" And in Fort Lauderdale, honkies gonna throw bottles and beer at policemen and they gonna say "College Students go on a Spree."

So the white people have been defining us all our lives and we have been forced to react to those definitions. And see, they call you all Negroes. I guess you all came from Negroland. [laughs] You got 'em! Yeah! But see you have allowed white people to name you. When we were in Puerto Rico a couple of months ago we were speaking in Spanish. I was looking through the dictionary to find the word for Negro in Puerto Rican. There is no such word. The closest word is negro: it

means black. In French, there is no word for Negro. In German, there is no word for Negro. In Swahili, there is no word for Negro.

[. . .]

But now they do something even more insidious with definitions. Let me give you an example so then we can get into Black Power and the definitions of Black Power. Now you remember, especially from my generation, when the whole thing broke out with integration and we used to sit glued to the TV set. You know, our black leaders would get up and say, "We want to integrate." In our minds, we knew the cat was talking about good schools, good houses, good jobs, and a good way of life. That was in the minds of all black people. But some dumb honky gonna jump up and say, [in a drawl] "You want to marry my daughter don't you?"

And instead of our black leaders being aggressive and saying "Later for you honky," at that time they would react to the honky. See they would let the honky define their own term "integration" and they would say, "Uh, uh, we don't want to be your brother. We just want to be your brother. Ah, ah." Yeah, yeah, you know! And they just go to sweating and puffing, "We don't want to sleep in your bedroom. We just want to live next door to you." Yeah, yeah! And so what they were doing was that here was a honky who defined their term and they were reacting to his definition. They don't pull that junk with us at SNCC 'cause we tell them right out when they say that nonsense about "marrying my daughter". Your daughter, your sister, your mama, we tell them to the point! To the point, to the point! We tell them crystal clear: "The white woman is not the queen of the world—she's not! She's not the Virgin Mary. She can be made like anyone else. Let's move on to something important! Let's move on to something important."

So that we will not be caught in a bind about reacting to their definitions. And the same thing happens, see, we say Black Power and some honky goin' to jump up and say, "You mean violence." And he wants us to say "Uh-uh, boss man, we don't mean violence." Later for the honky! It's our term—we know what it means. Later for him!

Black Power is the coming together of black people to fight for their liberation by any means necessary.

Now we want to talk about violence. Because I understand that some of your so-called Negro leaders have been saying that we violent. I won't deny it. Yeah, I'm violent. Somebody touch me, I'll break their arm. But the problem isn't one of violence, see. The problem is one of hitting back white people when they hit you. That's the real problem 'cause we've never done that all our lives. They've been able to walk over us, bomb our churches, beat us up, shoot into our houses, lynch us, and do everything they wanted to do and we would just sit there and whisper about it behind closed doors.

It's . . . a . . . new day . . . today! It's a new day today.

But what really upsets me is that these people who talk about violence are not concerned about black people. Because there is more violence in our neighborhood on Friday and Saturday night than there is anyplace else, anyplace else. We cut and we shoot each other more then we touch anybody in the world, and don't nobody talk out against that violence—nobody talking about it! And the reason they don't do it is because they don't give a damn about us. They're only concerned about white folk. If they were against violence, they would be preaching non-violence in the black communities, 'cause that's where we need it most. We need it there. We need to learn to love and to respect each other and stop cutting and shooting each other. But they don't care about us, they don't care about us, no! The only time you hear these preachers talk about nonviolence is when a honky hits you and you gettin' ready to take care of business. That's the only time you hear them talking about non-violence.

[. . .]

Now we want talk then pragmatically about how these things affect our lives as black people. What white America has done in order to rationalize away her guilt for what she's done to us, is that she's told a number of lies about us that she believes. Now that's expected. Hitler said if you tell a lie long enough, and hard enough, everybody will think it's the truth. And white American has done that. But what is pathetic and what

is bad is that some black people believe those lies about themselves. Yes. And so what we have to do to-night is begin to clarify those lies for ourselves.

[. . .]

Now the first lie that white America told about us is that we are lazy people. Now are you hip to that. And here goes some of us down the street, "Oh, oh, we just lazy people. We could be just like white folk, they always working hard and trying to get somewhere. We so lazy." You ought to get it in your minds, we not lazy. We hardworking. White people are lazy. Look here. They so lazy they came to Africa to steal us to do their work for them. We're not lazy. We are the hardest working people in this country. We are! The trouble is we are the lowest paid and the most oppressed and the most exploited people in this country. In this country, yeah! We're not lazy people. If you ride up and down the Delta in the South today, you will see black people chopping and picking cotton for \$2.00 a day while white folks sit on the porch, drink Scotch, and talk about us. We're not a lazy people. It is our mothers who take care of their own family and then go cross town to take care of Miss Ann's family. So you should get that out of your mind: we're not lazy. We are a hard working, industrious people. Always have been—our sweat built this country. Built this country.

Now the next lie she tells is what she tells our kids in school. If you work hard, you will succeed. Now you all ought to know that's a lot of Junk. 'Cause if that were true, black people would own this country lock, stock, and barrel. It's not a question of hard-working. It is a question of who has power and who has control. That's all. That's all it's about. Because we are the people who really built this country. We are the domestics, we are the share-croppers, we are the fruit-pickers, we are the janitors, we are the elevator men, we are the garbage men, we are the hardest working people in this country. We are. See then if it were true that you had to work hard to succeed, then the contrary of that would be true, that people who didn't work hard would be poor. And Bobby Kennedy would be the poorest honky in this country. So then we must begin to get it crystal clear in our minds, it is simply a question of who has power. And we don't have that. We got

everything else but that and the white man ain't got nothing but that.

You ever dig that? We got love, we got nonviolence, we got morality, we got Christianity, we got rhythm, we got everything you need. But we ain't got power. We ain't got power.

The honkies don't have love, can't spell nonviolence, don't know what religion is all about, and you know they ain't got rhythm. But they have power, that's what they have. Power over our lives! So we got to get it clear, the thing we need is power.

The next lie they tell us is this thing about education. If you go to school and get a degree you gonna make it, you know. All our college students when they get out of college with a college degree, make less money than a honky with a high school degree. Not only that, the education system that they teach us is riddled with racism. It is filled with racism! We can't see ourselves projected anywhere. They show us as a stupid people. They let us keep thinking we're stupid. They start off with their elementary books about Tom, Dick, and Jane. Tom is white, Dick is white, Jane is white, even their dog Spot is white. And the only time we see ourselves is little black Sambo on the last page eating watermelon.

But not only is it riddled with outright racism, it is riddled with subtle racism, and the history books just lie. They lie! And they have to lie because white people have got to lie to themselves. They cannot tell the truth about themselves. And what happens is they fill our minds with all those lies and we have to accept them as truths. Let me give you an example; one that is very hard but you gonna dig it.

If I said to you Mr. Kwame Nkrumah, who is a brilliant black man—he's out of sight, don't let them white folk fool you; he should be your hero, he's out of sight—and if I said to you Mr. Cusman Krumm (you wouldn't know about him because he's a leader in Africa) (or was until the CIA overthrew him) and if I said to you that Mr. Cusman Krumm discovered England in 1961, you'd laugh huh? That was the first time that that black man had set foot on England since we as black

people did not recognize the existence of nonblack people, he would have discovered England, huh? If I said to you that Christopher Columbus discovered America in 1492 you would say that that is right. If you were my teacher, you'd give me an A.

Alright, now dig. Here comes this honky from Europe, sets foot on this country, the red people are here, but they don't exist, so he discovered it. This has been the history of white society, they have never recognized anybody who is non-white, so nothing happens until they come and find you. Ha!

But now you've got to dig this thing about Columbus real deep, because when they tell you he discovered America and he was a dumb honky, I mean he was real stupid. He died thinking he was in India that is how dumb he was. And because he was stupid, he titled the Red man Indians. That's why they have the name, because some dumb honky thought he was in India.

So you've got to understand that. That's how riddled with racism it is—that you can't even recognize it. They don't even recognize how racist it is to say that Christopher Columbus discovered America. And they never will admit it; they can't, they can't.

Not only that, if you go to writing the real history of this country you would say that this country is a country of thieves. They started off by stealing this country from the red men and committing genocide against them. Not only did it steal the country from the red men—that didn't satisfy them—they stole us from Africa. You've got to understand that this nation is a nation of thieves and is becoming a nation of murderers in Vietnam, we've got to stop it, we've got to stop it. Because we have to save our humanity! Let white America do as it will, but as black people we have to save our humanity. That is very very important .

They start our kids off with the Roman Empire, the Greek Empire, and never teach you about Africa. They make you ashamed of Africa.

You ask kids, "Where you from?"

"My mother is from Seattle."

“Where’s your grandmother from?”

“From Kansas.”

“And where are your great grandparents from?”

“From Texas.”

“And where your great-great-grandmother from?”

“Mmm-umm.” [I don’t know.]

She is from Africa!

Africa!

But you don’t know anything about Africa ’cause you have white people who define Africa as savages. You let them define them for you and you don’t want to be a savage. You want to be white. Yeah! Yeah. Um-hmm. You want to be so white that you don’t want to part of your brothers in Africa. You want to be so white that you go to the movies to watch Tarzan. Yeah. You want to be so white that you sit up on your movie seats and yell for Tarzan to beat up your black brothers. That’s how white you want to be. Yeah. Yeah. Yeah. You should recognize what they’re doing to you. Here you are jumping up and down identifying with a white man—and he’s dumb! He’s dumb—he can’t even speak. All he says is “Uh-ah-yuh-ah-yah!” [Tarzan’s yell].

And you over there identifying with this white man because what they telling you is here comes this honky from Europe, and because he’s so smart and so intelligent, and we are black and so stupid, he comes over to Africa and knows the jungle better than us, and we been living there all our lives. Are you hip to that? And whenever we get into trouble with the elephants, we have to go to the great white father to keep the elephants from us. Ain’t that some junk? But what you have to recognize is that what they have done is brainwashed us. When you see Tarzan on TV, you yell for your black brothers to come and beat the hell out that white man. Beat him up!

But you see that has been calculated by white America, that we will never find out about ourselves. Because a

people without its roots, a people without its history is like a tree without its roots and we have been floating for 400 hundred years. Just floating. Just floating. They didn’t tell you that the first university in the world was the university in Timbuktu in Africa, did they? Africa, did they? They couldn’t tell you that because you would begin to identify with Africa and see a part of other black people. They tell you about the Roman Empire conquering the world, they didn’t tell you that Hannibal, a black man, crossed the Alps and beat the living daylights out the Romans. That’s right, Hannibal did it!

[. . .]

But they won’t give you that in the history books. They give white heroes to identify with. They mesmerize our minds. They give you George Washington. He’s supposed to be your hero. He’s the man who had you enslaved—sold a black woman for a barrel of molasses—and he’s supposed to be my hero? Later for him! Later for him.

They can’t tell you about the Nat Turners and the Denmark Vesey, can they? They can’t tell you because they were fighters who beat up all kinds of white folk who were trying to make them slaves. That’s why they can’t tell you because they want you to keep on being slaves, so they can define your very actions. It ain’t going to happen to today!

All of those things in the schools are calculated to make us ashamed of ourselves. But the most insidious things they could have done to us is to make us believe as a people that we are ugly. The criteria for beauty in this society is set by white folk. In the books you read, in the television programs you see, the movies, the magazines and the newspaper. If she’s beautiful she’s got a thin nose, thin lips, stringy hair and white skin—and that’s beauty. And they believe in that beauty so much, that our women run around day and night bathing in beauty cream from morning to night.

They have got us believing that so that all these young men go out and process their hair so they can have straight hair to look beautiful. I hope you can take the truth, because they mesmerized our women’s minds so

that they process their hair every Friday night. And the rest of them get their fifty dollars and buy wigs. We have to as a people gather strength to stand up on our feet and say “Our noses are broad, our lips are thick, our hair is nappy—we are black and beautiful!” Black and beautiful!

So that we don’t have to any longer be ashamed of ourselves and make our children think that they are shamed. Black parents won’t tell us, “Don’t drink coffee, because it makes you black. Bite in your lip, ’cause it’s too thick.” I was surprised in college to find a young man who wore a nose-clip on his nose every night. But that’s how they have messed up our minds. They messed it up so much that every time we begin to think somebody’s beautiful, they pick somebody who is light, bright, and damned near white. And then they are beautiful.

And when you marry somebody, our mothers keep telling us, “Make sure you marry somebody with hair that’s, you know, straight. Because I don’t want to be . . .”

That’s how much they have messed up our minds. We are ashamed of ourselves and of our color of our skin.

If you want to start a fight, call somebody black. “I ain’t black they’s black, they’s black, I ain’t black. What you talkin’ ’bout?”

You are black and beautiful! Stop being ashamed of what you are!

Once we stop being ashamed, we can move on because we can then begin to develop a concept of people-hood. We so ashamed of each other. “Now I’m on the bus, and here comes a black sister, there are five of us standing there. She is going to stand next to us. We are so clannish we got to be together.” We are so ashamed we don’t even want to see each other in a group. We are so ashamed that we go walking down the street and see a honky cop beating up on one of us, and know he beating him because he’s black and we keep walking right on by.

We are so ashamed of ourselves, that we watch our brothers and sisters get put out of their houses, put their furniture on the street, and we wait until night time to go and steal what we want. We are so ashamed of ourselves that we’re raping, plundering, and murdering each other. We have to build a concept of people-hood where we recognize that we are all the same people, the same brothers and sisters. So that we can move to the strength to tell them “When you touch one of us, you’ve got to touch all of us.” And when we have got the strength to move to that position, ain’t none of them going to mess with any of us.

100. Lyndon B. Johnson: Announcement about Not Seeking Reelection, 31 March 1968

Introduction

The January 1968 Tet Offensive, when Viet Cong forces launched a countrywide offensive throughout Vietnam during the Vietnamese New Year holiday, had a major impact on U.S. domestic politics. The Tet Offensive convinced many Americans, including the influential television broadcaster Walter Cronkite, that victory in Vietnam was unattainable. It also triggered a major review of American policies in Vietnam by the so-called Wise Men, senior advisors and past American officials headed by Dean Acheson, former secretary of state, who recommended that the United States open serious negotiations with the Democratic Republic of Vietnam (DRV, North Vietnam) and

accept a compromise settlement in South Vietnam if that was the price for the withdrawal of American troops. The Tet Offensive also triggered further major domestic and international protests against American policies in Vietnam. Many Democrats strongly disagreed with President Lyndon B. Johnson's Vietnam policies. Primary contests for nominations for the 1968 presidential election had begun, and Senator Eugene McCarthy of Minnesota, running on an antiwar platform and supported by hundreds of student volunteers, mounted a challenge to Johnson. In mid-March, McCarthy won 42 percent of the vote in the New Hampshire primary, only seven points behind Johnson's 49 percent, a considerable humiliation for an incumbent president. Unwilling to face a bruising, divisive, and possibly unsuccessful primary fight against McCarthy, on 31 March 1968 Johnson shocked the nation when he announced in a televised address that he would not serve another term as president. He also announced his intention of opening serious peace talks with the North Vietnamese and offered a complete bombing halt of North Vietnam if the enemy would agree to come to the negotiating table in good faith. Johnson's address marked the moment when the United States officially decided to accept a compromise settlement in Vietnam rather than continuing the war in an effort to attain victory. It also represented a bitter and anticlimactic end to his presidency and political career, which Johnson, an extremely able politician, had begun with great hopes of implementing a major domestic reform program and aspirations to become a towering president who left a great historical legacy. Johnson's escalation of American intervention in Vietnam effectively destroyed all these hopes, and he died six years later a sad and disappointed man.

Primary Source

Fifty-two months and ten days ago, in a moment of tragedy and trauma, the duties of this office fell upon me. I asked then for your help and God's, that we might continue America on its course, binding up our wounds, healing our history, moving forward in new unity, to clear the American agenda and to keep the American commitment for all of our people.

United we have kept that commitment. United we have enlarged that commitment. Through all time to come, I think America will be a stronger nation, a more just society, and a land of greater opportunity and fulfillment because of what we have all done together in these years of unparalleled achievement. Our reward will come in the life of freedom, peace, and hope that our children will enjoy through ages ahead.

What we won when all of our people united must not now be lost in suspicion, distrust, selfishness, and politics among any of our people.

Believing this as I do, I have concluded that I should not permit the Presidency to become involved in the

partisan divisions that are developing in this political year.

With America's sons in the fields far away, with America's future under challenge right here at home, with our hopes and the world's hopes for peace in the balance every day, I do not believe that I should devote an hour or a day of my time to any personal partisan causes or to any duties other than the awesome duties of this office—the Presidency of your country.

Accordingly, I shall not seek, and I will not accept, the nomination of my party for another term as your President.

But let men everywhere know, however, that a strong, a confident, and a vigilant America stands ready tonight to seek an honorable peace—and stands ready tonight to defend an honored cause—whatever the price, whatever the burden, whatever the sacrifice that duty may require.

101. The Prague Spring: The Action Program of the Communist Party of Czechoslovakia (CPCz), 5 April 1968

Introduction

For most of the Cold War, any sign that the Soviet satellites in Eastern Europe were taking an unduly independent line was likely to attract harsh repression. In January 1968 the Czech communist Alexander Dubček was appointed head of his party and sought to introduce “communism with a human face.” For six months, it seemed that it might be possible to do so. In April 1968 the Communist Party of Czechoslovakia (CPCz) adopted the Action Program that, while not rejecting Marxist-Leninism, denied that the Communist Party should be “the instrument of the dictatorship of the proletariat” and sought to restrict its role in social, economic, and political life. The Action Program accepted political pluralism and the existence of other parties, to be organized in a “National Front” in which divergent views were accepted. The program envisaged independent, noncommunist trade unions and called for freedom of assembly and association, freedom of speech, and an end to censorship of political and artistic expression. The State Security apparatus was to be barred from investigating individuals’ internal activities unless there was good reason to believe that they were acting in collaboration with “enemy centers” abroad. Individual property rights were to be protected, and economic market reforms were to be launched that would make public enterprises responsible for both their profits and losses. While economic relations with other communist countries would continue, these were to be based more on “economic calculations” of profitability and less on ideological considerations. The Action Program affirmed that the alliance with the Soviet Union would remain the fundamental principle of Czech foreign policy, in tandem with peaceful coexistence with “advanced capitalist countries.” In the first half of 1968, known as the Prague Spring, Czechs enjoyed unprecedented intellectual and cultural freedom, but these in turn provoked great uneasiness among the other Soviet bloc states, which repeatedly but unavailingly urged the Czechs to moderate their policies. Czech efforts to reassure fellow European communist leaders that their country remained a loyal member of the Warsaw Pact failed to convince Soviet party secretary Leonid Brezhnev and his communist colleagues within the Soviet Politburo and around Eastern Europe, many of whom feared that their own peoples might seek to emulate the Czechs. Hard-line Czech communists urged the Soviet leadership to take military action. On 20–21 August 1968, Warsaw Pact forces invaded Czechoslovakia, and Soviet troops remained in occupation for the next twenty years. Dubček, Czech President Ludvík Svoboda, and other prominent Czech leaders were flown to Moscow and forced to sign a memorandum accepting the presence of Soviet troops. Hard-line Czech communist officials quickly replaced them. Around half a million Czechs lost their communist party membership, and many of the intellectual elite who had been active in the Prague Spring found themselves relegated to menial jobs. Dubček himself spent two decades working in forestry. About 150,000 Czechs and Slovaks fled to the West. As Soviet intervention in Hungary in 1956 had done, repression of the Prague Spring tarnished the image of Soviet communism among many Western intellectuals. Brezhnev used the occasion to promulgate the Brezhnev Doctrine, stating that the Soviet Union arrogated to itself the right to intervene in the affairs of any communist state when socialism was threatened there. This declaration alarmed not just the East European nations, including those such as Albania, Romania, and Yugoslavia that prided themselves on their independence from Soviet control, but also the People’s Republic of China (PRC), where Chinese Communist Party Chairman (CCP) Mao Zedong had fiercely attacked the Soviet Union on ideological and doctrinal grounds. Brezhnev’s stance was one reason that within a few years, China began to look to the United States for potential protection against any Soviet incursions.

Primary Source

[. . .]

For the development of socialist democracy, for a new system of the political management of society

[. . .]

The main thing is to reform the whole political system so that it will permit the dynamic development of socialist social relations, combine broad democracy with a scientific, highly

qualified management, strengthen the social order, stabilize socialist relations and maintain social discipline. The basic structure of the political system must, at the same time, *provide firm guarantees against a return to the old methods of subjectivism and highhandedness from a position of power.* Party activity has, so far, not been turned systematically to that end, in fact, obstacles have frequently been put in the way of such efforts. All these changes necessarily call for *commencement of work on a new Czechoslovak constitution* so that the draft of the new constitution may be thoroughly discussed among professionals and in public in all important points and submitted to the National Assembly shortly after the Party Congress.

[. . .]

No responsibility without right

[. . .]

The whole *National Front*, the political parties which form it, and the social organisations, will take part in the creation of state policy. *The political parties* of the National Front are partners whose political work is based on the joint political programme of the National Front and is naturally bound by the Constitution of the Czechoslovak Socialist Republic, is fully based on the socialist character of social relations in our country. The Communist Party of Czechoslovakia considers the National Front to be a political platform which does not separate the political parties into the government and the opposition in the sense that opposition would be created to the state policy as the policy of the whole National Front and a struggle for political power in the state were to exist. Possible differences in the viewpoints of individual component parts of the National Front, or divergency of views as to the policy of the state, are all to be settled on the basis of the common socialist conception of the National Front policy by way of political agreement and unification of all component parts of the National Front. Formation of political forces striving to negate this concept of the National Front, to remove the National Front as a whole from political power, was ruled out as long ago as 1945 after the tragic experience of both our nations with the prewar political development of the then Czechoslovak Republic; it is naturally unacceptable for our present republic.

The Communist Party of Czechoslovakia considers the *political management* of the Marxist-Leninist concept of the development of socialism as a precondition for the right development of our socialist society. It will assert the Marxist-Leninist concept as the leading political principle in the National Front and in our political system by seeking, through the means of political work, such support in all the component parts of our system and *directly among the masses of workers and all working people* that will ensure its leading role in a democratic way.

Voluntary social organisations of the working people cannot replace political parties, *but the contrary is also true: political parties in our country cannot exclude common-interest organisations or workers and other working people from directly influencing state policy*, its creation and application. Socialist state power cannot be monopolized either by a single party, or by a coalition of parties. It must be open to all political organisations of the people. *The Communist Party of Czechoslovakia will use every means to develop such forms of political life that will ensure the expression of the direct say and will of the working class and all working people in political decision-taking in our country.*

The whole existing organisation, forms of activities, and incorporation of the various organisations in the National Front must be revised in principle under the new conditions and built up so that the National Front may carry out the qualitatively new tasks. *The National Front as a whole and all its component parts must be allowed independent rights and their own responsibility for the management of our country and society.*

Voluntary social organisations must be based on really voluntary membership and activity. People join these organisations because they express their interests, therefore they have the right to choose their own officials and representatives who cannot be appointed from outside. These principles should be the foundation of our unified mass organisations the activities of which are still indispensable but which should meet, by their structure, their working methods, and their ties with their members, the new social conditions.

The implementation of *constitutional freedoms of assembly and association* must be insured this year so that the

possibility of setting up voluntary organisations, special-interest associations, societies, etc. is guaranteed by law to meet the actual interests and needs of various strata and categories of our citizens, without bureaucratic interference and without monopoly of any individual organisation. Any restrictions in this respect can be imposed only by law and only the law can stipulate what is anti-social, forbidden, or punishable. Freedoms guaranteed by law are applicable in this sense, in compliance with the constitution, also to citizens of individual creeds and religious denominations.

The effective influence of views and opinions of the working people on all our policy, opposition to all tendencies to suppress the criticism and initiative of the people, cannot be guaranteed if we do not ensure constitution-based freedom of speech and all political and personal rights of all citizens, systematically and consistently, by all legal means available. *Socialism cannot mean only liberation of the working people from the domination of exploiting class relations, but must make more provisions for a fuller life of the personality than any bourgeois democracy.* The working people, who are no longer ordered about by any class of exploiters, can no longer be prescribed by any arbitrary interpretation from a position of power, what information they may or may not be given, which of their opinions can or cannot be expressed publicly, where public opinion may play a role and where not. Public opinion polls must be systematically used in preparing important decisions and the main results of the research are to be published. Any restriction may be imposed only on the basis of a law stipulating what is anti-social—which in our country is mainly the criminal law. The Central Committee of the Communist Party of Czechoslovakia considers it necessary to define more exactly than hitherto in the shortest possible time by a press law, when a state body can forbid the propagation of certain information—in the press, radio, television, etc.—and exclude the possibility of preliminary factual censorship. It is necessary to overcome the holding up, distortion, and incompleteness of information, to remove any unwarranted secrecy of political and economic facts, to publish the annual balance sheets of enterprises, to publish even alternatives to various suggestions and measures, to extend the import and sale of foreign press. Leading representatives of state, social and cul-

tural organisations are obliged to organize regular press conferences and give their views on topical issues on television, radio, and in the press. In the press, it is necessary to make a distinction between official standpoints of state, Party and journalist bodies; the Party press especially must express the Party's own life, development and criticisms of various opinions among the communists, etc., and cannot be made fully identical with the official viewpoints of the state.

[. . .]

Legal norms must guarantee more exactly *the freedom of speech of minority interests and opinions* also again within the framework of socialist laws and in harmony with the principle that decisions are taken in accordance with the will of the majority. The constitutional freedom of movement, particularly the travelling of our citizens abroad, *must be precisely guaranteed by law*; in particular, this means that a citizen should have the legal right to long-term or permanent sojourn abroad and that people should not be groundlessly placed in the position of emigrants; at the same time it is necessary to protect by law the interests of the state, for example, as regards the drain of some categories of specialists, etc.

We must gradually solve in the whole legal code the task of how to *protect in a better and more consistent way the personal rights and property of citizens*, we must especially remove those stipulations that virtually put individual citizens at a disadvantage against the state and other institutions. We must in future prevent various institutions from disregarding personal rights and the interests of individual citizens as far as personal ownership of family houses, gardens, etc. is concerned. It will be necessary to adopt, in the shortest possible time, the long-prepared law on compensation for any damage caused to any individual or to an organisation by an unlawful decision of a state organ.

[. . .]

Division and supervision of power—guarantees against highhandedness

[. . .]

The Party policy is based on the principle that no undue concentration of power must occur; throughout the state machin-

ery, in one sector, one body, or in a single individual. It is necessary to provide for such a division of power and such a system of mutual supervision that any faults or encroachments of any of its links are rectified in time, by the activities of another link. This principle must be applied not only to relations between the elected and executive bodies, but also to the inner relations of the state administration machinery and to the standing and activities of courts of law.

[. . .]

The Party considers the problem of a correct incorporation of the security force in the state as politically very important. The security of our lives will only benefit, if everything is eliminated that helps to maintain a public view of the security force marred by the past period of law violations and by the privileged position of the security force in the political system. That past period impaired the progressive traditions of our security force as a force advancing side by side with our people. These traditions must be renewed. The Central Committee of the Communist Party of Czechoslovakia deems it necessary to *change the organisation of the security force* and to split the joint organisation into two mutually independent parts—State Security and Public Security. *The State Security* service must have such a status, organisational structure, numerical state, equipment, methods of work, and qualifications which are in keeping with its work of defending the state from the activities of enemy centres abroad. Every citizen who has not been culpable in this respect must know with certainty that his political convictions and opinions, his personal beliefs and activities, cannot be the object of attention of the bodies of the State Security service. The Party declares clearly that this apparatus *should not be directed and used to solve internal political questions* and controversies in socialist society.

[. . .]

Socialism cannot do without enterprises

The programme of democratization in economy links the economic reform more closely with the processes facing us in the sphere of politics and the general management of society, and stimulates the determination and application of new elements which would develop

the economic reform even further. *The programme of democratization of the economy includes particularly the provision of ensuring the independence of enterprises and enterprise groupings and their relative independence from state bodies, a full and real implementation of the right of the consumer to determine his consumption and his style of life, the right of a free choice of working activity, the right and real possibility of different groups of the working people and different social groups to formulate and defend their economic interests in shaping the economic policy.*

In developing democratic relations in the economy we at present consider as the most important task the final formulation of the economic position of enterprises, their authority and responsibility.

The economic reform will increasingly push whole working teams of socialist enterprises into positions in which they will feel directly the consequences of both the good and bad management of enterprises. The Party therefore deems it necessary that the whole working team which bears the consequences should also be able to influence the management of the enterprise. There arises the need of democratic bodies in enterprises with determined rights towards the management of the enterprise. Managers and head executives of the enterprises, which would also appoint them to their functions would be accountable to these bodies for the overall results of their work. These bodies must become a direct part of the managing mechanism of enterprises, and not a social organisation—they cannot therefore be identified with trade unions. These bodies would be formed by elected representatives of the working team and by representatives of certain components outside the enterprise ensuring the influence of the interests of the entire society and an expert and qualified level of decision-making; the representation of these components must also be subordinated to democratic forms of control. At the same time it is necessary to define the degree of responsibility of these bodies for the results of the management of socialist property. In the spirit of these principles it is important to solve many concrete questions; at the same time it will be necessary to propose a statute of these bodies and to use certain traditions of our works councils from the years 1945–48 and experiences in modern enterprises.

[. .]

Problems of the standard of living—an urgent task of the economic policy

The basic aim of the Party in developing the economic policy is the steady growth of the standard of living. However, the development of the economy was in the past one-sidedly focussed on the growth of heavy industry with long-term returnability of investments. This was done to a considerable extent at the expense of the development of agriculture and the consumer goods industry, the development of the production of building materials, trade, services and non-productive basic assets, particularly in housing construction. This one-sided character of the former economic development cannot be

changed overnight. If, however, we take advantage of the great reserve existing in the organisation of production and work, as well as in the technical and economic standard of production and products, if we consider the possibilities offered by a skillful utilization of the new system of management, we can substantially speed up the creation of resources and on this basis raise the growth of nominal wages and the general standard of living.

102. Martin Luther King Jr.: “I See the Promised Land,” Memphis, Tennessee, 3 April 1968

Introduction

By 1968, the civil rights movement was divided. From the mid-1960s onward, black riots occurred in major American cities, while the Black Panthers and Black Muslims rejected Martin Luther King’s emphasis on working with the white majority and instead emphasized violent tactics and black separatism. The United States was also riven by dissension over the Vietnam War, with massive antiwar demonstrations taking place on university campuses and elsewhere. King himself had now become more radical, opposing the Vietnam War as a conflict in which white wealthy American troops were killing poor Asian people and placing more emphasis on social justice and the alleviation of black poverty both in the United States and elsewhere. In April 1968 he visited Memphis, Tennessee, in order to show support for municipal sanitation workers who were on strike for better working conditions. Looking back over years of the civil rights struggle, King urged black activists not to abandon their tactics of peaceful non-violent protest but rather to supplement these with economic boycotts of businesses and banks that refused to treat African Americans fairly. As always, he appealed to the stated principles of American democracy and to the Christian Bible for endorsement of both his objectives and his tactics. He seems to have had a premonition that he might soon suffer a violent death, saying that he, like the Jewish leader Moses, had “seen the promised land” even if he did not reach it with his people. The following day King was assassinated, a demoralizing and shocking event that, like the murders of President John F. Kennedy in 1963 and his brother Robert in June 1968, helped to convince many Americans that their country was falling apart and could no longer afford safety or protection to its most inspiring leaders.

[. .]

Something is happening in Memphis, something is happening in our world.

As you know, if I were standing at the beginning of time, with the possibility of general and panoramic view of the whole human history up to now, and the Almighty

said to me, “Martin Luther King, which age would you like to live in?”—I would take my mental flight by Egypt through, or rather across the Red Sea, through the wilderness on toward the promised land. And in spite of its magnificence, I wouldn’t stop there. I would move on by Greece, and take my mind to Mount Olympus. And I would see Plato, Aristotle, Socrates, Euripides and Aristophanes assembled around the Parthenon as they discussed the great and eternal issues of reality.

But I wouldn't stop there. I would go on, even to the great heyday of the Roman Empire. And I would see developments around there, through various emperors and leaders. But I wouldn't stop there. I would even come up to the day of the Renaissance, and get a quick picture of all that the Renaissance did for the cultural and esthetic life of man. But I wouldn't stop there. I would even go by the way that the man for whom I'm named had his habitat. And I would watch Martin Luther as he tacked his ninety-five theses on the door at the church in Wittenberg.

But I wouldn't stop there. I would come on up even to 1863, and watch a vacillating president by the name of Abraham Lincoln finally come to the conclusion that he had to sign the Emancipation Proclamation. But I wouldn't stop there. I would even come up the early thirties, and see a man grappling with the problems of the bankruptcy of his nation. And come with an eloquent cry that we have nothing to fear but fear itself.

But I wouldn't stop there. Strangely enough, I would turn to the Almighty, and say, "If you allow me to live just a few years in the second half of the twentieth century, I will be happy." Now that's a strange statement to make, because the world is all messed up. The nation is sick. Trouble is in the land. Confusion all around. That's a strange statement. But I know, somehow, that only when it is dark enough, can you see the stars. And I see God working in this period of the twentieth century in a way that men, in some strange way, are responding—something is happening in our world. The masses of people are rising up. And wherever they are assembled today, whether they are in Johannesburg, South Africa; Nairobi, Kenya; Accra, Ghana; New York City; Atlanta, Georgia; Jackson, Mississippi; or Memphis, Tennessee—the cry is always the same—"We want to be free."

[. . .]

[. . .]

It's alright to talk about "long white robes over yonder," in all of its symbolism. But ultimately people want some suits and dresses and shoes to wear down here. It's alright to talk about "streets flowing with milk and

honey," but God has commanded us to be concerned about the slums down here, and his children who can't eat three square meals a day. It's alright to talk about the new Jerusalem, but one day, God's preacher must talk about the new New York, the new Atlanta, the new Philadelphia, the new Los Angeles, the new Memphis, Tennessee. This is what we have to do.

Now the other thing we'll have to do is this: Always anchor our external direct action with the power of economic withdrawal. Now, we are poor people, individually, we are poor when you compare us with white society in America. We are poor. Never stop and forget that collectively, that means all of us together, collectively we are richer than all the nations in the world, with the exception of nine. Did you ever think about that? After you leave the United States, Soviet Russia, Great Britain, West Germany, France, and I could name the others, the Negro collectively is richer than most nations of the world. We have an annual income of more than thirty billion dollars a year, which is more than all of the exports of the United States, and more than the national budget of Canada. Did you know that? That's power right there, if we know how to pool it.

We don't have to argue with anybody. We don't have to curse and go around acting bad with our words. We don't need any bricks and bottles; we don't need any Molotov cocktails. We just need to go around to these stores, and to these massive industries in our country, and say, "God sent us by here to say to you that you're not treating his children right.) And we've come by here to ask you to make the first item on your agenda fair treatment where God's children are concerned. Now, if you are not prepared to do that, we do have an agenda that we must follow. And our agenda calls for withdrawing economic support from you."

And so, as a result of this, we are asking you tonight to go out and tell your neighbors not to buy Coca-Cola in Memphis. Go by and tell them not to buy Sealtest milk. Tell them not to buy—what is the other bread?—Wonder Bread. And what is the other bread company, Jesse? Tell them not to buy Hart's bread. As Jesse Jackson has said, up to now only the garbage men have been feeling pain, now we must kind of redistribute the pain. We are choosing these companies because

they haven't been fair in their hiring policies, and we are choosing them because they can begin the process of saying they are going to support the needs and the rights of these men who are on strike. And then they can move on downtown and tell Mayor Loeb to do what is right.

But not only that, we've got to strengthen black institutions. I call upon you to take your money out of the banks downtown and deposit your money in Tri-State Bank—we want a “bank-in” movement in Memphis. So go by the savings and loan association. I'm not asking you something that we don't do ourselves at SCLC. Judge Hooks and others will tell you that we have an account here in the savings and loan association from the Southern Christian Leadership Conference. We're just telling you to follow what we're doing. Put your money there. You have six or seven black insurance companies in Memphis. Take out your insurance there. We want to have an “insurance-in.”

Now there are some practical things we can do. We begin the process of building a greater economic base. And at the same time, we are putting pressure where it really hurts. I ask you to follow through here.

Now, let me say as I move to my conclusion that we've got to give ourselves to this struggle until the end. Nothing would be more tragic than to stop at this point, in Memphis. We've got to see it through. And when we have our march, you need to be there. Be concerned about your brother. You may not be on strike. But either we go up together, or we go down together.

Let us develop a kind of dangerous unselfishness. One day a man came to Jesus; and he wanted to raise some questions about some vital matters in life. At points, he wanted to trick Jesus, and show him that he knew a little more than Jesus knew, and through this, throw him off base. Now that question could have easily ended up in a philosophical and theological debate. But Jesus immediately pulled that question from mid-air, and placed it on a dangerous curve between Jerusalem and Jericho. And he talked about a certain man, who fell among thieves. You remember that a Levite and a priest passed by on the other side. They didn't stop to

help him. And finally a man of another race came by. He got down from his beast, decided not to be compassionate by proxy. But with him, administered first aid, and helped the man in need. Jesus ended up saying, this was the good man, because he had the capacity to project the “I” into the “thou,” and to be concerned about his brother. Now you know, we use our imagination a great deal to try to determine why the priest and the Levite didn't stop. At times we say they were busy going to church meetings—an ecclesiastical gathering—and they had to get on down to Jerusalem so they wouldn't be late for their meeting. At other times we would speculate that there was a religious law that “One who was engaged in religious ceremonials was not to touch a human body twenty-four hours before the ceremony.” And every now and then we begin to wonder whether maybe they were not going down to Jerusalem, or down to Jericho, rather to organize a “Jericho Road Improvement Association.” That's a possibility. Maybe they felt that it was better to deal with the problem from the causal root, rather than to get bogged down with an individual effort.

But I'm going to tell you what my imagination tells me. It's possible that these men were afraid. You see, the Jericho road is a dangerous road. I remember when Mrs. King and I were first in Jerusalem. We rented a car and drove from Jerusalem down to Jericho. And as soon as we got on that road, I said to my wife, “I can see why Jesus used this as a setting for his parable.” It's a winding, meandering road. It's really conducive for ambushing. You start out in Jerusalem, which is about 1200 miles, or rather 1200 feet above sea level. And by the time you get down to Jericho, fifteen or twenty minutes later, you're about 2200 feet below sea level. That's a dangerous road. In the day of Jesus it came to be known as the “Bloody Pass.” And you know, it's possible that the priest and the Levite looked over that man on the ground and wondered if the robbers were still around. Or it's possible that they felt that the man on the ground was merely faking. And he was acting like he had been robbed and hurt, in order to seize them over there, lure them there for quick and easy seizure. And so the first question that the Levite asked was, “If I stop to help this man, what will happen to me?” But then the Good Samaritan came by. And he

reversed the question: "If I do not stop to help this man, what will happen to him?"

That's the question before you tonight. Not, "If I stop to help the sanitation workers, what will happen to all of the hours that I usually spend in my office every day and every week as a pastor?" The question is not, "If I stop to help this man in need, what will happen to me?" "If I do not stop to help the sanitation workers, what will happen to them?" That's the question.

Let us rise up tonight with a greater readiness. Let us stand with a greater determination. And let us move on in these powerful days, these days of challenge to make America what it ought to be. We have an opportunity to make America a better nation. And I want to thank God, once more, for allowing me to be here with you.

You know, several years ago, I was in New York City autographing the first book that I had written. And while sitting there autographing books, a demented black woman came up. The only question I heard from her was, "Are you Martin Luther King?"

And I was looking down writing, and I said yes. And the next minute I felt something beating on my chest. Before I knew it I had been stabbed by this demented woman. I was rushed to Harlem Hospital. It was a dark Saturday afternoon. And that blade had gone through, and the X-rays revealed that the tip of the blade was on the edge of my aorta, the main artery. And once that's punctured, you drown in your own blood—that's the end of you.

It came out in *The New York Times* the next morning, that if I had sneezed, I would have died. Well, about four days later, they allowed me, after the operation, after my chest had been opened, and the blade had been taken out, to move around in the wheel chair in the hospital. They allowed me to read some of the mail that came in, and from all over the states, and the world, kind letters came in. I read a few, but one of them I will never forget. I had received one from the President and the Vice-President. I've forgotten what those telegrams said. I'd received a visit and a letter from the Governor of New York, but I've forgotten

what the letter said. But there was another letter that came from a little girl, a young girl who was a student at the White Plains High School. And I looked at that letter, and I'll never forget it. It said simply, "Dear Dr. King: I am a ninth-grade student at the Whites Plains High School." She said, "While it should not matter, I would like to mention that I am a white girl. I read in the paper of your misfortune, and of your suffering. And I read that if you had sneezed, you would have died. And I'm simply writing you to say that I'm so happy that you didn't sneeze."

And I want to say tonight, I want to say that I am happy that I didn't sneeze. Because if I had sneezed, I wouldn't have been around here in 1960, when students all over the South started sitting-in at lunch counters. And I knew that as they were sitting in, they were really standing up for the best in the American dream. And taking the whole nation back to those great wells of democracy which were dug deep by the Founding Fathers in the Declaration of Independence and the Constitution. If I had sneezed, I wouldn't have been around in 1962, when Negroes in Albany, Georgia, decided to straighten their backs up. And whenever men and women straighten their backs up, they are going somewhere, because a man can't ride your back unless it is bent. If I had sneezed, I wouldn't have been here in 1963, when the black people of Birmingham, Alabama, aroused the conscience of this nation, and brought into being the Civil Rights Bill. If I had sneezed, I wouldn't have had a chance later that year, in August, to try to tell America about a dream that I had had. If I had sneezed, I wouldn't have been down in Selma, Alabama, to see the great movement there. If I had sneezed, I wouldn't have been in Memphis to see a community rally around those brothers and sisters who are suffering. I'm so happy that I didn't sneeze.

[. . .]

Well, I don't know what will happen now. We've got some difficult days ahead. But it doesn't matter with me now. Because I've been to the mountaintop. And I don't mind. Like anybody, I would like to live a long life. Longevity has its place. But I'm not concerned about that now. I just want to do God's will. And He's

allowed me to go up to the mountain. And I've looked over. And I've seen the promised land. I may not get there with you. But I want you to know tonight, that we, as a people will get to the promised land. And I'm happy, tonight. I'm not worried about anything. I'm not

fearing any man. Mine eyes have seen the glory of the coming of the Lord.

103. General Association of Clermont Students Leaflet, Paris, 5 May 1968

Introduction

In May 1968, spontaneous protests by students and workers came close to overthrowing the government of President Charles de Gaulle. In early May, several months of confrontations between students and university administrators in Paris peaked when the authorities closed the University of Paris at Nanterre. On 3 May students at the Sorbonne protested in sympathy, and the police surrounded that university, used tear gas, and arrested various student leaders and, eventually, several hundred other students. The French student union quickly published leaflets describing these events. On 6 May university teachers, high school students, and workers began a series of major protests, with huge crowds congregating in Paris, to be met by the riot police. Bloody clashes took place as the crowds raised barricades that the police violently stormed. A one-day general strike was called for 13 May, and more than a million demonstrators marched in Paris the same day as the government announced the reopening of the Sorbonne. Students promptly occupied the Sorbonne, declaring it an independent “people’s university.” The movement’s focus soon spread beyond Paris, and by the end of that week workers had occupied approximately fifty factories, demanding de Gaulle’s resignation and in many cases more say in running their own industries. Union leaders took the opportunity to negotiate substantial pay raises, but the workers occupying the factories still declined to leave them and return to work as normal. On 29 May several hundred thousand people marched through Paris protesting de Gaulle. The president, however, confident that he still had the support of most of the French military, took strong action to restore order. On 30 May he took to the radio to order workers to return to work, warning that if they did not do so he would declare a national state of emergency. He also announced the dissolution of the National Assembly and called elections for 23 June. During the first half of June the protests fizzled out, as the police gradually regained control of factories, workers returned to their jobs, the national student union called off scheduled protests, and the police regained the Sorbonne on 16 June. De Gaulle won a solid victory in the scheduled elections. The Old French Left based in the trade unions and the Socialist and Communist Parties rejected the protestors of May 1968, who represented a mix of anarchists and left-wing radicals typical of the 1960s, and sought not just economic justice but a social order that would provide fulfillment and individual satisfaction in terms of educational methods, sexual freedom, free love, and all other aspects of life. They were seeking to create the utopian, harmonious society that was the ultimate goal of many of the student and counterculture movements of that decade.

Primary Source

Halt Repression!

For the first time in the history of the University, the Sorbonne has been invaded by police, to prevent the meeting for solidarity with the Nanterre students organized by the UNEF. “Although no incident had occurred during the meeting” (communiqué of the Sorbonne *Lettres* department of the SNESUP), nearly 600 students were arrested.

The *gardes-mobiles* came inside the Sorbonne and forced the demonstrators to evacuate the premises in small groups which were directed toward Black Marias. . . .

Students who happened to be outside the Sorbonne protesting against this deliberate violation of the fundamental right of assembly, spontaneously demonstrated throughout the Latin Quarter, where they were

chased and brutally hit by the *gardes-mobiles* and the so-called “*gardiens de la paix*.”

The CRS were leading the fight. They even charged into the halls of apartment houses, invaded several hotels and came out with the young people whom they beat up while the public booed. Because of the general reprobation, they stopped, but one of them was heard to say to another, “You won’t lose anything by waiting. . . .”

The police reaction reached its climax when the order was given to “clear everything.” Blackjacks held high, the CRS attacked, hitting with all their might in all directions. Old women were caught in the general turmoil. A passing motorist shouted his indignation, CRS swooped down on his car and tried to pull him out of it, hitting him while he was still seated. They succeeded at last in getting him out of the vehicle, his face bloodied. . . .

This brutal repression has been in the making for several weeks, the result of a systematic campaign of intoxication and calls for police intervention via the press, the radio, and the television. The student movement is presented as being the action of a “minority of ‘*enragés*.’”

Rector Roche: “a small group of students.”

Dean Grappin: “the excesses of a few.”

Minister Peyrefitte: “a handful of trouble makers. . . .”

On May 3, 1968, Paris students provided proof that the struggle is not just the affair of a minority. Their spontaneous demonstration brought out more than 2,000 students.

Reform and Blackjacks

The Government has shown, through the use of blackjacks, that it will not stop at any means in order to *liquidate the student movement* before the examination period, when its plan to eliminate hundreds of thousands of us will be implemented.

After the closing of Nanterre (for which the FNEF congratulates itself!), the blackjacking in the Latin Quarter, the closing of the Sorbonne, the forbidding of the UNEF Paris demonstration on Monday, May 6, *how far will the government go* to muzzle the students and liquidate their union movement? How repressive will M. Fouchet, Minister of the Interior, become, in order to have “his” reforms applied?

Students, we should not let ourselves be intimidated by repression and threats!

Occident has asserted its intention to “clean up the University!”

Students, we must organize a rebuttal, we must defend our organization, the UNEF!

SOLIDARITY

With our jailed comrades!

With our comrades who are fighting to protect freedom to unionize!

NO

To police repression!

To mass elimination!

The Syndicat national de l’enseignement supérieur (National Union of Higher Education [FEN]) “*in solidarity with the students, calls on the faculty in higher education to strike, in all universities.*”

L’UNEF calls on all students to join the

104. Nuclear Nonproliferation Treaty, 1968

Introduction

By the early 1960s, the United States, Britain, the Soviet Union, the People's Republic of China (PRC), and France had all developed nuclear weapons. Although wedded to maintaining their own nuclear forces, the first three of these powers were all keen to keep the "nuclear club" exclusive and to prevent the further spread of such weapons to smaller and weaker nations. One fear was that weak governments might not be able to maintain adequate security over their nuclear programs. For much of the 1960s, negotiations on the subject continued at the United Nations (UN). The goal of the Nuclear Nonproliferation Treaty was to prevent the spread and development of nuclear weaponry. The treaty was signed by 130 nations in 1968 and went into effect on 5 March 1970. Signatory powers who possessed nuclear weapons bound themselves not to transfer such technology to nonnuclear powers, while those who did not possess nuclear weapons pledged not to develop them. Neither France nor China agreed to sign the treaty until 1992, and despite widespread international condemnation, both countries continued to develop their nuclear arsenals and on occasion to provide assistance that enabled other states to develop nuclear weapons. It was widely believed, though never confirmed, that Israel possessed a nuclear deterrent. By the late twentieth century, several states had disregarded the treaty's provisions. India tested a nuclear device in 1974, and both Pakistan and India detonated nuclear devices in May 1998. In the early twenty-first century, Iran and the Democratic People's Republic of Korea (DPRK, North Korea) also mounted programs apparently intended to develop nuclear weapons, causing much alarm to the United States and West European powers, as the number of nuclear-armed states seemed likely to increase appreciably over the next decades.

Primary Source

[. . .]

ARTICLE I

Each nuclear-weapon State Party to the Treaty undertakes not to transfer to any recipient whatsoever nuclear weapons or other nuclear explosive devices or control over such weapons or explosive devices directly, or indirectly; and not in any way to assist, encourage, or induce any non-nuclear weapon State to manufacture or otherwise acquire nuclear weapons or other nuclear explosive devices, or control over such weapons or explosive devices.

ARTICLE II

Each non-nuclear-weapon State Party to the Treaty undertakes not to receive the transfer from any transferor whatsoever of nuclear weapons or other nuclear explosive devices or of control over such weapons or explosive devices directly, or indirectly; not to manufacture or otherwise acquire nuclear weapons or other nuclear explosive devices; and not to seek or receive any assistance in the manufacture of nuclear weapons or other nuclear explosive devices.

ARTICLE III

1. Each non-nuclear-weapon State Party to the Treaty undertakes to accept safeguards, as set forth in an agreement to be negotiated and concluded with the International Atomic Energy Agency in accordance with the Statute of the International Atomic Energy Agency and the Agency's safeguards system, for the exclusive purpose of verification of the fulfillment of its obligations assumed under this Treaty with a view to preventing diversion of nuclear energy from peaceful uses to nuclear weapons or other nuclear explosive devices. Procedures for the safeguards required by this article shall be followed with respect to source or special fissionable material whether it is being produced, processed or used in any principal nuclear facility or is outside any such facility. The safeguards required by this article shall be applied to all source or special fissionable material in all peaceful nuclear activities within the territory of such State, under its jurisdiction, or carried out under its control anywhere.

2. Each State Party to the Treaty undertakes not to provide: (a) source or special fissionable material, or (b) equipment or material especially designed or pre-

pared for the processing, use or production of special fissionable material, to any non-nuclear-weapon State for peaceful purposes, unless the source or special fissionable material shall be subject to the safeguards required by this article.

3. The safeguards required by this article shall be implemented in a manner designed to comply with article IV of this Treaty, and to avoid hampering the economic or technological development of the Parties or international cooperation in the field of peaceful nuclear activities, including the international exchange of nuclear material and equipment for the processing, use or production of nuclear material for peaceful purposes in accordance with the provisions of this article and the principle of safeguarding set forth in the Preamble of the Treaty.

4. Non-nuclear-weapon States Party to the Treaty shall conclude agreements with the International Atomic Energy Agency to meet the requirements of this article either individually or together with other States in accordance with the Statute of the International Atomic Energy Agency. Negotiation of such agreements shall commence within 180 days from the original entry into force of this Treaty. For States depositing their instruments of ratification or accession after the 180-day period, negotiation of such agreements shall commence not later than the date of such deposit. Such agreements shall enter into force not later than eighteen months after the date of initiation of negotiations.

ARTICLE IV

1. Nothing in this Treaty shall be interpreted as affecting the inalienable right of all the Parties to the Treaty to develop research, production and use of nuclear energy for peaceful purposes without discrimination and in conformity with articles I and II of this Treaty.

2. All the Parties to the Treaty undertake to facilitate, and have the right to participate in, the fullest possible exchange of equipment, materials and scientific and technological information for the peaceful uses of nuclear energy. Parties to the Treaty in a position to do so shall also cooperate in contributing alone or together with other States or international organizations to the

further development of the applications of nuclear energy for peaceful purposes, especially in the territories of non-nuclear-weapon States Party to the Treaty, with due consideration for the needs of the developing areas of the world.

ARTICLE V

Each party to the Treaty undertakes to take appropriate measures to ensure that, in accordance with this Treaty, under appropriate international observation and through appropriate international procedures, potential benefits from any peaceful applications of nuclear explosions will be made available to non-nuclear-weapon States Party to the Treaty on a nondiscriminatory basis and that the charge to such Parties for the explosive devices used will be as low as possible and exclude any charge for research and development. Non-nuclear-weapon States Party to the Treaty shall be able to obtain such benefits, pursuant to a special international agreement or agreements, through an appropriate international body with adequate representation of non-nuclear-weapon States. Negotiations on this subject shall commence as soon as possible after the Treaty enters into force. Non-nuclear-weapon States Party to the Treaty so desiring may also obtain such benefits pursuant to bilateral agreements.

ARTICLE VI

Each of the Parties to the Treaty undertakes to pursue negotiations in good faith on effective measures relating to cessation of the nuclear arms race at an early date and to nuclear disarmament, and on a Treaty on general and complete disarmament under strict and effective international control.

ARTICLE VII

Nothing in this Treaty affects the right of any group of States to conclude regional treaties in order to assure the total absence of nuclear weapons in their respective territories.

[. . .]

ARTICLE IX

1. This Treaty shall be open to all States for signature. Any State which does not sign the Treaty before its

entry into force in accordance with paragraph 3 of this article may accede to it at any time.

[. . .]

ARTICLE X

1. Each Party shall in exercising its national sovereignty have the right to withdraw from the Treaty if it decides that extraordinary events, related to the subject matter of this Treaty, have jeopardized the supreme interests of its country. It shall give notice of such withdrawal to all other Parties to the Treaty and to the United Nations Security Council three months in advance. Such notice shall include a statement of the

extraordinary events it regards as having jeopardized its supreme interests.

2. Twenty-five years after the entry into force of the Treaty, a conference shall be convened to decide whether the Treaty shall continue in force indefinitely, or shall be extended for an additional fixed period or periods. This decision shall be taken by a majority of the Parties to the Treaty.

105. Leonid Brezhnev: The Brezhnev Doctrine, September 1968

Introduction

In his September 1968 speech to a group of Polish workers, Soviet Premier Leonid Brezhnev announced a policy of cracking down on antisocialist forces within Soviet-controlled states. The policy became known as the Brezhnev Doctrine. Brezhnev decided to adopt this public position to defend the actions of the Soviet military in repressing the Prague Spring movement, which had sought to introduce reforms in Czechoslovakia, earlier that year. While Brezhnev made this statement primarily to justify Soviet behavior in Czechoslovakia, he couched it in terms sufficiently general that it seemed to arrogate to the Soviet Union the right to intervene in any communist country, within or outside the Soviet bloc, where socialism appeared to be threatened. Brezhnev's proclamation alarmed leaders of other communist states such as Albania and, most significantly, the People's Republic of China (PRC), which were then at odds with the Soviet Union, as they feared that it might herald Soviet attempts to use military force against themselves.

Primary Source

In connection with the events in Czechoslovakia, the question of the correlation and interdependence of the national interests of the socialist countries and their international duties acquires particular topical and acute importance.

The measures taken by the Soviet Union, jointly with other socialist countries, in defending the socialist gains of the Czechoslovak people are of great significance for strengthening the socialist community, which is the main achievement of the international working class.

We cannot ignore the assertions, made in some places, that the actions of the five socialist countries run

counter to the Marxist-Leninist principle of sovereignty and the rights of nations to self-determination.

The groundlessness of such reasoning consists primarily in that it is based on an abstract, nonclass approach to the question of sovereignty and the rights of nations to self-determination.

The peoples of the socialist countries and Communist parties certainly do have and should have freedom for determining the ways of advance of their respective countries.

However, none of their decisions should damage either socialism in their country or the fundamental inter-

ests of other socialist countries, and the whole working class movement, which is working for socialism.

This means that each Communist party is responsible not only to its own people, but also to all the socialist countries, to the entire Communist movement. Whoever forgets this, in stressing only the independence of the Communist party, becomes one-sided. He deviates from his international duty.

Marxist dialectics are opposed to one-sidedness. They demand that each phenomenon be examined concretely, in general connection with other phenomena, with other processes.

Just as, in Lenin's words, a man living in a society cannot be free from the society, a particular socialist state, staying in a system of other states composing the socialist community, cannot be free from the common interests of that community.

The sovereignty of each socialist country cannot be opposed to the interests of the world of socialism, of the world revolutionary movement. Lenin demanded that all Communists fight against small-nation narrow-mindedness, seclusion and isolation, consider the whole and the general, subordinate the particular to the general interest.

The socialist states respect the democratic norms of international law. They have proved this more than once in practice, by coming out resolutely against the attempts of imperialism to violate the sovereignty and independence of nations.

It is from these same positions that they reject the leftist, adventurist conception of "exporting revolution," of "bringing happiness" to other peoples.

However, from a Marxist point of view, the norms of law, including the norms of mutual relations of the socialist countries, cannot be interpreted narrowly, formally, and in isolation from the general context of class struggle in the modern world. The socialist countries resolutely come out against the exporting and importing of counterrevolution.

Each Communist party is free to apply the basic principles of Marxism Leninism and of socialism in its country, but it cannot depart from these principles (assuming, naturally, that it remains a Communist party).

Concretely, this means, first of all, that, in its activity, each Communist party cannot but take into account such a decisive fact of our time as the struggle between two opposing social systems—capitalism and socialism.

This is an objective struggle, a fact not depending on the will of the people, and stipulated by the world's being split into two opposite social systems. Lenin said: "Each man must choose between joining our side or the other side. Any attempt to avoid taking sides in this issue must end in fiasco."

It has got to be emphasized that when a socialist country seems to adopt a "non-affiliated" stand, it retains its national independence, in effect, precisely because of the might of the socialist community, and above all the Soviet Union as a central force, which also includes the might of its armed forces. The weakening of any of the links in the world system of socialism directly affects all the socialist countries, which cannot look indifferently upon this.

The antisocialist elements in Czechoslovakia actually covered up the demand for so-called neutrality and Czechoslovakia's withdrawal from the socialist community with talking about the right of nations to self-determination.

However, the implementation of such "self-determination," in other words, Czechoslovakia's detachment from the socialist community, would have come into conflict with its own vital interests and would have been detrimental to the other socialist states.

Such "self-determination," as a result of which NATO troops would have been able to come up to the Soviet border, while the community of European socialist countries would have been split, in effect encroaches upon the vital interests of the peoples of these countries and conflicts, at the very root of it, with the right of these people to socialist self-determination.

Discharging their internationalist duty toward the fraternal peoples of Czechoslovakia and defending their own socialist gains, the U.S.S.R. and the other socialist states had to act decisively and they did act against the antisocialist forces in Czechoslovakia.

106. Soviet and Chinese Statements on Border Clashes, March 1969

Introduction

China and the Soviet Union shared the world’s longest land border, 2,738 miles in all, and their precise boundaries were not always well defined. During the eighteenth and nineteenth centuries, China had ceded substantial amounts of territory—1.1 million square miles—to the then tsarist Russian Empire under treaties whose validity successive Chinese governments had subsequently rejected. In the first decade after he won control of China in October 1949, Chinese communist leader Mao Zedong accepted these boundaries, but tensions over and along the border increased after the Sino-Soviet split developed in the late 1950s. In 1963 the Chinese government began to challenge Russian occupation of these disputed lands, prompting both sides to begin a major military buildup in the area. Japanese newspapers cited statements by Mao that had it not been for the so-called unequal treaties of the nineteenth century, the Soviet Far Eastern cities of Vladivostok and Khabarovsk would both have been part of China. Between 1965 and 1969 the Soviet Union increased its ground forces along the Chinese border from thirteen to twenty-one divisions, rising to thirty in 1970 and forty-four in 1971, while China gained a nuclear capability in 1964 and began to deploy nuclear missiles in 1968. The August 1968 Soviet invasion of Czechoslovakia and Soviet leader Leonid Brezhnev’s proclamation that the Soviet Union had the right to intervene in the internal affairs of any socialist state where communism was threatened further alarmed the Chinese. By early 1969, the Soviet Union had 658,000 troops while China had 814,000 Chinese military personnel, and each side perceived the military threat from the other as increasing. On 2 March 1969 a Soviet patrol clashed with Chinese forces near Damansky (Zhenbao) Island on the Ussuri River dividing Heilongjiang Province, Manchuria, from Siberia. Each government subsequently claimed, in official statements, that the other side had deliberately provoked the incident. Historians now believe that the Chinese made the first move. Initially, thirty-one Soviet soldiers died and fourteen were wounded. In retaliation, Soviet forces then shelled and bombed Chinese troop formations based in Manchuria and stormed and took Damansky Island. The Soviet Union claimed to have inflicted 800 casualties on the Chinese and suffered only 60 themselves, while the Chinese proclaimed—probably untruthfully, given the superior training of the Soviet military—that their losses had been far lower than those of the Soviets. Further incidents and intrusions occurred over the next six months, the first on 14–15 March when Chinese forces attacked the new Soviet deployments on Damansky Island but were repelled. Each side publicly demanded that the other withdraw. In September 1969 Chinese Premier Zhou Enlai met Soviet Foreign Minister Alexei Kosygin in Beijing and reopened border talks that had begun in 1964 but were subsequently dropped. For almost two decades, minor Sino-Soviet hostilities flared up sporadically along the border, but, apparently fearing to escalate these incidents to the point of outright war, both sides tacitly agreed not to employ air power on such occasions. The Sino-Soviet border disputes seemingly played a substantial role in convincing Zhou, Mao Zedong, and other Chinese leaders that the communist Soviet Union, not the capitalist United States, constituted China’s most menacing enemy. In the early 1970s this, in turn, impelled the Chinese Politburo to move toward rapprochement with the administration of Republican President Richard Nixon, reversing more than two decades of deep ideological hostility toward the United States. Under President Mikhail Gorbachev, in 1986 the Soviet Union opened serious negotiations with China to settle the border questions. Under an agreement signed in 1990, the two states substantially reduced their forces along the border. As the negotiations to define their precise boundary proceeded, between 1991 and 2004 China and Russia eventually concluded several agreements that resolved all their outstanding border issues.

Note from the Chinese Ministry of Foreign Affairs to the Soviet Embassy in China, 2 March 1969

On the morning of March 2, 1969, Soviet frontier guards intruded into the area of Chenpao [Zhen Bao] Island, Heilunkiang Province, China, and killed and wounded many Chinese frontier guards by opening fire on them, thus creating an extremely grave border armed conflict. Against this, the Ministry of Foreign Affairs of the People's Republic of China is instructed to lodge the strongest protest with the Soviet Government.

At 0917 hours on March 2, large numbers of fully armed soldiers, together with four armored vehicles and cars, sent out by the Soviet frontier authorities, flagrantly intruded into the area of Chenpao Island which is indisputable Chinese territory, carried out blatant provocations against the Chinese frontier guards on normal patrol duty and were the first to open cannon and gun fire, killing and wounding many Chinese frontier guards. The Chinese frontier guards were compelled to fight back in self-defence when they reached the end of their forbearance after their repeated warnings to the Soviet frontier guards had produced no effect. This grave incident of bloodshed was entirely and solely created by the Soviet authorities . . . which have long been deliberately encroaching upon China's territory, carrying out armed provocations and creating ceaseless incidents of bloodshed.

The Chinese Government firmly demands that the Soviet Government punish the culprits of this incident and immediately stop its encroachment upon China's territory and its armed provocations, and reserves the right to demand compensation from the Soviet side for all the losses suffered by the Chinese side. The Chinese Government once again sternly warns the Soviet Government: China's sacred territory brooks no violation; if you should willfully cling to your reckless course and continue to provoke armed conflicts along the Sino-Soviet border, you will certainly receive resolute counterblows from the Chinese people; and it is the Soviet Government that must bear full responsibility for all the grave consequences arising therefrom. . . .

Statement by the Soviet Government, 29 March 1969

Recently on the Ussuri River in the region of Damanskii [Zhen Bao] Island there have occurred armed bor-

der incidents provoked by the Chinese side. The Chinese authorities did not and cannot have any justification for the organization of these incidents or for the resulting clashes and bloodshed. Such events can only gladden those who want by any means to dig an abyss of enmity between the Soviet Union and the People's Republic of China. They have nothing in common with the basic interests of the Soviet and Chinese peoples.

The circumstances of the armed attacks on Soviet border guards on the Ussuri River are well known. These were premeditated and previously planned actions.

On the morning of 2 March of this year, an observation post detected a transgression of the Soviet border at Damanskii Island by approximately 30 Chinese soldiers. A group of Soviet border guards headed by an officer made their way toward the transgressors with the aim of filing a protest, as was done on earlier occasions, and insisting that they leave Soviet territory. The Chinese soldiers allowed the Soviet border guards to approach within several meters and then suddenly, without any warning, opened fire at them from point-blank range.

At the same time, from an ambush on Damanskii Island where the Chinese soldiers had earlier secretly moved under cover of darkness, and from the Chinese shore, artillery guns, mortars, and automatic weapons opened fire on another group of Soviet border guards located near the Soviet shore. They joined the battle and, with the support of a neighboring border post, drove the transgressors out of Soviet territory. As a result of this treacherous attack there were dead and wounded on both sides.

In spite of a warning from the Soviet government and a call to refrain from such provocations, on 14–15 March in this same region the Chinese side launched new attempts at armed intrusion into the Soviet Union. Elements of the regular Chinese army, supported by artillery and mortar fire, attacked the Soviet border troops protecting Damanskii Island. The attack was decisively repelled, and the transgressors were driven from Soviet territory. This provocation by the Chinese side generated new casualties.

Now the Chinese authorities in their statements are trying to avoid responsibility for the armed clashes. They claim that it was not the Chinese but the Soviet border guards who transgressed the state frontier, and that this land supposedly does not belong to the Soviet Union. The Chinese side does not dispute the fact that its military personnel acted according to a prepared

plan, although by having recourse to a false assertion, it presents the use of arms by the Chinese transgressors as a “necessary measure.” . . .

107. Barry Goldwater: Defense of the Military-Industrial Complex Speech, 15 April 1969

Introduction

Senator Barry Goldwater of Arizona, Republican presidential candidate in 1964, was the foremost leader of the conservative political forces in his party during the 1960s. The fiercely anticommunist Goldwater lost by a landslide to Democratic President Lyndon B. Johnson in 1964, in part because American voters feared that Goldwater was too bellicose and could not be trusted to handle nuclear weapons responsibly enough to avoid a third world war. Goldwater nonetheless retained considerable support from conservatives in the Republican Party, many of whom felt that the United States had been insufficiently aggressive in prosecuting the Vietnam War. In 1969 Goldwater returned to the Senate, where he remained for the next eighteen years, serving on the Armed Services Committee. Goldwater, a politician who deplored the halfhearted manner in which he believed American troops were fighting the Vietnam War and would gladly have removed all restrictions on U.S. bombing of the Democratic Republic of Vietnam (DRV, North Vietnam), three months after his return to the Senate delivered a speech defending the military-industrial complex. He justified and even celebrated its existence with the argument that the worldwide responsibilities of the United States made a large defense industry essential. His only caveat was that the U.S. government had not gone far enough in developing the military-industrial complex. He was a strong critic of former Secretary of Defense Robert McNamara and his “whiz kid” management team of technocrats, whom Goldwater believed had mishandled the Vietnam War over the previous eight years, cut back projected military programs on budgetary grounds, and shown insufficient deference to military leaders. Goldwater’s views epitomized the right-wing beliefs in a strong defense that were temporarily shelved by Republicans during President Richard Nixon’s time in office but nonetheless became ever more influential during the 1970s. By the late 1970s, conservatives such as future president Ronald Reagan, who shared many of Goldwater’s staunchly anticommunist views, felt bold enough to attack the policies of détente with the Soviet Union orchestrated by Nixon, his successor President Gerald R. Ford, and Secretary of State Henry A. Kissinger and, during the presidency of Jimmy Carter, successfully blocked Senate ratification of the second Strategic Arms Limitation Treaty (SALT II). During Reagan’s presidency, in the 1980s the United States once again mounted a massive defense buildup, which Goldwater supported from his Senate base.

Primary Source

[. . .]

I believe it is long past the time when questions relating fundamentally to the defense of this nation should be placed in their proper perspective. Let us take the military-industrial complex and examine it closely. What it amounts to is that we have a big military establishment, and we have a big industrial plant which helps

to supply that establishment. This apparently constitutes a “complex.” If so, I certainly can find nothing to criticize but much to be thankful for in its existence. Ask yourselves, for example, why we have a large, expensive military establishment and why we have a large and capable defense industry. The answer is simply this: We have huge worldwide responsibilities. We face tremendous worldwide challenges. In short, we urgently require both a big defense establishment and

a big industrial capacity. Both are essential to our safety and to the preservation of freedom in a world fraught with totalitarian aggression.

Merely because our huge responsibilities necessitate the existence of a military-industrial complex does not automatically make that complex something we must fear or feel ashamed of. You might consider where we would be in any negotiations which might be entered into with the Soviet Union if we did not have a big military backed by a big industrial complex to support our arguments. You might wonder how we could possibly pretend to be interested in the freedom of smaller nations if the only military-industrial complex in the world was possessed by Communist Russia or Communist China.

Mr. President, in many respects I am reminded of the problem which confronted our nation in the early days of World War II. The madman Hitler was running rampant. Freedom was being trampled throughout all of Europe. Suddenly the United States found itself forced to fill the role of the "arsenal of democracy." This nation had to start from scratch and finally out-produce the combined efforts of the Axis powers. And we had to do it quickly. The very existence of freedom in the world as we knew it in the early 1940's depended on it. And how did we perform this miracle? Well, I'll tell you that we performed it with the help of an industrial giant called an integrated steel industry. Although this industry and others like it performed miracles of production at a time when the chips were down all over the world, it still was the subject of long and harassing investigation after the war because of its "bigness." Incredible as it seems, the very size of an industry which enable us to defeat the Fascists armies and remain free became the reason for investigation by liberals in the Congress during the immediate postwar period.

We never, Mr. President, seem to understand that size is not necessarily an evil. When the Russian Sputnik went up, this nation was deeply concerned. And that concern had to do with our inability at that time to duplicate the Soviet feat. Now that we have the industrial capacity to equal the Russians in space or in matters related to defense, there seems to be a nationwide effort to make us feel guilty.

What would the critics of the military-industrial complex have us do? Would they have us ignore the fact that progress occurs in the field of national defense as well as in the field of social sciences? Do they want us to turn back the clock, disband our military establishment, and do away with our defense-related industrial capacity? Mr. President, do these critics of what they term a military-industrial complex really want us to default on our worldwide responsibilities, turn our backs on aggression and slavery and develop a national policy of selfish isolation?

Rather than deploring the existence of a military-industrial complex, I say we should thank heaven for it. That complex gives us our protective shield. It is the bubble under which our nation thrives and prospers. It is the armor which is unfortunately required in a world divided.

For all those who rant and rave about the military-industrial complex, I ask this question: What would you replace it with?

What is more, I believe it is fair to inquire whether the name presently applied is inclusive enough. Consider the large number of scientists who contributed all of the fundamental research necessary to develop and build nuclear weapons and other products of today's defense industries. Viewing this, shouldn't we call it the "scientific-military-industrial complex." By the same token, do not forget the amount of research that has gone on in our colleges and universities in support of our defense-related projects. Maybe we should call it an "educational-scientific-military-industrial complex." Then, of course, the vast financing that goes into this effort certainly makes the economic community an integral part of any such complex. Now we have a name that runs like this: "An economic-educational-scientific-military-industrial complex."

What we are talking about, Mr. President, is an undertaking which grew up from necessity. It is the product of American initiative, incentive and genius responding to a huge global challenge. It is perhaps the most effective and efficient complex ever built to fill a worldwide function. Its ultimate aim is peace in our time regardless of the aggressive, militaristic image which the left wing is attempting to give it.

Mr. President, I don't find the employment of military officers by 100 of the largest companies in this nation alarming or menacing. Many of those officers were technically trained to provide special services, many of which are required by the companies involved. And I hasten to point out that these same companies employ other free Americans, some of them former Senators, some of them former Congressmen, some of them former civilian employees of the government. It is my contention that a retired military officer is a private citizen. He has a right to seek employment wherever he can. It is only natural that he should look to sources of employment which involve matters he was trained to work in. The fact that he once was an Army officer and the company he works for does business with the Army does not automatically insure an undesirable relationship from the public viewpoint. I would like to say that anyone who has evidence of wrongdoing, of deliberate and unlawful favoritism in the dealings which involve defense industries and former military officers should come forth and make the circumstances clear. I say that anyone who has evidence that a conspiracy exists between the Pentagon on one hand and former military officers on the other should say so and produce evidence to back it up. I say that anyone who charges that a "military elite" is at work trying to turn the United States into an aggressive nation should stop dealing in generalities and come forward with names, specific dates, meeting place locations, and all the rest of the kind of data it takes to back up such a charge.

So far, Mr. President, I have yet to hear of any specific case of wrongdoing involving former military officers working for companies that do business with the Pentagon.

[. . .]

Mr. President, I hope I shall be fully understood in this respect. If there is wrongdoing, whether of a conflict of interest nature or something else, in our defense establishment I want it investigated and stopped and the guilty parties punished. And this goes for wrongdoing by anyone concerned, whether he be a military man, a former military man, a defense industry executive or a civilian officer of the government. I feel that this is our

true concern. Maybe the hugeness of the system which we are now compelled to maintain does lend itself to improprieties. If so, let us concern ourselves with such improprieties and find means to deal with them legislatively. This is the constructive way to proceed. It does no good for us to gaze with awe on the tremendous increase in defense expenditures with which the McNamara Era saddled us and then pretend that denunciation of a military-industrial complex will somehow make it all right.

In the attacks on the military also you will find repeated reference to a speech once made by former President Eisenhower.

But I would remind you that when Dwight Eisenhower mentioned the possibility of unwarranted influence being acquired by such a complex, he had some other profound things to say. I want to quote one passage in particular. He said and I quote, "We face a hostile ideology—global in scope, atheistic in character, ruthless in purpose and insidious in method. Unhappily the danger it poses promises to be of indefinite duration. To meet it successfully, there is call for, not so much the emotional and transitory sacrifices of crisis, but rather those which enable us to carry forward steadily, surely, and without complaint the burdens of a prolonged and complex struggle—with liberty the stake. Only thus shall we remain, despite every provocation, on our charted course toward permanent peace and human betterment. . . .

"A vital element in keeping the peace is our military establishment. Our arms must be mighty, ready for instant action, so that no potential aggressor may be tempted to risk his own destruction."

As I have pointed out, many of the problems that are being encountered in the area of national defense today stem not so much from a military-industrial complex as they do from the mistakes and miscalculations of a "civilian complex" or perhaps I should say a "civilian-computer-complex." My reference here, of course, is to the Pentagon hierarchy of young civilians (often referred to as the "whiz kids") which was erected during the McNamara era in the questionable name of

“cost effectiveness.” And this complex, Mr. President, was built in some measure to shut out the military voice in a large area of defense policy decision making.

I suggest that the military-industrial complex is not the all-powerful structure that our liberal friends would have us believe. Certainly nobody can deny that this combination took a drubbing at the hands of Mr. McNamara and his civilian cadres during the last eight years.

If the military-industrial complex had been as strong and as cohesive as its critics would have us believe, it is entirely possible this nation and its taxpayers would not today be facing the need for rebuilding the defense of freedom. . . .

If the military-industrial complex had been the irresistible giant its critics describe, we would certainly today be better equipped. We would undoubtedly have a nuclear-powered Navy adequate to the challenge presented by the Soviet naval might. We would certainly have in the air—and not just on a drawing board—a manned, carry-on bomber. We would never have encountered the kind of shortages which cropped up in every area of the military as a result of the demands from Vietnam. There would have been no shortage of

military helicopters. There would have been no shortage of trained helicopter pilots. There would have been no need to use outdated and faulty equipment. No concern ever would have arisen over whether our supply of bombs was sufficient to the task in Southeast Asia.

In conclusion, Mr. President, I want to point out that a very strong case can be made for the need for a more powerful military-industrial complex than we have had during the past eight years. At the very least, I wish to say that the employment practices of industries doing business with the Pentagon—practices which lead them to hire the most knowledgeable men to do their work—are no cause for shock. Nor are these practices dangerous to the American people.

I have great faith in the civilian leaders of our Government and of our military services. I have no desire to see the voice of the military become all-powerful or even dominant in our national affairs. But I do believe that the military viewpoint must always be heard in the highest councils of our Government in all matters directly affecting the protection and security of our nation.

108. Nelson A. Rockefeller: The Rockefeller Report on the Americas, 1969

Introduction

By the end of the 1960s, it was clear that the Alliance for Progress that President John F. Kennedy had announced with such fanfare in 1961 had at best been only partially successful in promoting democracy and economic development throughout Latin America. Shortly after taking office in January 1969, Republican President Richard Nixon authorized the dispatch of a major official mission to Latin America. It was headed by one of his past rivals for his party's presidential nomination, former Governor Nelson A. Rockefeller of New York, who had extensive long-term business and philanthropic interests in Latin America. Accompanied each time by around two dozen leading U.S. experts, Rockefeller made four forays, during which he visited twenty of the twenty-six Latin American nations, and he and his entourage had intensive meetings with officials and others in the various host countries. Violent student protests in Honduras and other states against the mission's presence led the governments of Peru, Chile, and Venezuela to request that Rockefeller postpone his visit indefinitely. Rockefeller ascribed such demonstrations in large part to “general frustration over the failure [of the Alliance for Progress] to achieve a more rapid improvement in standards of living.” His report, submitted to Nixon in August 1969, warned that the United States had “allowed the special relationship it has historically maintained with the other nations of the Western Hemisphere to deteriorate

badly.” Latin America was not an important priority in U.S. foreign policy, which was marred by “a paternalistic attitude toward the other nations of the hemisphere” and by efforts to “direct the[ir] internal affairs to an unseemly degree.” Around the region the forces of nationalism were growing, “with strong anti-United States overtones.” Both democracy and the free enterprise system were facing strong challenges, in some cases from authoritarian and sometimes Left-leaning military governments, in others from communist insurgencies backed by Fidel Castro’s Cuba. Rockefeller recommended that the U.S. government pay more attention to Latin America and develop a genuine partnership with other countries in the Western Hemisphere; provide much more in the way of both military and economic assistance; adjust its own trade policies to make them more favorable to Latin American nations; renegotiate the international debts owed by foreign governments in order to reduce their service payments; promote U.S. private investment in the region; encourage both rural and urban development to raise basic living standards and promote agricultural improvements; put more effort into lifting the overall level of public health; enable Latin American women to develop their potential; and enhance educational and cultural aid, exchanges, and propaganda. The specifics of this program, which was couched in rather high-flown and even woolly rhetoric, with no estimate provided of just how much it would cost the United States, were broadly in line with the fundamental principles governing American Cold War aid programs around the developing world. Rockefeller’s report also reflected growing apprehensions within the foreign policy bureaucracy that U.S. preoccupation with Vietnam and consequent neglect of Latin America had contributed to a mounting wave of anti-American radicalism around the hemisphere, threatening American predominance in an area that the United States had since the early nineteenth century considered its own backyard and private sphere of influence.

Primary Source

Chapter One: The Quality of Life in the Western Hemisphere

A. The Special Relationship in the Western Hemisphere

The mission heard many details about relations between the United States and the other American republics from the leaders of the hemisphere, but they can best be summed up in one phrase: The United States has allowed the special relationship it has historically maintained with the other nations of the Western Hemisphere to deteriorate badly.

[. . .]

This report tries to understand some of the issues we must face in attempting to reinvigorate and re-shape our special relationship—and it offers some specific recommendations for action now.

B. The Existing Situation

Everywhere in the Western Hemisphere today, including the United States, men and women are enjoying a fuller life, but still for many the realities of life are in sharp contrast with the deepest felt human needs and goals of the people.

[. . .]

The upheavals in international systems over the past three decades have subjected the member states of the Western Hemisphere to external economic, political and ideological stresses that magnify domestic antagonisms.

At the same time, the issue of political legitimacy has challenged “accepted” systems of government, not only in the United States but particularly in the other American republics. With the disintegration of old orders which lacked a popular base, newly-emerging domestic structures have had difficulty in establishing their legitimacy. This makes the problem of creating a system of political order in the Western Hemisphere more difficult.

Some nations have retained their democratic institutions. In others, when democratic forms of government have not been successful, nations have moved to authoritarian forms as a solution to political and social dilemmas. Governments everywhere are struggling to cope with often conflicting demands for social reform and economic growth. The problem is compounded by the 400-year-old heritage of intense individualism which permeates all phases of life in the Latin countries of the Americas. Nationalism is burgeoning in most of the region with strong anti-United States overtones.

Increasing frustration is evidenced over political instability, *limited* educational and economic opportunities, and the incapacity or slowness of existing government structures to solve the people's problems. Subversive forces working throughout the hemisphere are quick to exploit and exacerbate each and every situation.

Change and the stresses and problems brought about by the processes of change characterize the existing situation in the hemisphere. The momentum of industrialization and modernization has strained the fabric of social and political structures. Political and social instability increased pressure for radical answers to the problems, and a growing tendency to nationalistic independence from the United States dominate the setting.

The restless yearning of individuals for a better life, particularly when accompanied by a well-developed sense of social responsibility, is chipping away at the very order and institutions by which society makes it possible for man to fulfill his personal dignity. The seeds of nihilism and anarchy are spreading throughout the hemisphere.

C. The Forces of Change

Change is the crucial characteristic of our time. It is erupting, and disrupting, in all cultures. It creates anxiety and uncertainty. It is demanding of all peoples an adjustment and flexibility which test the limits of individual and collective capacities.

Change is everywhere about us: in the explosion of new knowledge, the acceleration of all communication, the massive mobility of people, the multiplicity of human contacts, the pace and diversity of experience, the increasingly transitory nature of all relationships and the uprooting of the values to which differing cultures are anchored.

There is no society today, whether industrialized or developing, that is not coping with these hurricane forces of change. It is plain that, depending on how we respond to the need for change and the demands of these forces, the results can be tremendously constructive or tremendously destructive.

The sweeping change occurring in the hemisphere will affect our interests and our relationships with the other nations of the hemisphere. We must recognize that the United States cannot control the forces of change. However, we can and must try to *understand* the forces at work in the hemisphere—as well as at home—and how they may affect our national interests, if we are to shape intelligently and realistically our relationships.

Throughout the hemisphere, although people are constantly moving out of poverty and degradation in varying numbers, the gap between the advantaged and the disadvantaged, within nations as well as between nations, is ever sharper and ever more difficult to endure. It is made to seem all the worse by the facility of modern communications.

The Military

In many South and Central American countries, the military is the single most powerful political grouping in society. Military men are symbols of power, authority and sovereignty and a focus of national pride. They have traditionally been regarded in most countries as the ultimate arbiters of the nation's welfare.

The tendency of the military to intervene when it judges that the government in office has failed to carry out its responsibilities properly has generally been accepted in Central and South America. Virtually all military governments in the hemisphere have assumed power to "rescue" the country from an incompetent government, or an intolerable economic or political situation. Historically, these regimes have varied widely in their attitudes toward civil liberties, social reform and repression.

Like the Church, the military was traditionally a conservative force resistant to change. Most officers came from the landowner class. In recent years, however, the owners of land have shifted more and more to an urban industrial life. The military service has been less attractive to their sons. As a result, opportunities have opened up for young men of ambition and ability from poor families who have neither land nor professional and business connections. These ambitious sons of the working classes have entered the military to seek an education and the opportunity for advancement.

This pattern has become almost universal throughout the American republics to the south. The ablest of these young officers have gone abroad for education and are now assuming top positions of leadership in almost all of the military groups in the hemisphere. And while their loyalties are with the armed forces, their emotional ties are often with the people. Increasingly, their concern and dedication is to the eradication of poverty and the improvement of the lot of the oppressed, both in rural and urban areas.

In short, a new type of military man is coming to the fore and often becoming a major force for constructive social change in the American republics. Motivated by increasing impatience with corruption, inefficiency, and a stagnant political order, the new military man is prepared to adapt his authoritarian tradition to the goals of social and economic progress.

This new role by the military, however, is not free from perils and dilemmas. There is always the risk that the authoritarian style will result in repression. The temptation to expand measures for security or discipline or efficiency to the point of curtailing individual liberties, beyond what is required for the restoration of order and social progress, is not easy to resist.

[. . .]

The critical test, ultimately, is whether the new military can and will move the nation, with sensitivity and conscious design, toward a transition from military control for a social purpose to a more pluralistic form of government which will enable individual talent and dignity to flourish. Or will they become radicalized, statist and anti-U.S.?

In this connection, special mention should be made of the appeal to the new military, on a theoretical level, of Marxism: (1) It justifies, through its elitist-vanguard theories, government by a relatively small group or single institution (such as the Army) and, at the same time, (2) produces a rationale for state-enforced sacrifices to further economic development.

One important influence counteracting this simplistic Marxist approach is the exposure to the fundamental

achievements of the U.S. way of life that many of the military from the other American countries have received through the military training programs which the U.S. conducts in Panama and the United States.

Communist Subversion

In every country, there is a restless striving for a better life. Coming as it does at a time of uprooting change, it brings to many a vague unease that all the systems of society are out of control. In such a setting, all of the American nations are a tempting target for Communist subversion. In fact, it is plainly evident that such subversion is a reality today with alarming potential.

Castro has consistently recruited from the other American republics, and trained in Cuba, guerrillas to export the Cuban-type Communist agrarian revolution. Fortunately, the governments of the American republics have gradually improved their capabilities for dealing with Castro-type agrarian guerrillas. However, radical revolutionary elements in the hemisphere appear to be increasingly turning toward urban terrorism in their attempts to bring down the existing order. This type of subversion is more difficult to control, and governments are forced to use increasingly repressive measures to deal with it. Thus, a cycle of terrorist actions and repressive counter-reactions tends to polarize and unsettle the political situation, creating more fertile ground for radical solutions among large segments of the population.

There are also Maoist Communist forces in the hemisphere. Although they are relatively small in numbers they are fanatically dedicated to the use of violence and intimidation to achieve their ends. The mystique of Maoism has appealed most to the idealism of the young and, thus, has been the means for widespread subversion.

Now it appears in some cases that Castro and Maoist forces have joined for acts of subversion, terror and violence in the cities. These forces also concentrate on mass student demonstrations and disruptions of various institutions, public and private, calling on the support of Communist labor front organizations to the degree possible.

Although Castro's propaganda casts him as a leader of the down-trodden who is opposed to United States imperialism and independent of Soviet Communism, it is clear that the Soviet Union presently has an important degree of financial, economic, and military influence over Communist Cuba. The recent visit of the Soviet fleet to Havana is one evidence of growing warmth in their relations.

This Soviet performance in Cuba and throughout the hemisphere is to be contrasted with the official Soviet government and Communist party protestations not only of peaceful coexistence but of disassociation from Castro and his program of terror in the American republics.

Clearly, the opinion in the United States that Communism is no longer a serious factor in the Western Hemisphere is thoroughly wrong.

We found almost universally that the other American republics are deeply concerned about the threat that it poses to them—and the United States must be alert to and concerned about the ultimate threat it poses to the United States and the hemisphere as a whole.

Changes in the Decade Ahead

The nations of the Western Hemisphere in the decade ahead will differ greatly from their present situation. They will reflect the rapid and widespread changes now occurring, which will alter the institutions and processes by which the American republics govern and progress. While it is not possible to predict with any precision the precise course of change, the hemisphere is likely to exhibit the following characteristics in the next few years:

- Rising frustration with the pace of development, intensified by industrialization, urbanization and population growth;
- Political and social instability;
- An increased tendency to turn to authoritarian or radical solutions;
- Continuation of the trend of the military to take power for the purpose of guiding social and economic progress; and,

- Growing nationalism, across the spectrum of political groupings, which will often find expression in terms of independence from U.S. domination and influence.

Chapter Two: The Challenge to Political and Economic Freedom

A. The Nature of the Challenge

The pace and intensity of change, imposed on rampant inflation, urban violence, grinding poverty, embittering injustice and flaming nationalism, put the nations of the Western Hemisphere at a crossroads. The question of whether systems of freedom with order and justice will survive and prosper is no longer rhetorical; it is reality.

The key issue is whether government of free peoples can be made effective, and can set the necessary priorities, to cope with the people's present needs and their aspirations for the future; whether political and social institutions can hold the confidence not only of a questioning young generation but of adults as well.

For the United States, the challenge is a double one: First, to demonstrate by its example that a free society can resolve its own internal problems and provide a more rewarding life for all its people; second, to find ways in which its tremendous human and material resources can effectively supplement the efforts of the other American nations themselves, in a climate of growing instability, extremism, and anti-U.S. nationalism.

A new relationship between the United States and the other American republics must be shaped with a recognition that devotion to our long-term community of interests will often require sensitive handling of our short-term differences. In forging this relationship we have the opportunity to demonstrate how sovereign nations, working together, can solve common problems and thus to establish a model for cooperative arrangements for the fulfillment of men and women throughout the world.

It is a fortunate and striking fact of the modern world that, for the first time, the scientific know-how and managerial competence required to meet the economic

aspects of the challenge are available. Moreover, we believe the Western Hemisphere possesses the human, material and spiritual resources that are needed for the task in all its aspects—economic, social and political.

B. The United States National Interest

The moral and spiritual strength of the United States in the world, the political credibility of our leadership, the security of our nation, the future of our social and economic progress are now at stake.

Rising frustrations throughout the Western Hemisphere over poverty and political instability have led increasing numbers of people to pick the United States as a scapegoat and to seek out Marxist solutions to their socioeconomic problems. At the moment, there is only one Castro among the 26 nations of the hemisphere; there can well be more in the future. And a Castro on the mainland, supported militarily and economically by the Communist world, would present the gravest kind of threat to the security of the Western Hemisphere and pose an extremely difficult problem for the United States.

Just as the other American republics depend upon the United States for their capital equipment requirements, so the United States depends on them to provide a vast market for our manufactured goods. And as these countries look to the United States for a market for their primary products whose sale enables them to buy equipment for their development at home, so the United States looks to them for raw materials for our industries, on which depend the jobs of many of our citizens.

But these forces of economic interdependence are changing, and must change. An increasing flow of two-way trade in industrial products must supplement the present interchange of manufactured goods and primary products.

Today's 250 million people in South and Central America will become 643 million in just 30 years. If the current anti-US. trend continues, one can foresee a time when the United States would be politically and morally isolated from part or much of the Western

Hemisphere. If this should happen, the barriers to our collective growth would become formidable indeed.

It is plainly evident that the countries of the Western Hemisphere, including the United States, have become increasingly dependent on each other.

Historically, the United States has had a special relationship with the other American republics. It is based upon long association, geography and, above all, on the psychological acceptance of a concept of hemisphere community. It is embodied in the web of organizations, treaties and commitments of the inter-American system. Beyond conventional security and economic interests, the political and psychological value of the special relationship cannot be overestimated. Failure to maintain that special relationship would imply a failure of our capacity and responsibility as a great power. If we cannot maintain a constructive relationship in the Western Hemisphere, we will hardly be able to achieve a successful order elsewhere in the world. Moreover, failure to maintain the special relationship would create a vacuum in the hemisphere and facilitate the influence in the region of hostile foreign powers.

It is clear, then, that our national interest requires the maintenance of our special relationship which should have as its goal the creation of a community of self-reliant, independent nations linked in a mutually beneficial regional system, and seeking to improve the efficiency of their societies and the quality of life of their peoples.

C. Our National Objective

There is no system in all of history better than our own flexible structure of political democracy, individual initiative, and responsible citizenship in elevating the quality of man's life. It makes the individual of central importance; it subordinates the role of government as a servant of the people; it works with people and for people—it has no other justification.

Our job at home is far from finished. We must keep our emphasis on people, our priority concern for people. This will mean shaping the forces of change and

stretching out or deferring those programs not related to the urgent needs of people. Unless human needs are met, democracy will have failed of its purpose and cannot survive.

What is true at home is essentially also true for the hemisphere. Our concern must be for people. What we in the hemisphere have to do is work together, multiplying our relations with the people of the hemisphere nations, helping each other develop more effective societies that can enhance the health, freedom and security of all the people, to the end that the quality of the life of each and every person in the hemisphere is enhanced.

We must work with our fellow Americans to the end that no one is exploited or degraded to enrich another and every man and woman has a full opportunity to make the most of his endowments.

However, we must recognize that the specific forms or processes by which each nation moves towards a pluralistic system will vary with its own traditions and situation. We know that we, in the United States, cannot determine the internal political structure of any other nation, except by example.

Our ability to affect or influence the course of events in other nations is limited. We may find that other nations may perceive their interests in ways which conflict with ours. What we must do is take a long-term view of our interests and objectives, always maintaining a sense of our own priorities and of the special Western Hemisphere relationship we hope to achieve. Such a view will require a high degree of tolerance for diversity and for nationalistic expression often directed against the United States, and a recognition that our style may often have a more important effect than what we actually do in the hemisphere.

The kind of paternalistic relationship the United States has had in the past with other hemisphere nations will be increasingly costly and counter-productive in the years ahead. We believe the United States must move increasingly toward a relationship of true partnership, in which it will cooperate with other nations of the hemisphere in those areas where its cooperation can be helpful and is wanted.

The United States must face several important practical issues in trying to shape this new relationship:

1. The United States should determine its attitude towards internal political developments in a more pragmatic way;
2. The United States should decide how it can shift increasing responsibility to the other American nations (through multi-lateral channels) for the development process; and,
3. The United States should decide how its interests are affected by insurgency and subversion elsewhere in the hemisphere and the extent to which its programs can and should assist in meeting the security requirements of its neighbors.

The task is difficult but by no means impossible. It will require discipline and energy and above all a very clear and consistent sense of purpose at home and abroad. To grasp the opportunity that lies in the hemisphere, the United States must make some major and fundamental changes in, first, the structure of the government mechanisms through which we work with our hemisphere neighbors, and, second, in our policies and programs as they relate to the Western Hemisphere.

109. Richard Nixon: "Vietnamization" Speech, 3 November 1969

Introduction

When the Republican Richard Nixon became president in 1969, the United States was mired in a war in Vietnam that seemed unwinnable. Nixon and his influential National Security Advisor Henry A. Kissinger, who became

secretary of state in 1973, effectively directed U.S. foreign policies between them. The two men were both conscious that their country no longer enjoyed the undisputed supremacy of the immediate post-1945 period and that growing economic difficulties mandated cuts in defense budgets. The United States was also suffering from a dollar gap in terms of the imbalance between its overseas expenditures and what foreigners spent in the United States. Since 1945 the U.S. dollar had been linked to gold at a fixed exchange rate, making the American currency the effective regulator of the international currency system. In August 1971, however, Nixon removed the dollar from the gold standard, an action that symbolized his country's declining hegemonic status. From the beginning of his presidency, however, Nixon was determined to force America's European and Asian allies, who had become wealthy in part because the United States subsidized their defense costs, to bear more of the burden of covering their own military expenditures. During a July 1969 trip to Asia, the president announced this policy in a press conference at Guam. He stated that the United States would honor its treaty commitments and use its own nuclear umbrella to protect any "nation whose survival we consider vital to our security" from outside nuclear threats. He warned, however, that while the United States would when necessary provide supplementary "economic and military assistance" to allies facing other security challenges, "we shall look to the nation directly threatened to assume the primary responsibility of providing the manpower for its defense." Nixon had campaigned for the presidency announcing that he had a secret plan to end the war in Vietnam. Citing the Nixon (Guam) Doctrine, in November 1969 he informed the American people that this involved the new strategy of Vietnamization, whereby the United States would gradually reduce American forces in the Republic of Vietnam (ROV, South Vietnam) while furnishing that country with massive military aid in the expectation that its own troops would take up the slack. Nixon intended to couple this approach with aggressive U.S. moves against Vietnamese guerrilla sanctuaries in Cambodia and Laos and heavy bombing of the Democratic Republic of Vietnam (DRV, North Vietnam), measures that he hoped would persuade North Vietnam to make concessions at the negotiating table that would facilitate the survival of South Vietnam as an independent country and so enable the United States to withdraw completely. In November 1969, Nixon informed the American people that the military situation in Vietnam was improving, meaning that the United States could with a clear conscience reduce its commitments there. Despite Nixon's bold rhetoric that he was not abandoning South Vietnam, the knowledge that the Americans were gradually but inexorably drawing down their forces in Vietnam probably encouraged North Vietnamese representatives to maintain their faith in their ultimate victory over South Vietnam.

Primary Source

Tonight I want to talk to you on a subject of deep concern to all Americans and to many people in all parts of the world—the war in Vietnam.

I believe that one of the reasons for the deep division about Vietnam is that many Americans have lost confidence in what their Government has told them about our policy. The American people cannot and should not be asked to support a policy which involves the overriding issues of war and peace unless they know the truth about that policy.

Tonight, therefore, I would like to answer some of the questions that I know are on the minds of many of you listening to me.

How and why did America get involved in Vietnam in the first place?

How has this administration changed the policy of the previous administration?

What has really happened in the negotiations in Paris and on the battlefield in Vietnam?

What choices do we have if we are to end the war?

What are the prospects for peace?

[. . .]

Well, let us turn now to the fundamental issue. Why and how did the United States become involved in Vietnam in the first place?

Fifteen years ago North Vietnam, with the logistical support of Communist China and the Soviet Union, launched a campaign to impose a Communist govern-

ment on South Vietnam by instigating and supporting a revolution.

In response to the request of the Government of South Vietnam, President Eisenhower sent economic aid and military equipment to assist the people of South Vietnam in their efforts to prevent a Communist takeover. Seven years ago, President Kennedy sent 16,000 military personnel to Vietnam as combat advisers. Four years ago, President Johnson sent American combat forces to South Vietnam.

Now, many believe that President Johnson's decision to send American combat forces to South Vietnam was wrong. And many others—I among them—have been strongly critical of the way the war has been conducted.

But the question facing us today is: Now that we are in the war, what is the best way to end it?

In January I could only conclude that the precipitate withdrawal of American forces from Vietnam would be a disaster not only for South Vietnam but for the United States and for the cause of peace.

For the South Vietnamese, our precipitate withdrawal would inevitably allow the Communists to repeat the massacres which followed their takeover in the North 15 years before.

- They then murdered more than 50,000 people and hundreds of thousands more died in slave labor camps.
- We saw a prelude of what would happen in South Vietnam when the Communists entered the city of Hue last year. During their brief rule there, there was a bloody reign of terror in which 3,000 civilians were clubbed, shot to death, and buried in mass graves.
- With the sudden collapse of our support, these atrocities of Hue would become the nightmare of the entire nation—and particularly for the million and a half Catholic refugees who fled to South Vietnam when the Communists took over in the North.

For the United States, this first defeat in our Nation's history would result in a collapse of confidence in Amer-

ican leadership, not only in Asia but throughout the world.

Three American Presidents have recognized the great stakes involved in Vietnam and understood what had to be done.

[. . .]

For the future of peace, precipitate withdrawal would thus be a disaster of immense magnitude.

- A nation cannot remain great if it betrays its allies and lets down its friends.
- Our defeat and humiliation in South Vietnam without question would promote recklessness in the councils of those great powers who have not yet abandoned their goals of world conquest.
- This would spark violence wherever our commitments help maintain the peace—in the Middle East, in Berlin, eventually even in the Western Hemisphere.

Ultimately, this would cost more lives.

It would not bring peace; it would bring more war.

For these reasons, I rejected the recommendation that I should end the war by immediately withdrawing all of our forces. I chose instead to change American policy on both the negotiating front and battlefield.

In order to end a war fought on many fronts, I initiated a pursuit for peace on many fronts.

In a television speech on May 14, in a speech before the United Nations, and on a number of other occasions I set forth our peace proposals in great detail.

- We have offered the complete withdrawal of all outside forces within 1 year.
- We have proposed a cease-fire under international supervision.
- We have offered free elections under international supervision with the Communists participating in the organization and conduct of the elections as an organized political force. And the Saigon

Government has pledged to accept the result of the elections.

We have not put forth our proposals on a take-it-or-leave-it basis. We have indicated that we are willing to discuss the proposals that have been put forth by the other side. We have declared that anything is negotiable except the right of the people of South Vietnam to determine their own future. At the Paris peace conference, Ambassador Lodge has demonstrated our flexibility and good faith in 40 public meetings.

Hanoi has refused even to discuss our proposals. They demand our unconditional acceptance of their terms, which are that we withdraw all American forces immediately and unconditionally and that we overthrow the Government of South Vietnam as we leave.

We have not limited our peace initiatives to public forums and public statements. I recognized, in January, that a long and bitter war like this usually cannot be settled in a public forum. That is why in addition to the public statements and negotiation I have explored every possible private avenue that might lead to a settlement.

[. . .]

But the effect of all the public, private, and secret negotiations which have been undertaken since the bombing halt a year ago and since this administration came into office on January 20, can be summed up in one sentence: No progress whatever has been made except agreement on the shape of the bargaining table.

Well now, who is at fault?

It has become clear that the obstacle in negotiating an end to the war is not the President of the United States. It is not the South Vietnamese Government.

The obstacle is the other side's absolute refusal to show the least willingness to join us in seeking a just peace. And it will not do so while it is convinced that all it has to do is to wait for our next concession, and our next concession after that one, until it gets everything it wants.

There can now be no longer any question that progress in negotiation depends only on Hanoi's deciding to negotiate, to negotiate seriously.

I realize that this report on our efforts on the diplomatic front is discouraging to the American people, but the American people are entitled to know the truth—the bad news as well as the good news—where the lives of our young men are involved.

Now let me turn, however, to a more encouraging report on another front.

At the time we launched our search for peace I recognized we might not succeed in bringing an end to the war through negotiation. I, therefore, put into effect another plan to bring peace—a plan which will bring the war to an end regardless of what happens on the negotiating front.

It is in line with a major shift in U.S. foreign policy which I described in my press conference at Guam on July 25. Let me briefly explain what has been described as the Nixon Doctrine—a policy which not only will help end the war in Vietnam, but which is an essential element of our program to prevent future Vietnams.

We Americans are a do-it-yourself people. We are an impatient people. Instead of teaching someone else to do a job, we like to do it ourselves. And this trait has been carried over into our foreign policy.

In Korea and again in Vietnam, the United States furnished most of the money, most of the arms, and most of the men to help the people of those countries defend their freedom against Communist aggression.

Before any American troops were committed to Vietnam, a leader of another Asian country expressed this opinion to me when I was traveling in Asia as a private citizen. He said: "When you are trying to assist another nation defend its freedom, U.S. policy should be to help them fight the war but not to fight the war for them."

Well, in accordance with this wise counsel, I laid down in Guam three principles as guidelines for future American policy toward Asia:

- First, the United States will keep all of its treaty commitments.
- Second, we shall provide a shield if a nuclear power threatens the freedom of a nation allied with US or of a nation whose survival we consider vital to our security.
- Third, in cases involving other types of aggression, we shall furnish military and economic assistance when requested in accordance with our treaty commitments. But we shall look to the nation directly threatened to assume the primary responsibility of providing the manpower for its defense.

After I announced this policy, I found that the leaders of the Philippines, Thailand, Vietnam, South Korea, and other nations which might be threatened by Communist aggression, welcomed this new direction in American foreign policy.

The defense of freedom is everybody's business—not just America's business. And it is particularly the responsibility of the people whose freedom is threatened. In the previous administration, we Americanized the war in Vietnam. In this administration, we are Vietnamizing the search for peace.

The policy of the previous administration not only resulted in our assuming the primary responsibility for fighting the war, but even more significantly did not adequately stress the goal of strengthening the South Vietnamese so that they could defend themselves when we left.

The Vietnamization plan was launched following Secretary Laird's visit to Vietnam in March. Under the plan, I ordered first a substantial increase in the training and equipment of South Vietnamese forces.

In July, on my visit to Vietnam, I changed General Abrams' orders so that they were consistent with the objectives of our new policies. Under the new orders, the primary mission of our troops is to enable the South Vietnamese forces to assume the full responsibility for the security of South Vietnam.

[. . .]

Let me now turn to our program for the future.

We have adopted a plan which we have worked out in cooperation with the South Vietnamese for the complete withdrawal of all U.S. combat ground forces, and their replacement by South Vietnamese forces on an orderly scheduled timetable. This withdrawal will be made from strength and not from weakness. As South Vietnamese forces become stronger, the rate of American withdrawal can become greater.

I have not and do not intend to announce the timetable for our program. And there are obvious reasons for this decision which I am sure you will understand. As I have indicated on several occasions, the rate of withdrawal will depend on developments on three fronts.

One of these is the progress which can be or might be made in a Paris talks. An announcement of a fixed timetable for our withdrawal would completely remove any incentive for the enemy to negotiate an agreement. They would simply wait until our forces had withdrawn and then move in.

The other two factors on which we will base our withdrawal decisions are the level of enemy activity and the progress of the training programs of the South Vietnamese forces. And I am glad to be able to report tonight progress on both of these fronts has been greater than we anticipated when we started the program in June for withdrawal. As a result, our timetable for withdrawal is more optimistic now than when we made our first estimates in June. Now, this clearly demonstrates why it is not wise to be frozen in on a fixed timetable.

We must retain the flexibility to base each withdrawal decision on the situation as it is at that time rather than on estimates that are no longer valid.

Along with this optimistic estimate, I must—in all candor—leave one note of caution.

If the level of enemy activity significantly increases we might have to adjust our timetable accordingly.

[. . .]

My fellow Americans, I am sure you can recognize from what I have said that we really only have two choices open to us if we want to end this war.

—I can order an immediate, precipitate withdrawal of all Americans from Vietnam without regard to the effects of that action.

—Or we can persist in our search for a just peace through a negotiated settlement if possible, or through continued implementation of our plan for Vietnamization if necessary, a plan in which we will withdraw all of our forces from Vietnam on a schedule in accordance with our program, as the South Vietnamese become strong enough to defend their own freedom.

I have chosen this second course.

It is not the easy way.

It is the right way.

It is a plan which will end the war and serve the cause of peace—not just in Vietnam but in the Pacific and in the world.

In speaking of the consequences of a precipitate withdrawal, I mentioned that our allies would lose confidence in America.

Far more dangerous, we would lose confidence in ourselves. Oh, the immediate reaction would be a sense of relief that our men were coming home. But as we saw the consequences of what we had done, inevitable remorse and divisive recrimination would scar our spirit as a people.

We have faced other crises in our history and have become stronger by rejecting the easy way out and taking the right way in meeting our challenges. Our greatness as a nation has been our capacity to do what had to be done when we knew our course was right.

I recognize that some of my fellow citizens disagree with the plan for peace I have chosen. Honest and patriotic Americans have reached different conclusions as to how peace should be achieved.

[. . .]

And now I would like to address a word, if I may, to the young people of this Nation who are particularly concerned, and I understand why they are concerned, about this war.

I respect your idealism.

I share your concern for peace.

I want peace as much as you do.

[. . .]

—And I want to end the war for another reason. I want to end it so that the energy and dedication of you, our young people, now too often directed into bitter hatred against those responsible for the war, can be turned to the great challenges of peace, a better life for all Americans, a better life for all people on this earth.

I have chosen a plan for peace. I believe it will succeed.

[. . .]

And so tonight—to you, the great silent majority of my fellow Americans—I ask for your support.

I pledged in my campaign for the Presidency to end the war in a way that we could win the peace. I have initiated a plan of action which will enable me to keep that pledge.

The more support I can have from the American people, the sooner that pledge can be redeemed; for the more divided we are at home, the less likely the enemy is to negotiate at Paris.

Let us be united for peace. Let us also be united against defeat. Because let us understand: North Vietnam cannot defeat or humiliate the United States. Only Americans can do that.

110. Willy Brandt: The Federal Government's Report on the State of the Nation to the Bundestag, 28 January 1971

Introduction

During the 1960s, European nations took much of the initiative in trying to resolve the divisions and alleviate tensions between the continent's western and eastern halves. Willy Brandt, the first Social Democratic chancellor of the Federal Republic of Germany (FRG, West Germany), launched a campaign that he termed Ostpolitik (Eastern policy) to improve his country's relations with its communist neighbors to the east. Brandt had good credentials for doing so. As a boy his involvement in the antifascist resistance had forced him to flee Nazi Germany, yet as the defiant mayor of West Berlin during the 1948–1949 airlift, he had become a symbol of opposition to communist bullying. Until Brandt became chancellor, West Germany had refused to accord diplomatic recognition to any state except Soviet Russia that had diplomatic dealings with the German Democratic Republic (GDR, East Germany). Under Brandt, West Germany moved decisively to normalize dealings with Soviet bloc countries and between 1967 and 1974 established diplomatic relations with Romania, Yugoslavia, Poland, Czechoslovakia, Bulgaria, and Hungary. Even though his stance was controversial with large portions of the West German electorate, attracting strong criticism from those Germans who had once lived in what was now Poland, Brandt was prepared to accept the Soviet-backed cession to Poland in 1945 of large portions of what had been German territory in eastern Prussia, and in 1970 West Germany accepted the existing borders of Poland. Treaties with the Soviet Union in 1970 and East Germany in 1973 ratified the existing European borders and renounced the use of force to rectify them, even while leaving open the possibility of future German reunification. In return, trade and travel between the two Germanies became much easier, facilitating not just commerce but also the reunion of families separated by the iron curtain. Brandt's Ostpolitik paved the way for the policies of détente with the Soviet Union implemented by U.S. President Richard Nixon and Secretary of State Henry Kissinger during the early 1970s. Brandt's decision to recognize East Germany as a separate state was particularly contentious domestically, as it involved recognizing that Germany's division into two states was likely to be indefinite. His efforts won him the 1971 Nobel Peace Prize. Revelations in 1974 that one of his closest aides, Gunter Guillaume, a supposed refugee from East Germany, had been a spy led to Brandt's resignation. It does not seem that Guillaume had any great input into Brandt's policies, but his revelations to his masters that Brandt was indeed in earnest in seeking reconciliation with East Germany may have facilitated the Soviet bloc's acceptance of Ostpolitik. In 1990 Brandt welcomed the reunification of Germany, which occurred two years before his death.

Primary Source

This government is now making its second report on the position in divided Germany. At the same time, this High House has been presented with the Federal Government's answer to a major question from the S.P.D. [Social Democratic Party] and F.D.P. [Free Democratic Party] Parties on foreign policy.

As I promised here before the end of last year, papers intended to facilitate a comparison of conditions in the Federal Republic of Germany and the G.D.R. [German Democratic Republic or East Germany] in various important fields have also been put at the disposal of this House in connection with the report on the State of the Nation.

I.

Ladies and gentlemen, in our reply to this major question—which the Government will explain in detail in the course of the following debate—the political tendencies and conditions are described which result from the state of the Federal Republic and which affect our country from outside. The state of affairs in Germany cannot, of course, be judged independently either of general international or European tendencies. So it is appropriate to clarify the significant events of 1970, to re-emphasize our working principles and to re-examine the attitudes of our allies.

Our reply to the major question states that our Eastern policy has the unanimous support of our allies. The

fact that the leading representatives of the allied powers have not confined the expression of their support to confidential discussions has given us all the more encouragement to continue on the road that we regard as necessary. Our policy has been expressly supported in conferences of the West European communities and the Atlantic Alliance. I can take it that the published communiqués are well known to you.

[. . .]

Even in the eastern world, it is today hardly doubted that German policy is directed towards peace. And it is known that we are making no exceptions, not even in the case of the G.D.R., in our efforts to reach understanding.

Seen from this point of view, it was only logical, when signing the Moscow Treaty on the 12th August last year, to declare our agreement with the Soviet Union that all treaties we may want to conclude with the partners of the Warsaw Pact will form a political whole.

No one will be able to speak of effective relaxation of tension in Central Europe until all these elements are present.

Over and above this, I want to establish here that these treaties—to be exact, the treaty with the Soviet Union and that with the People's Republic of Poland—in no way contradict our position as a member of the European Community or as an ally of N.A.T.O. In neither West nor East, North nor South are there particular German interests or special German reservations, which could diminish or influence our decision in favour of a policy of settlement. However, we made it clear in Moscow that no treaty either can or may prevent us from striving for a state of peace in which our nation can recover its unity in freedom and self-determination. This reflects the task laid down in our constitution as well as our own convictions. But no one believes that aspirations come any nearer to fulfillment by being committed to paper.

We also have German interests in the widest sense at heart in our relationship to Poland, in doing what we can to ensure that the name of Germany shall no longer

be used as a symbol of injustice and horror, but as a sign of hope for reconciliation and peaceful coexistence. That this hope is not in vain may be seen in the number of Germans who will cross to the Federal Republic in the coming months.

With regard to relations with the G.D.R.: as laid down in the principles of the United Nations regarding relations between states, peaceful settlement of relations on the basis of human rights, equality, peaceful coexistence and non-discrimination must occupy the foreground of all efforts in this case as well.

[. . .]

This survey of developments since my last report a year ago makes clear the extent to which the settlement of relations between the Federal Republic of Germany and the G.D.R. must be seen in relation to the whole. An isolated solution to the problems affecting our people is just as impossible as, say, an attempt to secure peace on our own. History has taught us that crises can be created by one, but the maintenance of peace requires the cooperation of all.

What is possible between the states of Europe must also be possible between the two states in Germany; the artificial severance which has now lasted more than two decades has brought neither stability nor tranquillity. On the contrary, it has aroused tensions and crises which must now be overcome in the interests of Europe and Germany.

[. . .]

1970 has seen the return of the German question to the agenda of European and international politics, in a partly new form but certainly with greater urgency. What has been started must now be consistently and patiently pursued. . . .

To complicate things even further, since 1970 the G.D.R. has adopted the terms "socialist state of the German nation" and "socialist German national state," thereby both confirming and denying the continuance of one German nation. These observations and indications show how difficult discussions are when the part-

ner wants to have and be two things at the same time. For whereas the G.D.R., pointing to the “socialist German national state,” declares that there can be no “special relations” between the two German states, the same leadership claims the right to undertake what it calls “an offensive policy of peaceful coexistence towards the F.R.G.” With no other state in the world does the G.D.R. concern itself so thoroughly and so actively as with the Federal Republic.

And now I would ask: is this not the same intervention in the affairs of another state, otherwise so eagerly pilloried by the leadership of the G.D.R.? And does it not often go as far as encouraging our citizens to resist the internal order of their state?

I say this not only for the sake of necessary demarcation. I also want to make it clear that such conduct, negative though it be, shows a special interest in that part of the German nation living in the Federal Republic. Clearly, there is here an interest of a special kind and the involuntary documentation of the “special relations” otherwise denied. But this special interest is manifested in such a way that it makes the gulf between the two parts of Germany deeper than between other states with different ideological and social structures. Our common national basis leads the government in East Berlin not to playing down but to exaggerating the antitheses between East and West.

The other side frequently appeals to political realities. This is why we should now declare with all urgency: freedom, democracy and social justice are not formal concepts for us. They are the tasks laid down by our constitution, by the Basic Law, and they form the inalienable foundations of our political and social existence. We are ready to enter any contest concerned with more personal freedom and more social justice.

But there is one point on which we are in agreement with Herr Ulbricht, Chairman of the State Council and First Secretary, when he speaks of demarcation: neither ideologically nor socially can there be any mixing of antitheses nor any minimization of differences of opinion; this is—unfortunately—specially true of the two states in Germany, which belong to such different systems. But even these two states must be able to

achieve a form of peaceful coexistence in which neither holds the other in tutelage, but both provide an example abroad that even between such different political and social systems, peaceful cooperation is possible.

Nationhood is a question of consciousness and will. The polemics of East Berlin against the nation confirm the existence of this consciousness and will, which have also been preserved over there to a great extent. Differing interpretations of this theme need not hinder efforts for a settled, objective coexistence of the two German states. However, both sides must respect the fact that the Four Powers hold and will continue to hold responsibility for Germany as a whole and for Berlin. This situation is not an obstacle to the intentions of the Federal Government to reach with the G.D.R. agreements setting out clear obligations, such as are normal and necessary between states.

[. .]

IV.

The division of Germany inherited from the War also struck hard on some areas this side of the border; what had been a heartland became a fringe area remote from the economic centre. Historic, political, cultural and economic ties were broken.

In accordance with a resolution by the German Bundestag on 2nd July, 1953, successive federal governments have repeatedly stressed their intentions of giving priority to this inner-German fringe area. This Government has presented the House with the draft of a Bill aimed at coordinating previous promotional measures and preferences for the affected areas. It also foresees considerable improvements in the fields of housing and social facilities.

A further 80 million DM are to be set aside from the Federal Budget, whereby future plans will concentrate not only on economic promotion but also on measures to improve the infrastructure.

V.

In our efforts to the best of our ability to render the results of the division of Germany more bearable to all those affected, I am thinking particularly today of the

large group of our population who lost their old homelands 25 years ago as a result of the war.

Nobody should presume to disparage those who still today suffer pain and sadness over the loss of their homelands in the East. They bore a heavier burden than many other Germans. Yet it was their delegates who, 20 years ago in the Charter of Stuttgart, abjured hate and sought for settlement with our eastern neighbours. That Charter was a document of humanity and reason, which turned its gaze to the future and expressed a clear rejection of the barbaric methods of the past.

Certain people now want to awaken an impression among the exiles that a real possibility of return has been lost through the Treaty we have signed with Poland, that their real exile dates from now and that a renunciation of attainable rights has taken place. On this occasion, I would just like to say the following:

- If today we are willing for the sake of peace to proceed from the existing borders in Europe, that is also those in Eastern Europe, and to respect them, this does not by any means imply a legitimation or silent approval of the eviction of Germans from these areas that took place in 1945 and 1946. We have not just lost the war today—as we all know—and there has been plenty of time to orientate ourselves and obtain information on the attitude of foreign powers, including our closest allies.
- We want to break down barriers—and not just through this Treaty—between the German and Polish peoples, barriers resulting from a difficult historical heritage and particularly from the Second World War.
- Among the losses of eviction were not just the bases of material existence; we are concerned with an area which brought forth great achievements and contributions to German cultural and intellectual life. The Federal Government will assist in fostering this cultural heritage.
- As far as material losses are concerned, the Federal Republic has not even approached full compensation. However, in most cases economic assim-

ilation has been successful. Personal ability and skill and also the favourable economic development of our Federal Republic have played their part in this. Nevertheless, I ask our citizens who have not had to pay for the war with the loss of their homeland and all its inestimable associations to give their understanding and help to all those who still do not feel quite at home here.

- Following the conclusion of the treaty with Poland, many families can look forward to receiving their relations now living there. As you know, the first small groups are already arriving in the Federal Republic. Adjustment to life here will at first not be easy for some of these people. The Federal Government and the Lander governments will do everything in their power to help; but we need the cooperation of everyone to ease the burdens of acclimatization and a new start for these Germans who are coming to us.

Furthermore, I appeal to all citizens of the Federal Republic, men and women alike—whatever their origins, to play their part in seeing that the reconciliation with the Polish people becomes a lasting reality. The same applies in our efforts to achieve a settlement with the peoples of Czechoslovakia and to all reconciliation and cooperation with the East.

VI.

Our efforts to normalize relations with the East European states and the other part of Germany have led in past months not only to legitimate differences of opinion on content and form—as they will also be expressed in this House—but also to very vehement actions on the part of small groups whose volume has borne and bears no relation to their numbers. These groups, which are trying—under the misused and in this case macabre slogan of “resistance”—to exploit some of the exiles for their aims, represent neither the policy of our country nor the will of the people. They consist of a residue of radical organizations who are constantly trying out new methods of attracting dissatisfied citizens to their contemptible purposes.

We know what effect such campaigns, set against the background of history, have on our neighbours and on

our friends in the West. The evil committed under the Hitler regime has left deep scars, not only in the public opinion of neighbouring countries. We may prefer to dismiss exaggerated reaction in these countries, but we must try to understand it even if it is not justified by the facts.

The Federal Government believes that the overwhelming majority of our population rejects the aims and methods of the groups just mentioned, all the more so as many of our citizens still remember how destructive such forces can be. In any case, recent elections have clearly demonstrated that our people is not willing to entrust itself to extremists and obvious political adventurers.

We must defend ourselves energetically against those—whichever side they may come from—who wish to make violence or terror an instrument of political confrontation. And nationalistic agitation is forbidden both by bitter experience and the principles of our free constitution.

VII.

It has been said and written that, in view of events in Europe, the first year of this new decade is seen by some people as a kind of “German year.” In the old Berlin manner, I would ask whether we might not have it “a size smaller.” In any case, we should not forget that others have been involved in these efforts. However, we can say without complacency that in these difficult efforts to secure peace—and they are still difficult—the Federal Republic of Germany has not been a silent partner but a driving force and will continue to be so. This also applies to Western, especially West European cooperation with our Eastern neighbours.

Our policy does not suffer from a lack of balance. The promotion of West European cooperation, the further development of the Atlantic Alliance and the cultivation of trusted friendships remain the foundations of our policy. We stand with both feet firmly in the Western community. Close and indissoluble partnership with our friends and allies is not only the basis of our common efforts towards the pacification of Europe, it is of great value in itself.

On the other hand we cannot and do not want to rest content with this, any more than our partners in the West. In this process, with its ultimate aim of relaxing tension in Europe, the Federal Republic has taken over an appointed but independent role. Important as it is to go hand in hand with our Western partners, it is just as clear that a number of barriers and obstacles can only be cleared away by Germans, by ourselves. If we are to make a fresh start, we ourselves must deal with a major part of the inheritance of the war begun and lost by the Third Reich. The overcoming of European tensions is also dependent on our own contribution, especially with regard to the establishment of a tolerable contractual relationship between the two states in Germany. This is a task of which nobody can relieve us; we must tackle it ourselves.

In summing up, I want to affirm that we are proceeding on the basis of the following facts and expectations:

1. The right to self-determination laid down in the United Nations Charter must be conceded to the Germans in the historical process.
2. The German nation remains a reality, even if divided into differing state and social systems.
3. The policy of the Federal Republic of Germany, which is pledged to the preservation of peace, requires a contractual settlement of relations with the G.D.R. The principles and contractual elements established in the 20 Points of Kassel remain our valid basis for negotiations.
4. The judicial status of Berlin may not be called in question. In the framework of the rights and undertakings approved by the Three Powers responsible, the Federal Republic of Germany will do its part to ensure that the viability of West Berlin is better safeguarded than previously.
5. A satisfactory result of the Four Power negotiations on the improvement of the situation in and around Berlin will enable the Federal Government to present the treaty signed in Moscow on 12th August, 1970, to the legislative bodies for ratification.
6. The same timing and political connection applies to the decision of the legislative bodies on the

treaty signed in Warsaw on 7th December, 1970,
with the People's Republic of Poland.

in a manner fitting to the matter in hand and to our
responsibility

I have tried to report objectively, for I am convinced
that we can only do justice to the state of the nation if
we are capable of conducting the exchange of opinion

111. Joint Communiqué of the United States of America and the People's Republic of China, 28 February 1972

Introduction

By 1969 the protracted split between the Soviet Union and the communist People's Republic of China (PRC) had become so pronounced that serious military clashes between the two occurred on their joint border, at Zhenbao (Damanski) Island on the Ussuri River. Soviet diplomats responded with inquiries to Richard Nixon, the new U.S. president, as to his country's probable reaction should they mount a first strike against Chinese nuclear facilities. Although these overtures may have been intended more to intimidate the Chinese than as serious inquiries, they alarmed Chinese leader Mao Zedong and impelled him, despite the ongoing Great Proletarian Cultural Revolution, to explore the possibility of a rapprochement with the United States, until that time Mainland China's greatest ideological and strategic enemy. Nixon and his national security advisor, Henry A. Kissinger, responded positively. Exploratory visits by Kissinger were followed in February 1972 by a state visit by Nixon, who always considered the opening of China one of the greatest achievements of his presidency. At this juncture, the two countries did not resume full diplomatic relations, as the United States still recognized the Republic of China (ROC) on Taiwan, a stance that did not change until the end of 1978. At the end of Nixon's trip, during which he met Mao and Premier Zhou Enlai and visited both Beijing, China's capital, and Shanghai, its greatest commercial metropolis, the two countries did, however, issue a communiqué that immediately became one of the key documents governing Sino-American relations well into the next century. Although Nixon and Kissinger hoped that China would exert pressure on the Democratic Republic of Vietnam (DRV, North Vietnam) to reach an acceptable peace settlement in ongoing negotiations seeking to end the Vietnam War, China affirmed its support for revolutionary efforts in Vietnam, Cambodia, and Laos. Both sides agreed that full diplomatic normalization was their ultimate goal. The major stumbling block to this was the position of Taiwan, which PRC leaders considered an integral part of China. To finesse this issue, both the Chinese and the Americans stated their own position on Taiwan. The Chinese declared that they would not tolerate any moves toward the permanent separation of Taiwan from China, while the United States "acknowledge[d] that all Chinese on either side of the Taiwan Strait maintain there is but one China and that Taiwan is a part of China." U.S. officials also proclaimed their wish that the issue should be settled by peaceful means and their eventual intention of withdrawing "all U.S. forces and military installations from Taiwan." Both China and the United States also supported increased person-to-person contacts through cultural, scientific, and educational exchanges and the encouragement of more bilateral trade.

Primary Source

President Richard Nixon of the United States of America visited the People's Republic of China at the invitation of Premier Chou En-lai of the People's Republic of China from February 21 to February 28, 1972. Accompanying the President were Mrs. Nixon, U.S. Secretary of State William Rogers, Assistant to the President Dr. Henry Kissinger, and other American officials.

President Nixon met with Chairman Mao Tse-tung of the Communist Party of China on February 21. The two leaders had a serious and frank exchange of views on Sino-U.S. relations and world affairs.

During the visit, extensive, earnest and frank discussions were held between President Nixon and Premier Chou En-lai on the normalization of relations between

the United States of America and the People's Republic of China, as well as on other matters of interest to both sides. In addition, Secretary of State William Rogers and Foreign Minister Chi Peng-fei held talks in the same spirit.

President Nixon and his party visited Peking and viewed cultural, industrial and agricultural sites, and they also toured Hangchow and Shanghai where, continuing discussions with Chinese leaders, they viewed similar places of interest.

The leaders of the People's Republic of China and the United States of America found it beneficial to have this opportunity, after so many years without contact, to present candidly to one another their views on a variety of issues. They reviewed the international situation in which important changes and great upheavals are taking place and expounded their respective positions and attitudes.

The U.S. side stated: Peace in Asia and peace in the world requires efforts both to reduce immediate tensions and to eliminate the basic causes of conflict. The United States will work for a just and secure peace; just, because it fulfills the aspirations of peoples and nations for freedom and progress; secure, because it removes the danger of foreign aggression. The United States supports individual freedom and social progress for all the peoples of the world, free of outside pressure or intervention. The United States believes that the effort to reduce tensions is served by improving communication between countries that have different ideologies so as to lessen the risks of confrontation through accident, miscalculation or misunderstanding. Countries should treat each other with mutual respect and be willing to compete peacefully, letting performance be the ultimate judge. No country should claim infallibility and each country should be prepared to re-examine its own attitudes for the common good. The United States stressed that the peoples of Indochina should be allowed to determine their destiny without outside intervention; its constant primary objective has been a negotiated solution; the eight-point proposal put forward by the Republic of Vietnam and the United States on January 27, 1972 represents a basis for the attainment of that objective; in the absence of a nego-

tiated settlement the United States envisages the ultimate withdrawal of all U.S. forces from the region consistent with the aim of self-determination for each country of Indochina. The United States will maintain its close ties with and support for the Republic of Korea; the United States will support efforts of the Republic of Korea to seek a relaxation of tension and increased communication in the Korean peninsula. The United States places the highest value on its friendly relations with Japan; it will continue to develop the existing close bonds. Consistent with the United Nations Security Council Resolution of December 21, 1971, the United States favors the continuation of the ceasefire between India and Pakistan and the withdrawal of all military forces to within their own territories and to their own sides of the ceasefire line in Jammu and Kashmir; the United States supports the right of the peoples of South Asia to shape their own future in peace, free of military threat, and without having the area become the subject of great power rivalry.

The Chinese side stated: Wherever there is oppression, there is resistance. Countries want independence, nations want liberation and the people want revolution—this has become the irresistible trend of history. All nations, big or small, should be equal; big nations should not bully the small and strong nations should not bully the weak. China will never be a superpower and it opposes hegemony and power politics of any kind. The Chinese side stated that it firmly supports the struggles of all the oppressed people and nations for freedom and liberation and that the people of all countries have the right to choose their social systems according to their own wishes and the right to safeguard the independence, sovereignty and territorial integrity of their own countries and oppose foreign aggression, interference, control and subversion. All foreign troops should be withdrawn to their own countries.

The Chinese side expressed its firm support to the peoples of Vietnam, Laos and Cambodia in their efforts for the attainment of their goal and its firm support to the seven-point proposal of the Provisional Revolutionary Government of the Republic of South Vietnam and the elaboration of February this year on the two

key problems in the proposal, and to the Joint Declaration of the Summit Conference of the Indochinese Peoples. It firmly supports the eight-point program for the peaceful unification of Korea put forward by the Government of the Democratic People's Republic of Korea on April 12, 1971, and the stand for the abolition of the "U.N. Commission for the Unification and Rehabilitation of Korea." It firmly opposes the revival and outward expansion of Japanese militarism and firmly supports the Japanese people's desire to build an independent, democratic, peaceful and neutral Japan. It firmly maintains that India and Pakistan should, in accordance with the United Nations resolutions on the India-Pakistan question, immediately withdraw all their forces to their respective territories and to their own sides of the ceasefire line in Jammu and Kashmir and firmly supports the Pakistan Government and people in their struggle to preserve their independence and sovereignty and the people of Jammu and Kashmir in their struggle for the right of self-determination.

There are essential differences between China and the United States in their social systems and foreign policies. However, the two sides agreed that countries, regardless of their social systems, should conduct their relations on the principles of respect for the sovereignty and territorial integrity of all states, non-aggression against other states, non-interference in the internal affairs of other states, equality and mutual benefit, and peaceful coexistence. International disputes should be settled on this basis, without resorting to the use or threat of force. The United States and the People's Republic of China are prepared to apply these principles to their mutual relations.

With these principles of international relations in mind the two sides stated that:

- progress toward the normalization of relations between China and the United States is in the interests of all countries;
- both wish to reduce the danger of international military conflict;
- neither should seek hegemony in the Asia-Pacific region and each is opposed to efforts by any other country or group of countries to establish such hegemony; and

—neither is prepared to negotiate on behalf of any third party or to enter into agreements or understandings with the other directed at other states.

Both sides are of the view that it would be against the interests of the peoples of the world for any major country to collude with another against other countries, or for major countries to divide up the world into spheres of interest.

The two sides reviewed the long-standing serious disputes between China and the United States. The Chinese side reaffirmed its position: The Taiwan question is the crucial question obstructing the normalization of relations between China and the United States; the Government of the People's Republic of China is the sole legal government of China; Taiwan is a province of China which has long been returned to the motherland; the liberation of Taiwan is China's internal affair in which no other country has the right to interfere; and all U.S. forces and military installations must be withdrawn from Taiwan. The Chinese Government firmly opposes any activities which aim at the creation of "one China, one Taiwan," "one China, two governments," "two Chinas," and "independent Taiwan" or advocate that "the status of Taiwan remains to be determined."

The U.S. side declared: The United States acknowledges that all Chinese on either side of the Taiwan Strait maintain there is but one China and that Taiwan is a part of China. The United States Government does not challenge that position. It reaffirms its interest in a peaceful settlement of the Taiwan question by the Chinese themselves. With this prospect in mind, it affirms the ultimate objective of the withdrawal of all U.S. forces and military installations from Taiwan. In the meantime, it will progressively reduce its forces and military installations on Taiwan as the tension in the area diminishes.

112. Equal Rights Amendment, 1972

Introduction

As American women became more assertive during the 1960s, they demanded constitutional protection for their right to equal treatment. This was not a new demand. In 1923, an Equal Rights Amendment (ERA) was introduced in Congress, but although resubmitted every year between then and 1970, it never reached the floor of either house for a vote. In October 1971 the U.S. House adopted the amendment as Joint Resolution 208, and the Senate followed suit in March 1972. To be accepted as an amendment to the Constitution, the measure still required ratification within seven years by three-quarters of the state legislatures. When that deadline arrived, only thirty-five of the necessary thirty-eight states had ratified the amendment, and four had voted to rescind their original ratification, a constitutionally dubious procedure. In 1978 the U.S. House voted to extend the deadline by three years, but no further states ratified during the additional period. The Republican Party withdrew its original support for the ERA, and conservatives, especially those who argued that the growing absorption of women in the labor force jeopardized the survival of the American family, argued that the amendment's passage would further enhance the power of Congress and the federal courts, who would be empowered to enforce it. Other opponents charged that the amendment would make women eligible for the draft and military service and would remove laws that gave special protection to women in, for example, heavy industry. The failure to ratify the ERA fundamentally reflected the rightward shift of the American political climate during the 1970s and 1980s and the associated conservative backlash against women's rights.

113. Strategic Arms Limitation Treaty I, 26 May 1972

Introduction

One major objective of President Richard Nixon and Secretary of State Henry Kissinger in seeking détente with the Soviet Union was to conclude agreements limiting the further growth of nuclear weapons and antiballistic missile (ABM) systems. At a May 1972 summit meeting in Moscow, Nixon and Soviet leader Leonid Brezhnev signed two strategic arms limitation treaties, jointly known as SALT I, which took effect the following October. The ABM Treaty limited antiballistic missile defense sites in each country to two, neither hosting more than one hundred ABMs. The Interim Agreement froze for five years the number of nuclear warheads each side possessed, giving the Soviets numerical superiority (2,328 to the American 1,710) in exchange for accepting the American lead in multiple independent reentry vehicles (MIRVs), the delivery system. SALT I allowed its signatories to upgrade their nuclear weaponry provided they observed these limits. Although American conservatives regarded them with suspicion, these treaties were widely viewed as a diplomatic triumph for Nixon and were the first major arms control agreements concluded since the beginning of the Cold War. Further warming in Soviet-American relations was anticipated. Several Soviet-American commercial agreements followed the disarmament accords, providing for Soviet purchases of \$750 million of American grain, largely financed by American credits; various business contracts; maritime understandings; and comprehensive trade agreements settling outstanding Soviet debts to the United States and promising the Soviets most-favored trading nation status. At a second Nixon-Brezhnev summit,

held in Washington in June 1973, the two leaders signed the Agreement on Prevention of Nuclear War, binding them to consult whenever international crises that might precipitate nuclear war between them or with other states arose and to act “in such a manner as to help prevent the development of situations capable of causing a dangerous exacerbation of their relations.” They also concluded four executive agreements on oceanography, transport, agricultural research, and cultural exchange and issued a declaration of principles intended to accelerate talks at Geneva designed to produce a second and permanent nuclear arms limitation agreement (SALT II). Airline services were expanded, and trade missions were established. The SALT agreements seemed a triumph for Nixon-Kissinger triangular diplomacy, promising further progress in the direction of Soviet-American détente, but in practice they marked its high tide.

Primary Source

The United States of America and the Union of Soviet Socialist Republics, hereinafter referred to as the Parties,

Convinced that the Treaty on the Limitation of Anti-Ballistic Missile Systems and this Interim Agreement on Certain Measures with Respect to the Limitation of Strategic Offensive Arms will contribute to the creation of more favorable conditions for active negotiations on limiting strategic arms as well as to the relaxation of international tension and the strengthening of trust between States,

Taking into account the relationship between strategic offensive and defensive arms,

Mindful of their obligations under Article VI of the Treaty on the Non-Proliferation of Nuclear Weapons,

Have agreed as follows:

Article I

The Parties undertake not to start construction of additional fixed land-based intercontinental ballistic missile (ICBM) launchers after July 1, 1972.

Article II

The Parties undertake not to convert land-based launchers for light ICBMs, or for ICBMs of older types deployed prior to 1964, into land-based launchers for heavy ICBMs of types deployed after that time.

Article III

The Parties undertake to limit submarine-launched ballistic missile (SLBM) launchers and modern ballistic missile submarines to the numbers operational and

under construction on the date of signature of this Interim Agreement, and in addition to launchers and submarines constructed under procedures established by the Parties as replacements for an equal number of ICBM launchers of older types deployed prior to 1964 or for launchers on older submarines.

Article IV

Subject to the provisions of this Interim Agreement, modernization and replacement of strategic offensive ballistic missiles and launchers covered by this Interim Agreement may be undertaken.

Article V

1. For the purpose of providing assurance of compliance with the provisions of this Interim Agreement, each Party shall use national technical means of verification at its disposal in a manner consistent with generally recognized principles of international law.

2. Each Party undertakes not to interfere with the national technical means of verification of the other Party operating in accordance with paragraph 1 of this Article.

3. Each Party undertakes not to use deliberate concealment measures which impede verification by national technical means of compliance with the provisions of this Interim Agreement. This obligation shall not require changes in current construction, assembly, conversion, or overhaul practices.

Article VI

To promote the objectives and implementation of the provisions of this Interim Agreement, the Parties shall use the Standing Consultative Commission established under Article XIII of the Treaty on the Limitation of

Anti-Ballistic Missile Systems in accordance with the provisions of that Article.

Article VII

The Parties undertake to continue active negotiations for limitations on strategic offensive arms. The obligations provided for in this Interim Agreement shall not prejudice the scope or terms of the limitations on strategic offensive arms which may be worked out in the course of further negotiations.

Article VIII

1. This Interim Agreement shall enter into force upon exchange of written notices of acceptance by each Party, which exchange shall take place simultaneously with the exchange of instruments of ratification of the Treaty on the Limitation of Anti-Ballistic Missile Systems.

2. This Interim Agreement shall remain in force for a period of five years unless replaced earlier by an agreement on more complete measures limiting strategic

offensive arms. It is the objective of the Parties to conduct active follow-on negotiations with the aim of concluding such an agreement as soon as possible.

3. Each Party shall, in exercising its national sovereignty, have the right to withdraw from this Interim Agreement if it decides that extraordinary events related to the subject matter of this Interim Agreement have jeopardized its supreme interests. It shall give notice of its decision to the other Party six months prior to withdrawal from this Interim Agreement. Such notice shall include a statement of the extraordinary events the notifying Party regards as having jeopardized its supreme interests.

114. Salvador Allende: Speech to the United Nations, 4 December 1972

Introduction

Despite repeated attempts by the U.S. Central Intelligence Agency (CIA) to sabotage his chances, in 1970 Salvador Allende Gossens, leader of the Popular Unity coalition, was elected president of Chile. The socialist Allende was an outspoken Marxist and a strong critic of capitalism. Several major American corporations, including ITT and the Anaconda and Kennecott copper companies, feared that once Allende was in power, he would expropriate their holdings. U.S. President Richard Nixon and his secretary of state, Henry Kissinger, immediately decided to do all they could to destabilize Allende's government, with the aim of bringing about his overthrow. Even before Allende was sworn in, Nixon and Kissinger unsuccessfully attempted to persuade the Chilean military to block his taking office. Unbeknownst to Allende, the Soviet Komitet Gosudarstvennoi Bezopasnosti (KGB) had provided several hundreds of thousands of dollars in funding for Allende's campaign as the United States had done for his opponents, an indication of the manner in which both superpowers competed for influence in developing nations. Allende began to implement sweeping social reforms in health care, education, and agriculture, and he also nationalized major industries, including copper and banking. His government announced its intention of seizing all landholdings larger than eighty hectares and of providing employment on public works projects for all who needed it. Facing economic difficulties, Chile proclaimed a moratorium on payments on foreign debts and therefore went into default to international creditors and other governments. In 1971 Allende recognized President Fidel Castro's communist regime in Cuba, making Chile the only nation in the Western Hemisphere except Mexico to have diplomatic relations with that government, and welcomed Castro on a month-long visit to Chile, during which Castro held mass rallies and ostentatiously proffered copious advice to Allende. Allende also established close relations with Soviet bloc countries in Eastern Europe. Negative growth rates, government budgetary deficits, declining foreign reserves, falling commodity prices (especially in copper), and high inflation caused social unrest and a wave of

confrontational strikes and protests, many by small businessmen. The Nixon administration blocked all loans or aid to Allende's government by multilateral or U.S. agencies. Facing growing crises at home, in December 1972 Allende attended the United Nations (UN) assembly in New York, where he defended his actions and complained fiercely that American policies toward Chile and other Latin American and developing nations were imperialist and exploitative in nature. His accusations had no impact in terms of changing the Nixon administration's attitude. In September 1973 the Chilean military, strongly encouraged by CIA operations and other Nixon administration officials, mounted a coup led by General Augusto Pinochet, commander of the army, against Allende. Besieged in the presidential palace, Allende apparently committed suicide, using a gun that had been a gift from Castro, but for many years his admirers believed he had not committed suicide. For many on the Left, the overthrow and death of Allende made him an iconic figure who combined socialist beliefs with a commitment to democracy. The human rights abuses toward political opponents—at least 3,000 Chileans were killed and another 27,000 subjected to arbitrary imprisonment or torture—that characterized Pinochet's authoritarian military government, which remained in power until 1990, also helped to burnish his posthumous reputation.

Primary Source

I come from Chile, a small country but one where today any citizen is free to express himself as he so desires. A country of unlimited cultural, religious and ideological tolerance and where there is no room for racial discrimination. A country with its working class united in a single trade union organization, where universal and secret suffrage is the vehicle of determination of a multiparty regime, with a Parliament that has been operating constantly since it was created 160 years ago; where the courts of justice are independent of the executive and where the constitution has only been changed once since 1833, and has almost always been in effect. A country where public life is organized in civilian institutions and where the armed forces are of a proven professional background and deep democratic spirit. A country with a population of almost 10,000,000 people that in one generation has had two first-place Nobel Prize winners in literature, Gabriela Mistral and Pablo Neruda, both children of simple workers. In my country, history, land and man are united in a great national feeling.

But Chile is also a country whose retarded economy has been subjected and even alienated to foreign capitalist firms, resulting in a foreign debt of more than US\$4,000 million whose yearly services represent more than 30 per cent of the value of the country's exports; whose economy is extremely sensitive to the external situation, suffering from chronic stagnation and inflation; and where millions of people have been forced to live amidst conditions of exploitation and misery, of open or concealed unemployment.

Today I have come because my country is confronting problems of universal significance that are the object of the permanent attention of this assembly of nations: the struggle for social liberation, the effort for well-being and intellectual progress and the defence of national identity and dignity.

The outlook which faced my country, just like many other countries of the Third World, was a model of reflex modernization, which, as technical studies and the most tragic realities demonstrate, excludes from the possibilities of progress, well being and social liberation more and more millions of people, destining them to a subhuman life. It is a model that will produce a greater shortage of housing, that will condemn an ever-greater number of citizens to unemployment, illiteracy, ignorance and physiological misery.

In short, the same perspective that has kept us in a relationship of colonization or dependency and exploitation in times of cold war, has also operated in times of military conflict or in times of peace. There is an attempt to condemn us, the underdeveloped countries, to being second-class realities, always subordinated.

This is the model that the Chilean working class, coming on the scene as protagonist of its own destiny, has decided to reject, searching in turn for a speedy, autonomous development of its own, and transforming the traditional structures in a revolutionary manner.

[. . .]

The Revolutionary Path that Chile is Following

The change in the power structure that we are carrying out, the progressive leadership role of the workers in it, the national recovery of basic riches, the liberation of our country from subordination to foreign powers, are all crowning points of a long historical process; of efforts to impose political and social freedoms, of heroic struggle of several generations of workers and farmers to organize themselves as a social force to obtain political power and drive the capitalists from economic power.

Its tradition, personality and revolutionary awareness make it possible for the Chilean people to give a boost to the process towards socialism, strengthening civic liberties, collective and individual, and respecting cultural and ideological pluralism. Ours is a permanent battle to install social freedoms and economic democracy through full exercise of political freedoms.

The democratic will of our people has taken upon itself the challenge of giving a boost to the revolutionary process in the framework of a highly institutionalized state of law, that has been flexible to changes and is today faced by the need to adjust to the new socio-economic reality.

We have nationalized basic riches, we have nationalized copper, we have done so by a unanimous decision of Parliament, where the government parties are in a minority. We want everyone to clearly understand that we have not confiscated the large foreign copper mining firms. In keeping with constitutional provisions, we have righted a historic injustice by deducting from the compensation all profits above 12 per cent a year that they had made since 1955.

Some of the nationalized firms had made such huge profits in the last 15 years that when 12 per cent a year was applied as the limit of reasonable profits, they were affected by important deductions. Such is the case, for example, of a branch of the Anaconda Company, which made profits in Chile of 21.5 per cent a year over its book value between 1955 and 1970, while Anaconda's profits in other countries were only 3.6 per cent a year. That is the situation of a branch of the Kennecott Copper Corporation, which in the same period

of time, made an average of 52.8 per cent profits a year in Chile—and in some years it made really incredible profits like 106 per cent in 1967, 113 per cent in 1968 and more than 205 per cent in 1969. In the same period of time, Kennecott was making less than 10 per cent a year in profits in other countries. However, the application of the constitutional norm has kept other copper firms from suffering deductions because their profits did not exceed the reasonable limit of 12 per cent a year.

[. . .]

The nationalization of copper has been carried out while strictly observing internal judicial order and with respect for the norms of international law, which there is no reason to identify with the interests of the big capitalist firms.

In short, this is the process my country is going through, and I feel it is useful to present it to this assembly, with the authority given to us by the fact that we are strictly fulfilling the recommendations of the United Nations and relying on internal efforts as the base for economic and social development. Here, in this forum, the change of institutions and backward structures has been advised, along with the redistribution of income, priority for education and health and care for the poorest sectors. All this is a[n] essential part of our policy and it is in the process of being carried out.

The Financial Blockade

That is why it is even more painful to have to come here to this rostrum to proclaim the fact that my country is the victim of grave aggression.

We had foreseen problems and foreign resistance to our carrying out our process of changes, especially in view of our nationalization of natural resources. Imperialism and its cruelty have a long and ominous history in Latin America and the dramatic and heroic experience of Cuba is still fresh. The same is the case with Peru, which has had to suffer the consequences of its decision to exercise sovereign control over its oil.

In the decade of the 70s, after so many agreements and resolutions of the international community, in which the sovereign right of every state to control its natural

resources for the benefit of its people is recognized, after the adoption of international agreements on economic, social and cultural rights and the strategy of the second decade of development, which formalized those agreements, we are the victims of a new expression of imperialism—more subtle, more sneaky, and terribly effective—to block the exercise of our rights as a sovereign state.

From the very moment of our election victory on 4 September 1970, we were affected by the development of large-scale foreign pressures, aimed at blocking the inauguration of a government freely elected by the people and then overthrowing it. There have been efforts to isolate us from the world, strangle the economy and paralyze the sale of copper, our main export product, and keep us from access to sources of international financing.

We realize that when we denounce the financial-economic blockade with which we were attacked, it is hard for international public opinion and even for many of our compatriots to easily understand the situation because it is not open aggression, publicly proclaimed before the whole world. Quite the contrary, it is a sneaky and double-crossing attack, which is just as damaging to Chile.

We find ourselves opposed by forces that operate in the shadows, without a flag, with powerful weapons that are placed in a wide range of influential positions.

[. . .]

Chile, like most of the nations of the Third World, is very vulnerable to the situation of the external sector of its economy. In the last 12 months, the decline in the international price of copper has represented a loss of about US\$200 million in income for a nation whose exports total a bit more than US\$1,000 million, while the products, both industrial and agricultural, that we must import are much more expensive now, in some cases as much as 60 per cent.

As is almost always the case, Chile buys at high prices and sells at low prices.

It has been at these moments, in themselves difficult for our balance of payments, that we have had to face, among others, the following simultaneous actions, apparently designed to take revenge on the Chilean people for their decision to nationalize copper.

Until the moment my Government took office, every year Chile received almost US\$80 million in loans from international financial organizations such as the World Bank and the Inter-American Development Bank. This financing has been violently interrupted.

In the past decade, Chile received loans from the Agency for International Development of the Government of the United States (AID) totaling US\$50 million a year.

We are not asking for those loans to be reinstated. The United States has the sovereign right to grant or not to grant foreign aid to any country. All we want to point out is that the drastic elimination of those credits has resulted in important restrictions in our balance of payments.

Upon taking office as President, my country had short-term credit lines from private US banks, destined to finance our foreign trade, that amounted to US\$220 million. In a short period of time those credits were suspended and about US\$190 million have been deducted, a sum we had to pay, since the respective operations were not renewed.

[. . .]

As a result of the operations directed against the sale of copper in the nations of Western Europe, our short-term operations with private banks on that continent, mainly based on payment of that metal, have been greatly blocked. This has resulted in more than US\$20 million in credit lines not being renewed, the suspension of financial negotiations for more than US\$200 million that were almost complete, and the creation of a climate that blocks the normal handling of our purchases in those countries and acutely distorts all our activities in the field of external financing.

This financial stranglehold of a brutal nature, given the characteristics of the Chilean economy, has resulted in a severe limitation of our possibilities to purchase equipment, spare parts, supplies, food and medicine. Every Chilean is suffering the consequences of those measures, which bring suffering and grief into the daily

life of all and, naturally, make themselves felt in internal political life.

115. Agreement on Ending the War and Restoring Peace in Vietnam (Paris Peace Accords), 27 January 1973

Introduction

The Paris Peace Accords, which permitted the withdrawal by the end of March 1973 of all remaining United States forces and supposedly ended hostilities in Vietnam, were the product of almost five years of tortuous negotiations between the United States and representatives of the governments of the Democratic Republic of Vietnam (DRV, North Vietnam) and the Republic of Vietnam (ROV, South Vietnam) and the National Liberation Front (NLF, Viet Cong). Under their terms, NLF and North Vietnamese military personnel, including regular troops and guerrillas, were left in place rather than withdrawn. North Vietnam opened an embassy in Saigon, the southern capital, but no such arrangements were made for South Vietnam to do likewise in Hanoi. President Nguyen Van Thieu, head of the South Vietnamese government, was extremely reluctant to sign the accords and accepted these terms only because U.S. Secretary of State Henry Kissinger, who headed the American negotiating team, warned him that the United States would sign the agreement if Thieu did not sign. After eight years of major warfare in Vietnam, U.S. officials were under heavy domestic political pressure to withdraw, no matter what the consequences. The Paris Peace Accords provided for the speedy return of all U.S. prisoners of war, another significant American priority. Even at the time, many observers believed that the accords marked only a temporary truce in the war and that North Vietnamese leaders intended to resume it after a "decent interval" that would allow the United States to claim that it had not deserted an ally. Although American assistance after the accords had been signed was restricted to merely replacing existing stocks, President Richard Nixon promised Thieu massive economic and military aid if North Vietnam reopened hostilities or broke the accords. In practice, the war in Vietnam had become so unpopular that the U.S. Congress was unlikely to fulfill any such pledges. The two chief negotiators, Kissinger and North Vietnam's Le Duc Tho, were jointly awarded the 1973 Nobel Peace Prize, an honor that Tho refused to accept on the grounds that these accords did not represent a genuine peace. After the accords had been concluded, communist China and the Soviet Union continued to send large quantities of military supplies to North Vietnam. In December 1974 North Vietnam launched a new military offensive. On 30 April 1975 the South Vietnamese government surrendered, and Vietnam was finally united. Until 1995, however, successive U.S. presidential administrations refused to open either diplomatic or trade relations with the government of the Socialist Republic of Vietnam (SRV).

Primary Source

The Parties participating in the Paris Conference on Viet-Nam,

With a view to ending the war and restoring peace in Viet-Nam on the basis of respect for the Vietnamese

people's fundamental national rights and the South Vietnamese people's right to self-determination, and to contributing to the consolidation of peace in Asia and the world,

Have agreed on the following provisions and undertake to respect and to implement them:

Chapter I

The Vietnamese People's Fundamental National Rights

Article 1

The United States and all other countries respect the independence, sovereignty, unity, and territorial integrity of Viet-Nam as recognized by the 1954 Geneva Agreements on Viet-Nam.

Chapter II

Cessation of Hostilities—Withdrawal of Troops

Article 2

A cease-fire shall be observed throughout South Viet-Nam as of 2400 hours G.M.T., on January 27, 1973.

At the same hour, the United States will stop all its military activities against the territory of the Democratic Republic of Viet-Nam by ground, air and naval forces, wherever they may be based, and end the mining of the territorial waters, ports, harbors, and waterways of the Democratic Republic of Viet-Nam. The United States will remove, permanently deactivate or destroy all the mines in the territorial waters, ports, harbors, and waterways of North Viet-Nam as soon as this Agreement goes into effect.

The complete cessation of hostilities mentioned in this Article shall be durable and without limit of time.

Article 3

The parties undertake to maintain the cease-fire and to ensure a lasting and stable peace.

As soon as the cease-fire goes into effect:

(a) The United States forces and those of the other foreign countries allied with the United States and the Republic of Viet-Nam shall remain in-place pending the implementation of the plan of troop withdrawal. The Four-Party Joint Military Commission described in Article 16 shall determine the modalities.

(b) The armed forces of the two South Vietnamese parties shall remain in-place. The Two-Party Joint Military Commission described in Article 17 shall determine the areas controlled by each party and the modalities of stationing.

(c) The regular forces of all services and arms and the irregular forces of the parties in South Viet-Nam shall stop all offensive activities against each other and shall strictly abide by the following stipulations:

—All acts of force on the ground, in the air, and on the sea shall be prohibited;

—All hostile acts, terrorism and reprisals by both sides will be banned.

Article 4

The United States will not continue its military involvement or intervene in the internal affairs of South Viet-Nam.

Article 5

Within sixty days of the signing of this Agreement, there will be a total withdrawal from South Viet-Nam of troops, military advisers, and military personnel, including technical military personnel and military personnel associated with the pacification program, armaments, munitions, and war material of the United States and those of the other foreign countries mentioned in Article 3 (a). Advisers from the above-mentioned countries to all paramilitary organizations and the police force will also be withdrawn within the same period of time.

Article 6

The dismantlement of all military bases in South Viet-Nam of the United States and of the other foreign countries mentioned in Article 3 (a) shall be completed within sixty days of the signing of this agreement.

Article 7

From the enforcement of the cease-fire to the formation of the government provided for in Article 9 (b) and 14 of this Agreement, the two South Vietnamese parties shall not accept the introduction of troops, military advisers, and military personnel including technical military personnel, armaments, munitions, and war material into South Viet-Nam.

The two South Vietnamese parties shall be permitted to make periodic replacement of armaments, munitions and war material which have been destroyed, damaged, worn out or used up after the cease-fire, on

the basis of piece-for-piece, of the same characteristics and properties, under the supervision of the Joint Military Commission of the two South Vietnamese parties and of the International Commission of Control and Supervision.

Chapter III

The Return of Captured Military Personnel and Foreign Civilians, and Captured and Detained Vietnamese Civilian Personnel

Article 8

(a) The return of captured military personnel and foreign civilians of the parties shall be carried out simultaneously with and completed not later than the same day as the troop withdrawal mentioned in Article 5. The parties shall exchange complete lists of the above-mentioned captured military personnel and foreign civilians on the day of the signing of this Agreement.

(b) The parties shall help each other to get information about those military personnel and foreign civilians of the parties missing in action, to determine the location and take care of the graves of the dead so as to facilitate the exhumation and repatriation of the remains, and to take any such other measures as may be required to get information about those still considered missing in action.

(c) The question of the return of Vietnamese civilian personnel captured and detained in South Viet-Nam will be resolved by the two South Vietnamese parties on the basis of the principles of Article 21 (b) of the Agreement on the Cessation of Hostilities in Viet-Nam of July 20, 1954. The two South Vietnamese parties will do so in a spirit of national reconciliation and concord, with a view to ending hatred and enmity, in order to ease suffering and to reunite families. The two South Vietnamese parties will do their utmost to resolve this question within ninety days after the cease-fire comes into effect.

Chapter IV

The Exercise of the South Vietnamese People's Right to Self-Determination

Article 9

The Government of the United States of America and the Government of the Democratic Republic of Viet-

Nam undertake to respect the following principles for the exercise of the South Vietnamese people's right to self-determination:

(a) The South Vietnamese people's right to self-determination is sacred, inalienable, and shall be respected by all countries.

(b) The South Vietnamese people shall decide themselves the political future of South Viet-Nam through genuinely free and democratic general elections under international supervision.

(c) Foreign countries shall not impose any political tendency or personality on the South Vietnamese people.

Article 10

The two South Vietnamese parties undertake to respect the cease-fire and maintain peace in South Viet-Nam, settle all matters of contention through negotiations, and avoid all armed conflict.

Article 11

Immediately after the cease-fire, the two South Vietnamese parties will:

- achieve national reconciliation and concord, end hatred and enmity, prohibit all acts of reprisal and discrimination against individuals or organizations that have collaborated with one side or the other;
- ensure the democratic liberties of the people: personal freedom, freedom of speech, freedom of the press, freedom of meeting, freedom of organization, freedom of political activities, freedom of belief, freedom of movement, freedom of residence, freedom of work, right to property ownership, and right to free enterprise.

Article 12

(a) Immediately after the cease-fire, the two South Vietnamese parties shall hold consultations in a spirit of national reconciliation and concord, mutual respect, and mutual non-elimination to set up a National Council of National Reconciliation and Concord of three equal segments. The Council shall operate on the principle of unanimity. After the National Council of National Reconciliation and Concord has assumed

its functions, the two South Vietnamese parties will consult about the formation of councils at lower levels. The two South Vietnamese parties shall sign an agreement on the internal matters of South Viet-Nam as soon as possible and do their utmost to accomplish this within ninety days after the cease-fire comes into effect, in keeping with the South Vietnamese people's aspirations for peace, independence and democracy.

(b) The National Council of National Reconciliation and Concord shall have the task of promoting the two South Vietnamese parties' implementation of this Agreement, achievement of national reconciliation and concord and ensurance of democratic liberties. The National Council of National Reconciliation and Concord will organize the free and democratic general elections provided for in Article 9 (b) and decide the procedures and modalities of these general elections. The institutions for which the general elections are to be held will be agreed upon through consultations between the two South Vietnamese parties. The National Council of National Reconciliation and Concord will also decide the procedures and modalities of such local elections as the two South Vietnamese parties agree upon.

Article 13

The question of Vietnamese armed forces in South Viet-Nam shall be settled by the two South Vietnamese parties in a spirit of national reconciliation and concord, equality and mutual respect, without foreign interference, in accordance with the postwar situation. Among the questions to be discussed by the two South Vietnamese parties are steps to reduce their military effectives and to demobilize the troops being reduced. The two South Vietnamese parties will accomplish this as soon as possible.

Article 14

South Viet-Nam will pursue a foreign policy of peace and independence. It will be prepared to establish relations with all countries irrespective of their political and social systems on the basis of mutual respect for independence and sovereignty and accept economic and technical aid from any country with no political conditions attached. The acceptance of mili-

tary aid by South Viet-Nam in the future shall come under the authority of the government set up after the general elections in South Viet-Nam provided for in Article 9 (b).

Chapter V

The Reunification of Viet-Nam and the Relationship between North and South Viet-Nam

Article 15

The reunification of Viet-Nam shall be carried out step by step through peaceful means on the basis of discussions and agreements between North and South Viet-Nam, without coercion or annexation by either party, and without foreign interference. The time for reunification will be agreed upon by North and South Viet-Nam.

Pending reunification:

(a) The military demarcation line between the two zones at the 17th parallel is only provisional and not a political or territorial boundary, as provided for in paragraph 6 of the Final Declaration of the 1954 Geneva Conference.

(b) North and South Viet-Nam shall respect the Demilitarized Zone on either side of the Provisional Military Demarcation Line.

(c) North and South Viet-Nam shall promptly start negotiations with a view to reestablishing normal relations in various fields. Among the questions to be negotiated are the modalities of civilian movement across the Provisional Military Demarcation Line.

(d) North and South Viet-Nam shall not join any military alliance or military bloc and shall not allow foreign powers to maintain military bases, troops, military advisers, and military personnel on their respective territories, as stipulated in the 1954 Geneva Agreements on Viet-Nam.

116. United States War Powers Act, 7 November 1973

Introduction

In the aftermath of the Vietnam War, many American senators and congressmen resented the way in which President Lyndon B. Johnson, after the passage of the August 1964 Tonkin Gulf Resolution authorizing him to take such measures as he considered appropriate to deal with the situation in Vietnam, had sought no further congressional authorization before committing more than 500,000 military personnel to that country. Congress also resented the way in which Johnson's successor, Richard Nixon, had felt free to expand the war beyond Vietnam, launching heavy bombing raids on both Laos and Cambodia and even sending American forces to invade the latter country for two months in May and June 1970. In November 1973 Congress passed a joint resolution under whose terms the president was required to consult with Congress before beginning hostilities with another country and at regular intervals during the course of such hostilities. Unless Congress voted either to declare war or to approve the use of U.S. forces in a hostile situation, the president was required to withdraw all military personnel within sixty days, with at most an additional thirty days should circumstances make such an extension unavoidable. President Nixon vetoed the resolution, but Congress found the two-thirds majority necessary to pass it. Successive presidents stated that they considered it unconstitutional but nonetheless observed its provisions, and by the early twenty-first century, presidents had submitted 118 reports to Congress in connection with the War Powers Act. The occasions on which it was invoked included U.S. participation in United Nations (UN) peacekeeping missions as well as before the interventions in Grenada and Panama and prior to the Persian Gulf War of 1991.

Primary Source

Concerning the War Powers of Congress and the President.

Resolved by the Senate and the House of Representatives of the United States of America in Congress assembled,

Short Title

Section 1. This joint resolution may be cited as the "War Powers Resolution".

Purpose and Policy

Sec. 2. (a) It is the purpose of this joint resolution to fulfill the intent of the framers of the Constitution of the United States and insure that the collective judgment of both the Congress and the President will apply to the introduction of United States Armed Forces into hostilities, or into situations where imminent involvement in hostilities is clearly indicated by the circumstances, and to the continued use of such forces in hostilities or in such situations.

(b) Under article I, section 8, of the Constitution, it is specifically provided that the Congress shall have the power to make all laws necessary and proper for carrying into execution, not only its own powers but also all other powers vested by the Constitution in the Gov-

ernment of the United States, or in any department or officer thereof.

(c) The constitutional powers of the President as Commander-in-Chief to introduce United States Armed Forces into hostilities, or into situations where imminent involvement in hostilities is clearly indicated by the circumstances, are exercised only pursuant to (1) a declaration of war, (2) specific statutory authorization, or (3) a national emergency created by attack upon the United States, its territories or possessions, or its armed forces.

Consultation

Sec. 3. The President in every possible instance shall consult with Congress before introducing United States Armed Forces into hostilities or into situations where imminent involvement in hostilities is clearly indicated by the circumstances, and after every such introduction shall consult regularly with the Congress until United States Armed Forces are no longer engaged in hostilities or have been removed from such situations.

Reporting

Sec. 4. (a) In the absence of a declaration of war, in any case in which United States Armed Forces are introduced—

(1) into hostilities or into situations where imminent involvement in hostilities is clearly indicated by the circumstances;

(2) into the territory, airspace or waters of a foreign nation, while equipped for combat, except for deployments which relate solely to supply, replacement, repair, or training of such forces; or

(3) in numbers which substantially enlarge United States Armed Forces equipped for combat already located in a foreign nation; the president shall submit within 48 hours to the Speaker of the House of Representatives and to the President pro tempore of the Senate a report, in writing, setting forth—

(A) the circumstances necessitating the introduction of United States Armed Forces;

(B) the constitutional and legislative authority under which such introduction took place; and

(C) the estimated scope and duration of the hostilities or involvement.

(b) The President shall provide such other information as the Congress may request in the fulfillment of its constitutional responsibilities with respect to committing the Nation to war and to the use of United States Armed Forces abroad.

(c) Whenever United States Armed Forces are introduced into hostilities or into any situation described in subsection (a) of this section, the President shall, so long as such armed forces continue to be engaged in such hostilities or situation, report to the Congress periodically on the status of such hostilities or situation as well as on the scope and duration of such hostilities or situation, but in no event shall he report to the Congress less often than once every six months.

Congressional Action

Sec. 5. (a) Each report submitted pursuant to section 4(a)(1) shall be transmitted to the Speaker of the House of Representatives and to the President pro

tempore of the Senate on the same calendar day. Each report so transmitted shall be referred to the Committee on Foreign Affairs of the House of Representatives and to the Committee on Foreign Relations of the Senate for appropriate action. If, when the report is transmitted, the Congress has adjourned sine die or has adjourned for any period in excess of three calendar days, the Speaker of the House of Representatives and the President pro tempore of the Senate, if they deem it advisable (or if petitioned by at least 30 percent of the membership of their respective Houses) shall jointly request the President to convene Congress in order that it may consider the report and take appropriate action pursuant to this section.

(b) Within sixty calendar days after a report is submitted or is required to be submitted pursuant to section 4(a)(1), whichever is earlier, the President shall terminate any use of United States Armed Forces with respect to which such report was submitted (or required to be submitted), unless the Congress (1) has declared war or has enacted a specific authorization for such use of United States Armed Forces, (2) has extended by law such sixty-day period, or (3) is physically unable to meet as a result of an armed attack upon the United States. Such sixty-day period shall be extended for not more than an additional thirty days if the President determines and certifies to the Congress in writing that unavoidable military necessity respecting the safety of United States Armed Forces requires the continued use of such armed forces in the course of bringing about a prompt removal of such forces.

(c) Notwithstanding subsection (b), at any time that United States Armed Forces are engaged in hostilities outside the territory of the United States, its possessions and territories without a declaration of war or specific statutory authorization, such forces shall be removed by the President if the Congress so directs by concurrent resolution.

117. Declaration of Principles of the Government of Chile, 11 March 1974, As Excerpted in the Report on the Situation of Human Rights in Chile, 9 September 1985

Introduction

The military government that took power in Chile in September 1974 by means of a violent coup, in the course of which the leftist President Salvador Allende Gossens committed suicide, justified its action on the grounds that the country had faced a serious internal communist threat from his government. The new regime received appreciable support and aid from the United States. Before restoring any kind of democratic government, the new regime, headed by army commander General Augusto Pinochet, was determined to eradicate all radical dissent. Until that was accomplished, military rule would remain in force. As was often the case when anticommunist military governments came to power during the Cold War, the junta's proclaimed objective of a return to normally functioning political institutions was to be long deferred. In March 1974 the Chilean government made a public declaration of the principles on which it intended to run Chile. The "right to dissent" was supposedly recognized, but Marxist political groups were banned. The junta set no time limit to its retention of power, proclaiming its intention to "initiate a new stage in the national destiny" and eventually to hand over power to "new generations of Chileans trained in a school of healthy civic habits." Trade unions and other associations, "whether labor, business, professional, or student bodies," were to be banned from all political activity. Five years later, in December 1979, President Pinochet made a speech in which he stated that "democracy" and "universal suffrage" were not ends in themselves but merely the means of attaining efficient and harmonious government. Proclaiming his belief in strong presidential leadership, he warned of the continuing danger from "Soviet imperialism" and "Marxism" and said that the country was "not yet ready" for elections. The Pinochet government quickly reversed Allende's past recognition of the Marxist regime in Cuba and collaborated intimately with several other Latin American military dictatorships in Bolivia, Brazil, Paraguay, Uruguay, and Argentina in Operation CONDOR, a coordinated program to eliminate communists and radicals in all six states. A new Chilean constitution promulgated in 1980 provided for a plebiscite on the president in 1988, essentially a vote on whether or not the electorate approved of the incumbent's performance. If he lost, multiparty presidential elections would follow in 1989, to be followed by a return to civilian rule. For fifteen years, Pinochet followed policies of free market economic reform. Human rights abuses were frequent: 27,000 of the regime's political opponents were imprisoned and often tortured, and another 3,000 were killed. Pinochet lost the 1988 plebiscite, and in 1990 he handed over the presidency to Patricio Aylwin, a democratically elected successor, but remained military commander in chief until 1998. At that time he moved to a lifetime seat in the Chilean senate, still retaining substantial political influence. After a dramatic incident when Pinochet was arrested on human rights charges while in London in October 1998 but was eventually declared mentally unfit to stand trial, he returned to Chile in 2002, resigning his senate seat soon afterward. In subsequent years the Chilean courts stripped Pinochet of his senatorial immunity, arraigning him on charges of major human rights abuses and serious financial corruption. His death in December 2006 in Santiago, the Chilean capital, where he was under house arrest, prompted violent clashes in several cities between demonstrators celebrating Pinochet's demise and supporters of the former dictator.

Primary Source

[. . .]

14. On March 11, 1974, the Government Junta announced the ideological basis of its governance, which was contained in the "Declaration of Principles of the Government of Chile". This document is of particular importance as regards both the diagnosis of the situa-

tion that caused the intervention of the Armed and Security Forces and the objectives, which the Government intends to achieve. This document also refers to human rights, in general, and the exercise of political rights, in particular.

15. With respect to the "legal order respectful of human rights: the framework for the present Government"

the Declaration of Principles of the Government states that:

Chile has always lived within a legal framework. The majesty of the law invariably has been present in our social development. But, in addition, that legal framework has always been a reflection of the deep respect Chileans feel for the spiritual dignity of the human person and, consequently, for his fundamental rights. It is in that respect for human rights rather than in its tradition of popular generation and constitutional succession of governments in which the essence of Chilean democracy is to be found.

Another important characteristic of our juridical tradition has been respect for freedom of conscience and the right to dissent. These two aspects must be preserved by the Rule of Law which the movement of 11 September intends to recreate, but whose fundamental effectiveness has been maintained within the emergency measures that it itself contemplates. Human rights must be strengthened, so their exercise can be effectively enjoyed by all, and must be extended to encompass their most modern social expressions. The right to dissent must be maintained, but the experience of recent years indicates the need to establish the admissible limits of such dissent. Never again can we allow an ingenuous democracy, in the name of a misunderstood pluralism, to permit organized groups that sponsor guerrilla violence to achieve power, or, feigning acceptance of the rules of democracy, to advocate a doctrine and a morality, the objective of which is to build a totalitarian state. Consequently, Marxist parties and movements will never again be admitted to civic life.

Hence it follows that Chile is not neutral to Marxism. It is precluded from being so by its conception of man and of society, which is fundamentally opposed to that of Marxism. Consequently, the present Government does not fear or hesitate to declare itself anti-Marxist.

16. With respect to “a new and modern institutional system; task of the present Government”, the Declaration of Principles states that:

... the Government of the Armed and Security Forces has assumed the historical mission of giving Chile a

new institutional system that will embody the radical changes modern times have been producing. Only in this way will it be possible to endow our democracy with firm stability and to purge our democratic system of the faults that facilitated its destruction, but it will go beyond a mere corrective effort and enter fully into the audacious field of creation. Central to this new institutional system will be “the decentralization of power”, both in the operational and in the territorial sphere, which will enable the country to advance towards a “modernized society of authentic social participation”.

a. Functional decentralization: political and social power.

The new institutional system that is being created today will differentiate political power from social power and will clearly separate those who exercise it from the forms of exercising it.

“Political Power” or the power to decide matters of general interest to the nation properly constitutes the function of governing the country.

“Social Power”, on the other hand, must be understood as the power of the intermediate institutions of society to develop with legitimate independence towards achieving their respective ends thereby becoming vehicles of limitation as well as of enrichment of the action of political power.

Because of the lengthy erosion caused in our country by many years of demagoguery and the systematic destruction of all aspects of national life that has been accentuated by Marxism since 1970, the Armed and Security Forces of Chile, in fulfilling their classical doctrine and their duties towards continued existence of the nation, had to assume full political power on September 11. They did so by overthrowing an illegitimate, immoral and failed government and thus fulfilled a widespread national aspiration that is today expressed in the support of a majority of the population for the new government.

The Armed and Security forces are not establishing any time limit for their Government operation, since the task of rebuilding the country morally, institutionally, and materially [is] essential to change the mental-

ity of Chileans. But, more than that, the present government has been categorical in declaring that it does not intend to limit itself to being a government of mere administration, which means a pause between two similar party governments; in other words, it is not a “truce” for reorganization only to return power to the same politicians who were so largely responsible, by acts of commission and omission, for the virtual destruction of the country. The government of the Armed and Security Forces wishes to initiate a new stage in the national destiny and to open the way to new generations of Chileans trained in a school of healthy civic habits.

Nevertheless, although it does not establish any time limit, the Government Junta will in due course hand over political power to those whom the people elect through universal, free, secret and informed suffrage. The Armed and Security Forces will then assume the specifically institutional role of participation that the new Constitution assigns them, which will be that which must devolve upon those responsible for ensuring National Security, in the broad sense this concept has in modern times.

What has been said does not mean that the Armed and Security Forces are going to wash their hands of their governmental succession and to observe its resolution as mere spectators. On the very contrary, and as stated by the President of the Government Junta itself, “the Junta considers part of its mission to be that of inspiring a new and great civic-military movement”, which is already arising from the reality of events and will project the work of the present government in a fruitful and lasting manner towards the future.

17. With respect to the “social power”, the Declaration of Principles affirms that it “is called upon to become the most important organizational source of civic expression”, for which purpose it is necessary:

To ensure the independence and depolarization of all intermediate bodies between man and the State. Of particular importance are the organized unions, whether labor, business, professional or student bodies. In addition, the principle of subordination already set forth

requires these bodies to develop autonomously to achieve their specific purposes, without the State taking control of them, nor with their objectives distorted by political party manipulation by them or their leaders. Therefore, any political party intervention, direct or indirect, in the creation and work of the boards of directors of these unions, regardless of its nature, will be expressly prohibited. It is essential to understand that the above-mentioned depolarization is the only possible way of ensuring that these unions and other intermediate organizations are authentic vehicles of social participation, thereby fulfilling a desire that may be distinguished as a true sign of our times. There can be no talk of social participation if the bodies called upon to channel it, instead of being vehicles of the genuine thought of the organized people, become docile spokesmen of the instructions of some political party, which instructions are also frequently based on the narrow electoral interests of that party. The same requirements apply to the Municipalities.

18. The passages transcribed indicate the central aspects guiding the action of the Government of Chile with respect to the exercise of political rights, and the institutional forms that exercise is to assume. First, mention should be made of the explicit recognition that “formal democracy” practiced in the past has led to its own destruction by being infiltrated by Marxism-Leninism—a doctrine which, according to Decree Law No. 77 of 1973, the new Government has the mission of eradicating—which has been permitted by other political parties. Second, this document sets forth the need to build a protected democracy, in the subsequent operation of which an important role will be assigned to the Armed and Security Forces, in accordance with the wide meaning the concept of national security has in modern times. In the new institutional system, the intermediate groups will become the “most important organizational channel of civic expression” and therefore must be de-politicized, which will be complemented by a great civic-military movement inspired by the Government. Third, the absence of time limits for the task proposed, which includes the ambitious purpose of changing the mentality of Chileans, is evident. Once this profound reorganization, which includes the economic aspects, is achieved, the Government Junta will hand over political

power to the person who is chosen by elections based on universal, free, secret, and informed suffrage.

118. Richard Nixon: Presidential Resignation, 8 August 1974

Introduction

Richard Nixon was one of the most able of Cold War presidents. He conceived and implemented a major reorientation of U.S. international policies, away from ideology and toward a more realistic balance-of-power system, taking advantage of the Sino-Soviet split to win concessions from both major communist powers by pursuing policies of détente with the Soviet Union and reopening relations with China. A decline in the hegemonic position of the United States forced Nixon to reconceptualize American Cold War strategy so as to make the best use of his country's limited resources. At home, he was also the major architect of a strategy that reconfigured the American domestic political scene to ensure that with only a few breaks, from the late 1960s onward the Republicans became the majority party, their dominance still much apparent in the early twenty-first century. Despite these accomplishments, Nixon's own character flaws brought him low, as he acquiesced in efforts by White House aides and other administration officials to conceal their own and the White House's involvement in a botched burglary of the rival Democratic National Committee's Washington, D.C., headquarters in the Watergate Hotel. Fearful that he would not win reelection in 1972, Nixon had authorized or at least condoned the use of dirty tricks, including spying against and smearing potential political opponents, and abused the powers of government agencies, including the Internal Revenue Service (IRS), to facilitate illicit Republican fund-raising and harass political enemies. As media and congressional investigations gradually unearthed growing evidence of his own involvement and as Congress prepared to vote on articles of impeachment, Republican support for Nixon dwindled. It seemed likely that if impeached, he would be convicted and removed from office. Facing political disaster and disgrace, on 8 August 1974 Nixon resigned his office, the only president in American history to do so. Vice President Gerald Ford, whom Nixon had appointed the previous year following the resignation of Vice President Spiro Agnew in a separate scandal, assumed the presidency in Nixon's place and pardoned him for any crimes he might have committed in relation to Watergate. Many Americans resented this, feeling that Nixon should first have been tried and convicted, but Ford believed that the country needed to put the entire affair behind it and concentrate on tackling the assorted serious international and domestic problems then facing it. Nixon's preoccupation with Watergate for most of his truncated second term halted progress toward full normalization of relations with the People's Republic of China and hampered (but did not stop) further efforts toward détente with the Soviet Union. Although Ford retained Secretary of State Henry Kissinger, Nixon's leading foreign policy advisor, the new president did not have the same deftness as Nixon in handling international affairs. After a decade in near disgrace, Nixon was able to engineer a substantial political rehabilitation. In his final two decades he published numerous books and essays highlighting his foreign policy achievements, especially his dealings with the Soviet Union and China, and successive presidents, including Ronald Reagan, George H. W. Bush, and Bill Clinton, drew on his international expertise. When Nixon died in 1994, Clinton declared a national day of mourning and spoke at his funeral, which former presidents Ford, Jimmy Carter, Bush, and Reagan also attended.

Primary Source

This is the 37th time I have spoken to you from this office, where so many decisions have been made that shaped the history of this Nation. Each time I have done so to discuss with you some matter than I believe affected the national interest.

In all the decisions I have made in my public life, I have always tried to do what was best for the Nation. Throughout the long and difficult period of Watergate, I have felt it was my duty to persevere, to make every possible effort to complete the term of office to which you elected me.

In the past few days, however, it has become evident to me that I no longer have a strong enough political base in the Congress to justify continuing that effort. As long as there was such a base, I felt strongly that it was necessary to see the constitutional process through to its conclusion, that to do otherwise would be unfaithful to the spirit of that deliberately difficult process and a dangerously destabilizing precedent for the future.

But with the disappearance of that base, I now believe that the constitutional purpose has been served, and there is no longer a need for the process to be prolonged.

I would have preferred to carry through to the finish whatever the personal agony it would have involved, and my family unanimously urged me to do so. But the interest of the Nation must always come before any personal considerations.

From the discussions I have had with Congressional and other leaders, I have concluded that because of the Watergate matter I might not have the support of the Congress that I would consider necessary to back the very difficult decisions and carry out the duties of this office in the way the interests of the Nation would require.

I have never been a quitter. To leave office before my term is completed is abhorrent to every instinct in my body. But as President, I must put the interest of America first. America needs a full-time President and a full-time Congress, particularly at this time with problems we face at home and abroad.

To continue to fight through the months ahead for my personal vindication would almost totally absorb the time and attention of both the President and the Congress in a period when our entire focus should be on the great issues of peace abroad and prosperity without inflation at home.

Therefore, I shall resign the Presidency effective at noon tomorrow. Vice President Ford will be sworn in as President at that hour in this office.

As I recall the high hopes for America with which we began this second term, I feel a great sadness that I

will not be here in this office working on your behalf to achieve those hopes in the next 2½ years. But in turning over direction of the Government to Vice President Ford, I know, as I told the Nation when I nominated him for that office 10 months ago, that the leadership of America will be in good hands.

In passing this office to the Vice President, I also do so with the profound sense of the weight of responsibility that will fall on his shoulders tomorrow and, therefore, of the understanding, the patience, the cooperation he will need from all Americans.

As he assumes that responsibility, he will deserve the help and the support of all of us. As we look to the future, the first essential is to begin healing the wounds of this Nation, to put the bitterness and divisions of the recent past behind us, and to rediscover those shared ideals that lie at the heart of our strength and unity as a great and as a free people.

By taking this action, I hope that I will have hastened the start of that process of healing which is so desperately needed in America.

I regret deeply any injuries that may have been done in the course of the events that led to this decision. I would say only that if some of my judgments were wrong, and some were wrong, they were made in what I believed at the time to be the best interest of the Nation.

To those who have stood with me during these past difficult months, to my family, my friends, to many others who joined in supporting my cause because they believed it was right, I will be eternally grateful for your support.

And to those who have not felt able to give me your support, let me say I leave with no bitterness toward those who have opposed me, because all of us, in the final analysis, have been concerned with the good of the country, however our judgments might differ.

So, let us all now join together in affirming that common commitment and in helping our new President succeed for the benefit of all Americans.

I shall leave this office with regret at not completing my term, but with gratitude for the privilege of serving as your President for the past 5 ½ years. These years have been a momentous time in the history of our Nation and the world. They have been a time of achievement in which we can all be proud, achievements that represent the shared efforts of the Administration, the Congress, and the people.

But the challenges ahead are equally great, and they, too, will require the support and the efforts of the Congress and the people working in cooperation with the new Administration.

We have ended America's longest war, but in the work of securing a lasting peace in the world, the goals ahead are even more far-reaching and more difficult. We must complete a structure of peace so that it will be said of this generation, our generation of Americans, by the people of all nations, not only that we ended one war but that we prevented future wars.

We have unlocked the doors that for a quarter of a century stood between the United States and the People's Republic of China.

We must now ensure that the one quarter of the world's people who live in the People's Republic of China will be and remain not our enemies but our friends.

In the Middle East, 100 million people in the Arab countries, many of whom have considered us their enemy for nearly 20 years, now look on us as their friends. We must continue to build on that friendship so that peace can settle at last over the Middle East and so that the cradle of civilization will not become its grave.

Together with the Soviet Union we have made the crucial breakthroughs that have begun the process of limiting nuclear arms. But we must set as our goal not just limiting but reducing and finally destroying these terrible weapons so that they cannot destroy civilization and so that the threat of nuclear war will no longer hang over the world and the people.

We have opened the new relation with the Soviet Union. We must continue to develop and expand that

new relationship so that the two strongest nations of the world will live together in cooperation rather than confrontation.

Around the world, in Asia, in Africa, in Latin America, in the Middle East, there are millions of people who live in terrible poverty, even starvation. We must keep as our goal turning away from production for war and expanding production for peace so that people everywhere on this earth can at last look forward in their children's time, if not in our own time, to having the necessities for a decent life.

Here in America, we are fortunate that most of our people have not only the blessings of liberty but also the means to live full and good and, by the world's standards, even abundant lives. We must press on, however, toward a goal of not only more and better jobs but of full opportunity for every American and of what we are striving so hard right now to achieve, prosperity without inflation.

For more than a quarter of a century in public life I have shared in the turbulent history of this era. I have fought for what I believed in. I have tried to the best of my ability to discharge those duties and meet those responsibilities that were entrusted to me.

Sometimes I have succeeded and sometimes I have failed, but always I have taken heart from what Theodore Roosevelt once said about the man in the arena, "whose face is marred by dust and sweat and blood, who strives valiantly, who errs and comes short again and again because there is not effort without error and shortcoming, but who does actually strive to do the deed, who knows the great enthusiasms, the great devotions, who spends himself in a worthy cause, who at the best knows in the end the triumphs of high achievements and who at the worst, if he fails, at least fails while daring greatly."

I pledge to you tonight that as long as I have a breath of life in my body, I shall continue in that spirit. I shall continue to work for the great causes to which I have been dedicated throughout my years as a Congressman, a Senator, a Vice President, and President, the cause of peace not just for America but among all

nations, prosperity, justice, and opportunity for all of our people.

There is one cause above all to which I have been devoted and to which I shall always be devoted for as long as I live.

When I first took the oath of office as President 5½ years ago, I made this sacred commitment, to “consecrate my office, my energies, and all the wisdom I can summon to the cause of peace among nations.”

I have done my very best in all the days since to be true to that pledge. As a result of these efforts, I am confident that the world is a safer place today, not only for the people of America but for the people of all

nations, and that all of our children have a better chance than before of living in peace rather than dying in war.

This, more than anything, is what I hoped to achieve when I sought the Presidency. This, more than anything, is what I hope will be my legacy to you, to our country, as I leave the Presidency.

To have served in this office is to have felt a very personal sense of kinship with each and every American. In leaving it, I do so with this prayer: May God’s grace be with you in all the days ahead.

119. Cambodian Khmer Rouge Party Officials’ Conference on Future Policies, 20 May 1975

Introduction

On 17 April 1975, the Khmer Rouge, or Cambodian Communist Party, emerged victorious from a lengthy insurgency against the military government of President Lon Nol. Under the direction of Pol Pot, a former teacher, the Khmer Rouge embraced an extremely radical form of permanent revolution that sought to remake society on communist lines by eradicating all traces of bourgeois individualism. Hostile to city dwellers, whom they regarded as procapitalist, the Khmer Rouge leaders also decided to force all urban inhabitants back to the countryside to work in ideological purity in agriculture or occasionally in industry. Pol Pot, an admirer of Mao Zedong’s theory of permanent revolution, sought to implement his mentor’s teachings even more ruthlessly and comprehensively than Mao himself had done. A month after seizing power, the Central Committee of the Khmer Rouge summoned thousands of district and regional party officials and military representatives to a five-day meeting in Phnom Penh to receive instructions on the organization of the new political and socioeconomic order. Although no notes from this meeting have survived, the historian Ben Kiernan, using interviews he conducted with several former Khmer Rouge officials, was able to construct a coherent account of its major points. Two classes of citizens would exist: those with full rights (individuals who had supported the Khmer Rouge before its takeover) and those who were only candidates for such rights, particularly deportees from the cities. All officials of the former Lon Nol regime were to be executed, markets and currency would be abolished, urban dwellers were to be evacuated to the countryside to live in cooperatives and eat in communal dining halls, Buddhist monks were to be made to work in the fields, private property was abolished and all industry nationalized, all ethnic Vietnamese would be deported, and all potentially subversive elements were to be purged and killed. These instructions were interpreted with great brutality. Schools and hospitals closed, as the professionals running them were among the 3 million city dwellers who were deported. By the end of the decade, 1.7 million of Cambodia’s population of 7.1 million had died, many murdered outright, others due to the abysmal living conditions in the countryside, food shortages, deprivation, and illness.

Primary Source

All military and civilian officials of the new regime were summoned to a special meeting on 20 May 1975. “District and region secretaries came from all over the country, and representatives from all armed forces and units and regions, so there were thousands.” The assembly was held in the old sports center in the northern part of Phnom Penh. Its purpose was “to receive the plan distributed by the Center” and then return home to “implement the plan.” The meeting lasted five days.

This was the Center’s first major attempt to run its political writ throughout Cambodia. No documents from the meeting, and very few members of its audience, appear to have survived. But it has been possible to reconstruct some of the event through interviews with three of those present and with two others whose superiors attended and gave them accounts of it. (Later they were arrested; both disappeared.) The accounts are not only rare but modulated, informative despite lapses of memory, and, as we shall see, mutually corroborative without indication of prearrangement.

The earliest account dates from mid-1980. It comes from Sin Song, who in 1975 was political commissar of the 3rd Battalion of Chakrey’s 1st Eastern Division. Song was stationed in Prey Veng. He did not attend the May assembly, but his immediate superior, Chhouk, the Region 24 CPK secretary, did. On his return, Chhouk told Song that Pol Pot had made eight points:

1. Evacuate people from all towns.
2. Abolish all markets.
3. Abolish Lon Nol regime currency and withhold the revolutionary currency that had been printed.
4. Defrock all Buddhist monks and put them to work growing rice.
5. Execute all leaders of the Lon Nol regime beginning with the top leaders.
6. Establish high-level cooperatives throughout the country, with communal eating.
7. Expel the entire Vietnamese minority population.
8. Dispatch troops to the borders, particularly the Vietnamese border.

The second source is an officer named Ret, a Center battalion commander from the Northern Zone who

attended the meeting. Before his arrest in 1977, he told colleagues in the north of a large meeting in Phnom Penh around 27 May 1975. Ret said that “eleven points” were discussed, but his colleagues, interviewed in 1980, could recall his mentioning only the leadership’s orders to “kill Lon Nol soldiers, kill the monks, [and] expel the Vietnamese population” and its opposition to “money, schools, and hospitals.”

Mat Ly, a CPK district committee member in Region 21, attended the meeting. In 1991 he agreed with Sin Song that there were eight points. He started his list with five of the first six points recalled by Song (1, 2, 3, 4, and 6). He added the following: close schools, close hospitals, and “uproot spies root and branch.” Chea Sim, CPK secretary of Ponhea Krek district on the Vietnam border and a member of the Region 20 Committee, confirms Sin Song’s list.

To get to the meeting, Sim traveled along Highway 7 from the border to Tonle Bet, then took a ferry down the Mekong. He arrived in the capital on 19 May, spending the night with hundreds of other participants at the Phnom Penh Technical School, west of the city center. The next morning the meeting began at 8 A.M. The assembly lasted five days. Nuon Chea spoke on the first day, Pol Pot on the second. Chea Sim recalled some of the details in a 1991 interview.

“Nuon Chea said that building socialism in Kampuchea consisted of two parts, agriculture and industry. He said agriculture would be modernized in ten to fifteen years by scientific methods, by preparing irrigation dams and canals all over the country. And the dams and canals had to be started in the coming year, 1976. Industry would be modernized in a similar period of ten to fifteen years.”

“And the second issue: in order to achieve the construction of socialism progressively and advance all together in the set period, we must take care to carefully screen internal agents (*samrit samrainh phtey khnong*) in the party, in the armed forces, in the various organizations and ministries, in the government, and among the masses of the people. We have to carefully screen them, Nuon Chea said. He mentioned ‘the line of carefully screening internal agents to improve and

purify, in order to implement the line of building socialism so that it advances to modernization by new scientific technology.”

“This was a very important order to kill. Their careful screening was to take all measures so that people were pure (*borisot*). The line laid down must be followed at all costs. . . . If people could not do it, they would be taken away and killed. This was called the line of ‘careful screening’: It came out in concrete specifics in the eight points. . . . These came from the broad lines, the strategic principles. Socialist construction can only succeed under the line of careful screening of internal agents. The words ‘carefully screen’ were the killing principle . . . and were stated strongly on 20 May. It was to be done.” This recalls Mat Ly’s description of the slogan, “Uproot spies root and branch.”

Heng Samrin, then studying military affairs under Son Sen, was also at the meeting. He recalls the use of yet another term: “They did not say ‘kill,’ they said ‘scatter the people of the old government.’ Scatter (*komchat*) them away, don’t allow them to remain in the framework. It does not mean ‘smash’ (*komtec*). . . . Smash means ‘kill’ but they used a general word, ‘scatter.’ Nuon Chea used this phrase.” This appears to be Sin Song’s point number 5, though the use of varied euphemisms is an important qualification.

Samrin agrees that “mostly, it was Nuon Chea who did the talking,” explaining the new Center policies in detail. Samrin did not recall eight points, but mentioned permanent evacuation of the cities (Sin Song’s no. 1); the decisions to withhold the new currency and abolish the circulation of money (no. 3); establishment of “medium-level cooperatives” in the countryside (not quite no. 6); evacuation of the foreign embassies; and the division of the population into two groups: “full rights” citizens (*neak penh sith*, those who had lived in Khmer Rouge zones before 17 April); and “candidates” (*neak triem*) for such status, especially the newly evacuated deportees or “depositees” (*neak phñoe*) from the towns.

Samrin continues: “Nuon Chea talked of wiping out markets, not allowing money. If there were markets and money, there was property. The important, heavy

pressure was against property. Where there was money there were markets, and if there were markets there would be people with money and those people would have property. So they wanted to wipe out property, not allow private property to exist.” This is Sin Song’s point number 2.

“It was Pol Pot who distributed this plan personally,” says Samrin, who quoted him as saying, “Don’t use money, don’t let the people live in the cities.” There was, however, “no mention of closing schools or hospitals.” Chea Sim agrees. On the other hand, Samrin adds: “Monks, they said, were to be disbanded, put aside as a ‘special class,’ the most important to fight. They had to be wiped out (*lup bombat*). . . . I heard Pol Pot say this myself. . . . He said no monks were to be allowed, no festivals were to be allowed any more, meaning ‘wipe out religion.’” Nuon Chea affirmed this, adding that “wats would not be allowed.” This is Song’s point number 4.

Samrin claims that the two leaders’ views were “clearly the same.” But their manner was different. I asked Chea Sim if Pol Pot spoke of killing people, or if he ever used the word *kill*. He replied, “It is difficult for us to understand. We saw Pol Pot’s behavior and heard his words, and he did not seem to us to be a killer. He seemed kindly. He did not speak very much. He just smiled and smiled. . . . And his words were light, not strong. In general, you would estimate that Pol Pot was a kindly person, simple, with a mass view. But his methods were confrontational; he was just a killer.”

On the other hand, Sim continued, “Nuon Chea’s behavior was somewhat coarse, different from Pol Pot’s. It could be observed. . . . People always say that Nuon Chea is somewhat cruel. His behavior is stronger. And they always praise Pol Pot as the kindest person of all.”

[. . .]

The party secretary did make one strong, specific point. According to Chea Sim, “Pol Pot spoke a lot about the question of Vietnam. He stressed the importance of the issue of evacuating all of the Vietnamese people out of Cambodian territory.” Heng Samrin recalls Nuon Chea’s adding, “We cannot allow any Vietnamese

minority” to live in Cambodia. This is Sin Song’s point number 7. Pol Pot also noted that Vietnam’s Mekong Delta had been Cambodian territory in the past. But Chea Sim recalls no order sending troops to the borders to attack Vietnam. That came later, he says.

[. . .]

Dissent

Contrary to Heng Samrin’s account, Hou Yuon did not “disappear forever” after opposing the Center’s evacuation plan in February. Monks saw him at their wat in his home district in Kompong Cham province on 8 March. An ex-monk also recognized Hou Yuon at Oudong, north of Phnom Penh, on 17 April. Yuon, escorted by soldiers, was traveling in a jeep heading very fast towards the surrendered capital. The next month Yuon’s wife, Ung Yok Leang, returned to the couple’s native village. According to relatives, she came to collect her daughter and take her “to live with her father and mother” now that the war was over. It is unlikely she would have done this had Hou Yuon already disappeared or been killed. But he was certainly under a cloud. Hu Nim recorded in his “confession” that “after liberation, when the Party abolished money and wages and evacuated the people, Hou Yuon again boldly took a stand against the Party line.”

Chhouk told Sin Song that at the May meeting Hou Yuon had publicly dissented from some of [the] eight points. According to Song, “There was some disagreement with these points at the Assembly, especially over the creation of high-level cooperatives because three million city people and others were not familiar with revolutionary politics. And also, the country had just emerged from a war, so there were great shortages and a lack of capital and facilities. Communal eating cooperatives throughout the country was not a feasible proposition. Hou Yuon, for one, said that this was just not possible, Chhouk reported to me. . . . After that, Hou Yuon was sacked from the cabinet.”

Song continues, “Some people also disagreed with the policy of execution, preferring reeducation so that the victims could then play a useful role. And there was disagreement with the abolition of money and markets. Chhouk and the secretary of the Northeast Zone,

Ney Sarann, were among the main dissidents. On his return, Chhouk called a meeting of over thirty Region 24 cadres, including myself. He told us he disagreed with these policies; if the party went ahead along this road, he would not yet follow.”

Battalion commander Ret, for his part, claimed that Northern Zone Secretary Koy Thuon, himself, and others had argued in favor of “money, schools and religion.” Hu Nim, too, probably found himself in a difficult position in May 1975. Seng Horl, who had taken Highway 1 out of the city, was camping at Prek Eng, “waiting for news” of what would be allowed next. There he heard that Hu Nim had come to Prek Eng “to talk to the people.” Another refugee saw Hu Nim in black clothes, traveling in a jeep with several soldiers; he had stopped along the way and was “asking the people how they were going.” Hod says Hu Nim told the waiting evacuees that “*Angkar Loeu* had got the people to leave Phnom Penh for only three months, then they could go back again.” Heng Samrin put it this way: “The people were evacuated into the environs of the city. They were not yet evacuated to distant regions. Then, after receiving the plan on the twentieth [of May], the people were evacuated to the remote countryside. . . . From that time, they were evacuated forever, not allowed to live in cities again.” Thus, Horl stayed at Prek Eng for a month, until after the 20–24 May meeting. Then, forbidden to go back to Phnom Penh, he had to move further into the countryside. As Chea Sim recalled, “They just sent people on and distributed them permanently. They did not announce it, they just sent people on.”

There were a few exceptions. Skilled workers were being recalled at the same checkpoints where Lon Nol’s soldiers were being rounded up for execution. Nop, a railway worker who volunteered to go back, was given a house in the suburb of Tuk La’ak for his family. He was put to work on the railway line south of Phnom Penh. Factory and electrical workers went back to their jobs as well. After a month in the countryside, Tran Heng, a former textile worker, responded to a call for all textile and metal workers to go back to work. About six ferryloads of workers were taken back to the capital by river. But only fifteen workers went back to Heng’s factory, of which his father had been director. They

included Heng and his wife, his parents, his three older sisters and three brothers. Three hundred female Khmer Rouge soldiers were brought in to take the place of those workers who had presumably not trusted in the regime's call to return to work.

Two fairly similar accounts indicate what happened to Hou Yuon. French journalist Jean Lacouture writes that Yuon "was killed by one of his bodyguards a few days after the capture of Phnom Penh, as he was departing on a motorcycle from a public meeting where he had criticized the plan to turn pagodas into stables." If this is true, it is more likely to have occurred after the May meeting, where Pol Pot urged people to "wipe out religion." The second account, bearing a date of August 1975, is consistent with this inference.

A CPK cadre in Kompong Cham reported that Hou Yuon addressed a large gathering of evacuees and others by the Mekong River at Prek Po. He spoke out strongly against the evacuation and was applauded by the crowd. Soon after leaving this meeting, Hou Yuon was shot dead by a CPK squad, and his body was thrown into the Mekong. A confidential CPK report later confirmed that he had been murdered in 1975. His name was never officially mentioned by DK, though its representatives told foreigners Yuon was alive, "tending to organization." In September 1975, a Vietnamese official asked Koy Thuon what had happened to Yuon, and was told that Hou Yuon suffered from "heart disease."

120. Helsinki Agreements, 1975

Introduction

One aspect of détente was the Helsinki Conference on Security and Cooperation in Europe (CSCE), held in Helsinki, Finland, from 30 July to 1 August 1975 after a protracted international conference that lasted for two years. Thirty-three European countries as well as Canada and the United States signed Helsinki Agreements. They covered predominantly nonmilitary matters, including European security; human rights; cooperation on economic, scientific, technological, and environmental matters; and the free movement of individuals and ideas and promised follow-up meetings to discuss enforcement, modification, and extension of the accords. All signatories recognized existing boundaries within Europe and pledged to resolve disputes peacefully, refrain from interference in the internal affairs of other signatory states, and notify each other of substantial troop movements. The Helsinki Agreements set a standard for behavior among European nations regarding human rights and respect for national sovereignty. Although the accords had no force behind them, they were considered an important statement in defense of European stability. Conservatives in the United States immediately assailed the Helsinki Accords as a betrayal of Western interests that legitimized the Soviet position in Europe in exchange for meaningless human rights assurances. In the presidential election of 1976, both the Left and the Right attacked President Gerald Ford and Secretary of State Henry Kissinger—the latter of whom had taken little interest in the negotiation of these agreements—for yielding too much to the Soviets. Ironically, in practice the Helsinki Accords soon became a focal rallying point for human rights advocates and anti-Soviet protestors throughout Europe, who monitored and publicized aggressively all communist failures to live up to the standards enshrined in the Helsinki Accords.

[. . .]

VI. NON-INTERVENTION IN INTERNAL AFFAIRS

The participating States will refrain from any intervention, direct or indirect, individual or collective, in the

internal or external affairs falling within the domestic jurisdiction of another participating State, regardless of their mutual relations.

They will accordingly refrain from any form of armed intervention or threat of such intervention against another participating State.

They will likewise in all circumstances refrain from any other act of military, or of political, economic or other coercion designed to subordinate to their own interest the exercise by another participating State of the rights inherent in its sovereignty and thus to secure advantages of any kind.

Accordingly, they will, inter alia, refrain from direct or indirect assistance to terrorist activities, or to subversive or other activities directed towards the violent overthrow of the regime of another participating State.

*VII. RESPECT FOR HUMAN RIGHTS AND
FUNDAMENTAL FREEDOMS INCLUDING
THE FREEDOM OF THOUGHT,
CONSCIENCE, RELIGION OR BELIEF*

The participating States will respect human rights and fundamental freedoms, including the freedom of thought, conscience, religion or belief, for all without distinction as to race, sex, language or religion.

They will promote and encourage the effective exercise of civil, political, economic, social, cultural and other rights and freedoms all of which derive from the inherent dignity of the human person and are essential for his free and full development.

Within this framework the participating States will recognize and respect the freedom of the individual to profess and practice, alone or in community with others, religion or belief acting in accordance with the dictates of his own conscience.

The participating States on whose territory national minorities exist will respect the right of persons belonging to such minorities to equality before the law, will afford them the full opportunity for the actual enjoyment of human rights and fundamental freedoms and will, in this manner, protect their legitimate interests in this sphere.

The participating States recognize the universal significance of human rights and fundamental freedoms, respect for which is an essential factor for the peace, justice and well-being necessary to ensure the development of friendly relations and cooperation among themselves as among all States.

They will constantly respect these rights and freedoms in their mutual relations and will endeavor jointly and separately, including in cooperation with the United Nations, to promote universal and effective respect for them.

They confirm the right of the individual to know and act upon his rights and duties in this field.

In the field of human rights and fundamental freedoms, the participating States will act in conformity with the purposes and principles of the Charter of the United Nations and with the Universal Declaration of Human Rights. They will also fulfill their obligations as set forth in the international declarations and agreements in this field, including inter alia the International Covenants on Human Rights, by which they may be bound.

*VIII. EQUAL RIGHTS AND SELF-
DETERMINATION OF PEOPLES*

The participating States will respect the equal rights of peoples and their right to self-determination, acting at all times in conformity with the purposes and principles of the Charter of the United Nations and with the relevant norms of international law, including those relating to territorial integrity of States.

By virtue of the principle of equal rights and self-determination of peoples, all peoples always have the right, in full freedom, to determine, when and as they wish, their internal and external political status, without external interference, and to pursue as they wish their political, economic, social and cultural development.

The participating States reaffirm the universal significance of respect for and effective exercise of equal rights and self-determination of peoples for the development of friendly relations among themselves as among all States; they also recall the importance of the elimination of any form of violation of this principle. . . .

121. Church Report, 1975

Introduction

In September 1973 the U.S. Central Intelligence Agency (CIA) watched encouragingly as a military coup overthrew the leftist government of President Salvador Allende Gossens, who had initiated major nationalization programs and expropriated American-owned businesses. The extent of the CIA's role in orchestrating past efforts to prevent Allende from winning successive Chilean elections and in his fall from power became politically controversial, prompting a wide-ranging investigation by the U.S. Senate's Select Committee to Study Governmental Operations with Respect to Intelligence Activities, a body chaired by liberal Democratic Senator Frank Church of Idaho. In the aftermath of the divisive Vietnam War, the committee's report raised broader concerns over the CIA-sponsored covert operations intended to destabilize foreign governments whose policies were considered unfriendly to the United States. The Church Report offered no specific evidence of CIA involvement in the 1973 coup in which Allende died, probably at his own hand. It did, however, reveal that during the three years of his presidency, the CIA had provided massive funding, \$8 million in all, for anti-Allende activities and in election campaigns since 1964 had also been deeply involved in efforts to prevent him from gaining power. Just before Allende took office in 1970, the CIA had even gone so far as to try to foment a coup against him by the Chilean military. The Church Report expressed serious reservations over the manner in which such operations were authorized, with the central directorate of the CIA initially setting up operations and programs that then seemed to acquire an independent momentum of their own. On presidential instructions, some portions of the Chilean operations had been implemented secretly, with the 40 Committee that supposedly supervised all such activities left ignorant of them and with no consultation with knowledgeable experts. The report found that consultation with Congress had been inadequate and expressed anxiety that such extensive U.S.-backed covert activities damaged American credibility and also that of the overseas political forces that the U.S. government chose to support. It also raised concerns over the close relationships between CIA officials and American corporations with significant business interests in Chile. The report's authors asked uneasily how far the United States itself should be held responsible "for the cruelty and political suppression that have become the hallmark of the present regime in Chile." Their conclusion was blunt: "Given the costs of covert action, it should be resorted to only to counter severe threats to the national security of the United States. It is far from clear that that was the case in Chile."

Covert Action in Chile: 1963–1973.

I. Overview and Background

A. Overview: Covert Action in Chile

[. . .]

Numerous allegations have been made about U.S. covert activities in Chile during 1970–73. Several of these are false; others are half true. In most instances, the response to the allegations must be qualified:

Was the United States DIRECTLY involved, covertly, in the 1973 coup in Chile? The Committee has found no evidence that it was. However, the United States sought in 1970 to foment a military coup in Chile; after 1970 it adopted a policy both overt and covert, of oppo-

sition to Allende; and it remained in intelligence contact with the Chilean military, including officers who were participating in coup plotting.

Did the U.S. provide covert support to striking truck-owners or other strikers during 1971–73? The 40 Committee did not approve any such support. However, the U.S. passed money to private sector groups which supported the strikers. And in at least one case, a small amount of CIA money was passed to the strikers by a private sector organization, contrary to CIA ground rules. Did the U.S. provide covert support to right-wing terrorist organizations during 1970–73?

The CIA gave support in 1970 to one group whose tactics became more violent over time. Through 1971 that group received small sums of American money through third parties for specific purpose[s]. And it is

possible that money was passed to these groups on the extreme right from CIA-supported opposition political parties.

The pattern of United States covert action in Chile is striking but not unique. It arose in the context not only of American foreign policy, but also of covert U.S. involvement in other countries within and outside Latin America. The scale of CIA involvement in Chile was unusual but by no means unprecedented.

B. Issues

The Chilean case raises most of the issues connected with covert action as an instrument of American foreign policy. It consisted of long, frequently heavy involvement in Chilean politics: it involved the gamut of covert action methods, save only covert military operations; and it revealed a variety of different authorization procedures, with different implications for oversight and control. As one case of U.S. covert action, the judgements of past actions are framed not for their own sake; rather they are intended to serve as bases for formulating recommendations for the future.

The basic questions are easily stated:

- (1) Why did the United States mount such an extensive covert action program in Chile? Why was that program continued and then expanded in the early 1970's?
- (2) How was this major covert action program authorized and directed? What roles were played by the President, the 40 Committee, the CIA, the Ambassadors and the Congress?
- (3) Did U.S. policy-makers take into account the judgements of the intelligence analysts on Chile when they formulated and approved U.S. covert operations? Does the Chilean experience illustrate an inherent conflict between the role of the Director of Central Intelligence as a producer of intelligence and his role as a manager of covert operations?
- (4) Did the perceived threat in Chile justify the level of U.S. response? What was the effect of such large concentrated programs of covert political action in Chile? What were the effects, both abroad and at home, of the relationships which

developed between the intelligence agencies and American based multinational corporations?

[Sections II. through IV. Omitted]

V. Preliminary Conclusions.

Underlying all discussion of American interference in the internal affairs of Chile is the basic question of why the United States initially mounted such an extensive covert action program in Chile—and why it continued, and even expanded, in the early 1970s.

Covert action has been a key element of U.S. foreign policy toward Chile. The link between covert action and foreign policy was obvious throughout the decade between 1964 and 1974. In 1964, the United States commitment to democratic reform via the Alliance for Progress and overt foreign aid was buttressed via covert support for the election of the candidate of the Christian Democratic party, a candidate and a party for which the Alliance seemed tailor made. During 1970 the U.S. Government tried, covertly, to prevent Allende from becoming President of Chile. When that failed, covert support to his opposition formed one of a triad of official actions: covert aid to opposition forces, “cool but correct” diplomatic posture, and economic pressure. From support of what the United States considered to be democratic and progressive forces in Chile we had moved finally to advocating and encouraging the overthrow of a democratically elected government.

A. Covert Action and U.S. Foreign Policy.

In 1964, the United States became massively involved in covert activity in Chile. This involvement was seen by U.S. policy-makers as consistent with overall American foreign policy and the goals of the Alliance for Progress. The election of a moderate left candidate in Chile was a cornerstone of U.S. policy toward Latin America.

It is unclear from the record whether the 1964 election project was intended to be a one-time intervention in support of a good cause. It is clear that the scale of the involvement generated commitments and expectations on both sides. For the United States, it created assets and channels of funding which could be used again. For the Chilean groups receiving CIA funds, that funding

became an expectation, counted upon. Thus, when opposition to Allende became the primary objective of covert action in 1970, the structure for covert action developed through covert assistance to political parties in 1964 was well established.

A fundamental question raised by the pattern of U.S. covert activities persists: *Did the threat to vital U.S. national security interests posed by the Presidency of Salvador Allende justify the several major covert attempts to prevent his accession to power?* Three American Presidents and their senior advisors evidently thought so.

One rationale for covert intervention in Chilean politics was spelled out by Henry Kissinger in his background briefing to the press on September 16, 1970, the day after Nixon's meeting with [CIA Director Richard] Helms. He argued that an Allende victory would be irreversible within Chile, might affect neighboring nations and would pose "massive problems" for the U.S. in Latin America.

[. . .]

Another rationale for U.S. involvement in the internal affairs of Chile was offered by a high-ranking official who testified before the Committee. He spoke of Chile's position in a worldwide strategic chess game in 1970. In this analogy, Portugal might be a bishop, Chile a couple of pawns, perhaps more. In the worldwide strategic chess game, once a position was lost, a series of consequences followed. U.S. enemies would proceed to exploit the new opportunity, and our ability to cope with the challenge would be limited by any American loss.

B. Executive Command and Control of Major Covert Action.

In pursuing the Chilean chess game, particularly the efforts to prevent Allende's accession to power or his maintaining power once elected, Executive command and control of major covert action was tight and well directed. Procedures within the CIA for controlling the programs were well defined and the procedures made Station officials accountable to their supervisors in Washington. Unilateral actions on the part of the Station were virtually impossible.

But the central issue of command and control is *Accountability*: procedures for insuring that covert actions are and remain accountable both to the senior political and foreign policy officials of the Executive Branch and to the Congress.

The record of covert activities in Chile suggests that, although established executive processes of authorization and control were generally adhered to, there were—and remain—genuine shortcomings to these processes:

Decisions about WHICH covert action projects are submitted to the 40 Committee were and are made within the CIA on the basis of the Agency's determination of the political sensitivity of a project.

The form in which covert action projects were cleared with Ambassadors and other State Department officials varied. It depended—and still depends—on how interested Ambassadors are and how forthcoming their Station Chiefs are.

Once major projects are approved by the 40 Committee, they often continue without searching re-examination by the Committee. The Agency conducts annual reviews of on-going projects, but the 40 Committee does not undertake a review unless a project is recommended for renewal, or there is some important change in content or amount.

There is also the problem of controlling clandestine projects not labeled "covert action". Clandestine collection of human intelligence is *not* the subject of 40 Committee review. But those projects may be just as politically sensitive as a "covert action"; witness U.S. contacts with the Chilean military during 1970–73. Similarly, for security reasons, ambassadors generally know CIA assets only by general description, not by name. That practice may be acceptable, provided the description is detailed enough to inform the ambassador of the risk posed by the development of a particular asset and to allow the ambassador to decide whether or not that asset should be used.

There remains the question of the dangers which arise when the very mechanisms established by the

Executive Branch for insuring internal accountability are circumvented or frustrated.

By Presidential instruction, Track II was to be operated without informing the U.S. Ambassador in Santiago, the State Department, or any 40 Committee member save Henry Kissinger. The President and his senior advisors thus denied themselves the Government's major sources of counsel about Chilean politics. And the Ambassador in Santiago was left in the position of having to deal with any adverse political spill-over from a project of which he was not informed.

The danger was greater still. Whatever the truth about communication between the CIA and the White House after October 15, 1970—an issue which is the subject of conflicting testimony—all participants agreed that Track II constituted a broad mandate to the CIA. The Agency was given to believe it had virtual *carte blanche* authority; moreover, it felt under extreme pressure to prevent Allende from coming to power, by military coup if necessary. It was given little guidance about what subsequent clearances it needed to obtain from the White House. Under these conditions, CIA consultation with the White House in advance of specific actions was less than meticulous.

C. The Role of the Congress.

In the hands of Congress rests the responsibility for insuring that the Executive Branch is held to full political accountability for covert activities. The record on Chile is mixed and muted by its incompleteness.

CIA records note a number of briefings of Congressional committees about covert action in Chile. Those records, however, do not reveal the timeliness or the level of detail of these briefings. Indeed, the record suggests that the briefings were often after the fact and incomplete. The situation improved after 1973, apparently as Congressional committees became more persistent in the exercise of their oversight function. Furthermore, Sec. 662 of the Foreign Assistance Act should make it impossible for major projects to be operated without the appropriate Congressional committees being informed.

The record leaves unanswered a number of questions. These pertain both to how forthcoming the Agency was

and how interested and persistent the Congressional committees were. Were members of Congress, for instance, given the opportunity to object to specific projects before the projects were implemented? Did they want to? There is also an issue of jurisdiction. CIA and State Department officials have taken the position that they are authorized to reveal Agency operations only to the appropriate oversight committees.

D. Intelligence Judgements and Covert Operations.

A review of the intelligence judgements on Chile offered by U.S. analysts during the critical period from 1970–1973 has *not* established whether these judgements were taken into account when U.S. policy-makers formulated and approved U.S. covert operations. This examination of the relevant intelligence estimates and memoranda has established that the judgements of the analysts suggested caution and restraint while the political imperatives demanded action.

Even within the Central Intelligence Agency, processes for bringing considered judgements of intelligence analysts to bear on proposed covert actions were haphazard—and generally ineffective. This situation has improved; covert action proposals now regularly come before the Deputy Director for Intelligence and the appropriate National Intelligence Officer; but the operators still are separated from the intelligence analysts, those whose exclusive business it is to understand and predict foreign politics. For instance, the analysts who drafted the government's most prestigious intelligence analyses—NIEs—may not even have known of U.S. covert actions in Chile.

The Chilean experience does suggest that the Committee give serious consideration to the possibility that lodging the responsibility for national estimates AND conduct of operational activities with the same person—the Director of Central Intelligence—creates an inherent conflict of interest and judgement.

E. Effects of Major Covert Action Programs.

Covert Action programs as costly and as complex as several mounted by the United States in Chile are unlikely to remain covert. In Chile in 1964, there was simply too much unexplained money, too many leaflets, too many broadcasts. That the United States was in-

volved in the election has been taken for granted in Latin America for many years.

The involvement in 1964 created a presumption in Chile and elsewhere in Latin America that the United States Government would again be involved in 1970. This made secrecy still harder to maintain, even though the CIA involvement was much smaller in 1970 than it had been in 1964.

When covert actions in Chile became public knowledge, the costs were obvious. The United States was seen, by its covert actions, to have contradicted not only its official declarations but its treaty commitments and principles of long standing. At the same time it was proclaiming a "low profile" in Latin American relations, the U.S. Government was seeking to foment a coup in Chile.

The costs of major covert ventures which are "blown" are clear enough. But there may be costs to pay even if the operations could remain secret for long periods of time. Some of these costs may accrue even within the calculus of covert operations: successes may turn to failures. Several officials from whom the Committee took testimony suggested that the poor showing of the Chilean Christian Democrats in 1970 was, in some part, attributable to previous American covert support. Of course there were many causes of that poor showing, but in 1964 the PDC had been spared the need of developing some of its own grass roots organizations. The CIA did much of that for it. In 1970, with less CIA activity on behalf of the Christian Democratic Party, the PDC faltered.

Of course, the more important costs, even of covert actions which remain secret, are those to American ideals of relations among nations and of constitutional government. In the case of Chile, some of those costs were far from abstract: witness the involvement of United States military officers in the Track II attempt to overthrow a constitutionally-elected civilian government.

There are also long-term effects of covert actions. Many of those may be adverse. They touch American as well as foreign institutions. The Chilean institutions that the United States most favored may have been

discredited within their own societies by the fact of their covert support. In Latin America particularly, even the suspicion of CIA support may be the kiss of death. It would be the final irony of a decade of covert action in Chile if that action destroyed the credibility of the Chilean Christian Democrats.

The effects on American institutions are less obvious but no less important. U.S. private and governmental institutions with overt, legitimate purposes of their own may have been discredited by the pervasiveness of covert action. Even if particular institutions were not involved in covert action, they may have been corrupted in the perception of Latin Americans because of the pervasiveness of clandestine U.S. activity.

In the end, the whole of U.S. policy making may be affected. The availability of an "extra" means may alter officials' assessment of the costs and rationales of overt policies. It may postpone the day when outmoded policies are abandoned and new ones adopted. Arguably, the 1964 election project was part of a "progressive" approach to Chile. The project was justified, if perhaps not actually sustained, by the desire to elect democratic reformers. By 1970, covert action had become completely defensive in character: to prevent the election of Allende. The United States professed a "low profile" but at the same time acted covertly to ensure that the Chilean elections came out right, "low profile" notwithstanding.

A special case for concern is the relationship between intelligence agencies and multinational corporations.

In 1970, U.S. Government policy prohibited covert CIA support to a single party or candidate. At the same time, the CIA provided advice to an American-based multinational corporation on how to furnish just such direct support. That raised all of the dangers of exposure, and eliminated many of the safeguards and controls normally present in exclusively CIA covert operations. There was the appearance of an improperly close relationship between the CIA and multinational companies when former Director John McCone used contacts and information gained while at the CIA to advise a corporation on whose Board of Directors he sat. This appearance was heightened because the

contacts between the Agency and the corporation in 1970 extended to discussing and even planning corporate intervention in the Chilean electoral process.

The problem of cooperation is exacerbated when a cooperating company—such as ITT—is called to give testimony before an appropriate Congressional Committee. The Agency may then be confronted with the question of whether to come forward to set the record straight when it believes that testimony given on behalf of a cooperating company is untrue. The situation is difficult, for in coming forward the Agency may reveal sensitive sources and methods by which it learned the facts or may make public the existence of ongoing covert operations.

This report does no attempt to offer a final judgement on the political propriety, the morality, or even the effectiveness of American covert activity in Chile. Did the threat posed by an Allende presidency justify covert American involvement in Chile? Did it justify the specific and unusual attempt to foment a military coup to deny Allende the presidency? In 1970, the U.S. sought to foster a military coup in Chile to prevent Allende's accession to power; yet after 1970 the government—according to the testimony of its officials—did not engage in coup plotting. Was 1970 a mistake, an aber-

ration? Or was the threat posed to the national security interests of the United States so grave that the government was remiss in not seeking his downfall directly during 1970–73? What responsibility does the United States bear for the cruelty and political suppression that have become the hallmark of the present regime in Chile?

On these questions Committee members may differ. So may American citizens. Yet the Committee's mandate is less to judge the past than to recommend for the future. Moving from past cases to future guidelines, what is important to note is that covert action has been perceived as middle ground between diplomatic representation and the overt use of military force. In the case of Chile, that middle ground may have been far too broad. Given the costs of covert action, it should be resorted to only to counter severe threats to the national security of the United States. It is far from clear that that was the case in Chile.

122. Announcement of the Death of Mao Zedong, 9 September 1976

Introduction

On 9 September 1976 Mao Zedong, for a quarter-century communist China's supreme ruler, finally succumbed to a variety of ailments and died. At the time of his death it seemed that an extremist faction headed by a group popularly known as the Gang of Four, consisting of Mao's widow, Jiang Qing, and several Shanghai radicals, was firmly in control of the Chinese Politburo. The previous January, Mao's most able lieutenant, the moderate Premier Zhou Enlai, had died of cancer, sparking massive demonstrations in his memory in Tiananmen Square the following April during a festival when Chinese traditionally commemorated their dead. The Gang of Four and their supporters had taken this opportunity to purge one of Zhou's closest associates, Vice Premier Deng Xiaoping, a tough and able pragmatist who had been ousted during the Cultural Revolution of the 1960s but was brought back to power by Zhou in 1973. Deng delivered the eulogy at Zhou's funeral, giving his enemies the excuse they needed to drive him from power. Following Mao's death, the official Chinese media published an obituary that carefully highlighted his leadership of leftist and radical Chinese political forces and his criticism of Deng. The obituary exhorted the Chinese people to carry on the "class struggle" that Mao had so strongly supported, revile Deng, and carry the Cultural Revolution further. Once Mao had died, however, the Gang of Four soon lost their hold on power, and these policies were largely abandoned. In October 1976 Hua Guofeng, Mao's handpicked but uninspiring successor, mounted a coup against the Gang of Four and their associates, who were suddenly arrested. Held responsible

and vilified for the excesses of the Cultural Revolution, they were put on trial in 1981 and sentenced to long prison terms. In July 1977 Hua brought Deng back as vice premier. By the end of 1978 Deng had won control of the Chinese government, although Hua remained premier until 1980. Deng instituted large-scale economic modernization programs that relied heavily on market reforms, effectively reversing the long-term leftward drift of Chinese policies and ending the ideologically driven domestic radicalism that had characterized Mao's years in power. Seeking access to foreign expertise, technology, and funds, Deng also implemented dramatically improved Chinese relations with noncommunist powers.

Primary Source

The Central Committee of the Communist Party of China, the Standing Committee of the National People's Congress of the People's Republic of China, the State Council of the People's Republic of China and the Military Commission of the Central Committee of the Communist Party of China announce with deepest grief to the whole party, the whole army and the people of all nationalities throughout the country:

Comrade Mao Tse-tung, the esteemed and beloved great leader of our party, our army and the people of all nationalities of our country, the great teacher of the international proletariat and the oppressed nations and oppressed people, Chairman of the Central Committee of the Communist Party of China, Chairman of the Military Commission of the Central Committee of the Communist Party of China, and Honorary Chairman of the National Committee of the Chinese People's Political Consultative Conference, passed away at 00:10 hours, Sept. 9, 1976, in Peking [12:10 P.M. Wednesday, New York time] because of the worsening of his illness and despite all treatment, although meticulous medical care was given him in every way after he fell ill.

Founder and Leader of Party

Chairman Mao Tse-tung was the founder and wise leader of the Communist Party of China, the Chinese People's Liberation Army and the People's Republic of China. Chairman Mao led our party in waging a protracted, acute and complex struggle against the right and left opportunist lines in the party, defeating the opportunist lines pursued by Chen Tu-hsiu, Chu Chiu-pai, Li Li-san, Lo Chang-lung, Wang Ming, Chang Kuo-tao, Kao Kang, Jao Shu-shih and Peng Teh-huai and again, during the great proletarian Cultural Revolution, triumphing over the counterrevolutionary revisionist line of Liu Shao-chi, Lin Piao and Teng Hsiao-ping, thus enabling our party to develop and grow in strength

steadily in class struggle and the struggle between the two lines.

Led by Chairman Mao, the Communist Party of China has developed through a tortuous path into a great, glorious and correct Marxist-Leninist party which is today exercising leadership over the People's Republic of China.

During the period of the new democratic revolution, Chairman Mao, in accordance with the universal truth of Marxism-Leninism and by combining it with the concrete practice of the Chinese revolution, creatively laid down the general line and general policy of the new democratic revolution, founded the Chinese People's Liberation Army and pointed out that the seizure of political power by armed force in China could be achieved only by following the road of building rural base areas, using the countryside to encircle the cities and finally seizing the cities, and not by any other road.

He led our party, our army and the people of our country in using people's war to overthrow the reactionary rule of imperialism, feudalism and bureaucrat capitalism, winning the great victory of the new democratic revolution and founding the People's Republic of China.

The victory of the Chinese people's revolution led by Chairman Mao changed the situation in the East and the world and blazed a new trail for the cause of liberation of the oppressed nations and oppressed people.

In the period of the Socialist revolution, Chairman Mao comprehensively summed up the positive as well as the negative experience of the international Communist movement, penetratingly analyzed the class relations in Socialist society and, for the first time in

the history of the development of Marxism, unequivocally pointed out that there are still classes and class struggle after the Socialist transformation of the ownership of the means of production has in the main been completed, drew the scientific conclusion that the bourgeoisie is right in the Communist Party, put forth the great theory of continuing the revolution under the dictatorship of the proletariat, and laid down the party's basic line for the entire historical period of socialism.

All the victories of the Chinese people were achieved under the leadership of Chairman Mao; they are all great victories for Mao Tse-tung thought.

The radiance of Mao Tse-tung thought will forever illuminate the road of advance of the Chinese people.

Enriched Treasury of Marxism

Chairman Mao Tse-tung summed up the revolutionary practice in the international communist movement, put forward a series of scientific theses, enriched the theoretical treasury of Marxism and indicated the orientation of struggle for the Chinese people and the revolutionary people throughout the world.

With the great boldness and vision of a proletarian revolutionary, he initiated in the international Communist movement the great struggle to criticize modern revisionism with the Soviet revisionist renegade clique at the core, promoted the vigorous development of the cause of the world proletarian revolution and the cause of all the people of all countries against imperialism and hegemonism, and pushed the history of mankind forward.

Chairman Mao Tse-tung was the greatest Marxist of the contemporary era. In the past half century and more, basing himself on the principle of integrating the universal truth of Marxism-Leninism with the concrete practice of the revolution he inherited, defended and developed Marxism-Leninism in the protracted struggle against the class enemies at home and abroad, both inside and outside the party, and wrote a most brilliant chapter in the history of the movement of proletarian revolution.

He dedicated all his energies throughout his life to the liberation of the Chinese people, to the emancipation of the oppressed nations and oppressed people the world over, and to the cause of communism. With the great resolve of a proletarian revolutionary, he waged a tenacious struggle against his illness, continued to lead the work of the whole party, and the whole army and the whole nation during his illness and fought till his last breath.

The magnificent contributions he made for the Chinese people, the international proletariat and the revolutionary people of the whole world are immortal. The Chinese people and the revolutionary people the world over love him from the bottom of their hearts and have boundless admiration and respect for him.

Guided by Chairman Mao's proletarian revolutionary line, our party, our army and the people of our country continued their triumphant advance and seized great victories in the Socialist revolution and Socialist construction, particularly in the great proletarian Cultural Revolution, in criticizing Lin Biao and Confucius and in criticizing Teng Hsiao-ping [Deng Xiaoping] and repulsing the right deviationist attempt at reversing correct verdicts. Upholding socialism and consolidating the dictatorship of the proletariat in the People's Republic of China, a country with a vast expanse and a large population, is a great contribution of world historic significance which Chairman Mao Tse-tung made to the present era; at the same time, it has provided fresh experience for the international Communist movement in combating and preventing revisionism, consolidating the dictatorship of the proletariat, preventing capitalist restoration and building socialism.

Grief for All Revolutionaries

The passing away of Chairman Mao Tse-tung is an inestimable loss to our party, our army and the people of all the nationalities of our country, to the international proletariat and the revolutionary people of all countries and to the international Communist movement. His passing away is bound to evoke immense grief in the hearts of the people of our country and the revolutionary people of all countries.

The Central Committee of the Communist Party of China calls on the whole party, the whole army and the people of all nationalities throughout the country to turn their grief into strength with determination.

We must carry on the cause left behind by Chairman Mao and persist in taking class struggle as the key link, keep to the party's basic line and persevere in continuing the revolution under the dictatorship of the proletariat.

We must carry on the cause left behind by Chairman Mao and strengthen the centralized leadership of the party, resolutely uphold the unity and unification of the party and closely rally round the party and closely rally round the party central committee.

We must strengthen the building of the party ideologically and organizationally in the course of the struggle between the two lines and resolutely implement the principle of the three-in-one combination of the old, middle-aged and young in accordance with the five requirements for bringing up successors to the cause of the proletarian revolution.

We must carry on the cause left behind by Chairman Mao and consolidate the great unity of the people of all nationalities under the leadership of the working class and based on the worker-peasant alliance, deepen the criticism of Teng Hsiao-ping, continue the struggle to repulse the right deviationist attempt at reversing correct verdicts, consolidate and develop the victories of the great proletarian Cultural Revolution, enthusiastically support the new socialist things, restrict bourgeois right and further consolidate the dictatorship of the proletariat in our country.

We should continue to unfold the three great revolutionary movements of class struggle, the struggle for production and scientific experiment, build our country independently and with the initiative in our own hands, through self-reliance, hard struggle, diligence and thrift, and go all out, aim high and achieve greater, faster, better and more economical results in building socialism.

We must carry on the cause left behind by Chairman Mao and resolutely implement his line on army build-

ing, strengthen the building of the militia, strengthen preparedness against war, heighten our vigilance, and be ready at all times to wipe out any enemy that dares to intrude. We are determined to liberate Taiwan.

We must carry on the cause left behind by Chairman Mao and continue to carry out Chairman Mao's revolutionary line and policies in foreign affairs resolutely.

We must adhere to proletarian internationalism, strengthen the unity between our party and the genuine Marxist-Leninist parties and organizations all over the world, strengthen the unity between the people of our country and the people of all other countries, especially those of the third-world countries, unite with all the forces in the world that can be knitted, and carry the struggle against imperialism, social-imperialism and modern revisionism through to the end.

We will never seek hegemony and will never be a superpower.

We must carry on the cause left behind by Chairman Mao and assiduously study Marxism-Leninism-Mao Tse-tung thought, apply ourselves to the study of works by Marx, Engels, Lenin and Stalin and works by Chairman Mao, fight for the complete overthrow of the bourgeoisie and all other exploiting classes, for the establishment of the dictatorship of the proletariat in place of the dictatorship of the bourgeoisie and for the triumph of socialism over capitalism, and strive to build our country into a powerful socialist state, make a still greater contribution to humanity and realize the ultimate goal of communism.

Long live invincible Marxism-Leninism-Mao Tse-tung thought!

Long live the great, glorious and correct Communist Party of China!

Eternal glory to our great leader and teacher Chairman Mao Tse-tung!

123. Manifesto of Charter 77

Introduction

Throughout the Cold War, Soviet political dominance was never popular in Eastern Europe. On several occasions, in East Berlin in 1953, Hungary in 1956, and Czechoslovakia in 1968, Soviet tanks and troops forcibly reimposed control on countries within the Soviet bloc that had sought greater autonomy. Conservatives in the United States and Europe charged that the policies of détente with the Soviet Union implemented under Presidents Richard Nixon and Gerald Ford by Secretary of State Henry Kissinger, and most particularly the August 1975 Helsinki Agreements on human rights, represented an ineffective and unprincipled abandonment of East European dissenters to communist mercies. In practice, the Helsinki Accords soon became a rallying force for advocates of human rights and political change. On 1 January 1977, 243 prominent Czech citizens published a manifesto with the title “Charter 77” in a West German newspaper. The document was largely drafted by the well-known playwright Václav Havel, with assistance from other dissenters including Jan Patočka and Jiří Hajek. They demanded that their government, which had signed the Helsinki Agreements and various United Nations (UN) covenants on political, economic, and human rights, live up to those undertakings. The manifesto complained that at that time the Czech government simply ignored its public pledges on freedom of expression, freedom from fear, freedom of religion, freedom of travel, the right to education, and the right to organize trade unions. Charter 77 also condemned the political role of the Communist Party and the arbitrary and unconstitutional manner in which it issued political directives and instructions. In order to skirt government prohibitions on the organization of opposition parties or groups, Charter 77 claimed to have no formal structure or institutional framework. Within Czechoslovakia it circulated only in samizdat (privately produced) form, but it was widely published outside the country. Reaction from the Czech government was fierce. The official press harshly attacked the manifesto, and those signing it often lost their jobs, driver’s licenses, and citizenship; saw their children denied access to education; and suffered detention, trial, imprisonment, or exile. In April 1978 a support group was founded to publicize the persecution of those who had signed the manifesto. The following year, six members of this support group, including Havel, a staunch advocate of nonviolent passive-resistance tactics, were tried and sentenced to up to five years in prison. Such repression continued throughout the 1980s, but by the mid-1980s more than 1,200 Czechs had nonetheless signed the manifesto, and Charter 77 continued to issue reports detailing the country’s human rights violations and its failure to live up to the Helsinki Accords. As Soviet controls on Eastern Europe were relaxed in the late 1980s, Charter 77 members became more politically active and were heavily involved in negotiating a smooth transition to noncommunist rule in 1989. On 29 December 1989, Havel became the first president of a democratic Czechoslovakia, and other Charter 77 members likewise took high political office but with mixed results, as few had any governmental experience. Attempts to make the organization the nucleus of a new political party, the Civic Forum, failed to prevent the country’s division in 1992 into separate Czech and Slovak states.

Primary Source

In the Czechoslovak Register of Laws No. 120 of October 13, 1976, texts were published of the International Covenant on Civil and Political Rights, and of the International Covenant on Economic, Social and Cultural Rights, which were signed on behalf of our republic in 1968, reiterated at Helsinki in 1975 and came into force in our country on March 23, 1976. From that date our citizens have enjoyed the rights, and our state the duties, ensuing from them.

The human rights and freedoms underwritten by these covenants constitute features of civilized life for which

many progressive movements have striven throughout history and whose codification could greatly assist humane developments in our society.

We accordingly welcome the Czechoslovak Socialist Republic’s accession to those agreements. Their publication, however, serves as a powerful reminder of the extent to which basic human rights in our country exist, regrettably, on paper alone.

The right to freedom of expression, for example, guaranteed by Article 19 of the first-mentioned covenant, is in our case purely illusory. Tens of thousands of our

citizens are prevented from working in their own fields for the sole reason that they hold views differing from official ones, and are discriminated against and harassed in all kinds of ways by the authorities and public organizations. Deprived as they are of any means to defend themselves, they become victims of a virtual apartheid.

[. . .]

Freedom of public expression is inhibited by the centralized control of all the communication media and of publishing and cultural institutions. No philosophical, political or scientific view or artistic activity that departs ever so slightly from the narrow bounds of official ideology or aesthetics is allowed to be published; no open criticism can be made of abnormal social phenomena; no public defense is possible against false and insulting charges made in official propaganda—the legal protection against “attacks on honor and reputation” clearly guaranteed by Article 17 of the first covenant is in practice non-existent: false accusations cannot be rebutted, and any attempt to secure compensation or correction through the courts is futile; no open debate is allowed in the domain of thought and art.

Many scholars, writers, artists and others are penalized for having legally published or expressed, years ago, opinions which are condemned by those who hold political power today.

Freedom of religious confession, emphatically guaranteed by Article 18 of the first covenant, is continually curtailed by arbitrary official action; by interference with the activity of churchmen, who are constantly threatened by the refusal of the state to permit them the exercise of their functions, or by the withdrawal of such permission; by financial or other transactions against those who express their religious faith in word or action; by constraints on religious training and so forth.

One instrument for the curtailment or in many cases complete elimination of many civic rights is the system by which all national institutions and organizations are in effect subject to political directives from the machinery of the ruling party and to decisions made by powerful individuals.

The constitution of the republic, its laws and legal norms do not regulate the form or content, the issuing or application of such decisions; they are often only given out verbally, unknown to the public at large and beyond its powers to check; their originators are responsible to no one but themselves and their own hierarchy; yet they have a decisive impact on the decision-making and executive organs of government, justice, trade unions, interest groups and all other organizations, of the other political parties, enterprises, factories, institutions, offices and so on, for whom these instructions have precedence even before the law.

Where organizations or individuals, in the interpretation of their rights and duties, come into conflict with such directives, they cannot have recourse to any non-party authority, since none such exists. This constitutes, of course, a serious limitation of the right ensuing from Articles 21 and 22 of the first-mentioned covenant, which provides for freedom of association and forbids any restriction on its exercise, from Article 25 on the right to take part in the conduct of public affairs, and from Article 26 stipulating equal protection by the law without discrimination.

This state of affairs likewise prevents workers and others from exercising the unrestricted right to establish trade unions and other organizations to protect their economic and social interests, and from freely enjoying the right to strike provided for in Clause 1 of Article 8 in the second-mentioned covenant.

Further civic rights, including the explicit prohibition of “arbitrary interference with privacy, family, home or correspondence” (Article 17 of the first covenant), are seriously vitiated by the various forms of interference in the private life of citizens exercised by the Ministry of the Interior, for example by bugging telephones and houses, opening mail, following personal movements, searching homes, setting up networks of neighborhood informers (often recruited by illicit threats or promises) and in other ways.

The ministry frequently interferes in employers’ decisions, instigates acts of discrimination by authorities and organizations, brings weight to bear on the organs of justice and even orchestrates propaganda campaigns

in the media. This activity is governed by no law and, being clandestine, affords the citizen no chance to defend himself.

In cases of prosecution on political grounds the investigative and judicial organs violate the rights of those charged and those defending them, as guaranteed by Article 14 of the first covenant and indeed by Czechoslovak law. The prison treatment of those sentenced in such cases is an affront to their human dignity and a menace to their health, being aimed at breaking their morale.

Clause 2, Article 12 of the first covenant, guaranteeing every citizen the right to leave the country, is consistently violated, or under the pretense of “defense of national security” is subjected to various unjustifiable conditions (Clause 3). The granting of entry visas to foreigners is also treated arbitrarily, and many are unable to visit Czechoslovakia merely because of professional or personal contacts with those of our citizens who are subject to discrimination.

Some of our people—either in private, at their places of work or by the only feasible public channel, the foreign media—have drawn attention to the systematic violation of human rights and democratic freedoms and demanded amends in specific cases. But their pleas have remained largely ignored or been made grounds for police investigation.

Responsibility for the maintenance of rights in our country naturally devolves in the first place on the political and state authorities. Yet not only on them: everyone bears his share of responsibility for the conditions that prevail and accordingly also for the observance of legally enshrined agreements, binding upon all individuals as well as upon governments.

It is this sense of co-responsibility, our belief in the importance of its conscious public acceptance and the general need to give it new and more effective expression that led us to the idea of creating Charter 77, whose inception we today publicly announce.

Charter 77 is a loose, informal and open association of people of various shades of opinion, faiths and profes-

sions united by the will to strive individually and collectively for the respecting of civic and human rights in our own country and throughout the world—rights accorded to all men by the two mentioned international covenants, by the Final Act of the Helsinki conference and by numerous other international documents opposing war, violence and social or spiritual oppression, and which are comprehensively laid down in the U.N. Universal Charter of Human Rights.

Charter 77 springs from a background of friendship and solidarity among people who share our concern for those ideals that have inspired, and continue to inspire, their lives and their work.

Charter 77 is not an organization; it has no rules, permanent bodies or formal membership. It embraces everyone who agrees with its ideas and participates in its work. It does not form the basis for any oppositional political activity. Like many similar citizen initiatives in various countries, West and East, it seeks to promote the general public interest.

It does not aim, then, to set out its own platform of political or social reform or change, but within its own field of impact to conduct a constructive dialogue with the political and state authorities, particularly by drawing attention to individual cases where human and civic rights are violated, to document such grievances and suggest remedies, to make proposals of a more general character calculated to reinforce such rights and machinery for protecting them, to act as an intermediary in situations of conflict which may lead to violations of rights, and so forth.

By its symbolic name Charter 77 denotes that it has come into being at the start of a year proclaimed as Political Prisoners’ Year—a year in which a conference in Belgrade is due to review the implementation of the obligations assumed at Helsinki.

As signatories, we hereby authorize Professor Dr. Jan Patočka, Dr. Vaclav Havel and Professor Dr. Jiri Hajek to act as the spokesmen for the Charter. These spokesmen are endowed with full authority to represent it

vis-a-vis state and other bodies, and the public at home and abroad, and their signatures attest to the authenticity of documents issued by the Charter. They will have us and others who join us as their colleagues taking part in any needful negotiations, shouldering particular tasks and sharing every responsibility.

We believe that Charter 77 will help to enable all citizens of Czechoslovakia to work and live as free human beings.

Prague, 1 January 1977

124. The Framework for Peace in the Middle East (Camp David Accords), 17 September 1978

Introduction

From the time of its foundation in 1948, the existence of the state of Israel was a constant grievance to neighboring Arab states. Their resentment was intensified by Israeli military successes in the 1967 Six-Day War, in the course of which Israel seized the Sinai Peninsula from Egypt and territory from Jordan then occupied by Palestinians, including the West Bank of the Jordan River and the Gaza Strip. United Nations (UN) Security Council Resolution 242, passed in late 1967, urged that Israel withdraw to secure frontiers—not necessarily identical to those prior to the war—in exchange for a lasting peace settlement with its Arab neighbors. The product of negotiations held in September 1978 between Egyptian President Anwar Sadat and Israeli Prime Minister Menachem Begin, the Camp David Accords established an agreement by which the two countries could work to secure peace in the Middle East. The talks were hosted by U.S. President Jimmy Carter at the presidential retreat at Camp David, Maryland, and are generally considered a high point of his administration. They marked the first occasion on which top Arab and Israeli leaders were able to meet and negotiate in a relatively friendly atmosphere.

Primary Source

Muhammad Anwar al-Sadat, President of the Arab Republic of Egypt, and Menachem Begin, Prime Minister of Israel, met with Jimmy Carter, President of the United States of America, at Camp David from September 5 to September 17, 1978, and have agreed on the following framework for peace in the Middle East. They invite other parties to the Arab-Israeli conflict to adhere to it.

[. . .]

Framework

Taking these factors into account, the parties are determined to reach a just, comprehensive, and durable settlement of the Middle East conflict through the conclusion of peace treaties based on Security Council resolutions 242 and 338 in all their parts. Their purpose is to achieve peace and good neighborly relations. They recognize that for peace to endure, it must in-

volve all those who have been most deeply affected by the conflict. They therefore agree that this framework, as appropriate, is intended by them to constitute a basis for peace not only between Egypt and Israel, but also between Israel and each of its other neighbors which is prepared to negotiate peace with Israel on this basis. With that objective in mind, they have agreed to proceed as follows:

A. West Bank and Gaza

1. Egypt, Israel, Jordan and the representatives of the Palestinian people should participate in negotiations on the resolution of the Palestinian problem in all its aspects. To achieve that objective, negotiations relating to the West Bank and Gaza should proceed in three stages:

- a. Egypt and Israel agree that, in order to ensure a peaceful and orderly transfer of authority, and taking into account the security concerns of all

the parties, there should be transitional arrangements for the West Bank and Gaza for a period not exceeding five years. In order to provide full autonomy to the inhabitants, under these arrangements the Israeli military government and its civilian administration will be withdrawn as soon as a self-governing authority has been freely elected by the inhabitants of these areas to replace the existing military government. To negotiate the details of a transitional arrangement, Jordan will be invited to join the negotiations on the basis of this framework. These new arrangements should give due consideration both to the principle of self-government by the inhabitants of these territories and to the legitimate security concerns of the parties involved.

- b. Egypt, Israel, and Jordan will agree on the modalities for establishing elected self-governing authority in the West Bank and Gaza. The delegations of Egypt and Jordan may include Palestinians from the West Bank and Gaza or other Palestinians as mutually agreed. The parties will negotiate an agreement which will define the powers and responsibilities of the self-governing authority to be exercised in the West Bank and Gaza. A withdrawal of Israeli armed forces will take place and there will be a redeployment of the remaining Israeli forces into specified security locations. The agreement will also include arrangements for assuring internal and external security and public order. A strong local police force will be established, which may include Jordanian citizens. In addition, Israeli and Jordanian forces will participate in joint patrols and in the manning of control posts to assure the security of the borders.
- c. When the self-governing authority (administrative council) in the West Bank and Gaza is established and inaugurated, the transitional period of five years will begin. As soon as possible, but not later than the third year after the beginning of the transitional period, negotiations will take place to determine the final status of the West Bank and Gaza and its relationship with its neighbors and to conclude a peace treaty between Israel and Jordan by the end of the transitional period. These negotiations will be conducted among Egypt,

Israel, Jordan and the elected representatives of the inhabitants of the West Bank and Gaza. Two separate but related committees will be convened, one committee, consisting of representatives of the four parties which will negotiate and agree on the final status of the West Bank and Gaza, and its relationship with its neighbors, and the second committee, consisting of representatives of Israel and representatives of Jordan to be joined by the elected representatives of the inhabitants of the West Bank and Gaza, to negotiate the peace treaty between Israel and Jordan, taking into account the agreement reached in the final status of the West Bank and Gaza. The negotiations shall be based on all the provisions and principles of UN Security Council Resolution 242. The negotiations will resolve, among other matters, the location of the boundaries and the nature of the security arrangements. The solution from the negotiations must also recognize the legitimate right of the Palestinian peoples and their just requirements. In this way, the Palestinians will participate in the determination of their own future through:

- i. The negotiations among Egypt, Israel, Jordan and the representatives of the inhabitants of the West Bank and Gaza to agree on the final status of the West Bank and Gaza and other outstanding issues by the end of the transitional period.
- ii. Submitting their agreements to a vote by the elected representatives of the inhabitants of the West Bank and Gaza.
- iii. Providing for the elected representatives of the inhabitants of the West Bank and Gaza to decide how they shall govern themselves consistent with the provisions of their agreement.
- iv. Participating as stated above in the work of the committee negotiating the peace treaty between Israel and Jordan.
- d. All necessary measures will be taken and provisions made to assure the security of Israel and its neighbors during the transitional period and beyond. To assist in providing such security, a strong local police force will be constituted by the self-governing authority. It will be composed of inhabitants of the West Bank and Gaza. The

police will maintain liaison on internal security matters with the designated Israeli, Jordanian, and Egyptian officers.

- e. During the transitional period, representatives of Egypt, Israel, Jordan, and the self-governing authority will constitute a continuing committee to decide by agreement on the modalities of admission of persons displaced from the West Bank and Gaza in 1967, together with necessary measures to prevent disruption and disorder. Other matters of common concern may also be dealt with by this committee.
- f. Egypt and Israel will work with each other and with other interested parties to establish agreed procedures for a prompt, just and permanent implementation of the resolution of the refugee problem.

B. Egypt-Israel

1. Egypt and Israel undertake not to resort to the threat or the use of force to settle disputes. Any disputes shall be settled by peaceful means in accordance with the provisions of Article 33 of the U.N. Charter.

2. In order to achieve peace between them, the parties agree to negotiate in good faith with a goal of concluding within three months from the signing of the Framework a peace treaty between them while inviting the other parties to the conflict to proceed simultaneously to negotiate and conclude similar peace treaties with a view to achieving a comprehensive peace in the area. The Framework for the Conclusion of a Peace Treaty between Egypt and Israel will govern the peace negotiations between them. The parties will agree on the modalities and the timetable for the implementation of their obligations under the treaty.

C. Associated Principles

1. Egypt and Israel state that the principles and provisions described below should apply to peace treaties between Israel and each of its neighbors—Egypt, Jordan, Syria and Lebanon.

2. Signatories shall establish among themselves relationships normal to states at peace with one another. To this end, they should undertake to abide by all the provisions of the U.N. Charter. Steps to be taken in this respect include:

- a. full recognition;
- b. abolishing economic boycotts;
- c. guaranteeing that under their jurisdiction the citizens of the other parties shall enjoy the protection of the due process of law.

3. Signatories should explore possibilities for economic development in the context of final peace treaties, with the objective of contributing to the atmosphere of peace, cooperation and friendship which is their common goal.

4. Claims commissions may be established for the mutual settlement of all financial claims.

5. The United States shall be invited to participate in the talks on matters related to the modalities of the implementation of the agreements and working out the timetable for the carrying out of the obligations of the parties.

6. The United Nations Security Council shall be requested to endorse the peace treaties and ensure that their provisions shall not be violated. The permanent members of the Security Council shall be requested to underwrite the peace treaties and ensure respect for the provisions. They shall be requested to conform their policies and actions with the undertaking contained in this Framework.

125. Jimmy Carter: Address to the Nation, 15 December 1978

Introduction

For several years after the reopening in the early 1970s of relations between Mainland China and the United States, the two countries were still not in a state of full diplomatic recognition. The major reason for this was that although the Republic of China (ROC) on Taiwan was no longer a member of the United Nations (UN), it still had diplomatic relations with the United States. Chairman Mao Zedong died in 1976 and was initially succeeded by a radical faction headed by his wife Jiang Qing, whose leading members were known as the Gang of Four. They were arrested later that year, and by 1978 it was clear that the pragmatic elderly revolutionary Vice Premier Deng Xiaoping was firmly in control of the Chinese government and bent on instituting major economic reform programs. Deng was eager to increase Chinese access to American technological and business expertise and investment capital, something that he believed full recognition would facilitate. In 1978 the administration of President Jimmy Carter decided to switch diplomatic recognition from its longtime ally Taiwan to the People's Republic of China (PRC). The main stumbling block to doing so was in fact the status of Taiwan, which the PRC claimed as an integral part of China. Addressing the American people on this subject, Carter expressed the hope of the U.S. government that the status of Taiwan would be resolved by peaceful rather than forceful means. He also stated that the United States intended, as many other nations already did, to maintain existing "commercial, cultural, trade, and other relations with Taiwan through nongovernmental means." The Chinese government, meanwhile, issued a statement to the effect that "the way of bringing Taiwan back to the embrace of the motherland and reunifying the country [was] entirely China's affair." Despite Carter's reassurances, Taiwan officials were deeply apprehensive over the new policy. For many years Taiwan had enjoyed excellent relations with numerous congressmen, and in April 1979 Congress passed the Taiwan Relations Act, pledging that the U.S. government would maintain its cooperation with Taiwan and would, in particular, continue to supply Taiwan with the arms that might be required to protect the island against a Chinese military attack.

Primary Source

Good evening. I would like to read a joint communiqué which is being simultaneously issued in Peking at this very moment by the leaders of the People's Republic of China:

[At this point, the President read the text of the joint communiqué, which reads as follows:]

JOINT COMMUNIQUE ON THE ESTABLISHMENT OF DIPLOMATIC RELATIONS BETWEEN THE UNITED STATES OF AMERICA AND THE PEOPLE'S REPUBLIC OF CHINA

JANUARY 1, 1979

The United States of America and the People's Republic of China have agreed to recognize each other and to establish diplomatic relations as of January 1, 1979.

The United States of America recognizes the Government of the People's Republic of China as the sole

legal Government of China. Within this context, the people of the United States will maintain cultural, commercial, and other unofficial relations with the people of Taiwan.

The United States of America and the People's Republic of China reaffirm the principles agreed on by the two sides in the Shanghai Communiqué and emphasize once again that:

- Both wish to reduce the danger of international military conflict.
- Neither should seek hegemony in the Asia-Pacific region or in any other region of the world and each is opposed to efforts by any other country or group of countries to establish such hegemony.
- Neither is prepared to negotiate on behalf of any third party or to enter into agreements or understandings with the other directed at other states.
- The Government of the United States of America acknowledges the Chinese position that there is but one China and Taiwan is part of China.

—Both believe that normalization of Sino-American relations is not only in the interest of the Chinese and American peoples but also contributes to the cause of peace in Asia and the world.

The United States of America and the People's Republic of China will exchange Ambassadors and establish Embassies on March 1, 1979.

Yesterday, our country and the People's Republic of China reached this final historic agreement. On January 1, 1979, a little more than 2 weeks from now, our two Governments will implement full normalization of diplomatic relations.

As a nation of gifted people who comprise about one-fourth of the total population of the Earth, China plays, already, an important role in world affairs, a role that can only grow more important in the years ahead.

We do not undertake this important step for transient tactical or expedient reasons. In recognizing the People's Republic of China, that it is the single Government of China, we are recognizing simple reality. But far more is involved in this decision than just the recognition of a fact.

[. . .]

We have already begun to inform our allies and other nations and the Members of the Congress of the details of our intended action. But I wish also tonight to convey a special message to the people of Taiwan—I have already communicated with the leaders in Taiwan—with whom the American people have had and will have extensive, close, and friendly relations. This is important between our two peoples.

As the United States asserted in the Shanghai Communiqué of 1972, issued on President Nixon's historic visit, we will continue to have an interest in the peaceful resolution of the Taiwan issue. I have paid special attention to ensuring that normalization of relations between our country and the People's Republic will not jeopardize the well-being of the people of Taiwan. The people of our country will maintain our current commercial, cultural, trade, and other relations with

Taiwan through nongovernmental means. Many other countries in the world are already successfully doing this.

These decisions and these actions open a new and important chapter in our country's history and also in world affairs.

[. . .]

Remarks at a White House Briefing Following the Address to the Nation, 15 December 1978

THE PRESIDENT. Well, I wanted to come by and let you know that I believe this to be an extremely important moment in the history of our Nation. It's something that I and my two predecessors have sought avidly. We have maintained our own United States position firmly, and only since the last few weeks has there been an increasing demonstration to us that Premier Hua and Vice Premier Teng have been ready to normalize relations. I think the interests of Taiwan have been adequately protected. One of the briefers will explain the details to you.

Our Ambassador there, Leonard Woodcock, has done a superb job in presenting our own views strongly and clearly to the officials of the People's Republic of China. I will be preparing myself adequately for the visit of Vice Premier Teng. We invited him on one day, he accepted the next, without delay, and I think he's looking forward to this trip with a great deal of anticipation and pleasure.

I have talked personally this evening to Prime Minister Ohira [of Japan]. Early this morning we notified the officials in Taiwan, and we have also notified many of the leaders around the world of this long-awaited development in international diplomacy.

I think that one of the greatest benefits that will be derived from this is the continuation of strong trade, cultural relationships with Taiwan, the people of Taiwan, and a new vista for prosperous trade relationships with almost a billion people in the People's Republic of China. This is also, of course, enhanced by the new opportunities for us to understand the people of China, and to work avidly for peace in that region and for world peace.

This afternoon the Soviet Union officials were notified through their Ambassador here, Mr. Dobrynin. And I think the Soviets were familiar with the fact that we were anticipating normalization whenever the Chinese were willing to meet our reasonable terms, and they were not surprised. As you well know, the Soviet Union and People's Republic of China have diplomatic relations between themselves.

My own assessment is that this will be well received in almost every nation of the world, perhaps all of them, because it will add to stability. And the Soviets and others know full well, because of our own private explanations to them, not just recently but in months gone by, that we have no desire whatsoever to use our new relationships with China to the disadvantage of the Soviets or anyone else. We believe this will enhance stability and not cause instability in Asia and the rest of the world.

I'm very pleased with it. And I obviously have to give a major part of the credit to President Nixon and to President Ford, who laid the groundwork for this successful negotiation. And most of the premises that

were spelled out in the Shanghai Communiqué 6 years ago or more have been implemented now.

You can tell that I'm pleased, and I know that the world is waiting for your accurate explanation of the results.

[. . .]

I'll take just one question.

Q. Mr. President, you said the response to your speech would be "massive applause throughout the Nation." What do you think the response to your speech will be in Taiwan?

THE PRESIDENT. I doubt if there will be massive applause in Taiwan, but we are going to do everything we can to assure the Taiwanese that we put at top—as one of the top priorities in our own relationships with the People's Republic and them—that the well-being of the people of Taiwan will not be damaged.

126. Camp David Peace Treaty, 26 March 1979

Introduction

The Camp David Peace Treaty, also known as the Egyptian-Israeli Peace Treaty, was signed in 1979 as an outcome of the fall of 1978 Camp David Summit Conference that brought leaders from Israel and Egypt to U.S. President Jimmy Carter's Camp David retreat. During the thirteen-day conference, a framework for peace between Israel and Egypt was negotiated and formally agreed upon. The following year, Israel signed a peace treaty returning the Sinai Peninsula to Egypt. Carter hoped that concluding this treaty would encourage the subsequent negotiation of similar agreements between Israel and other Arab states. In practice, fellow Arab states boycotted Egypt for making peace with Israel. In October 1981, moreover, Muslim extremist gunmen who resented the peace treaty assassinated Egypt's President Anwar Sadat, who had negotiated the Camp David Accords, while he was watching a military parade in Cairo.

Primary Source

PREAMBLE

"The Government of the Arab Republic of Egypt and the Government of the State of Israel;

Convinced of the urgent necessity of the establishment of a just, comprehensive and lasting peace in the

Middle East in accordance with Security Council Resolution 242 and Resolution 338;

Reaffirming their adherence to the 'Framework for Peace in the Middle East Agreed at Camp David,' dated September 17, 1978. . . .

Agree to the following provisions:

ARTICLE I

1. The state of war between the Parties will be terminated and peace will be established between them upon the exchange of instruments of ratification of this Treaty.

2. Israel will withdraw all its armed forces and civilians from the Sinai behind the international boundary between Egypt and mandated Palestine . . . and Egypt will resume the exercise of its full sovereignty over the Sinai.

3. Upon completion of the interim withdrawal . . . the Parties will establish normal and friendly relations. . . .

ARTICLE II

The permanent boundary between Egypt and Israel is the recognized international boundary between Egypt and the former mandated territory of Palestine . . . without prejudice to the issue of the Gaza Strip. . . .

ARTICLE III

1. The Parties will apply between them the provisions of the Charter of the United Nations and the principles of international law governing relations among states in times of peace. In particular:

- a. They recognize and will respect each other's sovereignty, territorial integrity and political independence;
- b. They recognize and will respect each other's right to live in peace within their secure and recognized boundaries;
- c. They will refrain from the threat or use of force, directly or indirectly, against each other and will settle all disputes between them by peaceful means.

2. Each Party undertakes to ensure that acts or threats of belligerency, hostility, or violence do not originate from and are not committed from within its territory, or by any forces subject to its control or by any other forces stationed on its territory, against the population, citizens or property of the other Party. Each Party also undertakes to refrain from organizing, instigating, inciting, assisting or participating in acts or threats of bel-

ligerency, hostility, subversion or violence against the other Party, anywhere, and undertakes to ensure that perpetrators of such acts are brought to justice.

3. The Parties agree that the normal relationship established between them will include full recognition, diplomatic, economic and cultural relations, termination of economic boycotts and discriminatory barriers to the free movement of people and goods, and will guarantee the mutual enjoyment by citizens of the due process of law. The process by which they undertake to achieve such a relationship parallel to the implementation of other provisions of this Treaty is set out in the annexed protocol (Annex III).

ARTICLE IV

1. In order to provide maximum security for both Parties on the basis of reciprocity, agreed security arrangements will be established including limited force zones in Egyptian and Israeli territory, and United Nations forces and observers . . . and other security arrangements the Parties may agree upon. . . .

ARTICLE V

1. Ships of Israel, and cargoes destined for or coming from Israel, shall enjoy the right of free passage through the Suez Canal and its approaches through the Gulf of Suez and the Mediterranean Sea. . . . Israeli nationals, vessels and cargoes, as well as persons, vessels and cargoes destined for or coming from Israel, shall be accorded non-discriminatory treatment in all matters connected with usage of the canal.

2. The Parties consider the Strait of Tiran and the Gulf of Aqaba to be international waterways open to all nations for unimpeded and nonsuspendable freedom of navigation and overflight. The Parties will respect each other's right to navigation and overflight for access to either country through the Strait of Tiran and the Gulf of Aqaba.

127. Taiwan Relations Act, Public Law 96-8, 96th Congress, 10 April 1979

Introduction

In December 1978, President Jimmy Carter announced that his administration intended to transfer diplomatic recognition from the Republic of China (ROC) on the island of Taiwan to the communist People's Republic of China (PRC) on the Chinese mainland. In so doing, the United States would also abrogate the Mutual Defense Treaty it had signed with Taiwan in 1954. Taiwanese officials feared that this would leave the island exposed to PRC military attack and that before long Taiwan would be reunited with—or, as they saw it, annexed to—the mainland. The ROC on Taiwan enjoyed excellent relations with numerous U.S. senators and congressmen, who were equally apprehensive that such a fate might befall the former U.S. ally. In response to Carter's statement, in April 1979 Congress therefore passed the Taiwan Relations Act, which was made effective retrospectively from 1 January 1979. The act promised that it remained the policy of the U.S. government to cultivate close and friendly relations with "the people on Taiwan." It emphasized that the U.S. opening of relations with Mainland China "rests upon the expectation that the future of Taiwan will be determined by peaceful means" and that any attempt to use military or economic pressure against Taiwan to determine the islands's future would be a matter "of grave concern to the United States." Most significantly, the act pledged that the United States would continue "to provide Taiwan with arms of a defensive character." The "nature and quantity" of such armaments required would be left entirely for Congress and the president to determine. Congress also expected to be informed by the president of any potential threat to Taiwan. For the indefinite future, the status of Taiwan would remain the most significant irritant to U.S.-PRC relations. The two sides had not reached agreement on the subject of arms sales to Taiwan prior to the decision to move to full diplomatic recognition, but China had already stated that once this had been accomplished, it expected further negotiations on the subject. In a further communiqué, signed on 17 August 1982, the PRC and the United States affirmed their continued adherence to their statements in the Shanghai Communiqué of 1972 and stated that the United States would not follow a "two Chinas" or "one China, one Taiwan" policy. The U.S. government expressed its continued adherence to a peaceful resolution of the relationship between Taiwan and Mainland China and then "state[d] that it does not seek to carry out a long-term policy of arms sales to Taiwan, that its arms sales to Taiwan will not exceed, either in qualitative or in quantitative terms, the level of those supplied in recent years since the establishment of diplomatic relations between the United States and China, and that it intends gradually to reduce its sale of arms to Taiwan, leading, over a period of time, to a final resolution." American arms sales to Taiwan never tapered off as dramatically as this statement seemed to promise. As independence forces gained political strength on the island, the subject of the status of Taiwan flared up repeatedly to bedevil Sino-American relations. In practice, however, the situation stabilized and reached an uneasy equilibrium in which Taiwan and the mainland remained effectively separate states, but the United States cautiously refused to jeopardize its own relationship and perhaps risk war with the PRC by countenancing any moves by its Taiwanese client to declare formal independence.

An Act:

people of the United States and the people on Taiwan,
and for other purposes.

To help maintain peace, security, and stability in the Western Pacific and to promote the foreign policy of the United States by authorizing the continuation of commercial, cultural, and other relations between the

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,

SHORT TITLE

SECTION 1. This Act may be cited as the “Taiwan Relations Act”.

FINDINGS AND DECLARATION OF POLICY

SEC. 2.

(a) The President—having terminated governmental relations between the United States and the governing authorities on Taiwan recognized by the United States as the Republic of China prior to January 1, 1979, the Congress finds that the enactment of this Act is necessary—

(1) to help maintain peace, security, and stability in the Western Pacific; and

(2) to promote the foreign policy of the United States by authorizing the continuation of commercial, cultural, and other relations between the people of the United States and the people on Taiwan.

(b) It is the policy of the United States—

(1) to preserve and promote extensive, close, and friendly commercial, cultural, and other relations between the people of the United States and the people on Taiwan, as well as the people on the China mainland and all other peoples of the Western Pacific area;

(2) to declare that peace and stability in the area are in the political, security, and economic interests of the United States, and are matters of international concern;

(3) to make clear that the United States decision to establish diplomatic relations with the People’s Republic of China rests upon the expectation that the future of Taiwan will be determined by peaceful means;

(4) to consider any effort to determine the future of Taiwan by other than peaceful means, including by boycotts or embargoes, a threat to the peace and security of the Western Pacific area and of grave concern to the United States;

(5) to provide Taiwan with arms of a defensive character; and

(6) to maintain the capacity of the United States to resist any resort to force or other forms of coercion that would jeopardize the security, or the social or economic system, of the people on Taiwan.

(c) Nothing contained in this Act shall contravene the interest of the United States in human rights, especially with respect to the human rights of all the approximately eighteen million inhabitants of Taiwan. The preservation and enhancement of the human rights of all the people on Taiwan are hereby reaffirmed as objectives of the United States.

IMPLEMENTATION OF UNITED STATES POLICY WITH REGARD TO TAIWAN

SEC. 3.

(a) In furtherance of the policy set forth in section 2 of this Act, the United States will make available to Taiwan such defense articles and defense services in such quantity as may be necessary to enable Taiwan to maintain a sufficient self-defense capability.

(b) The President and the Congress shall determine the nature and quantity of such defense articles and services based solely upon their judgment of the needs of Taiwan, in accordance with procedures established by law. Such determination of Taiwan’s defense needs shall include review by United States military authorities in connection with recommendations to the President and the Congress.

(c) The President is directed to inform the Congress promptly of any threat to the security or the social or economic system of the people on Taiwan and any danger to the interests of the United States arising therefrom. The President and the Congress shall determine, in accordance with constitutional processes, appropriate action by the United States in response to any such danger.

APPLICATION OF LAWS; INTERNATIONAL AGREEMENTS

SEC. 4.

The absence of diplomatic relations or recognition shall not affect the application of the laws of the United States with respect to Taiwan, and the laws of the United States shall apply with respect to Taiwan in the

manner that the laws of the United States applied with respect to Taiwan prior to January 1, 1979.

(b) The application of subsection (a) of this section shall include, but shall not be limited to, the following:

[. .]

(5) Nothing in this Act, nor the facts of the President's action in extending diplomatic recognition to the People's Republic of China, the absence of diplomatic relations between the people on Taiwan and the United States, or the lack of recognition by the United States, and attendant circumstances thereto, shall be construed in any administrative or judicial proceeding as a basis for any United States Government agency, commission, or department to make a finding of fact or determination of law, under the Atomic Energy Act of 1954 and the Nuclear Non-Proliferation Act of 1978, to deny an export license application or to revoke an existing export license for nuclear exports to Taiwan.

(6) For purposes of the Immigration and Nationality Act, Taiwan may be treated in the manner specified in the first sentence of section 202(b) of that Act.

(7) The capacity of Taiwan to sue and be sued in courts in the United States, in accordance with the laws of the

United States, shall not be abrogated, infringed, modified, denied, or otherwise affected in any way by the absence of diplomatic relations or recognition.

(8) No requirement, whether expressed or implied, under the laws of the United States with respect to maintenance of diplomatic relations or recognition shall be applicable with respect to Taiwan.

(c) For all purposes, including actions in any court in the United States, the Congress approves the continuation in force of all treaties and other international agreements, including multilateral conventions, entered into by the United States and the governing authorities on Taiwan recognized by the United States as the Republic of China prior to January 1, 1979, and in force between them on December 31, 1978, unless and until terminated in accordance with law.

(d) Nothing in this Act may be construed as a basis for supporting the exclusion or expulsion of Taiwan from continued membership in any international financial institution or any other international organization.

128. Ayatollah Ruhollah Khomeini: Speech on the 1979 Uprising of Khurdad 15

Introduction

Ayatollah Ruhollah Khomeini, the chief political and religious leader in Iran in the 1980s, assumed power in the country at the head of a coup against Mohammad Reza Shah Pahlavi in early 1979 in what became known as the Islamic Revolution. In this speech, delivered that same year on the anniversary of the rebellion, Khomeini discussed the uprising of Khurdad 15, an unsuccessful revolt against the shah that Khomeini helped to mount in June 1963 but that the shah's forces had brutally suppressed. This episode represented a landmark both in Khomeini's personal career—he spent almost a year in prison before leaving Iran for a lengthy exile in France—and in his efforts to depose the shah. Equally significant, Khomeini was fiercely anti-Western, and his regime became the standard-bearer of radical fundamentalist Islam. Whereas the overthrown shah had ruled with Western support and followed modernizing if authoritarian policies, Khomeini rejected the West, whose attitudes and practices he regarded as deeply inimical to Islamic beliefs and practices. Adopting Western ideas and methods in such areas as human rights would, Khomeini argued, undermine the purity of Islam. Effectively, he called on Muslims to wage religious war against the West, resonant appeals that found a ready audience throughout the Muslim world and helped to promote a new wave of anti-Western Islamic violence in the late twentieth and early twenty-first centuries.

After Islamic revolutionaries stormed the American embassy in Tehran in November 1979, taking fifty-two employees there hostage and holding them for more than a year, relations between the United States and Iran reached new lows as the American government froze Iranian assets and imposed a trade embargo. Iran was no longer, as it had been under the shah, a cornerstone of U.S. Middle Eastern policy. Indeed, when neighboring Iraq began a lengthy war against Iran in 1980, the United States tended to favor Iraq over Iran. Khomeini remained in power in Iran until his death in 1989, and for more than a quarter of a century Iran remained a theocracy at odds with the United States.

Primary Source

Those who are ignorant must be guided to a correct understanding. We must say to them: “You who imagine that something can be achieved in Iran by some means other than Islam, you who suppose that something other than Islam overthrew the Shah’s regime, you who believe non-Islamic elements played a role—study the matter carefully. Look at the tombstones of those who gave their lives in the movement of Khurdad 15. If you can find a single tombstone belonging to one of the non-Islamic elements, it will mean they played a role. And if, among the tombstones of the Islamic elements, you can find a single tombstone belonging to someone from the upper echelons of society, it will mean that they too played a role. But you will not find a single tombstone belonging to either of those groups. All the tombstones belong to Muslims from the lower echelons of society: peasants, workers, tradesmen, committed religious scholars. Those who imagine that some force other than Islam could shatter the great barrier of tyranny are mistaken. As for those who oppose us because of their opposition to Islam, we must cure them by means of guidance, if it is at all possible; otherwise, we will destroy these agents of foreign powers with the same fist that destroyed the Shah’s regime.

Your opponents, oppressed people, have never suffered. In the time of the taghut, they never suffered because either they were in agreement with the regime and loyal to it, or they kept silent. Now you have spread the banquet of freedom in front of them and they have sat down to eat. Xenomaniacs, people infatuated with the West, empty people, people with no content! Come to your senses; do not try to westernize everything you have! Look at the West, and see who the people

are in the West that present themselves as champions of human rights and what their aims are. Is it human rights they really care about, or the rights of the superpowers? What they really want to secure are the rights of the superpowers. Our jurists should not follow or imitate them. You should implement human rights as the working classes of our society understand them. Yes, they are the real Society for the Defense of Human Rights. They are the ones who secure the well-being of humanity; they work while you talk; for they are Muslims and Islam cares about humanity. You who have chosen a course other than Islam—you do nothing for humanity. All you do is write and speak in an effort to divert our movement from its course.

But as for those who want to divert our movement from its course, who have in mind treachery against Islam and the nation, who consider Islam incapable of running the affairs of our country despite its record of 1400 years—they have nothing at all to do with our people, and this must be made clear. How much you talk about the West, claiming that we must measure Islam in accordance with Western criteria! What an error! It was the mosques that created this Revolution, the mosques that brought this movement into being. The mihrab was a place not only for preaching, but also for war—war against both the devil within and the tyrannical powers without. So preserve your mosques, O people. Intellectuals, do not be Western-style intellectuals, imported intellectuals; do your share to preserve the mosques!

129. Strategic Arms Limitation Treaty II, 18 June 1979

Introduction

When U.S. President Richard Nixon and Soviet leader Leonid Brezhnev signed the first Strategic Arms Limitation Treaties (SALT I) in 1972, including the Interim Agreement covering the subsequent five years, it was their expectation that more permanent arrangements would subsequently be negotiated. At a June 1974 summit in Moscow, the number of antiballistic missile (ABM) sites permitted each superpower was reduced to one, and a Threshold Test Ban Treaty forbade underground nuclear tests exceeding 160 kilotons. At Vladivostok the following November, President Gerald Ford, who had succeeded Nixon the previous August, and the Soviets accepted ceilings for the subsequent ten years on the numbers of missiles, single and multiple nuclear delivery vehicles, and heavy missile silos each power might possess, anticipating that these would shortly be enshrined in a formal SALT II Treaty. They expected further negotiations to extend and ideally increase these limitations beyond 1985. Jimmy Carter, who became president in 1977, was eager to reach such an agreement, but domestic political factors made this difficult. Conservatives within and outside his own administration, including Zbigniew Brzezinski, his Polish-born national security advisor, as well as prominent congressmen, were skeptical. Influential hawks such as Democratic Senator Henry Jackson sought deep reductions in the ceilings agreed to in the 1975 Vladivostok accords, which they feared left the Soviets undesirably strong; sought to restrict Soviet development of long-range bombers; and suggested that arms control be made contingent on a drastic reduction of Soviet activities in Africa and other developing nations. Not until 1979 did Soviet and American officials draft a SALT II Treaty that both sides could accept, one imposing both qualitative and quantitative restrictions on American and Soviet strategic nuclear weapons and delivery systems, equalizing the ceilings on each state. Signing this treaty at a Vienna summit on 18 June 1979, Carter and Brezhnev tentatively though inconclusively discussed the potential for a SALT III agenda. The U.S. Senate, however, refused to ratify the treaty. Besides characterizing SALT II as overly favorable to the Soviets, conservatives again condemned Russian activities in Africa and the presence of Soviet training brigades in Cuba. Treaty opponents also noted that the overthrow of the shah of Iran the previous January by a radical and strongly anti-American Muslim government headed by the aged Ayatollah Ruhollah Khomeini had deprived the United States of intelligence posts capable of monitoring Soviet treaty compliance. Concessions by Carter proved insufficient to win them over, and after the Soviet invasion of Afghanistan in December 1979, Carter himself withdrew the treaty from consideration by the Senate. In practice, though, both nations observed the treaty provisions, evidence of the continuing value to both superpowers of tacit complicity in maintaining some degree of international nuclear stability.

Primary Source

TREATY BETWEEN THE UNITED STATES OF AMERICA AND THE UNION OF SOVIET SOCIALIST REPUBLICS ON THE LIMITATION OF STRATEGIC OFFENSIVE ARMS, TOGETHER WITH AGREED STATEMENTS AND COMMON UNDERSTANDINGS REGARDING THE TREATY

The United States of America and the Union of Soviet Socialist Republics, hereinafter referred to as the Parties, Conscious that nuclear war would have devastating consequences for all mankind,

[. . .]

Have agreed as follows:

ARTICLE I

Each Party undertakes, in accordance with the provisions of this Treaty, to limit strategic offensive arms quantitatively and qualitatively, to exercise restraint in the development of new types of strategic offensive arms, and to adopt other measures provided for in this Treaty.

[. . .]

ARTICLE III

1. Upon entry into force of this Treaty, each Party undertakes to limit ICBM launchers, SLBM launchers,

heavy bombers, and ASBMs to an aggregate number not to exceed 2,400.

2. Each Party undertakes to limit, from January 1, 1981, strategic offensive arms referred to in paragraph 1 of this Article to an aggregate number not to exceed 2,250, and to initiate reductions of those arms which as of that date would be in excess of this aggregate number.

3. Within the aggregate numbers provided for in paragraphs 1 and 2 of this Article and subject to the provisions of this Treaty, each Party has the right to determine the composition of these aggregates.

4. For each bomber of a type equipped for ASBMs, the aggregate numbers provided for in paragraphs 1 and 2 of this Article shall include the maximum number of such missiles for which a bomber of that type is equipped for one operational mission.

5. A heavy bomber equipped only for ASBMs shall not itself be included in the aggregate numbers provided for in paragraphs 1 and 2 of this Article.

6. Reductions of the numbers of strategic offensive arms required to comply with the provisions of paragraphs 1 and 2 of this Article shall be carried out as provided for in Article XI.

ARTICLE IV

1. Each Party undertakes not to start construction of additional fixed ICBM launchers.

2. Each Party undertakes not to relocate fixed ICBM launchers.

3. Each Party undertakes not to convert launchers of light ICBMs, or of ICBMs of older types deployed prior to 1964, into launchers of heavy ICBMs of types deployed after that time.

4. Each Party undertakes in the process of modernization and replacement of ICBM silo launchers not to increase the original internal volume of an ICBM silo launcher by more than thirty-two percent. Within this limit each Party has the right to determine whether such an increase will be made through an increase in

the original diameter or in the original depth of an ICBM silo launcher, or in both of these dimensions.

[. . .]

6. Subject to the provisions of this Treaty, each Party undertakes not to have under construction at any time strategic offensive arms referred to in paragraph 1 of Article III in excess of numbers consistent with a normal construction schedule.

[. . .]

7. Each Party undertakes not to develop, test, or deploy ICBMs which have a launch-weight greater or a throw-weight greater than that of the heaviest, in terms of either launch-weight or throw-weight, respectively, of the heavy ICBMs deployed by either Party as of the date of signature of this Treaty.

[. . .]

8. Each Party undertakes not to convert land-based launchers of ballistic missiles which are not ICBMs into launchers for launching ICBMs, and not to test them for this purpose.

[. . .]

9. Each Party undertakes not to flight-test or deploy new types of ICBMs, that is, types of ICBMs not flight-tested as of May 1, 1979, except that each Party may flight-test and deploy one new type of light ICBM.

[. . .]

10. Each Party undertakes not to flight-test or deploy ICBMs of a type flight-tested as of May 1, 1979 with a number of reentry vehicles greater than the maximum number of reentry vehicles with which an ICBM of that type has been flight-tested as of that date.

[. . .]

11. Each Party undertakes not to flight-test or deploy ICBMs of the one new type permitted pursuant to paragraph 9 of this Article with a number of reentry

vehicles greater than the maximum number of reentry vehicles with which an ICBM of either Party has been flight-tested as of May 1, 1979, that is, ten.

[. . .]

12. Each Party undertakes not to flight-test or deploy SLBMs with a number of reentry vehicles greater than the maximum number of reentry vehicles with which an SLBM of either Party has been flight-tested as of May 1, 1979, that is, fourteen.

[. . .]

13. Each Party undertakes not to flight-test or deploy ASBMs with a number of reentry vehicles greater than the maximum number of reentry vehicles with which an ICBM of either Party has been flight-tested as of May 1, 1979, that is, ten.

[. . .]

14. Each Party undertakes not to deploy at any one time on heavy bombers equipped for cruise missiles capable of a range in excess of 600 kilometers a number of such cruise missiles which exceeds the product of 28 and the number of such heavy bombers.

[. . .]

ARTICLE VI

1. The limitations provided for in this Treaty shall apply to those arms which are:

- (a) operational;
- (b) in the final stage of construction;
- (c) in reserve, in storage, or mothballed;
- (d) undergoing overhaul, repair, modernization, or conversion.

[. . .]

6. The arms subject to the limitations provided for in this Treaty shall continue to be subject to these limitations until they are dismantled, are destroyed, or otherwise cease to be subject to these limitations under procedures to be agreed upon.

[. . .]

7. In accordance with the provisions of Article XVII, the Parties will agree in the Standing Consultative Commission upon procedures to implement the provisions of this Article.

ARTICLE VII

1. The limitations provided for in Article III shall not apply to ICBM and SLBM test and training launchers or to space vehicle launchers for exploration and use of outer space. ICBM and SLBM test and training launchers are ICBM and SLBM launchers used only for testing or training.

[. . .]

2. The Parties agree that:

- (a) there shall be no significant increase in the number of ICBM or SLBM test and training launchers or in the number of such launchers of heavy ICBMs;
- (b) construction or conversion of ICBM launchers at test ranges shall be undertaken only for purposes of testing and training;
- (c) there shall be no conversion of ICBM test and training launchers or of space vehicle launchers into ICBM launchers subject to the limitations provided for in Article III.

[. . .]

ARTICLE VIII

1. Each Party undertakes not to flight-test cruise missiles capable of a range in excess of 600 kilometers or ASBMs from aircraft other than bombers or to convert such aircraft into aircraft equipped for such missiles.

[. . .]

2. Each Party undertakes not to convert aircraft other than bombers into aircraft which can carry out the mission of a heavy bomber as referred to in subparagraph 3(b) of Article II.

ARTICLE IX

1. Each Party undertakes not to develop, test, or deploy:

- (a) ballistic missiles capable of a range in excess of 600 kilometers for installation on waterborne vehicles other than submarines, or launchers of such missiles;
- (b) fixed ballistic or cruise missile launchers for emplacement on the ocean floor, on the seabed, or on the beds of internal waters and inland waters, or in the subsoil thereof, or mobile launchers of such missiles, which move only in contact with the ocean floor, the seabed, or the beds of internal waters and inland waters, or missiles for such launchers;

[. . .]

- (c) systems for placing into Earth orbit nuclear weapons or any other kind of weapons of mass destruction, including fractional orbital missiles;
- (d) mobile launchers of heavy ICBMs;
- (e) SLBMs which have a launch-weight greater or a throw-weight greater than that of the heaviest, in terms of either launch-weight or throw-weight, respectively, of the light ICBMs deployed by

either Party as of the date of signature of this Treaty, or launchers of such SLBMs; or

- (f) ASBMs which have a launch-weight greater or a throw-weight greater than that of the heaviest, in terms of either launch-weight or throw-weight, respectively, of the light ICBMs deployed by either Party as of the date of signature of this Treaty.

[. . .]

2. Each Party undertakes not to flight-test from aircraft cruise missiles capable of a range in excess of 600 kilometers which are equipped with multiple independently targetable warheads and not to deploy such cruise missiles on aircraft.

130. Jimmy Carter: National Malaise Speech, 15 July 1979

Introduction

For the United States the 1970s was a bad decade, characterized by serious domestic economic problems and a sense of international impotence and drift. The country's 1973 withdrawal from the Republic of Vietnam (ROV, South Vietnam) was followed two years later by a North Vietnamese takeover of South Vietnam. In 1974 political scandals forced the resignation first of Vice President Spiro Agnew and then of President Richard Nixon, the first sitting chief executive to step down from office in disgrace. Persistent high inflation and unemployment dogged the presidencies of both Gerald Ford (1974–1977) and Jimmy Carter (1977–1981). High energy costs, due to dramatic price hikes by OPEC from 1973 onward, contributed substantially to domestic inflation in the United States. In 1979 President Carter, facing a national energy crisis due to the cutoff of supplies from revolution-torn Iran, sought to implement a major program to make his country less dependent on foreign oil by enhancing conservation and energy efficiency, switching to natural gas, developing solar power, and improving public transportation. As he worked on presenting this program, he also felt moved to address what he considered the broader problem of the "crisis of confidence" that had afflicted the United States since the 1960s. He hoped that tackling the energy crisis would bring the nation together once more. In reality, the United States failed to attain the majority of the goals on energy policy that Carter set out in this speech, and by the early twenty-first century anxieties over long-term international energy shortfalls were once again escalating dramatically.

Primary Source

During the past three years I've spoken to you on many occasions about national concerns, the energy

crisis, reorganizing the government, our nation's economy, and issues of war and especially peace. But over those years the subjects of the speeches, the talks, and

the press conferences have become increasingly narrow, focused more and more on what the isolated world of Washington thinks is important. Gradually, you've heard more and more about what the government thinks or what the government should be doing and less and less about our nation's hopes, our dreams, and our vision of the future.

Ten days ago I had planned to speak to you again about a very important subject—energy. For the fifth time I would have described the urgency of the problem and laid out a series of legislative recommendations to the Congress. But as I was preparing to speak, I began to ask myself the same question that I now know has been troubling many of you. Why have we not been able to get together as a nation to resolve our serious energy problem?

It's clear that the true problems of our Nation are much deeper—deeper than gasoline lines or energy shortages, deeper even than inflation or recession. And I realize more than ever that as president I need your help. So I decided to reach out and listen to the voices of America.

I invited to Camp David people from almost every segment of our society—business and labor, teachers and preachers, governors, mayors, and private citizens. And then I left Camp David to listen to other Americans, men and women like you.

[. . .]

These ten days confirmed my belief in the decency and the strength and the wisdom of the American people, but it also bore out some of my long-standing concerns about our nation's underlying problems.

I know, of course, being president, that government actions and legislation can be very important. That's why I've worked hard to put my campaign promises into law—and I have to admit, with just mixed success. But after listening to the American people I have been reminded again that all the legislation in the world can't fix what's wrong with America. So, I want to speak to you first tonight about a subject even more serious than energy or inflation. I want to talk to you right now about a fundamental threat to American democracy.

I do not mean our political and civil liberties. They will endure. And I do not refer to the outward strength of America, a nation that is at peace tonight everywhere in the world, with unmatched economic power and military might.

The threat is nearly invisible in ordinary ways. It is a crisis of confidence. It is a crisis that strikes at the very heart and soul and spirit of our national will. We can see this crisis in the growing doubt about the meaning of our own lives and in the loss of a unity of purpose for our nation.

The erosion of our confidence in the future is threatening to destroy the social and the political fabric of America.

The confidence that we have always had as a people is not simply some romantic dream or a proverb in a dusty book that we read just on the Fourth of July.

It is the idea which founded our nation and has guided our development as a people. Confidence in the future has supported everything else—public institutions and private enterprise, our own families, and the very Constitution of the United States. Confidence has defined our course and has served as a link between generations. We've always believed in something called progress. We've always had a faith that the days of our children would be better than our own.

Our people are losing that faith, not only in government itself but in the ability as citizens to serve as the ultimate rulers and shapers of our democracy. As a people we know our past and we are proud of it. Our progress has been part of the living history of America, even the world. We always believed that we were part of a great movement of humanity itself called democracy, involved in the search for freedom, and that belief has always strengthened us in our purpose. But just as we are losing our confidence in the future, we are also beginning to close the door on our past.

In a nation that was proud of hard work, strong families, close-knit communities, and our faith in God, too many of us now tend to worship self-indulgence and consumption. Human identity is no longer defined by

what one does, but by what one owns. But we've discovered that owning things and consuming things does not satisfy our longing for meaning. We've learned that piling up material goods cannot fill the emptiness of lives which have no confidence or purpose.

[. . .]

We are at a turning point in our history. There are two paths to choose. One is a path I've warned about tonight, the path that leads to fragmentation and self-interest. Down that road lies a mistaken idea of freedom, the right to grasp for ourselves some advantage over others. That path would be one of constant conflict between narrow interests ending in chaos and immobility. It is a certain route to failure.

All the traditions of our past, all the lessons of our heritage, all the promises of our future point to another path, the path of common purpose and the restoration of American values. That path leads to true freedom for our nation and ourselves. We can take the first steps down that path as we begin to solve our energy problem.

Energy will be the immediate test of our ability to unite this nation, and it can also be the standard around which we rally. On the battlefield of energy we can win for our nation a new confidence, and we can seize control again of our common destiny.

In little more than two decades we've gone from a position of energy independence to one in which almost half the oil we use comes from foreign countries, at prices that are going through the roof. Our excessive dependence on OPEC has already taken a tremendous toll on our economy and our people. This is the direct cause of the long lines which have made millions of you spend aggravating hours waiting for gasoline. It's a cause of the increased inflation and unemployment that we now face. This intolerable dependence on foreign oil threatens our economic independence and the very security of our nation. The energy crisis is real. It is worldwide. It is a clear and present danger to our nation. These are facts and we simply must face them.

What I have to say to you now about energy is simple and vitally important.

Point one: I am tonight setting a clear goal for the energy policy of the United States. Beginning this moment, this nation will never use more foreign oil than we did in 1977—never. From now on, every new addition to our demand for energy will be met from our own production and our own conservation. The generation-long growth in our dependence on foreign oil will be stopped dead in its tracks right now and then reversed as we move through the 1980s, for I am tonight setting the further goal of cutting our dependence on foreign oil by one-half by the end of the next decade—a saving of over 4½ million barrels of imported oil per day.

Point two: To ensure that we meet these targets, I will use my presidential authority to set import quotas. I'm announcing tonight that for 1979 and 1980, I will forbid the entry into this country of one drop of foreign oil more than these goals allow. These quotas will ensure a reduction in imports even below the ambitious levels we set at the recent Tokyo summit.

Point three: To give us energy security, I am asking for the most massive peacetime commitment of funds and resources in our nation's history to develop America's own alternative sources of fuel—from coal, from oil shale, from plant products for gasohol, from unconventional gas, from the sun.

I propose the creation of an energy security corporation to lead this effort to replace 2½ million barrels of imported oil per day by 1990. The corporation I will issue up to \$5 billion in energy bonds, and I especially want them to be in small denominations so that average Americans can invest directly in America's energy security.

Just as a similar synthetic rubber corporation helped us win World War II, so will we mobilize American determination and ability to win the energy war. Moreover, I will soon submit legislation to Congress calling for the creation of this nation's first solar bank, which will help us achieve the crucial goal of 20 percent of our energy coming from solar power by the year 2000.

These efforts will cost money, a lot of money, and that is why Congress must enact the windfall profits tax

without delay. It will be money well spent. Unlike the billions of dollars that we ship to foreign countries to pay for foreign oil, these funds will be paid by Americans to Americans. These funds will go to fight, not to increase, inflation and unemployment.

Point four: I'm asking Congress to mandate, to require as a matter of law, that our nation's utility companies cut their massive use of oil by 50 percent within the next decade and switch to other fuels, especially coal, our most abundant energy source.

Point five: To make absolutely certain that nothing stands in the way of achieving these goals, I will urge Congress to create an energy mobilization board which, like the War Production Board in World War II, will have the responsibility and authority to cut through the red tape, the delays, and the endless roadblocks to completing key energy projects.

We will protect our environment. But when this nation critically needs a refinery or a pipeline, we will build it.

Point six: I'm proposing a bold conservation program to involve every state, county, and city and every average American in our energy battle. This effort will permit you to build conservation into your homes and your lives at a cost you can afford.

I ask Congress to give me authority for mandatory conservation and for standby gasoline rationing. To further conserve energy, I'm proposing tonight an extra \$10 billion over the next decade to strengthen our public transportation systems. And I'm asking you for your good and for your nation's security to take no unnecessary trips, to use carpools or public transportation whenever you can, to park your car one extra day per week, to obey the speed limit, and to set your thermostats to save fuel. Every act of energy conservation like this is more than just common sense—I tell you it is an act of patriotism.

Our nation must be fair to the poorest among us, so we will increase aid to needy Americans to cope with rising energy prices. We often think of conservation only in terms of sacrifice. In fact, it is the most painless and immediate way of rebuilding our nation's strength.

Every gallon of oil each one of us saves is a new form of production. It gives us more freedom, more confidence, that much more control over our own lives.

So, the solution of our energy crisis can also help us to conquer the crisis of the spirit in our country. It can rekindle our sense of unity, our confidence in the future, and give our nation and all of us individually a new sense of purpose.

You know we can do it. We have the natural resources. We have more oil in our shale alone than several Saudi Arabias. We have more coal than any nation on Earth. We have the world's highest level of technology. We have the most skilled work force, with innovative genius, and I firmly believe that we have the national will to win this war.

I do not promise you that this struggle for freedom will be easy. I do not promise a quick way out of our nation's problems, when the truth is that the only way out is an all-out effort. What I do promise you is that I will lead our fight, and I will enforce fairness in our struggle, and I will ensure honesty. And above all, I will act. We can manage the short-term shortages more effectively and we will, but there are no short-term solutions to our long-range problems. There is simply no way to avoid sacrifice.

[. . .]

Little by little we can and we must rebuild our confidence. We can spend until we empty our treasuries, and we may summon all the wonders of science. But we can succeed only if we tap our greatest resources—America's people, America's values, and America's confidence.

I have seen the strength of America in the inexhaustible resources of our people. In the days to come, let us renew that strength in the struggle for an energy secure nation.

In closing, let me say this: I will do my best, but I will not do it alone. Let your voice be heard. Whenever you have a chance, say something good about our country. With God's help and for the sake of our nation, it is

time for us to join hands in America. Let us commit ourselves together to a rebirth of the American spirit. Working together with our common faith we cannot fail.

131. Soviet Intervention in Afghanistan, Personal Memorandum from Yuri Andropov to Leonid Brezhnev, December 1979

Introduction

In April 1978, the Marxist People's Democratic Party of Afghanistan (PDP) overthrew the government of Prime Minister Mohammad Daoud Khan, executing Daoud and his family and seizing power itself. PDP Secretary General Nur Muhammad Taraki became prime minister, and in December 1978 he signed a bilateral treaty of friendship and cooperation with the Soviet Union under whose terms substantial Soviet aid and several hundred military advisors were dispatched to Kabul, the capital. Taraki was overthrown and killed in a palace coup in September 1979 that placed his deputy prime minister, Hafizullah Amin, in power. Facing a guerrilla insurgency supported by the United States, Amin likewise relied heavily on Soviet military equipment and advisors, but on 28 December 1979 his Russian patrons, considering him too unreliable, organized a coup in which Soviet forces stormed the presidential palace and killed Amin. Former deputy prime minister Babrak Karmal, at that time ambassador to Czechoslovakia, succeeded him. Moscow apparently hoped that removing Amin would restore some kind of stability in Afghanistan. Yuri Andropov, then head of the Komitet Gosudarstvennoi Bezopasnosti (KGB), warned that Amin was unable to maintain order and was likely to shift to the West, follow neutralist policies, and move against his Soviet advisors. Initially, Soviet leader Leonid Brezhnev rejected no less than eighteen requests for assistance from Karmal and other Afghan communists outside the country, but it seems that eventually warnings that Amin was moving against "suspect persons" and might take action against the Soviet military advisors already present in the country tipped the balance. Soviet ground forces and paratroopers entered the country on 27 December 1979 and remained there for almost a decade. Anticomunist Afghan guerrillas, or mujahideen, many of them wedded to fundamentalist Islamic principles, proved as intransigent toward the Karmal government as they had been to Amin's. The coup marked the beginning of a lengthy stalemated war in which more than 15,000 Soviet troops and almost a million Afghans died in a guerrilla conflict often compared, in its effect upon the Soviet Union, to the entanglement of the United States in Vietnam in the 1960s and 1970s.

Primary Source

1. After the coup and the murder of Taraki in September of this year, the situation in Afghanistan began to undertake an undesirable turn for us. The situation in the party, the army and the government apparatus has become more acute, as they were essentially destroyed as a result of the mass repressions carried out by Amin. At the same time, alarming information started to arrive about Amin's secret activities, forewarning of a possible political shift to the West. [These included:] Contacts with an American agent about issues which are kept secret from us. Promises to tribal leaders to shift away from USSR and to adopt a "policy of neutrality." Closed meetings in which attacks were made against Soviet policy and the activities of our specialists. The practical removal of our headquarters in Kabul,

etc. The diplomatic circles in Kabul are widely talking of Amin's differences with Moscow and his possible anti-Soviet steps.

All this has created, on the one hand, the danger of losing the gains made by the April [1978] revolution (the scale of insurgent attacks will increase by spring) within the country, while on the other hand [increasing] the threat to our positions in Afghanistan (right now there is no guarantee that Amin, in order to protect his personal power, will not shift to the West), [because there has been] a growth of anti-Soviet sentiments within the population.

2. Recently we were contacted by group of Afghan communists abroad. In the course of our contact with

Babrak [Karmal] and [Asadullah] Sarwari, it became clear (and they informed us of this) that they have worked out a plan for opposing Amin and creating new party and state organs. But Amin, as a preventive measure, has begun mass arrests of 'suspect persons' (300 people have been shot).

In these conditions, Babrak and Sarwari, without changing their plans of opposition, have raised the question of possible assistance, in case of need, including military. We have two battalions stationed in Kabul and there is the capability of rendering such assistance. It appears that this is entirely sufficient for a successful operation. But, as a precautionary measure in the event of unforeseen complications, it would be wise to have a military group close to the border. In case of the de-

ployment of military forces we could at the same time decide various questions pertaining to the liquidation of gangs.

The implementation of the given operation would allow us to decide the question of defending the gains of the April revolution, establishing Leninist principles in the party and state leadership of Afghanistan, and securing our positions in this country.

132. Jimmy Carter: State of the Union Address, 23 January 1980.

Introduction

The idealistic Democrat Jimmy Carter, a traditional liberal in international affairs, became president in 1977 and was committed to a foreign policy agenda that envisaged the promotion of traditional American values, including human rights and peaceable relations with other nations, reductions in military spending, disarmament, and a new emphasis on economic over defense aid. Threatening events in the final years of his one-term presidency caused him to modify these preoccupations and to return to more traditional Cold War strategies. Since 1953 American Middle Eastern policy had centered on powerful oil-rich Iran. In 1978 a radical Islamic regime overthrew the autocratic but Western-oriented government of Mohammad Reza Shah Pahlavi of Iran. The new Iranian leaders were Islamic fundamentalists who, in a major blow to American geopolitical and economic interests, abrogated the existing alliance with the United States, a country they considered the international "great Satan," and cut off oil supplies. In November 1979 radical Islamic Iranians stormed the U.S. embassy in Tehran, holding sixty-three official American personnel hostage until Carter left office in January 1981. Skyrocketing oil prices caused by the Iranian oil embargo ratcheted up inflation and again reminded American consumers how heavily their way of life depended on foreign nations over whom they often had little leverage. To compound American problems in the region, in December 1979 the Soviet Union mounted a major military intervention in previously nonaligned Afghanistan in order to maintain in power a Soviet-backed Marxist regime that had taken power in 1978. Soviet actions were probably primarily due to fears that intensifying Islamic fanaticism in Afghanistan and Iran might infect neighboring Muslim areas of Soviet territory and precipitate separatist movements there. Carter, however, perceived this episode, which he hyperbolically termed "the greatest threat to peace since the Second World War," as part of a calculated Soviet strategy to gain control of the Persian Gulf and the oil-rich states surrounding it. Convinced that Soviet-American détente had become unattainable, he reacted strongly. Addressing congress and the nation in his January 1980 annual State of the Union address, Carter proclaimed the Carter Doctrine, stating that "business as usual" with the Soviet Union was not possible and that the United States would take all measures necessary to defend the Persian Gulf. The president moved to reinstitute containment policies, demanded annual 5 percent increases in military spending, proposed that young American men be compelled to register for a potential draft, and moved to create a Persian Gulf rapid deployment force. He also called for energy policies that would make his

country less dependent on foreign oil. Carter's speech, which effectively reiterated the 1957 Eisenhower Doctrine for the Middle East, also marked a definite break with his earlier efforts toward Soviet-American détente and disarmament, inaugurating several years of deep ideological and strategic antagonism between the two superpowers.

Primary Source

[. . .]

Three basic developments have helped to shape our challenges: the steady growth and increased projection of Soviet military power beyond its own borders; the overwhelming dependence of the Western democracies on oil supplies from the Middle East; and the press of social and religious and economic and political change in the many nations of the developing world, exemplified by the revolution in Iran.

Each of these factors is important in its own right. Each interacts with the others. All must be faced together, squarely and courageously. We will face these challenges, and we will meet them with the best that is in us. And we will not fail.

In response to the abhorrent act in Iran, our Nation has never been aroused and unified so greatly in peacetime. Our position is clear. The United States will not yield to blackmail.

We continue to pursue these specific goals: first, to protect the present and long-range interests of the United States; secondly, to preserve the lives of the American hostages and to secure, as quickly as possible, their safe release, if possible, to avoid bloodshed which might further endanger the lives of our fellow citizens; to enlist the help of other nations in condemning this act of violence, which is shocking and violates the moral and the legal standards of a civilized world; and also to convince and to persuade the Iranian leaders that the real danger to their nation lies in the north, in the Soviet Union and from the Soviet troops now in Afghanistan, and that the unwarranted Iranian quarrel with the United States hampers their response to this far greater danger to them.

If the American hostages are harmed, a severe price will be paid. We will never rest until every one of the American hostages are released.

But now we face a broader and more fundamental challenge in this region because of the recent military action of the Soviet Union.

Now, as during the last 3½ decades, the relationship between our country, the United States of America, and

the Soviet Union is the most critical factor in determining whether the world will live at peace or be engulfed in global conflict.

Since the end of the Second World War, America has led other nations in meeting the challenge of mounting Soviet power. This has not been a simple or a static relationship. Between us there has been cooperation, there has been competition, and at times there has been confrontation.

[. . .]

Preventing nuclear war is the foremost responsibility of the two superpowers. That's why we've negotiated the strategic arms limitation treaties—SALT I and SALT II. Especially now, in a time of great tension, observing the mutual constraints imposed by the terms of these treaties will be in the best interest of both countries and will help to preserve world peace. I will consult very closely with the Congress on this matter as we strive to control nuclear weapons. That effort to control nuclear weapons will not be abandoned.

We superpowers also have the responsibility to exercise restraint in the use of our great military force. The integrity and the independence of weaker nations must not be threatened. They must know that in our presence they are secure.

But now the Soviet Union has taken a radical and an aggressive new step. It's using its great military power against a relatively defenseless nation. The implications of the Soviet invasion of Afghanistan could pose the most serious threat to the peace since the Second World War.

The vast majority of nations on Earth have condemned this latest Soviet attempt to extend its colonial domination of others and have demanded the immediate withdrawal of Soviet troops. The Moslem world is especially and justifiably outraged by this aggression against an Islamic people. No action of a world power has ever been so quickly and so overwhelmingly condemned. But verbal condemnation is not enough. The Soviet Union must pay a concrete price for their aggression.

While this invasion continues, we and the other nations of the world cannot conduct business as usual with the Soviet Union. That's why the United States has imposed stiff economic penalties on the Soviet Union. I will not issue any permits for Soviet ships to fish in the coastal waters of the United States. I've cut Soviet access to high-technology equipment and to agricultural products. I've limited other commerce with the Soviet Union, and I've asked our allies and friends to join with us in restraining their own trade with the Soviets and not to replace our own embargoed items. And I have notified the Olympic Committee that with Soviet invading forces in Afghanistan, neither the American people nor I will support sending an Olympic team to Moscow.

The Soviet Union is going to have to answer some basic questions: Will it help promote a more stable international environment in which its own legitimate, peaceful concerns can be pursued? Or will it continue to expand its military power far beyond its genuine security needs, and use that power for colonial conquest? The Soviet Union must realize that its decision to use military force in Afghanistan will be costly to every political and economic relationship it values.

The region which is now threatened by Soviet troops in Afghanistan is of great strategic importance: It contains more than two-thirds of the world's exportable oil. The Soviet effort to dominate Afghanistan has brought Soviet military forces to within 300 miles of the Indian Ocean and close to the Straits of Hormuz, a waterway through which most of the world's oil must flow. The Soviet Union is now attempting to consolidate a strategic position, therefore, that poses a grave threat to the free movement of Middle East oil.

This situation demands careful thought, steady nerves, and resolute action, not only for this year but for many years to come. It demands collective efforts to meet this new threat to security in the Persian Gulf and in Southwest Asia. It demands the participation of all those who rely on oil from the Middle East and who are concerned with global peace and stability. And it demands consultation and close cooperation with countries in the area which might be threatened.

Meeting this challenge will take national will, diplomatic and political wisdom, economic sacrifice, and, of course, military capability. We must call on the best that is in us to preserve the security of this crucial region.

Let our position be absolutely clear: An attempt by any outside force to gain control of the Persian Gulf region will be regarded as an assault on the vital interests of the United States of America, and such an assault will be repelled by any means necessary, including military force.

During the past 3 years, you have joined with me to improve our own security and the prospects for peace, not only in the vital oil-producing area of the Persian Gulf region but around the world. We've increased annually our real commitment for defense, and we will sustain this increase of effort throughout the Five Year Defense Program. It's imperative that Congress approve this strong defense budget for 1981, encompassing a 5-percent real growth in authorizations, without any reduction.

We are also improving our capability to deploy U.S. military forces rapidly to distant areas. We've helped to strengthen NATO and our other alliances, and recently we and other NATO members have decided to develop and to deploy modernized, intermediate-range nuclear forces to meet an unwarranted and increased threat from the nuclear weapons of the Soviet Union.

We are working with our allies to prevent conflict in the Middle East. The peace treaty between Egypt and Israel is a notable achievement which represents a strategic asset for America and which also enhances prospects for regional and world peace. We are now engaged in further negotiations to provide full autonomy for the people of the West Bank and Gaza, to resolve the Palestinian issue in all its aspects, and to preserve the peace and security of Israel. Let no one doubt our commitment to the security of Israel. In a few days we will observe an historic event when Israel makes another major withdrawal from the Sinai and when Ambassadors will be exchanged between Israel and Egypt.

We've also expanded our own sphere of friendship. Our deep commitment to human rights and to meeting human needs has improved our relationship with much of the Third World. Our decision to normalize relations with the People's Republic of China will help to preserve peace and stability in Asia and in the Western Pacific.

We've increased and strengthened our naval presence in the Indian Ocean, and we are now making arrangements for key naval and air facilities to be used

by our forces in the region of northeast Africa and the Persian Gulf.

We've reconfirmed our 1959 agreement to help Pakistan preserve its independence and its integrity. The United States will take action consistent with our own laws to assist Pakistan in resisting any outside aggression. And I'm asking the Congress specifically to reaffirm this agreement. I'm also working, along with the leaders of other nations, to provide additional military and economic aid for Pakistan. That request will come to you in just a few days.

In the weeks ahead, we will further strengthen political and military ties with other nations in the region. We believe that there are no irreconcilable differences between us and any Islamic nation. We respect the faith of Islam, and we are ready to cooperate with all Moslem countries.

Finally, we are prepared to work with other countries in the region to share a cooperative security framework that respects differing values and political beliefs, yet which enhances the independence, security, and prosperity of all.

All these efforts combined emphasize our dedication to defend and preserve the vital interests of the region and of the nation which we represent and those of our allies—in Europe and the Pacific, and also in the parts of the world which have such great strategic importance to us, stretching especially through the Middle East and Southwest Asia. With your help, I will pursue these efforts with vigor and with determination. You and I will act as necessary to protect and to preserve our Nation's security.

The men and women of America's Armed Forces are on duty tonight in many parts of the world. I'm proud of the job they are doing, and I know you share that pride. I believe that our volunteer forces are adequate for current defense needs, and I hope that it will not become necessary to impose a draft. However, we must be prepared for that possibility. For this reason, I have determined that the Selective Service System must now be revitalized. I will send legislation and budget proposals to the Congress next month so that we can begin registration and then meet future mobilization needs rapidly if they arise.

We also need clear and quick passage of a new charter to define the legal authority and accountability of our intelligence agencies. We will guarantee that abuses

do not recur, but we must tighten our controls on sensitive intelligence information, and we need to remove unwarranted restraints on America's ability to collect intelligence.

The decade ahead will be a time of rapid change, as nations everywhere seek to deal with new problems and age-old tensions. But America need have no fear. We can thrive in a world of change if we remain true to our values and actively engaged in promoting world peace. We will continue to work as we have for peace in the Middle East and southern Africa. We will continue to build our ties with developing nations, respecting and helping to strengthen their national independence which they have struggled so hard to achieve. And we will continue to support the growth of democracy and the protection of human rights.

In repressive regimes, popular frustrations often have no outlet except through violence. But when peoples and their governments can approach their problems together through open, democratic methods, the basis for stability and peace is far more solid and far more enduring. That is why our support for human rights in other countries is in our own national interest as well as part of our own national character.

Peace—a peace that preserves freedom—remains America's first goal. In the coming years, as a mighty nation we will continue to pursue peace. But to be strong abroad we must be strong at home. And in order to be strong, we must continue to face up to the difficult issues that confront us as a nation today.

The crises in Iran and Afghanistan have dramatized a very important lesson: Our excessive dependence on foreign oil is a clear and present danger to our Nation's security. The need has never been more urgent. At long last, we must have a clear, comprehensive energy policy for the United States.

[. . .]

We will never abandon our struggle for a just and a decent society here at home. That's the heart of America—and it's the source of our ability to inspire other people to defend their own rights abroad.

Our material resources, great as they are, are limited. Our problems are too complex for simple slogans or for quick solutions. We cannot solve them without effort and sacrifice. Walter Lippmann once reminded us, "You

took the good things for granted. Now you must earn them again. For every right that you cherish, you have a duty which you must fulfill. For every good which you wish to preserve, you will have to sacrifice your comfort and your ease. There is nothing for nothing any longer.”

Our challenges are formidable. But there’s a new spirit of unity and resolve in our country. We move into the 1980’s with confidence and hope and a bright vision of the America we want: an America strong and free, an America at peace, an America with equal rights for all citizens—and for women, guaranteed in the United States Constitution—an America with jobs and good health and good education for every citizen, an America with a clean and bountiful life in our cities

and on our farms, an America that helps to feed the world, an America secure in filling its own energy needs, an America of justice, tolerance, and compassion. For this vision to come true, we must sacrifice, but this national commitment will be an exciting enterprise that will unify our people.

Together as one people, let us work to build our strength at home, and together as one indivisible union, let us seek peace and security throughout the world.

Together let us make of this time of challenge and danger a decade of national resolve and of brave achievement.

133. Jimmy Carter: Address to the Nation on Rescue Attempt for American Hostages in Iran, 25 April 1980

Introduction

President Jimmy Carter addressed his nation in this televised speech on 25 April 1980, the day after a U.S. military mission unsuccessfully attempted to rescue fifty-two Americans being held hostage in the U.S. embassy in Tehran, Iran, taken prisoner when radical Islamic militants had stormed the embassy on 4 November 1979 to protest past American support for the ousted Mohammad Reza Shah Pahlavi of Iran. Eight U.S. soldiers died in the rescue effort, and the entire episode was widely regarded as a humiliation for the United States. Three days before the raid, Secretary of State Cyrus R. Vance had resigned in protest over what he considered an ill-advised and futile mission, which the National Security Council (NSC) had decided to implement during his absence. The hostage crisis was not ended until the inauguration of Republican President Ronald Reagan in January 1981. It was one of several international events, among them a major oil crisis and the 1979 Soviet invasion of Afghanistan, that contributed to a sense of American impotence at this time and were also partly responsible for Reagan’s victory over Carter in the 1980 election.

Primary Source

Late yesterday, I cancelled a carefully planned operation which was underway in Iran to position our rescue team for later withdrawal of American hostages, who have been held captive there since November 4. Equipment failure in the rescue helicopters made it necessary to end the mission. As our team was withdrawing, after my order to do so, two of our American aircraft collided on the ground following a refueling operation in a remote desert location in Iran. Other information about this rescue mission will be made available to the American people when it is appropriate to do so.

There was no fighting; there was no combat. But to my deep regret, eight of the crewmen of the two aircraft which collided were killed, and several other Americans were hurt in the accident. Our people were immediately airlifted from Iran. Those who were injured have gotten medical treatment, and all of them are expected to recover.

No knowledge of this operation by any Iranian officials or authorities was evident to us until several hours after all Americans were withdrawn from Iran.

Our rescue team knew and I knew that the operation was certain to be difficult and it was certain to be dan-

gerous. We were all convinced that if and when the rescue operation had been commenced that it had an excellent chance of success. They were all volunteers; they were all highly trained. I met with their leaders before they went on this operation. They knew then what hopes of mine and all Americans they carried with them.

To the families of those who died and who were wounded, I want to express the admiration I feel for the courage of their loved ones and the sorrow that I feel personally for their sacrifice.

The mission on which they were embarked was a humanitarian mission. It was not directed against Iran; it was not directed against the people of Iran. It was not undertaken with any feeling of hostility toward Iran or its people. It has caused no Iranian casualties.

Planning for this rescue effort began shortly after our Embassy was seized, but for a number of reasons, I waited until now to put those rescue plans into effect. To be feasible, this complex operation had to be the product of intensive planning and intensive training and repeated rehearsal. However, a resolution of this crisis through negotiations and with voluntary action on the part of the Iranian officials was obviously then, has been, and will be preferable.

This rescue attempt had to await my judgment that the Iranian authorities could not or would not resolve this crisis on their own initiative. With the steady unraveling of authority in Iran and the mounting dangers that were posed to the safety of the hostages themselves and the growing realization that their early release was highly unlikely, I made a decision to commence the rescue operations plans.

This attempt became a necessity and a duty. The readiness of our team to undertake the rescue made it completely practicable. Accordingly, I made the decision to set our long-developed plans into operation. I ordered this rescue mission prepared in order to safe-

guard American lives, to protect America's national interests, and to reduce the tensions in the world that have been caused among many nations as this crisis has continued.

It was my decision to attempt the rescue operation. It was my decision to cancel it when problems developed in the placement of our rescue team for a future rescue operation. The responsibility is fully my own.

In the aftermath of the attempt, we continue to hold the Government of Iran responsible for the safety and for the early release of the American hostages, who have been held so long. The United States remains determined to bring about their safe release at the earliest date possible.

As President, I know that our entire Nation feels the deep gratitude I feel for the brave men who were prepared to rescue their fellow Americans from captivity. And as President, I also know that the Nation shares not only my disappointment that the rescue effort could not be mounted, because of mechanical difficulties, but also my determination to persevere and to bring all of our hostages home to freedom.

We have been disappointed before. We will not give up in our efforts. Throughout this extraordinarily difficult period, we have pursued and will continue to pursue every possible avenue to secure the release of the hostages. In these efforts, the support of the American people and of our friends throughout the world has been a most crucial element. That support of other nations is even more important now.

We will seek to continue, along with other nations and with the officials of Iran, a prompt resolution of the crisis without any loss of life and through peaceful and diplomatic means.

134. Appeal for European Nuclear Disarmament, 28 April 1980

Introduction

In December 1979 the North Atlantic Treaty Organization (NATO) announced that it planned to install a new generation of Pershing II and Cruise intermediate-range and short-range nuclear missiles in Europe to counter recent Soviet deployments of SS-20s in European Russia. As détente took hold during the 1970s, the Western antinuclear movement, whose most prominent organization was the Campaign for Nuclear Disarmament (CND), had become somewhat moribund. NATO's decision revitalized such forces, impelling old antinuclear campaigners to enter the fray again and also prompting many younger people around Europe and the United States to join. In April 1980 prominent British intellectuals, including the radical historian E. P. Thompson along with Mary Kaldor, Dan Smith, and Ken Coates, launched a new group, European Nuclear Disarmament (END), that sought a "nuclear-free Europe from Poland to Portugal." Their founding statement impartially laid the blame for growing nuclear tensions within Europe on both sides in the Cold War, the Western powers and the Soviet bloc. The organization soon won support from a wide range of West European supporters plus some from the Soviet bloc, including former Hungarian prime minister András Hegedűs, the dissident Soviet historian Roy Medvedev, and other East European intellectuals. Many END members were drawn from the West European peace movement and European social democratic and Eurocommunist parties. END also made great efforts to attract Soviet and East European dissidents and was vocal in its criticism of Soviet as well as U.S. and West European nuclear policies. In Britain, many Labour and Liberal members of Parliament belonged to END, together with a few maverick conservatives and communists. Whereas CND was a mass movement, END concentrated on attracting a small but influential membership, perhaps a thousand in all. The two overlapped, with much of the top leadership of CND drawn from END. At times END's insistence on condemning many Soviet actions put it at odds with CND, which included a small but extremely vocal group of communists and leftists. From 1982 to 1991 END held well-publicized annual conventions on nuclear weapons, attended by a wide range of antinuclear activists and intellectuals. The conclusion of the Intermediate Range Nuclear Forces (INF) Treaty of 1987 brought the removal over the next three years of the NATO missiles that had sparked END's formation. As communist regimes collapsed across Eastern Europe, in 1989 END entered a new incarnation, renaming itself the European Dialogue, a forum for the continent-wide encouragement of democracy and civil society. END's earlier activities had been symptomatic of growing disillusionment with both superpowers among European intellectuals during the latter Cold War, an outlook that led them to seek to escape the straitjacket of Soviet-American rivalry and chart a more independent course for their continent.

Primary Source

We are entering the most dangerous decade in human history. A third world war is not merely possible, but increasingly likely. Economic and social difficulties in advanced industrial countries, crisis, militarism, and war in the third world compound the political tensions that fuel a demented arms race. In Europe, the main geographical state for the East-West confrontation, new generations of even more deadly nuclear weapons are appearing.

For at least twenty-five years, the forces of both the North Atlantic and the Warsaw alliance have each had sufficient nuclear weapons to annihilate their opponents, and at the same time to endanger the very basis of civilized life. But with each passing year, competi-

tion in nuclear armaments has multiplied their numbers, increasing the probability of some devastating accident or miscalculation.

As each side tries to prove its readiness to use nuclear weapons, in order to prevent their use by the other side, new, more "usable" nuclear weapons are designed and the idea of "limited" nuclear war is made to sound more and more plausible. So much so that this paradoxical process can logically only lead to the actual use of nuclear weapons.

Neither of the major powers is now in any moral position to influence smaller countries to forgo the acquisition of nuclear armament. The increasing spread of nuclear reactors and the growth of the industry that

installs them, reinforce the likelihood of world-wide proliferation of nuclear weapons, thereby multiplying the risks of nuclear exchanges.

Over the years, public opinion has pressed for nuclear disarmament and detente between the contending military blocs. This pressure has failed. An increasing proportion of world resources is expended on weapons, even though mutual extermination is already amply guaranteed. This economic burden, in both East and West, contributes to growing social and political strain, setting in motion a vicious circle in which the arms race feeds upon the instability of the world economy and vice versa: a deathly dialectic.

We are now in great danger. Generations have been born beneath the shadow of nuclear war, and have become habituated to the threat. Concern has given way to apathy. Meanwhile, in a world living always under menace, fear extends through both halves of the European continent. The powers of the military and of internal security forces are enlarged, limitations are placed upon free exchanges of ideas and between persons, and civil rights of independent-minded individuals are threatened, in the West as well as the East.

We do not wish to apportion guilt between the political and military leaders of East and West. Guilt lies squarely upon both parties. Both parties have adopted menacing postures and committed aggressive actions in different parts of the world.

The remedy lies in our own hands. We must act together to free the entire territory of Europe, from Poland to Portugal, from nuclear weapons, air and submarine bases, and from all institutions engaged in research into or manufacture of nuclear weapons. We ask the two superpowers to withdraw all nuclear weapons from European territory. In particular, we ask the Soviet Union to halt production of SS 20 medium-range missiles and we ask the United States not to implement the decision to develop cruise missiles and Pershing II missiles for deployment in Western Europe. We also urge the ratification of the SALT II agreement, as a necessary step toward the renewal of effective negotiations on general and complete disarmament.

At the same time, we must defend and extend the right of all citizens, East or West, to take part in this common movement and to engage in every kind of exchange.

We appeal to our friends in Europe, of every faith and persuasion, to consider urgently the ways in which we can work together for these common objectives. We envisage a European-wide campaign, in which every kind of exchange takes place; in which representatives of different nations and opinions confer and coordinate their activities; and in which less formal exchanges, between universities, churches, women's organizations, trade unions, youth organizations, professional groups, and individuals, take place with the object of promoting a common object: to free all of Europe from nuclear weapons.

We must commence to act as if a united, neutral, and pacific Europe already exists. We must learn to be loyal, not to 'East' or 'West,' but to each other, and we must disregard the prohibitions and limitations imposed by any national state.

It will be the responsibility of the people of each nation to agitate for the expulsion of nuclear weapons and bases from European soil and territorial waters, and to decide upon its own means and strategy, concerning its own territory. These will differ from one country to another, and we do not suggest that any single strategy should be imposed. But this must be part of a trans-continental movement in which every kind of exchange takes place.

We must resist any attempt by the statesmen of East or West to manipulate this movement to their own advantage. We offer no advantage to either NATO or the Warsaw alliance. Our objectives must be to free Europe from confrontation, to enforce detente between the United States and the Soviet Union, and, ultimately, to dissolve both great power alliances.

In appealing to fellow-Europeans, we are not turning our backs on the world. In working for the peace of Europe we are working for the peace of the world. Twice in this century Europe has disgraced its claims to civilization by engendering world war. This time

we must repay our debts to the world by engendering peace.

This appeal will achieve nothing if it is not supported by determined and inventive action, to win more people to support it. We need to mount an irresistible pressure for a Europe free of nuclear weapons.

We do not wish to impose any uniformity on the movement nor to pre-empt the consultations and decisions

of those many organizations already exercising their influence for disarmament and peace. But the situation is urgent. The dangers steadily advance. We invite your support for this common objective, and we shall welcome both your help and advice.

135. Civil Defense Instructions for Home Fallout Shelters, 1980

Introduction

During the Cold War, the U.S. government devoted enormous energy to preparations designed to enable Americans to survive a nuclear war. Top federal government officials were expected to take refuge in huge shelters hollowed out in the Catocin Mountains near Washington, D.C. Businesses, government agencies, and other organizations were encouraged to include nuclear shelters when constructing new buildings or to adapt existing structures to include them. The Federal Emergency Management Agency (FEMA) also urged individual families to add their own personal fallout shelters to their homes. To assist in such undertakings, FEMA published a range of pamphlets giving detailed plans for a variety of shelters designed to suit every family's and house's particular circumstances. The majority were intended to take advantage of existing basements: individuals could choose between two models of Modified Ceiling Shelter, the Concrete Block Shelter, the Tilt-Up Storage Unit Shelter, and the Lean-To Shelter. Families without a basement were not forgotten. They could opt for the aboveground home shelter, which could double "as a tool shed or workshop," or the outside concrete shelter, whose "roof . . . can be used as an attractive patio." Each pamphlet was an illustrated manual giving detailed plans for the appropriate shelter's construction, listing the materials that would be needed, describing the topographical situations that a particular shelter was most advantageously designed to meet, and even mentioning suppliers of suitable ventilators and plumbing. Further manuals gave advice as to what supplies should be stored in a given shelter for particular family sizes. The home shelter program was intended to allay public fears and convince Americans that nuclear war was survivable but may well have simply contributed to a lurking sense of Cold War insecurity and vulnerability.

Primary Source

Aboveground Home Shelter

General information

This family shelter is intended for persons who prefer an aboveground shelter or, for some reason such as a high water table, cannot have a belowground shelter. In general, belowground shelter is superior and more economical than an aboveground shelter.

The shelter is designed to meet the standard of protection against fallout radiation that has been established by the Federal Emergency Management Agency for public fallout shelters. It can also be constructed to provide significant protection from the blast and fire

effects of a nuclear explosion. It has sufficient space to shelter six adults.

The shelter can be built of two rows of concrete blocks, one 12" and one 8", filled with sand or grout, or of poured reinforced concrete. Windows have been omitted; therefore, electric lights are recommended for day to day use.

The details and construction methods are considered typical. If materials other than shown are selected—for example, concrete block faced with brick—care should be taken to provide at least the same weight of materials per square foot: 200 lb. per sq. ft. in the walls and

100 lb. per sq. ft. in the roof. The wood frame roof over the reinforced concrete ceiling probably would be blown off by extremely high winds such as caused by a blast wave or tornado. However the wood frame roof is intended primarily for appearance; the concrete ceiling provides the protection. When using the shelter for protection against high winds, DO NOT place the concrete blocks in the doorway or windows.

This structure has been designed for areas where frost does not penetrate the ground more than 20 inches. If 20 inches is not a sufficient depth for footings, one or two additional courses of concrete blocks may be used to lower the footings. Average soil bearing pressure is 1,500 lb. per sq. ft. Most soils can be assumed to support this pressure without special testing or investigation.

The baffle wall outside the entrance to the shelter is extended out 7'4" to allow storage of lawn equipment such as wheelbarrows and lawn mowers. If additional space is desired, extend this dimension.

Before starting to build the shelter, make certain that the plan conforms to the local building code. Obtain a building permit if required. If the shelter is to be built by a contractor, engage a reliable firm that offers protection from liability or other claims arising from its construction.

FIRST ALTERNATIVE indicates windows in the workshop area. Solid blocks, equal to a thickness of 12 inches, should be available to fill these openings to provide adequate fallout protection. Window sizes should be kept small. When using the shelter for protection against high winds, do not place the concrete blocks in the doorway or windows.

SECOND ALTERNATIVE shows the cement block faced with bricks. Use one course 4-inch brick and two courses of 8-inch cement block to obtain the required weight per unit area.

THIRD ALTERNATIVE is to attach the tool shed or workshop to the house, with a covered area between. In this case, the facing materials should match the house.

FOURTH ALTERNATIVE is to install built-up roofing of asphalt or tar, or other wearing surface, on top of the concrete deck.

136. The Gdańsk Accords, “Solidarity,” 31 August 1980

Introduction

In Poland, which had a lengthy history of conflict with its Russian neighbor, Soviet control was never welcome. In the fall of 1956 Soviet military intervention was narrowly avoided. During the 1970s, price increases and poor working conditions generated serious labor unrest and public demonstrations. In 1976, Polish dissenters took advantage of their country's accession to the Helsinki Agreements the previous year to establish a Committee for Social Self-Defense, demanding that the Polish government respect human rights and condemning the official trade unions for failing to protect the workers they supposedly represented. In 1980, shortages of consumer goods and price increases led to a major new wave of strikes, including one called at the Lenin Shipyard in Gdańsk in August 1980. The strikers demanded independent trade unions, the right to strike, freedom of speech, the release of political prisoners, and improvements in the workers' living standards. The shipyard workers established an independent union, christened *Solidarność* (Solidarity) and headed by Lech Wałęsa, a charismatic electrician. The new organization set up an Interfactory Strike Committee, which quickly attracted tens of thousands of members from all over Poland and functioned as a political movement, launching strikes and demonstrations to show their sympathy with the original activists' demands. Solidarity's leaders received quiet encouragement from John Paul II, the former Archbishop Karol Wójtyła of Kraków, a forceful anticommunist who had been selected as pope in 1978 and retained a special interest in Polish affairs. At the end of August 1980, the government granted the strikers' demands, and Solidarity proceeded to organize itself as a nationwide organization. The Gdańsk accords marked the first occasion on which a communist government had made such concessions to its own people. Soviet officials, alarmed that other East European states might follow Poland's lead, considered military intervention at that time and again in December 1980 but rejected that option as overly controversial. Conflicts quickly developed between Solidarity and the Polish government. After Solidarity held its first congress in September 1981 and issued a message urging workers around Eastern Europe and in the Soviet Union to establish similar free trade unions, Soviet pressures on Polish leaders increased, and in December 1981 General Wojciech Jaruzelski, premier and defense minister, imposed martial law and banned Solidarity, imprisoning Wałęsa and thousands of other Solidarity leaders. The effective voiding of the Gdańsk accords was only temporary: economic difficulties afflicted Poland, and from 1985 onward a new Soviet leader, Mikhail Gorbachev, instituted policies that soon led to the dismantling of the Soviet empire. Released in 1986, Wałęsa openly reestablished Solidarity despite the official ban. As the Soviet Union renounced control over Eastern Europe in 1989 and labor unrest mounted in Poland, Solidarity held open negotiations with the government and was formally reinstated in April 1989. In elections held in June 1989, Solidarity candidates trounced the incumbent Communist Party and established the first democratic government in the former Soviet bloc.

Primary Source

Subsequent to consideration of the Twenty-one Demands put forward by the workforces striking on the Coast, the Government Commission and the Interfactory Strike Committee have reached the following decisions:

With regard to Point One: “To accept free trade unions, independent of the Party and employers, in accordance with ILO Convention 87 concerning free unions, ratified by Poland”, it was established:

1. Trade unions in the Polish People's Republic have not lived up to the hopes and expectations

of employees. It is necessary to form new, self-governing trade unions, as authentic representatives of the working class. The right to remain in the present unions is not questioned and we envisage cooperation between unions.

2. The Interfactory Strike Committee declares that the new, independent, self-governing trade unions will accept the bases of the Polish Constitution. The new trade unions will defend the social and material interests of employees and do not intend to act as a political party. They accept the principle of the social ownership of the means of production on which the existing socialist system in Poland is based. While acknowledging the

leading role of the Polish United Workers' Party in the state and not questioning the established system of international alliances, their purpose is to provide working people with appropriate means for exercising control, expressing their opinions and defending their own interests.

The Government Commission declares that the government will guarantee and ensure full respect for the independence and self-government of the new trade unions, both as to their organisational structure and to their functioning at all levels of their activity. The government will ensure the new trade unions have every opportunity to fulfill their basic function of defending employees' interests and meeting their material, social and cultural needs. It also guarantees that the new unions will not be subject to any discrimination.

3. The creation and operation of independent self-governing trade unions accords with ILO Conventions 87 on Freedom of Association and Protection of the Right to Organise and 98 on the Right to Organise and to Collective Bargaining, both ratified by Poland. The increase in the number of trade unions and other bodies representing employees, will necessitate changes in legislation. In particular, the government undertakes to introduce appropriate amendments to the laws on trade unions and workers' self-management and to the Labour Code.
4. The existing strike committees are free to become bodies representing factory employees, such as: workers' or employees' committees, workers' councils or founding committees of the new, self-governing trade unions. The Interfactory Strike Committee, as the Founding Committee of these unions, has a free choice over which form of a single union or association on the Coast to adopt. The founding committees will continue to function until elections of new officials under their statutes. The government undertakes to provide conditions for registration of the new trade unions outside the Central Trade Union Council register.
5. The new trade unions should have a genuine opportunity to express their opinion in public on the major decisions which determine the living standards of working people: the division of the national product between consumption and accu-

mulation; the allocation of the social fund amongst various sectors (health, education and culture); the basic principles for calculation and determination of wages, including that of automatic increases to compensate for inflation; long-term economic planning; the directions of investment and price changes. The government undertakes to provide conditions for fulfillment of these functions.

6. The Interfactory Committee is establishing a centre for social and professional studies. This will undertake objective research into the circumstances of employees, welfare conditions of working people and ways in which employees' interests can best be represented. It will conduct detailed research into wage and price indexing and propose means of compensation. The centre will publish the results of its investigations. The new unions will also have their own publications.
7. The government will ensure observance of the 1949 Law on trade unions, which states in Article One, Paragraph One, that workers and employees have the right of free association in trade unions. The newly-created trade unions will not join the association represented by the Central Trade Union Council. A new law will incorporate this principle. Participation by representatives of the Interfactory Strike Committee or founding committees of self-governing trade unions and other bodies representing employees in drawing up this new law is assured.

With regard to Point Two: 'To guarantee the right to strike and personal safety for strikers and their supporters', it was established:

The right to strike will be guaranteed by the law on trade unions now in preparation. It should lay down conditions for declaring and organising a strike, methods of resolving disputes and liability for breaches of the law. Articles 52, 64 and 65 of the Labour Code will not be used against strikers. Prior to adoption of the law the government guarantees the personal safety of strikers and their helpers, together with their present positions at work.

With regard to Point Three: 'To uphold freedom of expression and publication as guaranteed by the

Constitution, not to suppress independent publishing, and to grant access to the mass media for representatives of all denominations', it was established:

1. The government will submit a draft law to the *Sejm* on the control of press and publications within three months. It will be based on the principles that censorship should protect: the state's interests, that is preservation of state and economic secrets which will be more closely defined by law; matters of state security and its major international interests; religious feelings and those of non-believers; and should prevent dissemination of morally damaging material. The draft law will also provide a right of appeal to the Supreme Administrative Court against decisions taken by bodies controlling the press and publications. The right of appeal will also be incorporated into the Code of Administrative Procedure.
2. Religious associations will be granted access to the mass media as part of their religious practice, once various essential and technical questions have been resolved between the organs of state and religious associations concerned. The government will allow the radio transmission of Sunday mass, in accordance with detailed arrangements to be made with the Episcopate.
3. Broadcasting, the press and publishing should express a diversity of ideas, opinions and evaluations. They should be subject to social control.
4. The press, like members of society and their organisations, should have access to public documents such as administrative acts and social, economic or similar plans issued by the government and its subordinate organs. Exceptions to the principle of openness in administrative activity will be defined by the law, in accordance with sub-point 1.

[. . .]

With regard to Point Five: 'To put information in the mass media about the formation of the Interfactory Strike Committee and to publish its demands', it was established:

This proposal will be met by publishing the present protocol in the national mass media.

With regard to Point Six: 'To take definite steps to lead the country out of its present crisis by (a) giving the public full information about the social and economic situation and (b) enabling all social groups to participate in discussion of a reform programme', it was established:

We consider it vital to speed up work on economic reform. The authorities will define and publish the basic assumptions of this reform within the next few months. There should be wide public participation in discussing the reform. Trade unions should be involved in the preparation of laws on socialist economic organisations and workers' self-management. The reform of the economy should be based on a radical increase in the independence of enterprises and genuine participation by workers' self-governing institutions in management. There should be appropriate legislation to guarantee that trade unions are able to fulfill the functions defined in Point One of this Agreement.

Only an aware society, well-informed about reality, will be able to initiate and implement a programme for putting our economy in order. The government will radically increase the range of social and economic information made available to the public, to trade unions, and to economic and social organisations.

The Interfactory Strike Committee proposes further: creation of lasting prospects for the development of private peasant farming, the basis of Polish agriculture; equal treatment for the private, state and cooperative sectors of agriculture in access to all the means of production, including land; creation of conditions for the revival of rural self-government.

With regard to Point Seven: 'To pay all employees taking part in the strike wages equivalent to vacation pay for the duration of the strike, out of Central Trade Union Council funds', it was established:

Members of the workforces on strike will receive 40 per cent of normal wages for the duration of the strike and, on return to work, additional amounts equivalent to 100 per cent of wages for vacation pay, calculated on the basis of an eight-hour day. The Interfactory Strike Committee appeals to the workforce to increase pro-

ductivity, to economise on raw materials and energy and to improve labour discipline at all levels, in cooperation with the directors of enterprises, workplaces and institutions, once the strike has ended.

With regard to Point Eight: 'To raise the basic pay of every employee by 2000 zlotys a month, to compensate for current cost of living increases', it was established:

The wages of all groups of employees will gradually be raised, above all those of the lowest paid. It was agreed in principle that wages will be raised by individual factories and sectors. They will continue to be implemented as at present, according to specific jobs and trades, by increases of one point on the scale or its equivalent in other elements of wage calculation. For white-collar workers in industry, the increase will consist of one point on the scale. Increases still under discussion will be agreed according to sector and implemented by the end of September this year.

After analysing all sectors, the government, with the agreement of trade unions, will present a programme for increasing the wages of the lowest paid, with particular attention to large families. This will be put forward by 31 October 1980 and come into force on 1 January 1981.

With regard to Point Nine: 'To guarantee automatic wage increases that keep up with price rises and a fall in the value of money', it was established:

It was deemed necessary to halt price increases on basic goods through greater control over the socialised and private sectors and in particular by putting a stop to 'hidden' inflation. The government will do research into determinants of the cost of living. Similar studies will be conducted by trade unions and research institutes. The government will work out a method of compensation for cost of living increases by the end of 1980. After public discussion and acceptance, this will be implemented. The method chosen should take into account the *social minimum*.

With regard to the related points: Ten, 'To supply sufficient food for the domestic market, exporting only and exclusively the surpluses', Eleven, 'To abolish com-

mercial prices and sales for hard currency in shops for *Internal-Export*'; and Thirteen, 'To introduce ration cards for meat and meat products—food coupons—until the market is stabilised', it was established:

Meat supplies will be improved by 31 December 1980 as the result of greater incentives for agricultural production, reduction of meat exports to a minimum, additional meat imports and other measures. A programme for improved meat distribution, including the possibility of introducing rationing, will be presented by the same date.

Foreign currency shops (PEWEX) will not stock Polish products in short supply. Information will be published about decisions and measures taken in regard to market supplies, by the end of the year.

The Interfactory Strike Committee proposes that commercial shops should be closed and the price of meat and meat products be regulated and standardised at an average level.

With regard to Point Twelve: 'To introduce the principle that people in leading positions are chosen on the basis of qualifications rather than Party membership. To abolish privileges of the militia, security service and Party apparatus by equalizing family allowances and closing special shops, etc.', it was established:

It is accepted that people in leading positions will be selected on the bases of qualifications and ability, whether they are Party members, members of allied parties or unaffiliated. The government will present a programme for equalising the family allowances of all professional groups, by 31 December 1980. The Government Commission states that shops and cafeteria for their employees are identical to those at other workplaces and offices.

With regard to Point Fourteen: 'To lower the retirement age for women to fifty and for men to fifty-five. To allow retirement of those who have worked continuously in Poland for thirty years for women and thirty-five years for men, regardless of age', it was established:

The Government Commission considers that this proposal cannot be fulfilled in the present economic and

demographic circumstances. It may become a subject for discussion in the future.

The Interfactory Strike Committee proposes this be investigated by 31 December 1980. The possibility of retirement five years early for those working in difficult or arduous conditions, after thirty years for women and thirty-five for men, should be considered. In the case of particularly arduous work, retirement should be advanced by at least fifteen years. Early retirement should take place only at the employee's request.

[. . .]

With regard to Point Sixteen: 'To improve working conditions in the health service, so that full medical care can be provided for all employees', it was established:

It is recognised that an increase in the building capacity available for health service investment, improved supply of medicines through additional imports of raw materials, higher wages for health service employees (a change in the pay-scale for nurses) and implementation of governmental and regional programmes for the improvement of public health, are urgently needed. Other steps in this direction are appended:

1. Introducing a Charter of Rights for health service workers.

[. . .]

26. Raising the spending-limits on pharmaceuticals from 1138 zlotys to 2700 zlotys per hospital patient since this is the real cost of treatment, and raising the food allowance.
27. Issuing food coupons for the chronically sick.
28. Doubling the supply of medical vehicles in order to meet already existing needs.
29. Ensuring clean air, soil and water, especially along the Coast.
30. Opening new housing estates with health centres, pharmacies and chrefhe facilities already provided.

With regard to Point Seventeen: 'To provide sufficient chreęhe and nursery places for children of working mothers', it was established:

The Commission fully supports this proposal. The regional authorities will present the necessary programme by 30 November 1980.

With regard to Point Eighteen: 'To grant paid maternity leave for three years while a mother brings up her child', it was established:

An analysis of whether the economy can afford this will be carried out by 31 December 1980, in cooperation with trade unions. The size and length of paid maternity leave for mothers whose leave is unpaid at present will be determined.

The Interfactory Strike Committee proposes the allowance be the equivalent of full pay for the first year and half pay for the second, but not less than 2000 zlotys a month. The proposal should be implemented in stages from the first half of 1981.

[. . .]

With regard to Point Twenty-one: 'To make all Saturdays work-free. Employees on a three-shift and a four-brigade system will be compensated for the loss of free Saturdays by extension of annual leave of other paid days off', it was established:

Ways of introducing a programme for paid work-free Saturdays, or some other method of regulation to shorten working hours, will be drawn up and presented by 31 December 1980. The number of paid, work-free Saturdays will start to increase in 1981. Other steps in this direction are included in an appendix.

After the above had been agreed, the government undertakes:

To guarantee the personal safety and present working conditions of participants in the present strike and their helpers; that the ministries concerned will consider the specific problems of the branches put forward by the workforces on strike; immediate publication of the full text of the present Agreement in the mass media (press, radio and television).

The Interfactory Strike Committee undertakes to end the strike on 31 August 1980 at 5 P.M.

137. Wojciech Jaruzelski: Declaration of Martial Law, 13 December 1981

Introduction

Despite official acceptance of the Gdańsk accords, further conflicts quickly developed between Solidarity and the Polish government. In September 1981, Solidarity held its first congress and issued a message urging workers around Eastern Europe and in the Soviet Union to establish similar free trade unions. Soviet Communist Party General Secretary Leonid Brezhnev demanded that the Polish government introduce martial law. Twice, in August and December 1980, Soviet officials had contemplated military intervention but, fearing that such direct action would be counterproductive, preferred to put pressure on General Wojciech Jaruzelski, who had become Polish minister of defense, prime minister, and Communist Party general secretary in the previous year, to impose martial law. In December 1981 Jaruzelski did so, banning Solidarity and arresting Wałęsa and thousands of other members of the union. Martial law was not lifted in Poland until June 1983, and only in 1988, when severe economic problems had brought the country close to collapse, did the Polish government recognize Solidarity and open talks with its leaders. Jaruzelski subsequently defended his decision to declare martial law on the grounds that this represented the lesser of two evils and was preferable to a Soviet intervention. Even so, in 2006 the National Remembrance Institute charged him with communist crimes committed in connection with the imposition of martial law.

Primary Source

Citizens of the Polish People's Republic, I turn to you today as a soldier and as the head of the Polish Government. I turn to you in matters of supreme importance. Our country has found itself at the edge of an abyss. The achievements of many generations, the house erected from Polish ashes, is being ruined. The structures of the state are ceasing to function. New blows are being struck every day at the dying economy. Our living conditions are imposing on people an increasingly greater burden. Lines of painful division are running through every work enterprise and through many Polish homes. The atmosphere of endless conflicts, of misunderstandings and of hatred is sowing psychological devastation and injuring the traditions of tolerance. Strikes, strike readiness and protest actions have become the norm. Even school children are being dragged into it.

Yesterday evening many public buildings were occupied. Exhortations for a physical settling of accounts with the "Reds," with people who hold different views,

are being made. Acts of terrorism, of threats, of mob trials and also of direct coercion abound. The wave of impudent crimes, of assaults and break-ins is sweeping the country. Fortunes amounting to millions are being accrued by economic underground sharks and are growing. Chaos and demoralization have assumed the proportions of a disaster.

The nation has come to the end of its psychological endurance. Many people are beginning to despair. Now it is not days but hours that separate us from a national catastrophe. Honesty compels one to ask the question: Did things have to come to this?

In assuming the office of chairman of the Council of Ministers, I believed that we could lift ourselves up. Have we thus done everything to stop the spiral of the crisis? History will assess our activities. There have been errors, and we are drawing conclusions from them. Above all, however, the past months have been a busy time for the government, a time of wrestling with enormous difficulties.

Unfortunately, however, the national economy has been turned into an arena for political struggle. A deliberate torpedoing of government activities has brought about a situation in which results are not commensurate with the work put in with our efforts. We cannot be said to lack good will, moderation and patience. Sometimes there has been, perhaps, even too much of it. . . .

The self-preservation instinct of the nation must be heard. Adventurists must have their hands tied before they push the homeland into the abyss of fratricide.

Citizens. Great is the burden of responsibility that falls on me at this dramatic moment in Polish history. It is my duty to take this responsibility. Poland's future is at stake—the future for which my generation fought and for which it gave the best years of its life.

I announce that today a Military Council of National Salvation has been established. Today at midnight, the Council of State, in accordance with the Constitution, introduced martial law throughout the country. I want everyone to understand the motives and the aims of our action. We are not striving for a military coup, for a military dictatorship. The nation has enough strength,

enough wisdom to develop an efficient democratic system of socialist rule. In such a system the Armed Forces will be able to remain where they belong—in the barracks. No Polish problem can, in the long run, be solved through force. The Military Council for National Salvation is not replacing constitutional organs of power. Its sole task is the protection of legal order in the country and the creation of executive guarantees that will make it possible to restore order and discipline. This is the last path we can take to initiate the extrication of the country from the crisis, to save the country from disintegration. . . .

In this difficult moment I address myself to our socialist allies and friends. We greatly value their trust and constant aid. The Polish-Soviet alliance is, and will remain, the cornerstone of the Polish *raison d'état*, the guarantee of the inviolability of our borders.

Poland is, and will remain, a lasting link in the Warsaw Pact, an unfailing member of the socialist community of nations. . . .

138. Ronald Reagan: The “Evil Empire,” 8 March 1983

Introduction

In 1981, the former Hollywood actor and governor of California Ronald Reagan, a staunch conservative from the right wing of the Republican Party, became president. Unlike his more pragmatic predecessors, he was a fierce anti-communist who felt a deep ideological antipathy toward the Soviet Union and did not hesitate to express this antagonism. Alarmed that during the late 1970s the Soviet Union had become more assertive in Latin America, Africa, and the Middle East, Reagan launched a major defense buildup, improving on the increases in military spending already projected by his predecessor, Jimmy Carter. Reagan consciously sought to restore the national confidence of the United States after the demoralizing 1970s. He repeatedly proclaimed the superiority of capitalism, democracy, and free institutions over the Soviet Union and sought to encourage free enterprise, reduce the role of government, and cut taxes by curtailing spending on welfare and other social programs. Excessive intervention by the government, he proclaimed, was the problem, not the solution. One of Reagan's closest international allies was Margaret Thatcher, the equally conservative and ideologically driven prime minister of Great Britain, who shared his anticommunist and free market outlook. Reagan did not hesitate to use undiplomatic language to describe the Soviet Union. In June 1982 he made a state visit to Britain. Speaking in the British House of Commons, he relegated Soviet totalitarianism to the “ash heap of history.” He deliberately drew on memories of Winston Churchill, the towering British politician who had sounded the alarm against Adolf Hitler's Germany during the 1930s, served as an inspiring prime minister during World War II, and warned in 1946 that the Soviet Union had

drawn an “iron curtain” across Europe. In the original draft of this speech, Reagan referred to the Soviet Union as “the focus of evil in the modern world” and a “militaristic empire,” passages that were later cut as too provocative. Reagan did, however, proclaim his mission to “preserve freedom as well as peace” and described the conflict between totalitarianism and democracy as a battle between good and evil, optimistically stating that good would prevail. Nine months later, he recycled his uncompromising “evil empire” description of the Soviet Union when addressing the National Association of Evangelicals, a forum in which he also emphasized the antireligious aspects of communism. On this occasion, Reagan was particularly concerned to counter growing pressures in both the United States and Europe for a nuclear freeze agreement that would have halted deployments of additional short- and intermediate-range missiles in Western Europe.

Primary Source

[. . .]

Especially in this century, America has kept alight the torch of freedom, but not just for ourselves but for millions of others around the world.

And this brings me to my final point today. During my first press conference as President, in answer to a direct question, I pointed out that, as good Marxist-Leninists, the Soviet leaders have openly and publicly declared that the only morality they recognize is that which will further their cause, which is world revolution. I think I should point out I was only quoting Lenin, their guiding spirit, who said in 1920 that they repudiate all morality that proceeds from supernatural ideas—that’s their name for religion—or ideas that are outside class conceptions. Morality is entirely subordinate to the interests of class war. And everything is moral that is necessary for the annihilation of the old, exploiting social order and for uniting the proletariat.

Well, I think the refusal of many influential people to accept this elementary fact of Soviet doctrine illustrates an historical reluctance to see totalitarian powers for what they are. We saw this phenomenon in the 1930’s. We see it too often today.

This doesn’t mean we should isolate ourselves and refuse to seek an understanding with them. I intend to do everything I can to persuade them of our peaceful intent, to remind them that it was the West that refused to use its nuclear monopoly in the forties and fifties for territorial gain and which now proposes 50-percent cut in strategic ballistic missiles and the elimination of an entire class of land-based, intermediate-range nuclear missiles.

At the same time, however, they must be made to understand we will never compromise our principles and standards. We will never give away our freedom. We will never abandon our belief in God. And we will never stop searching for a genuine peace. But we can assure none of these things America stands for through the so-called nuclear freeze solutions proposed by some.

The truth is that a freeze now would be a very dangerous fraud, for that is merely the illusion of peace. The reality is that we must find peace through strength.

I would agree to a freeze if only we could freeze the Soviets’ global desires. A freeze at current levels of weapons would remove any incentive for the Soviets to negotiate seriously in Geneva and virtually end our chances to achieve the major arms reductions which we have proposed. Instead, they would achieve their objectives through the freeze.

A freeze would reward the Soviet Union for its enormous and unparalleled military buildup. It would prevent the essential and long overdue modernization of United States and allied defenses and would leave our aging forces increasingly vulnerable. And an honest freeze would require extensive prior negotiations on the systems and numbers to be limited and on the measures to ensure effective verification and compliance. And the kind of a freeze that has been suggested would be virtually impossible to verify. Such a major effort would divert us completely from our current negotiations on achieving substantial reductions.

A number of years ago, I heard a young father, a very prominent young man in the entertainment world, addressing a tremendous gathering in California. It was during the time of the cold war, and communism and

our own way of life were very much on people's minds. And he was speaking to that subject. And suddenly, though, I heard him saying, "I love my little girls more than anything." And I said to myself, "Oh, no, don't. You can't—don't say that." But I had underestimated him. He went on: "I would rather see my little girls die now, still believing in God, than have them grow up under communism and one day die no longer believing in God."

There were thousands of young people in that audience. They came to their feet with shouts of joy. They had instantly recognized the profound truth in what he had said, with regard to the physical and the soul and what was truly important.

Yes, let us pray for the salvation of all of those who live in that totalitarian darkness—pray they will discover the joy of knowing God. But until they do, let us be aware that while they preach the supremacy of the state, declare its omnipotence over individual man, and predict its eventual domination of all peoples on the Earth, they are the focus of evil in the modern world.

It was C. S. Lewis who, in his unforgettable "Screw-tape Letters," wrote: "The greatest evil is not done now in those sordid 'dens of crime' that Dickens loved to paint. It is not even done in concentration camps and labor camps. In those we see its final result. But it is conceived and ordered (moved, seconded, carried and minuted) in clear, carpeted, warmed, and well-lighted offices, by quiet men with white collars and cut fingernails and smooth-shaven cheeks who do not need to raise their voice."

Well, because these "quiet men" do not "raise their voices," because they sometimes speak in soothing tones of brotherhood and peace, because, like other dictators before them, they're always making "their final territorial demand," some would have us accept them at their word and accommodate ourselves to their aggressive impulses. But if history teaches anything, it teaches that simple-minded appeasement or wishful thinking about our adversaries is folly. It means the betrayal of our past, the squandering of our freedom.

So, I urge you to speak out against those who would place the United States in a position of military and moral inferiority. You know, I've always believed that old Screwtape reserved his best efforts for those of you in the church. So, in your discussions of the nuclear freeze proposals, I urge you to beware the temptation of pride—the temptation of blithely declaring yourselves above it all and label both sides equally at fault, to ignore the facts of history and the aggressive impulses of an evil empire, to simply call the arms race a giant misunderstanding and thereby remove yourself from the struggle between right and wrong and good and evil.

I ask you to resist the attempts of those who would have you withhold your support for our efforts, this administration's efforts, to keep America strong and free, while we negotiate real and verifiable reductions in the world's nuclear arsenals and one day, with God's help, their total elimination.

While America's military strength is important, let me add here that I've always maintained that the struggle now going on for the world will never be decided by bombs or rockets, by armies or military might. The real crisis we face today is a spiritual one; at root, it is a test of moral will and faith.

Whittaker Chambers, the man whose own religious conversion made him a witness to one of the terrible traumas of our time, the Hiss-Chambers case, wrote that the crisis of the Western World exists to the degree in which the West is indifferent to God, the degree to which it collaborates in communism's attempt to make man stand alone without God. And then he said, for Marxism-Leninism is actually the second oldest faith, first proclaimed in the Garden of Eden with the words of temptation, "Ye shall be as gods."

The Western World can answer this challenge, he wrote, "but only provided that its faith in God and the freedom He enjoins is as great as communism's faith in Man."

I believe we shall rise to the challenge. I believe that communism is another sad, bizarre chapter in human history whose last pages even now are being written. I believe this because the source of our strength in the

quest for human freedom is not material, but spiritual. And because it knows no limitation, it must terrify and ultimately triumph over those who would enslave their fellow man. For in the words of Isaiah: “He giveth power to the faint; and to them that have no might He increased strength. . . . But they that wait upon the Lord shall renew their strength; they shall mount up with wings as eagles; they shall run, and not be weary. . . .”

Yes, change your world. One of our Founding Fathers, Thomas Paine, said, “We have it within our power to begin the world over again.” We can do it, doing together what no one church could do by itself.

139. Ronald Reagan: Address to the Nation on Defense and National Security, 23 March 1983

Introduction

The centerpiece of President Ronald Reagan’s defense buildup became the Strategic Defensive Initiative (SDI), or “Star Wars” program. Proposed by the president in March 1983, this ambitious initiative envisaged the development of a system of antimissile defenses of lasers based on satellites in space, which would make the United States impregnable to nuclear attack. So long as it was genuinely impervious to incoming missiles, the construction of such a shield would make Soviet nuclear missiles useless against the United States while leaving the Soviets vulnerable to nuclear blackmail by their rival unless they embarked on the immensely expensive task of developing similar defenses of their own. One of Reagan’s purposes in announcing this scheme was almost certainly to persuade Soviet leaders to negotiate in earnest to cut nuclear armaments, although not until 1985, after Mikhail Gorbachev came to power in the Soviet Union, did this occur. Reagan’s admirers subsequently suggested that his intention in launching this initiative was to force the Soviet Union to launch a counterprogram that would strain the weak Soviet economy to the point of collapse, but at the time the president was apparently unaware of the gravity of Soviet economic problems. Scientists working on SDI had only limited success in developing reliable interceptors. After 1987, successive arms control agreements made a full-scale Soviet attack increasingly unlikely, and SDI’s emphasis shifted to smaller-scale ground-based systems that could counter accidental or limited launches. In the early 2000s, President George W. Bush revived the space-based SDI program in the guise of National Missile Defense, a shield intended to defend the United States and its European and Asian allies against nuclear attack by hostile powers. Even though it remained unclear precisely when any such scheme might be implemented, China resented the fact that Japan and Taiwan might be included under the new defense umbrella, thereby negating its own nuclear arsenal, while Russia condemned proposals to locate antimissile installations in former Warsaw Pact countries that had since joined NATO.

Primary Source

The calls for cutting back the defense budget come in nice, simple arithmetic. They’re the same kind of talk that led the democracies to neglect their defenses in the 1930’s and invited the tragedy of World War II. We must not let that grim chapter of history repeat itself through apathy or neglect.

This is why I’m speaking to you tonight—to urge you to tell your Senators and Congressmen that you know we must continue to restore our military strength. If we stop in midstream, we will send a signal of decline,

of lessened will, to friends and adversaries alike. Free people must voluntarily, through open debate and democratic means, meet the challenge that totalitarians pose by compulsion. It’s up to us, in our time, to choose and choose wisely between the hard but necessary task of preserving peace and freedom and the temptation to ignore our duty and blindly hope for the best while the enemies of freedom grow stronger day by day.

The solution is well within our grasp. But to reach it, there is simply no alternative but to continue this year,

in this budget, to provide the resources we need to preserve the peace and guarantee our freedom.

Now, thus far tonight I've shared with you my thoughts on the problems of national security we must face together. My predecessors in the Oval Office have appeared before you on other occasions to describe the threat posed by Soviet power and have proposed steps to address that threat. But since the advent of nuclear weapons, those steps have been increasingly directed toward deterrence of aggression through the promise of retaliation.

This approach to stability through offensive threat has worked. We and our allies have succeeded in preventing nuclear war for more than three decades. In recent months, however, my advisers, including in particular the Joint Chiefs of Staff, have underscored the necessity to break out of a future that relies solely on offensive retaliation for our security.

Over the course of these discussions, I've become more and more deeply convinced that the human spirit must be capable of rising above dealing with other nations and human beings by threatening their existence. Feeling this way, I believe we must thoroughly examine every opportunity for reducing tensions and for introducing greater stability into the strategic calculus on both sides.

One of the most important contributions we can make is, of course, to lower the level of all arms, and particularly nuclear arms. We're engaged right now in several negotiations with the Soviet Union to bring about a mutual reduction of weapons. I will report to you a week from tomorrow my thoughts on that score. But let me just say, I'm totally committed to this course.

If the Soviet Union will join with us in our effort to achieve major arms reduction, we will have succeeded in stabilizing the nuclear balance. Nevertheless, it will still be necessary to rely on the specter of retaliation, on mutual threat. And that's a sad commentary on the human condition. Wouldn't it be better to save lives than to avenge them? Are we not capable of demonstrating our peaceful intentions by applying all our abilities and our ingenuity to achieving a truly lasting stability? I think we are. Indeed, we must.

After careful consultation with my advisers, including the Joint Chiefs of Staff, I believe there is a way. Let me share with you a vision of the future which offers hope. It is that we embark on a program to counter the awesome Soviet missile threat with measures that are defensive. Let us turn to the very strengths in technology that spawned our great industrial base and that have given us the quality of life we enjoy today.

What if free people could live secure in the knowledge that their security did not rest upon the threat of instant U.S. retaliation to deter a Soviet attack, that we could intercept and destroy strategic ballistic missiles before they reached our own soil or that of our allies?

I know this is a formidable, technical task, one that may not be accomplished before the end of this century. Yet, current technology has attained a level of sophistication where it's reasonable for us to begin this effort. It will take years, probably decades of effort on many fronts. There will be failures and setbacks, just as there will be successes and breakthroughs. And as we proceed, we must remain constant in preserving the nuclear deterrent and maintaining a solid capability for flexible response. But isn't it worth every investment necessary to free the world from the threat of nuclear war? We know it is.

In the meantime, we will continue to pursue real reductions in nuclear arms, negotiating from a position of strength that can be ensured only by modernizing our strategic forces. At the same time, we must take steps to reduce the risk of a conventional military conflict escalating to nuclear war by improving our non-nuclear capabilities.

America does possess—now—the technologies to attain very significant improvements in the effectiveness of our conventional, nonnuclear forces. Proceeding boldly with these new technologies, we can significantly reduce any incentive that the Soviet Union may have to threaten attack against the United States or its allies.

As we pursue our goal of defensive technologies, we recognize that our allies rely upon our strategic offensive power to deter attacks against them. Their vital

interests and ours are inextricably linked. Their safety and ours are one. And no change in technology can or will alter that reality. We must and shall continue to honor our commitments.

I clearly recognize that defensive systems have limitations and raise certain problems and ambiguities. If paired with offensive systems, they can be viewed as fostering an aggressive policy, and no one wants that. But with these considerations firmly in mind, I call upon the scientific community in our country, those who gave us nuclear weapons, to turn their great talents now to the cause of mankind and world peace, to give us the means of rendering these nuclear weapons impotent and obsolete.

Tonight, consistent with our obligations of the ABM treaty and recognizing the need for closer consultation with our allies, I'm taking an important first step. I am

directing a comprehensive and intensive effort to define a long-term research and development program to begin to achieve our ultimate goal of eliminating the threat posed by strategic nuclear missiles. This could pave the way for arms control measures to eliminate the weapons themselves. We seek neither military superiority nor political advantage. Our only purpose—one all people share—is to search for ways to reduce the danger of nuclear war.

My fellow Americans, tonight we're launching an effort which holds the promise of changing the course of human history. There will be risks, and results take time. But I believe we can do it. As we cross this threshold, I ask for your prayers and your support.

140. Ronald Reagan: Address to the Nation on Events in Lebanon and Grenada, 27 October 1983

Introduction

On 23 October 1983, suicide-bombers drove trucks loaded with explosives into the barracks of peacekeeping forces of U.S. Marines and French troops stationed in Beirut, the capital of Lebanon. These troops had been deployed there since late 1982 as part of an international peacekeeping force that was trying to maintain order in Beirut after Israeli forces intent on driving out the Palestine Liberation Organization (PLO) had invaded, triggering a complicated civil war among various Lebanese political factions. The bombing killed 241 American servicemen, 58 French paratroopers, and some civilians. The episode was one of the first suicide bombings in the Middle East. Addressing the nation four days later, U.S. President Ronald Reagan affirmed his country's commitment to maintaining order in the Middle East, particularly in Lebanon, and claimed that the attacks were themselves evidence that the Marines were succeeding in their mission of restoring stability and normal conditions in Beirut. In practice, nonetheless, shortly afterward the U.S. government, reluctant to face the prospect of further major casualties in such episodes, proclaimed that the Marines had accomplished their mission and withdrew them from Lebanon, a decision that hawks later criticized as proof that terrorist tactics were effective. In the same address, Reagan also highlighted the American invasion of the Caribbean island of Grenada, an operation launched two days earlier to overthrow a Marxist government that had murdered socialist Prime Minister Maurice Bishop and seized power the previous week. Cuban troops and construction workers were present on the island building an airport that it was feared would be used for military purposes, and 1,000 American students were believed to be in danger. In conjunction with forces from seven other Caribbean countries, 5,000 United States Marines invaded the island and, after some heavy fighting, subdued the Grenadian ground and air forces and the Cuban contingents. They also found a cache of heavy weapons sufficient to arm 10,000 troops. Nineteen American soldiers died and 119 were wounded, while Grenadian casualties were 45 dead and 337 wounded. By mid-December 1983 most resistance had ended, except for some rebels who fled to the hills, and American forces were withdrawn. Parliamentary elections

held in 1984 returned the noncommunist New National Party to power. The two near-simultaneous episodes encapsulated the degree to which Reagan's bold rhetoric belied his pragmatic caution in international affairs. Like most American presidents and military men in the aftermath of the Vietnam War, he preferred to keep American military interventions brief and limited and to pick conflicts in which victory would be relatively quick and easy.

Primary Source

Some 2 months ago we were shocked by the brutal massacre of 269 men, women, and children, more than 60 of them Americans, in the shooting down of a Korean airliner. Now, in these past several days, violence has erupted again, in Lebanon and Grenada.

In Lebanon, we have some 1,600 marines, part of a multinational force that's trying to help the people of Lebanon restore order and stability to that troubled land. Our marines are assigned to the south of the city of Beirut, near the only airport operating in Lebanon. Just a mile or so to the north is the Italian contingent and not far from them, the French and a company of British soldiers.

This past Sunday, at 22 minutes after 6 Beirut time, with dawn just breaking, a truck, looking like a lot of other vehicles in the city, approached the airport on a busy, main road. There was nothing in its appearance to suggest it was any different than the trucks or cars that were normally seen on and around the airport. But this one was different. At the wheel was a young man on a suicide mission.

The truck carried some 2,000 pounds of explosives, but there was no way our marine guards could know this. Their first warning that something was wrong came when the truck crashed through a series of barriers, including a chain-link fence and barbed wire entanglements. The guards opened fire, but it was too late. The truck smashed through the doors of the headquarters building in which our marines were sleeping and instantly exploded. The four-story concrete building collapsed in a pile of rubble.

More than 200 of the sleeping men were killed in that one hideous, insane attack. Many others suffered injury and are hospitalized here or in Europe.

[. . .]

And now many of you are asking: Why should our young men be dying in Lebanon? Why is Lebanon important to us?

Well, it's true, Lebanon is a small country, more than five-and-a-half thousand miles from our shores on the edge of what we call the Middle East. But every President who has occupied this office in recent years has recognized that peace in the Middle East is of vital concern to our nation and, indeed, to our allies in Western Europe and Japan. We've been concerned because the Middle East is a powderkeg; four times in the last 30 years, the Arabs and Israelis have gone to war. And each time, the world has teetered near the edge of catastrophe.

The area is key to the economic and political life of the West. Its strategic importance, its energy resources, the Suez Canal, and the well-being of the nearly 200 million people living there—all are vital to us and to world peace. If that key should fall into the hands of a power or powers hostile to the free world, there would be a direct threat to the United States and to our allies.

We have another reason to be involved. Since 1948 our Nation has recognized and accepted a moral obligation to assure the continued existence of Israel as a nation. Israel shares our democratic values and is a formidable force an invader of the Middle East would have to reckon with.

[. . .]

In the year that our marines have been there, Lebanon has made important steps toward stability and order. The physical presence of the marines lends support to both the Lebanese Government and its army. It allows the hard work of diplomacy to go forward. Indeed, without the peacekeepers from the U.S., France, Italy, and Britain, the efforts to find a peaceful solution in Lebanon would collapse.

As to that narrower question—what exactly is the operational mission of the marines—the answer is, to secure a piece of Beirut, to keep order in their sector, and to prevent the area from becoming a battlefield. Our marines are not just sitting in an airport. Part of their task is to guard that airport. Because of their presence, the airport has remained operational. In addition, they patrol the surrounding area. This is their part—a limited, but essential part—in the larger effort that I’ve described.

If our marines must be there, I’m asked, why can’t we make them safer? Who committed this latest atrocity against them and why?

Well, we’ll do everything we can to ensure that our men are as safe as possible. We ordered the battleship *New Jersey* to join our naval forces offshore. Without even firing them, the threat of its 16-inch guns silenced those who once fired down on our marines from the hills, and they’re a good part of the reason we suddenly had a cease-fire. We’re doing our best to make our forces less vulnerable to those who want to snipe at them or send in future suicide missions.

[. . .]

Now then, where do we go from here? What can we do now to help Lebanon gain greater stability so that our marines can come home? Well, I believe we can take three steps now that will make a difference.

First, we will accelerate the search for peace and stability in that region. Little attention has been paid to the fact that we’ve had special envoys there working, literally, around the clock to bring the warring factions together. This coming Monday in Geneva, President Gemayel of Lebanon will sit down with other factions from his country to see if national reconciliation can be achieved. He has our firm support. . . .

Second, we’ll work even more closely with our allies in providing support for the Government of Lebanon and for the rebuilding of a national consensus.

Third, we will ensure that the multinational peace-keeping forces, our marines, are given the greatest possible protection. . . .

Beyond our progress in Lebanon, let us remember that our main goal and purpose is to achieve a broader peace in all of the Middle East. The factions and bitterness that we see in Lebanon are just a microcosm of the difficulties that are spread across much of that region. A peace initiative for the entire Middle East, consistent with the Camp David accords and U.N. resolutions 242 and 338, still offers the best hope for bringing peace to the region.

Let me ask those who say we should get out of Lebanon: If we were to leave Lebanon now, what message would that send to those who foment instability and terrorism? If America were to walk away from Lebanon, what chance would there be for a negotiated settlement, producing a unified democratic Lebanon?

If we turned our backs on Lebanon now, what would be the future of Israel? At stake is the fate of only the second Arab country to negotiate a major agreement with Israel. That’s another accomplishment of this past year, the May 17th accord signed by Lebanon and Israel.

[. . .]

We’re a nation with global responsibilities. We’re not somewhere else in the world protecting someone else’s interests; we’re there protecting our own.

[. . .]

With patience and firmness, we can help bring peace to that strife-torn region—and make our own lives more secure. Our role is to help the Lebanese put their country together, not to do it for them.

Now, I know another part of the world is very much on our minds, a place much closer to our shores: Grenada. The island is only twice the size of the District of Columbia, with a total population of about 110,000 people.

[. . .]

In 1979 trouble came to Grenada. Maurice Bishop, a protege of Fidel Castro, staged a military coup and

overthrew the government which had been elected under the constitution left to the people by the British. He sought the help of Cuba in building an airport, which he claimed was for tourist trade, but which looked suspiciously suitable for military aircraft, including Soviet-built long-range bombers.

The six sovereign countries and one remaining colony are joined together in what they call the Organization of Eastern Caribbean States. The six became increasingly alarmed as Bishop built an army greater than all of theirs combined. Obviously, it was not purely for defense.

In this last year or so, Prime Minister Bishop gave indications that he might like better relations with the United States. He even made a trip to our country and met with senior officials of the White House and the State Department. Whether he was serious or not, we'll never know. On October 12th, a small group in his militia seized him and put him under arrest. They were, if anything, more radical and more devoted to Castro's Cuba than he had been.

Several days later, a crowd of citizens appeared before Bishop's home, freed him, and escorted him toward the headquarters of the military council. They were fired upon. A number, including some children, were killed, and Bishop was seized. He and several members of his cabinet were subsequently executed, and a 24-hour shoot-to-kill curfew was put in effect. Grenada was without a government, its only authority exercised by a self-proclaimed band of military men.

There were then about 1,000 of our citizens on Grenada, 800 of them students in St. George's University Medical School. Concerned that they'd be harmed or held as hostages, I ordered a flotilla of ships, then on its way to Lebanon with marines, part of our regular rotation program, to circle south on a course that would put them somewhere in the vicinity of Grenada in case there should be a need to evacuate our people.

Last weekend, I was awakened in the early morning hours and told that six members of the Organization of Eastern Caribbean States, joined by Jamaica and Barbados, had sent an urgent request that we join them in

a military operation to restore order and democracy to Grenada. They were proposing this action under the terms of a treaty, a mutual assistance pact that existed among them.

These small, peaceful nations needed our help. Three of them don't have armies at all, and the others have very limited forces. The legitimacy of their request, plus my own concern for our citizens, dictated my decision. I believe our government has a responsibility to go to the aid of its citizens, if their right to life and liberty is threatened. The nightmare of our hostages in Iran must never be repeated.

[. . .]

Two hours ago we released the first photos from Grenada. They included pictures of a warehouse of military equipment—one of three we've uncovered so far. This warehouse contained weapons and ammunition stacked almost to the ceiling, enough to supply thousands of terrorists. Grenada, we were told, was a friendly island paradise for tourism. Well, it wasn't. It was a Soviet-Cuban colony, being readied as a major military bastion to export terror and undermine democracy. We got there just in time.

I can't say enough in praise of our military—Army rangers and paratroopers, Navy, Marine, and Air Force personnel—those who planned a brilliant campaign and those who carried it out. Almost instantly, our military seized the two airports, secured the campus where most of our students were, and are now in the mopping-up phase.

It should be noted that in all the planning, a top priority was to minimize risk, to avoid casualties to our own men and also the Grenadian forces as much as humanly possible. But there were casualties, and we all owe a debt to those who lost their lives or were wounded. They were few in number, but even one is a tragic price to pay.

It's our intention to get our men out as soon as possible. . . .

The events in Lebanon and Grenada, though oceans apart, are closely related. Not only has Moscow assisted

and encouraged the violence in both countries, but it provides direct support through a network of surrogates and terrorists. It is no coincidence that when the thugs tried to wrest control over Grenada, there were 30 Soviet advisers and hundreds of Cuban military and paramilitary forces on the island. At the moment of our landing, we communicated with the Governments of Cuba and the Soviet Union and told them we would offer shelter and security to their people on Grenada. Regrettably, Castro ordered his men to fight to the death, and some did. The others will be sent to their homelands.

You know, there was a time when our national security was based on a standing army here within our own borders and shore batteries of artillery along our coasts, and, of course, a navy to keep the sea lanes open for the shipping of things necessary to our well-being. The

world has changed. Today, our national security can be threatened in faraway places. It's up to all of us to be aware of the strategic importance of such places and to be able to identify them.

Sam Rayburn once said that freedom is not something a nation can work for once and win forever. He said it's like an insurance policy; its premiums must be kept up to date. In order to keep it, we have to keep working for it and sacrificing for it just as long as we live. If we do not, our children may not know the pleasure of working to keep it, for it may not be theirs to keep.

141. Ronald Reagan: Radio Address to the Nation on Nuclear Weapons, 29 October 1983

Introduction

Among the more controversial actions of Ronald Reagan's presidency was the installation of intermediate-range Pershing II and cruise missiles in Britain, Germany, Italy, Belgium, and the Netherlands. The North Atlantic Treaty Organization (NATO) made the initial decision to upgrade these missiles in December 1979 as a means of countering the 1977 Soviet deployments of SS-20 intermediate-range missiles in European Russia. In the early 1980s, Soviet-American arms control discussions on such weapons brought proposals that the European powers refrain from installing these missiles in exchange for the removal of their Soviet counterparts, but these proved unavailing. The apparent readiness of Reagan and several of his top advisors to contemplate nuclear warfare as a serious possibility alarmed many in both the United States and Europe, and in the early 1980s significant popular antinuclear protests and demonstrations occurred in all the potential host countries. Reagan firmly supported installation of the new missiles unless the Soviet Union made concessions on its own weapons, a stance he explained to the American people shortly before their deployment was scheduled to begin. NATO's announcement in November 1983 that installation of the new cruise and Pershing missiles was about to begin triggered further but unavailing demonstrations. The Soviet delegation promptly walked out of ongoing Intermediate-Range Nuclear Forces (INF) talks and did not return until March 1985. Ultimately, the conclusion of the INF Treaty in 1987 brought the removal of both the SS-20s and their NATO counterparts.

Primary Source

[. . .]

Now today, I'd like to talk about a very important decision that was made Thursday by the Defense Ministers of the North Atlantic Treaty Organization, or NATO, as it's commonly called. This decision has great impor-

tance for us and for the NATO Alliance as a whole, because it addresses the future size and composition of our shorter range nuclear forces in Europe.

As you know, we're negotiating with the Soviets in Geneva on the longer range missiles. The current imbalance on those systems is over 350 to 0 in their favor.

But with regard to the shorter range missiles, the tactical missiles, I think you'll be very pleased with today's news. But first, a little background.

The nuclear forces in Europe are fundamental to our overall strategy of deterrence and to protecting our allies and ourselves. The weapons strengthen NATO and protect the peace because they show that the alliance is committed to sharing the risks and the benefits of mutual defense. Just by being there, these weapons deter others from aggression and, thereby, serve the cause of peace. Unfortunately, we must keep them there until we can convince the Soviets and others that the best thing would be a world in which there is no further need for nuclear weapons at all.

The alliance's goal, as General Rogers, NATO's Supreme Allied Commander for Europe, has so often said, is to maintain no more military forces than are absolutely necessary for deterrence and defense.

In December of 1979 NATO reached a decision to reduce immediately the number of shorter range nuclear weapons stationed in Europe. In 1980 we carried out that decision by removing 1,000 of these weapons. The same decision also committed the alliance to a further review of the remaining systems of this category, and that brings us to our decision of Thursday.

Drawing on the recommendation put forward by a special, high-level study group, the NATO Defense Ministers decided that in addition to the 1,000 nuclear weapons which we withdrew in 1980, the overall size of the NATO nuclear stockpile could be reduced by an additional 1,400 weapons.

When these 2,400 weapons have been withdrawn, the United States will have reduced its nuclear weapons in Europe by over one-third from 1979 levels, and NATO will have the lowest number of nuclear weapons in 20 years. What this means is that the alliance will have removed at least five nuclear weapons for every new missile warhead we will deploy if the negotiations in Geneva don't lead to an agreement.

This step, taken by the alliance as a whole, stands in stark contrast to the actions of the Soviet Union. The

Soviet leaders have so far refused to negotiate in good faith at the Geneva talks. Since our 1979 decision to reduce nuclear forces, the Soviet Union has added over 600 SS-20 warheads to their arsenal. Coupled with this, they offer threats and the acceleration of previous plans, which they now call countermeasures, if NATO carries through with its deployment plan intended to restore the balance.

The comparison of Soviet actions with NATO's reductions and restraint clearly illustrates once again that the so-called arms race has only one participant—the Soviet Union.

On Thursday NATO took a dramatic and far-reaching decision, a decision that puts us a giant step along the path toward increased stability in Europe and around the world. As we reduce our nuclear warheads in Europe and, of equal importance, take the necessary actions to maintain the effectiveness of the resulting force, we will continue in the future what we've accomplished so well in the past—to deter Soviet aggression. We seek peace and we seek security, and the NATO decision serves both.

Now, let me bring you up to date on the negotiations in Geneva. Progress toward an equitable, verifiable agreement on the reduction of intermediate-range nuclear missiles has been slow to come. Most recently, I proposed three initiatives which go a long way toward meeting important concerns expressed by the Soviet Union. By our actions on the talks we have ensured that all of the elements of a mutually advantageous agreement are on the table. The Soviet Union has now advanced some additional proposals of its own. We'll study these proposals, and we'll address them in the talks in Geneva.

Unfortunately, the Soviet proposals permit them to retain SS-20 missiles while not allowing NATO to deploy its own. The proposals are also coupled with an explicit threat to break off the Geneva talks. I hope that the Soviet Union is truly interested in achieving an agreement. The test will be whether the Soviets, having advanced their latest proposals, decide finally to negotiate seriously in Geneva.

For our part, we continue to seek an equitable and verifiable agreement as quickly as possible. We will stay at the negotiating table for as long as necessary to achieve such an agreement.

142. The Mining of Nicaraguan Harbors, 9 April 1984

Introduction

The fiercely anticommunist administration of U.S. President Ronald Reagan felt justified in taking every possible measure within its power to try to overthrow the radical Sandinista government headed by Daniel Ortega Saavedra that came to power in 1979 after the overthrow of dictator Anastasio Somoza Debayle. Among these was the secret mining of Nicaraguan harbors in an effort to interdict commerce and prevent the movement of all shipping. In early 1984, the U.S. Central Intelligence Agency (CIA), based in nearby Honduras, repeatedly laid mines around Nicaraguan harbors and in some cases also attacked oil storage facilities and Nicaraguan vessels. On 28 February 1984 and again on 8 March, Nicaraguan Foreign Minister Miguel D’Escoto Brockmann wrote to U.S. Secretary of State George Shultz and formally complained of several incidents in which Nicaraguan fishing boats and assorted Dutch, Soviet, Panamanian, and Cuban vessels suffered serious damage. Brockmann also complained to the United Nations (UN) Security Council. On 9 April 1984, the Nicaraguan government took its complaint to the International Court of Justice at The Hague seeking a temporary restraining order until the case was heard, whereby the United States would “immediately cease and refrain from any action restricting, blocking or endangering access to or from Nicaraguan ports, and, in particular, the laying of mines.” On 10 May the Court issued this order. The U.S. government, however, refused to observe it and had already stated, on 6 April, that it would decline to recognize any International Court decisions relating to Latin American affairs. The State Department argued that these operations were justified, as the Sandinista government was assisting leftist rebels in San Salvador. Influential congressmen, including Senator Daniel Moynihan of New York, publicly criticized this stance, charging that it weakened the international institutions on which the United States itself often relied. Senator Barry Goldwater, chairman of the Senate Select Committee on Intelligence, was particularly annoyed that the CIA director had not informed him before proceeding to mine Nicaraguan harbors. The mining was probably undertaken in defiance of the December 1982 Boland Amendment banning the use of government funding for operations intended to overthrow the Nicaraguan government, including payments to the anti-Sandinista Contra paramilitary forces of Nicaraguan exiles. The UN Security Council condemned U.S. sabotage operations against Nicaraguan harbors. In November 1984 the International Court ruled that it did possess jurisdiction over the matter, whereupon the U.S. government withdrew from the case. U.S. reluctance to accept the authority of international institutions seemed to many observers another instance of its characteristic arrogance of power and double standards, as American officials exhorted other nations to honor their undertakings to these organizations but itself refused to show respect for such bodies.

Communiqué Dated 20 March 1984 Issued by the Ministry of Foreign Affairs of the Republic of Nicaragua

The Ministry of Foreign Affairs of the Republic of Nicaragua announces the following:

At 1.40 P.M. today, the Soviet vessel *Lugansk*, which was carrying oil to our country, was damaged while heading past buoy No. 1 towards Puerto Sandino by an explo-

sion caused by a device placed in that sector by mercenaries in the service of the United States Government. Five Soviet seamen were wounded as a result of that criminal action. Despite the above-mentioned terrorist action, this vessel is unloading the oil in the installations at Puerto Sandino.

This latest criminal attack is to be added to those perpetrated at Bluefields and Corinto in the Atlantic and Pacific Oceans of Nicaragua, which together constitute

the *de facto* blockade which the United States Government is applying against Nicaragua, as part of its undeclared war against the Nicaraguan people.

It also once again confirms the aggressive and criminal character of the policy of State terrorism pursued by the Reagan administration in its desire to restore its domination over our country.

As well as deploring the fact that Soviet seamen, in addition to the Dutch and Central American seamen affected previously, have fallen victim to the senseless policy of the United States Government, the Government of Nicaragua denounces the danger which the indiscriminate laying of mines and explosive charges poses to international shipping along the coasts of Central America.

The Government of Nicaragua reiterates its readiness to continue to struggle for peace in the Central American area and again appeals to the international community to provide Nicaragua with the necessary technical and military means to defend itself against the State terrorism unleashed by the United States Government.

Letter to CIA Director Casey from Sen. Barry Goldwater, Chairman of the Senate Select Committee on Intelligence

April 9, 1984.

Hon. William J. Casey,
Director of Central Intelligence,
Central Intelligence Agency, Washington, DC.

Dear Bill:

All this past weekend, I've been trying to figure out how I can most easily tell you my feelings about the discovery of the President having approved mining some of the harbors of Central America.

It gets down to one, little, simple phrase: I am pissed off!

I understand you had briefed the House on this matter. I've heard that. Now, during the important debate we had all last week and the week before, on whether

we would increase funds for the Nicaragua program, we were doing all right, until a Member of the Committee charged that the President had approved the mining. I strongly denied that because I had never heard of it. I found out the next day that the CIA had, with the written approval of the President, engaged in such mining, and the approval came in February!

Bill, this is no way to run a railroad and I find myself in a hell of a quandary. I am forced to apologize to the Members of the Intelligence Committee because I did not know the facts on this. At the same time, my counterpart in the House did know.

The President has asked us to back his foreign policy. Bill, how can we back his foreign policy when we don't know what the hell he is doing? Lebanon, yes, we all knew that he sent troops over there. But mine the harbors in Nicaragua? This is an act violating international law. It is an act of war. For the life of me, I don't see how we are going to explain it.

My simple guess is that the House is going to defeat this supplemental [aid request] and we will not be in any position to put up much of an argument after we were not given the information we were entitled to receive; particularly, if my memory serves me correctly, when you briefed us on Central America just a couple of weeks ago. And the order was signed before that.

I don't like this. I don't like it one bit from the President or from you. I don't think we need a lot of lengthy explanations. The deed has been done and, in the future, if anything like this happens, I'm going to raise one hell of a lot of fuss about it in public.

Sincerely,

Barry Goldwater, Chairman.

143. Deng Xiaoping: “Build Socialism with Chinese Characteristics,” 30 June 1984

Introduction

After the death in 1976 of China’s paramount leader, Communist Party Chairman Mao Zedong, a power struggle ensued within the Politburo between radicals, notably the Gang of Four centering around Mao’s widow, Jiang Qing, and pragmatists led by Deng Xiaoping, a veteran revolutionary leader then in his early seventies. The Gang of Four was quickly ousted, arrested, and put on trial, and after several years of maneuvering Deng eventually relegated Hua Guofeng, Mao’s handpicked successor, to the political sidelines. From 1976 onward as Deng engineered his ascent to political power, he skillfully discredited the extremist Cultural Revolution and those associated with it. Putting a new emphasis on effective economic reform and development, from the late 1970s he broke with Mao’s ideological purity and encouraged what he termed “socialism with Chinese characteristics,” a phrase that covered a wide variety of quasi-capitalist practices. Deng aimed to modernize China’s agriculture, industry, science and technology, and military institutions through a socialist market economy, one that represented an amalgam of statism and capitalism and ensured that the entire population shared in the benefits of economic development. He sought to quadruple China’s gross national product by the year 2000. He expected reform to begin in the cities and eventually revitalize the more backward rural areas. Such practices were, he argued, best suited to China’s particular conditions. Reforms were often devised by local leaders, drawing on their knowledge of conditions in their areas and, if they were successful, were gradually extended beyond their place of origin. Market mechanisms became increasingly important, and efficient management was valued more highly than ideological correctness, a major change from the years of Mao. Deng promoted a major Chinese rapprochement with Western powers, seeking access to their technological and scientific expertise. Whereas in the Soviet Union during the 1980s economic reform went hand in hand with a new openness and the weakening of communist rule, in China the Communist Party still exercised strict control over political and intellectual life and was determined to maintain its monopoly of power. This became brutally apparent in 1989 when students and workers mounted a major challenge to the party’s rule and on Deng’s orders were ruthlessly suppressed.

Primary Source

Since the defeat of the Gang of Four and the convocation of the Third Plenary Session of the Party’s Eleventh Central Committee, we have formulated the correct ideological, political and organizational lines as well as a series of principles and policies. What is the ideological line? To adhere to Marxism and to Marxist dialectical and historical materialism, or in other words, to seek truth from facts as advocated by Comrade Mao Zedong. Adherence to Marxism is vital to China and so is adherence to socialism. For more than a century since the Opium War, China was subjected to aggression and humiliation. It is because the Chinese people embraced Marxism and kept to the road leading from New Democracy to socialism that the Chinese revolution was victorious.

People may ask: If China had taken the capitalist instead of the socialist road, could the Chinese people

have liberated themselves and could China have finally stood up? The Kuomintang took that road for more than 20 years and proved that it does not work. By contrast, the Chinese Communists, by adhering to Marxism and integrating Marxism with actual conditions in China in accordance with Mao Zedong Thought, took their own road and succeeded in the revolution by encircling the cities from the countryside. Conversely, if we had not been Marxists, or if we had not integrated Marxism with Chinese conditions and followed our own road, China would have remained fragmented, with neither independence nor unity. China simply had to adhere to Marxism. If we had not fully believed in Marxism, the Chinese revolution would never have succeeded. That belief was the motive force. After the founding of the People’s Republic, if we had taken the capitalist rather than the socialist road, we would not have ended the chaos in the country or changed its conditions—inflation, unstable prices, poverty and

backwardness. We started from a backward past. There was virtually no industry for us to inherit from old China, and we did not have enough grain for food. Some people ask why we chose socialism. We answer that we had to because capitalism would get China nowhere. We must solve the problems of feeding and employing the population and of reunifying China. That is why we have repeatedly declared that we shall adhere to Marxism and keep to the socialist road. But by Marxism we mean Marxism that is integrated with Chinese conditions, and by socialism we mean socialism that is tailored to Chinese conditions and has Chinese characteristics.

What is socialism and what is Marxism? We were not quite clear about this before. Marxism attaches utmost importance to developing the productive forces. We advocate communism. But what does that mean? It means the principle of from each according to his ability and to each according to his needs, which calls for highly developed productive forces and overwhelming material wealth. Therefore, the fundamental task for the socialist stage is to develop the productive forces. The superiority of the socialist system is demonstrated by faster and greater development of the productive forces than under the capitalist system. One of our shortcomings since the founding of the People's Republic was that we neglected the development of the productive forces. Socialism means eliminating poverty. Pauperism is not socialism, still less communism. The superiority of the socialist system lies above all in its ability to increasingly develop the productive forces and to improve the people's material and cultural life. The problem facing us now is how China, which is still backward, is to develop the productive forces and improve the people's living standards. This brings us back to the point of whether to continue on the socialist road or to stop and turn onto the capitalist road. The capitalist road can only enrich less than 10 per cent of the Chinese population; it can never enrich the 90 per cent. That is why we must adhere to socialism. The socialist principle of distribution to each according to his work will not create an excessive gap in wealth. Consequently, no polarization will occur as our productive forces become developed over the next 20 to 30 years.

The minimum target of our four modernizations is to achieve a comparatively comfortable standard of living by the end of the century. I first mentioned this with former prime minister Masayoshi Ohira of Japan during his visit here in December 1979. By a comfortable standard we mean that per capita GNP will reach U.S. \$800. That is a low level for you, but it is really ambitious for us. China has a population of 1 billion now and it will reach 1.2 billion by then. If, when the GNP reaches \$1,000 billion, we applied the capitalist principle of distribution, it wouldn't amount to much and couldn't help to eliminate poverty and backwardness. Less than 10 per cent of the population would enjoy a better life, while over 90 per cent remained in poverty. But the socialist principle of distribution can enable all the people to become relatively comfortable. This is why we want to uphold socialism. Without socialism, China can never achieve that goal.

However, only talking about this is not enough. The present world is an open one. China's past backwardness was due to its closed-door policy. After the founding of the People's Republic, we were blockaded by others, and so the country remained closed to some extent, which created difficulties for us. Some "Left" policies and the "cultural revolution" in particular were disastrous for us. In short, the experience of the past 30 years or more proves that a closed-door policy would hinder construction and inhibit development. Therefore, the ideological line formulated at the Third Plenary Session of the Party's Eleventh Central Committee is to adhere to the principles of integrating Marxism with Chinese conditions, seeking truth from facts, linking theory with practice and proceeding from reality. In other words, the line is to adhere to the essence of Comrade Mao Zedong's thought. Our political line focuses on the four modernizations, on continuing to develop the productive forces. Nothing short of a world war would make us release our grip on this essential point. Even should world war break out, we would engage in reconstruction after the war. A closed-door policy would not help construction. There are two kinds of exclusion: one is directed against other countries; the other is directed against China itself, with one region or department closing its doors to the others. We are suggesting that we should develop a little faster

—just a little, because it would be unrealistic to go too fast. To do this, we have to invigorate the domestic economy and open up to the outside. We must first of all solve the problem of the countryside, which contains 80 per cent of the population. China's stability depends on the stability of the countryside with this 80 per cent—this is the reality of China from which we should proceed. No matter how successful our work in the cities is, it won't mean much without the stable base of the countryside. Therefore, we must first of all solve the problem of the countryside by invigorating the economy and adopting an open policy so as to bring the initiative of 80 per cent of the population into full play. We adopted this policy at the end of 1978, and after several years in operation it has produced the desired results.

The recent Second Session of the Sixth National People's Congress decided to shift the focus of reform from the countryside to the cities. The urban reform includes not only industry and commerce but science, education and all other professions as well. In short, we shall continue the reform at home. As for our relations with foreign countries, we shall pursue the policy of opening up still wider to the outside world. We have opened 14 medium and large coastal cities. We welcome foreign investment and advanced techniques. Management is also a kind of technique. Will they undermine

our socialism? Not likely, because the socialist economy is our mainstay. Our socialist economic base is so huge that it can absorb tens and hundreds of billions of dollars' worth of foreign funds without shaking the socialist foundation. Besides, we adhere to the socialist principle of distribution and do not tolerate economic polarization. Thus, foreign investment will doubtless serve as a major supplement to the building of socialism in our country. And as things stand now, this supplement is indispensable. Naturally, some problems will arise in the wake of foreign investment. But the negative aspects are far less significant than the positive use we can make of it to accelerate our development. It may entail a slight risk, but not much.

Well, those are our plans. We shall accumulate experience and try new solutions as new problems arise. In general, we believe the road we have chosen—building socialism with Chinese characteristics—is the right one and will work. We have followed this road for five and a half years and have achieved satisfactory results. We want to quadruple China's GNP by the end of the century. The pace of development has so far exceeded our projections. And so I can tell our friends that we are even more confident now.

144. Summary of the Comprehensive Anti-Apartheid Act, 2 October 1986

Introduction

During the Cold War, the U.S. government often tolerated undemocratic and illiberal behavior so long as the states in question were anticommunist and could therefore be considered allies, whether formal or informal. Successive presidential administrations chose to largely ignore the racist policies the Union of South Africa adopted after World War II, when the country established a system of segregation dividing people into three categories: blacks, whites, and coloreds. Only whites had full political and economic rights, social interactions among races were discouraged and sexual relations forbidden, and blacks were forbidden to live in white-only areas and relegated to menial occupations. From the 1950s onward as increasing numbers of African states won independence from their former colonial overlords and were able to express their views in the United Nations (UN), the British Commonwealth, and similar forums, international resentment and condemnation of South Africa's racial policies intensified. In 1961 South Africa withdrew from the British Commonwealth, many of whose other member states were strongly advocating the imposition of sanctions against South Africa. The Organization of African Unity (OAU), established in 1963, likewise called on other nations to impose economic sanctions against South Africa and break diplomatic

relations with it. In 1976 hundreds of black South Africans died in riots in Soweto protesting inequalities in education. In November 1977 the UN imposed an arms embargo on South Africa. By the late 1970s numerous states refused to trade with or recognize South Africa, many U.S. companies refused to do business or invest there, and South African athletes were banned from international sports events. When Ronald Reagan became president in 1981, his administration announced that it did not favor economic sanctions on South Africa and would follow a policy of constructive engagement. The State Department initiated substantial relaxations of sanctions and other controls imposed by previous administrations, measures that attracted strong criticism from black South African nationalists, including Nobel Peace Prize winner Bishop Desmond Tutu in 1984. In 1985 major racial violence and protests erupted in the South African townships, causing the government to declare a state of emergency. France introduced a UN resolution calling on member states to impose voluntary sanctions against South Africa, and later that year Reagan announced limited economic sanctions against South Africa. Congress remained unsatisfied and, despite strong opposition from the Reagan administration, in October 1986 overrode a presidential veto and passed the Comprehensive Anti-Apartheid Act. Although less strict than the House of Representatives had initially proposed, the act banned loans and new investment in South Africa by American firms, prohibited trade in major categories of exports and imports, broke air links, forbade American banks to accept South African government deposits, and outlawed cooperation between U.S. government agencies and South Africa in military affairs, trade, and tourism. The act represented a major defeat for the Reagan administration, and the president issued a brief statement warning that “punitive sanctions” would only cause “violence and more repression.” Reagan’s successor, George H. W. Bush, left the sanctions in place despite pressure from British Prime Minister Margaret Thatcher to lift them. Antiapartheid activists in South Africa as well as South African Central Bank Governor Gerhard de Kock subsequently suggested that international economic sanctions played an appreciable role in weakening the South African government to the point that in 1989 it opened negotiations with African National Congress (ANC) leaders, talks that eventually led to the dismantling of apartheid and the establishment in 1993 of a multiracial South African state.

Primary Source

Comprehensive Anti-Apartheid Act of 1986—Title I: Policy of the United States with respect to ending apartheid—Requires U.S. policy toward South Africa to be designed to bring about the establishment of a nonracial democracy in South Africa. Sets forth actions that the United States shall encourage South Africa to take, including releasing Nelson Mandela and establishing a timetable for the elimination of apartheid laws. Requires the United States to adjust its actions toward South Africa to reflect the progress made by South Africa in establishing a nonracial democracy.

Declares that U.S. policy toward the African National Congress, the Pan African Congress, and their affiliates shall be designed to bring about a suspension of violence that will lead to the start of negotiations. Requires the United States to work toward this goal by encouraging such organizations, through diplomatic and political measures, to: (1) suspend terrorist activities; (2) make known their commitment to a free and demo-

cratic post-apartheid South Africa; (3) agree to enter into negotiations for the peaceful solution to South Africa’s problems; and (4) reexamine their ties to the South African Communist Party. Requires the United States to adjust its actions toward South Africa not only to reflect progress or lack of progress made by South Africa in establishing a nonracial democracy but also to reflect progress or lack of progress made by such organizations in bringing about a suspension of violence.

Declares that U.S. policy toward the victims of apartheid is to use economic, political, diplomatic, and other means to remove the apartheid system and to assist the victims of apartheid to overcome the handicaps imposed on them by apartheid. Sets forth actions the United States will take to help the victims of apartheid.

Declares that U.S. policy toward the other countries in the region shall be designed to encourage democratic forms of government, respect for human rights, political independence, and economic development. Sets

forth actions the United States will take toward such countries.

Expresses the sense of the Congress that the President should discuss with the African “frontline” states the effects of disruptions in economic links through South Africa.

Declares that it is U.S. policy to promote negotiations among representatives of all citizens of South Africa to determine a future political system.

Expresses the sense of the Congress that high-level U.S. officials should meet with leaders of opposition organizations in South Africa and should, in concert with other interested parties, try to bring together opposition political leaders with South African Government leaders for negotiations to achieve a transition to the post-apartheid democracy envisioned in this Act.

Declares that the United States will encourage all participants in the negotiations to respect the right of all South Africans to participate in the political process without fear of retribution. Requires the United States to work for an agreement to suspend violence and begin negotiations through coordinated actions with the major Western allies and with the governments of the countries in the region.

Expresses the sense of the Congress that the achievement of such an agreement could be promoted if the United States and its major allies would meet to develop a plan to provide multilateral assistance for South Africa in return for South Africa implementing: (1) an end to the state of emergency and the release of political prisoners; (2) the unbanning of groups willing to suspend terrorism and to participate in negotiations and a democratic process; (3) a revocation of the Group Areas Act and the Population Registration Act and the granting of universal citizenship to all South Africans, including homeland residents; and (4) the use of a third party to bring about negotiations to establish power-sharing with the black majority.

Urges the President to seek cooperation among all individuals, groups, and nations to end apartheid.

[. . .]

Expresses the sense of the Senate that the U.S. Ambassador should request a meeting with Nelson Mandela.

Expresses the sense of the Congress that U.S. employers operating in South Africa are obliged both generally to oppose apartheid and specifically to recruit and train black and colored South Africans for management responsibilities.

Title II: Measures to Assist Victims of Apartheid—Amends the Foreign Assistance Act of 1961 to earmark a specified amount of the education and human resources development assistance funds for each of FY 1987 through 1989 to finance education, training, and scholarships for the victims of apartheid. Authorizes the use of Economic Support Fund monies for such purposes in lieu of an equal amount made through the education and human resources development assistance.

Requires the use of Economic Support Fund monies, in addition to the funds used for purposes described in the preceding paragraph, to finance scholarships for students pursuing secondary school education in South Africa. Requires the selection of such scholarship recipients to be by a nationwide panel or by regional panels appointed by the U.S. chief of diplomatic mission to South Africa. Authorizes the use of up to \$1,000,000 of Economic Support Fund assistance for such purposes for each of FY 1987 through FY 1989.

Requires assistance to be provided for inservice teacher training programs in South Africa through nongovernmental organizations. Authorizes the use of up to \$500,000 for FY 1987 and up to \$1,000,000 for FY 1988 for such purposes.

Requires priority to be given, in providing assistance for disadvantaged South Africans, to working with and through South African nongovernmental organizations whose leadership and staff are selected on a nonracial basis and which have the support of the disadvantaged communities being served.

[. . .]

Requires the Secretary of State (the Secretary) and any other head of a Federal agency carrying out activities in South Africa to try, in procuring goods and services, to assist businesses having more than 50 percent beneficial ownership by nonwhite South Africans.

Amends the Export-Import Bank Act of 1945 to require the Export-Import Bank to take active steps to encourage the use of its guarantee, insurance, and credit facilities in connection with South African businesses that are majority owned by nonwhite South Africans. Exempts from a specified certification requirement exports to or purchases from such businesses.

Expresses the sense of the Congress that the labor practices used by the U.S. Government in South Africa should represent the best of U.S. labor practices and should serve as a model for U.S. nationals in South Africa. Requires the Secretary and the heads of other agencies carrying out activities in South Africa to ensure that the labor practices used in South Africa are governed by a specified Code of Conduct.

[. . .]

Requires any U.S. national who employs more than 25 persons in South Africa to insure that the Code of Conduct is implemented. Prohibits U.S. intercession with any foreign government or foreign nation on behalf of any U.S. national employing more than 25 persons in South Africa if such U.S. national does not implement the Code of Conduct.

Declares that the Code of Conduct is as follows: (1) desegregating employment facilities; (2) providing equal employment opportunity for all employees; (3) assuring that the pay system is applied to all employees; (4) establishing a minimum wage and salary structure; (5) increasing the number of persons in managerial, supervisory, administrative, clerical, and technical jobs who are disadvantaged by apartheid; (6) taking reasonable steps to improve the quality of employees' lives outside the work environment; and (7) implementing fair labor practices by recognizing the right of all employees to unionize.

[. . .]

Title III: Measures by the United States to Undermine Apartheid—Prohibits importing from South Africa: (1) any gold coin minted in South Africa or sold by its Government; and (2) arms, ammunition, or military vehicles or any manufacturing data for such articles. Prohibits the importation of any article grown, produced, or manufactured by a South African parastatal organization (an organization owned or controlled by the South African Government other than an organization that received start-up funding from the South African Industrial Development Corporation but is now privately owned) except for: (1) agricultural products during the 12 months following enactment; (2) certain strategic minerals; and (3) articles to be imported pursuant to a contract entered into before August 15, 1986, provided no shipments may be received by a U.S. national under such contract after April 1, 1987.

Prohibits exporting computers, computer software, or computer technology to or for the use of: (1) the South African military, police, prison system, national security agencies; (2) ARMSCOR and its subsidiaries or the weapons research activities of the South African Council for Scientific and Industrial Research; (3) the administering authorities for apartheid; (4) any apartheid enforcing agency; or (5) any governmental entity which performs any of the above functions.

Permits exports of computers, computer software and technology to South Africa for other purposes only if a system of end use verification is in effect to ensure that the computers involved will not be used for any function of any of the entities listed above.

Prohibits any U.S. national from making or approving any loan to the South African Government or to any entity owned or controlled by such government. Exempts from such prohibition: (1) loans for any education, housing, or humanitarian benefit which is available to all persons on a nondiscriminatory basis or is available in a geographic area accessible to all population groups; or (2) loans entered into before enactment of this Act.

[. . .]

Prohibits, unless the Secretary certifies to the Speaker of the House and the chair of the Senate Foreign Rela-

tions Committee that South Africa maintains certain international nuclear safeguards: (1) the Nuclear Regulatory Commission from issuing a license for the export to South Africa of certain nuclear facilities, material, technology, or components; (2) the Secretary of Commerce from issuing a license for the export to South Africa of certain goods or technology that may be of significance for nuclear explosive purposes; (3) the Secretary of Energy from authorizing any person to engage in the production of special nuclear material in South Africa; and (4) any executive branch agency or the NRC from approving the retransfer of nuclear goods or technology to South Africa. Exempts certain exports, retransfers, or other activities from such prohibition if specified conditions are met.

Prohibits a U.S. depository institution from accepting, receiving, or holding a deposit account from the South African Government or from any entity owned or controlled by South Africa.

Prohibits importing into the United States from South Africa any uranium ore, uranium oxide, coal, or textiles.

Prohibits any U.S. national from making any new investment in South Africa, effective 45 days after enactment of this Act. Exempts firms owned by black South Africans.

Terminates the sanctions contained in title III of this Act and certain sanctions contained in title V of this Act if South Africa: (1) releases political prisoners and Nelson Mandela from prison; (2) repeals the state of emergency and releases all detainees held under such state of emergency; (3) unbans political parties and permits political freedom for all races; (4) repeals the Group Areas Act and the Population Registration Act and institutes no other measures with the same purposes; and (5) agrees to enter into good faith negotiations with truly representative members of the black majority without preconditions.

Authorizes the President, unless the Congress enacts a joint resolution of disapproval, to suspend or modify such sanctions after the President determines and reports to the Speaker of the House and the chair of the Senate Foreign Relations committee that South Africa

has: (1) released Nelson Mandela and other political prisoners; (2) taken three of the four actions listed in phrases (2) through (5) in the preceding paragraph; and (3) made substantial progress toward dismantling apartheid and establishing a nonracial democracy.

Declares that it is U.S. policy to support negotiations with the representatives of all communities. Declares that the United States will support negotiations which do not include the African National Congress, the Pan African Congress, or other organizations if the: (1) South African Government agrees to enter into negotiations without preconditions, abandons unprovoked violence against its opponents, commits itself to a free and democratic post-apartheid South Africa; and (2) African National Congress, the Pan African Congress, or other organizations refuse to participate or if such organizations refuse to abandon unprovoked violence during such negotiations and refuse to commit themselves to a free and democratic post-apartheid South Africa.

Declares that U.S. policy toward violence in South Africa shall be designed to end such violence and to promote negotiations. Declares that the United States shall work through diplomatic and other measures, to isolate those who promote terrorist attacks on unarmed civilians and those who provide assistance to such individuals.

[. . .]

Title IV: Multilateral Measures to Undermine Apartheid—Declares that it is U.S. policy to seek international cooperative agreements with other industrialized democracies to end apartheid. Declares that: (1) negotiations to reach such agreements should begin promptly and should be concluded within 180 days of enactment of this Act; and (2) the President should convene an international conference of the other industrialized democracies in order to reach such agreements. Requires the President to report to the Congress on such efforts.

Authorizes the President to modify specified sanctions imposed under title III of this Act to conform with such an agreement. Declares that each such agreement shall enter into force and effect if: (1) the President, at

least 30 days before entering into such agreement, notifies the Congress of the intention to enter into such agreement and publishes such notice; (2) after entering into the agreement, the President sends a copy of the agreement and certain other materials to the Congress; and (3) the Congress does not adopt a joint resolution of disapproval within 30 days of transmittal of such documents.

Expresses the sense of the Congress that the President should propose that the United Nations impose the same type of measures against South Africa as are imposed by this Act.

Authorizes the President to limit the importation into the United States of any product or service of a foreign country to the extent that such country benefits from restrictions imposed on U.S. nationals by this Act.

Creates a private right of action for U.S. nationals who are required to terminate or curtail business in South Africa against anyone who benefits or takes commercial advantage of such termination or curtailment.

Title V: Future Policy Toward South Africa—Declares that it is U.S. policy to impose additional measures against South Africa if substantial progress has not been made within 12 months of enactment of this Act in ending apartheid and establishing a nonracial democracy.

Requires the President to report annually to the Speaker of the House and the chair of the Senate Foreign Relations Committee beginning one year after enactment of this Act on the extent to which significant progress has been made toward ending apartheid. Requires the report to contain a recommended additional measure if the President determines that South Africa has not made significant progress in ending apartheid and establishing a nonracial democracy. Provides for expedited congressional consideration of a joint resolution which would enact such additional measures.

Authorizes the President to lift any prohibition against South Africa contained in this Act if the President reports to the Congress, after six months from the date of the imposition of such prohibition, that such prohibition would increase U.S. dependence upon member or observer countries of the Council for Mutual Economic Assistance for coal or any strategic and critical material by a specified amount. Requires the Secretary of Commerce to report to the Congress on the imports of such coal and materials. Requires the President to submit periodic reports on such imports to the Congress.

Requires the Secretary to report to the Congress by December 1, 1986, on the health condition and extent of starvation and malnutrition in the “homelands” areas of South Africa.

Requires the President to report to the Congress, within 90 days of enactment of this Act, on the extent to which the United States is dependent on imports from South Africa of chromium, cobalt, manganese, platinum group metals, ferroalloys, and other strategic and critical materials. Requires the President to develop a program which reduces the U.S. dependence on such imports.

[. .]

Requires the President to submit to specified congressional officials, within 90 days of enactment of this Act, a report on the activities of the Communist Party in South Africa.

Prohibits any person from importing any gold coin minted in, or offered for sale by, the Soviet Union.

145. Ronald Reagan: Remarks on East-West Relations at the Brandenburg Gate in West Berlin, 12 June 1987

Introduction

After Mikhail Gorbachev became general secretary of the Communist Party of the Soviet Union (CPSU) in 1985, Soviet relations with the West gradually improved. Gorbachev initially sought to reform rather than destroy communism in the Soviet Union through policies of economic restructuring (perestroika) and openness (glasnost). He also began to rein back Soviet military spending and overseas interventions, and he made serious overtures for cuts in nuclear and conventional forces. While responding to such overtures with growing enthusiasm, U.S. President Ronald Reagan remained a staunch anticommunist and was as unwilling as ever to appear to countenance Soviet domination of Eastern Europe. Speaking at the Brandenburg Gate in 1987, the symbolic heart of Berlin, Reagan urged Gorbachev to “tear down this wall” and allow the people of East Germany to choose their own destiny. Less than three years later, in November 1989, Reagan’s hopes were fulfilled, as Gorbachev relaxed Soviet control of Eastern Europe and the people of Berlin demolished the Berlin Wall themselves.

Primary Source

[. . .]

Our gathering today is being broadcast throughout Western Europe and North America. I understand that it is being seen and heard as well in the East. To those listening throughout Eastern Europe, a special word: Although I cannot be with you, I address my remarks to you just as surely as to those standing here before me. For I join you, as I join your fellow countrymen in the West, in this firm, this unalterable belief: Es gibt nur ein Berlin. [There is only one Berlin.]

Behind me stands a wall that encircles the free sectors of this city, part of a vast system of barriers that divides the entire continent of Europe. From the Baltic, south, those barriers cut across Germany in a gash of barbed wire, concrete, dog runs, and guard towers. Farther south, there may be no visible, no obvious wall. But there remain armed guards and checkpoints all the same—still a restriction on the right to travel, still an instrument to impose upon ordinary men and women the will of a totalitarian state. Yet it is here in Berlin where the wall emerges most clearly; here, cutting across your city, where the news photo and the television screen have imprinted this brutal division of a continent upon the mind of the world. Standing before the Brandenburg Gate, every man is a German, separated from his fellow men. Every man is a Berliner, forced to look upon a scar.

President von Weizsacker has said, “The German question is open as long as the Brandenburg Gate is closed.” Today I say: As long as the gate is closed, as long as this scar of a wall is permitted to stand, it is not the German question alone that remains open, but the question of freedom for all mankind. Yet I do not come here to lament. For I find in Berlin a message of hope, even in the shadow of this wall, a message of triumph.

[. . .]

In the Reichstag a few moments ago, I saw a display commemorating this 40th anniversary of the Marshall plan. I was struck by the sign on a burnt-out, gutted structure that was being rebuilt. I understand that Berliners of my own generation can remember seeing signs like it dotted throughout the Western sectors of the city. The sign read simply: “The Marshall plan is helping here to strengthen the free world.” A strong, free world in the West, that dream became real. Japan rose from ruin to become an economic giant. Italy, France, Belgium—virtually every nation in Western Europe saw political and economic rebirth; the European Community was founded.

In West Germany and here in Berlin, there took place an economic miracle, the Wirtschaftswunder. Adenauer, Erhard, Reuter, and other leaders understood the practical importance of liberty—that just as truth can flourish only when the journalist is given freedom of

speech, so prosperity can come about only when the farmer and businessman enjoy economic freedom. The German leaders reduced tariffs, expanded free trade, lowered taxes. From 1950 to 1960 alone, the standard of living in West Germany and Berlin doubled.

Where four decades ago there was rubble, today in West Berlin there is the greatest industrial output of any city in Germany—busy office blocks, fine homes and apartments, proud avenues, and the spreading lawns of park land. Where a city's culture seemed to have been destroyed, today there are two great universities, orchestras and an opera, countless theaters, and museums. Where there was want, today there's abundance—food, clothing, automobiles—the wonderful goods of the Ku'damm. From devastation, from utter ruin, you Berliners have, in freedom, rebuilt a city that once again ranks as one of the greatest on earth. The Soviets may have had other plans. But my friends, there were a few things the Soviets didn't count on—Berliner Herz, Berliner Humor, ja, und Berliner Schnauze. [Berliner heart, Berliner humor, yes, and a Berliner Schnauze.]

In the 1950s, Khrushchev predicted: "We will bury you." But in the West today, we see a free world that has achieved a level of prosperity and well-being unprecedented in all human history. In the Communist world, we see failure, technological backwardness, declining standards of health, even want of the most basic kind—too little food. Even today, the Soviet Union still cannot feed itself. After these four decades, then, there stands before the entire world one great and inescapable conclusion: Freedom leads to prosperity. Freedom replaces the ancient hatreds among the nations with comity and peace. Freedom is the victor.

And now the Soviets themselves may, in a limited way, be coming to understand the importance of freedom. We hear much from Moscow about a new policy of reform and openness. Some political prisoners have been released. Certain foreign news broadcasts are no longer being jammed. Some economic enterprises have been permitted to operate with greater freedom from state control. Are these the beginnings of profound changes in the Soviet state? Or are they token gestures, intended to raise false hopes in the West, or to

strengthen the Soviet system without changing it? We welcome change and openness; for we believe that freedom and security go together, that the advance of human liberty can only strengthen the cause of world peace.

There is one sign the Soviets can make that would be unmistakable, that would advance dramatically the cause of freedom and peace. General Secretary Gorbachev, if you seek peace, if you seek prosperity for the Soviet Union and Eastern Europe, if you seek liberalization: Come here to this gate! Mr. Gorbachev, open this gate! Mr. Gorbachev, tear down this wall!

I understand the fear of war and the pain of division that afflict this continent—and I pledge to you my country's efforts to help overcome these burdens. To be sure, we in the West must resist Soviet expansion. So we must maintain defenses of unassailable strength. Yet we seek peace; so we must strive to reduce arms on both sides. Beginning 10 years ago, the Soviets challenged the Western alliance with a grave new threat, hundreds of new and more deadly SS-20 nuclear missiles, capable of striking every capital in Europe. The Western alliance responded by committing itself to a counter-deployment unless the Soviets agreed to negotiate a better solution; namely, the elimination of such weapons on both sides. For many months, the Soviets refused to bargain in earnestness. As the alliance, in turn, prepared to go forward with its counter-deployment, there were difficult days—days of protests like those during my 1982 visit to this city—and the Soviets later walked away from the table.

But through it all, the alliance held firm. And I invite those who protested then—I invite those who protest today—to mark this fact: Because we remained strong, the Soviets came back to the table. And because we remained strong, today we have within reach the possibility, not merely of limiting the growth of arms, but of eliminating, for the first time, an entire class of nuclear weapons from the face of the earth. As I speak, NATO ministers are meeting in Iceland to review the progress of our proposals for eliminating these weapons. At the talks in Geneva, we have also proposed deep cuts in strategic offensive weapons. And the Western allies have likewise made far-reaching proposals to reduce

the danger of conventional war and to place a total ban on chemical weapons.

[. . .]

In Europe, only one nation and those it controls refuse to join the community of freedom. Yet in this age of redoubled economic growth, of information and innovation, the Soviet Union faces a choice: It must make fundamental changes, or it will become obsolete. Today thus represents a moment of hope. We in the West stand ready to cooperate with the East to promote true openness, to break down barriers that separate people, to create a safe, freer world.

And surely there is no better place than Berlin, the meeting place of East and West, to make a start. Free people of Berlin: Today, as in the past, the United States stands for the strict observance and full implementation of all parts of the Four Power Agreement of 1971. Let us use this occasion, the 750th anniversary of this city, to usher in a new era, to seek a still fuller, richer life for the Berlin of the future. Together, let us maintain and develop the ties between the Federal Republic and the Western sectors of Berlin, which is permitted by the 1971 agreement.

[. . .]

In these four decades, as I have said, you Berliners have built a great city. You've done so in spite of threats—the Soviet attempts to impose the East-mark, the blockade. Today the city thrives in spite of the challenges implicit in the very presence of this wall. What keeps you here? Certainly there's a great deal to be said for your fortitude, for your defiant courage. But I believe there's something deeper, something that involves Berlin's whole look and feel and way of life—not mere sentiment. No one could live long in Berlin without being completely disabused of illusions. Some-

thing instead, that has seen the difficulties of life in Berlin but chose to accept them, that continues to build this good and proud city in contrast to a surrounding totalitarian presence that refuses to release human energies or aspirations. Something that speaks with a powerful voice of affirmation, that says yes to this city, yes to the future, yes to freedom. In a word, I would submit that what keeps you in Berlin is love—love both profound and abiding.

Perhaps this gets to the root of the matter, to the most fundamental distinction of all between East and West. The totalitarian world produces backwardness because it does such violence to the spirit, thwarting the human impulse to create, to enjoy, to worship. The totalitarian world finds even symbols of love and of worship an affront. Years ago, before the East Germans began rebuilding their churches, they erected a secular structure: the television tower at Alexander Platz. Virtually ever since, the authorities have been working to correct what they view as the tower's one major flaw, treating the glass sphere at the top with paints and chemicals of every kind. Yet even today when the sun strikes that sphere—that sphere that towers over all Berlin—the light makes the sign of the cross. There in Berlin, like the city itself, symbols of love, symbols of worship, cannot be suppressed.

As I looked out a moment ago from the Reichstag, that embodiment of German unity, I noticed words crudely spray-painted upon the wall, perhaps by a young Berliner: "This wall will fall. Beliefs become reality." Yes, across Europe, this wall will fall. For it cannot withstand faith; it cannot withstand truth. The wall cannot withstand freedom.

146. Intermediate-Range Nuclear Forces Treaty, 8 December 1987

Introduction

The installation of short-range and intermediate-range cruise missiles in several West European North Atlantic Treaty Organization (NATO) allies—Great Britain, Italy, Germany, Belgium, and the Netherlands—in 1983 was one of

the most visible signs that the administration of U.S. President Ronald Reagan was sincere in adopting more assertive policies toward Soviet communism. The new missile deployments gave rise to extensive antinuclear protests throughout Western Europe and fueled fears that the bellicose Reagan was eager to provoke outright war with the Soviet Union. Ironically, a few years later the controversial missiles would be removed. After Mikhail Gorbachev came to power in the Soviet Union in 1985, he sought new disarmament agreements with the United States. At a summit meeting in Washington, D.C., on 8 December 1987, Reagan and Gorbachev signed a treaty eliminating all intermediate- and short-range nuclear missiles, the first time any such agreement had removed entire classes of nuclear weapons. The signing of this treaty, which entered into force on 1 June 1988, offered dramatic proof that the warming of relations between the Soviet Union and the United States was genuine and significant.

Primary Source

TREATY BETWEEN THE UNITED STATES OF AMERICA AND THE UNION OF SOVIET SOCIALIST REPUBLICS ON THE ELIMINATION OF THEIR INTERMEDIATE-RANGE AND SHORTER-RANGE MISSILES

The United States of America and the Union of Soviet Socialist Republics, hereinafter referred to as the Parties,

Conscious that nuclear war would have devastating consequences for all mankind,

Guided by the objective of strengthening strategic stability,

Convinced that the measures set forth in this Treaty will help to reduce the risk of outbreak of war and strengthen international peace and security, and

Mindful of their obligations under Article VI of the Treaty on the Non-Proliferation of Nuclear Weapons,

Have agreed as follows:

ARTICLE I

In accordance with the provisions of this Treaty which includes the Memorandum of Understanding and Protocols which form an integral part thereof, each Party shall eliminate its intermediate-range and shorter-range missiles, not have such systems thereafter, and carry out the other obligations set forth in this Treaty.

[. . .]

ARTICLE IV

1. Each Party shall eliminate all its intermediate-range missiles and launchers of such missiles, and all support structures and support equipment of the categories listed in the Memorandum of Understanding associated with such missiles and launchers, so that no later than three years after entry into force of this Treaty and thereafter no such missiles, launchers, support structures or support equipment shall be possessed by either Party.

2. To implement paragraph 1 of this Article, upon entry into force of this Treaty, both Parties shall begin and continue throughout the duration of each phase, the reduction of all types of their deployed and non-deployed intermediate-range missiles and deployed and non-deployed launchers of such missiles and support structures and support equipment associated with such missiles and launchers in accordance with the provisions of this Treaty. These reductions shall be implemented in two phases so that:

- (a) by the end of the first phase, that is, no later than 29 months after entry into force of this Treaty:
 - (i) the number of deployed launchers of intermediate-range missiles for each Party shall not exceed the number of launchers that are capable of carrying or containing at one time missiles considered by the Parties to carry 171 warheads;
 - (ii) the number of deployed intermediate-range missiles for each Party shall not exceed the number of such missiles considered by the Parties to carry 180 warheads;
 - (iii) the aggregate number of deployed and non-deployed launchers of intermediate-range

missiles for each Party shall not exceed the number of launchers that are capable of carrying or containing at one time missiles considered by the Parties to carry 200 warheads;

- (iv) the aggregate number of deployed and non-deployed intermediate-range missiles for each Party shall not exceed the number of such missiles considered by the Parties to carry 200 warheads; and
 - (v) the ratio of the aggregate number of deployed and non-deployed intermediate-range GLBMs of existing types for each Party to the aggregate number of deployed and non-deployed intermediate-range missiles of existing types possessed by that Party shall not exceed the ratio of such intermediate-range GLBMs to such intermediate-range missiles for that Party as of November 1, 1987, as set forth in the Memorandum of Understanding; and
- (b) by the end of the second phase, that is, no later than three years after entry into force of this Treaty, all intermediate-range missiles of each Party, launchers of such missiles and all support structures and support equipment of the categories listed in the Memorandum of Understanding associated with such missiles and launchers, shall be eliminated.

ARTICLE V

1. Each Party shall eliminate all its shorter-range missiles and launchers of such missiles, and all support equipment of the categories listed in the Memorandum of Understanding associated with such missiles and launchers, so that no later than 18 months after entry into force of this Treaty and thereafter no such missiles, launchers or support equipment shall be possessed by either Party.

2. No later than 90 days after entry into force of this Treaty, each Party shall complete the removal of all its deployed shorter-range missiles and deployed and non-deployed launchers of such missiles to elimination facilities and shall retain them at those locations until they are eliminated in accordance with the procedures set forth in the Protocol on Elimination. No later

than 12 months after entry into force of this Treaty, each Party shall complete the removal of all its non-deployed shorter-range missiles to elimination facilities and shall retain them at those locations until they are eliminated in accordance with the procedures set forth in the Protocol on Elimination.

3. Shorter-range missiles and launchers of such missiles shall not be located at the same elimination facility. Such facilities shall be separated by no less than 1000 kilometers.

ARTICLE VI

1. Upon entry into force of this Treaty and thereafter, neither Party shall:

- (a) produce or flight-test any intermediate-range missiles or produce any stages of such missiles or any launchers of such missiles; or
- (b) produce, flight-test or launch any shorter-range missiles or produce any stages of such missiles or any launchers of such missiles.

2. Notwithstanding paragraph 1 of this Article, each Party shall have the right to produce a type of GLBM not limited by this Treaty which uses a stage which is outwardly similar to, but not interchangeable with, a stage of an existing type of intermediate-range GLBM having more than one stage, providing that that Party does not produce any other stage which is outwardly similar to, but not interchangeable with, any other stage of an existing type of intermediate-range GLBM.

[. .]

ARTICLE XI

1. For the purpose of ensuring verification of compliance with the provisions of this Treaty, each Party shall have the right to conduct on-site inspections. The Parties shall implement on-site inspections in accordance with this Article, the Protocol on Inspection and the Protocol on Elimination.

2. Each Party shall have the right to conduct inspections provided for by this Article both within the territory of the other Party and within the territories of basing countries.

[. . .]

ARTICLE XII

1. For the purpose of ensuring verification of compliance with the provisions of this Treaty, each Party shall use national technical means of verification at its disposal in a manner consistent with generally recognized principles of international law.

2. Neither Party shall:

- (a) interfere with national technical means of verification of the other Party operating in accordance with paragraph 1 of this Article; or
- (b) use concealment measures which impede verification of compliance with the provisions of this

Treaty by national technical means of verification carried out in accordance with paragraph 1 of this Article. This obligation does not apply to cover or concealment practices, within a deployment area, associated with normal training, maintenance and operations, including the use of environmental shelters to protect missiles and launchers.

[. . .]

147. Mikhail Gorbachev: Statement on Afghanistan, 9 February 1988

Introduction

Intervention in Afghanistan in December 1979 embroiled the Soviet Union in a lengthy, costly, and ultimately unwinnable war in rugged mountainous terrain against tribal Afghan guerrilla forces, the fundamentalist Islamic mujahideen. Although equipped with armored cars, tanks, and heavy artillery, the Soviet Army had little training in guerrilla warfare, and much of its weaponry proved ineffective against these opponents. The war was fought with great brutality on both sides, with the Soviets using helicopters, fighter-bombers, and bombers in a scorched-earth policy designed to raze enemy territory, regardless of civilian casualties. The military situation nonetheless remained one of stalemate. Internationally, the Soviet action attracted severe condemnation, as the United Nations (UN) General Assembly, although unable to take any concrete action due to the Soviet veto power on the Security Council, voted repeatedly for resolutions that "strongly deplored" the invasion and called on the Soviets to withdraw, while the foreign ministers of the Organization of the Islamic Conference almost immediately demanded the removal of Soviet forces. The Afghan resistance movement received funding, weaponry (notably FIM-92 Stinger antiaircraft missile systems), and training from the United States, and its members were able to take shelter in camps in neighboring Pakistan. Pakistani special forces quietly took part in the war, and British and U.S. special services were also believed to be involved. China, Saudi Arabia, and other Muslim states also contributed funds to the mujahideen. By 1987, resistance forces were launching rocket attacks on the Afghan capital of Kabul and seemed likely to take it and overthrow the government in the near future. The war was expensive and highly unpopular in the Soviet Union, as more than 15,000 young soldiers died in combat and many more were wounded. Nobel Peace Prize winner Andrei Sakharov publicly denounced Soviet policies in Afghanistan and called for peace negotiations. In November 1986 a new Afghan government, headed by Mohammad Najibullah, former chief of the Afghan secret police, took office and announced policies of national reconciliation. Peace talks were opened between Afghanistan and Pakistan, and in March 1988 Soviet President Mikhail Gorbachev publicly stated that effective 15 May 1988, a withdrawal of Soviet troops would begin, to be completed by March 1989. The future of Afghanistan would, he said, now belong to the Afghans, and he would be happy if Afghanistan chose to become "an independent, nonaligned and neutral state." Gorbachev's declaration effectively represented a defeat for the Soviet Union. In April 1988 Afghanistan and Pakistan finally reached agreement on peace terms, with the Soviet Union and the United States acting as joint guarantors. Soviet troops left on schedule, with the last departing in

March 1989, but bitter civil war continued in Afghanistan. Ultimately, the country would fall under the control of the radical Islamic Taliban and provide a haven for the Muslim terrorists linked with the al-Qaeda organization that mounted the successful airborne attacks of 11 September 2001 on landmark American buildings in Washington, D.C., and New York.

Primary Source

The military conflict in Afghanistan has been going on for a long time now. It is one of the most severe and most painful regional conflicts. Now, from all indications, definite prerequisites have been created for its political settlement. In this connection, the Soviet leadership deems it necessary to express its views and to completely clarify its position.

The next round of talks between Afghanistan and Pakistan, through the personal representative of the UN Secretary-General, will take place in Geneva in the near future. There is a significant chance that the coming round will be the final one.

At present, the drafting of documents covering all aspects of a settlement has almost been completed at the Geneva talks. Among these documents are Afghan-Pakistani agreements on noninterference in each other's internal affairs and on the return of Afghan refugees from Pakistan; international guarantees of noninterference in the internal affairs of the Republic of Afghanistan; and a document on the interrelationship of all elements of a political settlement. There is also an accord on creating a verification mechanism.

What remains to be done? A timetable for the withdrawal of Soviet troops from Afghanistan that is acceptable to all sides must be established. Yes, a timetable, since we, in accord with the Afghan leadership, adopted a fundamental political decision on the withdrawal of Soviet troops some time ago, something that was announced at the time.

[. . .]

Seeking to promote a rapid and successful conclusion of the Afghan-Pakistani talks in Geneva, the governments of the USSR and the Republic of Afghanistan have agreed to set a specific date for beginning the withdrawal of Soviet troops—May 15, 1988—and to complete their withdrawal over a period of 10 months.

This date has been set based on the assumption that the agreements on a settlement will be signed no later than March 15, 1988, and, accordingly, that they will all go into effect simultaneously two months later. If the agreements are signed before March 15, the troop withdrawal will, accordingly, begin earlier.

[. . .]

Any armed conflict, including an internal one, is capable of poisoning the atmosphere in an entire region and of creating a situation of uneasiness and alarm for the neighbors of the country involved, not to mention the sufferings of and casualties among the people of the country itself. That is why we are opposed to all armed conflicts. We know that the Afghan leadership holds the same position.

As is known, all this led the Afghan leadership, headed by President Najibullah, to a profound rethinking of its political course, a process that resulted in a patriotic and realistic policy of national reconciliation. We are talking about a very bold and courageous action: It is not merely a call to end armed clashes but a proposal to create a coalition government and to share power with the opposition, including those who are waging an armed struggle against the government, and even with those who are abroad directing the actions of the rebels and supplying them with weapons and combat equipment obtained from foreign states. This has been proposed by a government that is invested with constitutional authority and wields real power in the country.

The policy of national reconciliation is an expression of new political thinking on the Afghan side. It shows not weakness but the strength of spirit, wisdom and dignity of free, honest and responsible political leaders who are concerned about their country's present and future.

The success of the policy of national reconciliation has already made it possible to begin the withdrawal of

Soviet troops from parts of Afghan territory. At present, there are no Soviet troops in 13 Afghan provinces, because armed clashes there have stopped. It is completely possible to say that the sooner peace is established on Afghan soil, the easier it will be for Soviet troops to leave.

The policy of national reconciliation has provided a political platform for all those who want peace in Afghanistan. What kind of peace? The kind that the Afghan people want. The proud, freedom-loving and valiant Afghan people, whose history of struggle for freedom and independence goes back many centuries, have been, are and will be the masters of their country, which is based, as President Najibullah has said, on the principles of multiple parties in the political field and multiple structures in the economic field.

The Afghans themselves will determine the ultimate status of their country among other states. Most often, it is said that the future, peaceful Afghanistan will be an independent, nonaligned and neutral state. Well, we will be nothing but happy to have such a neighbor on our southern borders.

[. .]

Now about our boys, our fighting men in Afghanistan. They have honestly fulfilled and are continuing to fulfill their duty, in the process showing selflessness and heroism.

Our people deeply respect those who performed their military service in Afghanistan. The state provides them with priority opportunities to obtain a good education and interesting, suitable work.

The memory of those who died the death of the brave in Afghanistan is sacred to us. Party and Soviet agencies are obliged to see to it that the families of the dead and their relatives and loved ones are surrounded with concern, attention and kindness.

One final point. When the Afghan knot is untied, this will have a very profound effect on other regional conflicts as well.

If the arms race, which we are so insistently seeking to halt—and with some success—is mankind's insane rush to the abyss, then regional conflicts are bleeding wounds capable of causing spots of gangrene on the body of mankind.

The earth is literally pockmarked with danger spots of this kind. Each of them means pain not only for the peoples directly involved but for everyone, whether in Afghanistan, in the Middle East, in connection with the Iran-Iraq war, in southern Africa, in Kampuchea or in Central America.

Who gains from these conflicts? No one, except arms merchants and various reactionary, expansionist circles who are accustomed to taking advantage of and turning a profit on the misfortunes of peoples.

Carrying through a political settlement in Afghanistan to conclusion will be an important break in the chain of regional conflicts.

Just as the accord on the elimination of medium- and shorter-range missiles sets up a sequence of further major steps in the field of disarmament, steps on which negotiations are under way or are in the planning stage, so behind a political settlement in Afghanistan looms the question: Which conflict will be overcome next? It is certain that more resolutions will follow.

States and peoples have sufficient potential in terms of responsibility, political will and determination to put an end to all regional conflicts within a few years. This is something worth working for. The Soviet Union will spare no effort in this highly important cause.

148. Zhao Ziyang: Documents on Student Protests, May 1989

Introduction

In the spring of 1989, youthful student protestors in Beijing demanded that the Communist Party regenerate itself and allow political changes to accompany the major economic reforms it had introduced since 1978. In massive demonstrations, students called for greater democracy in their universities and in the political system, requested a dialogue with the central government, urged the eradication of corruption, and demanded a press law and media freedom. Although an official *People's Daily* editorial of 23 April directed the students to disperse, some political leaders were far more receptive. On 4 May, Communist Party General Secretary Zhao Ziyang publicly endorsed many of the students' criticisms, saying that the Communist Party should meet their "reasonable demands." He spoke particularly favorably of their opposition to corruption, a problem that he felt had spiraled out of control, something he ascribed at least in part to China's "flawed legal system" that, with the "lack of democratic supervision" and the "lack of openness and transparency," allowed corruption to rage largely unchecked. Zhao hoped that the authorities would take a conciliatory and nonconfrontational line toward the students and other protestors, opening a dialogue whereby they could "exchange ideas and promote mutual understanding through democracy and law in an atmosphere of reason and order." In conversations on 4 May and again on 13 May with other Politburo members, including Premier Li Peng, top Chinese leader Deng Xiaoping, and president and Chinese Military Commission head Yang Shangkun, Zhao argued that only a very small minority of the protestors were trying to use the demonstrations to attack the government. Using policies of divide and rule, these few should, he thought, be isolated from the broader majority and discredited. The Communist Party should, he reiterated, "adjust to new times and situations," become more transparent and democratic, and move decisively against corruption. Despite Zhao's continuing support for a moderate line against the students, by 13 May it was clear that his colleagues, while ready to launch an anticorruption campaign, were becoming increasingly impatient to end the student protests. Shortly afterward, Zhao made an official visit to Pyongyang, the North Korean capital. By the time he returned, his colleagues were preparing to take military action against the demonstrators, and on 18 May Zhao cast the only dissenting Politburo vote against this. Early in the morning of 19 May he visited the protestors in Tiananmen Square, begging them to disperse but praising their youthful enthusiasm. This was to be Zhao's last public appearance. By the end of May he had been removed from all his official positions and placed under house arrest, living in Beijing in comfortable conditions but under tight supervision until his death in January 2005. At least twice, he reportedly wrote to the Chinese government requesting an official reassessment of the Tiananmen Square protests, but his petitions were refused or ignored. Fearing that his death might spark popular protests, the mainland authorities kept Zhao's funeral extremely low-key, and several of his close associates were kept under house arrest until the ceremonies were over. Commemorative ceremonies and vigils for Zhao were nonetheless held in many venues around the world. Even posthumously, his memory continued to embarrass the Chinese authorities, as friends and disciples gradually divulged his sometimes critical opinions and writings on their conduct of Chinese political affairs during his final years.

Primary Source

Speech at the Meeting of the Board of governors of the Asian Development Bank, 4 May 1989

I believe the basic attitude of the great majority of the student demonstrators is one of both satisfaction and dissatisfaction with the Communist Party and the government. These students do not oppose our underlying system, but they do demand that we eliminate the flaws in our work. They are satisfied with our achievements in reform and construction over the past decade,

as well as with the nation's general development. But they are irritated by mistakes we have made along the way. They are calling on us to correct those mistakes and to improve our work style, and these calls in fact correspond nicely with positions of the Party and the government, which are also to affirm our accomplishments and to correct our mistakes.

Are there attempts to exploit the student movement, and is such exploitation going on now? China is so

huge that there are always going to be at least some people who want to see us in turmoil. There will always be people ready to exploit our students, and they will miss no opportunity to do so. Such people are very few, but we must always be on guard against them. I am confident that the great majority of the students will see this point. Demonstrations are continuing in Beijing and elsewhere, but I have no doubt that the situation is going to calm down gradually and that China will be spared any major turmoil.

We should meet the students' reasonable demands through democracy and law, should be willing to reform, and should use rational and orderly methods. Let us put this more concretely: What most bothers the students right now is the scourge of corruption. But the Party and government have been working on this problem in recent years, so why are there so many voices of complaint, and why are they so loud? There are two reasons, I believe. One is that our flawed legal system and our lack of democratic supervision allow corruption to rage out of control. The other is that our lack of openness and transparency leads to rumors, inaccurate accusations, wild exaggerations, and outright fabrications about what the Party and government are doing. Most Party and government workers in fact live on low wages and have no income beyond their fixed salaries, let alone any legally sanctioned privileges. Yes, there are people who skirt the law, who grab special privileges; but there are fewer of them, and they do less harm, than people think. Of course the problem of corruption has to be solved, but that has to happen—can only happen—through reforms such as perfecting the legal system, improving democratic supervision, and increasing transparency.

And these same principles apply to how we should deal with the student demonstrations themselves. We need to use democracy and law and to reason in an atmosphere of order. We need to use dialogue to consult broadly with students, workers, intellectuals, members of the democratic parties, and citizens from all parts of society. We must exchange ideas and promote mutual understanding through democracy and law in an atmosphere of reason and order, working together to solve problems that concern everyone.

What we need most right now is calm, reason, self-restraint, and order as we move to solve problems through democracy and law. If the Party and government are willing to proceed in this way, I am confident that students and other segments of society will also find this to be the best way.

Li Peng and Zhao Ziyang Discuss Speech Later in the Day

Li Peng: "That was an excellent speech, Comrade Ziyang, and the response has been very positive. I'll echo you when I meet with the Asian Development Bank delegates tomorrow."

Zhao Ziyang: "I tried to set a mild tone. I hope it'll do some good in quieting the student movement down and in strengthening foreign investors' confidence in China's stability. . . . Comrade Li Peng, when I got back from North Korea I heard about the strong reactions to the April 26 editorial in the *People's Daily*. It seems to have turned into a real sore point that has the students all stirred up. Do you see any way to turn things around and calm them down?"

Li Peng: "Comrade Ziyang, as you know, the editorial reflected the spirit of the April 24 Politburo meeting, particularly the views of Comrade [Deng] Xiaoping. There may be problems of tone here and there, but we can't possibly change the core message."

Zhao Ziyang: "Let me tell you how I see all this. I think the student movement has two important characteristics. First, the students' slogans call for things like supporting the Constitution, promoting democracy, and fighting corruption. These demands all echo positions of the Party and the government. Second, a great many people from all parts of society are out there joining the demonstrations and backing the students. And it's not just Beijing that's flooded with protesters; it's the same story in Shanghai, Tianjin, and other major cities. This has grown into a nationwide protest. I think the best way to bring the thing to a quick end is to focus on the mainstream views of the majority. My problem with the April 26 editorial is that it sets the mainstream aside and makes a general, all-encompassing pronouncement that the majority just can't accept; it

generates an us-versus-them mentality. I have no quarrel with the view that a handful of people oppose the Four Basic Principles and are fishing in troubled waters. I said that in my speech today. But it's hard to explain, and also hard to believe, how hundreds of thousands of people all over the country could be manipulated by a tiny minority. The students feel stigmatized by the April 26 editorial, and that's the main thing that's set them off. I think we should revise the editorial, soften its tone a bit."

Li Peng: "The origins of this protest are complex, Comrade Ziyang. The editorial did not accuse the vast majority of students of creating turmoil. When Yuan Mu had his dialogue with the students, and again when he spoke with journalists, he explained the government's position several times over. The students should be quite clear about this by now. The trouble is, there's no sign the protests are subsiding. In fact, quite the opposite: Now we have illegal student organizations that are openly pressuring the government. You've read the petition from that 'AFS,' so you know they're trying to squeeze out the legal student organizations. And not just that: They want to negotiate with the Party and government as equals. They even add a lot of conditions, as if they're above the government. That petition of theirs was itself a threat. The elder comrades like Xiaoping, Chen Yun, and [Li] Xiannian are all convinced that a tiny minority of people are manipulating this protest from behind the scenes. Their purpose is quite clear: They want to negate the leadership of the CCP and negate the entire socialist system. I agree with our Elder comrades. And that's why I hold to the view that the April 26 editorial is accurate and cannot be changed."

Zhao Ziyang: "I'm not opposed to the term 'turmoil' in the editorial. But I believe that this refers only to the scale of the protest and to the degree to which it has affected social order and that it does not foreclose the question of the political nature of the protest—I mean whether it's spontaneous or antagonistic. I think we should publish another editorial distinguishing the majority of students and sympathizers from the tiny minority who are using the movement to fish in troubled waters, to create conflicts, and to attack the Party

and socialism. That way we can avoid a sweeping characterization of the protests as an antagonistic conflict. We can concentrate on policies of persuasion and guidance and avoid the sharpening of conflict. This kind of approach is the best way to help calm the situation."

Li Peng: "I disagree, Comrade Ziyang."

*Zhao Ziyang, Deng Xiaoping, and Yang Shangkun
Meet on 13 May 1989*

Zhao Ziyang: "Comrade Xiaoping, first I'd like to report to you on some of my thinking since the student movement and turmoil began. The student movement has mushroomed since mid-April; what all of us, including me, have been trying to do is to settle it down as quickly as possible. But I've noticed that this movement has two particular features we need to pay attention to: First, the student slogans all support the Constitution; they favor democracy and oppose corruption. These demands are basically in line with what the Party and government advocate, so we cannot reject them out of hand. Second, the number of demonstrators and supporters is enormous, and they include people from all parts of society. So I think we have to keep an eye on the majority and give approval to the mainstream view of the majority if we want to calm this thing down."

Deng Xiaoping: "It was obvious from the start that a tiny minority was stirring up the majority, fanning the emotions of the great majority."

Zhao Ziyang: "That's why I think we have to separate the broad masses of students and their supporters from the tiny minority who're using the movement to fish in troubled waters, stir up trouble, and attack the Party and socialism. We have to rely on guidance. We have to pursue multilevel, multichannel dialogue, get in touch with people, and build understanding. We mustn't let the conflicts get nasty if we expect things to settle down quickly."

Deng Xiaoping: "Dialogue is fine, but the point is to solve the problem. We can't be led around by the nose. This movement's dragged on too long, almost a month now. The senior comrades are getting worried. Chen

Yun, Peng Zhen, Xiannian, Wang Zhen, and Sister Deng—and me too—are all worried. We have to be decisive. I've said over and over that we need stability if we're going to develop. How can we progress when things are in an utter mess?"

Yang Shangkun: "Gorbachev will be here in two days, and today I hear that the students are going to announce a hunger strike. They obviously want to turn up the heat and get a lot of international attention."

Deng Xiaoping: "Tiananmen is the symbol of the People's Republic of China. The Square has to be in order when Gorbachev comes. We have to maintain our international image. What do we look like if the Square's a mess?"

Yang Shangkun: "The protests keep going, and now the students are starting a hunger strike. I'm afraid this major state event is going to get disrupted. Visits by heads of state are big events; all countries take them seriously. And the two sides have gone over every detail of Gorbachev's visit in advance. We must ask the students and the residents of Beijing to help us be sure everything goes forward as planned. That's something anybody with the slightest amount of patriotism should be able to accept. But I do wonder if it's going to be possible to have this welcoming ceremony as we planned it—there in the open Square, at the east entrance of the Great Hall of the People."

Zhao Ziyang: "To welcome Gorbachev in the right place and the right way involves the country's honor. I think the vast majority of students will realize this, see the big picture, and not disrupt the welcoming ceremony. I think these young students can understand this. The Beijing government and the SEC have already explained its importance to them."

Deng Xiaoping: "But if the students get carried away with extremism, they won't think of all this."

Yang Shangkun: "Still, we'll proceed as planned."

Zhao Ziyang: "I'll stress the importance of the Gorbachev visit one more time in the media this afternoon."

Deng Xiaoping: "As I've said before, the origins of this incident are not so simple. The opposition is not just some students but a bunch of rebels and a lot of riffraff, and a tiny minority who are utterly against opposing bourgeois liberalization. These people want to overthrow our Party and state. With this small handful mixed in with so many students and masses our work becomes much harder. We have to understand the complexities here; this is not just between the students and the government."

Zhao Ziyang: "The consensus in the Politburo has been to use the policies of guiding and dividing, winning over the great majority of students and intellectuals while isolating the tiny minority of anticommunist troublemakers, thereby stilling the movement through democratic and legal means. In order to get things going, Politburo members have already begun dialogues with various groups. This morning Li Peng is going to Capital Iron and Steel, and this afternoon I'm meeting with representatives of Beijing workers. In the next few days Hu Qili's people will be talking with journalists, and—"

Deng Xiaoping: "What do the ordinary people in society think?"

Zhao Ziyang: "The protests are widespread but limited to cities that have universities. The rural areas aren't affected, and the farmers are docile. So are urban workers, basically. The workers are unhappy about certain social conditions and like to let off steam from time to time, so they sympathize with the protesters. But they go to work as usual and they aren't striking, demonstrating, or traveling around like the students."

Yang Shangkun: "The thinking in the army is fully in line with the Central Committee and the Central Military Commission. These protests are not going to spread to officers or soldiers in the military."

Deng Xiaoping: "This whole outbreak should lead us to think about things, to take a hard look at the past. I've told foreigners that our biggest mistakes of the past ten years have been in education. What I meant, mainly, was political education—not just in schools or

for the young but for society in general. We haven't done enough in this area, and that was a huge oversight. These last few days I've been thinking. We've been right all along that the Four Basic Principles and the policies of reform and opening are mutually beneficial. If there's been a mistake, it's that we've been lax about the Four Basic Principles. We haven't used them as the foundation in educating the people, the students, and all the Party members and officials. We have to insist on both things at once; we can't ignore the political side. We must not give an inch on the basic principle of upholding Communist Party rule and rejecting a Western multiparty system. At the same time, the Party must resolve the issue of democracy and address the problems that arise when corruption pops up in the Party or government."

Zhao Ziyang: "The Party has to adjust to new times and situations. We have to do a good job with political education but then use the methods of democracy and law to solve actual problems. You have always emphasized the need for more transparency in political life, for a full use of the NPC's supervisory role, for more and better use of the system of political consultation and Communist-led cooperation with the democratic parties, for more popular oversight of the Party and the government, and so on. These principles are extremely important, especially now. When we allow some democracy, things might look 'chaotic' on the surface; but these little 'troubles' are normal inside a democratic and legal framework. They prevent major upheavals and actually make for stability and peace in the long run."

Yang Shangkun: "We have to separate legitimate demands for democracy, including proper exercise of democratic rights, from bourgeois liberalization. We can't let people promote bourgeois liberalization under the banner of democracy; and on the other hand, when we crack down on bourgeois liberalization, we have to be sure we don't squash democracy."

Zhao Ziyang: "When you raise the banner of democracy and law, you win the hearts of the people. It has great appeal to the masses and brings them together. I remember Comrade Xiaoping saying in 1984 that it's an important task of Party leadership to lead the people

in building democracy and a legal system, so that our socialist country can be justified in calling itself a nation of laws. I think we should grab the chance to build a socialist democratic system that suits China's unique circumstances. We should do it in a planned, paced, and orderly fashion, under Party leadership and based on the Four Principles."

Yang Shangkun: "We're just going to have to do everything we possibly can to beat corruption, to get rid of it. The people are gnashing their teeth at the very mention of corruption these days. They can't wait to see another embezzler get exposed."

Zhao Ziyang: "No doubt about it, getting rid of corruption is the most urgent task before us. The people are watching us, waiting to see if we really mean what we say. The Politburo's been considering whether to make clean government a major goal in the political reform plans—tying it in with democracy, a legal system, openness, transparency, supervision by the masses, and mass participation—and adopting some specific measures and procedures that really will solve the problem once and for all. The fight for clean government and against corruption has to start with the Politburo, and I've already asked the Politburo to kick things off by investigating my children. If they've been corrupt, then they must submit to the laws of the state. Wan Li has also proposed that the Standing Committee of the National People's Congress set up a special 'clean government committee.'"

Deng Xiaoping: "We need to tackle the corruption issue head-on, take on at least ten or twenty major cases, and handle them with a high degree of transparency. We must seize this chance to solve the corruption problem. Recently I've been thinking about why we've had such a hard time solving this problem so far, and I've concluded that it's probably because so many high-ranking officials and their families are involved. This may well be the reason why so little has been accomplished, even though we've been talking about it for years. We can't put this off any longer. In this movement, there haven't been any slogans opposing reform or opening up. Most have homed in on corruption. Of course, this could be a smoke screen for inciting the people to other things. But that doesn't change the

fact that we need to rectify the Party and achieve our strategic goals. If we don't punish corruption, especially when it's in the Party, we're really courting disaster. . . . The Standing Committee has got to be decisive, and it has to stick with principle, when we're faced with a political crisis like this. And of course we

must do everything possible to resolve this student movement peacefully.”

149. Tiananmen Square, New May Fourth Manifesto, 4 May 1989

Introduction

Although economic liberalization and political reform went hand in hand in Soviet Russia, this was not the case in China. A decade after Deng Xiaoping embarked on market reforms and opened China to the West, the Communist Party still retained strict control. In the spring of 1989, popular discontent mounted as rampant inflation and growing unemployment provoked protests among workers, while extensive corruption at every level undercut the government's authority and credibility. Students also resented the restrictions they faced in terms of lack of choice as to their careers once they graduated. The sudden death in April 1989 of former Communist Party Secretary General Hu Yaobang, who had the reputation of favoring greater democracy and rapid reform, became the occasion for major student demonstrations in Tiananmen Square in Beijing, the symbolic political heart of China. Initially held to commemorate and mourn the dead Hu, these gatherings soon metamorphosed into a broader protest campaign demanding greater democracy, media freedom, and an end to governmental corruption. Students also called for a strike in all Beijing universities. An official and clearly government-inspired *People's Daily* editorial of 26 April demanding that students disperse further inflamed the situation, and three days later 50,000 students demonstrated in Beijing demanding that this be withdrawn. Discontented urban workers also joined the students, drawn by their condemnations of corruption, and on 4 May 1989, the seventieth anniversary of the famous 1919 student protest movement often regarded as a key moment in China's twentieth-century national regeneration, 100,000 students and workers demonstrated in Beijing. The protestors demanded that the government open a dialogue with them. Harking back to the earlier protests, the student leader Wuer Kaixi read out a manifesto demanding that the government speed up democratic political reform, respect the rule of law, allow media freedom, and eradicate corruption. The Chinese leadership was divided as to how to respond, with some, notably General Secretary Zhao Ziyang, sympathetic to the students' demands, while others, led by Premier Li Peng, favored a much tougher line. Meanwhile, students from around the country were flocking to Beijing to participate in the demonstrations, while similar protests by students and workers occurred in major cities around China. On 13 May, thousands of students occupied Tiananmen Square and began a hunger strike that attracted worldwide media attention, in part because this coincided with a state visit by Soviet President Mikhail Gorbachev. The students displayed banners in English as well as Chinese demanding democracy, which were shown internationally on television screens overseas, and constructed a "Goddess of Democracy" statue closely resembling the American Statue of Liberty. As the situation reached an impasse, on 20 May the Chinese government declared a state of emergency and imposed martial law. Public demonstrations initially blocked the entry of troops into Beijing, and these relatively untried forces withdrew, to be replaced two weeks later by more experienced troops. Meanwhile, Zhao was forced from office. On 4 June 1989, the 27th and 38th Armies of the People's Liberation Army (PLA) entered Beijing, encountering considerable resistance from crowds of Beijing citizens, which they met with tear gas, bullets, and flame throwers. Students were cleared from the square. The precise number of casualties on each side during this operation is still disputed. The Chinese Red Cross estimated that 2,600 people died and 30,000 were injured, while the authorities claimed that 36 students and more than 100 soldiers died, with 3,000 soldiers and 6,000 civilians injured. Foreign reporters estimated that at least 3,000 people died. Many workers were subsequently arrested and executed, although students generally received lighter sentences, and many of their leaders succeeded in escaping abroad.

The authorities also cracked down fiercely on protestors elsewhere in China. The episode was a ferocious demonstration that the Chinese Communist Party (CCP) had no intention of loosening its hold on power and was prepared to use military force to maintain its position and prevent social disorder. Chinese leaders, many of whom, including Deng Xiaoping, had suffered severe persecution during the Cultural Revolution, placed a very high value on social stability. The events in and around Tiananmen Square also had a major impact on the West's previously favorable image of China, convincing both liberals and conservatives that despite its embrace of economic reform, Mainland China remained an authoritarian dictatorship with little respect for human rights.

Primary Source

Fellow students, fellow countrymen:

Seventy years ago today, a large group of illustrious students assembled in front of Tiananmen, and a new chapter in the history of China was opened. Today, we are once again assembled here, not only to commemorate that monumental day but more importantly, to carry forward the May Fourth spirit of science and democracy. Today, in front of the symbol of the Chinese nation, Tiananmen, we can proudly proclaim to all the people in our nation that we are worthy of the pioneers of seventy years ago.

For over one hundred years, the pioneers of the Chinese people have been searching for a path to modernize an ancient and beleaguered China. Following the Paris Peace Conference, they did not collapse in the face of imperialist oppression, but marched boldly forward. Waving the banners of science and democracy, they launched the mighty May Fourth Movement. May Fourth and the subsequent New Democratic Revolution were the first steps in the patriotic democracy movement of Chinese students. From this point on, Chinese history entered a completely new phase. Due to the socioeconomic conditions in China and the shortcomings of intellectuals, the May Fourth ideals of science and democracy have not been realized. Seventy years of history have taught us that democracy and science cannot be established in one fell swoop and that impatience and despair are of no avail. In the context of China's economy and culture, the Marxism espoused by the Chinese Communist Party cannot avoid being influenced by remnants of feudal ideology. Thus, while New China has steadily advanced toward modernization, it has greatly neglected building a democracy. Although it has emphasized the role of science, it has not valued the spirit of science—democracy. At present, our country is plagued with problems such as a

bloated government bureaucracy, serious corruption, the devaluation of intellectual work, and inflation, all of which severely impede us from intensifying the reforms and carrying out modernization. This illustrates that if the spirit of science and democracy, and their actual processes, do not exist, numerous and varied feudal elements and remnants of the old system, which are fundamentally antagonistic to large-scale socialist production, will reemerge in society, and modernization will be impossible. For this reason, carrying on the May Fourth spirit, hastening the reform of the political system, protecting human rights, and strengthening rule by law have become urgent tasks of modernization that we must undertake.

Fellow students, fellow countrymen, a democratic spirit is precisely the absorption of the collective wisdom of the people, the true development of each individual's ability, and the protection of each individual's interests; a scientific spirit is precisely respect for individual nature, and the building of the country on the basis of science. Now more than ever, we need to review the experiences and lessons of all student movements since May Fourth, to make science and rationalism a system, a process. Only then can the tasks the May Fourth Movement set before us be accomplished, only then can the spirit of May Fourth be carried forward, and only then can our wish for a strong China be realized.

Fellow students, fellow countrymen, the future and fate of the Chinese nation are intimately linked to each of our hearts. This student movement has but one goal, that is, to facilitate the process of modernization by raising high the banners of democracy and science, by liberating people from the constraints of feudal ideology, and by promoting freedom, human rights, and rule by law. To this end, we urge the government to accelerate the pace of political reform, to guarantee the rights of the people vested in the law, to implement a

press law, to permit privately run newspapers, to eradicate corruption, to hasten the establishment of an honest and democratic government, to value education, to respect intellectual work, and to save the nation through science. Our views are not in conflict with those of the government. We only have one goal: the modernization of China.

... Our present tasks are: first, to take the lead in carrying out experiments in democratic reform at the birthplace of the student movement, the university campus, democratizing and systematizing campus life; second, to participate actively in politics, to persist in our request for a dialogue with the government, to push democratic reforms of our political system, to oppose graft and corruption, and to work for a press law. We recognize that these short-term objectives are only the first steps in democratic reform; they are tiny, unsteady steps. But we must struggle for these first steps, we must cheer for these first steps.

Fellow students, fellow countrymen, prosperity for our nation is the ultimate objective of our patriotic student movement. Democracy, science, freedom, human rights, and rule by law are the ideals that we hundreds of thousands of university students share in this struggle. Our ancient, thousand-year civilization is waiting, our great people, one billion strong, are watching. What qualms can we possibly have? What is there to fear? Fellow students, fellow countrymen, here at richly symbolic Tiananmen, let us once again search together and struggle together for democracy, for science, for freedom, for human rights, and for rule by law.

Let our cries awaken our young Republic!

150. George H. W. Bush: Press Conference, Reaction to Tiananmen Square, 8 June 1989

Introduction

U.S. leaders faced a quandary in deciding how to react to the Chinese government's repression of students and workers in Beijing and elsewhere in China on and after 4 June 1989. At a news conference with President George H. W. Bush four days later, reporters repeatedly returned to the subject of their government's China policies. Bush, who had served from 1974 to 1975 as the second head of the newly opened U.S. Liaison Office in Beijing, had already imposed an embargo on sales of all military equipment to China, and shortly afterward he announced that all top-level governmental and military exchanges would be suspended for the indefinite future and the United States would veto all loans to China by U.S. institutions or international organizations to which it belonged. Bush felt it necessary to take a stand on human rights and express his administration's strong opposition to the brutal military suppression of dissent. As a staunch supporter of Chinese leader Deng Xiaoping's reformist policies, Bush did not, however, wish to break off all relations with China, a policy that he feared would merely weaken Deng and encourage reactionary elements within the Politburo. Bush reminded reporters that Deng himself had twice been purged during the Cultural Revolution. At this juncture, Bush was clearly still uncertain precisely who was in charge in China. He refused to recall the U.S. ambassador from Beijing or impose a total trade embargo, measures that, he argued, would simply be counterproductive. He also declined to offer Chinese students already in the United States blanket political asylum, although he promised to consider individual cases sympathetically. Congress and human rights advocates criticized the gradual relaxation of many of these sanctions over the next six months. The reluctance of the Bush administration to isolate China was demonstrated when, in July 1989, National Security Advisor Brent Scowcroft and Deputy Secretary of State Lawrence Eagleburger made a secret trip to China to consult with top officials there, a visit that was only made public when the two men made a second such visit the following December. Although the Bush administration soon sought to restore relatively normal relations with Deng's government, public opinion in the United States shifted dramatically against China, a downturn from which Sino-

American relations found it difficult to recover. For the American people and most of Congress, China's once favorable image was for many years tarnished by the widely and repeatedly televised scenes of tanks and soldiers moving against unarmed protestors in Beijing.

Primary Source

Q. Mr. President, cutting off military sales to China does not seem to have made an impression on the rulers there, and they've become more repressive. What else are you going to do to express this nation's outrage? And do you have any other plans?

The President. I think that the position we took, aiming not at the Chinese people but at the military arrangements, was well received around the world and was followed by many countries. Right after we did that, many of the European countries followed suit. The events in China are such that we, obviously, deplore the violence and the loss of life, urge restoration of order with recognition of the rights of the people. And I'm still hopeful that China will come together, respecting the urge for democracy on the part of the people. And what we will do in the future, I will announce at appropriate times; but right now, other countries are doing the same thing. And let's hope that it does have an ameliorating effect on this situation.

[. . .]

Q. Mr. President, can the United States ever have normal relations with China as long as the hardliners believed responsible for the massacre, such as Deng Xiaoping [Chairman of the Central Military Committee] and Premier Li Peng, remain in power? In other words, what will it take to get U.S.-Chinese relations back to normal?

The President. It will take a recognition of the rights of individuals and respect for the rights of those who disagree. And you have cited two leaders, one of whom I might tell you is—you mentioned Deng Xiaoping. I'm not sure the American people know this: He was thrown out by the Cultural Revolution crowd back in the late sixties; came back in 1976, was put out again because he was seen as too forward looking. And all I'm saying from that experience is: Let's not jump at conclusions as to how individual leaders in China feel when we aren't sure of that.

But the broad question that you ask—we can't have totally normal relations unless there's a recognition of the validity of the students' aspirations. And I think that that will happen. We had a visit right here, upstairs in the White House, with Mr. Wan Li [Chairman of the Standing Committee of the National People's Congress]. Now, I don't know whether he's in or out, but he said something to me that I think the American people would be interested in. He said, "The army loves the people." And then you've seen soldiers from the 27th Army coming in from outside of Beijing and clearly shooting people. But having said that, I don't think we ought to judge the whole People's Liberation Army of China by that terrible incident.

What I want to do is preserve this relationship as best I can, and I hope the conditions that lie ahead will permit me to preserve this relationship. I don't want to pass judgment on individual leaders, but I want to make very clear to those leaders and to the rest of the world that the United States denounces the kind of brutality that all of us have seen on our television. . . .

Q. Mr. President, I'd like to return to China for a moment. You mentioned that your goal is to reserve our relationship with the Chinese Government. But what do you say to the American people who might wonder why we are not more forceful in being the world's leading advocate of democracy? And are we not living up to that responsibility in this situation?

The President. Well, some have suggested, for example, to show our forcefulness, that I bring the American Ambassador back. I disagree with that 180 degrees. And we've seen, in the last few days, a very good reason to have him there. In fact, one of your colleagues, Richard Roth of CBS, was released partially because of the work of our Embassy, of Jim Lilley, our very able Ambassador.

Some have suggested, well, you've got to go full sanctions on economic side. I don't want to cut off grain, and we've just sold grain to the People's Republic of

China. I think that would be counterproductive and would hurt the people.

What I do want to do is take whatever steps are most likely to demonstrate the concern that America feels. And I think I've done that, and I'll be looking for other ways to do it if we possibly can.

Q. Mr. President, Chinese dissident Fang Lizhi has taken refuge in the U.S. Embassy, apparently fearing for his own safety. The Chinese Government has called that a wanton interference in internal affairs and a violation of international law. What is your reaction to that? And will the United States grant Fang political asylum in the United States?

The President. First, let me remind the audience here that we do not discuss asylum. It's almost like a public discussion of intelligence matters. But in terms of your question, we have acted in compliance with the international law as an extraordinary measure for humanitarian reasons. His personal safety was involved here, he felt. And then we try, historically, to work these things out in consultation with the sovereign state. So, we are not violating international law, in the opinion of our attorneys. And it is awful hard for the United States when a man presents himself—a person who is a dissident—and says that his life is threatened, to turn him back. And that isn't one of the premises upon which the United States was founded. So, we have a difference with them on that, you're right, but I hope it can be resolved. . . .

[. . .]

Q. Earlier, sir, you made reference to Deng Xiaoping, suggesting that he may, if I read you right, not necessarily have been responsible for the actions. You said that he was a reformer, twice out, back in. What were you trying to say? Do you have information that he is not—

The President. I was trying to say that I don't know. And I'm trying to say you don't know, and he doesn't know, and she doesn't know. And nobody knows—outside. And that's the way the Chinese system works. So, for

us to read every day some new name out there—it just isn't right. And I don't want to misrepresent this to the American people, but what I do know is that there's events over there that—it doesn't matter who's in charge—we condemn. And there's a relationship over there that is fundamentally important to the United States that I want to see preserved. And so, I'm trying to find a proper, prudent balance, not listening to the extremes that say, take your Ambassador out; cut off all food to the Chinese people so you show your concern. And I think we found a proper avenue there, but I cannot—and you ask a good question—I simply cannot tell you with authority who is calling the shots there today.

Q. Let me follow by asking you this, then: When you were in China earlier in the year, you met with Li Peng, and I believe you told him that China was exempted from your policy review because you knew China, you understood China. Have you been let down personally? Have you been misled in any way?

The President. I feel a certain sense of personal disappointment. But they weren't exempt from the norms of behavior that are accepted internationally in terms of armed people don't shoot down unarmed students. Nobody suggested that.

There was an interesting point in there—and I don't want to delve into the detail of private conversations—but one of the Chinese leaders, a very prominent name, told me, "We want change, but people have to understand it's very complicated here, how fast we move on these reforms. We've come a long way." And indeed, they did move dramatically faster on economic reforms than I think any of us in this room would have thought possible.

But what hasn't caught up is the political reforms and reforms in terms of freedom of expression. The freedom of press caught up a little bit; but it hadn't gone, obviously, near far enough, and now there's martial law and censorship. But we were cautioned on that visit about how fast China could move. Some of it was economic, and clearly, some of the message had to do with how fast they could move politically. . . .

Q. Mr. President, back to China. There are reports tonight that the Government there has begun rounding up the student leaders, who face at the very least, persecution; at the most, possibly charges of treason and whatever punishment that will bring. You have talked tonight about your strong desire to keep this relationship going and to keep the dialog and all our business as usual moving forward. If the—

The President. Not all of them. Excuse the interruption—

Q. Well, except for the military—

The President. Yes.

Q. Except for the military, sir. If we find out that the people who perpetrated the killings in Tiananmen Square and who were rounding up these students are running the Government, can the United States maintain fairly normal relationships with them, given our aim to foster human rights and promote democracy?

The President. It would make it extraordinarily difficult; but the question is so hypothetical that I'm going to avoid answering it directly. But anything that codifies the acceptance of brutality or lack of respect for human rights will make things much more difficult—there's no question about that.

Q. I have one followup. There are 20,000 Chinese students in the United States.

The President. Yes.

Q. Many of them have spoken out. Are you prepared to grant them political asylum in this country, should these—

The President. They're not seeking asylum. I'll tell you why I answer the question that way. They're not seeking asylum. We had four of them in the other day. And the first thing that one of them—Jia Hao said, "I love my country." And he wants to go back to his country. But what I have done is extend the visas so that people are not compelled to go back to our country. He's not seeking asylum. This man is not going to turn his back on his own country. He wants to change things; but he also wants to know that he is going to be safe, and I don't blame him for that. So, it's not a question of all these people—asylum is a legal status, and that's not what they're looking for.

Q.—in light of the student roundups. I mean, if they face—

The President. I think it's appalling, and so I would simply say that what we've already done would say to these people, you don't have to go back. But I'm not going to ask them to turn down the flag that they love and turn their back on China. These are patriotic young people who fear because of seeing their own brothers and sisters gunned down, but they're not seeking asylum. They don't want to flee China; they want to help change China.

151. Deng Xiaoping: Speech to Commanders of Martial Law Forces, 9 June 1989

Introduction

Although Mainland China embarked on major market-oriented economic reforms in 1978, this did not necessarily imply that the People's Republic of China (PRC) had embraced political liberalization. Chinese leaders had all lived through the chaos of the Cultural Revolution, and most had in some way fallen victim to it, experiences that probably intensified their determination to maintain social stability in future. Deng Xiaoping, who although formally only a vice premier had directed China's course from 1978 onward, had himself twice been purged during the Cultural Revolution, spending several years working in a factory, and he thought himself lucky to have survived.

When students and workers demonstrated in Beijing in the spring of 1989, eventually occupying Tiananmen Square, China's symbolic political heart, Deng responded fiercely, declaring martial law and ordering the army to disperse the protestors. One reason for his draconian attitude may have been that due in considerable part to Soviet President Mikhail Gorbachev's reforms, throughout 1989 revolutions and popular demonstrations were overturning communist regimes throughout Eastern Europe, while the Communist Party of the Soviet Union's (CPSU) position was also becoming untenable. Five days after the Chinese People's Liberation Army (PLA) moved against the protestors on 4 June 1989, causing hundreds and perhaps thousands of deaths among the students and sympathetic citizens of Beijing, Deng addressed its leaders, praising them for defending the Communist Party, which, he charged, the demonstrators had sought to topple. He nonetheless took the opportunity to emphasize that his economic reform policies remained unchanged, although political reeducation of dissenters was clearly badly needed. Deng's resort to military suppression of unarmed protestors undoubtedly permanently tarnished China's image overseas. The Western media and politicians, who had previously regarded his country as being in the process of liberalization, now characterized it as a brutal, authoritarian dictatorship. Most countries, including the United States, as well as numerous international financial agencies imposed economic and military sanctions on China, and its human rights record attracted new scrutiny. The ending of the Soviet-American Cold War also meant that China was less important to the Western alliance as a counterbalance to Soviet Russia, so that strategic self-interest no longer dictated Western tolerance of domestic repression. Even so, by the early 1990s Deng, despite opposition from hard-line ideologues within the Politburo who had hoped that the events of 1989 might enable them to reverse the country's promarket direction, had successfully reaffirmed and even accelerated China's commitment to the path of economic reform.

Primary Source

Comrades, you have been working very hard. First, I express my profound condolences to the commanders and fighters of the People's Liberation Army [PLA], commanders and fighters of the armed police force, and public security officers and men who died a heroic death; my cordial sympathy to the several thousand commanders and fighters of the PLA, commanders and fighters of the armed police force, and public security officers and men who were injured in this struggle; and cordial regards to all commanders and fighters of the PLA, commanders and fighters of the armed police force, and public security officers and men who took part in this struggle. I propose that we all rise and stand in silent tribute to the martyrs.

I would like to take this opportunity to say a few words.

This storm was bound to come sooner or later. This is determined by the major international climate and China's own minor climate. It was bound to happen and is independent of man's will. It was just a matter of time and scale. It is more to our advantage that this happened today. What is most advantageous to us is that we have a large group of veteran comrades who are still

alive. They have experienced many storms and they know what is at stake. They support the use of resolute action to counter the rebellion. Although some comrades may not understand this for a while, they will eventually understand this and support the decision of the Central Committee.

[. . .]

The incident became very clear as soon as it broke out. They have two main slogans: One is to topple the Communist Party, and the other is to overthrow the socialist system. Their goal is to establish a totally Westernized vassalage bourgeois republic [xi fang fu yong hua de zi chan jie ji gong he guo]. The people want to combat corruption. This, of course, we accept. We should also take the so-called anticorruption slogans raised by people with ulterior motives as good advice and accept them accordingly. Of course, these slogans are just a front: The heart of these slogans is to topple the Communist Party and overthrow the socialist system.

In the course of quelling this rebellion, many of our comrades were injured or even sacrificed their lives. Their weapons were also taken from them. Why was

this? It also was because bad people mingled with the good, which made it difficult to take the drastic measures we should take.

Handling this matter amounted to a very severe political test for our army, and what happened shows that our PLA passed muster. If we had used tanks to roll across, it would have created a confusion of fact and fiction across the country. That is why I have to thank the PLA commanders and fighters for using this attitude to deal with the rebellion. Even though the losses are regrettable, this has enabled us to win over the people and made it possible for those people who can't tell right from wrong to change their viewpoint. This has made it possible for everyone to see for themselves what kind of people the PLA are, whether there was a bloodbath at Tiananmen, and who were the people who shed blood.

[. . .]

The fact that this incident broke out as it did is very worthy of our pondering. It prompts us cool-headedly to consider the past and the future. Perhaps this bad thing will enable us to go ahead with reform and the open policy at a steadier and better—even a faster—pace, more speedily correct our mistakes, and better develop our strong points. Today I cannot elaborate here. I only want to raise a point.

The first question is: Are the line, principles and policies adopted by the 3rd Plenary Session of the 11th CPC Central Committee, including our three-step development strategy, correct? Is it the case that because of this rebellion the correctness of the line, principles, and policies we have laid down will be called into question? Are our goals leftist ones? Should we continue to use them as the goals for our struggle in the future? We must have clear and definite answers to these important questions.

We have already accomplished our first goal, doubling the GNP. We plan to take twelve years to attain our second goal of again doubling the GNP. In the next 50 years we hope to reach the level of a moderately developed nation. A 2 to 2.9 percent annual growth rate is sufficient. This is our strategic goal.

Concerning this, I think that what we have arrived at is not a “leftist” judgment. Nor have we laid down an overly ambitious goal. That is why, in answering the first question, we cannot say that, at least up to now, we have failed in the strategic goals we laid down. After 61 years, a country with 1.5 billion people will have reached the level of a moderately developed nation. This would be an unbeatable achievement. We should be able to realize this goal. It cannot be said that our strategic goal is wrong because this happened.

The second question is: Is the general conclusion of the 13th Party Congress of one center, two basic points correct? Are the two basic points—upholding the four cardinal principles and persisting in the open policy and reforms—wrong?

In recent days, I have pondered these two points. No, we have not been wrong. There is nothing wrong with the four cardinal principles. If there is anything amiss, it is that these principles have not been thoroughly implemented: They have not been used as the basic concept to educate the people, educate the students, and educate all the cadres and Communist Party members.

The nature of the current incident is basically the confrontation between the four cardinal principles and bourgeois liberalization. It is not that we have not talked about such things as the four cardinal principles, work on political concepts, opposition to bourgeois liberalization, and opposition to spiritual pollution. What we have not done is that there has been no continuity in these talks, and there has been no action—or even that there has been hardly any talk.

What is wrong does not lie in the four cardinal principles themselves, but in wavering in upholding these principles, and in very poor work in persisting with political work and education.

In my CPPCC talk on New Year's Day in 1980, I talked about four guarantees, one of which was the enterprising spirit in hard struggle and plain living. Hard struggle and plain living are our traditions. From now on we should firmly grasp education in plain living, and we should grasp it for the next 60 to 70 years. The

more developed our country becomes, the more important it is to grasp the enterprising spirit in plain living. Promoting the enterprising spirit in plain living will also be helpful toward overcoming corruption.

After the founding of the People's Republic, we promoted the enterprising spirit in plain living. Later on, when life became a little better, we promoted spending more, leading to waste everywhere. This, together with lapses in theoretical work and an incomplete legal system, resulted in breaches of the law and corruption.

I once told foreigners that our worst omission of the past 10 years was in education. What I meant was political education, and this does not apply to schools and young students alone, but to the masses as a whole. We have not said much about plain living and enterprising spirit, about the country China is now and how it is going to turn out. This has been our biggest omission.

Is our basic concept of reform and openness wrong? No. Without reform and openness, how could we have what we have today? There has been a fairly good rise in the people's standard of living in the past 10 years, and it may be said that we have moved one stage further. The positive results of 10 years of reforms and opening to the outside world must be properly assessed, even though such issues as inflation emerged. Naturally, in carrying out our reform and opening our country to the outside world, bad influences from the West are bound to enter our country, but we have never underestimated such influences.

In the early 1980s, when we established special economic zones, I told our Guangdong comrades that they should conduct a two-pronged policy: On the one hand, they should persevere in reforms and openness, and the other they should severely deal with economic crimes, including conducting ideological-political work. This is the doctrine that everything has two aspects.

However, looking back today, it appears that there were obvious inadequacies. On the one hand, we have been fairly tough, but on the other we have been fairly soft. As a result, there hasn't been proper coordination. Being reminded of these inadequacies would help us formulate future policies. Furthermore, we must con-

tinue to persist in integrating a planned economy with a market economy. There cannot be any change in this policy. In practical work we can place more emphasis on planning in the adjustment period. At other times, there can be a little more market regulation, so as to allow more flexibility. The future policy should still be an integration of a planned economy and a market economy.

What is important is that we should never change China into a closed country. There is not even a good flow of information. Nowadays, do we not talk about the importance of information? Certainly, it is important. If one who is involved in management doesn't have information, he is no better than a man whose nose is blocked and whose ears and eyes are shut. We should never again go back to the old days of trampling the economy to death. I put forward this proposal for the Standing Committee's consideration. This is also a fairly urgent problem, a problem we'll have to deal with sooner or later.

This is the summation of our work in the past decade: Our basic proposals, ranging from our development strategy to principles and policies, including reform and opening to the outside world, are correct. If there is any inadequacy to talk about, then I should say our reforms and openness have not proceeded well enough.

The problems we face in the course of reform are far greater than those we encounter in opening our country to the outside world. In reform of the political system, we can affirm one point: We will persist in implementing the system of people's congresses rather than the American system of the separation of three powers. In fact, not all Western countries have adopted the American system of the separation of three powers.

America has criticized us for suppressing students. In handling its internal student strikes and unrest, didn't America mobilize police and troops, arrest people, and shed blood? They are suppressing students and the people, but we are quelling a counterrevolutionary rebellion. What qualifications do they have to criticize us? From now on, we should pay attention when handling such problems. As soon as a trend emerges, we should not allow it to spread.

What do we do from now on? I would say that we should continue to implement the basic line, principles, and policies we have already formulated. We will continue to implement them unswervingly. Except where there is a need to alter a word or phrase here and there, there should be no change in the basic line and basic principles and policies. Now that I have raised this question, I would like you all to consider it thoroughly.

As to how to implement these policies, such as in the areas of investment, the manipulation of capital, etcetera, I am in favor of putting the emphasis on basic industry and agriculture. Basic industry includes the raw material industry, transportation, and energy. There should be more investment in this area, and we should persist in this for 10 to 20 years, even if it involves debts. In a way, this is also openness. We need to be bold in this respect. There can not be serious mistakes. We should work for more electricity, more railway lines, more public roads, and more shipping. There's a lot we can do. As for steel, foreigners think we'll need some 120 million metric tons in the future. We are now capable of producing about 60 million metric tons, about

half that amount. If we were to improve our existing facilities and increase production by 20 million metric tons, we would reduce the amount of steel we need to import. Obtaining foreign loans to improve this area is also an aspect of reform and openness. The question now confronting us is not whether or not the reform and open policies are correct or whether we should continue with these policies. The question is how to carry out these policies: Where do we go and which area should we concentrate on?

We must resolutely implement the series of line, principles, and policies formulated since the 3rd Plenary Session of the 11th CPC Central Committee. We should conscientiously sum up our experiences, persevere with what is correct, correct what is wrong, and do a bit more where we have lagged behind. In short, we should sum up the experiences of the present and look forward to the future.

152. Francis Fukuyama: “The End of History?” 1989

Introduction

As the Soviet Union under Mikhail Gorbachev turned to free market reforms and dismantled its empire and armed forces, intellectuals, political philosophers, and diplomats tried to discern the shape of the post–Cold War world. One controversial effort to do so was an article by Francis Fukuyama, a youthful U.S. diplomat who was deputy director of the State Department's Policy Planning Staff. To preserve his anonymity Fukuyama wrote under the pseudonym “X,” deliberately chosen to remind readers of the immensely influential 1947 article “The Sources of Soviet Conduct” that laid out the Cold War strategy of containment and was published in *Foreign Affairs* by Policy Planning Staff Director George F. Kennan. Writing in the journal *The National Interest* in a fifteen-page article, subsequently expanded into a book, Fukuyama suggested that the world had come to “the end of history,” a concept he derived from the philosopher George Wilhelm Friedrich Hegel. Although relatively small-scale conflicts and terrorist actions might still occur, ideological and strategic battles between major states, notably the United States, the European powers, Russia, and China, were, he thought, at an end, as liberal democracy and free-market capitalism triumphed around the globe. Fukuyama's article was widely perceived as a celebration of the triumph of Western values in the Cold War, and during the 1990s many governments, particularly those of the United States and most of Europe, tended to accept its assumptions. Many political commentators, however, felt that Fukuyama's analysis was somewhat simplistic and postulated a very static international system, ignoring the possibility, for example, of future conflicts over scarce resources or other goods among major state actors.

Primary Source

[. . .]

The triumph of the West, of the Western idea, is evident first of all in the total exhaustion of viable

systematic alternatives to Western liberalism. In the past decade, there have been unmistakable changes in the intellectual climate of the world's two largest communist countries, and the beginnings of significant reform movements in both. But this phenomenon extends beyond high politics and it can be seen also in the ineluctable spread of consumerist Western culture in such diverse contexts as the peasants' markets and color television sets now omnipresent throughout China, the cooperative restaurants and clothing stores opened in the past year in Moscow, the Beethoven piped into Japanese department stores, and the rock music enjoyed alike in Prague, Rangoon, and Tehran.

What we may be witnessing is not just the end of the Cold War, or the passing of a particular period of post-war history, but the end of history as such: that is, the end point of mankind's ideological evolution and the universalization of Western liberal democracy as the final form of human government. This is not to say that there will no longer be events to fill the pages of *Foreign Affairs'* yearly summaries of international relations, for the victory of liberalism has occurred primarily in the realm of ideas or consciousness and is as yet incomplete in the real or material world. But there are powerful reasons for believing that it is the ideal that will govern the material world in the long run. To understand how this is so, we must first consider some theoretical issues concerning the nature of historical change.

I

The notion of the end of history is not an original one. Its best known propagator was Karl Marx, who believed that the direction of historical development was a purposeful one determined by the interplay of material forces, and would come to an end only with the achievement of a communist utopia that would finally resolve all prior contradictions. But the concept of history as a dialectical process with a beginning, a middle, and an end was borrowed by Marx from his great German predecessor, Georg Wilhelm Friedrich Hegel.

[. . .]

III

[. . .]

In the past century, there have been two major challenges to liberalism, those of fascism and of communism. The former saw the political weakness, materialism, anomie, and lack of community of the West as fundamental contradictions in liberal societies that could only be resolved by a strong state that forged a new "people" on the basis of national exclusiveness. Fascism was destroyed as a living ideology by World War II. This was a defeat, of course, on a very material level, but it amounted to a defeat of the idea as well. What destroyed fascism as an idea was not universal moral revulsion against it, since plenty of people were willing to endorse the idea as long as it seemed the wave of the future, but its lack of success. . . .

The ideological challenge mounted by the other great alternative to liberalism, communism, was far more serious. Marx, speaking Hegel's language, asserted that liberal society contained a fundamental contradiction that could not be resolved within its context, that between capital and labor, and this contradiction has constituted the chief accusation against liberalism ever since. But surely, the class issue has actually been successfully resolved in the West. As Kojève (among others) noted, the egalitarianism of modern America represents the essential achievement of the classless society envisioned by Marx. This is not to say that there are not rich people and poor people in the United States, or that the gap between them has not grown in recent years. But the root causes of economic inequality do not have to do with the underlying legal and social structure of our society, which remains fundamentally egalitarian and moderately redistributionist, so much as with the cultural and social characteristics of the groups that make it up, which are in turn the historical legacy of premodern conditions. Thus black poverty in the United States is not the inherent product of liberalism, but is rather the "legacy of slavery and racism" which persisted long after the formal abolition of slavery.

As a result of the receding of the class issue, the appeal of communism in the developed Western world, it is safe to say, is lower today than any time since the end of the First World War. . . .

One may argue that the socialist alternative was never terribly plausible for the North Atlantic world, and was

sustained for the last several decades primarily by its success outside of this region. But it is precisely in the non-European world that one is most struck by the occurrence of major ideological transformations. Surely the most remarkable changes have occurred in Asia. Due to the strength and adaptability of the indigenous cultures there, Asia became a battleground for a variety of imported Western ideologies early in this century. Liberalism in Asia was a very weak reed in the period after World War I; it is easy today to forget how gloomy Asia's political future looked as recently as ten or fifteen years ago. It is easy to forget as well how momentous the outcome of Asian ideological struggles seemed for world political development as a whole.

The first Asian alternative to liberalism to be decisively defeated was the fascist one represented by Imperial Japan. Japanese fascism (like its German version) was defeated by the force of American arms in the Pacific war, and liberal democracy was imposed on Japan by a victorious United States. Western capitalism and political liberalism when transplanted to Japan were adapted and transformed by the Japanese in such a way as to be scarcely recognizable. Many Americans are now aware that Japanese industrial organization is very different from that prevailing in the United States or Europe, and it is questionable what relationship the factional maneuvering that takes place with the governing Liberal Democratic Party bears to democracy. Nonetheless, the very fact that the essential elements of economic and political liberalism have been so successfully grafted onto uniquely Japanese traditions and institutions guarantees their survival in the long run. More important is the contribution that Japan has made in turn to world history by following in the footsteps of the United States to create a truly universal consumer culture that has become both a symbol and an underpinning of the universal homogenous state. V. S. Naipaul traveling in Khomeini's Iran shortly after the revolution noted the omnipresent signs advertising the products of Sony, Hitachi, and JVC, whose appeal remained virtually irresistible and gave the lie to the regime's pretensions of restoring a state based on the rule of the Shariah. Desire for access to the consumer culture, created in large measure by Japan, has played a crucial role in fostering the spread of economic liber-

alism throughout Asia, and hence in promoting political liberalism as well.

The economic success of the other newly industrializing countries (NICs) in Asia following on the example of Japan is by now a familiar story. What is important from a Hegelian standpoint is that political liberalism has been following economic liberalism, more slowly than many had hoped but with seeming inevitability. Here again we see the victory of the idea of the universal homogenous state. South Korea had developed into a modern, urbanized society with an increasingly large and well-educated middle class that could not possibly be isolated from the larger democratic trends around them. Under these circumstances it seemed intolerable to a large part of this population that it should be ruled by an anachronistic military regime while Japan, only a decade or so ahead in economic terms, had parliamentary institutions for over forty years. Even the former socialist regime in Burma, which for so many decades existed in dismal isolation from the larger trends dominating Asia, was buffeted in the past year by pressures to liberalize both its economy and political system. It is said that unhappiness with strongman Ne Win began when a senior Burmese officer went to Singapore for medical treatment and broke down crying when he saw how far socialist Burma had been left behind by its ASEAN neighbors.

But the power of the liberal idea would seem much less impressive if it had not infected the largest and oldest culture in Asia, China. The simple existence of communist China created an alternative pole of ideological attraction, and as such constituted a threat to liberalism. But the past fifteen years have seen an almost total discrediting of Marxism-Leninism as an economic system. Beginning with the famous third plenum of the Tenth Central Committee in 1978, the Chinese Communist party set about decollectivizing agriculture for the 800 million Chinese who still lived in the countryside. The role of the state in agriculture was reduced to that of a tax collector, while production of consumer goods was sharply increased in order to give peasants a taste of the universal homogenous state and thereby an incentive to work. The reform doubled Chinese grain output in only five years, and in the process created for Deng Xiaoping a solid political base

from which he was able to extend the reform to other parts of the economy. Economic Statistics do not begin to describe the dynamism, initiative, and openness evident in China since the reform began.

China could not now be described in any way as a liberal democracy. At present, no more than 20 percent of its economy has been marketized, and most importantly it continues to be ruled by a self-appointed Communist party which has given no hint of wanting to devolve power. Deng has made none of Gorbachev's promises regarding democratization of the political system and there is no Chinese equivalent of Stalin's ghost. The Chinese leadership has in fact been much more circumspect in criticizing Mao and Maoism than Gorbachev with respect to Brezhnev and Stalin, and the regime continues to pay lip service to Marxism-Leninism as its ideological underpinning. But anyone familiar with the outlook and behavior of the new technocratic elite now governing China knows that Marxism and ideological principle have become virtually irrelevant as guides to policy, and that bourgeois consumerism has a real meaning in that country for the first time since the revolution. The various slowdowns in the pace of reform, the campaigns against "spiritual pollution" and crackdowns on political dissent are more properly seen as tactical adjustments made in the process of managing what is an extraordinarily difficult political transition. By ducking the question of political reform while putting the economy on a new footing, Deng has managed to avoid the breakdown of authority that has accompanied Gorbachev's perestroika. Yet the pull of the liberal idea continues to be very strong as economic power devolves and the economy becomes more open to the outside world. There are currently over 20,000 Chinese students studying in the U.S. and other Western countries, almost all of them the children of the Chinese elite. It is hard to believe that when they return home to run the country they will be content for China to be the only country in Asia unaffected by the larger democratizing trend. The student demonstrations in Beijing that broke out first in December 1986 and recurred recently on the occasion of Hu Yao-bang's death were only the beginning of what will inevitably be mounting pressure for change in the political system as well.

What is important about China from the standpoint of world history is not the present state of the reform or even its future prospects. The central issue is the fact that the People's Republic of China can no longer act as a beacon for illiberal forces around the world, whether they be guerrillas in some Asian jungle or middle class students in Paris. Maoism, rather than being the pattern for Asia's future, became an anachronism, and it was the mainland Chinese who in fact were decisively influenced by the prosperity and dynamism of their overseas co-ethnics—the ironic ultimate victory of Taiwan.

Important as these changes in China have been, however, it is developments in the Soviet Union—the original "homeland of the world proletariat"—that have put the final nail in the coffin of the Marxist-Leninist alternative to liberal democracy. It should be clear that in terms of formal institutions, not much has changed in the four years since Gorbachev has come to power: free markets and the cooperative movement represent only a small part of the Soviet economy, which remains centrally planned; the political system is still dominated by the Communist party, which has only begun to democratize internally and to share power with other groups; the regime continues to assert that it is seeking only to modernize socialism and that its ideological basis remains Marxism-Leninism; and, finally, Gorbachev faces a potentially powerful conservative opposition that could undo many of the changes that have taken place to date. Moreover, it is hard to be too sanguine about the chances for success of Gorbachev's proposed reforms, either in the sphere of economics or politics. But my purpose here is not to analyze events in the short-term, or to make predictions for policy purposes, but to look at underlying trends in the sphere of ideology and consciousness. And in that respect, it is clear that an astounding transformation has occurred.

Émigrés from the Soviet Union have been reporting for at least the last generation now that virtually nobody in that country truly believed in Marxism-Leninism any longer, and that this was nowhere more true than in the Soviet elite, which continued to mouth Marxist slogans out of sheer cynicism. The corruption and decadence of the late Brezhnev-era Soviet state seemed to

matter little, however, for as long as the state itself refused to throw into question any of the fundamental principles underlying Soviet society, the system was capable of functioning adequately out of sheer inertia and could even muster some dynamism in the realm of foreign and defense policy. Marxism-Leninism was like a magical incantation which, however absurd and devoid of meaning, was the only common basis on which the elite could agree to rule Soviet society.

What has happened in the four years since Gorbachev's coming to power is a revolutionary assault on the most fundamental institutions and principles of Stalinism, and their replacement by other principles which do not amount to liberalism *per se* but whose only connecting thread is liberalism. This is most evident in the economic sphere, where the reform economists around Gorbachev have become steadily more radical in their support for free markets, to the point where some like Nikolai Shmelev do not mind being compared in public to Milton Friedman. There is a virtual consensus among the currently dominant school of Soviet economists now that central planning and the command system of allocation are the root cause of economic inefficiency, and that if the Soviet system is ever to heal itself, it must permit free and decentralized decision-making with respect to investment, labor, and prices. After a couple of initial years of ideological confusion, these principles have finally been incorporated into policy with the promulgation of new laws on enterprise autonomy, cooperatives, and finally in 1988 on lease arrangements and family farming. There are, of course, a number of fatal flaws in the current implementation of the reform, most notably the absence of a thoroughgoing price reform. But the problem is no longer a conceptual one: Gorbachev and his lieutenants seem to understand the economic logic of marketization well enough, but like the leaders of a Third World country facing the IMF, are afraid of the social consequences of ending consumer subsidies and other forms of dependence on the state sector.

[. . .]

The Soviet Union could in no way be described as a liberal or democratic country now, nor do I think that it

is terribly likely that *perestroika* will succeed such that the label will be thinkable any time in the near future. But at the end of history it is not necessary that all societies become successful liberal societies, merely that they end their ideological pretensions of representing different and higher forms of human society. And in this respect I believe that something very important has happened in the Soviet Union in the past few years: the criticisms of the Soviet system sanctioned by Gorbachev have been so thorough and devastating that there is very little chance of going back to either Stalinism or Brezhnevism in any simple way. Gorbachev has finally permitted people to say what they had privately understood for many years, namely, that the magical incantations of Marxism-Leninism were nonsense, that Soviet socialism was not superior to the West in any respect but was in fact a monumental failure. The conservative opposition in the USSR, consisting both of simple workers afraid of unemployment and inflation and of party officials fearful of losing their jobs and privileges, is outspoken and may be strong enough to force Gorbachev's ouster in the next few years. But what both groups desire is tradition, order, and authority; they manifest no deep commitment to Marxism-Leninism, except insofar as they have invested much of their own lives in it. For authority to be restored in the Soviet Union after Gorbachev's demolition work, it must be on the basis of some new and vigorous ideology which has not yet appeared on the horizon.

If we admit for the moment that the fascist and communist challenges to liberalism are dead, are there any other ideological competitors left? Or put another way, are there contradictions in liberal society beyond that of class that are not resolvable? Two possibilities suggest themselves, those of religion and nationalism.

The rise of religious fundamentalism in recent years within the Christian, Jewish, and Muslim traditions has been widely noted. One is inclined to say that the revival of religion in some way attests to a broad unhappiness with the impersonality and spiritual vacuity of liberal consumerist societies. Yet while the emptiness at the core of liberalism is most certainly a defect in the ideology—indeed, a flaw that one does not need the perspective of religion to recognize—it is not at all

clear that it is remediable through politics. Modern liberalism itself was historically a consequence of the weakness of religiously-based societies which, failing to agree on the nature of the good life, could not provide even the minimal preconditions of peace and stability. In the contemporary world only Islam has offered a theocratic state as a political alternative to both liberalism and communism. But the doctrine has little appeal for non-Muslims, and it is hard to believe that the movement will take on any universal significance. Other less organized religious impulses have been successfully satisfied within the sphere of personal life that is permitted in liberal societies.

[. . .]

IV

What are the implications of the end of history for international relations? Clearly, the vast bulk of the Third World remains very much mired in history, and will be a terrain of conflict for many years to come. But let us focus for the time being on the larger and more developed states of the world who after all account for the greater part of world politics. Russia and China are not likely to join the developed nations of the West as liberal societies any time in the foreseeable future, but suppose for a moment that Marxism-Leninism ceases to be a factor driving the foreign policies of these states—a prospect which, if not yet here, the last few years have made a real possibility. How will the overall characteristics of a de-ideologized world differ from those of the one with which we are familiar at such a hypothetical juncture?

The most common answer is—not very much. For there is a very widespread belief among many observers of international relations that underneath the skin of ideology is a hard core of great power national interest that guarantees a fairly high level of competition and conflict between nations. Indeed, according to one academically popular school of international relations theory, conflict inheres in the international system as such, and to understand the prospects for conflict one must look at the shape of the system—for example, whether it is bipolar or multipolar—rather than at the specific character of the nations and regimes that constitute it. This school in effect applies a Hobbesian view

of politics to international relations, and assumes that aggression and insecurity are universal characteristics of human societies rather than the product of specific historical circumstances.

[. . .]

The developed states of the West do maintain defense establishments and in the postwar period have competed vigorously for influence to meet a worldwide communist threat. This behavior has been driven, however, by an external threat from states that possess overtly expansionist ideologies, and would not exist in their absence. . . .

The automatic assumption that Russia shorn of its expansionist communist ideology should pick up where the czars left off just prior to the Bolshevik Revolution is therefore a curious one. It assumes that the evolution of human consciousness has stood still in the meantime, and that the Soviets, while picking up currently fashionable ideas in the realm of economics, will return to foreign policy views a century out of date in the rest of Europe. This is certainly not what happened to China after it began its reform process. Chinese competitiveness and expansionism on the world scene have virtually disappeared: Beijing no longer sponsors Maoist insurgencies or tries to cultivate influence in distant African countries as it did in the 1960s. This is not to say that there are not troublesome aspects to contemporary Chinese foreign policy, such as the reckless sale of ballistic missile technology in the Middle East; and the PRC continues to manifest traditional great power behavior in its sponsorship of the Khmer Rouge against Vietnam. But the former is explained by commercial motives and the latter is a vestige of earlier ideologically-based rivalries. The new China far more resembles Gaullist France than pre-World War I Germany.

[. . .]

The Soviet Union, then, is at a fork in the road: it can start down the path that was staked out by Western Europe forty-five years ago, a path that most of Asia has followed, or it can realize its own uniqueness and remain stuck in history. The choice it makes will be

highly important for us, given the Soviet Union's size and military strength, for that power will continue to preoccupy us and slow our realization that we have already emerged on the other side of history.

V

The passing of Marxism-Leninism first from China and then from the Soviet Union will mean its death as a living ideology of world historical significance. For while there may be some isolated true believers left in places like Managua, Pyongyang, or Cambridge, Massachusetts, the fact that there is not a single large state in which it is a going concern undermines completely its pretensions to being in the vanguard of human history. And the death of this ideology means the growing "Common Marketization" of international relations, and the diminution of the likelihood of large-scale conflict between states.

This does not by any means imply the end of international conflict per se. For the world at that point would be divided between a part that was historical and a part that was post-historical. Conflict between states still in history, and between those states and those at the end of history, would still be possible. There would still be a high and perhaps rising level of ethnic and nationalist violence, since those are impulses incompletely played out, even in parts of the post-historical world. Palestinians and Kurds, Sikhs and Tamils, Irish Catholics and Walloons, Armenians and Azeris, will continue to have their unresolved griev-

ances. This implies that terrorism and wars of national liberation will continue to be an important item on the international agenda. But large-scale conflict must involve large states still caught in the grip of history, and they are what appear to be passing from the scene.

The end of history will be a very sad time. The struggle for recognition, the willingness to risk one's life for a purely abstract goal, the worldwide ideological struggle that called forth daring, courage, imagination, and idealism, will be replaced by economic calculation, the endless solving of technical problems, environmental concerns, and the satisfaction of sophisticated consumer demands. In the post-historical period there will be neither art nor philosophy, just the perpetual caretaking of the museum of human history. I can feel in myself, and see in others around me, a powerful nostalgia for the time when history existed. Such nostalgia, in fact, will continue to fuel competition and conflict even in the post-historical world for some time to come. Even though I recognize its inevitability, I have the most ambivalent feelings for the civilization that has been created in Europe since 1945, with its north Atlantic and Asian offshoots. Perhaps this very prospect of centuries of boredom at the end of history will serve to get history started once again.

153. Robert Darnton: "The Meanings of the Wall," 16 November 1989

Introduction

The foremost symbol of the Cold War division of Europe, the iron curtain that separated East from West on that continent, was the Berlin Wall. Constructed in 1961–1962, this heavily fortified barrier, fronted by a no-man's-land covered by machine guns and protected by barbed wire, forcibly prevented East Germans from escaping to the West. Over the years, hundreds were killed trying to cross the wall. Even after West German Chancellor Willy Brandt instituted his Ostpolitik measures in the early 1970s facilitating travel between East and West, only limited contacts were possible. As the Soviet Union relinquished its domination of Eastern Europe in 1989, large demonstrations occurred across the German Democratic Republic (GDR, East Germany) as the population demanded the right to cross over to the West and many East Germans fled to the West through Hungary. On the evening of 9 November 1989, Gunter Schabowski, head of East Berlin's Communist Party, announced that the Berlin Wall would be opened for private trips abroad. East and West Berliners flocked to the wall, and uncertain security guards

allowed them to cross unhindered and to climb on the wall itself. A carnival atmosphere took hold as strangers joined in celebrations with each other and even began to chip away chunks of the wall as souvenirs. The wall was never closed again and was eventually demolished, with only a short section remaining as a historical memento. Robert Darnton, a Western historian and journalist who was present, wrote an evocative and perceptive eyewitness account of the event.

Primary Source

On the morning after, November 10, when both Berlins woke up wondering whether the first flood through the Wall had been a dream, the West Berlin tabloid *Volksblatt* ran two headlines, shoulder to shoulder, on its front page: “The Wall Is Gone” and “Bonn Demands the Destruction of the Wall.”

Both were right. The Wall is there and it is not there. On November 9, it cut through the heart of Berlin, a jagged wound in the middle of a great city, the Great Divide of the Cold War. On November 10, it had become a dance floor, a picture gallery, a bulletin board, a movie screen, a videocassette, a museum, and, as the woman who cleaned my office put it, “nothing but a heap of stone.” The taking of the Wall, like the taking of the Bastille, transformed the world. No wonder that a day later, in Alexanderplatz, East Berlin, one conqueror of the Wall marched in a demonstration with a sign saying simply, “1789–1989.” He had helped dismantle the central symbol around which the postwar world had taken shape in the minds of millions.

To witness symbolic transformation on such a scale is a rare opportunity, and it raises many questions. To begin with the most concrete: What happened between November 9 and 12, and what does it mean?

The destruction of the Wall began in the early evening of Thursday, November 9, soon after the first wave of East Berliners, or *Ossis*, as they are called by the West Berliners here, burst upon the West. One Ossi, a young man with a knapsack on his back, somehow hoisted himself up on the Wall directly across from the Brandenburg Gate. He sauntered along the top of it, swinging his arms casually at his sides, a perfect target for the bullets that had felled many other wall jumpers, like Peter Fechter, an eighteen-year-old construction worker, who was shot and left to bleed to death a few feet in front of Checkpoint Charlie on August 17, 1962. Now, twenty-seven years later, a new generation of

border guards took aim at a new kind of target and fired—but only with power hoses and without much conviction. The conqueror of the Wall continued his promenade, soaked to the skin, until at last the guards gave up. Then he opened his knapsack and poured the water toward the East, in a gesture that seemed to say, “Good-bye to all that.”

A few minutes later, hundreds of people, Ossis and Wessis alike, were on the Wall, embracing, dancing, exchanging flowers, drinking wine, helping up new “conquerors”—and chipping away at the Wall itself. By midnight, under a full moon and the glare of spotlights from the watchtowers in no man’s land, a thousand figures swarmed over the Wall, hammering, chiseling, wearing its surface away like a colony of army ants. At the bottom, “conquerors” threw stones at its base or went at it with pickaxes. Long slits appeared, and the light showed through from the East, as if through the eyes of a jack-o’-lantern. On the top, at the center of the tumult, with the Brandenburg Gate looming in the background, one Ossi conducted the destruction with a sickle in one hand and a hammer in the other.

By Saturday, November 11, chunks of the wall were circulating through both Berlins. People exchanged them as souvenirs of what had already taken shape in the collective consciousness as a historical event: the end of the Cold War. A sidewalk entrepreneur sold bits of wall from a table on the Ku’damm (The Kurfürstendamm, West Berlin’s elegant shopping avenue.): 20 DM for a piece of the past. At one point, an East Berliner walked by and objected, with a smile on his face: “You can’t sell that. It’s our Wall. It belongs to us.”

Like any powerful symbol, the Wall has acquired many meanings, and they differ significantly from West to East. The Wall even looks different if you study it from one side and then the other. Seen from the West, it is a prison wall that encloses the East Berliners in totali-

tarianism. Tourists climb on observation towers and shudder deliciously at the spectacle: the monstrous, graffiti-covered concrete structure, the no man's land beyond it—which, until 1985, was mined and rigged with rifles that fired automatically at anyone who dashed across—the barbed wire, the dog patrols, the turrets with armed guards staring back through binoculars, and the second wall of windowless buildings on the far side of the deadly, desolate, space.

East Berliners see a different Wall. Theirs is painted in patterns of light and dark blue, clean, bright, and free of all graffiti. It shuts off the view of the repressive apparatus beyond it. If you lose your way or stray into outlying areas in East Berlin, you can drive along the wall for miles without noticing that it is something more than an ordinary part of the urban landscape.

[. . .]

Above all, the two populations of Berlin sought to make contact with one another. In exchanging hugs, drinks, and flowers, they performed a collective ritual of *Bruderschaft*. As the *Volksblatt* put it, “In the night when the gates opened, it seemed as though there were no more East Berliners and West Berliners. Everyone felt as though they belonged to a huge family, and everyone celebrated the festival accordingly.”

To someone unfamiliar with Berlin, it may be hard to imagine how successfully the Wall had divided the city. Soon after 1961, when the Wall went up, the million or so inhabitants on the Western side and the 2 million or so on the Eastern began to lose contact. By 1989, a whole generation had come of age within the shadow of the Wall. Most of them never crossed it, even from West to East when that was allowed. They accepted the Wall as a fact of life, as something inexorable, built into the landscape—there when they were born and there when they died. They left it to the tourists, took it for granted, forgot about it, or simply stopped seeing it.

Before the fall, an old woman was interviewed on her balcony, which overlooked the Wall from the West. She spent hours every afternoon staring into no man's land. Why did she look so hard at the Wall, day after day? the reporter asked, hoping to find some expression of Ber-

lin's divided personality. “Oh, I'm not looking at the Wall at all,” she replied. “I watch the rabbits playing in no man's land.” Many West Berliners did not see the Wall until it ceased to exist.

For the Wall enclosed the West Berliners even more thoroughly than it shut off their counterparts in the East. In 1961 it was perceived as a noose that would soon choke the life out of the western half of the city. But by 1989, West Berliners had come to regard the Wall as a source of support. Thanks to its presence, the government in Bonn poured billions into Berlin, subsidizing everything from the philharmonic orchestra to teen-age jazz groups. A whole population of underemployed intellectuals grew up around the Free University, which now has about 60,000 students. As residents of Berlin, they are exempt from the draft; they also can drink beer and talk politics in pubs throughout the night, for Berlin is the only city in the Federal Republic where the pubs are permitted to stay open past midnight, the only place where you can order breakfast in the afternoon. Many of these free-floating intellectuals became freeloaders. They lived off the Wall; and if it really falls, they may face a greater economic disaster than the Berliners in the East.

To Berliners, therefore, the Wall means something very different from what it means outside the city. But most of them realize that their local barrier is bound up with larger divisions, the Oder-Neisse line in particular and the general dividing line between the Warsaw Pact and NATO. Having gone to bed one day in a world with clearly defined boundaries, they woke up the next in a world without firm national borders, without balanced power blocs, and even without obvious demarcations of time, because it suddenly seemed possible to produce a treaty ending World War II forty-four years after World War II had ended. They are living a truism of anthropology: the collapse of boundaries can be deeply disturbing, a source of renewal but also a threat to a whole worldview.

The mood remains euphoric, nonetheless. In East Berlin especially, the idea has spread that in conquering the Wall the people seized power. No one denies that power comes out of the barrel of a gun, but it has symbolic forms, too. The demonstrations in the streets

sapped the legitimacy of the regime. Combined with the hemorrhaging of the population across the borders, they brought the government down, without a shot fired.

[. . .]

We may never know the details of what happened inside the crumbling power structure of the GDR. But whatever produced the occasion, the force that broke through the Wall was there for all to see on the night of November 9. It was the people of East Berlin. They took the Wall as they had taken to the streets for the previous two months, with nothing but their convictions, their discipline, and the power of their numbers.

When they came streaming into West Berlin, they spoke the language of liberty, but they expressed themselves by gesture, not by high-flown rhetoric. They took

possession of the Wall physically, by pouring through it, climbing on it, and chipping it apart. They did the same thing in West Berlin itself. They occupied space, swarming through the Ku'damm, filling the busses and pubs, parking their tiny Trabis on the noblest sidewalks, and returning triumphantly to the East with a flower for a girl friend or a toy for an infant.

It was a magical moment, the possession of a city by its people. On Thursday, November 9, under a full moon, between the shadow of the Reichstag and the menacing bulk of the Brandenburg Gate, the people of Berlin danced on their Wall, transforming the cruelest urban landscape into a scene of hilarity and hope, and ending a century of war.

154. National Salvation Front Communiqués, Romania, December 1989

Introduction

As communist regimes around Eastern Europe collapsed via the ballot box, the trend quickly spread. In December 1989 a popular uprising began in Romania against the government of Nicolae Ceaușescu in Romania, a regime that even though anti-Soviet had also been extremely repressive. Romania had been able to negotiate the withdrawal of Soviet troops in 1958 and had thereafter steered an independent course in foreign policy, developing close ties with Israel, the Arab countries, and the Federal Republic of Germany (FRG, West Germany). The government had also virtually eradicated illiteracy and developed an extremely effective educational system. Even so, after a period of prosperity in the 1960s and 1970, the dictatorial government became highly repressive, imposing economic austerity measures in an effort to repay foreign debts and developing a personality cult around Ceaușescu. As other East European states peacefully rejected communist rule, in mid-December 1989 fierce protests, riots, and strikes erupted in Romania that focused on the capital of Bucharest. The National Salvation Front was formed, and its leaders called for the ending of the communist monopoly of power; free elections; a new constitution; economic, commercial, and agricultural restructuring; the reorganization of education; and respect for human rights. Initially, the Ceaușescu government tried to use the military to repress the new opposition, but their efforts proved unavailing, and on 22 December the army declined to offer further opposition to demonstrators. Ceaușescu and his wife, Elena, fled the capital but within a day were captured, arrested, and put on trial. On 25 December the two were sentenced to death and executed by firing squad, the only communist leaders in Eastern Europe to come to a violent end during the 1989–1990 transfers of power.

December 22

Citizens, we are living in historic times. The Ceaușescu clan, which has led the country to disaster, was removed

from power. All of us know and admit that the victory in which the whole country rejoices is the outcome of the spirit of sacrifice of the broad masses of all nationalities, particularly of our wonderful youth, who, with

their blood, restored to us the feeling of national dignity. This is also the great merit of those who for years on end have jeopardized their lives by protesting against the tyranny.

A new page is being opened in Romania's political and economic history. At this turning point, we decided to organize ourselves into the National Salvation Front, which itself relies on the Romanian Army and encompasses all of the country's healthy forces, regardless of nationality, and all organizations and groups who bravely rose to defend freedom and dignity in the years of totalitarian tyranny. The goal of the National Salvation Front is to establish democracy, liberty, and the Romanian people's dignity.

As of this moment, all power structures of the Ceaușescu clan have been dissolved. The government has been dismissed. The State Council and its institutions are ceasing their activity, all state power has been assumed by the Council of the National Salvation Front. The Higher Military Council, which coordinates all of the activity of the Army and the Ministry of Interior units, will be subordinated to the Council of the National Salvation Front.

All ministries and central bodies, in their current structure, will continue their normal activity, subordinating themselves to the National Salvation Front, in order to ensure the normal development of all economic and social life.

County, municipal, town, and communal councils of the National Salvation Front will be set up in the territory as local power bodies. The militia is called upon to ensure public order, together with the citizen's committees. These local bodies will take all necessary steps to ensure public supplies of food, electric power, heat, water, public transportation, medical assistance, and the entire trade network.

As a program, the Front proposes the following:

1. To abandon the leading role of a single party and to establish a democratic and pluralistic system of government. [applause from the people in the studio]

2. To organize free elections in April.

3. To separate the legislative, executive, and judiciary powers in the state and to elect all political leaders for one or two mandates, at the most. Nobody should claim power for life.

The Council of the National Salvation Front suggests that in the future the country should be called Romania. [cheers, applause, chants of "Romania"]

A drafting committee of the new constitution will start to operate at once.

4. To restructure the whole national economy in accordance with the criteria of profitability and efficiency. To eliminate the administrative, bureaucratic methods of centralized economic management and to promote free initiative and competence in the management of all economic sectors.

5. To restructure agriculture and to assist the small scale peasant production. To halt the destruction of villages.

6. To reorganize Romanian education in accordance with the current requirements. To reorganize the educational structure on democratic and humanistic bases. To eliminate ideological dogmas that have caused so much damage to the Romanian people, and to promote genuine values of humanity. To eliminate lies and imposture and to establish criteria of competence and justice in all areas of activity. To base the development of the national culture on a new foundation. To take the press, radio, and television from the hands of a despotic family and turn it over to the hands of the people.

7. To observe the rights and freedoms of national minorities and to ensure their full equality with those of the Romanians.

8. To reorganize all of the country's trade, proceeding on the basis of the requirements of primarily satisfying all of the daily needs of Romania's population. In this respect we will end the export of agricultural and food-stuffs, we will reduce the export of oil products, and we will give priority to satisfying the heating and electric power needs of the people.

9. The whole foreign policy of the country should serve the promotion of good-neighborliness, friendship, and peace in the world and should be integrated in the process of building a united Europe, a common home of all the people of this continent. We will observe Romania's international commitments, primarily those to the Warsaw Pact.

10. To promote a domestic and foreign policy subordinated to the needs and the interests of developing the human being. To ensure complete observance of human rights and freedoms, including the right to free movement.

11. By organizing ourselves within this front, we are firmly determined to do our utmost in order to re-establish a civil society in Romania and to guarantee the triumph of democracy, freedom, and dignity of all citizens of the country. . . .

December 24

The overthrow of the odious dictatorship of the Ceaușescu clan has added a last page to the bloody chronicle of the years of suffering endured by the Romanian people.

Déclassé and irresponsible elements, which remained faithful to the tyrant, have tried to continue the terrorist practices of the former regime by resorting to provocations, attacks against civilians, indiscriminately killing unarmed people, attacking public institutions, industrial enterprises, military targets, trade outlets, hospitals, and housing quarters.

The Romanian people have, once again, affirmed their tremendous moral energy unleashed by their desire for freedom.

The Army has done its duty and so have the majority of the workers in the Ministry of Interior.

The revolution has won.

To completely restore the situation and to ensure the tranquility needed for a normal life in our free society, the Council of the National Salvation Front has decided to adopt extraordinary measures, which are imperative under the current circumstances.

1. Complete and immediate cessation of firing throughout the country. Anyone violating this disposition will be guilty of a crime against the Romanian people and will be punished promptly and mercilessly. Not one more drop of blood should be shed.

At the same time, any acts of vandalism and of destruction, as well as personal revenge are illegal, thus staining the noble nature of our revolution. The guilt of the dictator and of his former lackeys before history and our laws, will be established by tribunals, which will decide with the greatest severity on an appropriate penalty for the action of destroying the country.

2. The Army is the only element authorized to possess arms, the firm arm defending the interests of the people. All those who, during these days, have come into the possession of arms and ammunition, regardless of the circumstances, have to urgently deliver them by Monday, 25 December at 1500 GMT at the latest.

Those who will not respect these provisions, will be guilty of seriously violating the laws and will be punished most severely.

3. The units of the Ministry of Interior will be merged with the units of the Ministry of the National Defense, which is to take over the single command of all troops and all weapons of our country.

The militia bodies and the firemen will preserve all their specific duties, which they have to exercise with great determination.

4. Management and all working people are called upon to ensure the protection of economic, trade, and medical units, and educational, scientific, and cultural establishments.

Romanian society has to operate normally with the dedicated contribution of each of us.

At the same time, we call on all co-nationals to support the bodies in charge of order in ensuring the integrity of buildings, embassies, and the immunity of diplomats.

5. The bodies of the new structures of democracy must urgently begin their activity of restoring the country by firmly setting themselves up and becoming immediately subordinated to the Council and adopting, together with it, the measures of a political, social, administrative, and economic order, all measures which are absolutely necessary in the first stages of the reconstruction work.

May the first free New Year bring to Romania, along with the joy of liberation, tranquility and calm which

will permit us to assume all the responsibilities of the nation which is affirming its dignity.

The national consensus, the cooperation of the creative forces of our country and of all social categories, of any nationality, constitute a vital condition and the guarantee for fulfilling the basic targets of the revolutionary process in Romania.

155. Communist Party of the Soviet Union Central Committee Draft Platform, 13 February 1990

Introduction

Soviet President Mikhail Gorbachev took office in 1985 as a convinced communist who wished to reform and improve the existing Soviet system, not destroy it. A firm believer in Marxist-Leninism and the principles of the October 1917 Revolution, he perceived his policies as a means of strengthening and modernizing Soviet communism. Initially, he sought to work within the framework of the Communist Party of the Soviet Union (CPSU). Continuous sniping and sabotage of his policies of economic reform (*perestroika*) and openness (*glasnost*) by Communist Party officials gradually led him to break with the party. As early as January 1987 he urged the democratization of the Communist Party, by which at that stage he meant merely the introduction of multicandidate elections for party positions. At the Nineteenth Party Conference of June 1988, the first to take place for forty-seven years, Gorbachev and his supporters insisted on introducing radical changes, including multicandidate elections and the separation of the government structure from party organizations at the regional level. In December 1988 the Supreme Soviet was restructured, and a new Congress of People's Deputies established as the country's top legislative body, with only one-third of its seats reserved for the CPSU. Initially dominated by conservatives, this also included an opposition liberal faction headed by Moscow communist leader Boris Yeltsin. Their demands included the repeal of Article 6 of the Soviet constitution, which guaranteed the Communist Party a "leading role" in the Soviet state. Gorbachev allied himself with the liberals, and in a platform intended for submission to the Twenty-eighth Party Congress the following July, the February 1990 CPSU Central Committee revoked this provision. The Communist Party's monopoly on power had now effectively been broken. While affirming continuing Russian commitment to the development of a market economy, the draft platform also promised extensive social reforms and benefits. Deep resentment of Gorbachev's reforms still characterized many of the communist old guard, however, as became apparent when the Twenty-eighth Party Congress rewrote the language of the Central Committee's draft, moderating its criticisms of the CPSU and diluting the force of its recommendations. The episode suggested that efforts to revitalize and modernize the CPSU from within were likely to end in ultimate failure.

Primary Source

[. . .]

I. What is the essence of perestroika, what should be resolutely discarded and what should be preserved in the Party's Ideological and political arsenal?

First of all, we are breaking with the authoritarian-bureaucratic system which is incompatible with socialist principles. Our ideal is a humane, democratic socialism.

Having embarked on the road of revolutionary changes, it is necessary to discard completely the fetters

of the past that hinder our movement towards this objective.

While reaffirming faithfulness to the creative spirit of the materialist world outlook and the dialectic methodology of Marx, Engels and Lenin, and being guided by it, we resolutely reject ideological blinkers, dogmatism and intolerance towards different views and ideas.

While adhering to the positions of the working class and all working people, we abandon the simplified class approach which opposes national and universal human values.

We denounce total state hegemony in public life and everything that engendered arbitrariness and lawlessness, unpunishable abuses of power and undeserved privileges.

We denounce a primitive view of socialist ownership, disregard for commodity-money relations and all forms and methods of administration and management that entail man's alienation, and prevent him from making use of his abilities and endowments.

We renounce the treatment of nature as an object for ruthless exploitation, an attitude we have inherited from the beginning of our industrialization.

We condemn negligence of the people's cultural and historical values, and of the country's accumulated intellectual capital.

We reject negative dogmatic stereotypes in our relations with other parties of the working people, including social-democratic parties, which contribute to the progressive development of states and nations.

We proceed from the premise that the objectively growing interdependence of states and the emerging integrity of the world, in which various societies interact while retaining their freedom of option, are a basic feature of a new epoch.

The Soviet Communist Party deems it fundamentally important to distinguish everything in our past that was engendered by Stalinism and by violations of socialist

principles from what constitutes the Party's and the people's concrete contribution to their country and to all of mankind.

It is just as dangerous to idealize the past and to refuse to learn the complete and grim truth about tragic aspects of our history as to try to obliterate everything that is really great and valuable in our historical legacy. The continuity of the Soviet people's labor efforts and struggle must not be interrupted.

Socialist development is impossible without an ideal. And the latter, in turn, will lose all sense if people forget or neglect their history. Historic awareness, love of the homeland and patriotism, which is unacceptable in our conditions without internationalism, are symptoms of a nation's sound health and vitality.

The image of the future, even if it is only a few decades ahead, cannot be described exactly, in minute detail. But one thing is clear: it will be an absolutely different society that will develop in democratic conditions on the basis of powerful cultural and scientific-technological progress. It will be founded on the humanistic values of the peoples of our country and of all humankind. It will be a society that realizes the integrity of civilization and nature, in which man is history's end in itself. These features of the future social organization reflect the initial essence of the socialist idea, which has found its embodiment in the labor and efforts of peoples for social emancipation.

Immutable for us is our socialist option and our adherence to the October ideas: all power to the Soviets, factories to the workers, land to the peasants, peace to the peoples, free self-determination to the nations. We have inherited spiritual power and courage from older generations, their self-sacrifice for the sake of the Motherland. We cherish the sacred memory of the sacrifices they have made during the years of great sufferings.

We adhere to the idea of social justice. It permitted millions of people to rise up from historical nonexistence and it inspired them to deeds that turned our state into a mighty world power. The Soviet state played a decisive role in saving mankind from Fascist slavery and has become the mainstay of many peoples in their

struggle for national liberation. It has made an indispensable, unique contribution to world science, technology and culture.

The right to work, to pensions, free education and medical care and other social benefits that first appeared on Soviet soil have now become widespread benefits in any civilized society. To forget this means to disrespect the truth, disrespect those who have displayed lofty heroism and self-sacrifice in their passionate urge for the socialist ideal. Such are the basic points in perestroika's thinking and morality.

II. Man Is the Focus of Party Policy

The Party seeks to place man in the center of social development, providing him with worthy living and working conditions, guaranteeing him social justice, political liberty and possibilities for comprehensive development and spiritual fulfillment, and regards this as its main goal. This is exactly what should determine social progress.

The Soviet Communist Party stands for the earliest formulation of legal acts guaranteeing the rights and freedoms of citizens. The recognition of personal liberty as the key and vital value and a *volte-face* to guarantee the entire complex of human rights are perestroika's most important accomplishment. Now it is necessary to consolidate these rights, to rest them on a solid material, legal and political foundation.

The Party will uphold:

- Reliable legislative protection of a citizen's person and honor, the safety of his home and property, the privacy of his correspondence and telephone conversations,
- Stronger guarantees to implement the right to work, including payment according to the quantity and quality of work done and its final results, the formation of a mechanism to maintain employment, training and re-training of personnel and adequate material support for those who are forced to change their trade, profession or place of work,
- The development and strengthening of the political rights of citizens: participation in running the

affairs of society and the state, freedom of speech, the press, meetings and demonstrations and the formation of public organizations. Law and order and requirements of Soviet laws should be strictly observed,

- Freedom for creative activities and regard for talent as a national asset. Encouraging a multifaceted culture in every way, the Party will uphold humanistic criteria and, at the same time, protect society from pseudo-culture. A commercial attitude to culture is unacceptable to socialism,
- Man's free self-determination in the spiritual sphere, the freedom of conscience and religion. Without abandoning its world outlook, the Party will step up the dialogue between atheists and believers and pursue a policy that offers all churches the opportunity to freely operate within the law, contributing to mutual understanding between people,
- A higher role of the court of law in protecting civil rights, the establishment of public-state commissions exercising law-enforcement activities.

The CPSU gives priority to the adoption of laws in the near future on the press and other mass media, freedom of conscience and religious associations, public associations, the order of emigration from and immigration to the USSR, Soviet citizenship, languages of Soviet peoples and other legislative acts that will guarantee the political and personal rights of citizens.

The Party will persistently seek to strengthen and develop the economic and social rights of Soviet people and to raise their well-being. It will concentrate its efforts in this area on the following tasks:

- The drafting and legislative adoption of a state-wide demographic policy applying to human reproduction and the regulation of migration,
- The implementation of the housing Program that was put forth by the 27th CPSU Congress and that aims to provide each Soviet family with a separate flat or an individual house by the year 2000. This aim requires an increase in the rate of and a substantial rise in the quality of housing construction, provided by State funds and the funds of enterprises, cooperatives, savings of

population and easy credits. It also necessitates stiffer public control over the distribution of flats, comprehensive development and architectural plans that reflect the needs of the inhabitants,

- The right to protect health by improving medical services, involving a considerable increase in appropriations for public health and the utmost mobilization of resources of enterprises, industries, republics and local Soviets for these purposes,
- Stronger guarantees to preserve the environment, rational use of natural resources, the adoption of a long-term state ecological program for the country, the union and autonomous republics as well as laws on environmental control, improvement of the structure and operation of bodies engaged in environmental protection,
- The development of the entire sphere of education, enlightenment and culture and an increase in the investments for these aims, the radical improvement of the quality of teaching and the training of specialists, increasing the prestige of teachers, the promotion of competitiveness among ideas and talents, overcoming the administrative approach in the intellectual sphere, and the monopoly of group interests, the preservation of our cultural and spiritual heritage and historical monuments, support for various social initiatives and donations in the interest of developing education and culture, broad and free exchange of spiritual values with foreign countries.

The strategy of perestroika is based upon the profound understanding of the role of science and mastering its results in order to achieve a qualitatively new state for our society.

The development and use of the country's creative potential should be based upon solid legislation. It is important to ensure the effective protection of intellectual property. The Party stands for the independence of higher educational establishments and academic and branch scientific institutions, for the diversity of their structures.

The CPSU economic policy pays special attention to the protection of those social strata and groups in the

population that need primary help and support from society.

The CPSU stands for:

- Carrying out broad measures to improve the labor and housing conditions of women, including granting them the right to a reduced workday, work according to a convenient schedule, an increase in maternity leave, in leave for mothers of large families and for single mothers, paid by enterprises, setting additional subsidies for leaves and for health treatment, prioritizing the development of high quality goods production and services for women, their liberation from hard work that may harm their health. Within the framework of the political reform the Party will fight to promote the employment of women in the leading posts,
- The resolute improvement of child care, the allocation of more funds for the construction of children's institutions and the improvement of their work, and for expanded production of children's goods, the immediate implementation of measures to reduce infant mortality rates,
- The development and implementation of an effective youth policy, the opening of wide possibilities for implementing the capabilities and meeting the requirements of the younger generation, efforts to ensure its participation with full and equal rights in the political, economic and cultural life of society, the renewal of the youth movement, the young communist league, student and other organizations, support for their initiatives and for their growing desire for independence,
- The improvement of the positions of disabled people and war and labor veterans, the adoption of a new law on pensions and the development of a special program for the provision of all invalids, war and labor veterans and families of soldiers and officers who were killed with flats in the next five years, the implementation of resolutions on the improvement of medical services and the extension of the production of goods for veterans and invalids, the increase of pensions and allowances depending on the price growth, the granting of the right to working pensioners to receive

full wages irrespective of the amount of their pension.

Communists are convinced that citizens' rights and freedoms are inseparable from their civil duties. The Party will consistently work towards the establishment in society of respect for labor, law and order and of readiness to defend the socialist Motherland, towards the creation of legal and moral guarantees of such common human values as honesty and decency, kindness and mercy, moral self-control and conscientiousness, human dignity and freedom of choice.

The CPSU opposes all illegitimate privileges and benefits and advocates full openness on this issue. Communist Party membership or a leading post do not, in themselves, provide any advantages. Abuses of office must be eradicated.

III. For an Effective Planned Market Economy

The Party prioritizes the launching of effective work by legislative and executive bodies at all levels to improve the economic situation in the country.

The CPSU will help implement a series of measures, worked out by the Council of Ministers and approved by the Congress of People's Deputies of the USSR, to stabilize the consumer market, above all to eliminate the gap between the large amount of 'free' money and the degree to which it is matched by goods.

These measures should have an explicit social orientation and improve the economic position of low-income groups of the population, above all.

The availability of foodstuffs for the population remains the most acute problem. The CPSU advocates the priority development of the agrarian sector in order to accelerate an increase in the production of meat, milk, vegetables and other products of farming and livestock.

The solution of the food problem should rest on the development of all forms of economic management in agriculture. State-run, cooperative and individual farms and diverse forms of management, based on contract,

leasing, family and other principles, should be given equal possibilities.

The strengthening of the material and technical basis of agricultural production, of the processing and storage of products and the lessening of their losses before they are sold remains a major area of work.

The creation of a social balance between the town and the country is a major task of perestroika. New possibilities will have to be created within a short period of time to provide villagers with comfortable dwellings, services and roads.

We continue to focus on efforts to increase the production of consumer goods. The CPSU will help implement a package of measures to help satiate the market.

The Party advocates an effective financial recovery program, including such measures as the encouragement of deposits in savings banks at increased interest rates, the development of the insurance business, the distribution of state loan bonds on advantageous terms, the selling of dwellings, advance payments by the population for durable goods they plan to buy in the future, and the selling of stocks and other securities.

More flexible economic instruments and quotas will be needed to prevent unfounded incomes and the issue of money in circulation in excess of the supply of goods.

The CPSU believes that the solution of current and future socio-economic problems is inseparably linked with the radical economic reform. The reform must replace the command-and-distributive system—characterized by monopoly, lack of initiative, wastefulness, mismanagement and disregard for consumers' interests—with a plan-market economy based on a diversity of property forms, competition between independent manufacturers, a developed finance system and on the powerful stimuli of personal and collective interest.

The economic reform has proven much more difficult than it was initially perceived. But we are fully determined not to allow a return to the forms of economic

management that discredited themselves and that led the country into stagnation and threw it behind developed countries.

Economic reform is unthinkable without a deep restructuring of the relations of property. The CPSU advocates a diversity of its forms. Their equal and sound competition is the economic basis of civil freedoms, of the freedom to choose the forms and methods in which a worker will work, and the guarantee of consumers' interests and rights.

Another important task is the transformation of state property into property that will be democratically controlled by the working people themselves on the basis of leasing, full cost-accounting, contracts, joint-stock and other modern forms. All of the forms will take into account the scale of production, specific features of regions and the degree to which integrating ties are developed.

The Party stands for the all-round promotion of the cooperative movement on a sound basis, for the strengthening of production cooperatives, including collective farms, and for the broadening of the sphere of activity of various forms of labor collective property, including sharing and joint-stock property.

The CPSU believes that the existence of labor's individual property, including ownership of the means of production, does not contradict the modern stage in the country's economic development.

The use of any form of property must rule out the worker's alienation from the means of production and the exploitation of man by man.

One of the most difficult aspects of the economic reform is to find an organic combination of plan and market methods to regulate economic activity.

Modern production is impossible without a centralized planned management. This essentially socialist principle of economic management has been adopted by many countries.

However, it is crucially important to determine the precise degree and methods of such management. Un-

like in the past, when the plan attempted to encompass the entire process of production and distribution, there is now a need for a procedure in which planned, centralized economic management will be exercised through prices, taxes, interest rates, credits, payments, etc. Its sphere will be strictly defined by the nature of the strategic tasks.

These tasks include the implementation of major scientific, technical and structural programs, the development of infrastructure, comprehensive measures to protect the human environment and renew its resources, a policy for taxation and credit, and a guarantee of a stable monetary circulation.

Matters pertaining to the people's social security require centralized regulation.

The Party proceeds from the assumption that the country needs a single all-union market—full-fledged and regulated, which must become a permanently operating mechanism to achieve and maintain a balance between production possibilities and requirements, and a dynamic equilibrium between solvent demand and supply. This is also a condition for the incorporation of the Soviet economy into world economic relations and the transfer to a convertible rouble.

The creation of a full-fledged market economy requires the formation of markets of consumer products, capital goods, securities, investment, currencies and research and development, and an early reform of the financial, monetary and credit systems.

The restructuring of prices is a *sine qua non* condition for the market to start regulating the economy. The artificial price levels and proportions, the burden of ineffective subsidies for some and ruinous deductions from others provide false reference-points for economic management. They confound the assessment of management's effect, perpetuate scientific and technological backwardness and prevent the efficient utilization of the advantages of the international division of labor.

Competition between product manufacturers, including foreign firms, must become an important factor

regulating and restraining the growth of prices. Making competition a reality calls for legislative demonopolization of production, trade, credit services and insurance businesses.

The Party advocates a structural change of the economy in favor of the consumer sector, measures to curtail ineffective and capital-intensive production, and the revamping of the existing enterprises. There is a need to give more attention to implementing programs that rationally utilize nature and save resources, stocks, raw materials and labor inputs, as well as combat mismanagement.

The conversion of defense industries must become an organic component of the structural change. Based on their high skills and scientific and technological potential, it is possible to sharply increase the output of modern capital goods and consumer products. At the same time the necessary resources must be allocated for expanded reproduction, without which the economic development is bound to get caught in a dead end.

The Party will do its utmost to support efforts to speed up scientific and technological progress, which will be measured by its economic, ecological and social effectiveness and the prospects for its rapid introduction into all spheres of societal life. The provision of necessities for the powerful development of basic and applied research is another major concern of the state. More scope must be given to a variety of research activities and the dissemination of knowledge.

The protection of nature is the protection of man. Towards the close of the 20th Century, environmental protection has become a categorical imperative for preserving life on the earth. We must introduce world standards in this country and take an active part in international ecological cooperation.

The rapid industrial growth of the USSR, coupled with an attitude of neglect toward conservation measures, has led to grave pockets of ecological disaster. Urgent measures and large investments are required to rectify the situation. When deploying new industrial capacities, the Party deems it necessary to institutionalize a

procedure to make a strict scientific assessment and to consider public concerns.

At the same time one cannot panic, allowing unfounded demands to close down enterprises that are vital to the country and without which it is impossible to meet the most elementary needs of the people. It will be impossible to tackle ecological problems and save nature without modern scientific, technological and industrial development.

The USSR's broader participation in the international division of labor and co-production is indispensable to its effective economic development. A reliable way to achieve this is to increase the competitiveness of Soviet goods and services, steadily enhance foreign-economic ties, including in terms of currency, independence of the enterprises, do away with the prevalence of raw materials in exports and revise the import structure.

Working to implement all of the listed measures, the Soviet Communist Party will carefully look after the interests of the working people and erect a reliable legal barrier against the shadow economy, corruption, speculation and people who claim a monopoly.

[. . .]

V. Towards a New Federation

The CPSU's Nationalities Policy at the Current Stage. The fate of perestroika and the future of the country depend to a great extent on the development of inter-ethnic relations.

We resolutely reject attempts to cross out the great and worthy achievements of our country due to the October Revolution—the consolidation and accession to statehood of many peoples from former colonial provinces of the Russian Empire, the overcoming of their backwardness, new values of inter-ethnic relations and sense of being equal members of a great world power. At the same time distortions of Lenin's nationalities policy brought immense suffering and loss to the peoples of our multi-ethnic state. Serious problems accumulated during objective migrational and demographic processes as well.

The way out of these difficulties, as the Party sees it, lies in the consistent implementation of economic and political reforms, in the resolute rejection of the Stalinist, essentially unitary, model of state structure, and in the complete and invariable implementation of the principle of federalism. Our approach to the development of nations and inter-ethnic relations was set out in the CPSU platform, "The Party's Nationalities Policy in Present-day Conditions". It rests on the following key principles: the unconditional observance of the rights of citizens of any nationality all over the country's territory, a real guarantee of the sovereignty of union republics and a new level of independence for all forms of national autonomy, and the preservation of the country's integrity as a federation of free and equal republics, voluntarily delegating part of their rights to the union in order to attain common goals.

Self-Determination of Nations. The principle of the self-determination of nations in a renewed Soviet federation presupposes the freedom of national-state entities to choose forms by which to structure life, institutions and symbols of statehood. Our ideal is not unification, but unity in diversity.

The Party reaffirms its commitment to Lenin's principle of the right of nations to self-determination, including secession, and favors the adoption of a law on a mechanism for the exercise of this right. At the same time we are convinced that the weakening and disruption of reciprocally diverse and interrelated ties could lead to negative consequences for all peoples, to say nothing about individual destinies—consequences that are very difficult to foresee.

The Union and Union Republics. The transformation of the Soviet Federation should be based on harmonizing inter-ethnic relations and establishing optimal links between union republics and the union as their common entity.

The CPSU believes it is necessary to promote the agreement principle of the structure of the Union. This would make it possible to reflect the considerable changes that have taken place and to execute new approaches to an entire range of problems involving nationalities and inter-ethnic relations.

The voluntary delegation of clearly defined functions to the responsibility of the union will help strengthen the status of the union republics as sovereign states with constitutional guarantees. The republics' real sovereignty is impossible without their economic independence. But the present-day economy cannot make do without the center operating at the macro-level. The center has no interests that differ from the vital interests of the republics and the peoples forming the federation. A clear delineation of the responsibilities of the union and the republics is required, including in planning, budget arrangement, taxation, crediting and price formation.

Direct contract ties between the enterprises of all republics and regions, forming a union-wide market, should become the economic foundation of integration processes, the renewal and consolidation of our federation.

The republics' relations with the center and among themselves must take proper account of their specifics—geographical location, historical development, formation of statehood, role in the country's pattern of production forces, character and level of economies, psychological frame of mind and customs of the peoples inhabiting their territories.

The Development of Autonomous Formation. The perfection of the Soviet Federative State presupposes that the sovereignty and rights of autonomous republics, autonomous regions and autonomous districts will be strengthened and broadened, that they will be given more opportunities to make independent decisions on major problems of economic, social and cultural life. The Party will devote untiring attention to this.

The Rights of Nations and the Rights of a Person. Due to migrational processes and deformations that have occurred during the preceding development period there is the danger that some peoples will lose their distinctive national traits while residing in their historical homelands. Perfectly warranted therefore are measures to protect the native language, cultural and ethnic features, the national spiritual values, the original way of life and every republic's demographic structure.

At the same time, such measures must not be carried out at the expense of the interests and rights of citizens of other nationalities inhabiting a republic. Racism, chauvinism and nationalism are incompatible with the principles of socialism, with our country's laws and with international standards. No nation, no matter how small it is, should forfeit its culture and language, its inimitable image and character which were formed over centuries. We favor granting compact national groups the possibilities to set up their public, educational, religious and other associations, to have cultural and information institutions, schools and places of worship.

Particular concern must be displayed at the state level for small nations, for their specific way of life and development. The Soviet Communist Party upholds the unconditional right of all peoples to use their native language freely, to declare it an official language within the limits of their autonomous national-state requirements, including the Soviet Union's foreign policy. It is an instrument for inter-ethnic communication. It is advisable to grant it the status of an official language throughout the country's territory.

Communists who are dedicated to internationalism equally value the interests of all the peoples of our country. The status of a Party, uniting people of all nationalities, allows and obliges us to use this political potential to settle inter-ethnic disputes and conflicts. And we intend to act in this manner.

VI. Towards the Peaceful Development of Mankind

New Thinking, New Foreign Policy. By starting perestroika and thereby initiating profound changes in the entire world situation, by determining what our country will be like as a result of our renovation, we have taken upon ourselves a huge responsibility to mankind. What the world will be like in the 21st Century depends on the success of perestroika in the USSR. In turn, the radical improvement of the international situation and the ushering in of a peaceful era in the world's development meet the vital interests of the Soviet people and contribute to perestroika's progress.

Foreign policy, based on new thinking, has already yielded positive results. The world is getting rid of the bonds of confrontation. The integrity of modern civi-

lization is more clearly discernable now, calling for a new world policy. The "Cold War" has been stopped. The danger of a world military conflict has receded. A positive turn towards new relations has been made in relations between the Soviet Union and the United States. The first major steps have been taken towards practical disarmament. Dialogue and talks are becoming the principal form of international relations. Political methods are assuming priority in settling regional conflicts.

The Soviet Union's new thinking and new foreign policy have placed it at the forefront of efforts to build a safe and civilized world order. We stand for free socio-political options. This principle, in addition to the principle of balanced interests, must become universal during the coming epoch, must rid it of positions-of-strength policy and militarized thinking.

Our long-range foreign policy course comprises: a comprehensive range of mutually advantageous equitable relations and contacts with all the countries of the world, the renovation and development of cooperation with allied states and CMEA members, active participation in the European process, the construction of an 'All-European Home', activity in the Asian-Pacific region in order to turn it into a zone of peace and cooperation, all-out support for United Nations' efforts to implement the opportunities that have opened up before it, "good offices" in the political settlement of regional conflicts, solidarity with peoples and states defending their independence from any outside interference.

To demilitarize the world community, our course provides for: a complete ban on and the phased elimination of nuclear weapons, an end to nuclear tests everywhere, a ban on and liquidation of chemical weapons and their manufacture, a radical reduction in conventional arms and armed forces, moving towards eliminating the very possibility of offensive wars, the withdrawal of all foreign troops from the territories of other states and the liquidation of military bases there, the prevention of the militarization of space, the reorganization of military alliances (pending their elimination) into defensive-political associations in the service of universal security and international stability, deep cuts in military

budgets and the conversion of defense industry, gradual progress towards reciprocal openness on the earth, at sea, in the sky and in outer space, and the effective control of military activity and compliance with treaties.

The Party is convinced that only a policy leading towards a historically irreversible era of peace for mankind accords with the genuine interests of the Soviet state now and in the future.

Towards a New Quality of International Cooperation. The destinies of peoples, given the unqualified sovereignty of the states in which they live, are intertwined more closely today than ever before. This places new demands on world politics. It is imperative to unite the efforts of the entire world community in order to solve mankind's global problems. It is only through concerted efforts that states can overcome hunger, misery, mass epidemics, drug addiction and international terrorism and halt the profound disparities developing in different parts of the world. Only concerted efforts can prevent an ecological disaster, the signs of which are already making themselves felt on all continents. Only the elimination of obstacles to scientific and technological exchanges and the creation of a genuinely world economy will provide the material basis for the peaceful development of civilization. Progress towards these objectives of the new epoch requires a drastically new level of international cooperation. Here the United Nations' role is irreplaceable. We also favor interaction with all progressive organizations on the local, continental, regional and international level.

The world community's viability lies in the variety of its modes of development and in its multi-faceted nature: ethnic, spiritual, social, political, geographical

and cultural. It is within the mainstream of the overall, progressive movement of civilization—and we are convinced of this—that the ideas of socialism will be reborn and begin to gain an ever-growing influence. Although they differ from country to country, the dramatic developments in Eastern Europe are painfully overcoming the negative experience that emerged during socialism's struggle in the extremely unfavorable setting of the “Cold War” and without due account of the ethnic factor.

The changes that have occurred in East European countries have not changed our friendly attitude towards their peoples. The Party believes that the reforms begun there, like perestroika in the USSR, will create a more natural and firm basis for voluntary and mutually advantageous relations.

The Party is open to cooperation with the communist and workers', socialist and social-democratic, liberal and national-democratic parties, with all organizations and movements espousing peace, democracy and social progress.

Perestroika allowed the historical split in the socialist movement to heal and permitted the movement's revival as a world movement on a modern basis. One can foresee the prospect—and the Party welcomes it—of a consolidation of left forces in a search for a new world and social progress.

156. NATO: The London Declaration, 6 July 1990

Introduction

As the Soviet Union relaxed its control over Eastern Europe and noncommunist governments came to power throughout the region, the North Atlantic Treaty Organization (NATO) heads of state of the Western alliance met in London. Ascribing some credit to NATO for having “done much to bring about the new Europe,” they stated their determination to keep the alliance in existence. While they intended that it should remain a purely defensive pact, no one, they warned, could predict the future, and threats might still arise. They stated their intention of

“extending . . . the hand of friendship” to their former Warsaw Pact adversaries to the East and invited its member states to “establish regular diplomatic liaison” with themselves. With nuclear and conventional arms control agreements already in place, NATO anticipated that it would field smaller but more effective forces. The NATO powers also suggested that they and the Soviet Union jointly eliminate all “nuclear artillery shells from Europe.” They expected that in the future political rather than military cooperation would become their highest priority. Finally, they advocated an enhanced role for the Conference on Security and Cooperation in Europe (CSCE), urging that body to hold regular conferences and consultative meetings in order to promote the spread of democracy, the rule of law, economic development, and environmental cooperation.

Primary Source

1. Europe has entered a new, promising era. Central and Eastern Europe is liberating itself. The Soviet Union has embarked on the long journey towards a free society. The walls that once confined people and ideas are collapsing. Europeans are determining their own destiny. They are choosing freedom. They are choosing economic liberty. They are choosing peace. They are choosing a Europe whole and free. As a consequence, this Alliance must and will adapt.

2. The North Atlantic Alliance has been the most successful defensive alliance in history. As our Alliance enters its fifth decade and looks ahead to a new century, it must continue to provide for the common defence. This Alliance has done much to bring about the new Europe. No one, however, can be certain of the future. We need to keep standing together, to extend the long peace we have enjoyed these past four decades. Yet our Alliance must be even more an agent of change. It can help build the structures of a more united continent, supporting security and stability with the strength of our shared faith in democracy, the rights of the individual, and the peaceful resolution of disputes. We reaffirm that security and stability do not lie solely in the military dimension, and we intend to enhance the political component of our Alliance as provided for by Article 2 of our Treaty.

3. The unification of Germany means that the division of Europe is also being overcome. A united Germany in the Atlantic Alliance of free democracies and part of the growing political and economic integration of the European Community will be an indispensable factor of stability, which is needed in the heart of Europe. The move within the European Community towards political union, including the development of a European identity in the domain of security, will also con-

tribute to Atlantic solidarity and to the establishment of a just and lasting order of peace throughout the whole of Europe.

4. We recognise that, in the new Europe, the security of every state is inseparably linked to the security of its neighbours. NATO must become an institution where Europeans, Canadians and Americans work together not only for the common defence, but to build new partnerships with all the nations of Europe. The Atlantic Community must reach out to the countries of the East which were our adversaries in the Cold War, and extend to them the hand of friendship.

5. We will remain a defensive alliance and will continue to defend all the territory of all our members. We have no aggressive intentions and we commit ourselves to the peaceful resolution of all disputes. We will never in any circumstance be the first to use force.

6. The member states of the North Atlantic Alliance propose to the member states of the Warsaw Treaty Organisation a joint declaration in which we solemnly state that we are no longer adversaries and reaffirm our intention to refrain from the threat or use of force against the territorial integrity or political independence of any state, or from acting in any other manner inconsistent with the purposes and principles of the United Nations Charter and with the CSCE Final Act. We invite all other CSCE member states to join us in this commitment to non-aggression.

7. In that spirit, and to reflect the changing political role of the Alliance, we today invite President Gorbachev on behalf of the Soviet Union, and representatives of the other Central and Eastern European countries to come to Brussels and address the North Atlantic Council. We today also invite the governments of the

Union of Soviet Socialist Republics, the Czech and Slovak Federal Republic, the Hungarian Republic, the Republic of Poland, the People's Republic of Bulgaria and Romania to come to NATO, not just to visit, but to establish regular diplomatic liaison with NATO. This will make it possible for us to share with them our thinking and deliberations in this historic period of change.

8. Our Alliance will do its share to overcome the legacy of decades of suspicion. We are ready to intensify military contacts, including those of NATO Military Commanders, with Moscow and other Central and Eastern European capitals.

9. We welcome the invitation to NATO Secretary General Manfred Wörner to visit Moscow and meet with Soviet leaders.

10. Military leaders from throughout Europe gathered earlier this year in Vienna to talk about their forces and doctrine. NATO proposes another such meeting this Autumn to promote common understanding. We intend to establish an entirely different quality of openness in Europe, including an agreement on "Open Skies".

11. The significant presence of North American conventional and US nuclear forces in Europe demonstrates the underlying political compact that binds North America's fate to Europe's democracies. But, as Europe changes, we must profoundly alter the way we think about defence.

12. To reduce our military requirements, sound arms control agreements are essential. That is why we put the highest priority on completing this year the first treaty to reduce and limit conventional armed forces in Europe (CFE) along with the completion of a meaningful CSBM package. These talks should remain in continuous session until the work is done. Yet we hope to go further. We propose that, once a CFE Treaty is signed, follow-on talks should begin with the same membership and mandate, with the goal of building on the current agreement with additional measures, including measures to limit manpower in Europe. With this goal in mind, a commitment will be given at the time of signature of the CFE Treaty concerning the manpower levels of a unified Germany.

13. Our objective will be to conclude the negotiations on the follow-on to CFE and CSBMs as soon as possible and looking to the follow-up meeting of the CSCE to be held in Helsinki in 1992. We will seek through new conventional arms control negotiations, within the CSCE framework, further far-reaching measures in the 1990s to limit the offensive capability of conventional armed forces in Europe, so as to prevent any nation from maintaining disproportionate military power on the continent. NATO's High Level Task Force will formulate a detailed position for these follow-on conventional arms control talks. We will make provisions as needed for different regions to redress disparities and to ensure that no one's security is harmed at any stage. Furthermore, we will continue to explore broader arms control and confidence-building opportunities. This is an ambitious agenda, but it matches our goal: enduring peace in Europe.

14. As Soviet troops leave Eastern Europe and a treaty limiting conventional armed forces is implemented, the Alliance's integrated force structure and its strategy will change fundamentally to include the following elements:

- NATO will field smaller and restructured active forces. These forces will be highly mobile and versatile so that Allied leaders will have maximum flexibility in deciding how to respond to a crisis. It will rely increasingly on multinational corps made up of national units.
- NATO will scale back the readiness of its active units, reducing training requirements and the number of exercises.
- NATO will rely more heavily on the ability to build up larger forces if and when they might be needed.

15. To keep the peace, the Alliance must maintain for the foreseeable future an appropriate mix of nuclear and conventional forces, based in Europe, and kept up to date where necessary. But, as a defensive Alliance, NATO has always stressed that none of its weapons will ever be used except in self-defence and that we seek the lowest and most stable level of nuclear forces needed to secure the prevention of war.

16. The political and military changes in Europe, and the prospects of further changes, now allow the Allies concerned to go further. They will thus modify the size and adapt the tasks of their nuclear deterrent forces. They have concluded that, as a result of the new political and military conditions in Europe, there will be a significantly reduced role for sub-strategic nuclear systems of the shortest range. They have decided specifically that, once negotiations begin on short-range nuclear forces, the Alliance will propose, in return for reciprocal action by the Soviet Union, the elimination of all its nuclear artillery shells from Europe.

17. New negotiations between the United States and the Soviet Union on the reduction of short-range forces should begin shortly after a CFE agreement is signed. The Allies concerned will develop an arms control framework for these negotiations which takes into account our requirements for far fewer nuclear weapons, and the diminished need for sub-strategic nuclear systems of the shortest range.

18. Finally, with the total withdrawal of Soviet stationed forces and the implementation of a CFE agreement, the Allies concerned can reduce their reliance on nuclear weapons. These will continue to fulfil an essential role in the overall strategy of the Alliance to prevent war by ensuring that there are no circumstances in which nuclear retaliation in response to military action might be discounted. However, in the transformed Europe, they will be able to adopt a new NATO strategy making nuclear forces truly weapons of last resort.

19. We approve the mandate given in Turnberry to the North Atlantic Council in Permanent Session to oversee the ongoing work on the adaptation of the Alliance to the new circumstances. It should report its conclusions as soon as possible.

20. In the context of these revised plans for defence and arms control, and with the advice of NATO Military Authorities and all member states concerned, NATO will prepare a new Allied military strategy moving away from “forward defence” where appropriate, towards a reduced forward presence and modifying “flexible response” to reflect a reduced reliance on nuclear weapons. In that connection NATO will elab-

orate new force plans consistent with the revolutionary changes in Europe. NATO will also provide a forum for Allied consultation on the upcoming negotiations on short-range nuclear forces.

21. The Conference on Security and Cooperation in Europe (CSCE) should become more prominent in Europe’s future, bringing together the countries of Europe and North America. We support a CSCE Summit later this year in Paris which would include the signature of a CFE agreement and would set new standards for the establishment, and preservation, of free societies. It should endorse, inter alia:

- CSCE principles on the right to free and fair elections;
- CSCE commitments to respect and uphold the rule of law;
- CSCE guidelines for enhancing economic cooperation, based on the development of free and competitive market economies; and
- CSCE cooperation on environmental protection.

22. We further propose that the CSCE Summit in Paris decide how the CSCE can be institutionalised to provide a forum for wider political dialogue in a more united Europe. We recommend that CSCE governments establish:

- a programme for regular consultations among member governments at the Heads of State and Government or Ministerial level, at least once each year, with other periodic meetings of officials to prepare for and follow up on these consultations;
- a schedule of CSCE review conferences once every two years to assess progress toward a Europe whole and free;
- a small CSCE secretariat to coordinate these meetings and conferences;
- a CSCE mechanism to monitor elections in all the CSCE countries, on the basis of the Copenhagen Document;
- a CSCE Centre for the Prevention of Conflict that might serve as a forum for exchange of military information, discussion of unusual military activities, and the conciliation of disputes involving CSCE member states; and

- a CSCE parliamentary body, the Assembly of Europe, to be based on the existing parliamentary assembly of the Council of Europe in Strasbourg, and include representatives of all CSCE member states.

The sites of these new institutions should reflect the fact that the newly democratic countries of Central and Eastern Europe form part of the political structures of the new Europe.

23. Today, our Alliance begins a major transformation. Working with all the countries of Europe, we are determined to create enduring peace on this continent.

157. Helmut Kohl and Mikhail Gorbachev: Press Conference on German Reunification, 16 July 1990

Introduction

At the end of World War II, the various Allied powers, including the Soviet Union, had found it impossible to agree on the status of Germany. All had originally stated that the country should be united under a single government, but once the Cold War took hold neither the Western powers nor the Soviets were prepared to risk the absorption of Germany, Europe's strongest state, in the rival camp. The dismantling of the Berlin Wall and the relaxation of Cold War tensions in 1989–1990 gave the question of Germany's future new saliency, as East and West Germans alike called for the country's reunification under one government. There was little question that should such an event transpire, the West German authorities would take over the East, where communist rule had never been popular. In March 1990 the East Germans elected a noncommunist government whose major mandate was to negotiate reunification with the West. Initially, the leaders of the World War II occupation powers—Britain, France, the United States, and Russia, all of whom had long memories of Germany's assertive behavior in the earlier twentieth century—were unenthusiastic, but pledges that a reunited Germany would remain part of the North Atlantic Treaty Organization (NATO) and become more closely integrated in the European Union (EU) allayed the concerns of the Western leaders. On 1 July 1990 the two Germanies concluded an interim economic, social, and currency union. Russian objections still had to be countered. Meeting with Soviet leader Mikhail Gorbachev in July 1990 ten days after NATO had announced that it no longer regarded the Soviet Union as a threat, West German Chancellor Helmut Kohl reached agreement that the two Germanies should be unified within a few months, after which the East German government would cease to exist. Over the next three to four years, Soviet troops would be withdrawn from East German soil. The new Germany was free to join any alliance it pleased and intended to remain in NATO, but no NATO forces would be stationed on former East German territory until the Soviet military personnel had left. Germany also pledged to reduce its army to 370,000 men and to refrain from producing or owning atomic, biological, and chemical weapons. In addition, Germany agreed to accept the post–World War II cession to Poland of much of its territory in the east. On 31 August 1990, representatives of the two Germanies signed the Unification Treaty, followed on 12 September 1990 by the Treaty of Final Settlement between the two Germanies and the four World War II occupying powers. The actual event took place on 3 October 1990.

Primary Source

Kohl Statement

[. . .]

Today I can state the following with satisfaction and in agreement with President Gorbachev:

- The unification of Germany encompasses the Federal Republic, the G.D.R. and Berlin.
- When unification is brought about, all the rights and responsibilities of the Four Powers will end. With that, the unified Germany, at the point of its unification, receives its full and unrestricted sovereignty.

- The unified Germany may, in exercising its unrestricted sovereignty, decide freely and by itself if and which alliance it wants to be a member of. This complies with the C.S.C.E. Final Act. I have declared as the opinion of the West German Government that the unified Germany wants to be a member of the Atlantic Alliance, and I am certain that this also complies with the opinion of the Government of the G.D.R.
- The unified Germany concludes a bilateral treaty with the Soviet Union for the organization of the troop withdrawal from the G.D.R., which shall be ended within three to four years. At the same time, a transition treaty about the consequences of the introduction of the Deutsche mark in the G.D.R. for this time period of three to four years shall be concluded with the Soviet Union.
- As long as Soviet troops will remain stationed on the territory of the G.D.R., NATO structures will not be expanded to this part of Germany. The immediate realization of Articles 5 and 6 of the NATO treaty will stay untouched by this from the start. Non-integrated troops of the West German Army, which means troops of territorial defense, may be stationed on the territory of today's G.D.R. and in Berlin immediately after unification. For the duration of the presence of Soviet troops on former G.D.R. territory the troops of the three Western Powers shall, in our opinion, stay in Berlin. The Federal Government will ask the Western Powers for that and will arrange the stationing with the respective governments.
- The Federal Government declares its willingness to give a binding declaration in the current Vienna talks to reduce the army of a unified Germany within three to four years to a personnel strength of 370,000. The reduction shall start when the first Vienna agreement comes into effect.
- A unified Germany will refrain from production, holding or command of atomic, biological and chemical weapons and will remain a member of the Non-Proliferation Treaty.

This joint agreement is a good starting basis to conclude now in time and successfully the external aspects of German unification within the framework of the two-plus-four talks.

On my return I will make the necessary contacts with the G.D.R. Government, and I take it that the Government of the G.D.R. shares our perception. I will also deliver today's reports to the three Western Powers immediately. Foreign Minister Hans-Dietrich Genscher will inform the three Western foreign ministers tomorrow.

At the end of this talk, may I thank you, Mr. President and you, Mrs. Gorbachev, for the great hospitality. This hospitality was essential for the understanding. I may say, the personal trust has grown further.

Gorbachev Statement

Chancellor Kohl has said a great deal about the great work we have done together, the work and the visit that I see as so important.

I want to give some concrete evaluations of some questions. First of all, I think that the work about such important and difficult points that we did does not only touch our two peoples, but all Europeans, and that it also touches the world public. . . .

We could work so fruitfully because, most of all, in the course of the past years we went our way. Our relations are already marked by a very high level of dialogue, and the meetings on highest levels, the telephone calls, the mutual visits have contributed to this intensive dialogue.

We have expected that there will be . . . changes, for example in the area of NATO. The Warsaw Pact has already, as you know, changed its doctrine at its last session. That was a challenge, a call to change the structures of the blocs, from military blocs to more political ones.

We have received a very important impulse from the conference in London, NATO's most recent conference, which brought very important positive steps, which were also understood as such by the socialist countries and other European countries.

If the . . . step of London had not been made, then it would have been difficult to make headway at our meeting. I want to characterize the two last days with

a German expression: we made *realpolitik*. We have taken as a basis today's reality, the significance for Europe and the world.

We have reached agreement over the fact that the NATO structure is not going to be expanded to the territory of the former G.D.R. And if on the basis of our agreement the Soviet troops will be withdrawn in a time frame of, let us say, three to four years, then we take it that after this time period this territory will also be part of a Germany that has full sovereignty. We take it that

no other foreign troops appear there; here we have trust and are aware of the responsibility of this step.

Mr. Chancellor, it was you most of all who developed this idea at this meeting. We cannot talk yet about a unified Germany, it is still an idea yet, but an idea that I welcome. . . .

158. Treaty on Conventional Armed Forces in Europe, November 1990

Introduction

The Treaty on Conventional Armed Forces in Europe (CFE Treaty) was signed in November 1990 by the North Atlantic Treaty Organization (NATO) and Warsaw Pact states and came into force on 17 July 1992, as did the follow-up Concluding Act. The treaty was a companion to concurrent efforts by the Soviet Union and the United States to cut nuclear weapons and delivery systems, which resulted in the Intermediate-Range Nuclear Forces (INF) Treaty of 1988 and the Strategic Arms Reduction Treaties (START I and II) of 1991 and 1993. All were part of the broader efforts once Soviet leader Mikhail Gorbachev came to power in 1985 to reduce Cold War tensions. The CFE Treaty was a legally binding agreement intended to accomplish balanced reductions in the armed forces of each side in the former Cold War. Neither of the two camps was permitted to possess more than 20,000 artillery pieces, 20,000 tanks, 30,000 armored combat vehicles, 6,800 combat aircraft, and 2,000 attack helicopters. The treaty covered the entire area from the Atlantic to the Urals. Within this area several subregions were established, and each grouping would be entitled to have equal numbers of the various weapons systems. No one single country could hold more than one-third of the total armaments covered by this agreement. Weapons in excess of these limits were to be destroyed within forty months of the agreement entering into force. Subsequent negotiations resulted in the Concluding Act of the Negotiation on Personnel Strength of Conventional Armed Forces in Europe (the CFE-1A Agreement), which established manpower limits for certain types of forces, although not sea-based naval forces, internal security forces, or military personnel serving under United Nations (UN) commands. This agreement was signed in Helsinki on 6 July 1992. The CFE Treaty sought to establish military equilibrium between the two rival European camps at a lower level than had occurred in the past. The CFE Treaty was negotiated and signed under the auspices of the Committee on Security and Cooperation in Europe (CSCE) established under the Helsinki Accords. Two days after the CFE Treaty was signed, the CSCE formally declared that the Cold War had ended.

Primary Source

The Treaty on Conventional Armed Forces in Europe (CFE) was signed in November 1990 by members of the North Atlantic Treaty Organization and the now-defunct Warsaw Pact. There are 29 signatories. Its objective was to reduce the levels of conventional troops stationed in Europe, establishing equal ceilings for all nations between the Ural Mountains and the Atlantic Ocean regarding the armaments needed for launching

a surprise attack or carrying out a large-scale military offensive.

Under the agreement, neither side in the former cold war alliance can possess more than:

- 20,000 artillery pieces
- 30,000 armored combat vehicles
- 20,000 tanks

- 6,800 combat aircraft
- 2,000 attack helicopters

The treaty also established ceilings for the amount of equipment that can be held by active units, setting the numbers at:

- 17,000 artillery pieces
- 27,300 armored combat vehicles
- 16,500 tanks

The two groups have consulted internally to determine how the reductions will be broken down by country. The treaty also limits the proportion of equipment that can be held by any one European country to one-third of the total for the entire continent, and sets limits by region.

Equipment in excess of the agreed amounts must be destroyed. Most of the destroyed equipment will be older and the United States will transfer some of its new equipment to its allies to meet requirements. The destruction must be completed by the end of the third year after the treaty agreement, with one-quarter being completed after one year and 60% after two years.

The CFE treaty has complex and groundbreaking verification provisions that call for on-site inspections, information exchanges, on-site destruction monitoring, and challenge inspections. The treaty does not have an end date and gives all participants the right to monitor the destruction process.

The CFE-1A talks are mandated in the CFE treaty and require participants to reach agreement on further measures aimed at increasing stability and security on the continent. The CFE-1A talks ended on July 6, 1992 and include a political commitment by signatories to limit (and in some cases reduce) the size of their conventional armed forces. All the participants set their own ceilings, which were not subject to negotiation. The CFE-1A treaty has provisions for full information exchanges on manpower, with verification linked to the inspection program of the CFE equipment evaluation program.

CFE-1A, which took effect on July 17, 1992, incorporates three stabilizing measures:

- A required 42-day notification period if any signatory plans to increase its personnel in any ground force unit by more than 1,000 and in any air force unit by more than 500
- A provision requiring 42-days notification if a nation plans to call up 35,000 or more reservists (excluding call ups for such emergencies as natural disasters)
- A provision that any personnel relocated to forces not under limitation remain subject to limitation for 12–24 months.

159. Conference on Security and Cooperation in Europe (CSCE), Paris, 21 November 1990

Introduction

The Committee on Cooperation and Security in Europe (CSCE) was established under the 1975 Helsinki Agreements to supervise their implementation and encourage further progress toward European harmony. At the time, it was generally expected that the Cold War would be a permanent feature of international relations. After Mikhail Gorbachev assumed power in the Soviet Union in 1985, he instituted conciliatory rather than competitive international policies, making unilateral cuts in Soviet forces, permitting the East European nations to establish non-communist governments, and opening serious negotiations for mutual East-West reductions in both nuclear and conventional weapons that de-escalated Cold War tensions and effectively dismantled the Soviet empire. The Intermediate-Range Nuclear Forces (INF) Treaty, signed in 1988, withdrew all intermediate-range nuclear missiles from Europe, the first time an entire class of nuclear weapons had been eliminated. The Conventional Armed

Forces in Europe (CFE) Treaty, signed in 1990 under CSCE auspices, required major cuts in armed forces of both the North Atlantic Treaty Organization (NATO) and Warsaw Pact alliances. In a dramatic proof that the Cold War had ended on Western terms and “a new era of Democracy, Peace and Unity in Europe” had begun, the head of the signatory states issued a charter whereby they undertook “to build, consolidate and strengthen democracy as the only system of government of our nations.” They expressed their respect for human rights, economic liberty, social justice, freedom, political pluralism, and environmental responsibility. They also stated their intention to settle disputes among themselves by peaceful means, affirmed their commitment to economic cooperation, and pledged themselves to combat terrorism. The declaration was striking evidence of the degree to which, despite its global ramifications, the center of the Cold War had always remained the European rivalries between the two power blocs centered on the United States and the Soviet Union.

Primary Source

A New Era of Democracy, Peace and Unity

We, the Heads of State or Government of the States participating in the Conference on Security and Cooperation in Europe, have assembled in Paris at a time of profound change and historic expectations. The era of confrontation and division of Europe has ended. We declare that henceforth our relations will be founded on respect and co-operation.

[. . .]

Human Rights, Democracy and Rule of Law

We undertake to build, consolidate and strengthen democracy as the only system of government of our nations. In this endeavour, we will abide by the following:

Human rights and fundamental freedoms are the birth-right of all human beings, are inalienable and are guaranteed by law. Their protection and promotion is the first responsibility of government. Respect for them is an essential safeguard against an over-mighty State. Their observance and full exercise are the foundation of freedom, justice and peace.

Democratic government is based on the will of the people, expressed regularly through free and fair elections. Democracy has as its foundation respect for the human person and the rule of law. Democracy is the best safeguard of freedom of expression, tolerance of all groups of society, and equality of opportunity for each person.

Democracy, with its representative and pluralist character, entails accountability to the electorate, the obligation of public authorities to comply with the law and

justice administered impartially. No one will be above the law.

We affirm that, without discrimination, every individual has the right to

freedom of thought, conscience and religion or belief,
freedom of expression,
freedom of association and peaceful assembly,
freedom of movement;

no one will be:

subject to arbitrary arrest or detention,
subject to torture or other cruel, inhuman or degrading treatment or punishment;

everyone also has the right :

to know and act upon his rights,
to participate in free and fair elections,
to fair and public trial if charged with an offence,
to own property alone or in association and to exercise individual enterprise,
to enjoy his economic, social and cultural rights.

We affirm that the ethnic, cultural, linguistic and religious identity of national minorities will be protected and that persons belonging to national minorities have the right freely to express, preserve and develop that identity without any discrimination and in full equality before the law.

We will ensure that everyone will enjoy recourse to effective remedies, national or international, against any violation of his rights.

Full respect for these precepts is the bedrock on which we will seek to construct the new Europe.

Our States will co-operate and support each other with the aim of making democratic gains irreversible.

Economic Liberty and Responsibility

Economic liberty, social justice and environmental responsibility are indispensable for prosperity.

The free will of the individual, exercised in democracy and protected by the rule of law, forms the necessary basis for successful economic and social development. We will promote economic activity which respects and upholds human dignity.

Freedom and political pluralism are necessary elements in our common objective of developing market economies towards sustainable economic growth, prosperity, social justice, expanding employment and efficient use of economic resources. The success of the transition to market economy by countries making efforts to this effect is important and in the interest of us all. It will enable us to share a higher level of prosperity which is our common objective. We will co-operate to this end.

Preservation of the environment is a shared responsibility of all our nations. While supporting national and regional efforts in this field, we must also look to the pressing need for joint action on a wider scale.

Friendly Relations among Participating States

Now that a new era is dawning in Europe, we are determined to expand and strengthen friendly relations and co-operation among the States of Europe, the United States of America and Canada, and to promote friendship among our peoples.

To uphold and promote democracy, peace and unity in Europe, we solemnly pledge our full commitment to the Ten Principles of the Helsinki Final Act. We affirm the continuing validity of the Ten Principles and our determination to put them into practice. All the Principles apply equally and unreservedly, each of them being interpreted taking into account the others. They form the basis for our relations.

[. . .]

We are determined to enhance political consultation and to widen co-operation to solve economic, social, environmental, cultural and humanitarian problems. This common resolve and our growing interdependence will help to overcome the mistrust of decades, to increase stability and to build a united Europe.

We want Europe to be a source of peace, open to dialogue and to co-operation with other countries, welcoming exchanges and involved in the search for common responses to the challenges of the future.

Security

Friendly relations among us will benefit from the consolidation of democracy and improved security.

We welcome the signature of the Treaty on Conventional Armed Forces in Europe by twenty-two participating States, which will lead to lower levels of armed forces. We endorse the adoption of a substantial new set of Confidence- and Security-building Measures which will lead to increased transparency and confidence among all participating States. These are important steps towards enhanced stability and security in Europe.

The unprecedented reduction in armed forces resulting from the Treaty on Conventional Armed Forces in Europe, together with new approaches to security and cooperation within the CSCE process, will lead to a new perception of security in Europe and a new dimension in our relations. In this context we fully recognize the freedom of States to choose their own security arrangements.

Unity

Europe whole and free is calling for a new beginning. We invite our peoples to join in this great endeavour.

We note with great satisfaction the Treaty on the Final Settlement with respect to Germany signed in Moscow on 12 September 1990 and sincerely welcome the fact that the German people have united to become one State in accordance with the principles of the Final Act of the Conference on Security and Co-operation in

Europe and in full accord with their neighbours. The establishment of the national unity of Germany is an important contribution to a just and lasting order of peace for a united, democratic Europe aware of its responsibility for stability, peace and co-operation.

The participation of both North American and European States is a fundamental characteristic of the CSCE; it underlies its past achievements and is essential to the future of the CSCE process. An abiding adherence to shared values and our common heritage are the ties which bind us together. With all the rich diversity of our nations, we are united in our commitment to expand our co-operation in all fields. The challenges confronting us can only be met by common action, co-operation and solidarity.

The CSCE and the World

The destiny of our nations is linked to that of all other nations. We support fully the United Nations and the enhancement of its role in promoting international peace, security and justice. We reaffirm our commitment to the principles and purposes of the United Nations as enshrined in the Charter and condemn all violations of these principles. We recognize with satisfaction the growing role of the United Nations in world affairs and its increasing effectiveness, fostered by the improvement in relations among our States.

Aware of the dire needs of a great part of the world, we commit ourselves to solidarity with all other countries. Therefore, we issue a call from Paris today to all the nations of the world. We stand ready to join with any and all States in common efforts to protect and advance the community of fundamental human values.

Guidelines for the Future

Proceeding from our firm commitment to the full implementation of all CSCE principles and provisions, we now resolve to give a new impetus to a balanced and comprehensive development of our co-operation in order to address the needs and aspirations of our peoples.

Human Dimension

We declare our respect for human rights and fundamental freedoms to be irrevocable.

We will fully implement and build upon the provisions relating to the human dimension of the CSCE.

[. . .]

Determined to foster the rich contribution of national minorities to the life of our societies, we undertake further to improve their situation. We reaffirm our deep conviction that friendly relations among our peoples, as well as peace, justice, stability and democracy, require that the ethnic, cultural, linguistic and religious identity of national minorities be protected and conditions for the promotion of that identity be created. We declare that questions related to national minorities can only be satisfactorily resolved in a democratic political framework. We further acknowledge that the rights of persons belonging to national minorities must be fully respected as part of universal human rights. Being aware of the urgent need for increased cooperation on, as well as better protection of, national minorities, we decide to convene a meeting of experts on national minorities to be held in Geneva from 1 to 19 July 1991.

We express our determination to combat all forms of racial and ethnic hatred, antisemitism, xenophobia and discrimination against anyone as well as persecution on religious and ideological grounds.

In accordance with our CSCE commitments, we stress that free movement and contacts among our citizens as well as the free flow of information and ideas are crucial for the maintenance and development of free societies and flourishing cultures. We welcome increased tourism and visits among our countries.

[. . .]

Security

[. . .]

We call for the earliest possible conclusion of the Convention on an effectively verifiable, global and comprehensive ban on chemical weapons, and we intend to be original signatories to it.

We reaffirm the importance of the Open Skies initiative and call for the successful conclusion of the negotiations as soon as possible.

Although the threat of conflict in Europe has diminished, other dangers threaten the stability of our societies. We are determined to co-operate in defending democratic institutions against activities which violate the independence, sovereign equality or territorial integrity of the participating States. These include illegal activities involving outside pressure, coercion and subversion.

We unreservedly condemn, as criminal, all acts, methods and practices of terrorism and express our determination to work for its eradication both bilaterally and through multilateral co-operation. We will also join together in combating illicit trafficking in drugs.

[. . .]

Economic Co-operation

We stress that economic co-operation based on market economy constitutes an essential element of our relations and will be instrumental in the construction of a prosperous and united Europe. Democratic institutions and economic liberty foster economic and social progress, as recognized in the Document of the Bonn Conference on Economic Co-operation, the results of which we strongly support.

We underline that co-operation in the economic field, science and technology is now an important pillar of the CSCE. The participating States should periodically review progress and give new impulses in these fields.

We are convinced that our overall economic co-operation should be expanded, free enterprise encouraged and trade increased and diversified according to GATT rules. We will promote social justice and progress and further the welfare of our peoples. We recognize in this context the importance of effective policies to address the problem of unemployment.

We reaffirm the need to continue to support democratic countries in transition towards the establishment of market economy and the creation of the basis for self-sustained economic and social growth, as already undertaken by the Group of twenty-four countries. We further underline the necessity of their increased integration, involving the acceptance of disciplines as well

as benefits, into the international economic and financial system.

We consider that increased emphasis on economic co-operation within the CSCE process should take into account the interests of developing participating States.

We recall the link between respect for and promotion of human rights and fundamental freedoms and scientific progress. Co-operation in the field of science and technology will play an essential role in economic and social development. Therefore, it must evolve towards a greater sharing of appropriate scientific and technological information and knowledge with a view to overcoming the technological gap which exists among the participating States. We further encourage the participating States to work together in order to develop human potential and the spirit of free enterprise.

We are determined to give the necessary impetus to co-operation among our States in the fields of energy, transport and tourism for economic and social development. We welcome, in particular, practical steps to create optimal conditions for the economic and rational development of energy resources, with due regard for environmental considerations.

[. . .]

Environment

We recognize the urgent need to tackle the problems of the environment and the importance of individual and co-operative efforts in this area. We pledge to intensify our endeavours to protect and improve our environment in order to restore and maintain a sound ecological balance in air, water and soil. Therefore, we are determined to make full use of the CSCE as a framework for the formulation of common environmental commitments and objectives, and thus to pursue the work reflected in the Report of the Sofia Meeting on the Protection of the Environment.

We emphasize the significant role of a well-informed society in enabling the public and individuals to take initiatives to improve the environment. To this end, we commit ourselves to promoting public awareness and education on the environment as well as the public

reporting of the environmental impact of policies, projects and programmes.

We attach priority to the introduction of clean and low-waste technology, being aware of the need to support countries which do not yet have their own means for appropriate measures.

We underline that environmental policies should be supported by appropriate legislative measures and administrative structures to ensure their effective implementation.

We stress the need for new measures providing for the systematic evaluation of compliance with the existing commitments and, moreover, for the development of more ambitious commitments with regard to notification and exchange of information about the state of the environment and potential environmental hazards. We also welcome the creation of the European Environment Agency (EEA).

We welcome the operational activities, problem-oriented studies and policy reviews in various existing international organizations engaged in the protection of the environment, such as the United Nations Environment Programme (UNEP), the United Nations Economic Commission for Europe (ECE) and the Organisation for Economic Co-operation and Development (OECD). We emphasize the need for strengthening their co-operation and for their efficient co-ordination.

Culture

We recognize the essential contribution of our common European culture and our shared values in overcoming the division of the continent. Therefore, we underline our attachment to creative freedom and to the protection and promotion of our cultural and spiritual heritage, in all its richness and diversity.

In view of the recent changes in Europe, we stress the increased importance of the Cracow Symposium and we look forward to its consideration of guidelines for intensified cooperation in the field of culture. We invite the Council of Europe to contribute to this Symposium.

In order to promote greater familiarity amongst our peoples, we favour the establishment of cultural centres in cities of other participating States as well as increased cooperation in the audio-visual field and wider exchange in music, theatre, literature and the arts.

We resolve to make special efforts in our national policies to promote better understanding, in particular among young people, through cultural exchanges, co-operation in all fields of education and, more specifically, through teaching and training in the languages of other participating States. We intend to consider first results of this action at the Helsinki Follow-up Meeting in 1992.

Migrant Workers

We recognize that the issues of migrant workers and their families legally residing in host countries have economic, cultural and social aspects as well as their human dimension.

We reaffirm that the protection and promotion of their rights, as well as the implementation of relevant international obligations, is our common concern.

Mediterranean

We consider that the fundamental political changes that have occurred in Europe have a positive relevance to the Mediterranean region. Thus, we will continue efforts to strengthen security and co-operation in the Mediterranean as an important factor for stability in Europe. We welcome the Report of the Palma de Mallorca Meeting on the Mediterranean, the results of which we all support.

We are concerned with the continuing tensions in the region, and renew our determination to intensify efforts towards finding just, viable and lasting solutions, through peaceful means, to outstanding crucial problems, based on respect for the principles of the Final Act.

We wish to promote favourable conditions for a harmonious development and diversification of relations with the non-participating Mediterranean States. Enhanced cooperation with these States will be pursued with the

aim of promoting economic and social development and thereby enhancing stability in the region. To this end, we will strive together with these countries towards a substantial narrowing of the prosperity gap between Europe and its Mediterranean neighbours.

160. Agreement on the Cessation of the Military Provisions of the Warsaw Pact, 25 February 1991

Introduction

The Warsaw Pact was an alliance whose *raison d'être* was the Soviet Union's desire to assure its own security by maintaining the nations of Eastern Europe, whose territory separated it from its West European opponents nations, as friendly satellites with their foreign policies subordinated to Soviet direction. In 1989 Soviet leader Mikhail Gorbachev decided not just to grant the East European states greater autonomy but also decreed that should those nations wish to select noncommunist governments, the Soviet Union would decline to use military coercion to prevent this. Gorbachev's stance marked the reversal of the Brezhnev Doctrine, promulgated by Leonid Brezhnev in the wake of the 1968 Soviet intervention in Czechoslovakia. It was also a total rejection of one of the fundamental guiding principles of Soviet foreign policy for more than four decades, that the East European nations would not be permitted to establish nonsocialist governments or even socialist administrations unsympathetic to the Soviet Union, which had governed Soviet interventions in East Berlin in 1953, Hungary in 1956, and Czechoslovakia in 1968 and the imposition of martial law in Poland in 1981. Predictably, the Warsaw Pact military alliance was highly unpopular in most of its member states, regarded more as a means of subjugation than a guarantee of security. As noncommunist governments came to power throughout Eastern Europe in 1989 and 1990, pressures mounted to dismantle the alliance. Meeting in Budapest, Hungary, in February 1991, the foreign ministers of the member states agreed to dissolve the alliance effective 1 April 1991. Repudiating their past allegiance to the Soviet Union, the non-Soviet members then turned for protection to the West's rival North Atlantic Treaty Organization (NATO). Perceiving their new affiliation in part as a guarantee of their own security should a remilitarized Russia seek to regain its former dominance, in 1991 the Czech Republic, Hungary, and Poland joined NATO, followed in 2004 by Bulgaria, Romania, Slovakia, and Slovenia as well as the newly independent Baltic Republics of Estonia, Latvia, and Lithuania, which had been incorporated in the Soviet Union during World War II. Russian leaders protested vigorously but failed to prevent NATO's eastward enlargement, a measure of their country's massive decline in status.

Primary Source

[. . .]

1. As of 31 March 1991, the following documents will cease to be in force:

- Protocol on the creation of a Unified Command for the Armed Forces of the member-states of the treaty of friendship, cooperation, and mutual assistance from 14 May 1955
- Statute of the Committee of Ministers of Defense of the member-states of the Warsaw Pact in peace time from 17 March 1969

- Statute of the Unified Armed Forces and Unified Command of the member-states of the Warsaw Treaty in peace time from 17 March 1969
- Statute of the Military Council of the Unified Armed Forces of the member-states of the Warsaw Treaty in peace time from 17 March 1969
- Statute of a common anti-aircraft defense system for the member-states of the Warsaw Treaty in peace time from 17 March 1969
- Statute of the Unified Armed Forces of the member-states of the Warsaw Treaty and their leadership organs in war time from 18 March 1980

As well as all other documents adopted in connection with the above-mentioned acts, as implemented, altered, or amended.

In accordance with the foregoing, as of 31 March 1991 all military organs and structures created within the framework of the Warsaw Treaty—the Committee of Ministers of Defense, the Unified Command of the Unified Armed Forces, the Military Council of the UAF, the Staff and Committee on Technology of the UAF, the Military Scientific and Technical Council of the UAF, the Unified Air Defense System of the member-states of the Warsaw Treaty—are abolished. In addition, all military activity conducted within the framework of the Warsaw Treaty is terminated.

2. In accordance with point 1, as of 31 March 1991 the activity of military personnel of national armies in the administrative organs of the Unified Armed Forces and in the apparatus of the agencies of the supreme commander of the Unified Armed Forces in the national

ministries of defense is terminated, as is the payment of financial dues to the Unified Command.

3. The further handling of documents received by the ministries of defense of the member-states of the Unified Command of the Unified Armed Forces, as well as those received by the Unified Command from the ministries of defense, is to be determined by agreement between the Unified Command and the ministries of defense of the member-states. These documents are not to be transferred to third countries and are not to be divulged.

4. This protocol enters into force upon its signature.

161. George H. W. Bush: Address to Congress on the Cessation of the Persian Gulf Conflict, 6 March 1991

Introduction

The ending of the Cold War meant that the guiding principle of American foreign policy could no longer, as it had been for more than four decades, be the strategy of containment of communism. The first major international crisis of the immediate post–Cold War period occurred in August 1990 when Saddam Hussein, the dictatorial leader of Iraq, annexed oil-rich Kuwait, a U.S. ally. With encouragement from British Prime Minister Margaret Thatcher, President George H. W. Bush demanded that Iraq withdraw. When Hussein ignored this, under United Nations (UN) auspices Bush organized a coalition of U.S. allies, including the North Atlantic Treaty Organization (NATO) powers, Saudi Arabia, and Japan, to drive Iraqi forces from Kuwait. Bush’s efforts were facilitated by the Soviet Union and China, as both states refrained from using their veto power at the UN to sabotage this operation. Launched in early 1991, Operation DESERT STORM ended quickly and successfully, as Hussein’s troops were swiftly driven from Kuwait and pursued into Iraqi territory. Bush and his advisors soon decided to halt the invasion of Iraq, as they did not wish to deal with the challenges that overthrowing Hussein was likely to bring in their train, and they therefore left the weakened dictator in power but subject to confining UN sanctions and restrictions. Addressing Congress shortly after the Persian Gulf War had ended, a triumphant Bush promised aid to the Middle East. He then proclaimed that the ending of the Cold War had made it possible for the UN to function as its founders had originally intended so that there was a “very real prospect of a new world order.” This would, Bush stated, be a “world in which freedom and respect for human rights find a home among all nations.” He urged Congress to take swift and decisive action on economic problems, pollution, and crime to enable the country to fill its historic mission of implementing that new world order. Bush’s speech was somewhat vague as to precisely what the new world order would encompass or how it would be organized. Critics charged that he envisaged that the United States could use its unrivaled military and economic might to dominate the new world order in its own interests.

Primary Source

Tonight, I come to this House to speak about the world—the world after war. The recent challenge could not have been clearer. Saddam Hussein was the villain; Kuwait, the victim. To the aid of this small country came nations from North America and Europe, from Asia and South America, from Africa and the Arab world, all united against aggression. Our uncommon coalition must now work in common purpose: to forge a future that should never again be held hostage to the darker side of human nature.

Tonight in Iraq, Saddam walks amidst ruin. His war machine is crushed. His ability to threaten mass destruction is itself destroyed. His people have been lied to, denied the truth. And when his defeated legions come home, all Iraqis will see and feel the havoc he has wrought. And this I promise you: For all that Saddam has done to his own people, to the Kuwaitis, and to the entire world, Saddam and those around him are accountable.

All of us grieve for the victims of war, for the people of Kuwait and the suffering that scars the soul of that proud nation. We grieve for all our fallen soldiers and their families, for all the innocents caught up in this conflict. And, yes, we grieve for the people of Iraq, a people who have never been our enemy. My hope is that one day we will once again welcome them as friends into the community of nations. Our commitment to peace in the Middle East does not end with the liberation of Kuwait. So, tonight let me outline four key challenges to be met.

First, we must work together to create shared security arrangements in the region. Our friends and allies in the Middle East recognize that they will bear the bulk of the responsibility for regional security. But we want them to know that just as we stood with them to repel aggression, so now America stands ready to work with them to secure the peace. This does not mean stationing U.S. ground forces in the Arabian Peninsula, but it does mean American participation in joint exercises involving both air and ground forces. It means maintaining a capable U.S. naval presence in the region, just as we have for over 40 years. Let it be clear: Our vital national interests depend on a stable and secure Gulf.

Second, we must act to control the proliferation of weapons of mass destruction and the missiles used to deliver them. It would be tragic if the nations of the Middle East and Persian Gulf were now, in the wake of war, to embark on a new arms race. Iraq requires special vigilance. Until Iraq convinces the world of its peaceful intentions—that its leaders will not use new revenues to rearm and rebuild its menacing war machine—Iraq must not have access to the instruments of war.

And third, we must work to create new opportunities for peace and stability in the Middle East. On the night I announced Operation Desert Storm, I expressed my hope that out of the horrors of war might come new momentum for peace. We've learned in the modern age geography cannot guarantee security, and security does not come from military power alone.

All of us know the depth of bitterness that has made the dispute between Israel and its neighbors so painful and intractable. Yet, in the conflict just concluded, Israel and many of the Arab States have for the first time found themselves confronting the same aggressor. By now, it should be plain to all parties that peace-making in the Middle East requires compromise. At the same time, peace brings real benefits to everyone. We must do all that we can to close the gap between Israel and the Arab States—and between Israelis and Palestinians. The tactics of terror lead absolutely nowhere. There can be no substitute for diplomacy.

A comprehensive peace must be grounded in United Nations Security Council Resolutions 242 and 338 and the principle of territory for peace. This principle must be elaborated to provide for Israel's security and recognition and at the same time for legitimate Palestinian political rights. Anything else would fail the twin test of fairness and security. The time has come to put an end to Arab-Israeli conflict.

The war with Iraq is over. The quest for solutions to the problems in Lebanon, in the Arab-Israeli dispute, and in the Gulf must go forward with new vigor and determination. And I guarantee you: No one will work harder for a stable peace in the region than we will.

Fourth, we must foster economic development for the sake of peace and progress. The Persian Gulf and Middle East form a region rich in natural resources with a wealth of untapped human potential. Resources once squandered on military might must be redirected to more peaceful ends. We are already addressing the immediate economic consequences of Iraq's aggression. Now, the challenge is to reach higher, to foster economic freedom and prosperity for all the people of the region.

By meeting these four challenges we can build a framework for peace. I've asked Secretary of State Baker to go to the Middle East to begin the process. . . .

To all the challenges that confront this region of the world there is no single solution, no solely American answer. But we can make a difference. America will work tirelessly as a catalyst for positive change.

But we cannot lead a new world abroad if, at home, it's politics as usual on American defense and diplomacy. It's time to turn away from the temptation to protect unneeded weapons systems and obsolete bases. It's time to put an end to micromanagement of foreign and security assistance programs—micromanagement that humiliates our friends and allies and hamstringing our diplomacy. It's time to rise above the parochial and the pork barrel, to do what is necessary, what's right, and what will enable this nation to play the leadership role required of us.

The consequences of the conflict in the Gulf reach far beyond the confines of the Middle East. Twice before in this century, an entire world was convulsed by war. Twice this century, out of the horrors of war hope emerged for enduring peace. Twice before, those hopes proved to be a distant dream, beyond the grasp of man. Until now, the world we've known has been a world divided—a world of barbed wire and concrete block, conflict, and cold war.

Now, we can see a new world coming into view. A world in which there is the very real prospect of a new world order. In the words of Winston Churchill, a world order in which "the principles of justice and fair play protect the weak against the strong. . . ." A world where

the United Nations, freed from cold war stalemate, is poised to fulfill the historic vision of its founders. A world in which freedom and respect for human rights find a home among all nations. The Gulf war put this new world to its first test. And my fellow Americans, we passed that test. For the sake of our principles, for the sake of the Kuwaiti people, we stood our ground. Because the world would not look the other way, Ambassador al-Sabah, tonight Kuwait is free. And we're very happy about that.

Tonight, as our troops begin to come home, let us recognize that the hard work of freedom still calls us forward. We've learned the hard lessons of history. The victory over Iraq was not waged as "a war to end all wars." Even the new world order cannot guarantee an era of perpetual peace. But enduring peace must be our mission. Our success in the Gulf will shape not only the new world order we seek but our mission here at home.

In the war just ended, there were clear-cut objectives—timetables—and, above all, an overriding imperative to achieve results. We must bring that same sense of self-discipline, that same sense of urgency, to the way we meet challenges here at home. In my State of the Union Address and in my budget, I defined a comprehensive agenda to prepare for the next American century.

Our first priority is to get this economy rolling again. The fear and uncertainty caused by the Gulf crisis were understandable. But now that the war is over, oil prices are down, interest rates are down, and confidence is rightly coming back. Americans can move forward to lend, spend, and invest in this, the strongest economy on Earth.

We must also enact the legislation that is key to building a better America. For example, in 1990, we enacted an historic Clean Air Act. And now we've proposed a national energy strategy. We passed a child-care bill that put power in the hands of parents. And today, we're ready to do the same thing with our schools and expand choice in education. We passed a crime bill that made a useful start in fighting crime and drugs. This year, we're sending to Congress our comprehensive crime

package to finish the job. We passed the landmark Americans with Disabilities Act. And now we've sent forward our civil rights bill. We also passed the aviation bill. This year, we've sent up our new highway bill. And these are just a few of our pending proposals for reform and renewal.

So, tonight I call on the Congress to move forward aggressively on our domestic front. Let's begin with two initiatives we should be able to agree on quickly: transportation and crime. And then, let's build on success with those and enact the rest of our agenda. If our forces could win the ground war in 100 hours, then surely the Congress can pass this legislation in 100 days. Let that be a promise we make tonight to the American people.

When I spoke in this House about the state of our Union, I asked all of you: If we can selflessly confront evil for the sake of good in a land so far away, then surely we can make this land all that it should be. In the time since then, the brave men and women of Desert Storm accomplished more than even they may realize. They set out to confront an enemy abroad, and in the process, they transformed a nation at home. Think of the way they went about their mission—with confidence and quiet pride. Think about their sense of duty, about all they taught us about our values, about ourselves.

We hear so often about our young people in turmoil—how our children fall short, how our schools fail us, how American products and American workers are second-class. Well, don't you believe it. The America we saw in Desert Storm was first-class talent. And they did it using America's state-of-the-art technology. We saw the excellence embodied in the Patriot missile and the patriots who made it work. And we saw soldiers who know about honor and bravery and duty and country and the world-shaking power of these simple words. There is something noble and majestic about the pride, about the patriotism that we feel tonight.

[. . .]

We went halfway around the world to do what is moral and just and right. We fought hard and, with others, we won the war. We lifted the yoke of aggression and tyranny from a small country that many Americans had never even heard of, and we ask nothing in return.

We're coming home now—proud, confident, heads high. There is much that we must do, at home and abroad. And we will do it. We are Americans.

162. Strategic Arms Reduction Treaty I, 31 July 1991

Introduction

An extension of the nuclear arms reduction treaties of SALT I (1972) and SALT II (1979), the Strategic Arms Reduction Treaty I (also known as START I) further limited the spread and development of nuclear weapons by the United States and the Soviet Union. Negotiations for further arms control agreements began under President Ronald Reagan in 1982 but made little progress until Mikhail Gorbachev became Soviet leader in 1985. START I was signed by U.S. President George H. W. Bush and Soviet Premier Mikhail Gorbachev on 31 July 1991 in the final days of the Cold War and just weeks before the fall of the Soviet Union. After the dissolution of the Soviet Union, the failure of the successor states party to START I—Russia, Belarus, Kazakhstan, and Ukraine—to ratify this treaty until 1994 delayed its implementation, which was somewhat patchy due to the lack of Soviet funds for dismantling weapons scheduled for destruction. START I required each side to reduce its strategic offensive arms to 1,600 strategic nuclear delivery vehicles, 6,000 accountable warheads, and 4,900 ballistic missile warheads. The Soviet side was permitted 1,540 warheads on 154 heavy intercontinental ballistic missiles (ICBMs). Belarus, Kazakhstan, and Ukraine were expected to become nonnuclear states by 2001 and did so, while Russia and the United States would cut their strategic nuclear arsenals by 30–40 percent, reductions that were anticipated to be made deeper by a subsequent START II Treaty. START I was expected to remain in force for fifteen years, with

the possibility of further five-year extensions. By December 2001, both Russia and the United States had cut their deployed warheads to 6,000 apiece, the START I level. Even before the treaty came into force, both sides began scrapping ICBMs and launchers, submarine-launched ballistic missiles (SLBMs) and launchers, and heavy bombers. The treaty was dramatic proof that the United States and the Soviet Union could cooperate on major strategic arms reductions.

Primary Source

TREATY BETWEEN THE UNITED STATES OF AMERICA AND THE UNION OF SOVIET SOCIALIST REPUBLICS ON THE REDUCTION AND LIMITATION OF STRATEGIC OFFENSIVE ARMS

The United States of America and the Union of Soviet Socialist Republics, hereinafter referred to as the Parties,

Have agreed as follows:

ARTICLE I

Each Party shall reduce and limit its strategic offensive arms in accordance with the provisions of this Treaty, and shall carry out the other obligations set forth in this Treaty and its Annexes, Protocols, and Memorandum of Understanding.

ARTICLE II

1. Each Party shall reduce and limit its ICBMs and ICBM launchers, SLBMs and SLBM launchers, heavy bombers, ICBM warheads, SLBM warheads, and heavy bomber armaments . . .

[. . .]

3. Each Party shall limit the aggregate throw-weight of its deployed ICBMs and deployed SLBMs so that seven years after entry into force of this Treaty and thereafter such aggregate throw-weight does not exceed 3600 metric tons.

ARTICLE IV

1. For ICBMs and SLBMs:

- (a) Each Party shall limit the aggregate number of non-deployed ICBMs for mobile launchers of ICBMs to no more than 250. Within this limit, the number of non-deployed ICBMs for rail-mobile launchers of ICBMs shall not exceed 125.

- (b) Each Party shall limit the number of non-deployed ICBMs at a maintenance facility of an ICBM base for mobile launchers of ICBMs to no more than two ICBMs of each type specified for that ICBM base. Non-deployed ICBMs for mobile launchers of ICBMs located at a maintenance facility shall be stored separately from non-deployed mobile launchers of ICBMs located at that maintenance facility.
- (c) Each Party shall limit the number of non-deployed ICBMs and sets of ICBM emplacement equipment at an ICBM base for silo launchers of ICBMs to no more than:
 - (i) two ICBMs of each type specified for that ICBM base and six sets of ICBM emplacement equipment for each type of ICBM specified for that ICBM base; or
 - (ii) four ICBMs of each type specified for that ICBM base and two sets of ICBM emplacement equipment for each type of ICBM specified for that ICBM base.
- (d) Each Party shall limit the aggregate number of ICBMs and SLBMs located at test ranges to no more than 35 during the seven-year period after entry into force of this Treaty. Thereafter, the aggregate number of ICBMs and SLBMs located at test ranges shall not exceed 25.

2. For ICBM launchers and SLBM launchers:

- (a) Each Party shall limit the aggregate number of non-deployed mobile launchers of ICBMs to no more than 110. Within this limit, the number of non-deployed rail-mobile launchers of ICBMs shall not exceed 18.
- (b) Each Party shall limit the number of non-deployed mobile launchers of ICBMs located at the maintenance facility of each ICBM base for mobile launchers of ICBMs to no more than two such ICBM launchers of each type of ICBM specified for that ICBM base.

- (c) Each Party shall limit the number of non-deployed mobile launchers of ICBMs located at training facilities for ICBMs to no more than 40. Each such launcher may contain only a training model of a missile. Non-deployed mobile launchers of ICBMs that contain training models of missiles shall not be located outside a training facility.
 - (d) Each Party shall limit the aggregate number of test launchers to no more than 45 during the seven-year period after entry into force of this Treaty. Within this limit, the number of fixed test launchers shall not exceed 25, and the number of mobile test launchers shall not exceed 20. Thereafter, the aggregate number of test launchers shall not exceed 40. Within this limit, the number of fixed test launchers shall not exceed 20, and the number of mobile test launchers shall not exceed 20.
 - (e) Each Party shall limit the aggregate number of silo training launchers and mobile training launchers to no more than 60. ICBMs shall not be launched from training launchers. Each such launcher may contain only a training model of a missile. Mobile training launchers shall not be capable of launching ICBMs, and shall differ from mobile launchers of ICBMs and other road vehicles or railcars on the basis of differences that are observable by national technical means of verification.
3. For heavy bombers and former heavy bombers:
- (a) Each Party shall limit the aggregate number of heavy bombers equipped for non-nuclear armaments, former heavy bombers, and training heavy bombers to no more than 75.
 - (b) Each Party shall limit the number of test heavy bombers to no more than 20.
4. For ICBMs and SLBMs used for delivering objects into the upper atmosphere or space:
- (a) Each Party shall limit the number of space launch facilities to no more than five, unless otherwise agreed. Space launch facilities shall not overlap ICBM bases.
 - (b) Each Party shall limit the aggregate number of ICBM launchers and SLBM launchers located at space launch facilities to no more than 20, unless otherwise agreed. Within this limit, the aggregate number of silo launchers of ICBMs and mobile launchers of ICBMs located at space launch facilities shall not exceed ten, unless otherwise agreed.
 - (c) Each Party shall limit the aggregate number of ICBMs and SLBMs located at a space launch facility to no more than the number of ICBM launchers and SLBM launchers located at that facility.
5. Each Party shall limit the number of transporter-loaders for ICBMs for road-mobile launchers of ICBMs located at each deployment area or test range to no more than two for each type of ICBM for road-mobile launchers of ICBMs that is attributed with one warhead and that is specified for that deployment area or test range, and shall limit the number of such transporter-loaders located outside deployment areas and test ranges to no more than six. The aggregate number of transporter-loaders for ICBMs for road-mobile launchers of ICBMs shall not exceed 30.
6. Each Party shall limit the number of ballistic missile submarines in dry dock within five kilometers of the boundary of each submarine base to no more than two.
7. For static displays and ground trainers:
- (a) Each Party shall limit the number of ICBM launchers and SLBM launchers placed on static display after signature of this Treaty to no more than 20, the number of ICBMs and SLBMs placed on static display after signature of this Treaty to no more than 20, the number of launch canisters placed on static display after signature of this Treaty to no more than 20, and the number of heavy bombers and former heavy bombers placed on static display after signature of this Treaty to no more than 20. Such items placed on static display prior to signature of this Treaty shall be specified in Annex I to the Memorandum of Understanding, but shall not be subject to the limitations provided for in this Treaty.

- (b) Each Party shall limit the aggregate number of heavy bombers converted after signature of this Treaty for use as ground trainers and former heavy bombers converted after signature of this Treaty for use as ground trainers to no more than five. Such items converted prior to signature of this Treaty for use as ground trainers shall be specified in Annex I to the Memorandum of Understanding, but shall not be subject to the limitations provided for in this Treaty.

8. Each Party shall limit the aggregate number of storage facilities for ICBMs or SLBMs and repair facilities for ICBMs or SLBMs to no more than 50.

9. With respect to locational and related restrictions on strategic offensive arms:

- (a) Each Party shall locate non-deployed ICBMs and non-deployed SLBMs only at maintenance facilities of ICBM bases; submarine bases; ICBM loading facilities; SLBM loading facilities; production facilities for ICBMs or SLBMs; repair facilities for ICBMs or SLBMs; storage facilities for ICBMs or SLBMs; conversion or elimination facilities for ICBMs or SLBMs; test ranges; or space launch facilities. Prototype ICBMs and prototype SLBMs, however, shall not be located at maintenance facilities of ICBM bases or at submarine bases. Non-deployed ICBMs and non-deployed SLBMs may also be in transit. Non-deployed ICBMs for silo launchers of ICBMs may also be transferred within an ICBM base for silo launchers of ICBMs. Non-deployed SLBMs that are located on missile tenders and storage cranes shall be considered to be located at the submarine base at which such missile tenders and storage cranes are specified as based.
- (b) Each Party shall locate non-deployed mobile launchers of ICBMs only at maintenance facilities of ICBM bases for mobile launchers of ICBMs, production facilities for mobile launchers of ICBMs, repair facilities for mobile launchers of ICBMs, storage facilities for mobile launchers of ICBMs, ICBM loading facilities, training facilities for ICBMs, conversion or elim-

ination facilities for mobile launchers of ICBMs, test ranges, or space launch facilities. Mobile launchers of prototype ICBMs, however, shall not be located at maintenance facilities of ICBM bases for mobile launchers of ICBMs. Non-deployed mobile launchers of ICBMs may also be in transit.

- (c) Each Party shall locate test launchers only at test ranges, except that rail-mobile test launchers may conduct movements for the purpose of testing outside a test range, provided that:
 - (i) each such movement is completed no later than 30 days after it begins;
 - (ii) each such movement begins and ends at the same test range and does not involve movement to any other facility;
 - (iii) movements of no more than six rail-mobile launchers of ICBMs are conducted in each calendar year; and
 - (iv) no more than one train containing no more than three rail-mobile test launchers is located outside test ranges at any one time.
- (d) A deployed mobile launcher of ICBMs and its associated missile that relocates to a test range may, at the discretion of the testing Party, either continue to be counted toward the maximum aggregate limits provided for in Article II of this Treaty, or be counted as a mobile test launcher pursuant to paragraph 2(d) of this Article. If a deployed mobile launcher of ICBMs and its associated missile that relocates to a test range continues to be counted toward the maximum aggregate limits provided for in Article II of this Treaty, the period of time during which it continuously remains at a test range shall not exceed 45 days. The number of such deployed road-mobile launchers of ICBMs and their associated missiles located at a test range at any one time shall not exceed three, and the number of such deployed rail-mobile launchers of ICBMs and their associated missiles located at a test range at any one time shall not exceed three.
- (e) Each Party shall locate silo training launchers only at ICBM bases for silo launchers of ICBMs and training facilities for ICBMs. The number of silo training launchers located at each ICBM

base for silo launchers of ICBMs shall not exceed one for each type of ICBM specified for that ICBM base.

- (f) Test heavy bombers shall be based only at heavy bomber flight test centers and at production facilities for heavy bombers. Training heavy bombers shall be based only at training facilities for heavy bombers.

10. Each Party shall locate solid rocket motors for first stages of ICBMs for mobile launchers of ICBMs only at locations where production and storage, or testing of such motors occurs and at production facilities for ICBMs for mobile launchers of ICBMs. Such solid rocket motors may also be moved between these locations. Solid rocket motors with nozzles attached for the first stages of ICBMs for mobile launchers of ICBMs shall only be located at production facilities for ICBMs for mobile launchers of ICBMs and at locations where testing of such solid rocket motors occurs. Locations where such solid rocket motors are permitted shall be specified in Annex I to the Memorandum of Understanding.

[. . .]

ARTICLE V

1. Except as prohibited by the provisions of this Treaty, modernization and replacement of strategic offensive arms may be carried out.

2. Each Party undertakes not to:

- (a) produce, flight-test, or deploy heavy ICBMs of a new type, or increase the launch weight or throw-weight of heavy ICBMs of an existing type;
- (b) produce, flight-test, or deploy heavy SLBMs;
- (c) produce, test, or deploy mobile launchers of heavy ICBMs;
- (d) produce, test, or deploy additional silo launchers of heavy ICBMs, except for silo launchers of heavy ICBMs that replace silo launchers of heavy ICBMs that have been eliminated in accordance with Section II of the Conversion or Elimination Protocol, provided that the limits provided for in Article II of this Treaty are not exceeded;

- (e) convert launchers that are not launchers of heavy ICBMs into launchers of heavy ICBMs;
- (f) produce, test, or deploy launchers of heavy SLBMs;
- (g) reduce the number of warheads attributed to a heavy ICBM of an existing type.

3. Each Party undertakes not to deploy ICBMs other than in silo launchers of ICBMs, on road-mobile launchers of ICBMs, or on rail-mobile launchers of ICBMs. Each Party undertakes not to produce, test, or deploy ICBM launchers other than silo launchers of ICBMs, road-mobile launchers of ICBMs, or rail-mobile launchers of ICBMs.

4. Each Party undertakes not to deploy on a mobile launcher of ICBMs an ICBM of a type that was not specified as a type of ICBM for mobile launchers of ICBMs in accordance with paragraph 2 of Section VII of the Protocol on Notifications Relating to this Treaty, hereinafter referred to as the Notification Protocol, unless it is an ICBM to which no more than one warhead is attributed and the Parties have agreed within the framework of the Joint Compliance and Inspection Commission to permit deployment of such ICBMs on mobile launchers of ICBMs. A new type of ICBM for mobile launchers of ICBMs may cease to be considered to be a type of ICBM for mobile launchers of ICBMs if no ICBM of that type has been contained on, or flight-tested from, a mobile launcher of ICBMs.

5. Each Party undertakes not to deploy ICBM launchers of a new type of ICBM and not to deploy SLBM launchers of a new type of SLBM if such launchers are capable of launching ICBMs or SLBMs, respectively, of other types. ICBM launchers of existing types of ICBMs and SLBM launchers of existing types of SLBMs shall be incapable, without conversion, of launching ICBMs or SLBMs, respectively, of other types.

6. Each Party undertakes not to convert SLBMs into ICBMs for mobile launchers of ICBMs, or to load SLBMs on, or launch SLBMs from, mobile launchers of ICBMs.

7. Each Party undertakes not to produce, test, or deploy transporter-loaders other than transporter-loaders for ICBMs for road-mobile launchers of ICBMs attributed with one warhead.

8. Each Party undertakes not to locate deployed silo launchers of ICBMs outside ICBM bases for silo launchers of ICBMs.

9. Each Party undertakes not to locate soft-site launchers except at test ranges and space launch facilities. All existing soft-site launchers not at test ranges or space launch facilities shall be eliminated in accordance with the procedures provided for in the Conversion or Elimination Protocol no later than 60 days after entry into force of this Treaty.

10. Each Party undertakes not to:

- (a) flight-test ICBMs or SLBMs of a retired or former type from other than test launchers specified for such use or launchers at space launch facilities. Except for soft-site launchers, test launchers specified for such use shall not be used to flight-test ICBMs or SLBMs of a type, any one of which is deployed;
- (b) produce ICBMs for mobile launchers of ICBMs of a retired type.

11. Each Party undertakes not to convert silos used as launch control centers into silo launchers of ICBMs.

12. Each Party undertakes not to:

- (a) produce, flight-test, or deploy an ICBM or SLBM with more than ten reentry vehicles;
- (b) flight-test an ICBM or SLBM with a number of reentry vehicles greater than the number of warheads attributed to it, or, for an ICBM or SLBM of a retired type, with a number of reentry vehicles greater than the largest number of warheads that was attributed to any ICBM or SLBM of that type;
- (c) deploy an ICBM or SLBM with a number of reentry vehicles greater than the number of warheads attributed to it;

- (d) increase the number of warheads attributed to an ICBM or SLBM of an existing or new type.

13. Each Party undertakes not to flight-test or deploy an ICBM or SLBM with a number of reentry vehicles greater than the number of warheads attributed to it.

14. Each Party undertakes not to flight-test from space launch facilities ICBMs or SLBMs equipped with reentry vehicles.

15. Each Party undertakes not to use ICBMs or SLBMs for delivering objects into the upper atmosphere or space for purposes inconsistent with existing international obligations undertaken by the Parties.

16. Each Party undertakes not to produce, test, or deploy systems for rapid reload and not to conduct rapid reload.

17. Each Party undertakes not to install SLBM launchers on submarines that were not originally constructed as ballistic missile submarines.

18. Each Party undertakes not to produce, test, or deploy:

- (a) ballistic missiles with a range in excess of 600 kilometers, or launchers of such missiles, for installation on waterborne vehicles, including free-floating launchers, other than submarines. This obligation shall not require changes in current ballistic missile storage, transport, loading, or unloading practices;
- (b) launchers of ballistic or cruise missiles for emplacement on or for tethering to the ocean floor, the seabed, or the beds of inland waters and inland waters, or for emplacement in or for tethering to the subsoil thereof, or mobile launchers of such missiles that move only in contact with the ocean floor, the seabed, or the beds of inland waters and inland waters, or missiles for such launchers. This obligation shall apply to all areas of the ocean floor and the seabed, including the seabed zone referred to in Articles I and II of the Treaty on the Prohibition of the

Emplacement of Nuclear Weapons and Other Weapons of Mass Destruction on the Seabed and the Ocean Floor and in the Subsoil Thereof of February 11, 1971;

- (c) systems, including missiles, for placing nuclear weapons or any other kinds of weapons of mass destruction into Earth orbit or a fraction of an Earth orbit;
- (d) air-to-surface ballistic missiles (ASBMs);
- (e) long-range nuclear ALCMs armed with two or more nuclear weapons.

19. Each Party undertakes not to:

- (a) flight-test with nuclear armaments an aircraft that is not an airplane, but that has a range of 8000 kilometers or more; equip such an aircraft for nuclear armaments; or deploy such an aircraft with nuclear armaments;
- (b) flight-test with nuclear armaments an airplane that was not initially constructed as a bomber, but that has a range of 8000 kilometers or more, or an integrated platform area in excess of 310 square meters; equip such an airplane for nuclear armaments; or deploy such an airplane with nuclear armaments;
- (c) flight-test with long-range nuclear ALCMs an aircraft that is not an airplane, or an airplane that was not initially constructed as a bomber; equip such an aircraft or such an airplane for long-range nuclear ALCMs; or deploy such an aircraft or such an airplane with long-range nuclear ALCMs.

20. The United States of America undertakes not to equip existing or future heavy bombers for more than 20 long-range nuclear ALCMs.

21. The Union of Soviet Socialist Republics undertakes not to equip existing or future heavy bombers for more than 16 long-range nuclear ALCMs.

22. Each Party undertakes not to locate long-range nuclear ALCMs at air bases for heavy bombers equipped for nuclear armaments other than long-range nuclear ALCMs, air bases for heavy bombers equipped for

non-nuclear armaments, air bases for former heavy bombers, or training facilities for heavy bombers.

23. Each Party undertakes not to base heavy bombers equipped for long-range nuclear ALCMs, heavy bombers equipped for nuclear armaments other than long-range nuclear ALCMs, or heavy bombers equipped for non-nuclear armaments at air bases at which heavy bombers of either of the other two categories are based.

24. Each Party undertakes not to convert:

- (a) heavy bombers equipped for nuclear armaments other than long-range nuclear ALCMs into heavy bombers equipped for long-range nuclear ALCMs, if such heavy bombers were previously equipped for long-range nuclear ALCMs;
- (b) heavy bombers equipped for non-nuclear armaments into heavy bombers equipped for long-range nuclear ALCMs or into heavy bombers equipped for nuclear armaments other than long-range nuclear ALCMs;
- (c) training heavy bombers into heavy bombers of another category;
- (d) former heavy bombers into heavy bombers.

25. Each Party undertakes not to have underground facilities accessible to ballistic missile submarines.

26. Each Party undertakes not to locate railcars at the site of a rail garrison that has been eliminated in accordance with Section IX of the Conversion or Elimination Protocol, unless such railcars have differences, observable by national technical means of verification, in length, width, or height from rail-mobile launchers of ICBMs or launch-associated railcars.

27. Each Party undertakes not to engage in any activities associated with strategic offensive arms at eliminated facilities, notification of the elimination of which has been provided in accordance with paragraph 3 of Section I of the Notification Protocol, unless notification of a new facility at the same location has been provided in accordance with paragraph 3 of Section I of the Notification Protocol. Strategic offensive arms and

support equipment shall not be located at eliminated facilities except during their movement through such facilities and during visits of heavy bombers or former heavy bombers at such facilities. Missile tenders may be located at eliminated facilities only for purposes not associated with strategic offensive arms.

28. Each Party undertakes not to base strategic offensive arms subject to the limitations of this Treaty outside its national territory.

29. Each Party undertakes not to use naval vessels that were formerly declared as missile tenders to transport, store, or load SLBMs. Such naval vessels shall not be tied to a ballistic missile submarine for the purpose of supporting such a submarine if such a submarine is located within five kilometers of a submarine base.

30. Each Party undertakes not to remove from production facilities for ICBMs for mobile launchers of ICBMs, solid rocket motors with attached nozzles for the first stages of ICBMs for mobile launchers of ICBMs, except for:

- (a) the removal of such motors as part of assembled first stages of ICBMs for mobile launchers of ICBMs that are maintained, stored, and transported in stages;
- (b) the removal of such motors as part of assembled ICBMs for mobile launchers of ICBMs that are maintained, stored, and transported as assembled missiles in launch canisters or without launch canisters; and
- (c) the removal of such motors as part of assembled first stages of ICBMs for mobile launchers of ICBMs that are maintained, stored, and transported as assembled missiles in launch canisters or without launch canisters, for the purpose of technical characteristics exhibitions.

ARTICLE VI

1. Deployed road-mobile launchers of ICBMs and their associated missiles shall be based only in restricted

areas. A restricted area shall not exceed five square kilometers in size and shall not overlap another restricted area. No more than ten deployed road-mobile launchers of ICBMs and their associated missiles may be based or located in a restricted area. A restricted area shall not contain deployed ICBMs for road-mobile launchers of ICBMs of more than one type of ICBM.

[. . .]

ARTICLE VII

1. Conversion and elimination of strategic offensive arms, fixed structures for mobile launchers of ICBMs, and facilities shall be carried out pursuant to this Article and in accordance with procedures provided for in the Conversion or Elimination Protocol. Conversion and elimination shall be verified by national technical means of verification and by inspection as provided for in Articles IX and XI of this Treaty; in the Conversion or Elimination Protocol; and in the Protocol on Inspections and Continuous Monitoring Activities Relating to this Treaty, hereinafter referred to as the Inspection Protocol.

[. . .]

ARTICLE XI

1. For the purpose of ensuring verification of compliance with the provisions of this Treaty, each Party shall have the right to conduct inspections and continuous monitoring activities and shall conduct exhibitions pursuant to this Article and the Inspection Protocol. Inspections, continuous monitoring activities, and exhibitions shall be conducted in accordance with the procedures provided for in the Inspection Protocol and the Conversion or Elimination Protocol.

163. The August 1991 Coup against Gorbachev

Introduction

By August 1991, internal opposition to Mikhail Gorbachev's rule had reached the boiling point. In the previous months, he had sought to assuage separatist sentiment among the various republics of the Soviet Union by drafting a new union act. Under its terms the constituent republics would have enjoyed genuine autonomy in a voluntary and democratic federation. The communist functionaries who still dominated the new Congress of People's Deputies already deeply resented what they saw as the destruction of their country's international standing, as Gorbachev allowed the former East European satellites to renounce communism, leave the Warsaw Pact, and turn toward the West. Major cuts in Soviet military forces and armaments and the ending of economic and military aid programs to Soviet clients around the world were to them still further evidence of national decline and humiliation. Internal difficulties were perhaps even more salient. Intensifying economic problems and falling living standards caused growing discontent among the Soviet people, many of whom began to look wistfully back to a more prosperous past. Communist officials pointed to rising crime rates, unemployment, and high inflation and deteriorating standards in health care, education, and housing as evidence of a national crisis that demanded strong action. In August 1991, while Gorbachev was on holiday in the Crimea, his vice president and other communist officials mounted a coup against his rule. Gorbachev was placed under house arrest, and the coup leaders demanded his resignation. The Moscow communist leader Boris Yeltsin, recently elected president of the Russian Republic and head of the liberal faction in the congress, responded immediately and forcefully. Climbing on a tank outside the assembly's building, on behalf of the government he exhorted both soldiers and the Moscow populace to resist Gorbachev's ouster, which he characterized as a "right-wing, reactionary, unconstitutional coup" to remove "the legally elected President of the country." Such methods, Yeltsin charged, were "unacceptable" and "discredited" the Soviet Union internationally. Championing the cause of democracy, he declared the coup "illegal" and demanded Gorbachev's release and return to Moscow to give him an opportunity to address the people. Yeltsin's bold stand won over the military and the people. Lacking support, the plotters crumbled and the coup fizzled out. After three days in captivity, Gorbachev was freed and came back to Moscow. Even so, the episode marked the end of his effectiveness as president. Yeltsin's undoubted courage had made him the hero of the hour, and Gorbachev was heavily dependent on him. With encouragement from Yeltsin, an old political opponent of Gorbachev, by the end of the year the Soviet Union itself had been dissolved. An embittered Gorbachev, who had hoped to maintain the constituent republics as a unified grouping, resigned, and Yeltsin became the first president of the new Russian Federation.

Primary Source

Appeal to the Soviet People, 18 August 1991

Fellow countrymen! Citizens of the Soviet Union! At this grave, critical hour for the fate of the fatherland and of our peoples, we appeal to you! A mortal danger threatens our great homeland! For a number of reasons, the policy of reforms begun at the initiative of M. S. Gorbachev and conceived of as a means of ensuring the dynamic development of the country and the democratization of the life of society has reached an impasse. The initial enthusiasm and hopes have given way to unbelief, apathy and despair. The authorities at all levels have lost the trust of the population. In the life of society, political intrigue has supplanted concern for the fate of the fatherland and the citizen. Malicious

mocking of all state institutions is being propagated. In essence, the country has become ungovernable.

Taking advantage of the liberties that have been granted and trampling the shoots of democracy, which have just emerged, extremist forces have come into being and embarked on a course aimed at the liquidation of the Soviet Union, the breakup of the state and the seizure of power at any cost. The results of the nationwide referendum on the unity of the fatherland have been trampled. The cynical exploitation of national feelings is only a screen for satisfying ambitions. These political adventurers are troubled neither by the current misfortunes of their peoples nor by their future troubles. In creating an atmosphere of

psychological and political terror and trying to hide behind the shield of the people's trust, they forget that the ties they are condemning and breaking were established on a basis of far broader popular support—support that, moreover, has undergone the test of history for many centuries. Today those who are essentially working toward the overthrow of the constitutional system should have to answer to mothers and fathers for the deaths of the many hundreds of victims in conflicts between nationalities. The crippled lives of more than half a million refugees are on their conscience. Because of them, tens of millions of Soviet people who only yesterday were living in a united family but today find themselves outcasts in their own homes have lost tranquility and the joy of life.

The people should decide what the social system should be like, but they are being deprived of this right.

Instead of showing concern for the security and well-being of every citizen and of society as a whole, the people who have acquired power frequently use it for interests that are alien to the people, as a means of unscrupulous self-assertion. The streams of words and mountains of statements and promises only underscore the scanty and wretched nature of their practical deeds. The inflation of power, more frightening than any other kind of inflation, is destroying our state and society. Every citizen feels growing uncertainty about tomorrow and deep concern for the future of his or her children.

The crisis of power has had a catastrophic effect on the economy. The chaotic, ungoverned slide toward a market has caused an explosion of selfishness—regional, departmental, group and personal. The war of laws and the encouragement of centrifugal tendencies have brought the destruction of the unified national-economic mechanism that took shape over decades. The result is a sharp falloff in the standard of living for the overwhelming majority of Soviet people and the flourishing of speculation and the shadow economy. It is high time to tell the people the truth: Unless urgent and resolute measures are taken to stabilize the economy, hunger and a new round of impoverishment are inevitable in the very near future, from which it is only one step to large-scale manifestations of spontaneous

discontent, with destructive consequences. Only irresponsible people can set their hopes on some kind of help from abroad. No hand-outs are going to solve our problems; salvation is in our own hands. The time has come to measure the authority of every person or organization in terms of actual contributions to the restoration and development of the national economy.

[. . .]

An offensive against the rights of the working people is under way. The rights to work, education, health care, housing and recreation have been called in question.

Even people's basic personal safety is increasingly under threat. Crime is growing at a rapid rate and is becoming organized and politicized. The country is sinking into an abyss of violence and lawlessness. Never before in the country's history has the propaganda of sex and violence gained such wide scope, jeopardizing the health and lives of future generations. Millions of people are demanding that measures be taken against the octopus of crime and glaring immorality.

[. . .]

The State Committee for the State of Emergency in the USSR is fully aware of the depth of the crisis that has struck our country; it is assuming responsibility for the fate of the homeland, and it is fully resolved to take very serious measures to bring the state and society out of crisis as quickly as possible.

We promise to conduct a wide-ranging, nationwide discussion of the draft of a new Union Treaty. Everyone will have the right and opportunity to think about this highly important act in a calm atmosphere and to make up his mind about it, for the fate of the numerous peoples of our great homeland will depend on what the Union will be like.

We intend to immediately restore legality and law and order, to put an end to bloodshed, to declare a merciless war against the criminal world, and to eradicate shameful phenomena that discredit our society and degrade Soviet citizens. We will clean the criminal elements from the streets of our cities and put an end

to the highhandedness of the plunderers of public property.

We favor truly democratic processes and a consistent policy of reforms leading to the renewal of our homeland and to its economic and social prosperity, which will enable it to take a worthy place in the world community of nations.

[. . .]

In the process of developing a mixed national economy, we will support private enterprise, providing it with the necessary possibilities for developing production and the service sphere.

Our top-priority concern will be solving the food and housing problems. All available forces will be mobilized for the satisfaction of these very urgent requirements of the people.

We call on workers, peasants, the working intelligentsia and all Soviet people to restore labor discipline and order in the shortest possible time and to raise the level of production, so as then to move resolutely forward. Our life, the future of our children and grandchildren and the fate of the fatherland will depend on this.

We are a peace-loving country and will unswervingly observe all the commitments we have made. We have no claims against anyone. We want to live in peace and friendship with everyone, but we firmly state that no one will ever be allowed to encroach on our sovereignty, independence and territorial integrity. Any attempts to talk to our country in the language of diktat, no matter where they come from, will be resolutely curbed.

For centuries, our multinational people have been filled with pride in their homeland; we have not been ashamed of our patriotic feelings, and we consider it natural and legitimate to raise present and future generations of citizens of our great power in this spirit.

To do nothing in this critical hour for the fate of the fatherland is to assume a grave responsibility for the

tragic, truly unpredictable consequences. Everyone who cherishes our homeland, who wants to live and work in an atmosphere of tranquility and confidence, who does not accept a continuation of bloody conflicts between nationalities and who sees his fatherland as independent and prosperous in the future must make the only correct choice. We call on all true patriots and people of goodwill to put an end to this time of troubles.

We call on all citizens of the Soviet Union to recognize their duty to the homeland and provide every kind of support to the State Committee for the State of Emergency in the USSR and to efforts to bring the country out of crisis.

Constructive proposals from public-political organizations, labor collectives and citizens will be gratefully accepted as a manifestation of their patriotic readiness to participate actively in the restoration of centuries-old friendship in the single family of fraternal peoples and in the revival of the fatherland.

—[signed] THE STATE COMMITTEE
FOR THE STATE OF EMERGENCY IN
THE USSR.

Boris Yeltsin, 19 August 1991
To the Citizens of Russia

On the night of Aug. 18–19, 1991, the legally elected President of the country was removed from power.

Whatever reasons are used to justify this removal, what we are dealing with is a right-wing, reactionary, unconstitutional coup.

Despite all the difficulties and very grave trials that the people are experiencing, the democratic process in the country is assuming ever deeper dimensions and is becoming irreversible. The peoples of Russia are becoming the masters of their fate. The uncontrolled rights of unconstitutional bodies, including Party bodies, have been substantially restricted. The leadership of Russia has taken a resolute position on the Union Treaty, striving for the unity of the Soviet Union and the unity of Russia. Our position on this question made it possible to significantly accelerate the drafting

of this treaty, clear it with all the republics, and set a date for signing it—Aug. 20, 1991.

This development of events aroused the animosity of reactionary forces and drove them into irresponsible, adventurist attempts to solve very complicated political and economic problems by methods of force. There were earlier attempts to stage a coup.

We have believed and continue to believe that these methods of force are unacceptable. They discredit the USSR before the whole world, undermine our prestige in the world community, and return us to the era of the cold war and the Soviet Union's isolation from the world community.

All this compels us to declare the so-called committee that has come to power illegal. Accordingly, we declare all the decisions and orders of this committee illegal.

We are confident that bodies of local power will unswervingly follow constitutional laws and the decrees of the President of the Russian SFSR. We call on the citizens of Russia to give the putschists the response they deserve and to demand that the country be returned to normal constitutional development.

Certainly Gorbachev, the country's President, must be given an opportunity to speak to the people. We demand the immediate convening of an Extraordinary Congress of USSR People's Deputies.

We are absolutely certain that our fellow countrymen will not allow the highhandedness and lawlessness of the putschists, who have lost all shame and conscience, to become firmly established. We appeal to servicemen to display lofty civic spirit and not to take part in the reactionary coup.

Until these demands are fulfilled, we call for a general strike of unlimited duration. We have no doubt that the world community will make an objective assessment of this cynical attempt at a right-wing coup.

—[signed] Yeltsin, President of Russia; Silayev, Chairman of the RSFSR Council of Ministers; and Khasbulatov, acting Chairman of the RSFSR Supreme Soviet.

164. The Minsk Declarations (Dissolution of the Soviet Union), 8 December 1991

Introduction

By 1990 the readiness of Soviet President Mikhail Gorbachev to allow the former Soviet satellites in Eastern Europe to reject communism and leave the Warsaw Pact had strengthened separatist forces within the Soviet Union itself. The Baltic republics, Estonia, Latvia, and Lithuania, which had only been incorporated in the Soviet Union during World War II, were particularly outspoken in demanding autonomy or independence, but nationalist forces were also developing in various Soviet republics, including Azerbaijan, Armenia, Georgia, and Ukraine. In January 1991 unrest in Lithuania, whose government had declared that the Soviet constitution was no longer valid there, led Gorbachev to order the Soviet military to replace the republic's government. At least 14 people were killed and another 600 injured, provoking protests from many Western states. Seeking to defuse the growing internal crisis, Gorbachev and his advisors proceeded to draw up a treaty of union that would have made the Soviet Union into a voluntary democratic federation whose members enjoyed economic free trade with each other. In August 1991 nationalist hard-liners within the Soviet leadership, who feared that this arrangement would lead to the breakup of the Soviet Union, mounted a coup against Gorbachev, then on holiday in the Crimea. Although Gorbachev's government survived, largely due to the intervention of Boris Yeltsin, elected two months earlier as president of the Russian Republic, Gorbachev's authority was fatally weakened. Yeltsin, who sought to implement sweeping economic reforms within Russia, regarded the Soviet Union as expendable, and during the fall the Russian

Republic gradually took over the Soviet ministries based in Moscow. After confidential negotiations, in early December 1991 Yeltsin met with the leaders of the republics of Ukraine and Belarus, and the three declared the dissolution of the Soviet Union and its replacement by a voluntary Commonwealth of Independent States. Membership in this organization was open to all former Soviet republics, and by the end of the month eleven states—Armenia, Azerbaijan, Belarus, Kazakhstan, Kyrgyzstan, Moldova, the Russian Federation, Tajikistan, Turkmenistan, Ukraine, and Uzbekistan—had joined. On 30 December the signatories agreed to coordinate their military policies and to observe the arms control agreements concluded by the former Soviet Union. Gorbachev objected strongly but unavailingly to the dismantling of the Soviet Union, which he had hoped to preserve. On 24 December 1991, the Russian Federation took over the Soviet seat in the United Nations (UN). The following day, Gorbachev finally resigned his position as the last Soviet president, leaving Yeltsin in undisputed control as president of the Russian Federation, an outcome that had probably been one major underlying reason behind Yeltsin's move to break up the Soviet Union.

The Minsk Agreement

**Signed by the heads of state of Belarus,
the Russian Federation, and Ukraine on
December 8, 1991**

PREAMBLE

We, the Republic of Belarus, the Russian Federation and the Republic of Ukraine, as founder states of the Union of Soviet Socialist Republics (USSR), which signed the 1922 Union Treaty, further described as the high contracting parties, conclude that the USSR has ceased to exist as a subject of international law and a geopolitical reality.

[. . .]

ARTICLE 1

The high contracting parties form the Commonwealth of Independent States.

ARTICLE 2

The high contracting parties guarantee their citizens equal rights and freedoms regardless of nationality or other distinctions. Each of the high contracting parties guarantees the citizens of the other parties, and also persons without citizenship that live on its territory, civil, political, social, economic and cultural rights and freedoms in accordance with generally recognized international norms of human rights, regardless of national allegiance or other distinctions.

ARTICLE 3

The high contracting parties, desiring to promote the expression, preservation and development of the eth-

nic, cultural, linguistic and religious individuality of the national minorities resident on their territories, and that of the unique ethno-cultural regions that have come into being, take them under their protection.

ARTICLE 4

The high contracting parties will develop the equal and mutually beneficial co-operation of their peoples and states in the spheres of politics, the economy, culture, education, public health, protection of the environment, science and trade and in the humanitarian and other spheres, will promote the broad exchange of information and will conscientiously and unconditionally observe reciprocal obligations.

The parties consider it a necessity to conclude agreements on co-operation in the above spheres.

ARTICLE 5

The high contracting parties recognize and respect one another's territorial integrity and the inviolability of existing borders within the Commonwealth.

They guarantee openness of borders, freedom of movement for citizens and of transmission of information within the Commonwealth.

ARTICLE 6

The member-states of the Commonwealth will co-operate in safeguarding international peace and security and in implementing effective measures for reducing weapons and military spending. They seek the elimination of all nuclear weapons and universal total disarmament under strict international control.

The parties will respect one another's aspiration to attain the status of a non-nuclear zone and a neutral state.

The member-states of the community will preserve and maintain under united command a common military-strategic space, including unified control over nuclear weapons, the procedure for implementing which is regulated by a special agreement.

They also jointly guarantee the necessary conditions for the stationing and functioning of and for material and social provision for the strategic armed forces. The parties contract to pursue a harmonized policy on questions of social protection and pension provision for members of the services and their families.

ARTICLE 7

The high contracting parties recognize that within the sphere of their activities, implemented on the equal basis through the common coordinating institutions of the Commonwealth, will be the following:

- co-operation in the sphere of foreign policy;
- co-operation in forming and developing the united economic area, the common European and Eurasian markets, in the area of customs policy;
- co-operation in developing transport and communication systems;
- co-operation in preservation of the environment, and participation in creating a comprehensive international system of ecological safety;
- migration policy issues;
- and fighting organized crime.

ARTICLE 8

The parties realize the planetary character of the Chernobyl catastrophe and pledge themselves to unite and co-ordinate their efforts in minimizing and overcoming its consequences.

To these ends they have decided to conclude a special agreement which will take consider [sic] the gravity of the consequences of this catastrophe.

ARTICLE 9

The disputes regarding interpretation and application of the norms of this agreement are to be solved by way of negotiations between the appropriate bodies, and

when necessary, at the level of heads of the governments and states.

ARTICLE 10

Each of the high contracting parties reserved the right to suspend the validity of the present agreement or individual articles thereof, after informing the parties to the agreement of this a year in advance.

The clauses of the present agreement may be addedded to or amended with the common consent of the high contracting parties.

ARTICLE 11

From the moment that the present agreement is signed, the norms of third states, including the former USSR, are not permitted to be implemented on the territories of the signatory states.

ARTICLE 12

The high contracting parties guarantee the fulfillment of the international obligations binding upon them from the treaties and agreements of the former USSR.

ARTICLE 13

The present agreement does not affect the obligations of the high contracting parties in regard to third states.

The present agreement is open for all member-states of the former USSR to join, and also for other states which share the goals and principles of the present agreement.

ARTICLE 14

The city of Minsk is the official location of the coordinating bodies of the Commonwealth.

The activities of bodies of the former USSR are discontinued on the territories of the member-states of the Commonwealth.

Agreement on Strategic Forces Concluded between the 11 members of the Commonwealth of Independent States on December 30, 1991

PREAMBLE

Guided by the necessity for a coordinated and organized solution to issues in the sphere of the control of

the strategic forces and the single control over nuclear weapons, the Republic of Armenia, the Republic of Azerbaijan, the Republic of Belarus, the Republic of Kazakhstan, the Republic of Kyrgyzstan, the Republic of Moldova, the Russian Federation, the Republic of Tajikistan, the Republic of Turkmenistan, the Republic of Ukraine and the Republic of Uzbekistan, subsequently referred to as 'the member-states of the Commonwealth,' have agreed on the following:

ARTICLE 1

The term 'strategic forces' means: groupings, formations, units, institutions, the military training institutes for the strategic missile troops, for the air force, for the navy and for the air defenses; the directorates of the Space Command and of the airborne troops, and of strategic and operational intelligence, and the nuclear technical units and also the forces, equipment and other military facilities designed for the control and maintenance of the strategic forces of the former USSR (the schedule is to be determined for each state participating in the Commonwealth in a separate protocol).

ARTICLE 2

The member-states of the Commonwealth undertake to observe the international treaties of the former USSR, to pursue a coordinated policy in the area of international security, disarmament and arms control, and to participate in the preparation and implementation of programs for reductions in arms and armed forces. The member-states of the Commonwealth are immediately entering into negotiations with one another and also with other states which were formerly part of the USSR, but which have not joined the commonwealth, with the aim of ensuring guarantees and developing mechanisms for implementing the aforementioned treaties.

ARTICLE 3

The member-states of the Commonwealth recognize the need for joint command of strategic forces and for maintaining unified control of nuclear weapons, and other types of weapons of mass destruction, of the armed forces of the former USSR.

ARTICLE 4

Until the complete elimination of nuclear weapons, the decision on the need for their use is taken by the president of the Russian Federation in agreement with the heads of the Republic of Belarus, the Republic of Kazakhstan and the Republic of Ukraine, and in consultation with the heads of the other member-states of the Commonwealth.

Until their destruction in full, nuclear weapons located on the territory of the Republic of Ukraine shall be under the control of the Combined Strategic Forces Command, with the aim that they not be used and be dismantled by the end of 1994, including tactical nuclear weapons by 1 July 1992.

The process of destruction of nuclear weapons located on the territory of the Republic of Belarus and the Republic of Ukraine shall take place with the participation of the Republic of Belarus, the Russian Federation and the Republic of Ukraine under the joint control of the Commonwealth states.

ARTICLE 5

The status of strategic forces and the procedure for service in them shall be defined in a special agreement.

ARTICLE 6

This agreement shall enter into force from the moment of its signing and shall be terminated by decision of the signatory states or the Council of Heads of State of the Commonwealth.

This agreement shall cease to apply to a signatory state from whose territory strategic forces or nuclear weapons are withdrawn.

165. Strategic Arms Reduction Treaty II, 3 January 1993

Introduction

Signed on 3 January 1993 by President George H. W. Bush and Russian President Boris Yeltsin, the Strategic Arms Reduction Treaty II (also known as START II) was the most drastic arms reduction treaty to date, emphasizing that the Cold War had indeed come to an end with the fall of the Soviet Union two years earlier. Although the U.S. Senate ratified the treaty on 26 January 1996, the Russian Duma did not give its assent until 14 April 2000. The treaty went into effect on 5 December 2001. START II was intended to eliminate all heavy intercontinental ballistic missiles (ICBMs) and all other multiple-warhead (MIRVed) ICBMs. It also imposed cuts in the signatory powers' arsenals of strategic nuclear weapons by two-thirds from those they possessed when START talks began. When the first phase ended, each side was expected to have reduced its total stockpile of strategic nuclear weapons to 3,800–4,250, falling to 3,000–3,500 by the end of the second stage, of which none might be MIRVs. Submarine-launched ballistic missiles (SLBMs) were to be reduced to 1,700–1,750 for each side. Progress under this treaty was less swift than anticipated. In 1997 the first stage, initially expected to end in December 2001, was extended to December 2004, and the second state was extended from January 2003 to December 2007.

Primary Source

TREATY BETWEEN THE UNITED STATES OF AMERICA AND THE RUSSIAN FEDERATION ON FURTHER REDUCTION AND LIMITATION OF STRATEGIC OFFENSIVE ARMS

The United States of America and the Russian Federation, hereinafter referred to as the Parties,

Reaffirming their obligations under the Treaty Between the United States of America and the Union of Soviet Socialist Republics on the Reduction and Limitation of Strategic Offensive Arms of July 31, 1991, hereinafter referred to as the START Treaty,

Have agreed as follows:

ARTICLE I

1. Each Party shall reduce and limit its intercontinental ballistic missiles (ICBMs) and ICBM launchers, submarine-launched ballistic missiles (SLBMs) and SLBM launchers, heavy bombers, ICBM warheads, SLBM warheads, and heavy bomber armaments, so that seven years after entry into force of the START Treaty and thereafter, the aggregate number for each Party, as counted in accordance with Articles III and IV of this Treaty, does not exceed, for warheads attributed to deployed ICBMs, deployed SLBMs, and deployed heavy bombers, a number between 3800 and 4250 or such lower number as each Party shall decide for itself, but in no case shall such number exceed 4250.

2. Within the limitations provided for in paragraph 1 of this Article, the aggregate numbers for each Party shall not exceed:

- (a) 2160, for warheads attributed to deployed SLBMs;
- (b) 1200, for warheads attributed to deployed ICBMs of types to which more than one warhead is attributed; and
- (c) 650, for warheads attributed to deployed heavy ICBMs.

3. Upon fulfillment of the obligations provided for in paragraph 1 of this Article, each Party shall further reduce and limit its ICBMs and ICBM launchers, SLBMs and SLBM launchers, heavy bombers, ICBM warheads, SLBM warheads, and heavy bomber armaments, so that no later than January 1, 2003, and thereafter, the aggregate number for each Party, as counted in accordance with Articles III and IV of this Treaty, does not exceed, for warheads attributed to deployed ICBMs, deployed SLBMs, and deployed heavy bombers, a number between 3000 and 3500 or such lower number as each Party shall decide for itself, but in no case shall such number exceed 3500.

4. Within the limitations provided for in paragraph 3 of this Article, the aggregate numbers for each Party shall not exceed:

- (a) a number between 1700 and 1750, for warheads attributed to deployed SLBMs or such lower

number as each Party shall decide for itself, but in no case shall such number exceed 1750;

- (b) zero, for warheads attributed to deployed ICBMs of types to which more than one warhead is attributed; and
- (c) zero, for warheads attributed to deployed heavy ICBMs.

5. The process of reductions provided for in paragraphs 1 and 2 of this Article shall begin upon entry into force of this Treaty, shall be sustained throughout the reductions period provided for in paragraph 1 of this Article, and shall be completed no later than seven years after entry into force of the START Treaty. Upon completion of these reductions, the Parties shall begin further reductions provided for in paragraphs 3 and 4 of this Article, which shall also be sustained throughout the reductions period defined in accordance with paragraphs 3 and 6 of this Article.

6. Provided that the Parties conclude, within one year after entry into force of this Treaty, an agreement on a program of assistance to promote the fulfillment of the provisions of this Article, the obligations provided for in paragraphs 3 and 4 of this Article and in Article II of this Treaty shall be fulfilled by each Party no later than December 31, 2000.

[. . .]

ARTICLE IV

[. . .]

7. Each Party shall have the right to reorient to a conventional role heavy bombers equipped for nuclear armaments other than long-range nuclear ALCMS. For the purposes of this Treaty, heavy bombers reoriented to a conventional role are those heavy bombers specified by a Party from among its heavy bombers equipped for nuclear armaments other than long-range nuclear ALCMs that have never been accountable under the START Treaty as heavy bombers equipped for long-range nuclear ALCMS. The reorienting Party shall provide to the other Party a notification of its intent to reorient a heavy bomber to a conventional role no less than 90 days in advance of such reorientation. No conversion procedures shall be required

for such a heavy bomber to be specified as a heavy bomber reoriented to a conventional role.

8. Heavy bombers reoriented to a conventional role shall be subject to the following requirements:

- (a) the number of such heavy bombers shall not exceed 100 at any one time;
- (b) such heavy bombers shall be based separately from heavy bombers with nuclear roles;
- (c) such heavy bombers shall be used only for non-nuclear missions. Such heavy bombers shall not be used in exercises for nuclear missions, and their aircrews shall not train or exercise for such missions; and
- (d) heavy bombers reoriented to a conventional role shall have differences from other heavy bombers of that type or variant of a type that are observable by national technical means of verification and visible during inspection.

9. Each Party shall have the right to return to a nuclear role heavy bombers that have been reoriented in accordance with paragraph 7 of this Article to a conventional role. The Party carrying out such action shall provide to the other Party through diplomatic channels notification of its intent to return a heavy bomber to a nuclear role no less than 90 days in advance of taking such action. Such a heavy bomber returned to a nuclear role shall not subsequently be reoriented to a conventional role.

Heavy bombers reoriented to a conventional role that are subsequently returned to a nuclear role shall have differences observable by national technical means of verification and visible during inspection from other heavy bombers of that type and variant of a type that have not been reoriented to a conventional role, as well as from heavy bombers of that type and variant of a type that are still reoriented to a conventional role.

166. Samuel P. Huntington: "The Clash of Civilizations," Summer 1973

Introduction

Once the Cold War had ended, political scientists and international relations specialists sought to discover what were likely to be the guiding principles of the post-Cold War world. In 1989 the youthful diplomat Francis Fukuyama suggested that history had effectively come to an end with the triumph of liberal democracy and market capitalism and that there would be no further major conflicts among big powers. In an article published in 1993 in the prestigious journal *Foreign Affairs* that he subsequently expanded into a book, Samuel P. Huntington, a Harvard political scientist, offered a far more pessimistic vision of the future international system, arguing that it would be dominated by a "clash of civilizations" between "the West and the rest." The most important "fault lines" in the world ran, he thought, along cultural lines. Whereas twentieth-century international conflicts had followed ideological differences, those of the next century would pit Western Judeo-Christian civilization against "Islamic, Confucian, Japanese, Hindu, Buddhist, or Orthodox cultures." Huntington believed that elites in non-Western countries no longer sought to adopt Western liberal values but were embracing their own civilizations' values. He foresaw non-Western states banding together to resist Western domination. Some critics charged that Huntington's categories were simplistic and that many of the differences he discerned corresponded to divisions between rich and poor states that the Cold War had temporarily masked. To many observers, however, the 11 September 2001 attacks by radical Islamic terrorists on the World Trade Center in New York and the Pentagon building in Washington and subsequent Muslim bombings in Madrid and London, together with President George W. Bush's declaration that the guiding principle of U.S. foreign policy had become the "war on terror," seemed to confirm Huntington's prediction that rivalry between Islam and the West was likely to become the defining feature of the new international system.

Primary Source

[. . .]

THE NATURE OF CIVILIZATIONS

During the cold war the world was divided into the First, Second and Third Worlds. Those divisions are no longer relevant. It is far more meaningful now to group countries not in terms of their political or economic systems or in terms of their level of economic development but rather in terms of their culture and civilization.

What do we mean when we talk of a civilization? A civilization is a cultural entity. Villages, regions, ethnic groups, nationalities, religious groups, all have distinct cultures at different levels of cultural heterogeneity. The culture of a village in southern Italy may be different from that of a village in northern Italy, but both will share in a common Italian culture that distinguishes them from German villages. European communities, in turn, will share cultural features that distinguish them from Arab or Chinese communities. Arabs, Chinese and

Westerners, however, are not part of any broader cultural entity. They constitute civilizations. A civilization is thus the highest cultural grouping of people and the broadest level of cultural identity people have short of that which distinguishes humans from other species. It is defined both by common objective elements, such as language, history, religion, customs, institutions, and by the subjective self-identification of people. People have levels of identity: a resident of Rome may define himself with varying degrees of intensity as a Roman, an Italian, a Catholic, a Christian, a European, a Westerner. The civilization to which he belongs is the broadest level of identification with which he intensely identifies. People can and do redefine their identities and, as a result, the composition and boundaries of civilizations change.

Civilizations may involve a large number of people, as with China ("a civilization pretending to be a state," as Lucian Pye put it), or a very small number of people, such as the Anglophone Caribbean. A civilization may include several nation states, as is the case with West-

ern, Latin American and Arab civilizations, or only one, as is the case with Japanese civilization. Civilizations obviously blend and overlap, and may include subcivilizations. Western civilization has two major variants, European and North American, and Islam has its Arab, Turkic and Malay subdivisions. Civilizations are nonetheless meaningful entities, and while the lines between them are seldom sharp, they are real. Civilizations are dynamic; they rise and fall; they divide and merge. And, as any student of history knows, civilizations disappear and are buried in the sands of time.

Westerners tend to think of nation states as the principal actors in global affairs. They have been that, however, for only a few centuries. The broader reaches of human history have been the history of civilizations. In *A Study of History*, Arnold Toynbee identified 21 major civilizations; only six of them exist in the contemporary world.

WHY CIVILIZATIONS WILL CLASH

Civilization identity will be increasingly important in the future, and the world will be shaped in large measure by the interactions among seven or eight major civilizations. These include Western, Confucian, Japanese, Islamic, Hindu, Slavic-Orthodox, Latin American and possibly African civilization. The most important conflicts of the future will occur along the cultural fault lines separating these civilizations from one another.

Why will this be the case?

First, differences among civilizations are not only real; they are basic. Civilizations are differentiated from each other by history, language, culture, tradition and, most important, religion. The people of different civilizations have different views on the relations between God and man, the individual and the group, the citizen and the state, parents and children, husband and wife, as well as differing views of the relative importance of rights and responsibilities, liberty and authority, equality and hierarchy. These differences are the product of centuries. They will not soon disappear. They are far more fundamental than differences among political ideologies and political regimes. Differences do not necessarily mean conflict, and conflict does not necessarily mean violence. Over the centuries, however, dif-

ferences among civilizations have generated the most prolonged and the most violent conflicts.

Second, the world is becoming a smaller place. The interactions between peoples of different civilizations are increasing; these increasing interactions intensify civilization consciousness and awareness of differences between civilizations and commonalities within civilizations. North African immigration to France generates hostility among Frenchmen and at the same time increased receptivity to immigration by “good” European Catholic Poles. Americans react far more negatively to Japanese investment than to larger investments from Canada and European countries. Similarly, as Donald Horowitz has pointed out, “An Ibo may be . . . an Owerri Ibo or an Onitsha Ibo in what was the Eastern region of Nigeria. In Lagos, he is simply an Ibo. In London, he is a Nigerian. In New York, he is an African.” The interactions among peoples of different civilizations enhance the civilization-consciousness of people that, in turn, invigorates differences and animosities stretching or thought to stretch back deep into history.

Third, the processes of economic modernization and social change throughout the world are separating people from longstanding local identities. They also weaken the nation state as a source of identity. In much of the world religion has moved in to fill this gap, often in the form of movements that are labeled “fundamentalist.” Such movements are found in Western Christianity, Judaism, Buddhism and Hinduism, as well as in Islam. In most countries and most religions the people active in fundamentalist movements are young, college-educated, middle-class technicians, professionals and business persons. The “unsecularization of the world,” George Weigel has remarked, “is one of the dominant social facts of life in the late twentieth century.” The revival of religion, “la revanche de Dieu,” as Gilles Kepel labeled it, provides a basis for identity and commitment that transcends national boundaries and unites civilizations.

Fourth, the growth of civilization-consciousness is enhanced by the dual role of the West. On the one hand, the West is at a peak of power. At the same time, however, and perhaps as a result, a return to the roots

phenomenon is occurring among non-Western civilizations. Increasingly one hears references to trends toward a turning inward and "Asianization" in Japan, the end of the Nehru legacy and the "Hinduization" of India, the failure of Western ideas of socialism and nationalism and hence "re-Islamization" of the Middle East, and now a debate over Westernization versus Russianization in Boris Yeltsin's country. A West at the peak of its power confronts non-Wests that increasingly have the desire, the will and the resources to shape the world in non-Western ways.

In the past, the elites of non-Western societies were usually the people who were most involved with the West, had been educated at Oxford, the Sorbonne or Sandhurst, and had absorbed Western attitudes and values. At the same time, the populace in non-Western countries often remained deeply imbued with the indigenous culture. Now, however, these relationships are being reversed. A de-Westernization and indigenization of elites is occurring in many non-Western countries at the same time that Western, usually American, cultures, styles and habits become more popular among the mass of the people.

Fifth, cultural characteristics and differences are less mutable and hence less easily compromised and resolved than political and economic ones. In the former Soviet Union, communists can become democrats, the rich can become poor and the poor rich, but Russians cannot become Estonians and Azeris cannot become Armenians. In class and ideological conflicts, the key question was "Which side are you on?" and people could and did choose sides and change sides. In conflicts between civilizations, the question is "What are you?" That is a given that cannot be changed. And as we know, from Bosnia to the Caucasus to the Sudan, the wrong answer to that question can mean a bullet in the head. Even more than ethnicity, religion discriminates sharply and exclusively among people. A person can be half-French and half-Arab and simultaneously even a citizen of two countries. It is more difficult to be half-Catholic and half-Muslim.

Finally, economic regionalism is increasing. The proportions of total trade that were intraregional rose be-

tween 1980 and 1989 from 51 percent to 59 percent in Europe, 33 percent to 37 percent in East Asia, and 32 percent to 36 percent in North America. The importance of regional economic blocs is likely to continue to increase in the future. On the one hand, successful economic regionalism will reinforce civilization-consciousness. On the other hand, economic regionalism may succeed only when it is rooted in a common civilization. The European Community rests on the shared foundation of European culture and Western Christianity. The success of the North American Free Trade Area depends on the convergence now underway of Mexican, Canadian and American cultures. Japan, in contrast, faces difficulties in creating a comparable economic entity in East Asia because Japan is a society and civilization unique to itself. However strong the trade and investment links Japan may develop with other East Asian countries, its cultural differences with those countries inhibit and perhaps preclude its promoting regional economic integration like that in Europe and North America.

Common culture, in contrast, is clearly facilitating the rapid expansion of the economic relations between the People's Republic of China and Hong Kong, Taiwan, Singapore and the overseas Chinese communities in other Asian countries. With the Cold War over, cultural commonalities increasingly overcome ideological differences, and mainland China and Taiwan move closer together. If cultural commonality is a prerequisite for economic integration, the principal East Asian economic bloc of the future is likely to be centered on China. This bloc is, in fact, already coming into existence.

[. . .]

Culture and religion also form the basis of the Economic Cooperation Organization, which brings together ten non-Arab Muslim countries: Iran, Pakistan, Turkey, Azerbaijan, Kazakhstan, Kyrgyzstan, Turkmenistan, Tadjikistan, Uzbekistan and Afghanistan. One impetus to the revival and expansion of this organization, founded originally in the 1960 by Turkey, Pakistan and Iran, is the realization by the leaders of several of these countries that they had no chance of admission to the European Community. Similarly, Caricom, the Central

American Common Market and Mercosur rest on common cultural foundations. Efforts to build a broader Caribbean-Central American economic entity bridging the Anglo-Latin divide, however, have to date failed.

As people define their identity in ethnic and religious terms, they are likely to see an “us” versus “them” relation existing between themselves and people of different ethnicity or religion. The end of ideologically defined states in Eastern Europe and the former Soviet Union permits traditional ethnic identities and animosities to come to the fore. Differences in culture and religion create differences over policy issues, ranging from human rights to immigration to trade and commerce to the environment. Geographical propinquity gives rise to conflicting territorial claims from Bosnia to Mindanao. Most important, the efforts of the West to promote its values of democracy and liberalism as universal values, to maintain its military predominance and to advance its economic interests engender countering responses from other civilizations. Decreasingly able to mobilize support and form coalitions on the basis of ideology, governments and groups will increasingly attempt to mobilize support by appealing to common religion and civilization identity.

The clash of civilizations thus occurs at two levels. At the micro-level, adjacent groups along the fault lines between civilizations struggle, often violently, over the control of territory and each other. At the macro-level, states from different civilizations compete for relative military and economic power, struggle over the control of international institutions and third parties, and competitively promote their particular political and religious values.

THE FAULT LINES BETWEEN CIVILIZATIONS

The fault lines between civilizations are replacing the political and ideological boundaries of the Cold War as the flash points for crisis and bloodshed. The Cold War began when the Iron Curtain divided Europe politically and ideologically. The Cold War ended with the end of the Iron Curtain. As the ideological division of Europe has disappeared, the cultural division of Europe between Western Christianity, on the one hand, and

Orthodox Christianity and Islam, on the other, has re-emerged. The most significant dividing line in Europe, as William Wallace has suggested, may well be the eastern boundary of Western Christianity in the year 1500. This line runs along what are now the boundaries between Finland and Russia and between the Baltic states and Russia, cuts through Belarus and Ukraine separating the more Catholic western Ukraine from Orthodox eastern Ukraine, swings westward separating Transylvania from the rest of Romania, and then goes through Yugoslavia almost exactly along the line now separating Croatia and Slovenia from the rest of Yugoslavia. In the Balkans this line, of course, coincides with the historic boundary between the Hapsburg and Ottoman empires. The peoples to the north and west of this line are Protestant or Catholic; they shared the common experiences of European history—feudalism, the Renaissance, the Reformation, the Enlightenment, the French Revolution, the Industrial Revolution; they are generally economically better off than the peoples to the east; and they may now look forward to increasing involvement in a common European economy and to the consolidation of democratic political systems. The peoples to the east and south of this line are Orthodox or Muslim; they historically belonged to the Ottoman or Tsarist empires and were only lightly touched by the shaping events in the rest of Europe; they are generally less advanced economically; they seem much less likely to develop stable democratic political systems. The Velvet Curtain of culture has replaced the Iron Curtain of ideology as the most significant dividing line in Europe. As the events in Yugoslavia show, it is not only a line of difference; it is also at times a line of bloody conflict.

Conflict along the fault line between Western and Islamic civilizations has been going on for 1,300 years. After the founding of Islam, the Arab and Moorish surge west and north only ended at Tours in 732. From the eleventh to the thirteenth century the Crusaders attempted with temporary success to bring Christianity and Christian rule to the Holy Land. From the fourteenth to the seventeenth century, the Ottoman Turks reversed the balance, extended their sway over the Middle East and the Balkans, captured Constantinople, and twice laid siege to Vienna. In the nineteenth

and early twentieth centuries as Ottoman power declined Britain, France, and Italy established Western control over most of North Africa and the Middle East.

After World War II, the West, in turn, began to retreat; the colonial empires disappeared; first Arab nationalism and then Islamic fundamentalism manifested themselves; the West became heavily dependent on the Persian Gulf countries for its energy; the oil-rich Muslim countries became money-rich and, when they wished to, weapons-rich. Several wars occurred between Arabs and Israel (created by the West). France fought a bloody and ruthless war in Algeria for most of the 1950s; British and French forces invaded Egypt in 1956; American forces went into Lebanon in 1958; subsequently American forces returned to Lebanon, attacked Libya, and engaged in various military encounters with Iran; Arab and Islamic terrorists, supported by at least three Middle Eastern governments, employed the weapon of the weak and bombed Western planes and installations and seized Western hostages. This warfare between Arabs and the West culminated in 1990, when the United States sent a massive army to the Persian Gulf to defend some Arab countries against aggression by another. In its aftermath NATO planning is increasingly directed to potential threats and instability along its "southern tier."

This centuries-old military interaction between the West and Islam is unlikely to decline. It could become more virulent. The Gulf War left some Arabs feeling proud that Saddam Hussein had attacked Israel and stood up to the West. It also left many feeling humiliated and resentful of the West's military presence in the Persian Gulf, the West's overwhelming military dominance, and their apparent inability to shape their own destiny. Many Arab countries, in addition to the oil exporters, are reaching levels of economic and social development where autocratic forms of government become inappropriate and efforts to introduce democracy become stronger. Some openings in Arab political systems have already occurred. The principal beneficiaries of these openings have been Islamist movements. In the Arab world, in short, Western democracy strengthens anti-Western political forces. This may be a passing phenomenon, but it surely complicates relations between Islamic countries and the West.

[. . .]

The interactions between civilizations vary greatly in the extent to which they are likely to be characterized by violence. Economic competition clearly predominates between the American and European subcivilizations of the West and between both of them and Japan. On the Eurasian continent, however, the proliferation of ethnic conflict, epitomized at the extreme in "ethnic cleansing," has not been totally random. It has been most frequent and most violent between groups belonging to different civilizations. In Eurasia the great historic fault lines between civilizations are once more aflame. This is particularly true along the boundaries of the crescent-shaped Islamic bloc of nations from the bulge of Africa to central Asia. Violence also occurs between Muslims, on the one hand, and Orthodox Serbs in the Balkans, Jews in Israel, Hindus in India, Buddhists in Burma and Catholics in the Philippines. Islam has bloody borders.

CIVILIZATION RALLYING: THE KIN-COUNTRY SYNDROME

Groups or states belonging to one civilization that become involved in war with people from a different civilization naturally try to rally support from other members of their own civilization. As the post-Cold War world evolves, civilization commonality, what H. D. S. Greenway has termed the "kin-country" syndrome, is replacing political ideology and traditional balance of power considerations as the principal basis for cooperation and coalitions. It can be seen gradually emerging in the post-Cold War conflicts in the Persian Gulf, the Caucasus and Bosnia. None of these was a full-scale war between civilizations, but each involved some elements of civilizational rallying, which seemed to become more important as the conflict continued and which may provide a foretaste of the future.

[. . .]

Civilization rallying to date has been limited, but it has been growing, and it clearly has the potential to spread much further. As the conflicts in the Persian Gulf, the Caucasus and Bosnia continued, the positions of nations and the cleavages between them increasingly were along civilizational lines. Populist politicians, religious

leaders and the media have found it a potent means of arousing mass support and of pressuring hesitant governments. In the coming years, the local conflicts most likely to escalate into major wars will be those, as in Bosnia and the Caucasus, along the fault lines between civilizations. The next world war, if there is one, will be a war between civilizations.

THE WEST VERSUS THE REST

The west is now at an extraordinary peak of power in relation to other civilizations. Its superpower opponent has disappeared from the map. Military conflict among Western states is unthinkable, and Western military power is unrivaled. Apart from Japan, the West faces no economic challenge. It dominates international political and security institutions and with Japan international economic institutions. Global political and security issues are effectively settled by a directorate of the United States, Britain and France, world economic issues by a directorate of the United States, Germany and Japan, all of which maintain extraordinarily close relations with each other to the exclusion of lesser and largely non-Western countries. Decisions made at the U.N. Security Council or in the International Monetary Fund that reflect the interests of the West are presented to the world as reflecting the desires of the world community. The very phrase “the world community” has become the euphemistic collective noun (replacing “the Free World”) to give global legitimacy to actions reflecting the interests of the United States and other Western powers. Through the IMF and other international economic institutions, the West promotes its economic interests and imposes on other nations the economic policies it thinks appropriate. In any poll of non-Western peoples, the IMF undoubtedly would win the support of finance ministers and a few others, but get an overwhelmingly unfavorable rating from just about everyone else, who would agree with Georgy Arbatov’s characterization of IMF officials as “neo-Bolsheviks who love expropriating other people’s money, imposing undemocratic and alien rules of economic and political conduct and stifling economic freedom.”

Western domination of the U.N. Security Council and its decisions, tempered only by occasional abstention by China, produced U.N. legitimation of the West’s use

of force to drive Iraq out of Kuwait and its elimination of Iraq’s sophisticated weapons and capacity to produce such weapons. It also produced the quite unprecedented action by the United States, Britain and France in getting the Security Council to demand that Libya hand over the Pan Am 103 bombing suspects and then to impose sanctions when Libya refused. After defeating the largest Arab army, the West did not hesitate to throw its weight around in the Arab world. The West in effect is using international institutions, military power and economic resources to run the world in ways that will maintain Western predominance, protect Western interests and promote Western political and economic values.

[. . .]

The central axis of world politics in the future is likely to be, in Kishore Mahbubani’s phrase, the conflict between “the West and the Rest” and the responses of non-Western civilizations to Western power and values. (Kishore Mahbubani, “The West and the Rest,” *The National Interest*, Summer 1992.) Those responses generally take one or a combination of three forms. At one extreme, non-Western states can, like Burma and North Korea, attempt to pursue a course of isolation, to insulate their societies from penetration or “corruption” by the West, and, in effect, to opt out of participation in the Western-dominated global community. The costs of this course, however, are high, and few states have pursued it exclusively. A second alternative, the equivalent of “band-wagoning” in international relations theory, is to attempt to join the West and accept its values and institutions. The third alternative is to attempt to “balance” the West by developing economic and military power and cooperating with other non-Western societies against the West, while preserving indigenous values and institutions; in short, to modernize but not to Westernize.

[. . .]

IMPLICATIONS FOR THE WEST

This article does not argue that civilization identities will replace all other identities, that nation states will disappear, that each civilization will become a single coherent political entity, that groups within a civilization

will not conflict with and even fight each other. This paper does set forth the hypotheses that differences between civilizations are real and important; civilization-consciousness is increasing; conflict between civilizations will supplant ideological and other forms of conflict as the dominant global form of conflict; international relations, historically a game played out within Western civilization, will increasingly be de-Westernized and become a game in which non-Western civilizations are actors and not simply objects; successful political, security and economic international institutions are more likely to develop within civilizations than across civilizations; conflicts between groups in different civilizations will be more frequent, more sustained and more violent than conflicts between groups in the same civilization; violent conflicts between groups in different civilizations are the most likely and most dangerous source of escalation that could lead to global wars; the paramount axis of world politics will be the relations between “the West and the Rest”; the elites in some torn non-Western countries will try to make their countries part of the West, but in most cases face major obstacles to accomplishing this; a central focus of conflict for the immediate future will be between the West and several Islamic-Confucian states.

This is not to advocate the desirability of conflicts between civilizations. It is to set forth descriptive hypotheses as to what the future may be like. If these are plausible hypotheses, however, it is necessary to consider their implications for Western policy. These implications should be divided between short-term advantage and long-term accommodation. In the short term it is clearly in the interest of the West to promote greater cooperation and unity within its own civilization, particularly between its European and North American components; to incorporate into the West societies in Eastern Europe and Latin America whose cultures are close to those of the West; to promote and maintain cooperative relations with Russia and Japan; to prevent escalation of local inter-civilization conflicts into major inter-civilization wars; to limit the expan-

sion of the military strength of Confucian and Islamic states; to moderate the reduction of Western military capabilities and maintain military superiority in East and Southwest Asia; to exploit differences and conflicts among Confucian and Islamic states; to support in other civilizations groups sympathetic to Western values and interests; to strengthen international institutions that reflect and legitimate Western interests and values and to promote the involvement of non-Western states in those institutions.

In the longer term other measures would be called for. Western civilization is both Western and modern. Non-Western civilizations have attempted to become modern without becoming Western. To date only Japan has fully succeeded in this quest. Non-Western civilizations will continue to attempt to acquire the wealth, technology, skills, machines and weapons that are part of being modern. They will also attempt to reconcile this modernity with their traditional culture and values. Their economic and military strength relative to the West will increase. Hence the West will increasingly have to accommodate these non-Western modern civilizations whose power approaches that of the West but whose values and interests differ significantly from those of the West. This will require the West to maintain the economic and military power necessary to protect its interests in relation to these civilizations. It will also, however, require the West to develop a more profound understanding of the basic religious and philosophical assumptions underlying other civilizations and the ways in which people in those civilizations see their interests. It will require an effort to identify elements of commonality between Western and other civilizations. For the relevant future, there will be no universal civilization, but instead a world of different civilizations, each of which will have to learn to coexist with the others.

167. Lawrence E. Walsh: Final Report of the Independent Counsel for Iran-Contra Matters, 1993

Introduction

One of the most damaging episodes for U.S. President Ronald Reagan, the Iran-Contra scandal seized Americans' attention during 1985–1987. It was revealed that the Reagan administration had secretly negotiated the sale of arms to Iran in the hope of winning the return of American hostages held by the Iranians in Lebanon and in order to finance aid to the Contra rebels, who were fighting the Marxist Sandinista government in Nicaragua. This action was in violation of the Boland Amendment, which prohibited aid to the Contras, and of stated U.S. policies not to negotiate with the Iranians. The matter was eventually turned over to Special Prosecutor Lawrence Walsh, who submitted the final report of his investigation to the U.S. House of Representatives on 4 August 1993. One of the major questions that Walsh had to investigate was the degree of Reagan administration involvement. It was White House officials, rather than the State Department, who conceived and implemented these activities. Reagan initially claimed to have been unaware of them but nonetheless took full responsibility for them, while Vice President George H. W. Bush also stated that he himself had been “out of the loop” on the subject. National Security Advisor Robert McFarlane, who had conceived the scheme as a means of improving relations with Iran and made a secret trip to Iran as part of the operation, tried but failed to commit suicide during the investigation. No hostages were freed as a result of these negotiations. McFarlane and his successor, John Poindexter, were both convicted of lying to Congress, but their sentences were overturned on appeal, as was that of Colonel Oliver North, a National Security Council (NSC) aide who had been heavily involved in the implementation of these schemes. Most of the other high-ranking officials whom Walsh indicted, including U.S. Secretary of Defense Caspar Weinberger, who had been accused of lying to and withholding information from Congress, were pardoned after Bush became president. The Iran-Contra scandal undoubtedly tarnished Reagan's second term in office, since the president had either deliberately misled the American people and broken various laws or else failed to exercise proper supervision over lower-level officials within his administration. In March 1987 Reagan spoke on national television, telling the American people that he regretted the situation and had been incorrect in stating earlier that the United States had not traded arms for hostages but that he believed his actions had been right. Reagan's approval ratings at one stage dropped to 46 percent but by the time he finished his presidency had rebounded to 63 percent. Some American politicians have since asserted that in the broader national interest they declined to pursue the Iran-Contra Affair as aggressively as might have been possible because they did not wish to bring down the first U.S. president to serve two uninterrupted terms in office since Dwight D. Eisenhower during the 1950s. The executive summary of the report prepared by Walsh was nonetheless a damning catalog of legal violations and abuses of power by a wide range of high-level Reagan administration officials.

Primary Source

EXECUTIVE SUMMARY

In October and November 1986, two secret U.S. Government operations were publicly exposed, potentially implicating Reagan Administration officials in illegal activities. These operations were the provision of assistance to the military activities of the Nicaraguan contra rebels during an October 1984 to October 1986 prohibition on such aid, and the sale of U.S. arms to Iran in contravention of stated U.S. policy and in possible violation of arms-export controls. In late November 1986,

Reagan Administration officials announced that some of the proceeds from the sale of U.S. arms to Iran had been diverted to the contras.

As a result of the exposure of these operations, Attorney General Edwin Meese III sought the appointment of an independent counsel to investigate and, if necessary, prosecute possible crimes arising from them.

The Special Division of the United States Court of Appeals for the District of Columbia Circuit appointed

Lawrence E. Walsh as Independent Counsel on December 19, 1986, and charged him with investigating:

- (1) the direct or indirect sale, shipment, or transfer since in or about 1984 down to the present, of military arms, materiel, or funds to the government of Iran, officials of that government, persons, organizations or entities connected with or purporting to represent that government, or persons located in Iran;
- (2) the direct or indirect sale, shipment, or transfer of military arms, materiel or funds to any government, entity, or person acting, or purporting to act as an intermediary in any transaction referred to above;
- (3) the financing or funding of any direct or indirect sale, shipment or transfer referred to above;
- (4) the diversion of proceeds from any transaction described above to or for any person, organization, foreign government, or any faction or body of insurgents in any foreign country, including, but not limited to Nicaragua;
- (5) the provision or coordination of support for persons or entities engaged as military insurgents in armed conflict with the government of Nicaragua since 1984.

This is the final report of that investigation.

OVERALL CONCLUSIONS

The investigations and prosecutions have shown that high-ranking Administration officials violated laws and executive orders in the Iran/contra matter.

Independent Counsel concluded that:

the sales of arms to Iran contravened United States Government policy and may have violated the Arms Export Control Act;

the provision and coordination of support to the contras violated the Boland Amendment ban on aid to military activities in Nicaragua;

the policies behind both the Iran and contra operations were fully reviewed and developed at the highest levels of the Reagan Administration;

although there was little evidence of National Security Council level knowledge of most of the actual

contra-support operations, there was no evidence that any NSC member dissented from the underlying policy of keeping the contras alive despite congressional limitations on contra support;

the Iran operations were carried out with the knowledge of, among others, President Ronald Reagan, Vice President George Bush, Secretary of State George P. Shultz, Secretary of Defense Caspar W. Weinberger, Director of Central Intelligence William J. Casey, and national security advisers Robert C. McFarlane and John M. Poindexter; of these officials, only Weinberger and Shultz dissented from the policy decision, and Weinberger eventually acquiesced by ordering the Department of Defense to provide the necessary arms; and

large volumes of highly relevant, contemporaneously created documents were systematically and willfully withheld from investigators by several Reagan Administration officials.

Following the revelation of these operations in October and November 1986, Reagan Administration officials deliberately deceived the Congress and the public about the level and extent of official knowledge of and support for these operations.

In addition, Independent Counsel concluded that the off-the-books nature of the Iran and contra operations gave line-level personnel the opportunity to commit money crimes.

PROSECUTIONS

In the course of Independent Counsel's investigation, 14 persons were charged with criminal violations. There were two broad classes of crimes charged: Operational crimes, which largely concerned the illegal use of funds generated in the course of the operations, and "cover-up" crimes, which largely concerned false statements and obstructions after the revelation of the operations. Independent Counsel did not charge violations of the Arms Export Control Act or Boland Amendment. Although apparent violations of these statutes provided the impetus for the cover-up, they are not criminal statutes and do not contain any enforcement provisions.

All of the individuals charged were convicted, except for one CIA official whose case was dismissed on

national security grounds and two officials who received unprecedented pre-trial pardons by President Bush following his electoral defeat in 1992. Two of the convictions were reversed on appeal on constitutional grounds that in no way cast doubt on the factual guilt of the men convicted. The individuals charged and the disposition of their cases are:

- (1) Robert C. McFarlane: pleaded guilty to four-counts of withholding information from Congress;
- (2) Oliver L. North: convicted of altering and destroying documents, accepting an illegal gratuity, and aiding and abetting in the obstruction of Congress; conviction reversed on appeal;
- (3) John M. Poindexter: convicted of conspiracy, false statements, destruction and removal of records, and obstruction of Congress; conviction reversed on appeal;
- (4) Richard V. Secord: pleaded guilty to making false statements to Congress;
- (5) Albert Hakim: pleaded guilty to supplementing the salary of North;
- (6) Thomas G. Clines: convicted of four counts of tax-related offenses for failing to report income from the operations;
- (7) Carl R. Channell: pleaded guilty to conspiracy to defraud the United States;
- (8) Richard R. Miller: pleaded guilty to conspiracy to defraud the United States;
- (9) Clair E. George: convicted of false statements and perjury before Congress;
- (10) Duane R. Clarridge: indicted on seven counts of perjury and false statements; pardoned before trial by President Bush;
- (11) Alan D. Fiers, Jr.: pleaded guilty to withholding information from Congress;
- (12) Joseph F. Fernandez: indicted on four counts of obstruction and false statements; case dismissed when Attorney General Richard L. Thornburgh refused to declassify information needed for his defense;
- (13) Elliott Abrams: pleaded guilty to withholding information from Congress;
- (14) Caspar W. Weinberger: charged with four counts of false statements and perjury; pardoned before trial by President Bush.

At the time President Bush pardoned Weinberger and Clarridge, he also pardoned George, Fiers, Abrams, and McFarlane.

THE BASIC FACTS OF IRAN/CONTRA

The Iran/contra affair concerned two secret Reagan Administration policies whose operations were coordinated by National Security Council staff. The Iran operation involved efforts in 1985 and 1986 to obtain the release of Americans held hostage in the Middle East through the sale of U.S. weapons to Iran, despite an embargo on such sales. The contra operations from 1984 through most of 1986 involved the secret governmental support of contra military and paramilitary activities in Nicaragua, despite congressional prohibition of this support.

The Iran and contra operations were merged when funds generated from the sale of weapons to Iran were diverted to support the contra effort in Nicaragua. Although this “diversion” may be the most dramatic aspect of Iran/contra, it is important to emphasize that both the Iran and contra operations, separately, violated United States policy and law. The ignorance of the “diversion” asserted by President Reagan and his Cabinet officers on the National Security Council in no way absolves them of responsibility for the underlying Iran and contra operations.

The secrecy concerning the Iran and contra activities was finally pierced by events that took place thousands of miles apart in the fall of 1986. The first occurred on October 5, 1986, when Nicaraguan government soldiers shot down an American cargo plane that was carrying military supplies to contra forces; the one surviving crew member, American Eugene Hasenfus, was taken into captivity and stated that he was employed by the CIA. A month after the Hasenfus shootdown, President Reagan’s secret sale of U.S. arms to Iran was reported by a Lebanese publication on November 3. The joining of these two operations was made public on November 25, 1986, when Attorney General Meese announced that Justice Department officials had discovered that some of the proceeds from the Iran arms sales had been diverted to the contras.

When these operations ended, the exposure of the Iran/contra affair generated a new round of illegality.

Beginning with the testimony of Elliott Abrams and others in October 1986 and continuing through the public testimony of Caspar W. Weinberger on the last day of the congressional hearings in the summer of 1987, senior Reagan Administration officials engaged in a concerted effort to deceive Congress and the public about their knowledge of and support for the operations.

Independent Counsel has concluded that the President's most senior advisers and the Cabinet members on the National Security Council participated in the strategy to make National Security staff members McFarlane, Poindexter and North the scapegoats whose sacrifice would protect the Reagan Administration in its final two years. In an important sense, this strategy succeeded. Independent Counsel discovered much of the best evidence of the cover-up in the final year of active investigation, too late for most prosecutions.

[. . .]

AGENCY SUPPORT OF THE OPERATIONS

Following the convictions of those who were most central to the Iran/contra operations, Independent Counsel's investigation focused on the supporting roles played by Government officials in other agencies and the supervisory roles of the NSC principals. The investigation showed that Administration officials who claimed initially that they had little knowledge about the Iran arms sales or the illegal contra-resupply operation North directed were much better informed than they professed to be. The Office of Independent Counsel obtained evidence that Secretaries Weinberger and Shultz and White House Chief of Staff Donald T. Regan, among others, held back information that would have helped Congress obtain a much clearer view of the scope of the Iran/contra matter. Contemporaneous notes of Regan and Weinberger, and those dictated by Shultz, were withheld until they were obtained by Independent Counsel in 1991 and 1992.

THE WHITE HOUSE AND OFFICE OF THE VICE PRESIDENT

As the White House section of this report describes in detail, the investigation found no credible evidence

that President Reagan violated any criminal statute. The OIC could not prove that Reagan authorized or was aware of the diversion or that he had knowledge of the extent of North's control of the contra-resupply network. Nevertheless, he set the stage for the illegal activities of others by encouraging and, in general terms, ordering support of the contras during the October 1984 to October 1986 period when funds for the contras were cut off by the Boland Amendment, and in authorizing the sale of arms to Iran, in contravention of the U.S. embargo on such sales. The President's disregard for civil laws enacted to limit presidential actions abroad specifically the Boland Amendment, the Arms Export Control Act and congressional-notification requirements in covert-action laws created a climate in which some of the Government officers assigned to implement his policies felt emboldened to circumvent such laws.

President Reagan's directive to McFarlane to keep the contras alive "body and soul" during the Boland cut-off period was viewed by North, who was charged by McFarlane to carry out the directive, as an invitation to break the law. Similarly, President Reagan's decision in 1985 to authorize the sale of arms to Iran from Israeli stocks, despite warnings by Weinberger and Shultz that such transfers might violate the law, opened the way for Poindexter's subsequent decision to authorize the diversion. Poindexter told Congress that while he made the decision on his own and did not tell the President, he believed the President would have approved. North testified that he believed the President authorized it.

Independent Counsel's investigation did not develop evidence that proved that Vice President Bush violated any criminal statute. Contrary to his public pronouncements, however, he was fully aware of the Iran arms sales. Bush was regularly briefed, along with the President, on the Iran arms sales, and he participated in discussions to obtain third-country support for the contras. The OIC obtained no evidence that Bush was aware of the diversion. The OIC learned in December 1992 that Bush had failed to produce a diary containing contemporaneous notes relevant to Iran/contra, despite requests made in 1987 and again in early 1992 for the production of such material. Bush refused to be interviewed for a final time in light of evidence developed

in the latter stages of OIC's investigation, leaving unresolved a clear picture of his Iran/contra involvement. Bush's pardon of Weinberger on December 24, 1992 pre-empted a trial in which defense counsel indicated that they intended to call Bush as a witness.

The chapters on White House Chief of Staff Regan and Attorney General Edwin Meese III focus on their actions during the November 1986 period, as the President and his advisers sought to control the damage caused by the disclosure of the Iran arms sales. Regan in 1992 provided Independent Counsel with copies of notes showing that Poindexter and Meese attempted to create a false account of the 1985 arms sales from Israeli stocks, which they believed were illegal, in order to protect the President. Regan and the other senior advisers did not speak up to correct the false version of events. No final legal determination on the matter had been made. Regan said he did not want to be the one who broke the silence among the President's senior advisers, virtually all of whom knew the account was false.

The evidence indicates that Meese's November 1986 inquiry was more of a damage-control exercise than an effort to find the facts. He had private conversations with the President, the Vice President, Poindexter, Weinberger, Casey and Regan without taking notes. Even after learning of the diversion, Meese failed to secure records in NSC staff offices or take other prudent steps to protect potential evidence. And finally, in reporting to the President and his senior advisers, Meese gave a false account of what he had been told by stating that the President did not know about the 1985 HAWK shipments, which Meese said might have been illegal. The statute of limitations had run on November 1986 activities before OIC obtained its evidence. In 1992, Meese denied recollection of the statements attributed to him by the notes of Weinberger and Regan. He was unconvincing, but the passage of time would have been expected to raise a reasonable doubt of the intentional falsity of his denials if he had been prosecuted for his 1992 false statements.

THE ROLE OF CIA OFFICIALS

Director Casey's unswerving support of President Reagan's contra policies and of the Iran arms sales encour-

aged some CIA officials to go beyond legal restrictions in both operations. Casey was instrumental in pairing North with Secord as a contra-support team when the Boland Amendment in October 1984 forced the CIA to refrain from direct or indirect aid. He also supported the North-Secord combination in the Iran arms sales, despite deep reservations about Secord within the CIA hierarchy.

Casey's position on the contras prompted the chief of the CIA's Central American Task Force, Alan D. Fiers, Jr., to "dovetail" CIA activities with those of North's contra-resupply network, in violation of Boland restrictions. Casey's support for the NSC to direct the Iran arms sales and to use arms dealer Manucher Ghorbanifar and Secord in the operation, forced the CIA's Directorate of Operations to work with people it distrusted.

Following the Hasenfus shootdown in early October 1986, George and Fiers lied to Congress about U.S. Government involvement in contra resupply, to, as Fiers put it, "keep the spotlight off the White House." When the Iran arms sales became public in November 1986, three of Casey's key officers—George, Clarridge and Fiers—followed Casey's lead in misleading Congress.

Four CIA officials were charged with criminal offenses—George, the deputy director for operations and the third highest-ranking CIA official; Clarridge, chief of the European Division; Fiers; and Fernandez. George was convicted of two felony counts of false statements and perjury before Congress. Fiers pleaded guilty to two misdemeanor counts of withholding information from Congress. The four counts of obstruction and false statements against Fernandez were dismissed when the Bush Administration refused to declassify information needed for his defense. Clarridge was awaiting trial on seven counts of perjury and false statements when he, George and Fiers were pardoned by President Bush.

STATE DEPARTMENT OFFICIALS

In 1990 and 1991, Independent Counsel received new documentary evidence in the form of handwritten notes suggesting that Secretary Shultz's congressional testimony painted a misleading and incorrect picture of his knowledge of the Iran arms sales. The subsequent

investigation focused on whether Shultz or other Department officials deliberately misled or withheld information from congressional or OIC investigators.

The key notes, taken by M. Charles Hill, Shultz's executive assistant, were nearly verbatim, contemporaneous accounts of Shultz's meetings within the department and Shultz's reports to Hill on meetings the secretary attended elsewhere. The Hill notes and similarly detailed notes by Nicholas Platt, the State Department's executive secretary, provided the OIC with a detailed account of Shultz's knowledge of the Iran arms sales. The most revealing of these notes were not provided to any Iran/contra investigation until 1990 and 1991. The notes show that—contrary to his early testimony that he was not aware of details of the 1985 arms transfers—Shultz knew that the shipments were planned and that they were delivered. Also in conflict with his congressional testimony was evidence that Shultz was aware of the 1986 shipments.

Independent Counsel concluded that Shultz's early testimony was incorrect, if not false, in significant respects, and misleading, if literally true, in others. When questioned about the discrepancies in 1992, Shultz did not dispute the accuracy of the Hill notes. He told OIC that he believed his testimony was accurate at the time and he insisted that if he had been provided with the notes earlier, he would have testified differently. Independent Counsel declined to prosecute because there was a reasonable doubt that Shultz's testimony was willfully false at the time it was delivered.

Independent Counsel concluded that Hill had willfully withheld relevant notes and prepared false testimony for Shultz in 1987. He declined to prosecute because Hill's claim of authorization to limit the production of his notes and the joint responsibility of Shultz for the resulting misleading testimony, would at trial have raised a reasonable doubt, after Independent Counsel had declined to prosecute Shultz.

Independent Counsel's initial focus on the State Department had centered on Assistant Secretary Elliott Abrams' insistence to Congress and to the OIC that he was not aware of North's direction of the extensive

contra-resupply network in 1985 and 1986. As assistant secretary of state for inter-American affairs, Abrams chaired the Restricted Inter-Agency Group, or RIG, which coordinated U.S. policy in Central America. Although the OIC was skeptical about Abrams' testimony, there was insufficient evidence to proceed against him until additional documentary evidence inculcating him was discovered in 1990 and 1991, and until Fiers, who represented the CIA on the RIG, pleaded guilty in July 1991 to withholding information from Congress. Fiers provided evidence to support North's earlier testimony that Abrams was knowledgeable about North's contra-supply network. Abrams pleaded guilty in October 1991 to two counts of withholding information from Congress about secret Government efforts to support the contras, and about his solicitation of \$10 million to aid the contras from the Sultan of Brunei.

SECRETARY WEINBERGER AND DEFENSE DEPARTMENT OFFICIALS

Contrary to their testimony to the presidentially appointed Tower Commission and the Select Iran/contra Committees of Congress, Independent Counsel determined that Secretary Weinberger and his closest aides were consistently informed of proposed and actual arms shipments to Iran during 1985 and 1986. The key evidence was handwritten notes of Weinberger, which he deliberately withheld from Congress and the OIC until they were discovered by Independent Counsel in late 1991. The Weinberger daily diary notes and notes of significant White House and other meetings contained highly relevant, contemporaneous information that resolved many questions left unanswered in early investigations.

The notes demonstrated that Weinberger's early testimony that he had only vague and generalized information about Iran arms sales in 1985 was false, and that he in fact had detailed information on the proposed arms sales and the actual deliveries. The notes also revealed that Gen. Colin Powell, Weinberger's senior military aide, and Richard L. Armitage, assistant secretary of defense for international security affairs, also had detailed knowledge of the 1985 shipments from Israeli stocks. Armitage and Powell had testified that they did

not learn of the November 1985 HAWK missile shipment until 1986.

Weinberger's notes provided detailed accounts of high-level Administration meetings in November 1986 in which the President's senior advisers were provided with false accounts of the Iran arms sales to protect the President and themselves from the consequences of the possibly illegal 1985 shipments from Israeli stocks.

Weinberger's notes provided key evidence supporting the charges against him, including perjury and false statements in connection with his testimony regarding the arms sales, his denial of the existence of notes and his denial of knowledge of Saudi Arabia's multi-million dollar contribution to the contras. He was pardoned less than two weeks before trial by President Bush on December 24, 1992.

There was little evidence that Powell's early testimony regarding the 1985 shipments and Weinberger's notes was willfully false. Powell cooperated with the various Iran/contra investigations and, when his recollection was refreshed by Weinberger's notes, he readily conceded their accuracy. Independent Counsel declined to prosecute Armitage because the OIC's limited resources were focused on the case against Weinberger and because the evidence against Armitage, while substantial, did not reach the threshold of proof beyond a reasonable doubt.

THE REAGAN, BUSH AND CASEY SEGMENTS

The Independent Counsel Act requires a report as to persons not indicted as well as those indicted. Because of the large number of persons investigated, those discussed in individual sections of this report are limited to those as to whom there was a possibility of indictment. In addition there are separate sections on President Reagan and President Bush because, although criminal proceedings against them were always unlikely, they were important subjects of the investigation, and their activities were important to the action taken with respect to others.

CIA Director Casey is a special case. Because Casey was hospitalized with a fatal illness before Independent Counsel was appointed, no formal investigation of Casey was ever undertaken by the OIC. Casey was never able to give his account, and he was unable to respond to allegations of wrongdoing made about him by others, most prominently North, whose veracity is subject to serious question. Equally important, fundamental questions could not be answered regarding Casey's state of mind, the impact, if any, of his fatal illness on his conduct and his intent.

Under normal circumstances, a prosecutor would hesitate to comment on the conduct of an individual whose activities and actions were not subjected to rigorous investigation, which might exculpate that individual. Nevertheless, after serious deliberation, Independent Counsel concluded that it was in the public interest that this report expose as full and complete an account of the Iran/contra matter as possible. This simply could not be done without an account of the role of Director Casey.

OBSERVATIONS AND CONCLUSIONS

This report concludes with Independent Counsel's observations and conclusions. He observes that the governmental problems presented by Iran/contra are not those of rogue operations, but rather those of Executive Branch efforts to evade congressional oversight. As this report documents, the competing roles of the attorney general—adviser to the President and top law-enforcement officer—come into irreconcilable conflict in the case of high-level Executive Branch wrongdoing. Independent Counsel concludes that congressional oversight alone cannot correct the deficiencies that result when an attorney general abandons the law-enforcement responsibilities of that office and undertakes, instead, to protect the President.

168. Allen Ginsberg, Interview on the Counterculture and the Cold War

Introduction

One of the more striking features of the 1960s was the degree of interconnection among the various protest movements that developed during the decade. Their roots dated back at least to the 1950s, when a group of young American poets and writers known as the Beats, its most prominent members Allen Ginsberg, Jack Kerouac, William S. Burroughs, and Neal Cassady, emerged in New York and California. Dissatisfaction with what they considered to be their own country's stifling conformity led them to explore unorthodox art forms in literature, painting, sculpture, and music; turn to African and Asian culture; and test the boundaries of censorship. Ginsberg's 1957 poem *Howl*, for example, was the subject of a celebrated obscenity case. The Beats pioneered alternative lifestyles in the United States, experimenting with mind-altering drugs, investigating Eastern religions including Zen Buddhism, and bearing the banner of a sexual revolution that regarded heterosexual monogamy as only one option among many other less-conventional ways of life. As representatives of what they termed the counterculture, they questioned all accepted standards of morality and placed great emphasis on spontaneity, self-fulfillment, and attaining harmony with nature and the universe. The Beats rejected the pressures and demands that large corporate organizations placed on their employees, and ecological concerns for the environment often made them hostile to big business, or the Establishment, whose economic and cultural dominance in the United States they considered dehumanizing and dangerous. Several of the Beats, including Ginsberg, came from traditionally radical backgrounds, and they broke with the prevailing anticommunist Cold War orthodoxy of the 1950s, especially the manner in which the United States felt free to impose its will on other nations, such as Guatemala and Iran. During the 1960s, the Beats generally supported the civil rights movement and were particularly prominent in the anti-Vietnam War protests. For many young people in the 1960s, the Beats attained near iconic status. Their vocal advocacy of individual freedom and more relaxed and satisfying lifestyles appealed to many young people, and far broader social acceptance of nonconventional personal choices became a lasting legacy of the counterculture. Interviewed shortly before his death in connection with a much-publicized CNN television series on the Cold War, Ginsberg vividly recalled the origins of the counterculture and his involvement in the interrelated anti-Establishment campaigns of the 1960s.

Primary Source

INTERVIEWER: Could you tell me how you personally experienced the restrictive Cold War atmosphere that came through the Fifties?

ALLEN GINSBERG: Well, part of that atmosphere was the sort of anti-Communist hysteria of McCarthyism, but culminating in '53 or so, with the execution of the Rosenbergs. It was a little harsh. Whatever they did, it wasn't worth killing people, you know, killing them. I remember sending a wire to Eisenhower and saying: "No, that's the wrong thing." Drawing blood like that is the wrong thing, because it's ambiguous; and especially, there was one commentator on the air, called Fulton Lewis, who said that they smelt bad, and therefore should die. There was an element of anti-Semitism in it. But I remember very clearly on the radio, this guy

Fulton Lewis saying they smelt bad. He was a friend of J. Edgar Hoover, who was this homosexual in the closet, who was blackmailing almost everybody.

But that year, '53, I was living with William Burroughs in New York, and he was conceiving the first routines of *Naked Lunch*, which were parodies of Cold War bureaucracy mentality and police state mentality. And I remember that year very vividly, that Mosaddeq was overthrown in Iran, in Persia, because it was suspected that he might be neutral, or left, though he wasn't, but he really wanted to nationalize the oilfields, which the Shah later did anyway. And I remember the CIA overthrew Mosaddeq, and he wept in court; and we've had karmic troubles and war troubles with Iran ever since. That was the seed of all the Middle Eastern catastrophe we're facing now.

[At the] same time, in 1953, the Arbenz government in Guatemala was overthrown, and I was much aware of that, despite the neutrality of the American papers and the lack of real reporting. The actual event was that Allen Dulles was running the CIA, I believe; John Foster Dulles was Eisenhower's Secretary of State; they both had relations to the . . . I think it was the Sullivan and Cromwell law firm. The Sullivan and Cromwell law firm were representing United Fruit, and so, for the United Fruit's interests we overthrew a democratically elected leader . . . Jacobo Arbenz in Guatemala. And that was followed by . . . well, what is it? . . . 30 years or 40 years of persecution of the Guatemalan indigenous peoples, with the death of 200,000 of them—at least so the *New York Times* says—particularly under the later leadership of General Ríos Montt, who turns out also to have been a disciple of Pat Robertson, the right-wing moralist, Bible-thumping Christ announcer, assuming for himself the morality and ethics of Jesus.

So many, many seeds of karmic horror: mass death, mass murder, were planted in those years, including, very consciously for me—I was quite aware of it—the refusal of John Foster Dulles to shake Zhou Enlai's hand at the Geneva Conference which ended the French war in Indochina, or was supposed to end it. Now the Americans had been sending France \$40 million a year to pursue that war, and then the Americans cut off the funds, so the French didn't have funds. But as Bernard Fall points out, and many others, General Salan and others maintained the war through the proceeds of the opium sales in Cholon, the Chinese section of Saigon, and the war was funded for a while by them. Then, when the Americans finally took over, with a puppet president, Diem who had been cultivated in the Merinal Academy in the East Coast by Cardinal Spellman . . . another flaming faggot, who in disguise was a sort of a war dragon and one of the instigators of the Vietnam War . . . so Diem was a Catholic, and we had installed him as the puppet in a Buddhist country. So, when I arrived in Saigon in 1963, coming after several years in India, I was astounded to find that this Buddhist country was being run by a Catholic American puppet. And, in sitting down with David Halberstam and I think Charles Morer and Peter Arnett and others, who were reporting for the American news-

papers, I got a completely different idea in the early Sixties, '63, May 30th '63 to . . . oh, June 10th or so . . . completely different idea of what was going on in the war than I'd had reading the papers abroad or in America. They all said that the war could not be won; there was no light at the end of the tunnel; and Ambassador Lodge's reports to the President were false, or hyper-optimistic and misleading; and that they were getting flak and criticism for reporting what they saw on the spot there. But to go back to the Fifties, what was . . . it felt like in the Fifties—given all these karmic violent errors that the CIA was making in Iran, in Latin America, the real problem was that none of this was clearly reported in the press. It was reported with apologies or with rationalizations or with the accusation that Arbenz was a communist, or that Mosaddeq was a communist. Mosaddeq was mocked, especially when he wept in court, with tears that were tears, and very tragic, both for America and Iran. And he was considered . . . you know, in *Time* magazine, which was sort of the standard party line, like the Stalinist party line, he was considered the . . . you know, some kind of jerk.

Of course, in those days Walt Whitman was considered a jerk, and William Carlos Williams was considered a jerk, and any sign of natural man was considered a jerk. The ideal, as you could find it in advertising in the loose organizations, was the man of distinction: actually, a sort of British-looking guy with a brush moustache and a tweed coat, in a club library, drinking—naturally—the favorite drug, the drug of choice of the Establishment. And this was considered and broadcast as . . . advertised as *the* American century. Well, you know, Burroughs and I and Kerouac had already been reading Oswald Spengler on the decline in the West and the cycles of civilizations, and found this proclamation of the American century a sort of faint echo of Hitler's insistence on his empire lasting 1,000 years, or the Roman Empire's neglect of the central cities. And we were thinking in terms of the fall of America, and a new vision and a new religiousness, really, a second religiousness, which Kerouac spoke of in the Fifties, and exemplified, say, with his introduction to Eastern thought into the American scene, from the beginning of the 1950s through his book *Mexico City Blues*, poems which were Buddhist-flavored, through his open portrait of Gary Snyder in *The Dharma Bum(s)*, the book

The Dharma Bums—a long-haired rucksack revolution, a rebellion within the cities against the prevailing war culture, and a cultivation of the countryside and the beginning of ecological considerations and ecological reconstruction.

So you had McCarthyism, you had a completely false set of values being presented in terms of morality, ethics and success: the man of distinction. You had to put down the most tender parts of American conscience, Whitman and Williams. You had the aggression of the closet queen J. Edgar Hoover and the alcoholic, intemperate Senator McCarthy working together. You had a stupid Post Master General, Arthur Somerfield, who presented the President, Eisenhower, with *Lady Chatterley's Lover* on his desk, with dirty words underlined; and it was reported, I think in *Time* or in *Newsweek*, that Eisenhower said, "Terrible—we can't have this!" And so there was censorship, particularly censorship of literature towards . . . it was not . . . like, unconsciously or inadvertently, the things that were censored were the anti-war, anti-*macho*, anti-imperial texts, whether the beginnings of Burroughs's *Naked Lunch* in the Fifties, Kerouac's *Visions of Cody*, which could not be printed in those days, *Lady Chatterley's Lover*, Henry Miller. So we had D. H. Lawrence banned, Catullus banned; the *Satyricon* and Petronius' *Arbiter* couldn't be printed completely in English, it had to be printed in Latin in the Modern Library editions.

So we had electoral censorship, literary censorship. You had a large-scale electoral censorship on a much more subtle, vast wave, with the CIA, bankrolling the Congress for Cultural Freedom and a number of literary magazines, like *Encounter*, *Truth*, (*We Won in?*) *Africa*, *Demonat*, and others. Stephen Spender, I remember, used to complain to me that he'd bring in articles critical of the American imperium in Latin America, and somehow Laski, or whoever was working with him, or Arnold Beichman, I don't know—somehow, when he left their office, they would . . . it was rejected and nothing but anti-Communist, anti-Russian screeds were there. Very good reporting in that aspect, very good, but on the other hand there was no balance in reporting the horrors of American imperial invasion and overthrow and CIA subversion—all over the world, actually—much less CIA invasion of the intellectual body politic,

with the funding of the National Student Association, Congress for Cultural Freedom, all those magazines; even the Pen Club was tainted with that for a while. So there was this invasion of subsidy for a somewhat middle-right-wing party line. And the interesting thing is, most of those people that were working in the CIA, that worked that out, were ex-commies; they had the same Stalinist mentality: they just transferred it over to the right wing, and it prevails to this very day. But it was . . . ex-radicals, or even Marxists, who, disillusioned by the show trials of 1937 and the anti-Semitism of Stalin, went all the way over to the extreme right and began suppressing their understanding of the trouble with the American capitalism and imperialism, and didn't strike a good balance, as did a few intellectuals, like Irving Howe, an American who had explored the *World of Our Fathers*, Ian McGuint . . . the first-generation of Slavic, Russian and Jewish geniuses that rose out of the American soil after the great immigrations of 1895, which is part of my family too, because my mother came over from Russia in 1895.

So, to summarize: in the Fifties you had invasion of the intellectual world, subtly and secretly, by the CIA. You had invasion of political worlds in the Middle East, in Central America and Africa, I presume, and in Asia, again with secret police. I believe it was Wesley Fischel, the professor at East Lansing, Wisconsin, the University of Wisconsin, who trained President Diem's secret police and brought them over intact to Saigon, under the auspices of the CIA, back in the early Fifties, when Diem was installed, '56 or so. You had a subversion of student activity and a blanketing of student protest. That's why you had the extreme rise of SDS, and later (Prairie Fire?) in the early Sixties, because normal student investigation and rebellion against the status quo had been suppressed by CIA funding of the National Student Association, with the presidents of the Student Association quite witting.

You had a literary atmosphere where there was censorship, where there was very little vigor, where an Eliotic conservative attitude was dominant in the academies, which excluded then Whitman as canon or Williams as canon or Minna Loy, or Louis Nighecker, or Cobracussi or Charles (unclear), or the whole imagist/objectivists' lineage which came into prominence in America in the

Fifties and transformed American poetry to open form. So you had a closed form in poetry, and a closed form of mind, is what it boils down to,

[. . .]

[. . .]

GINSBERG: What were the tenets or themes of the counter-culture, as I know them from the Forties and Fifties, meaning the beat group and some allied friends.

[. . .]

First of all, open forum in poetry, rather than a closed forum. It's like when you split the atom, you get energy. So we were following Whitman and William Carlos Williams and the imagists and objectivists in technique, rather than the academic folks who were having a metronomic beat. That happened in painting, poetry, music and all the arts. And that involved candor and spontaneity, spontaneous composition, a classic thing from Tibet, Japan, China, not recognized here as classic because people weren't scholarly enough, so they thought it was some home-made spontaneous prosody, but it was the great tradition of Milarepa, the Tibetan poet.

Candor, arising from that, meaning if you're saying what's really on your mind spontaneously, you might say things that people would object to or censor. Thus Burroughs's *Naked Lunch*, which couldn't be printed in America until after many, many legal trials.

An interest in ecology and restoration of the planet, particularly on the part of Kerouac, who said "The earth is an Indian thing," or Gary Snyder who's a famous ecological poet, or Michael McClure whose specialty is in biology, or Philip Lamonti as a surrealist, using surrealist means to go back to the indigenous mind, so to speak.

Then there was also an interest in breaking the bonds of censorship, which we did, and being able to speak freely. There was an exuberance in art rather than any sort of a wet blanket, some sense of exuberance that . . . as Blake said, "exuberance is beauty", and even some visionary element. There was the introduction, along with that, of Eastern thought, Zen and Tibetan

Buddhism, from the early Fifties on, through Kerouac and specifically through Gary Snyder, who was studying Chinese and Japanese in the early Fifties, and then went to study in a Zen monastery in Kyoto, where I joined him on that trip from India through Saigon to Kyoto to Vancouver. So meditation practice and exploration of the texture of consciousness was central, meaning exploration of our own aggression, and some way of relating to our own aggression rather than it run wild over the world as the American diplomacy was allowing: American fear, aggression dominance, *macho* delusion, to destroy other cultures.

We had a real strong interest in African American culture and in the arts of African American culture, which have never been fully recognized as the great American contribution to world culture. So, the entire program of Kerouac's writing is really related to the new sounds and the new rhythms of bebop, with Charlie Parker and Dizzy Gillespie and Thelonius Monk and other musicians whom he visited and heard directly in Harlem during the late Thirties, early Forties.

So there was an interest in both Asiatic culture and African American culture, *The Tibetan Book of the Dead* . . . so an expanding of the American horizon of what was canon, what was the canon: not merely the Judeo-Christian but also the Deists, Buddhists, and let us say animists or indigenous, worship of stocks and stones, as the Catholics would say, who came to America and burned all the Mayan goddesses, despising the pagan cultures. So we were actually checking out the pagan cultures, and finding a refinement, both artistic and intellectual, that we didn't have in Western culture, a Western culture based on some kind of either logical Aristotelian . . . a thing is either A or not A, or there's one single monotheist center, as distinct from the old hermetic tradition of Heraclitus through Blake and the Eastern tradition of no center, or emptiness, or *ku*, or *shrwinyatah*, that things are real but simultaneously no inherent permanent nature. That's a big intellectual distinction, and we were beginning to absorb that question through the Highest Perfect Wisdom sutra, which is chanted every morning in Zen and Tibetan rooms.

So there was a complete change of mind, and also a rediscovery of America itself and the indigenous land,

people, folk tales, folk music, urban folk arts like beebop and dozens, rather than a looking to Europe for sophisticated models only. . . .

. . . [O]h, I forgot the Sexual Revolution, gay liberation—yeah, you’ve got to add that in! So if you have complete change in view of the function and texture of consciousness, complete change in sexual tolerance, complete opening of artistic form, complete acceptance of human nature as is, as the fit subject matter, including the chaos of human nature, as your ground, naturally any young generation finds that exciting, ’cause they can reclaim their own bodies, their own speech and their own minds, they can use their own bodies, they can use their own speech, they can use their own minds, as the basis for their art or for their love-making or for their business. Naturally it caught on, because the whole older thing was censored, stultified, secret, secretive. The whole point of the Cold War, of the nuclear matter, was that it was all done in secrecy. From whatever proclivities they had in bed, through whatever proclivities they had in the war room of the White House or the Pentagon, through the creation of the single greatest political decision of the century: to make the bomb and drop it, you’ve to got realize it was all done undemocratically and in secret. And people had to hide their emotions sexually, hide their personal feelings, disguise themselves as men of distinction, and create a world-ravaging Frankenstein, the nature of which they could never put back in the bottle, or . . . to mix my metaphor, a genie that they couldn’t put back in the bottle, or a Frankenstein that they couldn’t stop, because we still don’t know what to do with the wastes, the nuclear waste. So, boasting intelligence, they made a half-assed science that did not take into account its own results, and the complete equation was not resolved, yet they had the pride of billions and billions and billions and trillions of dollars of investment, trillions of dollars of war materials, secrecy, perquisites, pride, an incredible conspiracy of silence surrounding what was supposed to be a democratic nation. We were never consulted on the creation of the bomb; and people are so blind to the horror of that situation, they don’t get it, that there was a dozen people in secret that took the decision that shakes the world, in what is supposed to be a democracy. This is Stalinism at its worst, or Hitlerism at its worst. People

are not used to thinking of America or the West in these terms, but you really have to realistically look and see how we have poisoned the world.

There is the further problem that, because of conspicuous consumption, we are maybe more responsible for the garbage on the planet than anyone else, and for setting models of garbage . . . of disposable planets, so to speak.

[. . .]

. . . [O]ne other question we haven’t covered, which was the introduction of the drugs which alter consciousness very slightly, like marijuana, which had a bad rep from the Government, but which actually, when one tried, one found that they were quite mild, like marijuana certainly. You know, I remember my first experience was that it made my vanilla ice cream with chocolate syrup Sunday delightful to eat, like a totem I’d never . . . an icon I’d never experienced before. And this was supposed to be the drug that sent Algerian dogs frothing at the mouth, mad. [Laughs] So actually, that was one reason that the US Government lost its authority, all the way up to the levitation of the Pentagon in 1967. [Laughs] It was simply that the authority of the “government” word was deconstructed, the authority of the Pentagon was deconstructed by one good-looking kid putting a flower in the barrel of the gun held by another good-looking kid in uniform. Everybody realized the Pentagon is an arbitrary authority. You know, it’s like in Blake “old Nobodaddy”. So . . . much less LSD, of which Blake might say “The eye, altering, alters all”—i.e. a change of consciousness that’s experienced for, say, 8–10 hours, and that actually gives some perspective to the entire structure of social consciousness, the social arrangement, that you begin to see . . . X-ray, a little X-ray view of that; and particularly during a wartime, the realization of . . . people would get high, and I think that LSD was likely enough that psychedelics may have been a great catalyst to the anti-war movement. That was my guess at the time, and still is. So there’s another element.

OK, so what did it feel like? It felt like we were walking around in a large mass hallucination, sustained by all the politicians, but particularly Lyndon Johnson and

later by Nixon, extremely, based on lies and secrecy, sustained by the media, who were not able to . . . or couldn't conceive that the whole structure of the United States mentality could be so wrong and so disastrous and so Earth-destroying, because they participated in priming it up all the time. So, in a sense it was a piece of cake. You know, [Laughs] all these madmen walking around in a dream, and all you had to do is make some common sense. You know, all I had to do is say was . . . say, "I'm putting my queer shoulder to the wheel," [Laughs] or, you know, "I here declare the end of the war—I here declare the end of the war." Lyndon Johnson never even declared it: he just sent soldiers over. OK, if he's going to have that chutzpah, that brass, OK, I can *undeclare* it. And not only that: my word is going to outlast his. [Laughs] So it was sort of both a play, and at the same time a serious attempt to communicate to people, to transmit information that came from experience and self-knowledge, from wider travel, from maybe a deeper heart understanding, than was being displayed in the official media party line. And I'm using that word, "party line", with the over-

shadow echo of the Communist Party line. We definitely had a party line, *The Times* had a party line, and they've still got it.

[. . .]

So you had an establishment party line which, after all, is part of the power structure, and worse and worse from those days to this, as it gets more and more concentrated. But the beginning of that concentration of power in so few hands was back in the Fifties, when the networks and the few newspapers of record—*Times*, *Washington Post*—were in a state of what the Alcoholics Anonymous people would call "denial" of both scandal, error, and treason even.

[. . .]

169. Daniel Ortega and Oscar Manuel Sobalvarro: Interviews with Sandinista and Contra Leaders

Introduction

In 1979, a leftist government came to power in Nicaragua after the overthrow of ruling strongman Anastasio Somoza Debayle. The youthful new president, Daniel Ortega Saavedra, had spent years in the Sandinista National Liberation Front (SNLF), the anti-Somoza urban guerrilla movement. Ortega was initially only one among a five-person junta established in 1979, but as representatives of other parties left this coalition he became *de facto* leader, winning a large majority in national elections called in 1984. The administration of U.S. President Ronald Reagan denounced these as a sham and refused to recognize the new government, although outside observers thought them reasonably fair. As a young revolutionary, Ortega had already established a close relationship with Fidel Castro's communist government of Cuba, which sent 2,500 military and political advisors to assist the new government. When Reagan became president in 1981, his administration began to provide aid to anti-Sandinista Contra forces of Nicaraguan exiles, based in camps in neighboring Honduras and Costa Rica, who waged civil war against the new regime, mounting various types of disruptive sabotage. Reagan also imposed economic sanctions and embargoes on the Sandinista government. Even though Nicaragua's population was only 4.5 million, the Reagan administration argued that the Sandinista regime represented a major communist threat to all of Latin America, providing Soviet and Cuban forces with another base in the Western Hemisphere. In 1987 Costa Rican President Óscar Arias Sánchez helped to negotiate a cease-fire agreement between the Contras and the SNLF under whose terms national elections were scheduled for 1990. The Sandinistas lost these elections probably in part because their conscription policies and suppression of human rights had made them unpopular, as had economic difficulties and infrastructural damage due to the impact of the U.S.-backed civil war and other sanctions.

Primary Source

Interview with Daniel Ortega, Sandinista Leader, Nicaraguan President (translated from Spanish)

On the origins of the Sandinista revolution:

We grew up in a situation where we didn't know what freedom or justice were, and therefore we didn't know what democracy was. . . . The people of Nicaragua were suffering oppression. This made us develop an awareness which eventually led us to commit ourselves to the struggle against the domination of the capitalists of our country in collusion with the U.S. government, i.e. imperialism. And that's why our struggle took on an anti-imperialist character.

One has to bear in mind that during my childhood and adolescence, I suffered the repression of the Somoza dictatorship in every way: economically, socially, as well as at the hands of the police—because if we went out on the street to play baseball, for example, the police would come and beat us up and put us in prison. There was nowhere for young people to play sports, and all we experienced was repression. I also became aware through the experience of my family, because my father had fought alongside Sandino and had been imprisoned by Somoza, and my mother was also anti-Somoza and had been sent to jail. And they used to tell all those stories. On the other hand, there were no civic channels through which one might try to achieve change in our country, so we came to the conclusion that the only way to overthrow the dictatorship was through armed struggle.

The Cuban Revolution hadn't triumphed yet. My idol was Sandino, and also Christ. I was brought up a Christian, but I regarded Christ as a rebel, a revolutionary, someone who had committed himself to the poor and the humble and never sided with the powerful. I had a Christian upbringing, so I would say that my main early influences were a combination of Christianity, which I saw as a spur to change, and Sandinism, represented by the resistance against the Yankee invasion. Later, the triumph of the Cuban Revolution was very influential, and Fidel, Che, and Camilo [Cienfuegos] became our main role models. There were also wars going on in Algeria and in Vietnam, which further encouraged us to believe that victory was possible.

On Latin American support for the Sandinistas:

[Cuba and Nicaragua] were close together and both suffered a dictatorship backed by the United States: there it was Batista, here it was Somoza. And there was a desire for profound change; I mean, not just replacing one dictatorship with another, or going from an iron dictatorship to a formal dictatorship within the framework of liberal politics: we wanted a more profound social change, a socialist change, and naturally that led us to identify with the Cuban Revolution.

[Visiting Cuba], I really felt transported to a country that was challenging imperialism, that was putting forward an alternative to capitalism. I mean, it was challenging world capitalism and also the heavy weight of international imperialism. And one came face to face with these very spiritual, moral people who had a great fighting spirit. That's what I felt when I went to Cuba for the first time. . . .

Before the triumph of the Revolution, we received aid primarily from Cuba. Cuba had always supported the Sandinista struggle. Later on, as we developed the struggle in our country, Cuba was able to give us much more support. When the governments of Carlos Andres Perez in Venezuela, Omar Torrijos in Panama and Rodrigo Carazo in Costa Rica coincided in power, it became easier to bring in weapons from Havana through Panama, and then from Havana directly to Costa Rica, which of course assisted us greatly in overthrowing Somoza's dictatorship. . . .

On the Sandinistas' relationship with the United States:

[We took power] with great enthusiasm and a great desire to transform the country, but also with the worry that we would have to confront the United States, something which we regarded as inevitable. It's not that we fell into a kind of geopolitical fatalism with regard to the United States, but historically speaking the United States has been interfering in our country since the last century, and so we said, "The Yankees will inevitably interfere. If we try to become independent, the United States will intervene."

I would say that we tried to neutralize that confrontation with the United States, and around September of

'79 I went to the United Nations, and before that I visited Washington and had a meeting with President Carter. During the meeting with President Carter, we proposed the development of a new kind of relationship with the United States. During our exchange, [he said that] the American government was worried about the implications of the revolution and that the conservative sections of the United States perceived it as a threat. We insisted that this was an opportunity, as I said to Carter, for the United States to make good the historical damage they had inflicted on our country. Our national anthem still includes the words "Yankee, the enemy of humanity," and we said to him that the only way to abolish that line would be for the attitude of the imperialist powers to change throughout the world, and specifically towards Nicaragua. And then, in concrete terms, we asked President Carter for a certain amount of economic help, and for material support to build up a new army, because the old one had been wiped out. We needed weapons, because Nicaragua didn't manufacture any at the time, so we were asking them to help us in this respect. But they couldn't respond, because there was a public debate going on in the United States at that moment, and the conservatives were accusing Carter of opening the door to "communism," which was the word they used for these changes. It was up to the U.S. Congress to make these kinds of decisions, and the Congress did not want to approve such decisions.

[Our relationship with Cuba] was precisely the challenge—that the United States should respect our right to maintain friendly relations with whoever Nicaragua wanted. If the United States wanted to put conditions on Nicaragua's relations [with other countries], then it meant that we were starting off on the wrong foot, that the old imperialist attitude was still the same and there was nothing democratic about it at all, and that they were keeping up their dictatorial attitude throughout the world, supported by their economic and military power. So this meant that we started trying to find weapons in other parts of the world. Of course, the kind of support that Cuba could give us was very limited when it came to building up our army, since they didn't manufacture armaments in the quantities that we required. So we turned to Algeria and the Soviet Union for support. The first weapons that we received

came from Algeria. Algeria identified very much with our struggle. We conducted a series of negotiations at the time, and the first reply we received came from Algeria. Then we began to receive support from other countries of the socialist community, and mainly from the Soviet Union. . . .

I remember perfectly well that when we began working in that direction, which we did quite openly, the U.S. government sent us an emissary, Mr. Thomas Enders, and I remember my conversation with him. He came to tell us very clearly that the United States was not going to allow a Soviet-Cuban communist bridgehead to be established in this continent. I said that we had a right to maintain relations with any other country, and that they should respect that right. And then he said that I should understand that they had the power to crush us, to which I replied that we were ready to fight and confront them even though they were a big power—that Sandino had already confronted them in the past and that we were ready to do so again if they tried to crush us.

On Soviet support for the Sandinista regime:

Well, first of all, we did not assume that others would fight on our behalf; we the Nicaraguans were ready to fight ourselves. What we asked for were weapons so that we could defend ourselves—that's what we asked of the Soviet Union, of the socialist countries of Eastern Europe, of the Algerians, of the Vietnamese; and that's what we received so that we could arm the Nicaraguan people and defend ourselves in that war imposed on us by Ronald Reagan's Administration over a number of years.

[From the Soviet Union] we received rifles, which were still what our government most needed, because clearly, if the United States invaded us, we wouldn't be in a position to wage a mobile war with heavy armaments, so our defense would have to rely on our ability to develop popular resistance forces, guerrillas, throughout the country. So rifles were our main request, plus a few heavy armaments. Some tanks and helicopters arrived from the Soviet Union, but we never managed to get any MiG planes. We asked for planes so that we could use them in this war imposed on us by the United States, because with interceptor planes we could have

neutralized the Contras' aerial logistics from Honduras, El Salvador and Costa Rica. But it seems that the United States put such heavy pressure on the Soviet Union, that even though the Soviets were willing and had already committed themselves in writing to send us MiG-21 planes and trained [our] pilots . . . they began procrastinating. And I even remember that in one of the exchanges we had with them, they said that the United States had threatened [them]—and I remember they even did it publicly during a visit to France, in the presence of President Mitterrand. We had explored the possibility of the French sending us Mirage [planes], and the French were willing; and when this became known, the Americans reacted by announcing publicly that they would not allow those armaments to enter Nicaragua and that they would bomb the Nicaraguan ports [if they arrived]. We asked the Soviets and the French to send the planes regardless, that we were willing to take the risk of Nicaragua being bombed. But in the end it wasn't possible for the planes to arrive in our country. There was an attempt, I remember, to send some smaller planes from Libya, and those planes got as far as Brazil, where they were intercepted and sent back to Libya.

I think that the Soviet Union was guided by a socialist agenda, and that this socialist agenda was in the minds of the Soviet leadership and Party members. There was a conviction that the socialist cause was a just one, and so wherever there were struggles against colonialism, imperialism and neocolonialism, the Soviet Union would support those struggles and those causes, in the form of economic and military help. The economic assistance that the Soviet Union gave Nicaragua was invaluable.

On the Sandinistas' war with the Contras:

The fact is that the United States is behind what has happened in Nicaragua, and what they did was to promote a confrontation between Nicaraguans. And we already know how many millions of dollars and armaments they approved for the war in Nicaragua, and the things that were openly discussed in the U.S. Congress about our ports, the contempt of the United States for international law, for the resolutions of the United Nations Security Council and the decisions of the International Court of Justice, and so on. And of course, it

was painful to have to accept that we were being confronted by another part of the Nicaraguan people, who were as poor as the Sandinistas who were defending the Revolution, but who acted as tools of an imperialist policy. . . .

This was a war that went beyond [Nicaragua], and without the United States the Contras would not have existed. Without the United States it would have been impossible for Somoza's former Guard to regroup, and it was they who started to organize the first counter-revolutionary units. Without the United States, there simply would not have been an armed uprising in our country. So I think it's very clear that external factors played a role in this matter, because I repeat, if I had had the resources to start fostering wars, I could have done so anywhere in the world—in the United States, for example: first stir people up and then provide them with the weapons to defend the rights they feel they have been denied. . . .

I would say that what was going on here was a confrontation with the United States. That was their discourse and that's how they trained [the Contras]. I mean, they trained them to make the same speech to the people as Somoza had made. Somoza set himself up as dictator of our country in the name of anti-communism and the fight against communism, and according to Somoza, Sandino was a communist, as he was in the eyes of the United States. So the training they gave the Contras—that whole manual the CIA prepared and all the rest of it—was aimed at exacerbating an already backward mentality, because a population with more than 60 percent illiteracy is obviously a backward population; and a good part of the Contras themselves come from this same section of the population.

**Interview with Oscar Manuel Sobalvarro, Chief of Staff, "Contra" rebel army, Nicaragua
(translated from Spanish)**

On why he opposed the Sandinistas:

It was the repression carried out by the Sandinistas which forced me to take the decision to fight, in particular because we saw that Nicaragua's democracy was under threat. The Sandinistas promised democracy, but what we began to see a few months after their triumph was very different. . . .

My father is a peasant; his name is Justo Pastor Sobalvarro. He is a man of few means, hardworking, who serves his community. He used to grow coffee in the province of Jinotega, but his property was confiscated by the Sandinista regime. . . .

My father, who was a liberal, said to me: "I think that these people are communists." That's what Somoza used to say in his speeches, and my father—though he didn't support Somoza and was a great liberal—believed it. And being the age I was at the time—I was 19, very young—listening to my father say that every day influenced me, and I started thinking that yes, the Sandinistas were communists. And when they began to give signs that they were, I believed it, and that's what made me decide to fight against them, even though the idea of joining the military and taking up arms to fight against someone hadn't crossed my mind.

At the beginning of their government, the Sandinista Front promoted a literacy campaign, and this program included first and foremost the education of adults in the rural areas. And they sent student brigades to the mountains. These brigades included foreigners who were appointed coordinators of the groups. One of these coordinators came to our house, and this person turned out to be a Soviet, and in his speech he said that God didn't exist, that God was Fidel Castro, and that it was necessary to serve Fidel Castro; that the government of Nicaragua was at the disposal of Fidel Castro, and that it was necessary to serve the government, and all this kind of thing—which we the Nicaraguans weren't used to, because we've been very Catholic, especially my family. And I would say the Nicaraguans in general are very Catholic. And for someone to suddenly turn up and tell us that God doesn't exist really started putting a lot of doubts in our minds. . . .

There was a lot of hatred. Personally speaking, I was first and foremost affected physically by the Sandinista Front, because we were taken out of our homes and our families and threatened with being shot, and at that moment I began to build up a tremendous hatred against the Front's structures, and I felt the desire to fight against these people because they were doing a lot of damage. Just as they hurt me and my family per-

sonally, we also saw how they hurt other people, and we really had the desire and the morale to fight. . . .

[We didn't like the] systems which the Sandinista government implanted in Nicaragua, such as the control of private property, the political persecution of all those who didn't identify with the Sandinista regime, who didn't say "I'm a Sandinista." All this forced many Nicaraguans to fight against the Sandinistas, because, first of all, we weren't prepared to give up what was ours, our property. The Sandinistas came and confiscated our properties. All those who didn't agree with the Sandinista policies were subjected to confiscations and imprisonment, and their lives were threatened. Many were murdered just for disagreeing with the Sandinista Front. This sort of thing turned many Nicaraguan peasants against the Sandinistas and made them decide to fight [against them] militarily. . . .

On joining the Contras:

I started [fighting] on March 20, 1980, with hunting rifles. My purpose in fighting the Sandinista Front at that time was not to wage war against them but to convey to the Sandinista government the message that the peasants and many other Nicaraguans did not agree with [the introduction of] new things which were alien to the way of life that we knew, and that if what they were trying to do was to implant a totalitarian communist regime, well, we weren't going to agree to that. And that's how we began the struggle. Initially we were a group of 15 young men, and then it grew to 30, and I was one of the leaders and main promoters of the group. That's how the Contras were born: what were known as the MILPAS: *Milicias Populares Anti-Sandinistas* [Anti-Sandinista People's Militias].

As part of the struggle against the Sandinista regime, we started laying ambushes; and it was during one of these ambushes that we retrieved two Soviet rifles. And it then became necessary to show the world that the Sandinistas really were being supported and supplied by the Soviet Union and Cuba. The best way of showing it was to present the Soviet-made weapons to the public, so after we retrieved these weapons I decided to go to Honduras to ask for support to present the weapons. After some time, we managed to make contact with Commander Enrique Bermudez, known

as “Commander 380,” and through him we showed the weapons to the U.S. government authorities who were in Honduras, and they were persuaded that the Sandinistas were indeed being supported and supplied by the Soviet countries. . . .

This, of course, was in 1981, almost a year after the struggle began. Initially, we had used pistols and hunting rifles, but by now we had war weapons which we had captured, and their number was gradually increasing.

On U.S. support for the Contras:

It was through some contacts with the U.S. government that we started to receive help—first of all through Argentine instructors, who trained us, and then the Americans became directly involved in giving us help. There were difficult moments, times when we were getting help, and then the U.S. Congress cut off the aid, so we had to renew the struggle to seek help. Some of our people who represented the political side of the resistance lobbied the U.S. Congress to try to get help to continue the war against the Sandinistas. However, we were always fighting against the Sandinistas, even without help from the U.S. government. . . .

I think that the support we received from the U.S. government wasn’t aimed at us achieving a military victory in Nicaragua. I think we received help to pressurize the Sandinista government into making changes. And it was not just the pressure that we exerted as guerrillas, but there were also the interests of the neighboring countries: Guatemala, El Salvador, Costa Rica and Honduras, who through the Esquipulas II agreement managed to get the Sandinistas to commit themselves to a process of democratization. And after these agreements, we became involved in negotiations with the Sandinistas. I also think that the Sandinistas were forced to negotiate not only because of the pressure exerted by the Central American countries, but because of the military pressure we exerted on them; because we were on top of them, gaining terrain every day, and they were unable to stop the guerrilla movement in

Nicaragua through military force. So it was a combination of those two factors, and of course the [Sandinista] Front made mistakes—the Front made many more mistakes than we did as a resistance movement.

On Nicaragua’s role in the Cold War:

There was a war going on in Nicaragua, there was a war going on in El Salvador, there was guerrilla warfare in Guatemala, there were small movements in Honduras—so naturally the big powers had a political interest in these events. We, as armed guerrilla groups, were an important factor in these big powers achieving their aims. . . .

The interests of the Soviet countries were to spread the guerrilla movements throughout Latin America, and so of course we were protecting, let’s say, the interests of the Americans by preventing these subversive movements from going any further. And I think that we, the Nicaraguans, were a very important factor in preventing the guerrilla movement in El Salvador from consolidating itself and taking power . . . mainly because their strength depended on the support they received from the Sandinistas in Nicaragua, and since we were confronting the Sandinistas directly, the Sandinistas didn’t have time to help the Salvadoran guerrillas, as well as other guerrillas in Guatemala and so on. So in this sense we were an important factor, and this was shown by the fact that when the resistance was dismantled, the Salvadoran guerrilla movement had to be dismantled too because they no longer had any base from which to continue fighting. . . . And I think that at that very moment, the United States also achieved their aim of forestalling the emergence of any more guerrilla movements.

170. Mikhail Gorbachev: Perestroika and Glasnost

Introduction

In March 1985 Mikhail Sergeyevich Gorbachev became general secretary of the Communist Party of the Soviet Union (CPSU) and his country's supreme leader, succeeding three elderly and ailing predecessors under whom economic, social, and international problems had slowly accumulated for well over a decade. From the late 1970s onward, all major Soviet economic indicators suddenly declined. The economic growth rate, 5.2 percent from 1966 to 1970, fell to 2.7 percent, and growth in industrial production, investment, productivity, and consumption also dropped, sometimes to negative or near-negative levels. Oil production leveled off, and from 1979 to 1982 Russia suffered droughts and poor harvests. Lagging modernization in such old industries as steel, combined with the tardy introduction of new technology such as computers, left the Soviet Union trailing the West. The nature of the Soviet economy and society discouraged individualist inventors and entrepreneurs whose efforts contributed to Western economic growth. From the early 1970s, Soviet living standards, health care, and life expectancy all declined, while infant mortality rose. When such problems appeared, serious systemic flaws in the Soviet command economy, including its autarkic nature and the consequent absence of independent institutions that could provide credit and capital, plus the nonexistence of fiscal economic incentives conspired to facilitate collapse rather than reform. Gorbachev, the first general secretary born since the 1917 Russian Revolution, was of a generation that laid far greater emphasis on freedom of thought and choice than his predecessors had done. A dedicated communist, he frequently referred to the lessons and thinking of the October Revolution and of the Soviet Union's founder, Vladimir Lenin, and stated that his policies were intended to implement these. Initially, Gorbachev hoped to reform the Soviet economy and society from within, strengthening communism through the twin policies of perestroika (economic restructuring) and glasnost (openness). In practice, his reforms initially provoked yet further problems and helped to further weaken the Soviet Union, stirring up party opposition to his reforms. Glasnost largely meant freedom of speech, and glasnost-inspired criticism on occasion undercut the economic restructuring of perestroika and could be and was turned against Gorbachev himself. Reluctant to embrace a market economy outright or to inflict the pain incumbent on full-scale economic restructuring, he opted for half-measures, retaining much of the command economy structure of price supports and controls, which undercut the reforms he initiated. Although the 1988 Law on Cooperatives permitted private ownership of businesses, the Soviet Union also lacked the independent financial, banking, credit, and stock exchange facilities needed to underpin the development of a market economy. High inflation, shortages, strikes, and falling productivity were the immediate results of Gorbachev's economic reforms, and many ordinary Soviet citizens living on fixed incomes suffered from declining living standards, while a small elite of well-connected entrepreneurs were thought to be profiting massively from economic change. Seeking to reform the Soviet communist system, Gorbachev effectively destroyed it. His efforts to obtain major loans and economic assistance from the United States and Western-dominated international institutions were less fruitful than he and his advisors hoped. As his Western reputation grew, Gorbachev's domestic popularity plummeted, and in August 1991 a coup attempt almost overthrew him and effectively destroyed his political credibility. In December 1991 the Soviet Union itself was dissolved, and Gorbachev resigned as its president. In retirement, he reflected on his record in office.

Primary Source

There has been a continuing debate over when reform actually began in our country. Politicians and journalists have been trying to locate the exact point at which all our dramatic changes began. Some assert that reforms in Russia did not really begin until 1992.

The basis for reform was laid by Khrushchev. His break with the repressive policies of Stalinism was a heroic

feat of civic action. Khrushchev also tried, though without much success, to make changes in the economy. Significant attempts were made within the framework of the so-called Kosygin reforms. Then came a long period of stagnation and a new attempt by Yuri Andropov to improve the situation in our society. An obvious sign that the times were ripe for change was the activity of the dissidents. They were suppressed and expelled from the country, but their moral stand and

their proposals for change (for example, the ideas of Andrei Sakharov) played a considerable role in creating the spiritual preconditions for perestroika.

[. . .]

Perestroika was born out of the realization that problems of internal development in our country were ripe, even overripe, for a solution. New approaches and types of action were needed to escape the downward spiral of crisis, to normalize life, and to make a breakthrough to qualitatively new frontiers. It can be said that to a certain extent perestroika was a result of a rethinking of the Soviet experience since October.

The vital need for change was dictated also by the following consideration. It was obvious that the whole world was entering a new stage of development—some call it the postindustrial age, some the information age. But the Soviet Union had not yet passed through the industrial stage. It was lagging further and further behind those processes that were making a renewal in the life of the world community possible. Not only was a leap forward in technology needed but fundamental change in the entire social and political process.

Of course it cannot be said that at the time we began perestroika we had everything thought out. In the early stages we all said, including myself, that perestroika was a continuation of the October revolution. Today I believe that that assertion contained a grain of truth but also an element of delusion.

The truth was that we were trying to carry out fundamental ideas that had been advanced by the October revolution but had not been realized: overcoming people's alienation from government and property, giving power to the people (and taking it away from the bureaucratic upper echelons), implanting democracy, and establishing true social justice.

The delusion was that at the time I, like most of us, assumed this could be accomplished by improving and refining the existing system. But as experience accumulated, it became clear that the crisis that had paralyzed the country in the late 1970s and early 1980s was systemic and not the result of isolated aberrations. The

logic of how matters developed pointed to the need to penetrate the system to its very foundations and change it, not merely refine or perfect it. We were already talking about a gradual shift to a social market economy, to a democratic political system based on rule of law and the full guarantee of human rights.

This transition turned out to be extremely difficult and complicated, more complicated than it had seemed to us at first. Above all, this was because the totalitarian system possessed tremendous inertia. There was resistance from the party and government structures that constituted the solid internal framework of that system. The nomenklatura encouraged resistance. And this is understandable: Since it held the entire country in its hands, it would have to give up its unlimited power and privileges. Thus the entire perestroika era was filled with struggles—concealed at first and then more open, more fully exposed to public view—between the forces for change and those who opposed it, those who, especially after the first two years, simply began to sabotage change.

The complexity of the struggle stemmed from the fact that in 1985 the entire society—politically, ideologically, and spiritually—was still in the thrall of old customs and traditions. Great effort was required to overcome these traditions, as mentioned above. There was another factor. Destroying the old system would have been senseless if we did not simultaneously lay the foundations for a new life. And this was genuinely unexplored territory. The six-year perestroika era was a time filled with searching and discovery, gains and losses, breakthroughs in thought and action, as well as mistakes and oversights. The attempted coup in August 1991 interrupted perestroika. After that there were many developments, but they were along different lines, following different intentions. Still, in the relatively short span of six years we succeeded in doing a great deal. The reforms in China, incidentally, have been going on since 1974, and their most difficult problems still remain unsolved.

What specifically did we accomplish as a result of the stormy years of perestroika? The foundations of the totalitarian system were eliminated. Profound democratic changes were begun. Free general elections were

held for the first time, allowing real choice. Freedom of the press and a multiparty system were guaranteed. Representative bodies of government were established, and the first steps toward a separation of powers were taken. Human rights (previously in our country these were only “so-called,” reference to them invariably made only in scornful quotation marks) now became an unassailable principle. And freedom of conscience was also established.

Movement began toward a multistructured, or mixed, economy providing equality of rights among all forms of property. Economic freedom was made into law. The spirit of enterprise began to gain strength, and processes of privatization and the formation of joint stock companies got under way. Within the framework of our new land law, the peasantry was reborn and private farmers made their appearance. Millions of hectares of land were turned over to both rural and urban inhabitants. The first privately owned banks also came on the scene. The different nationalities and peoples were given the freedom to choose their own course of development. Searching for a democratic way to reform our multinational state, to transform it from a unitary state in practice into a national federation, we reached the threshold at which a new union treaty was to be signed, based on the recognition of the sovereignty of each republic along with the preservation of a common economic, social, and legal space that was necessary for all, including a common defense establishment.

The changes within our country inevitably led to a shift in foreign policy. The new course of perestroika predetermined renunciation of stereotypes and the confrontational methods of the past. It allowed for a rethinking of the main parameters of state security and the ways to ensure it. I will return to this subject.

In other words, the foundations were laid for normal, democratic, and peaceful development of our country and its transformation into a normal member of the world community.

These are the decisive results of perestroika. Today, however, looking back through the prism of the past few years and taking into account the general trends of world development today, it seems insufficient to reg-

ister these as the only results. Today it is evidently of special interest to state not only *what* was done but also *how* and *why* perestroika was able to achieve its results, and what its mistakes and miscalculations were.

Above all, *perestroika would have been simply impossible if there had not been a profound and critical reexamination not only of the problems confronting our country but a rethinking of all realities—both national and international.*

Previous conceptions of the world and its developmental trends and, correspondingly, of our country's place and role in the world were based, as we have said, on dogmas deeply rooted in our ideology, which essentially did not permit us to pursue a realistic policy. These conceptions had to be shattered and fundamentally new views worked out regarding our country's development and the surrounding world.

[. .]

The practical work of perestroika was to *renounce stereotypical ideological thinking and the dogmas of the past. This required a fresh view of the world and of ourselves with no preconceptions, taking into account the challenges of the present and the already evident trends of the future in the third millennium.*

During perestroika, and often now as well, the initiators of perestroika have been criticized for the absence of a “clear plan” for change. The habit developed over decades of having an all-inclusive regimentation of life. But the events of the perestroika years and of the subsequent period have plainly demonstrated the following: *At times of profound, fundamental change in the foundations of social development it is not only senseless but impossible to expect some sort of previously worked out “model” or a clear-cut outline of the transformations that will take place. This does not mean, however, the absence of a definite goal for the reforms, a distinct conception of their content and the main direction of their development.*

All this was present in perestroika: a profound democratization of public life and a guarantee of freedom of social and political choice. These goals were proclaimed and frequently reaffirmed. This did not exclude but presupposed the necessity to change one's specific

reference points at each stage as matters proceeded and to engage in a constant search for optimal solutions.

An extremely important conclusion follows from the experience of perestroika: Even in a society formed under totalitarian conditions, democratic change is possible by *peaceful evolutionary means*. The problem of revolution and evolution, of the role and place of reforms in social development, is one of the eternal problems of history. In its inner content perestroika of course was a revolution. But in its form it was an evolutionary process, a process of reform.

[. . .]

From the very beginning of the changes our country's leadership assigned primary importance to open communication with the people, including direct disclosure in order to explain the new course. Without the citizens' understanding and support, without their participation, it would not have been possible to move from dead center. That is why we initiated the policies of perestroika and glasnost simultaneously.

Like perestroika itself, glasnost made its way with considerable difficulty. The nomenklatura on all levels, which regarded the strictest secrecy and protection of authorities from criticism from below as the holy of holies of the regime, opposed glasnost in every way they could, both openly and secretly, trampling its first shoots in the *local* press. Even among the most sincere supporters of perestroika, the tradition over many years of making everything a secret made itself felt. But it was precisely glasnost that awakened people from their social slumber, helped them overcome indifference and passivity and become aware of the stake they had in change and of its important implications for their lives. Glasnost helped us to explain and promote awareness of the new realities and the essence of our new political course. In short, without glasnost there would have been no perestroika.

The question of the relation between ends and means is one of the key aspects of politics and of political activity. If the means do not correspond to the ends, or, still worse, if the means contradict the ends, this will lead to setbacks and failure. The Soviet Union's experience is

convincing evidence of this. When we began perestroika as a process of democratic change, we had to ensure that the means used to carry out these changes were also democratic.

In essence, glasnost became the means for drawing people into political activity, for including them in the creation of a new life, and this, above all, corresponded to the essence of perestroika. Glasnost not only created conditions for implementing the intended reforms but also made it possible to overcome attempts to sabotage the policy of change.

We are indebted to glasnost for a profound psychological transformation in the public consciousness toward democracy, freedom, and the humanist values of civilization. Incidentally, this was one of the guarantees that the fundamental gains of this period would be irreversible.

Perestroika confirmed once again that the normal, democratic development of society rules out universal secrecy as a method of administration. Democratic development presupposes glasnost—that is, openness, freedom of information for all citizens and freedom of expression by them of their political, religious, and other views and convictions, freedom of criticism in the fullest sense of the word.

Why, then, did perestroika not succeed in achieving all its goals? The answer primarily involves the question of “harmonization” between political and economic change.

The dominant democratic aspect of perestroika meant that the accent was inevitably placed on political reform. The dialectic of our development during those years was such that serious changes in the economic sphere proved to be impossible without emancipating society politically, without ensuring freedom—that is, breaking the political structures of totalitarianism. And this was accomplished. But economic change lagged behind political change, and we did not succeed in developing economic change to the full extent.

In recent years I have often had occasion to refute criticism to the effect that we should have begun with economic changes and held tightly to the political reins,

as was done in China. There was no lack of understanding of economics on our part, still less scorn or disregard for it. To dispute that line of criticism it is sufficient to examine the chronology of events of perestroika. From the very beginning most plenary sessions of our Central Committee were devoted precisely to restructuring the economy. This aspect of the process occupied nearly three-quarters of my time and effort as general secretary, as well as the work of my colleagues and our government agencies. However, the state monopoly ownership that prevailed in our economy for decades, the administrative-command system that had left its mark on our economic personnel and party leaders, most of whom had been trained in economic management, indeed the very character of our economic system which had been functioning over such a prolonged period—all these factors contributed to *incredibly powerful inertia*, which made the task of switching over onto new tracks, the tracks of a real market economy, tremendously difficult. Even if all our economic ideas and decisions during perestroika had been flawless (and I cannot say they were), that inertia would have been present.

Change had begun, but we were searching for an optimal way of making a peaceful transition from a totalitarian economy to a democratic one. The search was long and drawn out. Moods of disillusionment and disappointment, loss of faith in perestroika, dissatisfaction with the worsening material situation—all these forces began to rise among the people (although the material conditions at that time cannot be compared to those that resulted from the “shock therapy” of Gaidar and Yeltsin). Support for the reforms in our society grew distinctly weaker, and populist demagogues took advantage of this, promising to correct matters in the course of one year, which was sheer balderdash. But people wanted a quick change for the better. The society’s dissatisfaction over market conditions was thoroughly exploited by the opponents of reform inside the CPSU.

Another factor that threatened perestroika was the delay in solving the nationalities question, transforming the USSR from an actual unitary state to a truly multinational federation and thus, in the *last* analysis, bringing the situation into correspondence with the relevant clauses of the Soviet constitution. Nationalist

elements and the ruling circles in the [non-Russian] republics, deciding that the moment had come to weaken Control from the center, took advantage of this.

The negative processes began to gain strength after Yeltsin’s group came to power in Russia and issued a declaration of sovereignty for the Russian Federation. The intention behind this was in fact to eliminate the union of republics (although nothing was said about that at the time). They were able to counter that destructive policy line with the line of preserving the union and reforming it fundamentally. By July 1991 the various republics had agreed on a new union treaty. The attempted coup by the opponents of reform thwarted the signing of that treaty. And although those opponents were defeated, the events of August 1991 gave a powerful impetus to the processes of disintegration, and the position of the central government of the Soviet Union was greatly undermined. The leadership of the Russian Republic took advantage of this. It had already been attempting constantly to assume the right to make decisions that would affect the entire union. Thus the process of estrangement and disunification among the republics was intensified, and all this resulted, in December 1991, in an agreement between Russia, Ukraine, and Belarus to dissolve the USSR.

These are some of the lessons of perestroika. Of course I have only indicated the most important and fundamental ones. These lessons, it would seem, have a definite importance not only for historians. Today when the entire world is in flux, when the need for change has arisen in many countries as a result of the many new challenges of the approaching new century, any experience of change and reform takes on a significance that is not limited by national borders.

I can say this without fear of error: The experience of the transition from totalitarianism to democracy in my country, for all its uniqueness, contains much that may be of interest to democratic reformers in other countries. Especially if we keep in mind the intensified tendency toward decentralization and the rising new wave of nationalism. What about for Russia itself? What might be useful for its further development? The continuing crisis in Russia is explained in many respects by the fact that it departed from the evolutionary road

of reforms and yielded to the influence of the proponents of “shock therapy.” It retreated from genuinely democratic standards in public life, scorned the social imperative, and failed to resolve the question of establishing proper federated relationships. We can be sure that the future of Russia as a democratic, peace-loving, humane country can be assured only if it continues to move along the path of genuinely democratic renewal, which was begun by perestroika—of course taking into account in the process all the new elements that have emerged.

In concluding this chapter let us once again recall October. The revolution of 1917 was victorious under the banner of ultrademocratic slogans. These slogans were not merely demagogic, not just a means of winning power. They expressed a profound basis for the transformation of our country, a country that used to be called the Russian empire. However, the Bolsheviks,

and after them Stalin, demonstrated to their country and to the world in the most convincing way that democracy cannot be built on principles of hatred, hostility, or elimination of one part of society, or of the world, by another. Today in Russia, in the final analysis, we have come to understand democracy as a universal human value, and the task we face is not to end up once again in the position of serving as a “negative model.”

Thoughts about perestroika naturally encompass the entire complex of problems of the new thinking, including, in foreign policy, the international aspect. The road to a new foreign policy was a long one.

171. Mikhail Gorbachev: “The New Thinking”

Introduction

In March 1985 Mikhail Sergeyevich Gorbachev succeeded the elderly Konstantin Chernenko as general secretary of the Communist Party of the Soviet Union (CPSU) and top Soviet leader. Gorbachev, the first Soviet leader born after the Russian Revolution of 1917, sought to revitalize the Soviet Union both domestically and abroad. He was a dedicated communist who looked back to the October 1917 revolution and frequently cited the teachings of Vladimir Lenin, the Bolshevik founder of the Soviet Union. At home, Gorbachev introduced policies of perestroika (economic restructuring) and glasnost (openness) that he hoped would strengthen Soviet communism, although ultimately they contributed to the socialist system’s collapse. Although Western leaders at first found his overtures difficult to credit, Gorbachev also sought a genuine rapprochement with Western countries that he hoped would enable both Cold War antagonists and their allies to make major cuts in conventional and nuclear weapons. By the mid-1980s, the cost of maintaining an empire and acting as leader of the international communist camp was imposing heavy economic burdens on the Soviet Union. Military spending by then absorbed 13–14 percent (18 percent according to some figures) of gross national product as opposed to 10–12 percent in the early 1960s, diverting funds from domestic economic development. Most countries in Eastern Europe, the core of Soviet security concerns, still sullenly resented Soviet domination. Economic difficulties of the 1970s caused by rising petroleum prices further eroded Soviet popularity, as the Russians chose in 1982 to cut by 10 percent their oil shipments to East European allies, whose own economies also suffered from rigid autarky. Globally assertive Soviet foreign policies carried a high price tag, as Soviet clients throughout the world demonstrated insatiable appetites for economic and military aid, while expanding Russian overseas activities almost automatically triggered determined American responses in opposition, which in turn demanded further Soviet expenditures. The lengthy Afghan intervention, which lasted until 1989, embroiled Soviet troops in a costly and unwinnable guerrilla war that produced heavy casualties, an expensive and demoralizing entanglement that echoed previous American involvement in Vietnam. When Gorbachev assumed power, his counterpart in the United States was the staunchly anticommunist Republican President Ronald Reagan, who implemented a major arms buildup after 1980 and had announced his intention of undertaking

a vastly expensive program, the Strategic Defense Initiative, to build a satellite-mounted antimissile system in space. Fear of a costly arms race that would further strain the Soviet Union's fragile economy may well have been one of the motives impelling Gorbachev to improve relations with the West. In speeches at the time and in subsequent writings, he stressed less self-interested factors: that the world had become heavily interdependent, that diversity among nations had to be accepted, that nuclear weapons were so dangerous and destructive that they could not be used, and that "politics based on the use of force is doomed." International leaders habitually, of course, employed high-flown rhetoric on such subjects, often as a substitute for practical action. Gorbachev shrewdly noted that "because of the prevailing mistrust between East and West, only specific measures could contribute to establishing trust." American and European leaders were indeed initially wary of responding to Gorbachev's overtures, suspecting that these were only empty gestures designed to persuade the West to relax its guard. In Europe, where since the late 1970s the collapse of détente and the subsequent nuclear buildup had provoked public alarm and a determination to preserve the Pan-European gains of the previous two decades, Gorbachev quickly won great popularity. Margaret Thatcher, the hard-line British prime minister in whom Reagan found a political soul mate, urged her colleague to work with the Soviet leader, and Reagan was far readier than many of his advisors to trust Gorbachev. In 1987 the superpowers signed the Intermediate-Range Nuclear Forces (INF) Treaty, eliminating all medium-range missiles in Europe and imposing strong verification procedures. The Strategic Arms Reduction Treaty (START I), which Gorbachev and George H. W. Bush, who succeeded Reagan, concluded in 1991 cut long-range weapons dramatically. In 1985 Gorbachev extended glasnost and perestroika to Soviet satellites in Eastern Europe, hoping thereby to strengthen communism in those countries but in practice promoting rapidly accelerating East European criticism of communism. Although the Soviet hold on this once vital and unnegotiable security interest was increasingly precarious, in 1988 Gorbachev unilaterally reduced the Soviet armed forces by 500,000 and withdrew 10,000 tanks, 8,500 artillery systems, and 800 combat units from Eastern Europe. The Soviet Union decided against intervention should these satellites choose to reject communism, institute free elections, and leave the Soviet empire, which by 1990 all had done. Symbolically, in 1989 the Berlin Wall was dismantled, and the following year the two Germanies united, retaining North Atlantic Treaty Organization (NATO) membership despite Soviet objections. The following year, the two European power blocs signed a Treaty on Conventional Forces in Europe, providing for mutual reductions in conventional armed forces on the part of both European blocs. On 1 April 1991 the Warsaw Pact itself was dissolved. Between 1989 and 1991, the Soviet Union also liquidated its expensive global commitments to revolutionary and quasi-revolutionary regimes and other clients in Nicaragua, Afghanistan, El Salvador, Ethiopia, Cuba, Vietnam, and elsewhere. A new rapprochement with China mirrored the warming of Soviet-Western relations and made it unnecessary to maintain large Soviet forces on the Sino-Soviet border. Gorbachev's policies made him a hero in the West, but to many Russians who took pride in their country's great-power status, the policies seemed an exercise in national humiliation, contributing to a coup attempt against him in August 1991 that, although ultimately unsuccessful, destroyed his authority. In December 1991 Gorbachev finally resigned as president of the now-defunct Soviet Union.

Primary Source

[. . .]

The need for a major reversal in world politics was subsequently repeated in discussions with other foreign leaders, including those of the United States, Great Britain, West Germany, Japan, India, and China.

Perhaps of special interest was the meeting with U.S. Vice President George Bush and Secretary of State George Schultz, where we presented our views on So-

viet foreign policy. I will quote several passages from that meeting:

The Soviet Union will pursue an active and constructive policy based on an understanding of its role and responsibility as a great power. On the global level we see our task as that of promoting, in all our relations with other governments, the aim of creating a healthier international situation and of generating conditions for the expansion of international ties, cultural exchanges,

exchanges in the fields of science, technology, and so on.

We attribute great importance to our relations with the United States. We have no desire to achieve military superiority over the United States, and we have no intention of infringing on the valid interests of the United States. In our opinion, there are great possibilities for fruitful cooperation between us.

We must learn to construct international relations in the real world. The formulation of policy and its practical implementation in all likelihood will depend on how those realities are understood. . . . Every country has certain constant or permanent interests. Accordingly, in carrying out our foreign policy we must take into account the interests of each state. We cannot proceed on the basis that might makes right. . . . We cannot understand the present policy of the United States. It simply does not fit in with the concept of normal international relations.

A short while later, on April 10, 1985, as general secretary of the CPSU Central Committee, I received a visit from Thomas (“Tip”) O’Neill, speaker of the U.S. House of Representatives, and a meeting with him ensued. This meeting was along the same lines as the previous one, but with a greater degree of candor. In my effort to convey to the American congressman my views on the seriousness of the moment, the new possibilities emerging, and the terms and conditions that should be observed if these possibilities were to become a reality, I said the following:

The relations between our countries are presently in a kind of ice age. We favor restoring Soviet-American relations to normal channels. At bottom, our position includes the understanding that a *fatal conflict of interest between our countries is not inevitable*. Further, we have a common interest—in avoiding nuclear war, in guaranteeing the security of both our countries, of preserving life itself for our respective peoples. . . . We do not wish to remake the United States in our own image, regardless of what we like or dislike about that nation. However, the United States should also not undertake the quixotic task of remaking the Soviet Union to suit its own tastes. That

would just lead to war. . . . Many problems exist in the world—political, economic, and social—but there is a way out, namely, peaceful coexistence, the recognition that each nation has the right to live as it wishes. There is no other alternative. . . .

We must build a bridge toward cooperation. But to build such a bridge, as everyone knows, construction must proceed from both sides.

In these two discussions—first with George Bush and George Schultz and then with Tip O’Neill—in addition to the kind of ideas the Soviet government had previously formulated, new ones were presented that had not been part of Soviet policy in the past. I am referring to the principle of balancing interests (and, accordingly, the renunciation of “zero-sum” diplomacy), that is, the need to search for mutually acceptable compromises, to recognize freedom of choice for each nation, and to acknowledge that any system is valid if chosen by the people.

The same principles were posed in meetings with Margaret Thatcher and Helmut Kohl. Also touched on in these meetings were specific problems of bilateral and Europeanwide relations.

An important step in the conceptual development of our new views on foreign policy was taken at the April 1985 Central Committee plenum—the same plenum at which a presentation of forthcoming changes in our government’s domestic policy were first set forth. To quote from the general secretary’s report:

We are in favor of proper, correct, smoothly functioning, and, if you will, civilized relations between states based on genuine respect for international legal norms. But one thing must be clear: Only if imperialism renounces any attempt to resolve by military means the historic dispute between our two social systems will we be successful in bringing international relations back into the channel of normal cooperation.

This was the general framework defining what we saw at the time as the limits of what was possible.

Later in the report two other points were singled out: First, “disputed questions and conflict situations must

be resolved by political means—that is our firm conviction”; and, second, “the CPSU, and the Soviet state, unalterably support the right of self-determination for all peoples, that is, the freedom to decide their own socioeconomic conditions and build their future without interference from the outside. To deny any nation this sovereign right is a hopeless task, doomed from the start.”

This principle was universal in the renewed form of Soviet policy. It applied to all governments and states, including those belonging to the so-called socialist system. This was emphasized at two meetings that took place in 1985 with leaders of the Warsaw Pact countries, one on March 13, the other on April 26. The following summarizes what was said at those meetings:

The relationship between allied countries [i.e., between the Soviet Union and its allies] had to be reshaped. Relations were to develop based on principles of independence, equality, and noninterference in one another’s internal affairs. Each country was to bear responsibility for the decisions it made. In other words, and this point was emphasized, we were ending the so-called Brezhnev doctrine; we were turning a new page, leaving behind the old one on which were recorded episodes of the USSR’s intervention in its allies’ internal affairs.

Not all the leaders attending the Warsaw Pact meetings may have fully appreciated the meaning of what was said. After all, similar words had been spoken in the past, which had by no means prevented our troops from being sent, for example, into Czechoslovakia. But soon everyone realized we were talking about a serious and firm orientation.

On May 8, at a meeting celebrating the fortieth anniversary of the victory over fascism, another proposition was put forward signifying an important step toward expanding the framework of the new foreign policy. The following statement was made: “The only sensible solution today is to establish active cooperation among all governments in the interest of a peaceful future for all; it is the creation, utilization, and development of international mechanisms and institutions of such cooperation that would make it possible to find optimal cor-

relations between national interests and the interests of humanity as a whole.” The advancement of this thesis indicated that the USSR’s concept of foreign policy, in contrast to that of the past, was beginning to move away from narrow class positions to include the new realities in the new world.

This theme was developed further during my visit to France, in discussions with President Mitterand and at meetings with parliamentarians, as evinced by the following statement made at that time:

There is closer and closer interconnection and interdependence among countries and continents. This is an inevitable condition for the development of the world economy, for scientific and technical progress, for the accelerated exchange of information, and for the movement of people and goods on the earth’s surface and even in outer space—in short, for the overall development of human civilization. Unfortunately the advances of civilization are by no means always used to promote the people’s well-being. Scientific and technological achievements are too often used to create means of destruction, to produce and stockpile ever more terrifying weapons.

Under these conditions Hamlet’s question—“To be, or not to be?”—no longer confronts just the individual but challenges the human race as well. Indeed it is becoming a global question. There can only be one answer: Humanity and civilization must survive. But this can be ensured only by learning to live together, to get along side by side on this small planet, by mastering the difficult art of considering one another’s interests.

In the person of Mitterand I had found a partner who took these questions seriously.

During the meeting with Mitterand our side advanced one more proposition that further developed the theme under discussion: “We think that in current circumstances it is especially important not to carry ideological disagreements, in imitation of certain medieval fanatics, into the realm of relations among states.”

Based on all these ideas, and as a means of renewing international relations, a meeting was held in November

1985 between the general secretary of the CPSU Central Committee and the president of the United States, Ronald Reagan. Summarizing the results of this meeting, which was marked, above all, by progress on these very questions regarding human survival and a mutual recognition of the inadmissibility of nuclear war or a policy course aimed at achieving military supremacy, I said the following:

Yes, I am convinced that at the present stage of international relations, which is characterized by greater interconnectedness among states, by their interdependence, a new policy is required. We believe that a new approach requires that the current policies of all states be nourished by the realities of today's world. This is an essential prerequisite for any state in constructing its foreign policy and will also contribute to improving the world situation.

[. . .]

Seeking to end the nuclear arms race, on July 30 we declared a moratorium on nuclear testing, to begin on August 6, 1985 (and this was extended several times). We appealed to the government of the United States to follow our example.

At the same time a message was sent to President Reagan proposing a substantial reduction in strategic nuclear weapons, which would of course be linked with the renunciation of a nuclear arms race in space.

On September 17 we published Soviet proposals to the United Nations concerning the basic directions and principles of international cooperation in the peaceful utilization and nonmilitarization of outer space.

The above is an incomplete list of initiatives taken during 1985. But it shows well enough that the proposals we introduced were quite specific, and their implementation was easily verifiable. These were realistic measures aimed at stopping the expansion of the nuclear arms race.

It should be noted that the measures taken by the Soviet leadership were in some cases unilateral, whereas at other times proposals were addressed equally to both

sides. What was involved, then, was the desire to give material content to the idea of a renewal of international relations, based on the principle of equal security for both sides and freeing them both from a confrontational approach.

The idea was precisely for all to have equal security. For example, when the Soviet Union stopped taking countermeasures in response to U.S. actions in Europe, the level of security increased for the entire continent; at the same time no harm was done to the interests of the USSR itself, for at the time the USSR had superiority in medium-range missiles in Europe. All the appropriate measures were carefully worked out, of course, with the active participation of both our political and military leadership.

Were the new Soviet ideas and the corresponding practical measures assessed fairly in the West? The answer is yes and no. Western observers at the time noted that something new was apparent in the Soviet proposals, but they often regarded this as merely a propaganda maneuver.

The appraisal of the specific actions taken by the USSR was basically positive, but by no means was a symmetrical response made all at once. (True, the United States, beginning in late 1985, did in fact slow down its deployment of medium-range missiles in Europe.) The cessation of nuclear testing on our part, which received a broad and positive response from most governments and world public opinion, was not reciprocated by the United States, which continued its testing.

Obviously hard work lay ahead and possibly for a long time. At a CPSU Central Committee plenum on October 15, 1985, taking into account the events that had transpired, we took note of increased "counteraction by the aggressive forces of imperialism in response to the positive changes in the world." These forces aspired to social revenge and, for that purpose, sought to maintain international tension.

In all meetings and discussions between the general secretary of the CPSU Central Committee and representatives of Western governments, constructive ideas

were advanced but these were often accompanied by serious, specific, and sometimes quite sharp criticism of the foreign policy positions held by our negotiating partners—above all, the Americans. In all cases the observation was made that steps toward new world relations must be mutual; otherwise nothing would come of them.

At the Twenty-seventh CPSU Congress in February–March 1986 a balance sheet was drawn on the work that had been accomplished. It was at this plenum that we first formulated the basic, general conclusions that would become the decisive framework of the new thinking. Nothing can diminish the importance of these first steps—both theoretical and practical—that were taken during 1985 toward promoting world cooperation. All this was a substantial prologue to the active and assertive promotion of the new principles and methods in world affairs.

The Conception (1985–1991)

As said above, the ideas of the new thinking were not fixed for all time. They constantly evolved. Three main phases in their development can be identified.

The first phase was connected, above all, with the position put forward at the Twenty-seventh CPSU Congress and the deepening of that position in the subsequent period. It was characterized by a theoretical-political analysis of major changes in the world that had taken place since World War II and by the political requirements those changes raised. The practical task was to search for a realistic way to end the Cold War and find a way out of the vicious circle of mistrust, hostility, and confrontation.

The second phase found expression, above all, in the speech by the general secretary of the CPSU Central Committee at the UN General Assembly on December 7, 1988, at a time when the first changes for the better in international affairs were becoming evident. This phase was marked by the advancement of major ideas having to do with prospects for planetwide development. We were no longer talking about “the struggle between two camps” but about the global interests of humanity, the principles of a new world order, and the urgent need for a future based on the

codevelopment of all members of the international community.

The third phase was reached in 1990–91. It embodied the idea that changes in the realm of international relations alone were insufficient, that the future of humanity could be reliably assured only along the lines of a new paradigm of civilization itself, in a process in which a new form of civilization was emerging.

What are the basic postulates of the new thinking? Its starting point is the recognition that despite their dissimilarities all the nations of the world are interdependent. We speak of recognition because this interdependence, which is a form of unity or oneness, had been taking shape for decades. This dynamic had been studied by scientists and scholars outside the Soviet Union and was taken into account by Western foreign policy. As early as 1975, for example, Henry Kissinger declared that global interdependence had become a central factor of U.S. diplomacy. In the Soviet Union, on the other hand, this viewpoint concerning interdependence was perceived as an “alien class” concept. Nonetheless interdependence was a tangible reality, impossible to disregard, and by the mid-1980s it had become the foremost tendency in world relations.

On the one hand, the internationalization of economic life, the mutual influence or reciprocal effect of political decisions taken by various nations, and the formation of an increasingly dense worldwide informational and cultural network—all this was creating an entirely new picture of the world. On the other hand, many complicated and acute global problems had accumulated—for example, problems of ecology, demography, raw materials, and energy sources—and were impossible to resolve within the framework of a single country or even region.

[. . .]

Albert Einstein was one of the first to speak of the necessity for new thinking in the nuclear age. But no one listened to his warnings. (In general, scientific conclusions usually go unheeded even today.) Yet the very first atomic bomb explosions at Hiroshima and Nagasaki demonstrated that we had entered a new stage in

human history. For the first time in its history, the human race had weapons that could extinguish all life on earth. The Day of Judgment, instead of being a biblical allegory, could become a reality, a tragedy made by human hands. This realization was what dictated my statement as CPSU general secretary on January 15, 1986. The main point of that statement was the proposal that we move toward a nonnuclear world in the twenty-first century.

Deep reflection on the situation, on the possible consequences if weapons of mass destruction were used, forced us to draw three theoretical-political conclusions of prime importance.

The first was that the nature of modern weaponry leaves no country any hope of defending itself by purely military and technical means, not even if, for example, it created the most powerful defense system possible. The problem of guaranteeing security appears more and more clearly as a political problem that can and must be solved, above all, by political means. And political means imply negotiations—and still more negotiations. Negotiations presuppose patience, tolerance, and a consistent search for mutually acceptable compromises.

[. . .]

A second conclusion—actually a corollary of the first—is that politics based on the use of force is doomed.

Of course there are attempts to show that this is not so, that wars—even small ones—can still serve as a continuation of politics by other means and can produce definite results. But the experience of the entire era since World War II shows that not a single armed conflict has given its participants or, above all, its initiators any serious political dividends.

A peace based on positions of strength is internally unstable, no matter how one may argue the case. By its very nature, such a peace is based on confrontation, secret or open, on the constant danger of eruptions of fighting, the constant temptation to attempt to achieve one's aims through the use of force. This kind of peace is advantageous (if under present-day criteria such a

thing can be considered an advantage) only to the arms manufacturers.

It is already true today and will especially be true in the future that the authority or prestige of a government, and its place in the international community, will increasingly be defined not by the size of its armies but by its civilized conduct, by its commitment to universal human interests, by the freedom and prosperity of its citizens, by its ability to preserve and enrich its uniqueness not at the expense of others but through honest and mutually advantageous cooperation with others.

We must be realists. The road to such a world will be long and difficult. Renunciation of the use of force in politics, renunciation of the practice of measuring the security of a country by its armed strength—these aims will not be achieved all at once.

With minimal agreement among nations, the field of operation for the politics of force can be limited or narrowed. Unsanctioned use of force on an international level would immediately be subjected to rigorous collective counteraction.

A third conclusion, which is a logical continuation of the first two, is that security under contemporary conditions (especially if we speak of the major nuclear powers) can only be mutual. Taking world relations as a whole, security can only be universal.

These were the considerations that inspired Soviet policy, leading us to advance a program in 1986 for creating a universal system of international security that would encompass not only military but also political, economic, and humanitarian fields.

The theory and methodology of the new thinking were based on the desire to combine military policy with a moral approach to world affairs. This is a highly complicated task; much has been said and written about it in the past as well as at the present time, but no solutions have yet been found. We cannot say that a full solution was achieved even in the perestroika era. Nevertheless it cannot be denied that the basic international decisions made in that era did correspond to

principles of morality. Reflections on the essential problems of the modern world, the ways in which the world has been developing, and the principles of relations among nations gradually led us to the following conclusion: It is impossible to provide for and guarantee new horizons in the future by limiting oneself to the improvement of international relations—that is, the existing ties among nations. The ultimate solutions

lie in the very basic elements of human existence, the deep-running processes that determine the life of the human community.

Rank Structures, Selected Cold War Militaries

All modern armies have two primary classes of soldier: officers and enlisted men. This distinction originated in the armies of ancient times. In the medieval period, the distinction was between knights and men at arms; that is, between nobility and commoners. Through the beginning of the twentieth century, the distinction between military officers and enlisted soldiers reflected the social class distinctions of society as a whole. An officer was, by definition, a gentleman. The breakdown in the old social order that began during World War I was likewise reflected in the world's armies. By the end of World War II, the distinction between officers and enlisted men had become far more a professional one than a social one.

Officers, who comprise 10–15 percent of modern armies, are further divided into three basic groups. Company-grade officers (lieutenants and captains) are responsible for the leadership of platoons and companies. Field-grade officers (majors and colonels) lead battalions and regiments. General officers command the higher military echelons and also coordinate the overall direction of an army and its military activities. It is the generals who answer directly to the political leadership of modern democracies. In some armies, the highest-level general officers hold the title of marshal. Navies also recognize three broad groups of officers, without necessarily using the army terms. In most militaries, generals and admirals are collectively called flag officers because each one has a personal flag bearing the insignia of his rank. Although women flag officers are not uncommon in the U.S. military today, the first one only appeared in the U.S. Army in the early 1970s. Female flag officers are still a rarity in most of the world's militaries.

Enlisted soldiers, sailors, and airmen are divided into two basic categories: enlisted men and noncommissioned officers (NCOs). The term used for the NCO varies from army to army—for example, *Unteroffizier* in German or *sous officier* in French—but the meaning is universal. In any army, NCOs are the backbone of the organization. They are the ones responsible for training individual soldiers and for training and leading fire teams and squads. They hold key leadership positions in platoons and companies. At the higher levels, they assist staff officers in the planning and execution of operations.

In all armies, the larger majority of the enlisted ranks denote the distinctions within the NCO corps. During the Cold War, the Soviet Union and the Warsaw Pact militaries had the weakest and least professional NCO corps. The American, British, and Canadian militaries had by a wide margin the best NCO corps. The Vietnam War decimated the U.S. NCO corps, but it was painstakingly rebuilt in the 1970s and 1980s. Today, most American senior NCOs have some college education, and many have bachelor's or even master's degrees—something that would have been unthinkable as recently as the late 1950s.

NCOs include corporals, sergeants, and, in some armies, warrant officers. In most navies, the NCOs are called petty officers and, in some cases, warrant officers. Warrant officer is the most difficult to classify because its exact status varies from army to army. Most armies of the Cold War period followed the British model, in which warrant officers were the highest category of NCOs. In the U.S. military, by contrast, warrant officers were a distinct personnel class between officers and enlisted men. They were, and still are, considered to be specialist officers, highly skilled in a certain functional area (such as pilots), receiving pay equivalent to company-grade officers but without the full range of command authority and responsibilities.

In the U.S. military, warrant officers were, and still are, much closer to commissioned officers. In the British military warrant officers are clearly the most senior of the NCOs. Contrary to widely held popular belief, the rank of sergeant major does not exist in the British military. Rather, it is a position title—or an appointment, as the British call it—such as squad leader or company commander. The rank of the NCO holding the sergeant major position is always warrant officer, but he is always addressed by his position title of sergeant major. There is, then, no direct comparison between British and U.S. warrant officers, which partially explains the difficulty in correlating military ranks in any period of history.

The confusion between U.S. and British warrant officers causes problems to this day in many North American Treaty Organization (NATO) headquarters. Most armies of the Cold War had warrant officers within the British model. Italy, Poland, Greece, and Romania are among the few countries that have warrant officers within the U.S. model. The U.S. Army, Navy, and Marine Corps had four grades of warrant officer during the Cold War period, although a fifth grade was added right as the Cold War was ending. The U.S. Air Force, on the other hand, discontinued warrant officers in 1959.

While the U.S. military officer rank structure remains today essentially the same as it was in World War II, enlisted rank structures were completely revised in the late 1950s. All the services added two more enlisted pay grades, bringing the total to nine. But while the air force and navy created two new ranks at the top of their enlisted structures, the army and the marine corps added one new rank to the top and another one to the bottom. The result has been a number of anomalies. For example, a master sergeant in the army and the marine corps is a pay grade E-8, while in the air force he is an E-7, or one rank lower. The same applied to the rank of staff sergeant, which in the army and marines corps is an E-6, while it is only an E-5 in the air force.

In the late 1950s, the U.S. Army also created specialist ranks for the pay grades E-4 through E-9. In theory, specialists were not NCOs, and despite their pay grades they ranked below corporal, the lowest NCO rank. It never worked out that way in practice. A specialist 5 was, for all practical purposes, treated as an NCO, although within a given pay grade, hard-stripe NCOs always took precedence over specialists. Because the line between specialists and NCOs continued to blur, the U.S. Army eliminated the ranks of specialist 8 and specialist 9 in the late 1960s. In the subsequent years the remaining specialist ranks were eliminated, one at a time from the top down. By the end of the Cold War, only specialist 4 remained. While a specialist 4 was definitely not an NCO, a corporal (also a pay grade E-4) definitely was.

Establishing rank equivalency among armies is an inexact science at best, as the confusion over warrant officers and sergeants major illustrates. Common sense would seem to dictate that two soldiers in different armies with the exact same rank titles would be essentially equivalent. Unfortunately, that is not the case. The rank of major general provides one of the best examples. British and U.S. major generals are essentially equivalent, but they are not the same as a Soviet or Warsaw Pact general major. In the U.S. Army, major general was and is the second of the general officer ranks, whereas in the Soviet Army it was the first. Rather than simply accepting rank titles at face value, a reasonably approximate rank equivalency can only be established by considering what the holder of that rank actually did.

The problem of rank equivalency is further compounded by the fact that all armies did not have the same number of ranks, whether for officers or enlisted personnel, and sometimes even the various militaries of the same country do not have the same number of ranks. Most armies had three ranks of company-grade officer, but the Soviet and Warsaw Pact armies had four. The British Navy has no officer rank equivalent to the British Army's second lieutenant. The British Navy and the British Air Force have only one grade of warrant officer (senior NCO), but the British Army has two. The Canadian Army and Air Force, on the other hand, have three grades of warrant officer. The Norwegian military has only four enlisted ranks, the senior-most being only at the midlevel of the NATO rank-protocol list. At the most senior levels, countries such as the United Kingdom, France, Turkey, and Poland have marshals, who rank above their four-star generals. As it did during World War II, however, the Soviet Army had three levels of marshal, as did the Democratic People's Republic of Korea (DPRK, North Korea). The People's Republic of China (PRC) had two. Officer candidates had their own separate rank structures in most armies. But the ranks of cadet, midshipman, aspirant, *fahnrich*, and so on were essentially temporary training ranks. Of the eleven distinct enlisted ranks, only the Federal Republic of Germany (FRG, West Germany) had all eleven. Of the fifteen possible officer ranks, only North Korea had all fifteen.

All air forces grew from their respective armies in the first part of the twentieth century. By the Cold War, almost all air forces were independent organizations. In many countries, the rank structures for both army and air force are identical, or nearly so. The British Air Force has an officer rank

structure parallel to that of the British Army but with completely different rank titles and insignia. The rank titles and insignia of U.S. Air Force officers are exactly the same as in the U.S. Army, while the enlisted rank structure is somewhat different, and the rank insignia are completely different.

Many countries during the Cold War, especially in NATO, had a fourth branch of service that may have technically been part of one of the three main services but was nonetheless distinctively separate in terms of operations, uniform, and rank structure. There were two basic types of such organizations—marines and military police. The marine corps of the United States, United Kingdom, Spain, the Netherlands, Republic of Korea (ROK, South Korea), and Republic of Vietnam (RVN, South Vietnam) were all nominally part of those countries' naval establishments. Their rank structures, and in most cases their rank insignia, were more similar to those countries' respective armies. France, Italy, Belgium, and West Germany all had national military police organizations that came under their respective ministries of defense. The German Bundesgrenzschutz (Border Police) were organized and equipped along military lines and had a specific combat role in time of war. The Bundesgrenzschutz passed to purely civilian control in 1994. The French Gendarmerie Nationale is actually a separate branch of the French military. For most of the Cold War, the Italian Carabinieri was a separate corps under the Italian Army, but after the Cold War it became a separate branch of the Italian military. As with the Bundesgrenzschutz, the Belgian Gendarmerie passed to purely civilian status in 1992.

The following tables represent an attempt to equate the various enlisted and officer ranks during the Cold War. In determining the level at which to place a given rank, the duties and responsibilities of the person holding that rank take precedence over the face value of the rank title. The tables do not include officer candidates or true warrant officers. Warrant officers as NCOs are included. Many armies also had special rank structures and designations for musicians, buglers, and pipers, which likewise are not included in the table. During the more than forty years of the Cold War period, most armies made various changes to their rank structures, and some even made complete overhauls more than once. In constructing these tables, the objective was to present a snapshot at about 1975. Even that level of precision was not completely possible. The result, then, are tables based on the best information available ranging from the late 1960s to the early 1980s.

The British Army, which describes itself as “a very tribal organization,” had, and still has, a sometimes confusing number of variations on the enlisted ranks from regiment to regiment. In some cases, just the title of the rank varies, with the insignia remaining the same. Corporals and lance corporals in the British Artillery, for example, are called bombardiers and lance bombardiers. Other ranks, such as squadron quartermaster corporal, had a unique rank insignia and existed only in the Household Cavalry. For the most part, the British enlisted ranks shown in the tables are the most common.

Country Profiles

Belgium

Location: Western Europe

Capital: Brussels

Area (square miles): 11,787

Area (relative): about the size of Maryland

	1950	1961	1970	1989
Population Estimate	8,600,000	9,200,000	9,600,000	9,900,000
Population Density (per sq mile)	729.62	780.52	814.46	839.91
Armed Forces Personnel		110,000	110,000	110,000
Armed Forces as % of Population		1.20%	1.15%	1.11%
Military Spending as % of GNP		3.10%	2.90%	2.50%

Bulgaria

Location: Southeastern Europe

Capital: Sofia

Area (square miles): 42,822

Area (relative): slightly larger than Tennessee

	1950	1961	1970	1989
Population Estimate	7,300,000	7,900,000	8,500,000	9,000,000
Population Density (per sq mile)	170.47	184.48	198.50	210.17
Armed Forces Personnel		132,000	175,000	150,000
Armed Forces as % of Population		1.67%	2.06%	1.67%
Military Spending as % of GNP		5.3%	10.1%	11.9%

Canada

Location: Northern North America

Capital: Ottawa

Area (square miles): 3,849,670

Area (relative): slightly larger than the United States

	1950	1961	1970	1989
Population Estimate	14,000,000	18,300,000	21,700,000	27,400,000
Population Density (per sq mile)	3.64	4.75	5.64	7.12
Armed Forces Personnel		124,000	95,000	88,000
Armed Forces as % of Population		0.68%	0.44%	0.32%
Military Spending GNP		4.4%	2.4%	2.1%

Cuba

Location: Caribbean

Capital: Havana

Area (square miles): 42,803

Area (relative): slightly smaller than Pennsylvania

	1950	1961	1970	1989
Population Estimate	5,800,000	7,200,000	8,500,000	10,400,000
Population Density (per sq mile)	135.50	168.21	198.58	242.97
Armed Forces Personnel		270,000	140,000	297,000
Armed Forces as % of Population		3.75%	1.65%	2.86%
Military Spending as % of GNP		7.6%	4.9%	3.9%

Czechoslovakia

Location: Central Europe

Capital: Prague

Area (square miles): 49,383

Area (relative): slightly larger than twice the size of West Virginia

	1950	1961	1970	1989
Population Estimate	8,900,000	13,800,000	14,300,000	15,600,000
Population Density (per sq mile)	180.22	279.45	289.57	315.90
Armed Forces Personnel		310,000	222,000	175,000
Armed Forces as % of Population		2.25%	1.55%	1.12%
Military Spending as % of GNP		5.6%	6.6%	6.8%

Democratic People's Republic of Korea (North Korea)

Location: Eastern Asia

Capital: Pyongyang

Area (square miles): 46,541

Area (relative): slightly smaller than Mississippi

	1950	1961	1970	1989
Population Estimate	9,500,000	10,900,000	13,900,000	19,700,000
Population Density (per sq mile)	204.12	234.20	298.66	423.28
Armed Forces Personnel		390,000	438,000	1,040,000
Armed Forces as % of Population		3.58%	3.15%	5.28%
Military Spending as % of GNP		11.3%	13.1%	20.0%

Democratic Republic of Vietnam (North Vietnam) *

Location: Southeastern Asia

Capital: Hanoi

Area (square miles): 63,360

Area (relative): slightly more than twice the size of Maine

	1950	1961	1970	1989
Population Estimate	25,300,000	16,400,000	22,100,000	65,900,000
Population Density (per sq mile)	399.31	258.84	348.80	1040.09
Armed Forces Personnel		250,000	452,000	1,249,000
Armed Forces as % of Population		1.52%	2.05%	1.90%
Military Spending as % of GNP		15.9%	Unknown	Unknown

Denmark

Location: Northern Europe

Capital: Copenhagen

Area (square miles): 16,637

Area (relative): slightly less than twice the size of Massachusetts

	1950	1961	1970	1989
Population Estimate	4,300,000	4,700,000	4,900,000	5,100,000
Population Density (per sq mile)	258.46	282.50	294.52	306.55
Armed Forces Personnel		45,000	45,000	31,000
Armed Forces as % of Population		0.96%	0.92%	0.61%
Military Spending as % of GNP		2.6%	2.4%	2.2%

*Vietnam was divided between 1954 and 1975, after which it was united as the Socialist Republic of Vietnam (SRV).

Federal Republic of Germany (West Germany)

Location: Central Europe

Capital: Bonn

Area (square miles): 96,019

Area (relative): slightly larger than Oregon

	1950	1961	1970	1989
Population Estimate	43,000,000	56,200,000	60,700,000	62,100,000
Population Density (per sq mile)	447.83	585.30	632.17	646.75
Armed Forces Personnel		350,000	510,000	503,000
Armed Forces as % of Population		0.62%	0.84%	0.81%
Military Spending as % of GNP		4.0%	3.3%	2.8%

Finland

Location: Northern Europe

Capital: Helsinki

Area (square miles): 130,560

Area (relative): slightly smaller than Montana

	1950	1961	1970	1989
Population Estimate	4,000,000	4,500,000	4,600,000	5,000,000
Population Density (per sq mile)	30.64	34.47	35.23	38.30
Armed Forces Personnel		48,000	40,000	39,000
Armed Forces as % of Population		1.07%	0.87%	0.78%
Military Spending as % of GNP		1.8%	1.5%	1.6%

France

Location: Western Europe

Capital: Paris

Area (square miles): 212,934

Area (relative): slightly less than twice the size of Colorado

	1950	1961	1970	1989
Population Estimate	41,800,000	46,200,000	50,800,000	56,400,000
Population Density (per sq mile)	196.30	216.97	238.57	264.87
Armed Forces Personnel		720,000	570,000	554,000
Armed Forces as % of Population		1.56%	1.12%	0.98%
Military Spending as % of GNP		6.2%	4.2%	3.7%

German Democratic Republic (East Germany)

Location: Central Europe

Capital: East Berlin

Area (square miles): 41,828

Area (relative): slightly larger than Tennessee

	1950	1961	1970	1989
Population Estimate	18,400,000	16,900,000	17,100,000	16,500,000
Population Density (per sq mile)	439.90	404.04	408.82	394.47
Armed Forces Personnel		139,000	202,000	262,000
Armed Forces as % of Population		0.82%	1.18%	1.59%
Military Spending as % of GNP		1.5%	6.9%	8.8%

Greece

Location: Southern Europe

Capital: Athens

Area (square miles): 50,950

Area (relative): slightly smaller than Alabama

	1950	1961	1970	1989
Population Estimate	7,600,000	8,400,000	8,800,000	10,000,000
Population Density (per sq mile)	149.17	164.87	172.72	196.27
Armed Forces Personnel		160,000	180,000	201,000
Armed Forces as % of Population		1.90%	2.05%	2.01%
Military Spending as % of GNP		4.2%	4.7%	5.8%

Hungary

Location: Central Europe

Capital: Budapest

Area (square miles): 35,919

Area (relative): slightly smaller than Indiana

	1950	1961	1970	1989
Population Estimate	9,300,000	10,000,000	10,300,000	10,400,000
Population Density (per sq mile)	258.92	278.40	286.76	289.54
Armed Forces Personnel		115,000	146,000	109,000
Armed Forces as % of Population		1.15%	1.42%	1.05%
Military Spending GNP		2.2%	7.4%	6.3%

Israel

Location: Middle East

Capital: Jerusalem (Tel Aviv)

Area (square miles): 8,019

Area (relative): slightly smaller than New Jersey

	1950	1961	1970	1989
Population Estimate	1,300,000	2,200,000	2,900,000	4,300,000
Population Density (per sq mile)	162.11	274.35	361.64	536.23
Armed Forces Personnel		63,000	105,000	191,000
Armed Forces as % of Population		2.86%	3.62%	4.44%

United States

Location: North America

Capital: Washington, D.C.

Area (square miles): 3,717,796

Area (relative): about half the size of Russia

	1950	1961	1970	1989
Population Estimate	152,300,000	183,800,000	205,000,000	247,300,000
Population Density (per sq mile)	729.62	780.52	814.46	839.91
Armed Forces Personnel		2,483,000	3,070,000	2,241,000
Armed Forces as % of Population		1.35%	1.50%	0.91%
Military Spending as % of GNP		9.2%	7.9%	5.6%

Cold War Chronology

February 1945

- 4–12 Yalta Conference—Big Three (United States, United Kingdom, Soviet Union) represented by Franklin Roosevelt, Winston Churchill, and Josef Stalin

May 1945

- 8 V-E Day (end of World War II in Europe)

June 1945

- 26 United Nations (UN) founding conference ends with the promulgation of the UN Charter

July–August 1945

- 17–2 Potsdam Conference—Big Three represented by Harry Truman, Winston Churchill (replaced by Clement Attlee during the conference), and Josef Stalin

August 1945

- 14 V-J Day (end of World War II in the Pacific)
17 U.S. and Soviet officials agree on 38th Parallel as the boundary line between their occupation forces in Korea

September 1945

- 2 Ho Chi Minh proclaims in Hanoi the Democratic Republic of Vietnam (DRV, North Vietnam)

November 1945

- 17 Nationalist leader Sukarno declares the Netherlands East Indies (Indonesia) independent

- 27 U.S. General of the Army George C. Marshall begins his mission to China to try to mediate between the Guomindang (GMD, Nationalist) and Communist Party of China (CCP) factions

January 1946

- 10 UN General Assembly holds its first meeting; Trygve Lie of Norway becomes first UN secretary-general
19 Iran complains to the UN Security Council that the Soviet Union is meddling in internal Iranian affairs
31 An agreement is reached in China on a new governmental structure for the country

February 1946

- 9 Speech by Josef Stalin stating that capitalism and communism are “incompatible”
22 George Kennan issues the “Long Telegram,” the basis for the containment policy of the United States
25 Chinese Nationalists and communists agree on a program to integrate their armed forces

March 1946

- 5 British statesman Winston Churchill delivers his “Sinews of Peace” speech (also known as the “Iron Curtain” speech) at Westminster College in Fulton, Missouri
25 Under pressure from the West, the Soviet Union announces that it will withdraw its troops from northern Iran

April 1946

- 18 With Marshall absent in the United States, Chinese Nationalist and communist forces clash in Manchuria
- 22 Merger of communist and socialist parties in Germany, creating the Socialist Unity Party (SED), in effect the new communist party

July 1946

- 12 The U.S. House of Representatives approves \$3.75 billion loan to Great Britain
- 29 Opening of conference in Paris to conclude peace treaties with World War II cobelligerents of Germany

August 1946

The Nationalist and communist agreements in China collapses

September 1946

- The Greek Civil War between the royalist British-backed government and Greek communist guerrillas begins
- 6 In an important speech in Stuttgart, U.S. Secretary of State James F. Byrnes declares the U.S. intention to restore the German economy and vows that U.S. forces will remain in Europe as long as other powers retain occupying forces there
- 17 In Zurich, Winston Churchill calls for the creation of a "United States of Europe"

November 1946

- 25 President Harry S. Truman establishes the Loyalty Commission (Presidential Temporary Commission on Employee Loyalty)

December 1946

- 2 The United States and Britain agree to create Bizonia by combining their occupation zones in Germany
- 3 The Greek government complains to the UN Security Council that the neighboring communist states are providing military support to the communist insurgency

- 19 Viet Minh forces attack the French in Tonkin (northern Vietnam), beginning the Indochina War

January 1947

- 1 Bizonia officially created
- 8 Marshall, having failed to bridge the wide gulf between the Nationalists and communists, leaves China

February 1947

- 10 Peace treaties signed with German cobelligerents of World War II: Bulgaria, Finland, Hungary, Italy, and Romania
- 21 British diplomats in Washington inform the U.S. State Department that Britain, hard-pressed financially, can no longer provide aid to Greece and Turkey

March 1947

- 4 Britain and France sign the Treaty of Dunkerque (Dunkirk) by which they pledge mutual aid in the event of a new war with Germany
- 12 In a speech to Congress, President Truman asks for \$400 million in aid for Greece and Turkey and outlines the policy that later comes to be known as the Truman Doctrine
- 21 Truman issues Executive Order 9835 calling for an investigation into the loyalty of all federal employees

May 1947

- 8 In a speech to the Delta Cotton Council in Mississippi that is in effect a trial balloon for the later Marshall Plan, U.S. Undersecretary of State Dean Acheson discusses the economic plight of Europe and the U.S. stake in this

June 1947

- 5 In a speech at Harvard University, Marshall, now secretary of state, proposes an economic aid program for Europe that will later be known as the Marshall Plan

July 1947

"Sources of Soviet Conduct" by "X" (George Kennan) is published in *Foreign Affairs*

- 2 The Soviet Union rejects U.S. assistance under the Marshall Plan given the conditions attached, forcing its European satellites to follow suit
- 20 Fighting erupts in Indonesia between Dutch and nationalist forces, beginning a two-year war
- 26 Truman signs the National Security Act, which establishes the Department of Defense, the Central Intelligence Agency (CIA), the National Security Council (NSC), and the Joint Chiefs of Staff (JCS)

September 1947

- 2 Western Hemisphere states sign the Treaty of Rio, designed to establish inter-American solidarity against aggression
- 22–23 Communist delegates meeting in Poland establish the Communist Information Bureau (Cominform)

October 1947

- 18 The House Un-American Activities Committee (HUAC) begins an investigation of communism and the movie industry in Hollywood

December 1947

The Chinese Civil War between the Nationalists and the communists resumes

February 1948

- 25 Communist coup in Czechoslovakia—after the collapse of a coalition government, President Edvard Beneš is pressured into appointing a government dominated by the communists

March 1948

- 10 Czechoslovak government authorities announce the death, allegedly by suicide, of Czechoslovak Foreign Minister Jan Masaryk (a 2004 Czech Republic government investigation concludes that he had been murdered)
- 17 Treaty of Brussels is signed by France, Britain, Belgium, the Netherlands, and Luxembourg—forerunner to the North Atlantic Treaty Organization (NATO)
- 20 Soviet representatives walk out of the four-power Allied Control Council for Germany

April 1948

- 1 Soviet authorities in Germany impose restrictions on road and rail traffic from the Western zones of Germany into Berlin
- 2 The U.S. Congress establishes the Economic Cooperation Administration to oversee the Economic Recovery Program (Marshall Plan)
- 30 In Bogotá, Colombia, the United States and Latin American countries establish the Organization of American States (OAS)

June 1948

- 13 The U.S. Senate adopts the Vandenberg Resolution endorsing U.S. participation in regional defense organizations
- 18 The Western occupying powers introduce a new currency in their zones of Germany and Berlin
- 24 The Berlin Blockade begins when the Soviet Union halts all land and water traffic between the Western zones of Germany and West Berlin
- 26 The Berlin Airlift begins
- 28 Yugoslavia is expelled from the Cominform

August 1948

- 3 Whittaker Chambers testifies to HUAC that former State Department official Alger Hiss was a communist in the 1930s

November 1948

- 2 In one of the most stunning upsets in U.S. political history, Truman wins reelection as president over the favored Republican Party challenger Thomas E. Dewey

December 1948

- 5 Municipal elections held in the Western zones of Berlin
- 10 The UN General Assembly adopts the Universal Declaration of Human Rights

January 1949

- 22 Communist forces capture Beijing in China
- 25 The Soviet Union announces the creation of the Council of Mutual Economic Assistance (Comecon), the Soviet counterpart to the Marshall Plan, for its satellites of Eastern Europe

- 28 The UN Security Council orders the Netherlands to end military operations in Indonesia and grant it independence

February 1949

- 26 The government of the Netherlands agrees to grant independence to Indonesia

March 1949

- 25 Chinese communist leader Mao Zedong proclaims Beijing to be the capital of China

April 1949

- 4 NATO is established by twelve nations, including the United States
22 Nationalist forces abandon their capital of Nanjing (Nanking)

May 1949

- 5 Ten West European states form the Council of Europe at Strasbourg, France
8 The Western German parliament approves the Basic Law, in effect the constitution of the Federal Republic of Germany (FRG, West Germany)
12 The Soviet Union ends the Berlin Blockade
23 West Germany is established
25 Chinese communist forces occupy Shanghai

August 1949

- 24 North Atlantic Treaty goes into effect following its ratification by France
29 The Soviet Union tests its first atomic bomb

October 1949

- 1 Mao proclaims the establishment of the People's Republic of China (PRC)
7 The German Democratic Republic (GDR, East Germany) is established

January 1950

- 21 Hiss is convicted of perjury
31 Truman announces that the United States will proceed with the development of nuclear fusion (the hydrogen bomb)

February 1950

- 9 In a speech in Wheeling, West Virginia, U.S. Senator Joseph R. McCarthy claims to have a list of 205 communist sympathizers working in the State Department
14 The Sino-Soviet Treaty of Friendship, Alliance, and Mutual Assistance signed in Moscow

April 1950

- 7 The National Security Council produces NSC-68, which calls for a massive military buildup
25 Truman approves NSC-68

May 1950

- 9 French Foreign Minister Robert Schuman proposes creation of a European coal and steel community

June 1950

- 25 North Korean forces invade the Republic of Korea (ROK, South Korea), beginning the Korean War
27 The UN Security Council passes a resolution sponsored by the United States calling for the defense of Korea
30 Truman approves the dispatch of U.S. ground forces to Korea

August 1950

- 11 In the course of a speech to the European Assembly in Strasbourg, Winston Churchill, still a private citizen, calls for the establishment of a European army, with West German participation

September 1950

- 15 Successful amphibious landing by American forces at Inchon, South Korea

October 1950

- 7 UN forces cross the 38th Parallel into the Democratic People's Republic of Korea (DPRK, North Korea)
28 Chinese communist forces launch a major intervention in the Korean War

November 1950

25–26 Chinese communist forces carry out a massive offensive against UN forces in the Korean War

December 1950

- 15 Truman proclaims a state of national emergency
- 31 Chinese communist forces cross the 38th Parallel, invading South Korea

January 1951

- 4 Chinese communist forces capture Seoul
- 10 UN forces recapture Seoul and Inchon

March 1951

- 29 Julius and Ethel Rosenberg are convicted of passing nuclear secrets to the Soviet Union and on 5 April receive the death sentence

April 1951

- 11 Truman dismisses General Douglas MacArthur as commander of UN forces in Korea, replacing him with General Matthew Ridgway
- 18 Delegates of West European states meeting in Paris establish the European Coal and Steel Community (ECSC)

May 1951

- 23 The PRC takes control of Tibet
- 25 Guy Burgess and Donald Maclean, British Foreign Office officials, leave Britain—later it is revealed that they had spied for the Soviet Union

June 1951

- 23 Soviet UN delegate Jacob Malik proposes a cease-fire in Korea and the reestablishment of the status quo antebellum

July 1951

- 10 Armistice talks begin at Kaesong in Korea

September 1951

- 8 The Treaty of San Francisco is signed between the Allied powers, associated nations (forty-nine in all), and Japan and goes into effect on 28 April 1952

- 27 Iran takes control of the Anglo-Iranian oil refinery at Abadan

February 1952

- 23 NATO authorities announces a plan to create an army of fifty divisions within a year's time

March 1952

- 10 Stalin proposes a reunified and neutral Germany

July 1952

- 21 Egyptian military officers overthrow King Farouk

October 1952

- 3 In waters off Australia, Britain detonates its first atomic bomb

November 1952

- 1 The United States tests the world's first thermonuclear device (hydrogen bomb)

March 1953

- 5 Stalin dies
- 6 Georgy Malenkov becomes Soviet premier and first secretary of the Communist Party of the Soviet Union (CPSU)
- 14 Malenkov is forced to relinquish leadership of the CPSU to Nikita Khrushchev

June 1953

- 17 Workers in East Berlin strike and riot against increases in work quotas and shortages of basic goods—the riots spread across East Germany and have to be put down by Soviet troops
- 19 Julius and Ethel Rosenberg are executed despite widespread protests against their sentence

July 1953

- 27 The United States and North Korea sign an armistice, ending the fighting in Korea

August 1953

- 19 A CIA-sponsored coup overthrows the government of nationalist Premier Mohammed Mossadegh in Iran

January 1954

- 12 U.S. Secretary of State John Foster Dulles enunciates the defense doctrine that will become known as massive retaliation
- 21 The United States launches the *Nautilus*, the world's first nuclear-powered submarine

March 1954

- 1 The United States explodes its first deliverable thermonuclear bomb on Bikini Atoll in the Pacific
- 13 The Battle of Dien Bien Phu opens in Indochina

April 1954

- 22 Opening of the Army-McCarthy Hearings in Washington, D.C.
- 26 Beginning of the Geneva Conference on Korea and on the war in Indochina

May 1954

- 7 Viet Minh forces defeat the French at Dien Bien Phu following a furious two-month-long battle

June 1954

- 27 A CIA-sponsored coup overthrows President Jacobo Arbenz of Guatemala

July 1954

- 21 The Indochina War ends with the signing of agreements in Geneva, although in order to comply with a deadline imposed by French Premier Mendès-France, the document is dated 20 July

August 1954

- 30 The French National Assembly rejects the European Defense Community (EDC) treaty

September 1954

- 3 The shelling of offshore Chinese islands in the Taiwan Strait until 1 May 1955 is initiated by the PRC
- 8 Establishment of the Southeast Asia Treaty Organization (SEATO) with signing of documents in Manila

October 1954

- 3 In London, the Western Allies sign an agreement that will allow the rearmament of West Germany within NATO

December 1954

- 2 The U.S. Senate votes to censure Senator McCarthy
- 2 The United States and the Republic of China (Taiwan) sign a mutual defense treaty

February 1955

- 8 Malenkov resigns as premier of the Soviet Union and is replaced by Nikolai Bulganin, while Khrushchev emerges as the leader of the Soviet Union
- 24 Turkey and Iraq sign the Baghdad Pact

April 1955

- 5 Britain, Turkey, and Iraq sign the Baghdad Pact, and Iran and Pakistan join later in the year (after Iraq leaves in 1959, the name is changed to the Central Treaty Organization, or CENTO)

May 1955

- 5 West Germany regains full sovereignty and joins NATO as a full member on 8 May
- 14 The Soviet Union and its satellites form the Warsaw Treaty Organization to counter NATO
- 15 The Western Allies and the Soviet Union sign the Austrian State Treaty, ending the occupation of Austria

June 1955

- 18 Summit meeting involving Khrushchev, Dwight Eisenhower, Anthony Eden, and Edgar Faure at Geneva

August 1955

- 4 The U-2 spy plane makes its first overflight of the Soviet Union

December 1955

- 1 The Western Allies declare that despite Soviet contentions to the contrary, Berlin remains an occupied city

- 9 The West German government announces the Hallstein Doctrine, indicating that West Germany will no longer maintain diplomatic relations with those states that recognize the East German government

February 1956

- 25 Khrushchev gives his so-called secret speech to the Twentieth Party Congress of the Soviet Communist Party in which he denounces the “cult of personality built by Stalin,” thus beginnings a campaign of de-Stalinization

June 1956

- 28 Workers riot in Poznań, Poland, against poor economic conditions and communist rule

July 1956

- 26 Gamal Abdel Nasser, president of Egypt, nationalizes the Suez Canal

October 1956

- 21 The Soviet Union accepts Władysław Gomułka as the new leader of Poland
23 The Hungarian Revolution begins
26 Representatives of seventy nations sign a document creating the International Atomic Energy Agency (IAEA)
29 The Suez Crisis begins, during which Israel, backed by Britain and France, attacks Egypt

November 1956

- 1 Imre Nagy announces that Hungary is leaving the Warsaw Treaty Organization
4 Soviet tanks enter Budapest to crush the Hungarian Revolution

December 1956

- 2 Fidel Castro and his followers land in Cuba and begin the Cuban Revolution

January 1957

- 5 President Eisenhower announces a new policy, later known as the Eisenhower Doctrine, that promises U.S. military aid to victims of aggression in the Middle East

March 1957

- 9 Eisenhower signs into law congressional legislation authorizing U.S. forces to come to the aid of Middle Eastern states

July 1957

- 3 Khrushchev defeats opposition to his rule and solidifies his position as leader of the Soviet Union
14 Coup in Iraq in which King Faisal and others are slain

October 1957

- 4 The Soviet Union launches *Sputnik I*, the world's first orbiting satellite

January 1958

- 1 The European Common Market and Atomic Energy Commission are established
13 British government announces that a Soviet attack on the West, regardless of the weapons employed, will evoke a British hydrogen bomb response
31 U.S. Army launches *Explorer I*, the first American artificial satellite

May 1958

Mao's disastrous Great Leap Forward (1958–1961), an attempt at rural industrialization and increased agricultural production that results in a massive famine and the deaths of perhaps as many as 30 million people, begins

July–October 1958

The United States sends troops under the Eisenhower Doctrine to protect Lebanon's pro-Western government

July 1958

- 29 Establishment of the National Aeronautics and Space Administration (NASA)

August 1958

- 23 Renewed shelling of Jinmen and Mazu (part of the Republic of China) in the Taiwan Strait by the PRC

October 1958

- 4 Establishment of the French Fifth Republic

December 1958

- 14 The Western Allies reject the Soviet demand that they withdraw their soldiers from West Berlin

January 1959

- 1 Castro takes power in Cuba

March 1959

- 30 Release of earlier congressional testimony by U.S. Chief of Naval Operations Admiral Arleigh Burke in which he announces the beginning of a shift in U.S. defense posture with a renewed emphasis on conventional forces to build up a capability to wage limited war

April 1959

- 4 The NATO Council announces its determination to maintain the status quo in West Berlin and the rights of all occupying powers to be there

July 1959

- 24 Vice President Richard Nixon and Khrushchev have the “Kitchen Debate” at a U.S. exhibition in Moscow

September 1959

- 15–27 Khrushchev becomes the first Soviet leader to visit the United States

December 1959

- 1 Signing of the agreement on the peaceful use of Antarctica, the first major postwar arms-control agreement

March 1960

- 17 Eisenhower approves a CIA plan calling for Cuban exiles to invade Cuba and overthrow Castro’s regime

May 1960

- 5 Khrushchev announces that the Soviet Union shot down a U-2 spy plane on 1 May and captured the pilot, Francis Gary Powers

- 7 The U.S. government admits that the U-2 shot down over the Soviet Union had been on a surveillance mission

- 16 Eisenhower refuses to apologize for the U-2 flights, resulting in Khrushchev’s departure from Paris and the collapse of the scheduled summit there

July 1960

Civil war breaks out in the Republic of the Congo, which had recently received independence from Belgium

September–October 1960

Khrushchev attends the UN General Assembly session, and Eisenhower does not offer to meet him

October 1960

- 19 The United States bans most trade with Cuba

December 1960

- 20 Establishment of the National Liberation Front (NLF) in the Republic of Vietnam (RVN, South Vietnam) by Vietnamese communists

January 1961

- 1 The United States breaks diplomatic relations with Cuba

April 1961

- 12 Major Yuri Gagarin of the Soviet Union becomes the first human to orbit Earth in space
- 17 Cuban exiles invade Cuba at the Bay of Pigs

May 1961

- 5 Commander Alan Shepard becomes the first American in space
- 15 U.S. President John F. Kennedy declares in a speech to Congress that the United States should achieve a manned flight to the moon before the end of the decade

June 1961

- 3–4 Kennedy and Khrushchev hold a summit meeting in Vienna

July 1961

- 24 Kennedy warns the Soviet Union not to interfere with Western access to West Berlin

August 1961

- 13 East German authorities close their border with the West and begin construction of the Berlin Wall

October 1961

- 26–27 Confrontation in Berlin between U.S. and Soviet tanks

February 1962

- 7 The United States embargoes trade with Cuba
- 10 The United States swaps Soviet spy Colonel Rudolf Abel for U-2 pilot Powers
- 20 Lieutenant Colonel John H. Glenn Jr. becomes the first American to orbit Earth in space

July 1962

- 1 French rule ends in Algeria following a vote in that country in favor of independence
- 23 The neutrality of Laos is guaranteed by accords signed in Geneva

October 1962

- 14 Beginning of the Cuban Missile Crisis with the discovery in a U-2 reconnaissance flight of the construction of Soviet missile bases in Cuba
- 22 In a speech to the American people, Kennedy announces the presence of the Soviet missile bases in Cuba and declares a quarantine on the shipment to Cuba of offensive weapons
- 28 Khrushchev agrees to withdraw missiles from Cuba in return for a U.S. guarantee not to invade the island

November 1962

- 20 Kennedy announces an end to the U.S. blockade of Cuba

June 1963

- 20 Establishment of a hotline between the White House and the Kremlin
- 26 Kennedy's speech at the Berlin Wall in which he declares, "Ich bin ein Berliner"

August 1963

- 5 The United States, Britain, and the Soviet Union sign a partial nuclear test-ban treaty

August 1964

- 2 Attack by North Vietnamese torpedo boats against the U.S. destroyer *Maddox* in international waters in the Gulf of Tonkin
- 7 The U.S. Congress passes the Gulf of Tonkin Resolution

October 1964

- 15 Leonid Brezhnev becomes first secretary of the CPSU, replacing Khrushchev
- 16 The PRC tests its first atomic bomb

February 1965

- 7 Communist forces in South Vietnam attack U.S. military installation at Pleiku

March 1965

- 8–9 U.S. Marines arrive in South Vietnam, the first U.S. combat troops sent there, charged with protecting U.S. bases

April 1965

- 28 U.S. President Lyndon B. Johnson sends Marines to the Dominican Republic

September–October 1965

- 30–1 A communist coup is crushed by the Indonesian Army

March 1966

- 9 France withdraws from NATO's military command but remains part of the alliance

June 1967

- 6 The Six-Day War begins between Israel and Egypt, to include Syria and Jordan
- 23 Johnson meets with Premier Alexei Kosygin in Glassboro, New Jersey

October 1967

- 21 March on the Pentagon to protest the Vietnam War

January 1968

- 5 Alexander Dubček becomes leader of the Czechoslovakian Communist Party (CPCz), and the Prague Spring begins two months later, in March
- 30 The Tet Offensive begins in South Vietnam

May 1968

- 10–13 The United States and North Vietnam begin peace talks in Paris

July 1968

- 1 The United States, the Soviet Union, and Britain sign the Nuclear Non-Proliferation Treaty (NPT)

August 1968

- 20–21 Warsaw Pact troops end the Prague Spring by invading Czechoslovakia

November 1968

- 12 Brezhnev announces the Brezhnev Doctrine in which socialist states are obligated to aid a socialist state threatened by counter-revolutionary forces

March 1969

- 2 Clashes erupt between the Soviet Union and the PRC along the Ussuri River

June 1969

- 8 The Nixon Doctrine proclaims that Asian nations will have to defend themselves with their own soldiers in the future

November 1969

- 17 U.S. and Soviet negotiators begin the Strategic Arms Limitation Talks (SALT)

April 1970

- 30 Incursion by the United States and South Vietnam into Cambodia

August 1970

- 12 West Germany signs a nonaggression pact with the Soviet Union

December 1970

- 7 West German–Polish Treaty recognizes the Oder-Neisse border

June 1971

- 13 The *New York Times* begins publishing the Pentagon Papers

July 1971

- 15 Nixon announces that he will visit the PRC in 1972

February 1972

- 21 Nixon begins his visit to the PRC

May 1972

- 26 Nixon and Kosygin sign the SALT I treaty and the Anti-Ballistic Missile (ABM) Treaty

June 1972

- 3 A four-power agreement between the United States, the Soviet Union, Britain, and France resolves the Berlin issue

December 1972

- 21 The Basic Treaty establishes mutual relations between West Germany and East Germany

January 1973

- 27 A Vietnam peace agreement is signed

July 1973

- 3 The Helsinki Conference on European security begins

October 1973

- 6 Egyptian forces strike across the Suez Canal, beginning what is known as the October, Yom Kippur, or Ramadan War between Egyptian and Syrian forces against Israel

November 1973

- 7 Congress overrides Nixon's veto of the War Powers Act

June 1974

- 27 Summit meeting between Nixon and Brezhnev

November 1974

- 23–24 President Gerald Ford and Brezhnev agree on a draft for a SALT II treaty

April 1975

- 17 Cambodia falls to the Khmer Rouge, and a genocidal campaign soon begins
30 Fall of Saigon and end of the Vietnam War

August 1975

- 1 Leaders of thirty-five nations sign the Helsinki Accords

July 1976

- 2 North and South Vietnam are officially united

March 1977

- 17 President Jimmy Carter announces that human rights will be a major focus of U.S. foreign policy

December 1978

- 25 Vietnam invades Cambodia

January 1979

- 1 The United States and the PRC open diplomatic relations

June 1979

- 18 Carter and Brezhnev sign the SALT II treaty (never ratified)

July 1979

- 17 Marxist Sandinista guerrillas seize control in Nicaragua

November 1979

- 4 Radical Iranian students seize the U.S. embassy in Tehran, taking seventy Americans hostage

December 1979

- 12 European members of NATO agree to deploy U.S. Pershing II and cruise missiles in Western Europe
27 Soviet forces seize control of Afghanistan

January 1980

- 3 Carter withdraws the SALT II treaty from consideration by the Senate in response to the Soviet invasion of Afghanistan
23 Carter, in a statement that later becomes known as the Carter Doctrine—a reaffirmation of the Truman and Eisenhower Doctrines and a partial repudiation of the Nixon Doctrine—announces that the United States will regard any Soviet aggression directed at the Persian Gulf as a threat to its vital interests

April 1980

- 7 The United States breaks off diplomatic relations with Iran

May 1980

- 4 President Josip Broz Tito of Yugoslavia, in power since 1945, dies

August 1980

- 31 Solidarity, led by Lech Wałęsa, signs an agreement with the Polish government that allows the establishment of the trade union movement

January 1981

- 20 American hostages held in Iran are freed

April 1981

- 1 The United States suspends aid to the Sandinista regime in Nicaragua

October 1981

- 6 President Anwar Sadat of Egypt assassinated by Muslim fundamentalist military officers

December 1981

- 13 The Polish government declares martial law and arrests the leaders of Solidarity

June 1982

- 6 Israeli forces invade southern Lebanon in an attempt to end the terrorist activities of the Palestine Liberation Organization (PLO)

November 1982

- 10 Brezhnev dies

March 1983

- 9 President Ronald Reagan calls the Soviet Union an “evil empire”
- 23 Reagan announces support for the Strategic Defense Initiative (SDI), popularly known as Star Wars

April 1983

- 18 Arab terrorists set off a bomb at the U.S. embassy in Beirut, killing sixty-three people

September 1983

- 1 Soviet aircraft shoot down Korean passenger jet KAL 007 in Soviet airspace

October 1983

- 5 Wałęsa wins the Nobel Peace Prize for his work with Solidarity
- 23 Arab terrorists drive a truck full of explosives into a U.S. barracks in Lebanon, killing 241 Marines
- 25 Invasion of Grenada by U.S. and Caribbean contingents

November 1983

- 23 The Soviet Union responds to the U.S. deployment of Pershing II missiles in Western Europe by walking out of the intermediate-range nuclear forces reduction talks in Geneva

May 1984

- 24 Congress bans further aid to the Contras in their struggle against the Sandinista regime in Nicaragua

September 1984

- 26 The PRC and Britain sign an agreement on the transfer of Hong Kong to the PRC in 1997

February 1985

- 6 Reagan announces U.S. support for all anti-communist rebels (freedom fighters) in a policy that later becomes known as the Reagan Doctrine

March 1985

- 11 Mikhail Gorbachev becomes general secretary of the CPSU

May 1985

- 20 Federal Bureau of Investigation (FBI) agents arrest naval officer John Anthony Walker Jr. as a Soviet spy

November 1985

- 19–21 First summit meeting between Reagan and Gorbachev is held in Geneva

April 1986

- 26 A major nuclear accident occurs at the Chernobyl nuclear power plant near Kiev in the Soviet Union

October 1986

- 11–12 Gorbachev and Reagan meet at Reykjavík, Iceland, for a second summit but fail to reach agreement on arms control

May 1987

- 5 Congress begins hearings on the Iran-Contra Affair

June 1987

- 14 Pope John Paul II makes his third papal visit to his native Poland and strongly endorses Solidarity

December 1987

- 8–10 Gorbachev and Reagan hold a summit in Washington, D.C., and sign the Intermediate-Range Nuclear Forces (INF) Treaty, which bans all intermediate-range nuclear missiles from Europe

May–June 1988

- 29–2 Reagan and Gorbachev hold a summit meeting in Moscow

December 1988

- 7 Gorbachev announces unilateral reductions in troop (100,000 men) and tank (10,000) strength in Europe in a speech to the UN General Assembly

January 1989

- 11 Hungary introduces political reforms

February 1989

- 15 Soviet troops leave Afghanistan

March 1989

- 26 The Soviet Union holds the first partially free elections in its history for the Congress of People's Deputies

May 1989

- 2 Hungary begins removing the barbed-wire fence along its border with Austria

June 1989

- 3–4 Chinese troops kill and injure thousands of prodemocracy demonstrators in Beijing's Tiananmen Square
- 4–18 Solidarity is victorious in Poland's first free election under communist rule
- 16 Imre Nagy, executed for his role in the 1956 Hungarian Revolution, is reburied with honors

August 1989

- 24 Poland gets its first noncommunist premier since World War II

October 1989

- 9 Demonstrations in Leipzig begin an expanding series of protests against the East German government
- 18 Egon Krenz replaces Erich Honecker as head of the East German Communist Party
- 25 Gorbachev publicly rejects the Brezhnev Doctrine

November 1989

- 9 East Germany inadvertently opens the Berlin Wall
- 20 More than 200,000 people demonstrate in Prague against the Czechoslovak communist regime
- 24 Czechoslovak communist leader Milo Jake and his entire politburo resign

December 1989

- 2–3 President George H. W. Bush meets with Gorbachev at sea near Malta

- 25 A military tribunal tries and executes Romanian dictator Nicolae Ceaușescu and his wife Elena
- 29 Václav Havel becomes Czechoslovakia's first noncommunist president since 1948

March 1990

- 11 Lithuania declares its independence from the Soviet Union
- 13 The Congress of People's Deputies repeals Article 6 of the Soviet constitution, depriving the CPSU of its legal monopoly on political power, and the CPSU's Central Committee agrees to the change two days later

May–June 1990

- 30–3 Bush and Gorbachev hold a summit meeting in Washington, D.C.

July 1990

- 16 Meeting between Helmut Kohl, chancellor of West Germany, and Gorbachev leads to an agreement allowing German unification

October 1990

- 3 Germany is officially united
- 15 Gorbachev is awarded the Nobel Peace Prize

November 1990

- 21 The thirty-four members of the Conference on Security and Cooperation in Europe sign the Charter of Paris, formally ending the Cold War

July 1991

- 1 The Warsaw Pact formally disbands
- 31 Bush and Gorbachev, meeting in Moscow, sign the Strategic Arms Reduction Treaty (START I)

August 1991

- 19–21 Unsuccessful coup by Soviet Communist Party hard-liners

December 1991

- 25 Gorbachev resigns as leader of the Soviet Union
- 31 The Soviet Union is officially dissolved

MICHAEL D. RICHARDS AND SPENCER C. TUCKER

How to Read a Primary Source

Reading information, like the reference content of this encyclopedia, is the bread and butter of the historian. Reading through a historian's analysis of a particular event, a reference entry from an encyclopedia, or the content directly from a government act each have value in determining the historical context of a period.

A good historian must develop the skills to determine what is a primary source of information and what is a secondary source. A secondary source is content that is written about a historical period and interprets the historical events. For example, reference materials such as this encyclopedia or a history textbook are secondary sources. A primary source is any source that is created within the historical period being studied. A song from the Beatles or treaties from the end of World War II are good examples of primary sources.

But why study a primary source? Historians are taught to “go to the source” and are more likely to go to the most original source available than to read through another historian's analysis of the material. Reaching into primary source materials gives the historian the closest source to the actual event as possible. But in dealing with all primary sources, like secondary sources, certain information should be gathered:

1. What type of source is it? Knowing exactly what type of source it is can be very useful in determining the validity of the primary source.

2. Who is the author of the source? Each source is created by someone. To guarantee the authenticity of the primary source, a historian will check the source and its author.

3. When was the source created? Ensure that the source was actually created within the time period being studied and was not created afterward as an analysis of it. Understanding the historical context of the source is very important in determining whether the source is a primary source or a secondary source.

4. Where was the source created? Make sure the source was created within the historical space being studied. In essence, is the source reporting on the event from a distance, or was the author actually experiencing it?

Once these basic facts have been determined for the source, a historian will look into the purpose of the primary source. All sources are created for a purpose—letters to friends are intended to inform, treaties are intended to set boundaries and limitations, fictional works are intended to entertain or teach. Ask the following questions about the primary source:

1. Why was the source created? The purpose of the source can give insight into whether or not the source is an accurate and unbiased portrayal of the information or if it has been editorialized.

2. Who is the intended audience of the source? A source that is created to tell a friend something will be very different than one that is intended to inform an enemy.

Once a historian has determined the facts of the source, and has a sense of its purpose and audience, the source can be placed within a historical context.

How to Read a Map

The ability to read and comprehend maps is a very important skill to acquire in historical study. Understanding the various components of a map and their importance is key to this skill.

What is the difference between a key and a scale? What is a compass rose? What is the distance between point A and point B? All of these questions are important if you want to read a map. But what is a map and how is it read? The answer appears to be very simple—but there are many different types of maps and not all of them have the same purpose.

Generally, a map is a visual representation of a particular location that shows the relationship between a set of features. These features can be physical, cultural, political, economic, or military. For example, a map that shows the events of the Tet Offensive might highlight where certain attacks by the Viet Cong occurred and when, in relation to other events of the Vietnam War.

To be able to understand how a map can show these features, it is necessary to understand the general elements of a map.

1. **Title** Just like the title of a book or magazine article, the title of a map should tell the reader the subject of the map. The best titles include not only the “what,” but also the “where” and the “when” of the subject of the map. Titles are often very simple, but they give the reader a sense of the scope of the map.

2. **Orientation** As a general convention, all cartographers (mapmakers) place north at the top of each map. To reinforce this convention, or to point out when the

convention has not been followed, a compass rose is added to a map to point to the North Pole (rather than true north).

3. **Scale** Maps generally have a small feature near one of the corners that shows the relative size of the map. The scale of the map shows the relationship between a particular length on the map (usually one inch) and the relative distance between features on the map. This allows the reader to determine distances between elements on the map. Some maps do not include a scale—these maps are described as “not written to scale,” which means that distances between features on the map are not necessarily accurate.

4. **Legend (Key)** The legend or key of the map shows the reader the meaning of the symbols and colors used on the map. Many symbols are accepted and not shown on most legends, such as dots for cities and stars within circles for capital cities. By utilizing the symbols, colors, and shadings on a map, a cartographer can describe not only the physical features of a region, but also actions or changes.

5. **Grid (Coordinates)** Every map should show the relationship of the region shown in the map to the longitude meridians and latitude parallels of the globe. This allows the reader to place the region of the map (which may be very small) within the larger geographic context of the Earth.

Some maps use these features to show a geographic relationship between events and actions; others use them to display other information, such as economic or cultural changes over time and the relationship between

geography and these changes. For example, the refugee population of various nations can be shown using either a table that displays the information or a map, which would also show the relationship between the largest populations and their geographic locations.

Learning how to read a map and understanding how a map can display information can be a valuable historical tool for all students.

How to Read a Chart, Table, or Graph

Charts, tables, and graphs are all important visual ways to display statistical information. Organizing statistical information in a visual format is an excellent way to display relationships between statistics, represent changes over time, or show a large amount of information in a more confined and organized space than a paragraph. These visual representations show complex information in a simple, straightforward relationship.

To understand how a historian might use a chart, table, or graph, it is important to understand their basic components. The common components of a chart, table, or graph include:

1. **Title** Every chart, table, or graph should have a title that details the information that will be presented within it. Titles should not only explain briefly the relationship between the two or more components involved, but should also include a date or other chronological information to place the data in a historical context.

2. **Data** The information that makes up the chart, table, or graph is called the data. Whether this information is displayed in a pie chart, a relational table, or a line graph, it is the most important component of the visual display.

3. **Legend (Key)** The legend or key is the explanation of the visual design of the chart, table, or graph. If the visual design uses color or shading to denote a particular piece of information, the key will explain which color or shading represents which information.

Other components of charts, tables, and graphs are specific to the type of visual representation used. Here

are some examples of specific types of charts, tables, or graphs and their components.

Pie Chart A pie chart is a very convenient way to show parts of something that make up a whole. By using various colors or shadings, a pie chart can show how much of the total a certain piece of information represents. For example, when looking at the total number of individuals in military service at a certain time, a pie chart can show how many were in the navy, air force, or army.

Statistical Table A statistical table is the clearest way to show information. It can be as simple as a two-column presentation of the presidents of the United States and their dates of service, or as complicated as a table showing the relationship between casualties during a conflict and the military budgets of various nations.

Bar Graph A bar graph is a type of graph that shows a relationship between two or more similar entities. The graph is most often placed on x- and y-axes, where the y-axis denotes the total number of what is being compared, and the x-axis lists the pieces of information that are being compared. For example, the x-axis of a bar graph might list the various groups involved in a conflict, and the y-axis might show the number of casualties. This graph would easily show the relationship between the number of casualties sustained by the various groups at a particular moment in time.

Line Graph A line graph is a type of graph that best shows changes in a particular piece of information over

time. The line graph is also placed on x- and y-axes, but here the x-axis usually shows a period of time and the y-axis shows the total number of what is being compared. Line graphs often show two or more pieces of information in comparison, with a different color or line style for each of the things being compared. for example, a line graph of the military expenditures

of two nations over a period of time would make an effective line graph.

Understanding how to read the various types of charts, tables, and graphs will make comprehension of more difficult pieces of information much easier.

Glossary

4-F	Draft classification given to those individuals determined to be unfit for military service	AFC	Armed Forces Council
AAM	air-to-air missile	AFDD	Air Force Doctrine Document
ABCCC	Airborne Battlefield Command and Control Center	AFMC	Air Force Material Command
ABDA	American, British, Dutch, Australian	AFV	armored fighting vehicle
ABL	airborne laser	AGM	Missile-range instrumentation ship
ABM	antiballistic missile	AIRCENT	Allied Air Forces Central Europe
Abwehr	Military intelligence (German); Germany's military intelligence branch was the Abwehrabteilung, commonly known as the Abwehr.	AK-47	Russian-designed assault rifle, Automat Kalashnikov, manufactured throughout the communist bloc and considered to be one of the most successful infantry weapons of the twentieth century.
ACAV	Armored cavalry assault vehicle; M113 armored personnel carrier modified with two additional 7.62-mm machine guns and shielding for its main .50-caliber machine gun.	ALCS	airborne launch-control system
ACCS	Air Command and Control System; also Airborne Command and Control Squadron	ALERT	Attack and Launch Early Reporting to Theater
ACG	Air Commando Group	amidship	The center part of the ship. This is both between the fore and aft sections and between the port and starboard sides.
ACV	U.S. Navy designation for an auxiliary aircraft carrier	amphibious warfare	Military activity that involves landing from ships, either directly or by means of landing craft or helicopters.
AEW	airborne early warning	anyang hasham niko	Fractured American version of Korean-language <i>annyong hashimnigga</i> (hello).
AFB	Air Force Base	AOR	area of responsibility

apartheid	Any system or practice that separates individuals within a nation by race or caste; specifically used in South Africa in the twentieth century.	ballistics	The science of projectiles, divided into interior and exterior ballistics. Its aim is to improve the design of shells/projectiles so that increased accuracy and predictability are the result. It also deals with rockets and ballistic missiles.
APC	armored personnel carrier		
APDS	armor-piercing discarding sabot		
ARG/SLF	amphibious ready group/special landing force	Baltimore Four	The Baltimore Four, activists opposed to the Vietnam War, poured human and animal blood over the files of potential draftees in 1967 in the first-ever raid on a selective service office.
ARM	antiradiation missile		
arms race	Massive military buildup between the Soviet Union and the United States during the Cold War era.	battle light	Red light between decks to aid in development of night vision.
ARPA	Advanced Research Projects Agency		
ARRS	Aerospace Rescue and Recovery Service	BBC	British Broadcasting Corporation
ARV	armored recovery vehicle	beehive round	An explosive artillery shell delivering small nail-like projectiles rather than shrapnel.
ASAT	antisatellite		
ASEAN	Association of Southeast Asian Nations, founded in 1967 to oppose the threat of feared communist expansionism. Members include Brunei, Myanmar (Burma), the Philippines, Indonesia, Laos, Malaysia, Singapore, Thailand, and Vietnam (admitted in July 1995).	Berlin occupation zones	At the end of World War II, the Allies (the United States, Great Britain, France, and the Soviet Union) divided Berlin, Germany, into zones that each country was to occupy.
ASM	air-to-surface missile	Big Four	Soviet Union, United States, Great Britain, and China
ASR	submarine rescue ship	Big Three	Soviet Union, United States, and Great Britain
ASROC	antisubmarine rocket	bipolar world	The balance of power after World War II and during the Cold War, when half of the Northern Hemisphere was controlled by the United States and capitalist democracies and the other half by the Soviet Union and communist states.
ASW	antisubmarine warfare		
ATF	Advanced Tactical Fighter		
ATGM	antitank guided missile		
AWACS	Airborne Warning and Control System, a mobile long-range radar surveillance and control center for air defense.	blacklist	A list of persons who are under government suspicion for possible illegal activities.
AWOL	absent without leave		
Ba Muoi Ba	A Vietnamese brand of beer (Vietnamese for “33”).	BMEWS	Ballistic Missile Early Warning System

boat people	After the Vietnam War, Vietnamese refugees by the hundreds and thousands fled their homeland on crowded fishing boats, makeshift vessels, and unseaworthy craft.	CAS	at a site believed to bring success and luck to the dead person's descendants.
body count	The number of enemy killed, wounded, or captured during an operation.	Catonsville Nine	close air support
brinkmanship	The action of escalation of a hazardous situation in an effort to force an opponent to back down.	CBO	The Catonsville Nine, a group of religious antiwar activists, led a famous protest against the Vietnam War.
bug out	To retreat rapidly and in panic without orders or authority when confronted with an advancing enemy and usually leaving all weapons and equipment behind; the opposite of an orderly, organized, and authorized withdrawal or relocation.	CBU	combined bomber offensive
bush war	Bush wars, which are typically fought in the bush regions (wilderness areas replete with dense trees or shrubs and inhabited by people as well as wild animals) of Africa, are conflicts fought with guerrilla tactics.	cease-fire	cluster bomb unit
CAC	Combined action company. Organized by the U.S. Marine Corps beginning in August 1965, the CACs were composed of a Vietnamese Popular Forces platoon, a Marine rifle squad, and a medical corpsman.	CGN	A cease-fire, which occurs during times of war, may involve a partial or temporary cessation of hostilities. A cease-fire can also involve a general armistice or a total cessation of all hostilities.
cai táng	Vietnamese practice of ancestor veneration. Traditionally, especially before 1954, about three to five years after they had been temporarily buried, the remains of a dead relative would be exhumed, washed with scented alcohol, and reburied in a permanent grave. The remains might even be moved to another grave,	chaplains	guided missile cruiser with nuclear power
		Charlie	Military officers who tend to the spiritual, moral, and physical needs of troops in the field and in camp; pastors in uniform.
		Checkpoint Charlie	One of the many slang names for Communist troops; military communications code word for the letter "C"; a shortened form of Victor Charlie (VC, for Viet Cong).
		cheka	Border crossing point between West and East Berlin during the period of the Cold War.
		chicken plate	political police of Russia
		CHICOM	Bulletproof breastplate worn by helicopter crews.
		CHNAVADVGRP	Chinese communist
		chogey	Chief, Naval Advisory Group Vietnam (U.S. Navy)
		Christian Democrats	Slang term meaning to leave an area: "cut a chogey." Originally a Korean War term that was also used in Vietnam.
			Espousing such Christian values as compassion and tolerance,

	Christian Democrats began to form political parties in Western Europe after World War II, particularly in Germany and Italy.	Claymore	U.S. M18 antipersonnel mine. Light, easily transported, and highly directional. Spraying more than 100 steel balls in a 40-degree arc, it could be hand-detonated or emplaced to fire electronically (command detonated).
CIC	Counterintelligence Corps (U.S.)		
CIDG	Civilian Irregular Defense Group. Central Intelligence Agency project that combined self-defense functions with economic programs to win the support of the civilian population. Carried out among Montagnards by U.S. Army Special Forces.	clear and hold	Military operation used by U.S. and Republic of Vietnam troops in the pacification program in which troops encircled, captured, and searched an area, clearing it of communist forces; South Vietnamese troops then usually held the area.
CinC	commander in chief		
CINCFE	Commander in chief, Far East. Commander of U.S. forces in the Far East.	containment	A primary strategy of the United States during the Cold War in which political, economic, and military force was used to prevent the spread of communism through the world.
CINCMED	commander in chief of the Mediterranean		
CINCPAC	Commander in Chief, Pacific Command. Commander of U.S. forces in the Pacific, including Southeast Asia.	CORDS	Civilian Operations and Revolutionary (later changed to Rural) Development Support. Organized all civilian agencies in Vietnam within the military chain of command. Successor to the Office of Civilian Operations (OCO).
CINCUNC	Commander in chief, United Nations Command. Commander of United Nations military forces in Korea.		
CIS	Commonwealth of Independent States		
civil affairs/ military government	Those activities of a commander that embrace the relationship between the military forces and civil authorities and people in a friendly country or area (civil affairs) or occupied country or area (military government).	COSVN	Central Office for South Vietnam (Trung Uong Cuc Mien Nam). Communist military headquarters representing the Democratic Republic of Vietnam (DRV, North Vietnam) Lao Dong Party Central Committee in South Vietnam.
civilian control of the military	Civilian control of the military was established by the framers of the U.S. Constitution as an alternative to the British system in which the king alone controlled the military.	coup	Also known as a coup d'état, a coup is a sudden, decisive use of force in politics, especially in terms of a violent overthrow of an existing government by a small group, often assisted by the military.
CLAA	U.S. Navy designation for an anti-aircraft cruiser.		

court-martial	To subject to a military trial with a court consisting of a board of commissioned officers.		rebels, students, workers, and union leaders.
curtain fire	Artillery tactic of making a continuous wall of fire to seal off an area.	disarmament	The removal or drastic reduction by nation-states of major weapons.
CVN	Aircraft carrier, nuclear propulsion.	dislocation	The displacement of populations of people from one geographic location to another, most often caused by sudden and extreme situations of a political, military, and/or economic nature.
DARPA	Defense Advanced Research Projects Agency		
death squads	Clandestine and usually irregular organizations, often paramilitary in nature, that carry out extrajudicial executions and other violent acts against clearly defined individuals or groups of people.	Distant Early Warning Line	The Distant Early Warning Line, also called the DEW Line, was a chain of radar stations in the Arctic region of North America that were built during the Cold War between 1954 and 1957.
D.C. Nine	On 22 March 1969, nine members of the radical Catholic Left, most of whom were Catholic priests, staged a raid on Dow Chemical offices in Washington, D.C., to protest the Vietnam War.	DMSP	Defense Meteorological Satellite Program
Defense Meteorological Satellite Program	The Defense Meteorological Satellite Program was used during the Persian Gulf War to help aircrews know which targets were clear and which were obscured by clouds or other weather phenomena.	DMZ	Demilitarized zone. For example, the 5-mile-wide buffer zone along the demarcation line, just below the 17th Parallel, that was established in the 1954 Geneva Accords to provisionally divide North and South Vietnam pending elections that were to have been held in 1956. According to the Geneva Accords, there were to be no military forces, supplies, or equipment within the zone during its temporary existence.
defense perimeter	A defense without an exposed flank, consisting of forces deployed along the perimeter of a defended area.	DOD	Department of Defense (U.S.)
détente	The relaxation of tension between two superpowers, through the theory of mutually assured destruction.	donut dollies	Nickname for workers in the American Red Cross Supplemental Recreation Activities Overseas (SRAO) program in Vietnam that provided a variety of recreational activities for American troops. The women were so-named because they often dispensed donuts and coffee to the troops, especially in the field. The women also
Dirty War	A period of strict repression during Argentina's 1976–1983 military dictatorship in which the right-wing regime contained popular opposition by brutally striking out against all alleged subversives, including leftist		

	assisted in hospitals and provided games and conversation in the field.		members of different ethnic communities considered to be enemies of the country.
door-gunner	Soldier who fired from the open door of a helicopter, a hazardous position usually filled by volunteers.	EUSAK executive officer	Eighth U.S. Army in Korea The executive officer (XO) is the second in command of a vessel, squadron, etc.
draft evasion	The most common form of protest against the draft, or compulsory military enrollment sanctioned by the government.	FAC	Forward air controller. Low-flying spotter planes identified opposition positions and called the FAC, who in turn ordered air strikes against these positions.
Eagle Flight Special	U.S. helicopter assault force used to observe communist positions, react to emergencies, and conduct raid and ambush missions.	fallout shelter	Structures developed to allow the users to survive a nuclear attack and its subsequent radioactive fallout.
economic warfare	Compelling an enemy to submit either by direct action against its economic basis or indirectly through blockade or boycott.	FDC FDO FEAF	fire direction center fire direction officer Far East Air Force. Primary U.S. Air Force component serving in Korea during the Korean War.
E&E	escape and evasion		
electronic warfare	The use of the electromagnetic spectrum to gain knowledge of the presence and movement of an opposing force and also to deny any opposing force the use of that spectrum.	FEC FECOM firebase	Far East Command (today FECOM) Far East Command A small artillery base used for patrol and to support ground operations, usually temporary.
ER/ELINT	electronic reconnaissance/intelligence	firefight	A brief and violent exchange of small-arms fire between two opposing units, rather than combat action between two larger forces, during an assault.
ESM	electronic support measures		
espionage	Espionage, or the practice of spying to learn the secrets of other nations or organizations, has always been an important component of any military operation.	first-strike capability	The ability of a country to launch an overwhelming surprise attack on another country.
estimated position	Vessel's position advanced on the chart from a previous fixed or observed position.	FISCOORD	Fire support coordinator for artillery at company, battalion, or brigade level. Usually the senior artilleryman present who prepared fire plans and integrated all indirect-fire weapons.
ethics of war	Rules, principles, or virtues applied to warfare.		
ethnic cleansing	A policy by which government, military, or guerrilla forces remove from their homes mem-	five o'clock follies	Five o'clock follies was the derisive epithet appended by the media during the Vietnam War

	to daily media briefings by the Military Assistance Command, Vietnam Office of Information, at the Joint U.S. Public Affairs Office in Saigon.			left his arms and accoutrements behind. He carried furlough papers detailing his leave dates, assignment, and return to duty date. Since photos were noticeably absent, such furlough papers gave a physical description of the man.
flashback	A strong recurrence of memory, usually a symptom of post-traumatic stress disorder (PTSD).			
flotilla	A grouping of warships, distinctive from a fleet by its smaller size.	GHQ		general headquarters
Force Recon	The U.S. Marine Corps' elite reconnaissance element.	glasnost		"Openness" in Russian. A policy developed by Mikhail Gorbachev of scaling back government secrecy and encouraging cooperation with the United States.
foreign aid	Foreign aid, the granting of assistance to other countries, may include donations of food or money, development loans, technical help, or military support.	global positioning system (GPS)		A series of satellites that broadcast navigational signals by ultra-precise atomic clocks, providing accurate positioning.
fps	feet per second	GLONASS		Global Orbiting Navigation Satellite System
fragging	Euphemism introduced during the Vietnam War to describe the intentional causing of friendly casualties from weapons in American hands.	GNSS		Global Navigation Satellite System
		GPES		Ground proximity extraction system. A system whereby a long hook attached to cargo in a C-130 cargo plane would catch an arrest wire on the runway, pulling the cargo from the plane. Used during air resupply to land loads, as during the siege of Khe Sanh.
freedom birds	Nickname given to the airplanes taking U.S. soldiers home after their tour of duty.			
freedom schools	Freedom schools were established in the early and mid-1960s, particularly in Mississippi and Alabama, by young student civil rights activists to build awareness among African Americans as to what could be done about oppression.	guerrilla		A type of limited warfare or a person who participates in guerrilla warfare.
		gulag		A forced labor camp in the Soviet Union, often used for political prisoners.
friendly fire	Friendly fire describes the incidence of casualties incurred by military forces in active combat operations as a result of being fired upon by their own or allied forces.	hearts and minds		In 1965 President Lyndon B. Johnson said, "So we must be ready to fight in Vietnam, but the ultimate victory will depend on the hearts and minds of the people who actually live out there." The U.S. government tried to win the loyalty and trust
FSB	fire support base			
furlough	Any leave granted to a soldier by his superior. A soldier on furlough			

	of the Vietnamese through various pacification programs that included the provision of civic improvements and security from Viet Cong harassment with the objective of encouraging villagers to fight against the communists.		theless representing the different points of view: India (neutralist), Canada (Western), and Poland (communist). Later, Indonesia replaced India in a revamped version of the ICSC known as the International Commission of Control and Supervision (ICCS) mandated by the 1973 Paris Peace Accords.
hegemony	The dominance of one nation over other nations, based on the dominant nation's transfer of core values and basic societal institutions, not through military conquest.	IDSCS	Initial Defense Satellite Communications System
Hoa Lo Prison	The Hoa Lo Prison, nicknamed the Hanoi Hilton, was the best-known and most notorious of the camps or prisons housing U.S. prisoners of war in the Hanoi area.	intelligence community	The intelligence community comprises the government agencies charged with gathering information (intelligence) about other countries' military abilities and general intentions in order to secure U.S. foreign policy goals.
hop tac	Vietnamese for "cooperation." Name of an unsuccessful 1964 pacification program concentrated around Saigon.	international waters	All waters apart from nations' territorial waters.
HQ	headquarters	Iron Curtain	A term popularized by Winston Churchill to describe the division between the Soviet Union and its related states and the countries of Western Europe.
HUD	head-up display		
hull	Actual body of a vessel. Excludes superstructure, rigging, masts, and rudder.	Iron Triangle	Area between the Thi Tinh and Saigon Rivers dominated by the Viet Cong.
HUMINT	human intelligence	IRBM	intermediate-range ballistic missile
hydrogen bomb	In 1950, the hydrogen bomb (H-bomb) was created under the direction of U.S. President Harry Truman in response to the growing threat of the cold war.	IRPCS	International Regulations for Preventing Collisions at Sea (or Colregs by U.S. Coast Guard); internationally agreed rules of the road, designed to ensure safety at sea. Applies to all vessels on the high seas.
ICBM	intercontinental ballistic missile		
ICSC	International Commission for Supervision and Control. Established at the 1954 Geneva Conference to supervise implementation of the Geneva Accords, it consisted of delegates from three countries not involved in the conflict but none-	IVS	International Voluntary Services. A private, nonprofit organization that served as a model for the Peace Corps and that first came to the Republic of Vietnam (RVN, South Vietnam) in 1957.

	Funded primarily by the U.S. Agency for International Development (USAID), support also came from the RVN government during the early years. IVS workers were required to study Vietnamese and received instruction in Vietnamese culture. They signed up for a two-year stay in-country, with assignments at the village level ranging from agricultural development to the teaching of English. IVS saw its function as humanitarian and divorced from USAID political objectives. Saigon ceased approving IVS projects in 1971.	K rations KCOMZ	Army, U.S. Marine Corps, and U.S. Navy. U.S. Army field rations Korean communications zone. In U.S. Army doctrine, a communications zone is the specified area behind the front lines where supply and administrative facilities could be established and operated to relieve the frontline commander of responsibility for functions not directly related to combat operations.
Japanese miracle	The extraordinary economic recovery and success of Japan shortly after the end of World War II.	KGB	Komitet Gossudarstvennoi Bezopastnosti (Committee for State Security), the Soviet secret police.
jeep	quarter-ton truck (slang term for a general-purpose truck, or GP)	KHz	kilohertz, or 1,000 cycles per second
jet engine	An internal combustion engine in which hot exhaust gases generated by burning fuel combine with air, causing a rearward thrust of jet fluid and propelling an aircraft.	KIA	killed in action
		kibbutz	An agricultural settlement organized with collective principles, often in Israel.
		Kit Carson scouts	Former Viet Cong or People's Army of Vietnam soldiers who were used as scouts by U.S. units.
jihad	Islamic term that means "holy war."	KKK	Khmer Kampuchea Krom. Anti-communist faction, loosely allied with the Khmer Serai, seeking autonomy for Khmer Krom people living in the Mekong River Delta of South Vietnam in return for military services. During the 1960s, Khmer Krom soldiers made up numerous ethnic regular and irregular force battalions within the Army of the Republic of Vietnam (ARVN).
JSOTF	Joint Special Operations Task Force		
junta	Rule by a group of military officers who came to national power through a military coup.		
JUSPAO	Joint U.S. Public Affairs Office; created in 1965 to take charge of both relations with the news media and psychological warfare operations.		
JUWTF	Joint Unconventional Warfare Task Force; composed of unconventional warfare personnel from the U.S. Air Force, U.S.	laws of war	International laws, enforced sometimes by nations after war and sometimes by commanders in battle, governing both the decision to engage in war and the manner of its conduct,

	particularly the forms of violence used, the definition of combatants, the treatment of prisoners, and the treatment of neutrals and noncombatants.		War, U.S. President Dwight D. Eisenhower decided to increase the production of nuclear weapons.
lima sites	Primitive airstrips in Laos used by U.S. forces for covert actions.	mayday	Internationally recognized radio distress signal; may be sent only in a case of imminent danger. From French <i>m'aidez</i> (help me).
LOCs	lines of communication		
LOH	Light observation helicopter (pronounced LOOCH).	Medevac	Acronym combining the words "medical" and "evacuation"; term applied to the movement of casualties from the battlefield to more secure locations for immediate medical attention.
long-range torpedo	Homing torpedoes having speeds up to 75 knots and ranges between 40,000 and 60,000 yards; driven by electric batteries of hydrogen peroxide engines, they leave no wake.	MEO	middle-earth orbit
LORAN	long-range electronic navigation	mercenaries	Hired professional soldiers who fight for a state or entity without regard to political interests or issues.
low-intensity conflict	A system of military engagement developed during the Cold War.		
M-16	U.S. assault rifle. Incurred great controversy, as early models tended to jam in combat. Troops initially preferred the M14, a magazine-fed Garand-action, U.S. rifle issued from 1957 until 1967.	MGS	Mobile Ground System
		MGT	Mobile Ground Terminal
		MHC	minehunter, coastal
		MHz	megahertz, or 1 million cycles per second
		MIDAS	Missile Defense Alarm System
MACV-SOG	Military Assistance Command, Vietnam, Studies and Observation Group	MiG Alley	A 6,500-square-mile airspace in northwestern Korea, site of the most intense jet aircraft combat throughout the war.
MAD	mutual assured destruction		
mad minute	Strategy used by U.S. forces in an effort to force or "trip" a Viet Cong or People's Army of Vietnam ambush or assault. Just prior to daybreak, all forces within a position would open fire into the area surrounding the position, utilizing all weapons.	militarism	The view that military power and efficiency is the supreme ideal of the state.
		military base	A variety of military installations can be considered military bases.
		military justice	The military justice system, which is responsible for disciplining members of the armed forces, operates under a code of law that is separate from civilian law.
martial law	Temporary military governance of a civilian population when the civil government has become unable to sustain order.		
massive retaliation	As a result of the frustrating consequences of the Korean	Military Sealift Command	The Military Sealift Command (MSC) is the U.S. Navy force dedicated to providing strategic mobility in support of wartime

	and peacetime national security objectives.	NASA	National Aeronautics and Space Administration
MIRACL	Mid-Infrared Advanced Chemical Laser	NATO	North Atlantic Treaty Organization
MIRV	multiple independently targetable reentry vehicle	nautical mile	Unit of measurement at sea, equal to 6,076 feet.
missile gap	The difference in the number of nuclear missiles between the Soviet Union and the United States.	NAVSTAR	Navigation Satellite Time and Ranging
		NBAP	Night Bomber Aviation Regiment (Soviet Union)
mobilization	Mobilization, in war or national defense, is the organization of the armed forces of a nation for active military service in time of war or other national emergency.	NLF	National Liberation Front; officially National Front for the Liberation of South Vietnam (NFLSV, Viet Cong).
Montagnard	French term for indigenous Vietnamese mountain people. Often shortened to "Yard."	Nobel Prize	The Nobel Foundation was established in 1900 and awarded its first annual prize in 1901.
mopping up	Mission assigned to troops following the first assault wave; their job was to clear pockets of enemy resistance bypassed earlier.	no-fire line	U.S. fire-control measure. A designated point on a map beyond which no indirect-fire weapons or air assets could be employed without permission from the sector commander.
MOS	military occupational specialty		
MRBM	medium-range ballistic missile	nonaligned movement	The nonaligned movement was initiated by many third world nations during the 1950s and 1960s in an attempt to steer a course of neutrality between the United States and the Soviet Union in the atmosphere of the Cold War. These countries felt that they had nothing to gain from entering direct alliances with either of the two superpowers, although they frequently courted both sides in attempts to gain greater amounts of economic and military assistance. The nonaligned movement first met at the Bandung Conference in Indonesia in 1955, and international meetings were held periodically over the next two decades, but the neutral nations were never able to
mujahideen	guerrilla fighters, especially in Afghanistan and Iran		
mutual assured destruction	The understanding that if one of the superpowers fired its nuclear arsenal at the other, the reciprocation would lead to the completion destruction of both countries.		
NAG	Naval Advisory Group. Former U.S. Navy section in the Military Assistance and Advisory Group, Vietnam (until May 1964). In April 1965 it became an operational naval command.		
napalm	Made of gasoline thickened to a gel, napalm was used by the U.S. military during World War II, the Korean War, and the Vietnam War in bombs and flamethrowers.		

	formulate any cohesive policies because of the wide variety of member countries. With the end of the Cold War, the nonaligned movement lost any importance that it once held in international affairs.	periscope	Prismatic telescope fitted on submarines and used to observe surface vessels and other objects while the submarine is submerged.
nonproliferation	Collective term used to describe efforts to prevent the spread of weapons of mass destruction short of military means.	periscope depth	Submersion of a submarine so that only its periscope is above sea level.
NORAD	North American Air Defense Command	pinko	Slang term meaning a communist sympathizer that came into usage after World War II. A communist would be called a red.
oa	Abbreviation for "overall," used as a descriptor of the length of a vessel; thus, a ship that is 300 feet in length (oa) measures 300 feet from the front of the bow to the end of the stern.	post-traumatic stress disorder	Term developed to describe and treat stress reactions in Vietnam War veterans.
occupied territories	Two of the four areas seized by Israel from Arab states in the Six-Day War in 1967.	POW	prisoner of war
paramilitary organizations	Unofficial groups organized along military lines yet lacking the traditional role or legitimization of conventional or genuine military organizations.	procurement	The act of purchasing, procurement often refers to the government's purchasing of military equipment or other supplies.
Patriot missile	Built for the U.S. government by Raytheon, the Patriot tactical air defense missile system became an overnight sensation during the Persian Gulf War for shooting down incoming Iraqi Scud missiles in Saudi Arabia and Israel.	propellants	Compounds used to move a projectile from the firing device to the target.
PBR	river patrol boat	provost marshal	chief of military police
peaceful coexistence	An expression that describes the act of living together without hostility, peaceful coexistence is often a foreign policy goal of nations that wish to avoid war.	psychological operations	The use of psychology and propaganda by military units to persuade target audiences to adopt at least some of their views and possibly to modify their behavior.
perestroika	"Restructuring" in Russian; an economic policy developed by Mikhail Gorbachev to rebuild the Soviet Union.	PSYOPS	psychological warfare operations
		PSYWAR	psychological warfare
		punji stake	A sharpened bamboo stake covered with feces or poison and placed at the bottom of a pit, underwater, or along a trail to be stepped on by troops; an effective physical and psychological weapon.
		PWO	Psychological warfare officers. U.S. Army officers attached to Eighth Army headquarters who decided on suitable psychological warfare targets.

rearmament	The process a nation undertakes to rebuild its arsenal of weapons that were exhausted during a time of war or other military action.		them into a change of policy. There are political, economic, and military sanctions.
recon	Short for “reconnaissance.” Small recon patrols were used to get information about enemy troop strengths, movements, etc.; also called recce.	satellite state	A country that is under the domination or influence of another. The term was used to describe the status of the East European states during the Cold War.
rest camp	Rear area for recuperation and light duties; also a sort of holding area before soldiers left on leave.	SCAP	supreme commander, Allied powers (title given to General Douglas MacArthur as head of the occupation forces in Japan)
restricted fire line	U.S. fire-control measure. A designated point on a map beyond which targets could be engaged only with indirect-fire weapons or air assets with permission from tactical headquarters or when direct contact was in progress.	scorched earth policy	A policy of devastating all land and buildings while advancing or retreating in order to leave nothing available to the enemy.
revetment	A makeshift bulwark to brace trench walls, usually consisting of fascines or sand bags.	Seabees	U.S. Navy construction battalion.
ROTC	Reserve Officer Training Corps	SEAL	Sea Air Land. Elite U.S. Navy unconventional warfare teams.
RSFSR	Russian Socialist Federative Soviet Republic, official title of Soviet Russia.	SFHQ	Special Forces Headquarters
sabotage	The destruction of military equipment in order to hinder the defense of an enemy nation.	shaped charge	An explosive charge that focused its energy in a particular direction.
Saigon commando	Derogatory slang term given by combat troops to soldiers assigned to rear areas. Often soldiers assigned to these billets wore the popular boonie hats and camouflage uniforms denied to frontline forces.	shrapnel	An artillery shell containing metal balls fused to explode in the air above the enemy troops; shell fragments from an exploding shell.
salient	A military position that extends into the position of the enemy.	SIGINT	signals intelligence
salvo	The simultaneous firing of a number of guns.	SLBM	submarine-launched ballistic missile
SAM	surface-to-air missile	SOF	Special Operations Forces
sanctions	Activities taken against a nation by other nations to pressure	SOG	Studies and Observations Group. Operating out of the Military Assistance Command, Vietnam, this organization carried out clandestine operations, such as road-watch teams in Laos, in conjunction with the Central Intelligence Agency.
		SOP	standing operating procedure (order to be followed automatically in specified circumstances)

sortie	One flight by one aircraft.	UAV	unmanned aerial vehicle
SRBM	short-range ballistic missile	UCAV	uninhabited combat aerial vehicle
SRV	Socialist Republic of Vietnam. North and South Vietnam reunified in 1975.	UDT	underwater demolition team (U.S.)
SSBN	ballistic missile submarine (nuclear).	USO	United Service Organizations (U.S.)
SSN	nuclear submarine (attack)	USTRANSCOM	United States Transportation Command
Stavka	Russian Army Supreme Headquarters (general staff), equivalent to GHQ, OHL, and GQG in other armies	UXB	unexploded bomb
STC	Satellite Test Center	V/STOL	vertical/short takeoff and landing
Stealth fighter	Military aircraft with unconventional shapes designed primarily to absorb incoming enemy radar beams and therefore reduce detection.	Velvet Revolution	The intellectual-led revolt that took place in late 1989 in what was then Czechoslovakia and resulted in the ousting of the communist regime that had been in place since the end of World War II and the subsequent creation of a democratic system.
STOL	short takeoff and landing	Victor Charlie	Military communications code words for VC (Viet Cong). (<i>See</i> Charlie)
SVAF	South Vietnamese Air Force	Vietnamization	In 1970, President Richard Nixon used the process of Vietnamization, or the replacement of American troops with South Vietnamese troops, to transfer military responsibility to South Vietnam.
TAC	Tactical Air Command	VSTOL	very short takeoff and landing
TBM	tactical ballistic missile	VTOL	vertical takeoff and landing
TDY	Temporary duty; usually a six-month assignment.	VVAW	Vietnam Veterans Against the War
teach-ins	Teach-ins, which combined protest with education, originated during the Vietnam War as a form of antiwar demonstration.	wag the dog	An expression that can refer to a president's attempt to divert attention from an unpopular domestic situation by waging war or military attacks abroad.
TEREC	tactical electronic reconnaissance sensor	war bride	A newly married or soon to be married woman whose husband or fiancé is serving in the military during wartime.
TOA	time of arrival	war crimes	Violations of the laws and customs of war entailing individual
toe poppers	Slang for communist antipersonnel mines designed to maim (break a foot or blow off toes).		
TOT	time on target (artillery term)		
tour of duty	The 365 days a soldier in the U.S. Army spent in Vietnam; for Marines the period was thirteen months.		
TsAGI	Tsentral'nyi Aero-Gidrodinamicheskii Institut (Central Aerodynamics and Hydrodynamics Institute, Soviet Union)		

	criminal responsibility directly under international law.	Yankee Station	An operating area off the Vietnamese coast in the South China Sea used by the U.S. Navy's Seventh Fleet Attack Carrier Strike Force (Task Force 77). Air strikes against North Vietnam were launched from Yankee Station; code name for the Gulf of Tonkin.
War on Poverty	The War on Poverty, a central component of President Lyndon B. Johnson's Great Society program, aimed to reduce and eventually to eliminate poverty in the United States.		
war reparations	The demands for restitution usually imposed by the victorious party as part of the peace negotiations at the end of a war.	ZEL	zero-length launcher
		zero day	Term applied to the date of an attack or a major operation.
WIA	wounded in action	zero hour	Term applied to the exact time of an attack, information to be kept as long as possible from the participating troops.
Wise Men	A select group of senior advisors to President Lyndon Johnson.

COMPILED BY BONNIE K. GOODMAN

Cold War Websites

Important Websites for Study of the Cold War

Cold War International History Project

www.wilsoncenter.org/index.cfm?fuseaction=topics.home&topic_id=1409

The Cold War International History Project provides documents, news about the Cold War, information about upcoming conferences, and access to the archives of various countries that were important during the Cold War.

Cold War Museum

www.coldwar.org

The Cold War Museum provides access to news stories and commentary about the Cold War, documents, and a detailed timeline of many of the important events of the era.

Smithsonian Institution

www.si.edu

The Smithsonian Institution has numerous exhibitions about important periods of American history during the Cold War, from the space race to the Civil Rights sit-ins.

Cold War Files

coldwarfiles.org

Cold War Files has short biographies of many of the most important decision-makers during the Cold War, as well as downloadable versions of many of the most important documents of the period.

National Museum of the United States Air Force

www.wpafb.af.mil/museum/

This national museum provides detailed information about important aircraft during the Cold War, information about museum tours, and galleries of important people, weapons, and more.

Ronald Reagan Presidential Library

www.reagan.utexas.edu

This presidential library is an exhaustive compilation of the public papers of President Ronald Reagan, in addition to the documents of his governorship and a gallery of Reagan memorabilia.

WWW-VL History: The Cold War History 1945–1991
gpweb.us

This website has hundreds of links to Cold War chronologies, documents, commentaries, images, and other resources.

National Security Archive
www.gwu.edu/~nsarchiv/

The National Security Archive has important documents, advisory board transcripts, collections of primary sources, and commentaries.

Central Intelligence Agency
www.cia.gov

The Central Intelligence Agency gives access to essays about the Cold War, intelligence papers, and commentary about Cold War events as they happened.

Open Society Archives
www.osa.ceu.hu

The Open Society Archives allows access to the Hungarian archives during the Cold War and links to the archives of many former Soviet countries.

U.S. Military Operations
www.globalsecurity.org/military/ops/coldwar-ops.htm

Provides information about many of the most important military operations during the Cold War in addition to a great deal of information about current U.S. conflicts.

Organization of American Historians
www.oah.org

The Organization of American Historians website gives free access to articles about the Cold War from their *OAH Magazine of History*.

United Nations
www.un.org

The United Nations website provides access to scholarly articles, transcripts of speeches to the United Nations, secretary-general reports, and more.

State Department
www.state.gov

The U.S. State Department gives access to presidential public speeches, daily briefings, and documents important to the Cold War era.
